

Dear Sir/Madam

I am writing to support this bill

I have a disability, which is severely limited sight. while this was not the case at birth and would not have been detected before birth, it does restrict my activities and i do require assistance to live a normal life. Being restricted and requiring assistance are the hallmarks of some disabilities which can be detected before birth and are used as reasons for abortion. On the other hand, people with these disabilities usually lead fulfilling lives which are a blessing to many other people. Abortion for these reasons devalues the, as it gives out the message that their lives count for less than fully able-bodied people. My belief is that all viable foetuses should be allowed to live.
