3988. **Mrs Overend:** Thank you very much for attending and for bearing with us through all our questions. I will pick up on a few earlier points. You talked about the highly important role that schools' actions have in the community. How is that measured? Is it how the school building is used or how students participate in the community? Is there a measurement of that? Do you have certain set criteria, or is it done case by case?
3989. **Mr A Bell:** That is made clear under community connections in the shared education framework that ETI has

- developed and is continuing to develop. It outlines that, in the early stage of sharing, we would very much expect engagement with parents in the wider community. As you move through, it builds, and indicators of what should be done are given at each stage. The basic level is “defining” schools at a very early stage. They then move to the “developing” stage, and community connections will build to do more work in the community. By the time they reach the top level of “embedding”, we expect schools to have good connections with the community; parents to be well aware of what the shared education programmes are doing; schools to be using community resources; and, when possible, bringing in people from the community with experience of different areas — for example, if history is being taught, there may be people with a recent experience.
3990. There are all those levels, and the school should also be aware of what is happening in the community. The curriculum sets out minimum standards, but one thing that we want schools to do is to take those standards and apply them to that group of children and young people as well as possible. If they understand what those children and young people face in their local community, they can better address that. It is all those levels, and maybe that answers your question.
3991. **Mrs Overend:** It is interesting to hear those details. Thank you. Another question occurred to me during our discussion. Has the Department looked at other policies, such as the entitlement framework, that may work against the ideal of promoting shared education? The shared partnership in Magherafelt in my area promotes all schools working together, but people back off and want to deliver subjects on their own because of the entitlement framework.
3992. **Dr Kingon:** Our experience of the applications process has been that schools being initially paired with each other through area learning communities has helped them to deliver on the entitlement framework requirement, because those schools may not have been able to deliver on their own. Some of these partnerships have come through strongly in the applications to shared education. That experience of collaboration and cooperation with another school and the practical difficulties that that can sometimes entail in timetabling and so on is a good basis from which to go forward with shared education. We do not see any particular tension there at all.
3993. **Mr A Bell:** As we have developed the policy, we have looked to other policies in the Department. Obviously, there is a suite of policies, so this needs to fit with others. Part of the work we do is to try to identify whether there are contradictions or difficulties or whether another policy is working against what we are trying to do. That would have been part of the policy development route that we went down.
3994. **Mrs Overend:** The Department’s stats identify that 24% of schools are not involved in sharing. In order to ensure wider and non-tokenistic participation, does the Department believe that a legal obligation is required for schools to be involved in shared education?
3995. **Mr A Bell:** The experience that we have built up over a number of years and all the research indicate that you need community support. If we started obliging communities to go down that route, you are going against that. We know from our knowledge in this area in this Province that, once you start forcing people to do things, that is when people will walk away from the position. We want to encourage and facilitate shared education as opposed to imposing it on communities.
3996. **Mrs Overend:** In respect of employment practices in schools, the Minister suggested that section 75 obligations might be extended to all schools but that a public consultation would be required. Will the Department comment on whether it believes that a legal obligation might be usefully placed on schools to promote good relations

- and perhaps normalise employment practices in schools?
3997. **Mr A Bell:** That was one of the recommendations from the ministerial advisory group report. That group did a lot of work and a very widespread consultation process before coming up with that. That happens in other jurisdictions. There were a lot of concerns in some of your previous sessions about the bureaucracy that would be involved. Other jurisdictions have what is sometimes referred to as an “equality-lite” scheme for schools. It is light on bureaucracy as opposed to light in ensuring that they meet the groups. There are other ways to move that forward, and we would want to explore this area as part of that. OFMDFM is in the lead on that process. The Minister has written to the First Minister and deputy First Minister to ask for their views initially about moving this forward.
3998. **Mrs Overend:** When did he write to them?
3999. **Mr A Bell:** He wrote to them a number of months back.
4000. **Mrs Overend:** What is “a number”? Twelve? Twenty-four?
4001. **Mr A Bell:** I do not know the exact date off the top of my head, but it is probably more than six months ago.
4002. **Mrs Overend:** That is a reasonable amount of time in which to have expected a response.
4003. You might find that some schools will amalgamate because of school numbers or will work more closely together because of the risk of closure. Do you look on that favourably?
4004. **Mr A Bell:** Again, there are criteria, particularly for the Delivering Social Change signature project. As we work down through the policy level, we set out more detailed criteria in the individual programmes that deliver that policy. The criteria in the Delivering Social Change signature project state that, first, schools must be sustainable. When they come together for the shared educational experience, the expectation is that they are doing it for the right reasons. That is one reason why they have to set that out in their action plans. Each school individually self-assesses against the continuum model, and they then work as a partnership to see where it sits. We have made the process fairly robust while not being too bureaucratic for schools to follow so that we avoid the situations that you are talking about, where they are coming at it from the point of view that it allows them to continue to exist as a school.
4005. **The Chairperson (Mr Weir):** I have a couple of final questions. Drumragh and Methodist College highlighted their individual circumstances. They are concerned that shared education, according to the definition, cannot really happen in a single site or school. Why is there a requirement for more than one school to be involved?
4006. **Mr A Bell:** It goes back to what I said earlier about the dual aims of improving educational outcomes and, as part of that, reconciliation outcomes. There is a lot of international evidence that, when a school collaborates with another school, it can raise standards. It is based on that evidence. A very good school can raise the standards of other schools and share with them how it has reached that standard.
4007. **Mrs Graham:** You referred to two schools that I am not familiar with. I do not know what those two schools are doing. However, we would have to ask questions. If someone is saying that they are doing all these things but is unwilling to work with somebody else, it raises questions.
4008. **The Chairperson (Mr Weir):** Although I was not here when that evidence was given, to be fair, it is maybe somewhat pejorative to say that they are unwilling to do that. They are saying that they are providing a particular setting in which communities are mixing.
4009. **Mrs Graham:** That is great.

4010. **The Chairperson (Mr Weir):** They are simply asking why they are being excluded from that as opposed to —
4011. **Mrs Graham:** We need those schools to participate. The very fact they are doing those things makes it all the more important that they participate. As Andrew said, whether it is educational attainment, reconciliation outcomes or both, a stronger school that works with another school that is in need of support, needs to improve and recognises that need will pull up what is happening in that school. Hopefully, the stronger school will be able to take credit for the support that it provides.
4012. **Dr Kingon:** If you look at the practicalities of the Delivering Social Change programme, you will see that the funding that is available is to assist with transport and provide substitute cover. Andrew referred to that. It is funding to facilitate inter-school collaboration, which is recognised as having additional costs over and above a school's LMS budget. A school on its own will not incur those types of cost in the very good work that it is doing by itself.
4013. **The Chairperson (Mr Weir):** Trevor, you have a final question on the Moy situation and the shared campus.
4014. **Mr Lunn:** I am not going to go down to the Moy again. The question was about the measurement of education and the societal benefit of shared education schemes. You have answered it at least three times, so you are off the hook.
4015. **Mrs Graham:** Thank you.
4016. **The Chairperson (Mr Weir):** On that note, I thank you for your evidence. There are a couple of issues that we could clear up. It may be useful for the witnesses to hear this. This is a two-stage process. An inquiry report will be drafted for debate, if we can get agreement on it, before the summer recess. We are also acutely aware that the Department hopes to take the legislative situation to the Executive, and we are keen to help with that. Given the time frame, I made a suggestion earlier. Members should email Peter with any thoughts, and we could give an initial view to the Department. The aim is to get something drafted next week so that we can give our initial view — one or two pages — to the Department.
4017. **The Committee Clerk:** This is about the Bill, Chair.
4018. **The Chairperson (Mr Weir):** Yes. It is specifically about the Bill.
4019. **Mrs Graham:** That would be helpful.
4020. **The Chairperson (Mr Weir):** Hopefully, we can then agree a line and get it to the Department. That would be useful for next week's meeting.
4021. **Mr McCausland:** I am thinking about that phrase "equality of identity". There is a lot to be said for the old Community Relations Council model: equality, diversity and interdependence. It is the three-legged stool. It is a simple way of expressing what is in there.
4022. **The Chairperson (Mr Weir):** If members have any thoughts, I ask them to send them to the Clerk so that we can have something drafted for next week. Hopefully, we might be able to agree something, but maybe that is the naivety of the honeymoon period.
4023. Thank you for your forbearance. We have had two hours' worth, so there is a lot of meat on this, and I suspect that this may be stage one of a number of stages.

Committee for Education

Report on the Inquiry into Shared and Integrated Education Volume 2

Together with the Minutes of Proceedings, Minutes of Evidence
and Written Submissions Relating to the Report

Ordered by the Committee for Education to be printed 1 July 2015

This report is the property of the Committee for Education. Neither the report nor its contents should be disclosed to any person unless such disclosure is authorised by the Committee.

**THE REPORT REMAINS EMBARGOED UNTIL
COMMENCEMENT OF THE DEBATE IN PLENARY**

Powers and Membership

Powers

The Committee for Education is a Statutory Departmental Committee of the Northern Ireland Assembly established in accordance with paragraphs 8 and 9 of the Belfast Agreement, section 29 of the Northern Ireland Act 1998 and under Standing Order 48 of the Northern Ireland Assembly.

The Committee has power to:

- Consider and advise on Departmental budgets and annual plans in the context of the overall budget allocation;
- Consider relevant secondary legislation and take the Committee stage of primary legislation;
- Call for persons and papers;
- Initiate inquiries and make reports; and
- Consider and advise on any matters brought to the Committee by the Minister of Education.

Membership

The Committee has 11 members including a Chairperson and Deputy Chairperson and a quorum of 5. The membership of the Committee is as follows:

Peter Weir (Chairperson) ^{2,6}

Sandra Overend (Deputy Chairperson) ⁷

Maeve McLaughlin

Jonathan Craig

Ross Hussey ^{1,8}

Nelson McCausland ³

Chris Hazzard

Trevor Lunn

Robin Newton

Pat Sheehan

Sean Rogers ^{4,5}

1 With effect from 04 July 2014 Mrs Sandra Overend replaced Mrs Jo-Anne Dobson
 2 With effect from 23 September 2014 Ms Michelle McIlveen replaced Mr Mervyn Storey as Chairperson
 3 With effect from 06 October 2014 Mr Nelson McCausland replaced Mr Stephen Moutray
 4 With effect from 17 November 2014 Mr Colum Eastwood replaced Mr Seán Rogers
 5 With effect from 08 December 2014 Mr Sean Rogers replaced Mr Colum Eastwood
 6 With effect from 11 May 2015 Mr Peter Weir replaced Miss Michelle McIlveen as Chairperson
 7 With effect from 15 June 2015 Mrs Sandra Overend replaced Mr Danny Kinahan as Deputy Chairperson
 8 With effect from 23 June 2015 Mr Ross Hussey replaced Mrs Sandra Overend

Northern Ireland Assembly – Committee for Education Shared and Integrated Education Inquiry

Submission by Atlantic Philanthropies and the International Fund for Ireland

Contacts

Dr Padraic Quirk (Atlantic Philanthropies)

Dr Adrian Johnston (International Fund for Ireland)

23rd October 2014

1. Introduction and background

- 1.1 This submission to the Northern Ireland Education Committee Inquiry into Shared and Integrated Education is made by the International Fund for Ireland and Atlantic Philanthropies, two organisations which have been jointly supporting shared education since 2007 onwards. We welcome the opportunity to submit written evidence to the timely inquiry on shared and integrated education.
- 1.2 Although the details of this submission focus on our collective experience of funding the Shared Education Programme, it is worth noting that Atlantic Philanthropies has supported initiatives in shared and integrated education and view both as positively contributing to transforming a divided education system.
- 1.3 Our submission follows the key headings set out in terms of reference by the Education Committee: nature and definition of shared and integrated education; key barriers and enablers; alternative approaches and models in other jurisdictions; and, priorities and actions to improve sharing and integration. Of necessity, the emphasis in our submission is based on our collective intervention on shared education drawing on the experience and research evidence generated therein.

