

Dear sir / madam

My sister had a kidney transplant 26 years ago. It gave her a new life which we really appreciated. However she received it with the informed consent of her donors family, not by presumed consent! I am against presumed consent as there are no safeguards in place to prevent it if the person is not on the organ donation register.

Upon death it is the decision of the individuals family to decide what happens to their loved ones body ,not a matter for our government to decide.

Your faithfully