2. Definitions

- 2.1 What is integrated education? Integrated education brings together in one school, children, parents, teachers and governors from Catholic and Protestant traditions and those from other faiths or none. Pupils experience an education that gives them the opportunity to understand, respect and celebrate all cultural and religious traditions. Parental involvement is a central value of integrated education, with a high level of parental representation on Boards of Governors.
- 2.2 The origins of the sector can be traced back to 1974 when a group of parents called All Children Together lobbied successfully for legislation which would allow existing schools to become integrated (Education (NI) Act 1977). The first planned integrated school (Lagan College) was established by parents in Belfast in 1981. Integrated education was given a major fillip through the Education Reform (NI) Order 1989 (article 64) which, for the first time, placed a statutory duty on the Department of Education to 'encourage and facilitate' the development of integrated education. The Order also gave the department the power to fund a central, representative body to develop, support and promote integrated education in Northern Ireland – the Northern Ireland Council for Integrated Education (NICIE) was

established 1987). There are now 62 integrated schools in Northern Ireland with an enrolment in 2013/14 of 21,206 pupils or approximately 6.7% of the overall school population.

- 2.3 What is shared education? Shared education refers to schools from different sectors working together in a sustained process ranging from two or more schools making shared use of specialist facilities, through to coordinated timetabling, and pupils taking classes across a network of schools. The Ministerial Advisory Report on Shared Education (2013: xiii) defines it as:

Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

- 2.4 Shared education is distinct from integrated education. The essential point is that shared education involves inter sectoral collaboration to improve both educational and reconciliation outcomes. It seeks to create interdependencies between schools mostly through delivering core curriculum activities where teachers and pupils work together across schools to achieve higher quality educational experiences. Shared education recognises that schools have interdependent relationships and promotes positive inter sectoral collaboration to support the common good.
- 2.5 Shared education has been delivered through 3 project providers: Queen's University Belfast, the Fermanagh Trust and the North Eastern Education and Library Board PIEE project. In 2012/13 there were 101 primary schools and 61 post-primary schools involved in the Shared Education Programme with 12,771 pupils participating (4% of the school population). We set out the key differences between shared and integrated education in table 1. We do however see the practical distinction between shared and integrated education as a false dichotomy. Instead, we argue that there is a spectrum of collaboration which is possible between schools ranging from: schools working in isolation through, ad hoc collaboration, organic partnership, irregular (and less sustained) shared activity, regular sustained activity, culture of collegiality and institutional interdependence (Duffy, Baker and Stewart, 2013).

Table 1: Shared and Integrated Education – defining characteristics

	Shared Education	Integrated Education
Definitions	Shared education refers to schools from different sectors working together in a sustained and meaningful process ranging from two or more schools making shared use of specialist facilities, through to coordinated timetabling, and pupils taking classes across a network of schools.	Integrated education brings together in one school, children, parents, teachers and governors from Catholic and Protestant traditions and those from other faiths or none.
Characteristics	The focus of shared education is delivering core curriculum activities where teachers and pupils work together across schools to achieve higher quality educational experiences. Shared education recognises that schools have interdependent relationships and promotes positive collaboration to support the common good. Shared education involves parental, pupil, teacher and community involvement.	Pupils experience an education that gives them the opportunity to understand, respect and celebrate all cultural and religious traditions. Parental involvement is a central value of integrated education, with a high level of parental representation on Boards of Governors.

	Shared Education	Integrated Education
Numbers involved	Maintain the percentage of schools engaged in shared education on a whole school basis at 15% (114) in the 2014/15 academic year and increase to 20% (152) by 2017/18 (from DE Business Plan for Shared Education Signature Project).	21,206 (62 schools) or 6.7% of school population.
Key transformative changes	<ul style="list-style-type: none"> • Programme for Government commitments to shared education. • Building a United Community commitment to share education: ‘we will enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child’s educational experience’. • 10 new shared education campuses. • Ministerial endorsement of shared education and commitment to mainstream it to become part of the ‘DNA’ of education system. 	<ul style="list-style-type: none"> • Parental choice for parents who wish to send their children to integrated schools. • Legislative commitment by Department of Education to ‘encourage and facilitate’ integrated education. • State funding for integrated schools. • Justice Treacy’s ruling (2014): integrated schooling cannot be delivered by schools with a predominantly Catholic or Protestant ethos – integrated education is a stand-alone concept.
Legacy	<p>Cross-sectoral interdependency between schools for education and reconciliation benefits.</p> <p>Boundaries between existing sectors are now porous.</p>	Solid base of integrated schools with opportunities for further growth to meet parental demand.

3. Enablers and Barriers

3.1 There are both public policy and legislative enablers. For example, the Northern Ireland Executive entitled Together: Building a United Community (T:BUC), makes a clear commitment to shared education as follows:

We believe that creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement unemployment, and sectarianism; and improving good relations amongst and for our young people. This must also be considered within the context of the increasing diversity of our society, which is reflected within the school environment. Through this Strategy, we will enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child’s educational experience. T:BUC (2013: 48).

3.2 Under the banner Delivering Social Change there is now a Shared Education Signature project which commits £25m from OFMDFM, the Department of Education and Atlantic Philanthropies to take shared education from pilot schools to scale throughout Northern Ireland. In addition, the Northern Ireland Executive has committed to building 10 shared education campuses. These projects should make a significant contribution towards mainstreaming shared education.

- 3.3 The Ministerial Advisory Report Advancing Shared Education (2013) recommended a statutory duty on the Department of Education (and ESA) to encourage and facilitate shared education as defined in the report. The Minister of Education told the NI Assembly (22nd October 2013):

Shared education is rolling out as we speak. I would like to see a legal definition put in place through the ESA Bill. However, if the ESA continues to be delayed, I will consider bringing forward legislation to introduce a definition of shared education separate from the ESA Bill, as I place such importance on it.

Given the collapse of the ESA bill we suggest separate legislation to enable the development of shared education as follows:

- (1) There will be a duty on schools to collaborate in the delivery of education on a cross community and cross sectoral basis.
- (2) Duties
 - i **Duty of schools**
 - a. There will be a duty on schools to collaborate¹ on a cross community basis² as defined in the footnotes below.
 - b. Principals and the Board of Governors shall take steps to ensure that opportunities are created for sustained, regular cross community contact between pupils through the delivery of Education. These commitments should be defined in school development plans and take into account existing DENI guidance on school improvement and educational delivery.
 - ii. **Duty of new (combined) Education and Library Board (ELB)**
 - a. There will be a duty on the new (combined) Education and Library Board to ensure curriculum choices are made available to all students based on the shared education model. The ELB will provide support, guidance, resources and funding of shared activities based on the statutory curriculum.
 - iii. **Duty of the Department of Education Northern Ireland**
 - a. There will be a duty on the Department for Education Northern Ireland (DENI) to monitor and evaluate the delivery of education on a cross community basis.
 - b. The Education and Library Board will have a duty to report on all schools cross-community partnership work and disseminate best practice both to DENI and throughout the ELB.

(Laura Lundy, Queens University Belfast)

- 3.4 Barriers: At the macro level there is a statutory duty on the Department of Education under the Education Reform (NI) Order 1989 to encourage and facilitate the development of integrated education. There is also a call from the Ministerial Advisory Group on Shared Education (2013) for the same legal duty to be applied to shared education. Neither of these has however translated into a clear blueprint for a fully shared and/or integrated system of education. Hence, government intentions are aspirational rather than practical involving time-bound targets, associated funding to achieve significant change and measurable educational outcomes.

1 Definition of collaborate. By collaborate we are referring to schools working together on a regular, sustained basis in the delivery of statutory curricular subjects. "Collaborate" also refers to the delivery of extra-curricular activities.

2 Definition of "cross-community". By "cross community" we recognise the existence of controlled, maintained, voluntary, integrated, special education resource centres and Irish Medium provision. "Cross community collaboration" occurs when schools from different management types work together on a regular, sustained basis.

- 3.5 One of the key barriers to shared and integrated education is the area planning process which has attracted a large response through public consultation. There is evidence that in some cases ELBs have chosen to ignore grassroots opinion which offers potential local shared education solutions. This represents the worse type of paternalism on the part of school managing authorities; a 'we know best attitude' reinforced by a needs model in the area plans which is based on 3 separate sectors: controlled, maintained and integrated schools. Such an approach stifles 'innovation and creativity' which the Department of Education implored the Education and Library Boards and CCMS to embrace in their approach to area planning.
- 3.6 The Education Minister has encouraged public engagement in the future reorganisation of the education estate, in particular bottom-up solutions. There is evidence that people are much more advanced in their thinking than managing authorities which have acted as gatekeepers for local solutions and sought to protect their own sectoral interests. In short, the area planning consultation process has been tokenistic.
- 3.7 Another barrier to the development of shared education is that the Programme for Government (PfG) commitments may be treated in a 'light touch' way through the Entitlement Framework, Area Learning Communities, Extended Schools, and the Community Relations, Equality and Diversity Policy (CRED). The inclusion of shared education targets within the PfG, whilst encouraging, are weak. What does 'ensuring that all children have the opportunity to participate in shared education by 2015' actually mean when shared education in this context has been undefined? Moreover, the Minister's reference to shared education being an integral part of the way in which the Entitlement Framework operates lacks conviction as the Department of Education has no way of telling – they cannot provide evidence to substantiate this claim. The concern is that shared education morphs into community relations work rather than an opportunity to improve educational performance on a cross-community basis, with DE taking a passive role.
- 3.8 In addition, the sectoral vested interests, in particular the churches, maintain a resistance to a change in the status quo. While maintained schools, for example, have been active participants in shared education, they do not see their involvement in the long term as a substitute for exclusively Catholic education. An associated barrier is the political risks linked with creating a more shared education system since it blurs the traditional boundaries and could impact on the medium term voting habits in a political system which has reflected a segregated society.
- 3.9 The existing sectoral based teacher training degree programmes compound the status quo and can act as a barrier to a system which is attempting to become more shared and integrated. The new opportunities and challenges created by systemic educational change need to be reflected in the ways in which new teachers are trained and the professional development needs of existing teachers. There is little point in a structural reconfiguration of the school system without accompanying investment in those professionals which teach our pupils.

4. Other jurisdictions

- 4.1 Although the Shared Education Programme has a specific focus on Northern Ireland, there is the potential for wider learning in countries in, or emerging from, conflict. A team from the Centre for Shared Education in Queen's University were invited to support the work being carried out to tackle divisions with the Macedonian education system. This, in turn, has leveraged funding (from UNICEF and USAID) in support of a shared education programme between ethnic Macedonian and Albanian schools. Queen's University has been advising on the formulation and implementation of this programme given their experience in Northern Ireland.
- 4.2 A team from Queen's Shared Education Programme also travelled to Israel to participate in workshops and seminars on shared education. Working with Queen's, the Nazareth Academic

Institute examined ways to implement research outcomes within its constituency, namely students in a college of higher education and the communities surrounding it. Queen's is also co-operating with Hand in Hand, Centre for Jewish-Arab Education in Israel in order to explore shared options for school age children and their communities. Hand in Hand was founded in 1997 as a centre for Jewish-Arab Education in Israel and builds peace, coexistence and equality through a network of integrated, bilingual schools for Jewish and Arab children.

- 4.3 Atlantic's collaboration with the Office of the Minister and Deputy First Minister (OFMDFM) in the Shared Education Signature project will link us into a European Centre for Delivering Social Change which, inter alia, which carry out work that provides a research-policy-practice nexus for policy initiatives at the centre of government. The Centre will disseminate best social change practice [outwards] to other European countries and learn from developments elsewhere [inwards] which will help tackle key thematic areas in the Northern Ireland social change agenda. Shared education research, policy and practice will be a core theme in the European Centre for Delivering Social Change.
- 4.4 Perry (2012) provides examples of shared education in other jurisdictions: shared campuses in Scotland; federation in England and Wales; communities of schools in Belgium; and school clusters in New Zealand. The Scottish experience of shared campuses was very positive despite initial concerns that denominational schools might lose their ethos. The federated model also offers a useful comparator for Northern Ireland. This is where two or more schools share leadership and governance arrangements. The literature notes that while federations require a larger budget in comparison to an individual school, economies of scale may be realised, and increased costs are offset by greater resources. In a recent Ofsted report on federations, inspectors found educational provision and outcomes had shown improvement, with the federated model as a contributory factor to the improvement.

5. Priorities and Actions

- 5.1 At the strategic level there is a need for the Northern Ireland Executive, Assembly and Department of Education to agree a future plan for a fully integrated and shared system of education moving forward. We need to move from aspirations to pragmatic systemic changes. The investments by Atlantic Philanthropies and IFI have demonstrated clear economic, education and societal benefits of shared education – what is needed is to embed shared and integrated education comprehensively in the delivery of education in Northern Ireland.
- 5.2 Beyond this strategic goal the key priorities and actions are scaling-up shared education in a meaningful way rather than a superficial engagement in short-term community relations work. The key priorities and actions are listed in table 2.

Table 2: Scaling-Up Shared Education

<p>Scaling up Shared Education</p>	<p>There are a number of elements involved in scaling up the levels of collaboration and sharing between schools. Typically this will comprise work across a number of areas including:</p> <p>Support for Shared Governance</p> <ul style="list-style-type: none"> • Participants: Chairs of governors; all governors; governors sub-committee • Activities: agreed shared governance arrangements; promote school partnership; employment of staff; agree shared policies; and, oversight of partnership transactions/finance. <p>Shared School Management</p> <ul style="list-style-type: none"> • Participants: Principals and Vice Principals • Activities: Embed and promote philosophy of the partnership; Principals work closely with Vice Principals to shape programme; deployment of staff across the partnership; employment of staff; and, financial management. <p>Shared Curriculum Planning</p> <ul style="list-style-type: none"> • Participants: Principals and Vice Principals • Activities: Maximise shared curriculum in order to reduce duplication and provide broadest choice possible; agreed benchmarking, assessment and target setting; synchronisation of timetabling; agreed teaching and learning strategies formulated; and Identification of future need. <p>Shared Teaching & Learning</p> <ul style="list-style-type: none"> • Participants: Heads of department; subject specialist teachers; and teachers • Activities: Agreed teaching and learning strategies implemented; shared plans and schemes of work; audit of existing resources within partnership; maximise the use of existing resources across partnership; joint staff training; and creation of shared policies. <p>Shared Classes</p> <ul style="list-style-type: none"> • Participants: Pupils • Activities: Pupils engaged in shared classes and learning; shared student council; and shared pupil extra-curricular activities (sports, choir/music etc).
	<p>Educational Improvement</p> <p>In addition to the above, school partnerships should be encouraged to specifically develop shared plans focused on improving educational outcomes. Likely activities to be supported will include:</p> <ul style="list-style-type: none"> • Assistance to identify common areas of educational need; • Conduct a curriculum audit which identifies duplication of provision, areas of under- provision and how best to address these issues. • Identify complementary expertise and how schools intend to use it to benefit the partnership. • Highlight existing resources that could be shared for the benefit of the partnership (physical space, ICT suites etc.). The schools will provide a rationale as to how existing resources can be used more efficiently and effectively across the partnership in a sustainable manner. • Identify opportunities for the development of common teaching and learning strategies, benchmarking and standards across the partnership with a focus on improving educational outcomes. • Identify opportunities for shared training and capacity building and how they intend to provide access to these on an on-going process. • Demonstrate how the cross-sectoral partnership will lead to improved educational provision across the partnership. • Identify additional resources that they would require to progress the work of the partnership in terms of improving educational outcomes.

Outputs	
The above activities will result in the following outputs:	<ul style="list-style-type: none"> • Increase in the number of schools involved in shared education delivery. • Increased level of interdependence in the school system. • Increase in the number of joint governance schools (models of confederation, federation, co-location and possibly shared campuses).
Expected Outcomes	
The outcomes from this work should result in:	<ul style="list-style-type: none"> • Improved educational outcomes and enhanced access to curriculum for all pupils involved in shared education. • Normalised peer-to-peer cross-community relationships built through regular contact within mainstream education. • Shared education becomes a core element of all schools' strategic planning and day-to-day functional activities. • The Department of Education will fund, incentivise and formally regulate shared education. • The Education and Training Inspectorate's (ETI) will incorporate shared education activities as a component part of their regular inspection process of schools. • Learning from shared education exemplars will inform international best practice on transforming segregated education systems.

6. Conclusions

6.1 The Ministerial statement Advancing Shared Education (22nd October 2013) noted:

- Shared education must become the accepted reality at every stage of education, from early years to post-graduate study...We need to ensure that sharing is in the DNA of our education system: in legislation, policy and the structure of ESA.
- Sharing brings: educational benefits, respect for diversity and good relations. It builds equality and a confident community. So my vision is one of education without barriers; good schools where children learn, grow and develop together.

6.2 Atlantic Philanthropies and the International Fund for Ireland have, through the Shared Education Programme, developed the concept, practice and supporting evidence to demonstrate the benefits of shared education. We see the role of DE and the new unitary Education and Library Board as embedding our work in the system.

See appendix 1 for a sample of the evidence on the effectiveness of shared education

Ballycastle High School and Cross and Passion College

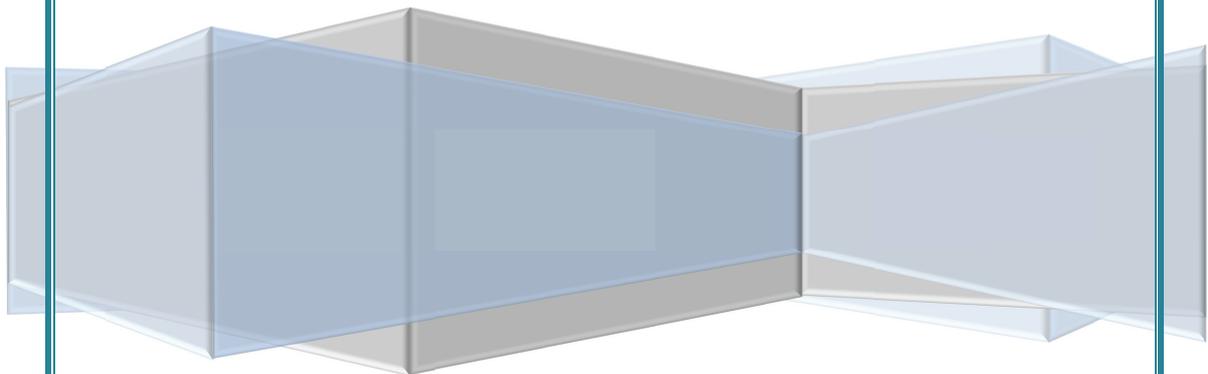

Northern Ireland Assembly Committee for Education

Shared and Integrated Education Inquiry

Shared Education in Moyle

I Williamson and Barbara Ward

In Moyle, both Ballycastle High School and Cross and Passion College have a sense of helping to shape the future:

Background:

We have a strong sense of the successful history enjoyed by both schools and by the pupils who have attended our schools over the years. Pupils are drawn mainly from the town of Ballycastle and the rural hinterland surrounding the town. We enjoy a high level of loyalty from the community, with in many instances, several generations of families having attended the schools.

While enjoying this sense of history we are very aware of the role played by Ballycastle High School and Cross and Passion College in having helped to shape the future.

This vision of collaboration, efficient use of resources and increased choice, has proven to be highly beneficial to the pupils, parents, schools and the local community. This vision continues to grow with our involvement in the Shared Education Programme with Atlantic Philanthropies and Q.U.B. This project and current support has enabled further advancements of our vision to enhance shared provision for post-primary pupils in the Ballycastle area. At Key Stages 4 and 5 significant progress has been made in relation to meeting the requirements of the Entitlement Framework and furthering cross curricular activities.

The vision and ethos has grown organically within a heartfelt context of mutual dependency and respect for each-others differences. This non-threatening sense of shared purpose and simple 'good neighbourliness' has impacted significantly on cross community relations.

In a socially deprived area such as ours, many parents still just want the best life chances possible for their children. This is the pervading attitude of most of our parents. But this sense of aspiration and expectation has to be nurtured by effective communication and genuine open, caring relationships. Parents know that every child matters in both our schools. We earnestly endeavour to show our parents that education has in the past and can in the future provide the vehicle for their children's advancement.

We are both non-selective schools and our pupils cover the full range in relation to academic ability. Both schools benefit hugely from that diversity and the wide range of talents, characteristics and personalities presented by each of our pupils.

Our location and degree of geographic isolation has also been of benefit, with parents choosing to send their children to us instead of attending schools elsewhere. But we cannot take this for granted and the teaching staff and support staff are keenly aware of our need to continue to be successful schools which enjoy the full confidence of the community.

Nature of Shared Education in Ballycastle

Almost 300 pupils attend weekly shared curricular classes – 139 CPC pupils taking classes in BHS and 148 BHS pupils taking classes in CPC.

Vision and Leadership

- Collaborative Sub-committees with representatives from both of Boards of Governors has been formed – their focus relates to the planning of the collaborative curriculum offer, standards and attainment and pastoral care and well-being of pupils involved in the collaboration.
- Governors have jointly agreed the core values/ principles underpinning the partnership and the purpose of the collaborative arrangements (Appendix One)
- There is a shared approach School Development Planning in relation to 14-19 attainment and related school improvement actions.
- Regular opportunities for leaders at levels of management in the school to meet plan monitor and evaluate provision together – this includes Principals, Senior Leaders, Curriculum and Pastoral Leaders

Curriculum

- The partnership provides a wide range of BTEC, AS/A level and GCSE subjects, with subject option blocks aligned. 6th Form and Key Stage 4 provision meets Entitlement Framework requirements. Additional subjects are delivered in partnership with Northern Regional College.
- The nature of the curriculum offer reflects the ‘All Ability’, inclusive nature of the two schools, the diverse nature of young peoples’ aspiration in terms of their progression to further and higher education as well as the needs of the local and wider economy

Extra- Curricular / Curricular Enrichment Provision includes:

- A Joint School council ensure that pupils views and opinions are sought and taken on board in relation to planning and organisation of provision
- A range of shared careers education events
- Joint Year 8 and 9 Rugby team
- Joint Choir, concerts and orchestral activities.
- Charity fundraising activities.

There is much evidence that the impact of the partnership extends beyond the classrooms into the wider community.

The Report of the Ministerial Advisory Group 2013; 'Advancing Shared Education' suggested that there are seven key principles that need be at the heart of efforts to advance shared education.

Shared Education:

1. Welcomes and celebrates diversity and respects the right of children and young people to be educated in accordance with their own religious, cultural or philosophical traditions while also ensuring that they develop an understanding and respect for others by having significant and meaningful opportunities to be educated together with those from different backgrounds;
2. Ensures that all children have access to a quality education and enjoy equal opportunities within the education system, and thus has a particular concern with identifying and meeting the needs of children and young people from vulnerable and/or marginalised backgrounds;
3. Is built upon strong links with parents and care-givers, fostered in early childhood and maintained throughout each child's progression through the education system, and respects the role they play in supporting their child's education and development;
4. Provides all children and young people with a broad-based and holistic education whilst also ensuring that this is progressively tailored to meet their individual needs and to help develop their particular strengths and talents to the fullest;
5. Helps children and young people develop a greater awareness of and respect for diversity, in all its forms, and equips them with the knowledge and skills to be able to live in an open, inclusive and confident society;
6. Respects the rights and dignity of all children and young people, ensures that their views and opinions are heard and responded to and promotes their safety and wellbeing; and
7. Acknowledges the central importance of good leadership in schools and the quality of teachers and support staff and thus places a particular emphasis on ensuring high quality initial teacher education and continuing professional development opportunities that encourage teachers and educationalists learning and sharing together.

It is our contention that the above summary encompasses the core and essence of what shared education is in the Ballycastle context.

Key Barriers and Enablers for Shared Education

This response is based on the experience of a long standing sharing of educational resources and expertise in Ballycastle. It reflects our thoughts on barriers and enablers at system wide level.

Enablers

The strength and quality of the partnership is a crucial enabler. Shared education will flourish in a strong partnership where;

- each partner feels equal and is confident of the purpose, worth and value of their own institution and of the contribution it can make to the success of the partnership
- the essential nature of the context, history, ethos and value system in each school is understood and respected
- where there is a strong sense of common purpose and commitment to the concept of sharing for the greater good of the young people and the wider community in which they will live and work

The Commitment of Key Stakeholders:

The support of those working at **planning and policy level** in the education system at all levels is vital if Shared Education is become a recognised part of the education system in Northern Ireland. This includes:

- Department of Education
- The new Education Authority including the full range of educational stakeholders included in this ELB's / CCMS / Trustees/ Others

It is essential that those who are key decision makers see this as an authentic, sustainable and appropriate option for communities which can impact positively in three ways;

- It can provide the option for a choice of type of school which reflects the aspirations, beliefs, culture and identity of pupils and their parents whilst at the same providing authentic, high quality opportunities to accept diversity and indeed come to understand and value each-others traditions
- It can avoid duplication, make economic sense through the sharing of resources
- Sharing and good use of resources can have a significant impact on outcomes for young people

The confidence of Parents and Pupils

Pupils and their parents need to be absolutely confident that the sharing arrangements will work for their pupils – entrusting your child's education, even if it is only in a limited number of subjects to another school is a real challenge. It is vital therefore that the quality of leadership, teaching and learning and well-being and care of young people is of the highest standard possible. Where there are shared arrangements, pupils and their parents must be kept well informed about the

opportunities available through sharing, arrangements for monitoring progress, meeting teachers and so on. The arrangement needs to be underpinned by Service Level Agreements, robust protocols and shared policies relating to key areas of shared educational experience.

Policy context

It is important that the policy context for education enables Shared Education however it is equally important that Shared Education will enhance the implementation of policy.

For example, the following DE policy areas can be delivered much more efficiently and effectively in some areas where well established shared arrangements exist:

- Entitlement Framework
- ESAGS – Raising Educational Attainment
- Literacy and Numeracy Strategy including the Signature Teacher Project
- Tackling educational disadvantage
- STEM activities
- CRED

Meeting a real educational need

Shared Education will only be successful in the educational and economic sense if it meets a real need. Where it facilitates enhanced curriculum provision and choice for young people, where it increases access to specialist teaching and or accommodation and where it makes better use of resources, it will be effective and worthwhile.

Training and Development of Governors and Staff

The development of high quality Shared Education experiences is a challenge for school leaders, governors and staff. It adds an additional, but in our experience very worthwhile layer to the leadership, governance, and management of schools involved. The availability of training opportunities would;

- Increase awareness of the significant benefits / opportunities which shared education offers
- Increase awareness of the particular challenges
- Support schools in developing the leadership capabilities of those involved
- Facilitate the sharing of good practice

Co-location

Shared Education opportunities have to make sense and enhance young peoples' experience as opposed to adding unnecessary cost and travel time. It therefore works best where school are in close proximity to one another.

Barriers

There are a number of potential barriers to Shared Education Arrangements – on reflection they mostly relate to the absence of the ‘Enablers’ outlined above.

Geographical Distance

Sharing of day to day educational experiences is infinitely more difficult if it involves long distances and the use of public transport / taxis etc on a long term basis and is therefore often a barrier to authentic, sustained sharing.

Priorities and actions to improve Shared Education including relevant parts of CRED policy.

The aim of the CRED policy is to:

Contribute to improving relations between communities by educating children and young people to develop self-respect and respect for others, promote equality and work to eliminate discrimination, and by providing formal and non-formal education opportunities for them to build relationships with those of different backgrounds and traditions within the resources available.

In every sense the aim of the Community Relations Equality and Diversity policy is totally embedded in the ethos of both Cross and Passion College and Ballycastle High School. The key relationships within the partnership have been nurtured in an organic, genuine, natural evolution. A culture of mutual respect for each other's differences and a genuine desire to be good neighbours permeates every aspect of what the schools do.

However, there is no scope for complacency and everyone has to be mindful of inadvertent issues arising which may have unforeseen negative consequences. Everyone is mindful of the power of perception which is not borne out in reality. Poor communication or mixed messages can create misunderstandings which are at best inconvenient and at worst damaging to the partnership.

Both schools have separate identities reflecting the key aspects of faith, aspiration and identity for their respective communities. The fact that a choice exists as to which school parents/guardians choose to send pupils to is critical. There is nothing threatening or competitive in the relationship that exists in Ballycastle between the two schools. The fundamental premise that ours is a partnership based upon mutual need and individual choice is correct and highly significant.

The objectives of the CRED policy are:

- Ensure that learners, at each stage of their development, have an understanding of and respect for the rights, equality and diversity of all without discrimination; and
- Educate children and young people to live and participate in a changing world, so that they value and respect difference and engage positively with it, taking account of the ongoing intercommunity divisions arising from conflict and increasing diversity within our society; and
- Equip children and young people with the skills, attitudes and behaviours needed to develop mutual understanding and recognition of, and respect for, difference.

It is our contention that the experience of Shared Education in Ballycastle more than fulfils the aims and objectives of the CRED policy. However, it may be the case that this has been largely by default as opposed to design. The catalyst which initiated the partnership and is still at its heart, is to have a pragmatic relationship which best meets the educational needs of post primary pupils in Ballycastle and the surrounding area. In our locality, this is best achieved through Shared Education. As long both schools continue to successfully meet this need and achieve good outcomes for all pupils then the partnership will prosper. However, if parents or guardians lose faith in the educational capabilities of either school then the partnership will struggle. The societal and cross community benefits which have developed for our partnership are strong. However, they would be negatively impacted if confidence was lost in either school.

Appendix One Making the Partnership work in Ballycastle

The essence of Shared Education in Ballycastle has been present for many decades. The partnership has been nurtured and developed on a basis of **joint need** and mutual respect and a desire to develop in an organic and sensitive way.

A desire to best meet the educational needs of post-primary pupils in the area, has resulted in a sense that the two main denominations and communities in Ballycastle and the surrounding area are closer together. This has obviously been benefited by increasing social and political stability over a number of years.

Promoting Standards and higher levels of achievement

Of key importance in our Shared Education partnership is expecting, setting and communicating high standards of teaching, and achievement for both teachers and pupils. Promoting a culture of high expectations and success from all pupils, of all abilities, is fundamental to the success of both schools and the partnership. Fostering and sustaining a work ethic within the schools among the pupil body is again central. Closely monitoring on an agreed regular basis, the standards of work, effort, tracking and target setting for each pupil and sharing the results with pupils and their parents. Frequently communicated to provide immediate feedback to pupils on their progress and allowing parents to feel part of the achievement process. Hard working pupils are rewarded and recognised – ‘there is no drug like success’! We jointly continue to develop the effective use of data to inform target setting, and we see further potential in developing this. It is the level of success achieved by pupils in both our schools which provides the ‘cement’ that sustains the partnership

As Senior Leaders we feel it is important to be aware of our own need to develop professionally and to work effectively with others. We are continually striving to develop a collegiate approach among our staff towards the work of the partnership. Teachers work together to enable staff to be more aware of whole school issues such as discipline, extra-curricular enrichment activities, and raising standards. This means that the partnership works as a team for the good of all the pupils involved. Enabling senior colleagues to have their leadership skills fully realised and utilised to empower them to develop their strategic views and opinions is also essential.

Well being

A culture of pro-active Pastoral Care and a firm, fair and compassionate approach to discipline is very important to pupils, parents and guardians in both schools. Maintaining effective discipline in the schools avoids many time-consuming problems of a pastoral/behavioural nature which dissipate teachers’ energy; frustrate both pupils and their parents and which dilute the education and sharing process. These standards come from the top and need to be implemented in a firm, fair, consistent and compassionate way. In practice this means:

- Daily exchange of information eg absentees and events etc.
- Close pastoral contacts with Heads of Year and scheduled meetings.
- Regular joint Departmental Meetings for subjects sharing teaching.

- Btec Meetings – Consortium arrangements in place.
- Co-ordination of Parents' Afternoons with parents going to each school to speak to teachers.
- Joint 6th Form Student Council
- Leadership Awards
- Sports coaching training

As our partnership has grown and become more embedded the requirement to avoid needless administrative and systemic barriers has been considered. We have taken steps to minimise issues but this is an ongoing challenge and needs to be constantly monitored, evaluated and reviewed.

Both schools now:

- Endeavour to synchronise holidays and Staff Development Days.
- Close co-ordination and co-operation in timetable construction and curriculum planning.
- Close liaison between Principals in relation to staffing requirements
- Occasional sharing of facilities eg Assembly Hall.
- Collaboration in relation to school improvement this has included alignment in relation to reporting times and systems, target setting and pupil tracking procedures.
- Regular joint staff development and training.
- Aligning of key objectives for PRSD.

The benefits of shared education have been:

- The partnership enables the schools to meet Entitlement Framework requirements.
- Pupils of both schools benefit from a broad range of curricular choice, allowing them to make the most of their talents and abilities.
- Staff benefit from mutually supportive networks, developing next practice.
- Staff, pupils and parents from different backgrounds interact in a sustained, regular basis.
- Societal and economic benefits.
- Joint Board of Governors Sub-groups meet to consider the key aspects of collaboration.
- Careful consideration is given to joint School Development Plan objectives.

Another enabling factor in the development of Shared Education has been engaging meaningfully with other external agencies in the local community. This is central to the dynamics that exist in the town of Ballycastle. For example charities, schools, churches, social services, the PSNI, Council etc all have their own agendas, but the combined synergy of these interactions does benefit significantly certain individuals in our schools and in the community. If co-ordinated and funded appropriately these combined actions can bring significant benefit to shared partnership. Finding the time to foster

these relationships is essential to the idea of partnership, sharing and networking. It can be difficult to find that time, but it is highly important.

It is a key priority in both Cross and Passion College and Ballycastle High School to have cognisance of the need to address potential underachievement in disadvantaged communities. Both schools serve a wide hinterland which has significant pockets of social deprivation. Meeting the needs of this constituency is important to maintaining our partnership. Of equal importance is meeting the aspirations of parents and pupils from other socio-economic backgrounds. Both schools are highly aware of this and as such also promote an ethos which closely aligned to a key area of securing accountability.

Both schools place importance on the monitoring of examination statistics and bench marking data which is necessary to reveal extent of any problem. Also, to promote and develop a culture in the partnership of self-reflection and school improvement by making effective use of the data that is available.

Both schools have in the past in offered supportive literacy and numeracy classes to pupils showing underachievement in the first three years. Also, the work currently underway in developing the use of Cross Curricular Skills for Levels of Progression does have the potential to further support literacy and numeracy, within and across the curriculum of both schools. The appointment on a joint basis of teachers to support Literacy and Numeracy as part of the Signature Project has proven to be successful and potentially provides a model for further development.

Both schools endeavour to make effective use of ICT resources to support literacy and numeracy and promote effective teaching and learning. This emphasis, coupled with purposeful whole class teaching and where appropriate, individual personalised support, is an attempt to ensure all pupils are supported to reach their potential. Work is currently on going with C2kni to develop the Partnership Exchange procedure which will permit easier access to staff and pupils in both schools to a wider range of C2k ICT based systems and resources in both schools.

The partnerships systems which relate to the review of performance and provision are constantly evolving and developing and being tweaked! The benefits at micro (school) and macro (system) level could be significant. But these must be managed within the dynamic, vibrant environment that is a school. We need to secure a balance, with the restrictions and pressures of time constraints and not losing sight of the fundamental importance of positive relationships in bringing about effective change.

Securing accountability within the context of Department of Education's School Improvement Policy – Every School a Good School The and 'Together towards improvement' – especially the latter - are good publications since they spell out what good practice looks like on the ground. The publication by the Education and Training Inspectorate of; 'Quality Indicators for use in the evaluation of IFI Sharing in Education Funded Projects' has also been a useful enabling tool.

Both Principals and Governors are very grateful for the effective practical support which is essential from external agencies. PEACE 3 funded projects, the Shared Education Project (Atlantic Philanthropies and Q.U.B.) and the North Eastern Education and Library Board funded Peace, Inclusion, Reconciliation, Citizenship and History Project (PIRCH) have been beneficial recent vehicles in moving forward with our Shared Education Partnership and collaborative arrangements. However, continued support from CASS, CCEA etc to support effective and co-ordinated implementation of our strategies is required. There is a real danger of overwhelming staff, which can create confusion. Gaining and retaining staff ownership of initiative implementation is essential to sustaining a

positive working culture in our schools and partnership. The situation is not helped when changes come about which necessitate re-planning and re-scheduling.

A key example of this barrier relates to funding for the Entitlement Framework. The uncertainty which surrounds this critical supportive scaffold of our partnership is most unhelpful. Senior Leaders and Governors need clear direction and information relating to funding which is required to sustain our collaborative arrangements.

The quality of support for schools from RTU in relation to Shared Education is important. The assistance provided to schools is particularly important at a time of significant staffing changes within a school. Anything which eases succession planning and transition in relation to leadership/teaching changes within a school is important. This takes on even more critical significance in a Shared Education Partnership when it is more than one school which can be impacted by significant staffing changes.

Both Principals feel that they must comment upon the fact that that both Ballycastle High School and Cross and Passion College are considered to be a relatively successful schools in an area of social deprivation. This fact is testament to the hard work of staff, parents and pupils – sometimes in difficult physical conditions. We are in dire need of suitable, effective and indeed at times, a healthy and safe working environment. Our staff and children should not be made to feel second class in relation to their school buildings. We feel it is important at this time of financial constraint, that we should not lose sight of the urgent need for school refurbishment if not replacement of schools.

Both schools require capital investment in order to facilitate the partnership achieving its full potential. It is vital that the statutory bodies continue to support the schools in facilitating proposals for bespoke new builds and shared centres that will allow the partnership to develop fully. The North Eastern Board Area Plan for the post-primary schools in Ballycastle and the Department of Education announcement in July, relating to the Shared Campuses Programme have been welcomed by all key stakeholders. It is important that these commitments are fulfilled as soon as possible.

Appendix 2**SHARED EDUCATION IN MOYLE****Core Values**

It is really important to us that the partnership;

- Is all inclusive
- Caters for young people of all abilities and aptitudes
- Respects and promotes the unique identity and ethos of each school
- Reflects the needs and aspirations of the wider community
- Is pupil centred – the needs and well- being of young people at the centre
- Reaches out to and supports young people who are marginalised and vulnerable
- Embraces the richness of difference
- Promotes excellence – high standards
- Has the absolute confidence of the community
- Enables each young person to have a strong sense of loyalty to and pride in their own school
- Enables each young person to have a strong loyalty to and pride in the partnership

What is the purpose of the partnership?

- To enhance educational opportunities for all young people in post primary education in North Antrim – enhancing choice – promoting quality
- To improve outcomes for young people at Key Stages 4 and 5
- To make the best use of educational resources available
- To promote and nurture mutual respect and understanding as well as community cohesion
- To provide the local and wider community with young people who have the knowledge, skills and attitudes to make value contributions to the economic and community life the area

Ballymena Borough Council

Committee for Education Inquiry into Shared and Integrated Education

Written Evidence from Ballymena Borough Council

23 October 2014

Policy.unit@ballymena.co.uk

Inquiry Into Shared and Integrated Education Committee for Education

The Committee for Education is undertaking an Inquiry into Shared and Integrated Education and is seeking written submissions from interested parties by 24 October 2014.

The Terms of Reference are as follows:–

The Education Committee will:

- Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases – including consideration of the need for a formal statutory definition and an obligation in Statute to facilitate and encourage Shared Education;
- identify the key barriers and enablers for Shared Education and Integrated Education;
- identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;
- Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED (Community Relations, Equality and Diversity in Education) Policy;
- the need to engage more effectively with parents/carers; and the role of Special Schools;
- and
- Report to the Assembly on its findings and recommendations by Spring 2015.

Shared Education

“Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

In 2012 the Ministerial Advisory Group on the Advancement of Shared Education in Northern Ireland, states the organisation and delivery of shared education must :

- *Meet the needs of, and provide for the education of learners from all Section 75 categories and socio-economic groups together;*
- *involve schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and*
- *deliver educational benefits to learners, promote the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.”*

Submission

Ballymena Borough Council is of the view that there can be many positive impacts of Shared Education, as defined above. Shared Facilities/Campuses/Equipment has clear advantages for schools and the wider community in terms of resourcing/funding and efficiencies, which are becoming ever more important in the current economic and budgetary climate.

- Shared Education can provide an important mechanism for ensuring that children and young people have access to a wider range of subjects and courses;
- collaboration between schools can provide an effective means for teachers to share good practice and engage in professional development; and
- research shows most children and young people, and their parents and/or care-givers, involved in Shared Education initiatives find the experience a positive one and encourage more positive attitudes and relationships between children and young people from different backgrounds.

However, Council are of the view:

- It is important that particular models of collaboration are not imposed on schools but that they are allowed to develop organically, reflecting the needs and situations that exist at a local level;
- the existing funding model for schools tends to create competition between schools and can inhibit the extent to which schools feel able to genuinely collaborate;
- there are clear resource implications for schools and other educational institutions wishing to engage in Shared Education, and thus some mechanism for supporting and incentivising schools to be involved in cross-sectoral collaboration is required;
- school collaboration is not easy and presents significant practical challenges in relation to matters such as timetabling, curriculum planning and transport and thus strong leadership within schools is essential; and
- Council would also welcome a statutory definition of Shared Education.

Integrated Education

The Northern Ireland Council for Integrated Education (NICIE) defines Integrated Education as follows:

“Integrated Education brings children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school. Integrated schools have been an alternative to an educational system in which most children attend largely religiously separated schools.

Integrated Schools differ from other schools in Northern Ireland by ensuring that children from diverse backgrounds are educated together every day in the same classrooms. Through their Admissions Criteria they enrol approximately equal numbers of Catholic and Protestant children, as well as children from other religious and cultural backgrounds.

It is important to note that Integrated schools are not secular but are essentially Christian in character and welcome all faiths, which aims to provide children with a caring and enhanced educational experience. Empowering them as individuals is seen as a priority so that as children grow and mature, they'll be able to affect positive change in a shared society.”

Submission

Whilst Ballymena Borough Council appreciates the concerns and apprehensions that exist towards Integrated Education, Council generally believe that Integrated Education may represent a positive choice for some parents and pupils. In 32 years the number of children educated in Integrated schools has grown from 28 pupils in 1981 to nearly 22,000 today. This has been mainly brought about by a desire for a different choice of education for children and young people.

A recent Millward Brown survey found that 83% of parents in Belfast believe that Integrated Education is a vital part of building a shared future in Northern Ireland. Over 70% of parents believe that adequate funding for Integrated Education should be made available, with enough places available for those who wish to send their children to an integrated school. Council would support this view but we must emphasise that it is essential that parents and pupils are free to choose other forms of education as they wish.

Ballymoney Community Resource Centre

Ballymoney Community Resource Centre

For the community, by the community, with the community.

Submission to The Education Committee in relation to Shared/Integrated Education on behalf of the Ballymoney Community Resource Centre, Community Education Steering Group.

Ballymoney Community Resource Centre Community Education Steering Group met on 02.10.14 to discuss and contribute towards the inquiry response into Integrated/Shared Education. The BCRC Community Education Steering Group was initially formed to Those groups represented included Causeway Older People's Strategy Team (COAST) which was represented by Mary McCusker, Integrated Education Fund (IEF) was represented by Eleanor Kyle, Coleraine Education Community Project (CECP was represented by Paul McLernon), Focus on Family was represented by Brendan Patterson, Millburn Community Association was represented by Billy Eilis and Ballymoney Community Resource Centre was represented by Angela Mulholland.

The guidelines for the Inquiry are The Education Committee will:

- Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases – including consideration for the need for a formal statutory definition and obligation in statute to facilitate and encourage Shared Education.
- Identify the key barriers and enablers for Shared Education and Integrated Education.
- Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes.
- Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools.
- Report to the Assembly on its findings and recommendation by Spring 2015.

The Committee agreed to set the deadline for submissions to the Inquiry as 24 October 2014

Here is the following contribution and record of discussion from the scheduled meeting.

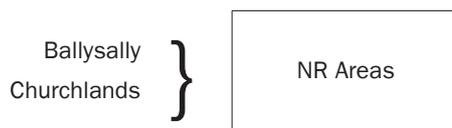

Two local Grammar Schools within the town of Coleraine were discussed (The Coleraine High School and The Coleraine Institute and it was stated that where a student attending these schools comes from can and does have a detrimental effect on their overall life experience within the education system. It was felt that the role of Community Education has to deal with the effect of this behaviour and that sometimes this form of education is the only route out of deprivation and low self esteem for not only the young people concerned but also for parents and adults alike.

It was recognised that there is a lot more support for students within the Primary School model and the Ballysally Nurturing Programme was held up as a model of best practice as most of the support is facilitated on a one to one basis, however once students reach secondary school level this support is seen to be delivered more on a speed dating level. Participants agreed that collaboration is important and vital to ensuring sustainability for programmes and projects alike. A current example of best practice in collaboration is the current programme Coleraine Education Community Project (CECP) which was set up in April 2010 in collaboration with ten of the schools and nurseries in the Coleraine N. R. Areas. Although this funding is only up to March 2015, it was agreed that programmes like CECP and it's Vision to build bridges between Coleraine schools and the communities they serve, to help families access opportunities, to realise their potential, and develop stronger,

independent and confident communities are vital to sustaining the concept of both Integrated and Shared Education.

It was recognised that there are at present 62 grant-aided integrated schools in Northern Ireland (with a total enrolment of 21,500 pupils, or 7 percent of total pupils in 2012/13), made up of 38 grant-maintained integrated schools and 24 controlled integrated schools. This result is still relatively low and needs to be addressed. However it was agreed very strongly that this issue has to be addressed however not at the expense of the standard of education for any student.

In relation to formal education it was stated that mature students were not made to feel particularly welcome whereas within the Community Education platform, everyone was made to feel welcome. This then led to a discussion on why kids are leaving both Primary School and indeed Secondary School levels with little or no qualifications. It was recognised that the concept of Integrated/Shared Education needs to get into the heart of the programme in the home. The home environment has to change and be part of Integrated Education and the concept of Working Class Kids getting Working Class Jobs has to be challenged. Just because there is no history of someone in the family not having achieved or having gone to University, should not be the same aspiration of the young people growing up within those areas. It was noted that particularly within the Millburn Estate 30% of the kids attending the school are from the estate, therefore this creates in itself an opportunity for integration amongst young people from different areas in Coleraine and wider afield. This also creates an opportunity for schools within the Neighbourhood Renewal to interact and take part in programmes designed to promote integration and shared learning.

Community Education can provide a platform within Neighbourhood Renewal areas for both Integrated Education and Shared Education. The role of the Community Networks/Community Groups and Associations is to co-ordinate and deliver what is needed on the ground. The role of Community Education should not be about any personal agenda but should be about the participants and those availing of the courses and objectives. The concept of a natural/shared space is at the core of Community Education. People need to feel safe, free from barriers and any special needs also need to be addressed. The discussion returned to the question of why is the current education system not working? Why are young people leaving without qualifications? The concept of working for yourself/learning apprenticeship skills and opportunities to start social enterprises that address real social issues can all be achieved through the medium of community education with a strong focus on integration and shared learning. It was also recognised that within different communities, engaging with parents is vital to continuing the concept of integrated and shared education.

Models of Good Practice were then discussed, The Aspire Programme in particular.

Aspire is a collaboration of local grass-roots community groups operating in the Coleraine area. Currently there are five core Aspire members with a much wider support from other local partners. Part of Aspire's remit is to deliver relevant community-based training (accredited and non-accredited) for the benefit of local communities. What has tended individual groups within areas will have Training/Programme Workers as paid employees whose main role is to generate programmes and participants to attend that individual group. Where Aspire aims to be different is by providing a genuine beneficiary-led approach to programme delivery - this means identification of local need and then provision of programmes to meet that need. As all the groups under Aspire are working towards the same goal, it means that where the programmes are delivered and by whom is largely irrelevant so long as the beneficiaries are getting what they need and the programmes are of the required quality to meet those needs.

This approach to integrated education puts the learner at the centre of the process as opposed to the more traditional approach of specific centres trying to attract people and courses solely within the confines of their own work. The expected result of this work will be that as well as the individual beneficiary gaining the skills, qualifications and learning that they desire, furthermore local organisations will develop genuine partnership working in terms of future delivery of programmes and services. The long-term aim of Aspire is to have a Programme Officer, working centrally and not aligned to any particular group. This role would involve identifying educational and training needs within local and wider communities and then engaging participants in programmes that are already running in the local area, or where there are gaps in programme delivery provision, setting up these programmes in partnership with the most relevant local delivery partner in the area. It is anticipated that this approach will provide a far more enhanced service for local beneficiaries than the current competitive arena that aims to secure participants for isolated courses.

Another approach that Aspire is taking is to ensure that access to relevant programmes and courses is accessible for all so there is a major emphasis on roles that encourage participation through person-centred, relationship-developing, pre-programme support. Given the barriers to education, whether through prior negative experiences from formal education processes or through the wide variety of other causes (family commitments, social isolation, lack of confidence, fear, lack of transport and other resources, etc), the aim of Aspire is to work alongside people to gently remove these barriers, resulting in the right stage and time where the individual feels comfortable and motivated to commit to a programme of learning, either formal or informal.

We all have a responsibility to our young people? There is a real challenge out there to keep skills within our own area, to ensure a vibrant and sustainable community for the future. Community Education helps to break the class issue down within the education system. It was generally agreed that the cost of uniforms were too dear, particularly when you have four or five children to send out at the start of each term. The concept of discrimination was also discussed and on how we measure success? It was generally agreed that valuing apprenticeships and focusing on opportunities to develop social enterprises was the way forward.

Submissions should be made by email to committee.education@niassembly.gov.uk

Beacon, P – Concerned Parent

The real inquiry should be into why LISNASKEA HIGH SCHOOL was closed when it was already doing a 3 year partnership with other ccms schools in the area.

This is so sad now when it is going to be made mainstreamed. It is definitely a good idea, it is a good chance for all children getting a chance to learn together.

My daughter was at Lisnaskea High when it closed last year, she decided to go to an integrated school, and total loves it. It is well organised and there is no fuss made by different religions . All are treated equal, which is the way it should be,

Phyllis Beacon

Towards a Learning City

Belfast Education and Library Board

Response to a request for written evidence on Shared/Integrated Education inquiry made by Northern Ireland

Assembly Committee for Education.

October 2014

Shared/Integrated Education inquiry

The Committee for Education is undertaking an Inquiry into Shared/Integrated Education. The terms of reference for the Committee's Inquiry are set out below.

The Committee will:

- Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;
- Identify the key barriers and enablers for Shared Education and Integrated Education;
- Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;
- Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools; and
- Report to the Assembly on its findings and recommendations by Spring 2015.

Introduction

Section 1

Belfast Education and Library Board

The Belfast Education and Library Board was established in 1973 and from this date has made significant contribution to the changing educational landscape of Belfast through innovative, creative and dynamic initiatives and support in education and youth contexts.

As the local authority the board:

- takes account of the need to provide pre-school education;
- ensures that there is adequate provision for pupils of compulsory school age;
- makes suitable provision for children who have been identified as having special education needs; and
- contributes to the moral, spiritual, cultural, intellectual and physical development of the community.

The board also secures the provision of adequate facilities for recreational, social, physical, cultural and youth activities and of other services ancillary to education.

The Belfast Education and Library Board is committed to providing a quality education and youth service which contributes to life-long learning for all the people of Belfast. As an education and library board we provide services to all school sectors at all levels – controlled, maintained, voluntary, Irish medium and integrated sectors. As a board we have a proven record of supporting schools programmes that have involved young people and schools engaging in shared education.

Section 2

Response to the terms of reference

2.1 Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education.

Comment:

1. Educational bodies and institutions will have their own definition and understanding of shared education based on their individual contexts. BELB believes that a clear and concise definition of Shared Education that is understood and shared by all is an important starting point for dialogue and development of a holistic approach to a system wide definition of shared education programmes. A clear nomenclature around shared education should help to facilitate understanding and help to allay misconceptions.
2. Recent definitions include:
 - ‘Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.’ (*Minister’s terms of reference and accepted by the Ministerial Advisory Group*).
 - ‘Working definition: shared education refers to schools from different sectors working together in a sustained process ranging from two or more schools making shared use of specialist facilities, through to coordinated timetabling, and pupils taking classes across a network of schools.’ (*Professor Colin Knox University of Ulster*).

- ‘Shared education involves young people from diverse backgrounds learning together, enabling them to recognise and value diversity and develop higher levels of mutual understanding. It refers to methodologies and environments where pupils interact by sharing, building on and widening one another’s knowledge, skills and experiences and beginning to reconcile differences to promote a shared future. Shared education is more than just a shared space.’ (*A Final Evaluation of the International Fund for Ireland’s Sharing in Education Programme 2013*).

3. Each of these definitions highlight key aspects of shared education:

1. It is important that the definition indicates that Shared Education is not solely about promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion (important as they are) but also emphasizes (first and foremost) that it is about delivering educational benefits to learners as highlighted in the Ministerial Advisory Group definition. The wider evidential research demonstrates clearly that collaboration between schools can play a significant role in terms of school improvement, related to:

- pupil performance (attainment, engagement, motivation and behaviour)
- teacher development (motivation, morale, practice enhanced skills relationships)
- leadership economic improvements (sharing resources)
<http://www.schoolsworkingtogether.co.uk/reports.html>.

This explicit link to learning in part should go some way to reassuring schools and parents about the fundamental purpose of shared education.

2. It is to an extent a given that it involves schools from different sectors working together, however within the historical context of Northern Ireland this is often taken to mean schools/pupils from a Protestant and Catholic background. Given the greater diversity of pupils in NI schools from different religious and cultural backgrounds any definition should reflect this, similar to the Sharing in Education Programme definition. Possibly cognisance should be taken to the fact that there is increasing diversity between schools from the same sector.

3. A definition of shared education should also indicate that shared education is not simply about a ‘one off’ event, a series of activities/events or lessons but rather is a sustained process to embed approaches/strategies (whole school approach) as indicated by Professor Colin Knox.

4. Any definition needs to reflect the changing composition of society and the increasing diversity of the population in Northern Ireland. We are living in an increasingly multicultural society and there is much work to be done to achieve respectful and welcoming relationships with people from different cultures. Shared education needs to be about more than the two main communities. Globalisation has demonstrated the interconnectedness of people’s lives around the world.

2.2 Identify the key barriers and enablers for Shared Education and Integrated Education.

Comment:

Enablers

1. There needs to be clear and committed leadership to the values and principles of shared education from the Board of Governors, principal and senior leadership team. (whole school approach). This should be linked to appropriate professional development to ensure staff are trained and developed.
2. The Northern Ireland Curriculum provides a sound foundation through a broad and balanced curriculum with opportunities in areas such as PDMU, Local and Global

Citizenship and other aspects of Learning for Life and Work, for pupils to address issues such as race, gender, diversity etc. (section 75 categories). All subject strands but in particular, Religious Education, History, Geography, English, Languages, Drama and Art and Design provide opportunities for teachers to develop curriculum experiences that explore identity, diversity and promote reconciliation, developing the attitudes and dispositions. However, some aspects can be lost when 'educational performance' becomes an overriding factor. (Blocker - many of these areas in the former group are often allocated less curricular time).

3. A fully resourced and sustained programme of continuing professional development for governors, school leaders, and teachers to support, develop, promote best practice and identify next practice in the NIC.
4. Comment could be made in ETI inspection reports on schools with existing 'shared education' elements active in the school whether through formalised programmes, curriculum provision, extracurricular provision or community links. Highlighting effective practice.
5. The education and library boards (education authority) as part of its work with schools could identify and disseminate effective practice.
6. Schools and organisations could evaluate consistently the impact of the work of reconciliation on the young people's attitudes, behaviours, understanding and skills to be able to demonstrate clearly the progress of young people and to inform future planning.
7. When compiling future school development plans that targets relating to "Shared Education" priorities are identified and detailed. This could relate to point 6 above.
8. The work of the Area Learning Communities could be extended and developed to include a greater focus on shared education. A similar approach could be extended to primary schools (Primary Area Learning Communities).
9. A more collaborative/partnership and focused approach between the education and library boards and schools at induction/early professional development and continuing professional development to ensure high quality professional development opportunities that encourage teachers and support bodies learning and sharing together.
10. Collaborative approach between the school(s), parents, local community groups, statutory bodies in developing programmes which are contextualised and develop out of local community and school's needs. For example, since the late 1990s Edenderry Nursery and Holy Cross Nursery have established a model of collaboration in education across an interface area in North Belfast. The project runs exchange days/play days between schools. This involves a full class from each school travelling to spend a day in the other school. The programme is focused on enabling children to meet and play with their 'buddies' and the day runs like any other with children engaging in circle time, play, story time etc. A joint parents' programme is delivered in tandem with this. Parents participate jointly in cross community workshops, cookery programmes, parenting programmes, arts and craft activities etc within both nursery settings.
11. The confidence of parents and pupils
 - Pupils and their parents need to be absolutely confident that the sharing arrangements will work for their pupils. Where there are shared arrangements, pupils and their parents must be kept well informed about the opportunities available through sharing, arrangements for monitoring progress, meeting teachers and so on. The arrangement needs to be underpinned by Service Level Agreements,

robust protocols and shared policies relating to key areas of shared educational experience.

12. The strength and quality of the partnership is a crucial enabler. Shared education will flourish in a strong partnership where:
 - each partner feels equal and is confident of the purpose, worth and value of their own institution and of the contribution it can make to the success of the partnership;
 - history, ethos and value system in each school is understood and respected;
 - Shared resources, such as a teacher;
 - Building capacity, Board of Governors, principals and teachers;
 - Planning together (teachers).
13. All area based plans should also give cognisance/reflect a degree of shared education campuses.
14. School development proposals should have a section to indicate how the proposal will contribute to shared education.
15. Shared education placements between initial teacher education Institutions to enable student teachers to spend an 'extended' time (or) take part of their course in another institution.
16. Modelling of 'Good Practice' in shared education principles across the education sectors – increasing collaboration between the education support bodies.

Barriers

1. Work may be needed in persuading schools that Shared Education programmes/ sharing campuses will lead to real and measurable improvements in the quality of education that they provide and in raising educational achievement among their pupils.
2. Depending on the extent and nature of shared education, some schools may perceive it as a threat to their 'identity'/'ethos.' In Northern Ireland there is a very strong 'loyalty' factor to the school attended.
3. With changing demographics, schools have concerns about falling rolls and this has to a certain extent placed some schools in 'competition' with each other for pupil places. This may mitigate to the extent as to how far some schools may feel they could share and collaborate.
4. More beneficial if all participating schools share the one overall school site. By doing so you will greatly reduce potential transport, budgetary, supervision and timetabling issues.
5. Parental Support - It is essential that parents have totally bought into the proposed partnership and fully understand the process and intended learning outcomes. The process needs to be transparent.
6. Collaboration between schools attended mostly by children and young people from affluent backgrounds and schools attended mostly by young people from less affluent backgrounds may also present a challenge in terms of finding common ground.
7. Variability among schools in terms of educational outcomes may also present a barrier. For example, if there are two post-primary schools (either grammar or non-grammar) situated in the same locality, and one is a much 'higher achieving' school than the other, there may be a reluctance on the part of parents, teachers and senior

management in the 'higher achieving' school for pupils from the two schools to learn together in case this has a detrimental impact on pupils' educational attainment.

8. Funding may be identified by schools and other establishments as a major factor affecting whether a school can establish or maintain a shared education initiative. Initiatives may be programme-funded and therefore may only have a certain lifespan, and schools may therefore have to find other avenues in order to maintain provision.
9. A number of practical considerations may mitigate against some schools fully engaging in shared education programmes/initiatives, for example:
 - accountability for pupil outcomes;
 - timetabling issues;
 - travel time between schools;
 - safety and transportation issues;
 - parental consent;
 - staff time and resources;
 - some schools may perceive that other schools benefit more than they do;
 - Staff time and resources.

2.3 Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes.

Comment:

1. Significant work has already been undertaken in this area in identifying and analysing models of Shared Education, for example, 'Education and a Shared future. Options for sharing and collaboration in Northern Ireland schools.' (O'Sullivan, O'Flynn and Russell. <http://www.schoolsworkingtogether.co.uk/documents/education-and-a-shared-future.pdf>). As a Board we recognise the implications of such reports for the support we provide to schools across all sectors.

2.4 Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools.

Comment:

1. The Advancing Shared Education document (2013) states one of the values that stem from the definition of shared education is:

“An emphasis on developing the whole child so that they have a strong sense of their own identity and an understanding and respect for others and that they are able to develop a wide range of knowledge and skills to enable them to make a full and positive contribution to building a prosperous, open, diverse and inclusive society”.
2. This is closely related to the key objectives of the CRED policy (2011) which are:
 - ensure that learners, at each stage of their development, have an understanding of and respect for the rights, equality and diversity of all without discrimination;
 - educate children and young people to live and participate in a changing world, so that they value and respect difference and engage positively with it, taking account of the ongoing intercommunity divisions arising from conflict and increasing diversity within our society; and
 - equip children and young people with the skills, attitudes and behaviours needed to develop mutual understanding and recognition of, and respect for, difference.

3. The CRED policy advocates a long term, meaningful, cross-curricular approach to Community Relations, Equality and Diversity. While curricular areas such as PDMU, Local and Global Citizenship and Learning for Life and Work already provide a framework which enables teaching and learning relating to these areas to be examined and developed the CRED policy encourages all educational settings to recognise how others curricular areas such as History, World Around Us, Literacy, Music and The Arts can also complement and extend this learning.
4. The delivery of training to Teachers, Youth Workers and Board of Governors has been a central element of this policy. This training ensures that staff has the knowledge, resources and confidence to develop the Policy within their school setting. Fundamental to the success will be the delivery of a platform of training programmes which ensure a co-ordinated approach which celebrates and learns from best practice. CRED is not currently embedded within initial teacher training however it would be important that is developed as we move forwards with any training relating to Shared Education or CRED.
5. The further development of links with community groups, specialist organisations and parents/carers has been a key aspect of the CRED policy which is very closely embedded within the Shared Education philosophy.
6. The CRED enhancement funding scheme has enabled schools to access resources to assist them to provide meaningful opportunities for groups of children and young people to engage with one another, develop their knowledge and skills and allow them to examine their values and beliefs. Shared Education will enable pupils to engage in learning in a shared classroom however a priority must still be given to ensuring children and young people have the opportunity to develop an understanding and appreciation of the diverse society existing in Northern Ireland. The allocation of additional funding and dedicated support officers to enable this is something which has proven beneficial as part of CRED and is worthy of consideration within the development of Shared Education.
7. The CRED Policy is nearing the end of its initial 3 year business plan. While it is still essentially a recent policy which many schools and early years settings are still adapting to and developing it has resulted in large number of staff attending Community Relations, Equality and Diversity Training, the collection and development of support resources, the allocation of funding and the celebration of examples of best practice. Future developments relating to both CRED and Shared Education may benefit for the establishment of policy links or shared practice.
8. There is a need to widen pupils' horizons and ways of thinking beyond local contexts. The development of cultural awareness, dialogue and understanding is of central importance in preparing young people for adult life. This could be achieved through a variety of approaches, for example, through the uptake of programmes such as Young Social Innovators www.youngsocialinnovators.org. There is a need to embed a global dimension in the curriculum as this should lead to school communities developing greater awareness of the wider world and less stereotypical views about others.

Blackwater Integrated College

22 October 2014

Dear Mr McCallion

I am writing on behalf of the Board of Governors of Blackwater Integrated College in response to your request for written evidence with regard to Shared and Integrated Education.

Lagan College in Belfast and Shimna IC in Newcastle were oversubscribed and parents, in particular those whose children attended integrated primary schools, wanted to ensure the choice of integrated post-primary provision in the mid-down area. Rowallane IC opened in 2006 as an independent school, funded by the IEF. Unfortunately Rowallane did not receive government backing due mainly to the policy of proposals being considered in relation to likely impact on nearby schools, rather than in the light of parental demand. Undeterred in the second year of the school the parents sought another integrated option for their children.

Blackwater IC opened in September 2008 as the result of bringing together the independent school Rowallane Integrated College and the former Down Academy Controlled Integrated High School.

Blackwater IC is a school which operates in a building which is less than satisfactory. The current school was built for 250 pupils. If we were to meet our enrolment of 400 there would be serious health and safety issues! The lack of suitable facilities makes it more difficult to attract students.

I believe that Shared Education and Integrated Education are different. Integrated Education is full immersion sharing in which the children and young people are given the opportunity to learn about and from each other in their daily interactions. They learn to get to know each other as people and not as labels.

I have personal experience of shared education having attended a mixed school. The school was, however, single identity in its ethos and practice.

In addition, while working in the Controlled Sector, I was involved in a number of cross-community projects. While these displayed many examples of good practice and certainly had a worth and value, they had little, if any, long term impact.

Any legislation to support Shared Education must not be at the expense of Integrated Education. Integrated Education is more effective in bringing children and young people

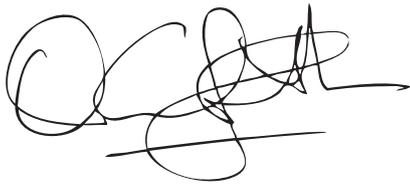

Blackwater Integrated College PO Box 42 Downpatrick BT30 9WZ
T. 0845 388 6875 - E. info@blackwateric.org - www.blackwateric.org

together and is more financially efficient than retaining separate schools with the resulting need to duplicate resources.

The key barriers to the growth of Integrated Education have been a weak political commitment due to our existing divided political system and the ‘what we have we hold’ mentality of so many educational institutions. It is significant that a Judicial Review was needed to clarify the Department’s statutory duty and to remind the Minister to fulfil it.

Educating our children together from a young age gives the opportunity for education to heal division. It is time to find a sustainable way to bring children and young people together if we are to work “together, building a united community”. Integrated Education as the norm for our children and young people provides an excellent model.

Yours sincerely

A handwritten signature in black ink, appearing to be 'Olwen Griffith', written in a cursive style with a horizontal line underneath.

Dr Olwen Griffith

Principal

Bridge Integrated Primary School

Sir

As the Principal of Bridge Integrated Primary School, I feel it is appropriate for me to make a written response to the Committee. I have worked in Bridge IPS for 20 years and have had the privilege of being Principal in our school since 2005. Having grown up in a Catholic family and having attended Maintained schools, I was struck forcefully on entering the integrated school system, by the passion of the parents, staff and governors who led to its creation and maintained and encouraged its growth. This continues to be the case today.

Integrated Education inspires and achieves quality education alongside quality contact for the children who attend our schools. Our pupils are immersed in an ethos of respect for one another's communities from the outset of their attendance and from this grows curiosity and genuine interest in one another, without a need to suspiciously or negatively compare the beliefs, practices and cultures of a classmate or colleague. Friendships grow beyond the classroom and into the communities in which we live. Barriers, often formed through ignorance or as a result of community pressure, begin to be broken down and our pupils bring home a new message – that we can break the mould!

Shared education is a start – but must not be the end. It is imperative that fully fledged integrated schools, which are desired by parents, are allowed to grow and are facilitated and encouraged by the Department of Education. Shared education is a model of partial contact and this is not enough if the communities in our country are to grow in knowledge and trust of one another.

With thanks for your consideration of my comments.

Teresa Devlin

Bullick, E Retired Teacher

The Northern Ireland Assembly's Education Committee Inquiry into Shared and Integrated Education

A Personal Journey

Although now retired my teaching career included 14 years as principal of a controlled primary school with 120 pupils, two years as an EMU Development Officer with a local ELB and 16 years as principal of an urban integrated primary school with 365 pupils. I hold an MA in Peace and Conflict Resolution Studies.

During my time working in EMU I had the opportunity to host a Danish headteacher on an exchange programme. In Denmark the vast majority of pupils are simply enrolled in the local community school nearest to their home. At the end of his stay he wrote the following:

"I find that here in NI you separate your children on almost every conceivable pretext. You send them to different schools based on age, ability, gender, religion, social class and more recently based on preferred language. If we were to introduce such a system back in my own country I fear that children might grow up to be suspicious or ignorant of each other. They might even grow up to hate each other. In a country where inter-communal mistrust is so prevalent I cannot understand why you would wish to take such profound risks with each new generation of impressionable young people."

This would not be an uncommon view. Our neighbours in Europe can see only too clearly what we apparently cannot see for ourselves. If an education system artificially separates groups of children during their most formative years they will indeed grow up in a state of ignorance and will be grossly ill-prepared for life in a dual-cultural or pluralist society.

We have provided and nurtured a system which has allowed vested interests groups and individual institutions to put their aspirations ahead of the needs of young people. We devise elaborate schemes to bring young people together through sporting and cultural initiatives yet we ignore the elephant in the room – our almost exclusively divided school system.

Each August we salve our collective conscience when we extol the virtues of our high achievers yet conveniently ignore the fact that our lowest achievers are amongst the poorest anywhere in Europe.

The Problem: Segregated Education

I departed the controlled primary sector because I became convinced that we were doing a disservice to our children. Year on year we were turning out pupils who were indeed numerate, literate and IT competent but who had no knowledge whatsoever about the other eleven year olds who were simultaneously leaving the maintained primary on the other side of the town. Education has to be about more than mere academic performance. It must also be about how we behave towards our fellow man and how we relate to him/her. Institutional separation denies pupils the opportunity to build meaningful relationships with their neighbours and it is therefore harmful to society.

The Solutions

For the past thirty years there has been a growing awareness of the detrimental effect of segregation and tentative solutions have been sought.

(i) EMU

In the decade 1985 – 1995 many EMU projects were lightweight, unsustainable and unsustainable. There was insufficient contact for trust to build amongst either staff or students

so little benefit was achieved. Some of the better quality EMU projects however were akin to Shared Education in that they involved sustained twice weekly contact between classes over a lengthy period. At the end of the decade however the majority of initiatives were judged it to have been expensive experiments and logistically too complex to sustain. Teachers who had been responsible for so much additional planning were relieved when they could return to normal i.e. simply planning their own curriculum for their own students.

(ii) Shared Education

Despite its laudable objectives this initiative has to date only involved a tiny minority of students. Even if expansion were deemed a priority too few schools are currently physically close enough for shared education to take place. Buses travelling back and forth between schools is both a unwarranted expense and a logistical nightmare. Children apparently working collaboratively yet wearing different uniforms simply highlights the contrived nature of the exercise.

Schools are already complex institutions and teaching is already a stressful occupation. Combining groups of students for varying periods of time with different staff on different sites only adds to the complexity of the educational process. It may certainly be possible for some extra –curricular activities and it is certainly feasible at 6th Form but for the vast majority of students in the majority of schools meaningful Shared Education will not be achievable.

(iii) Integrated Education

The obvious solution is integrated education. Frustrated at the lack of government action parents took the initiative and created the current planned integrated school movement. Parents recognised that it takes sustained contact over months and years to create the atmosphere necessary for trust and mutual understanding to develop and it is only fully integrated schools which can offer this maximum contact time.

Integrated schools are the most cost effective strategy for creating and sustaining contact - there is nothing artificial or contrived about integration. Integrated schools do not dilute ethos nor do they shy away from difficult issues. Staff in integrated schools work together as a single team finding solutions to everyday issues. Together they devise innovative solutions to contentious events – *such as the election of a new Pope or the birthday of the Queen.*

It is sad reflection on our political and church leaders that it was left to parents to establish such schools. The 1989 legislation clearly states that DE should **encourage and facilitate** integrated education. In my view all it done to date is to merely **permit** integrated education.

“I do not know of any measures which would prepare the way for a better feeling in Ireland than uniting children at an early age and bringing them up in the same school, leading them to commune with one another and to form those little intimacies and friendships which often subsist through life”

Dr James Doyle, Roman Catholic Bishop of Kildare and Leighlin , 1826

Almost two centuries on we have yet to recognise and deal with the travesty of segregation.

Eric H A Bullick

Carr, A Concerned Parent

Dear Mr McCallion

24/10/14

I am writing in response to your request for written evidence with regard to Shared and Integrated Education. It surprises me greatly that 29 years since I, as a parent deeply committed to helping to create a society at peace, worked tirelessly and in a long term voluntary capacity to cultivate the first integrated primary school outside Belfast, All Children's Integrated Primary School, Newcastle, Co. Down and chaired the first meeting of a new parent's group to set in progress the development of Shimna Integrated College, next door, that there is so little understanding of the statutory duty to encourage and facilitate integrated education and the range of interventions to try and eliminate or drastically change the meaning of this duty.

Before I comment further on the areas of the inquiry which I can from deep commitment and personal experience contribute to, I share the story I wrote a few days ago for an up and coming publication about my journey.

All Children's Integrated Primary School, Newcastle, Co. Down, nestles at the foot of the Mourne Mountains behind the wall of what was originally a traditional Walled Garden, part of the Annesley Estate.

It would be hard to imagine a more perfect setting, the green of the forest and peaks of the hills on one side and the sweeping coastline of sea and sand on the other.

Today, 230 children, aged four to eleven, and reflecting the diversity of faith, culture and creed that is Northern Ireland, 2014, come together every day to learn, play, share and develop a caring understanding of one another.

And yet, All Children's only exists because a small group of dedicated parents and concerned friends came together in 1985. They were united in their belief that educating children together was important if Northern Ireland was to become a society at peace after so many years of violent conflict.

Anne Carr, is one of those founding parents and this is her story:

It was October 1985 when I read the small advertisement on the front page of our local paper, the Mourne Observer.

It invited all parents interesting in establishing a new integrated primary school in Newcastle, Co. Down, to a meeting in the community centre.

I had followed the news items on the group of parents who had a few years before established Lagan College and had been inspired by their determination and courage.

The mayhem of the "Troubles" had already deeply affected our lives in so many ways and as a young mother of three children, I was immediately drawn to the possibility of my children being educated locally with children of all faiths and none instead of the segregated education that was the norm.

I went to the meeting and found the room filled with parents from across our community divides, all passionate about the possibility of integrated education in our area.

The meeting was addressed by Belinda Loftus, a parent from Dundrum and representatives of the organisation All Children Together, a charitable group that had supported Lagan College in their endeavours and whose aim was to support parent groups interested in developing integrated schools in their areas.

I realised that the initial idea had come from a group of parents involved with Dundrum Community Association and led by Belinda, they had contacted the Board of Governors of Downshire Controlled Primary School in Dundrum to explore the possibility of it transforming to integrated status. They knew that pupil numbers in the school were dwindling and hoped that the idea of developing a planned shared school for the village might sustain its future. The request had been turned down so, still passionate about the development of integrated education in the area, they called upon the support of All Children Together and this meeting was organised to gauge wider support.

It was explained that a steering committee was required initially, to start to raise the funding required to get a school off the ground. The process was that All Children Together could provide a small grant to pay for administration, publicity and meeting costs and that they could also help with raising more substantial funds from charitable organisations around the word, interested in supporting the development of integrated education in Northern Ireland.

The reality was that funding from government sources would only be available when the school was up and running and considered viable and this could take at least one school year.

Despite the challenges, the enthusiasm of the people in the room was amazing and a steering committee was soon elected. The goal was to work towards the establishment of a new integrated primary and nursery school ready to open its doors to the first pupils in September 1986. I was appointed public relations officer that night and my journey with integrated education began.

It was only when we got down to the nitty gritty of the work involved that we realised what an enormous challenge we had set ourselves. If our school was to open in less than one year we had approx. £150,000.00 to raise, a school building to secure, teaching staff to appoint, classrooms to furnish, educational resources to source and most importantly, parents to sign up who would buy into our dream and enrol their children in our nursery and primary classes.

Whilst others got on with their area of development, I got on with sharing the dream - raising the profile of our plans, writing a monthly newsletter, writing articles for the local press, organising coffee mornings, meeting potential parents, sending letters to funders, getting as much publicity as possible.

The months flew by and slowly but surely the pupil numbers grew.

Our fundraisers proved an excellent way to engage potential parents and Belinda's efforts to secure educational charitable funds were successful and enough funding to hand we prepared to open our new school as planned.

The parent group met and decided on the name for our new school – All Children's Integrated Primary and Nursery School. The motto – "Harmony Through Understanding" was agreed and Steve Murphy, a founder parent and graphic artist designed the logo which depicted a dove of peace rising from an open book of knowledge. The first parents designed the uniform and decided that comfort and practicality would replace the normal shirt and tie uniform of the time in other schools. It would be a navy sweatshirt, short sleeved polo shirt and grey skirt or trousers. Trousers were accepted as the choice for both boys and girls if preferred.

It proved impossible to secure a building to house our new school so the only option was to rent a site in a local industrial area and buy second hand mobile classrooms.

It was all hands on deck preparing the land, bringing the mobiles on site, securing toilet facilities and tackling the internal and external painting of the classrooms, office area, kitchen, buying furniture and resources, much of which was second hand and hiring our teachers and ancillary staff.

As the 1st September, 1986 approached, time simply ran out and delays on the site meant that the school mobiles would not be ready. Emergency measures then and we were delighted

when the local St John's Church of Ireland church hall was made available to our group as initial temporary premises from which to run the school.

It was with immense pride that I watched our first pupils enter the gates of St John's Church Hall on 1st September 1986, the day All Children's Integrated Primary and Nursery School was born. There were 62 children on the role, a full nursery class, a combined Primary 1 – 3 class and a combined Primary 4 – 7 class.

My daughter Ashlee was one of the first Primary 1 pupils and my twin sons Darryl and Nathan were in Primary 5 and part of the combined Primary 4 – 7 class. (My youngest son Adam, born in 1988, was to enter the Reception Class in 1992.)

All Children's, the first fully integrated primary school outside the Belfast area had arrived and as PR officer I welcomed the world's press at the gates. Our opening was big and worldwide news. I did interviews with American, Australian and Japanese news crews. I travelled to Belfast to share our excitement and explain why we had developed the school to Wendy Austin on BBC Northern Ireland News and Gerry Kelly on UTV.

The school opened, we moved to a new phase of development. Settling into the mobile classrooms after three weeks in the temporary church hall, the much larger team of founder parents and friends, new parents, principal and teachers worked tirelessly to continue to raise the funds to keep the school going, develop the curriculum and at the same time ensure that the important ethos of sharing and developing understanding, parental involvement and child centred learning was at the heart of everything we planned.

Parental support was always crucial but in the early days it was volunteer parents who manned the school kitchen, made the lunches, did a lot of the maintenance and cleaning, led extra curriculum activities and continued to hold all sorts of fund raising events to raise much needed cash.

The pupils thrived, despite the often inclement weather and the reality of moving between mobile classrooms and a separate toilet block. Wellington boots were the answer for breaktime and outdoor play and the double size mobile became assembly hall, sports hall and classroom combined.

Enrolments grew steadily and the search for a permanent building to house our school continued. The lease on the industrial site was running out so it was a dream come true when we secured a piece of land, just off King Street, Newcastle to become our permanent home. The Annesley family in Newcastle owned the site and offered it to our governors at a significantly reduced price. It had been a traditional Walled Garden in the past and some of the old wall remained. It was on a magnificent setting between the Mourne Mountains and the sea and although in the interim it would house our rapidly deteriorating mobile classrooms, our long term vision was a new purpose built school on the site.

Two years after our school opened its doors, we were delighted to have been deemed a viable school by the Department of Education and awarded maintained status. This meant that our primary school's teacher salaries would be funded one hundred percent and seventy five percent of our running costs covered. We had still money to raise but significantly less than before and we as parents and staff celebrated our wonderful achievement.

The new school site was wonderful. We had space for many outdoor activities. A new school garden was developed and a large grassy area at the front was turned into an "All Ball Pitch". Two of the parents crafted goalposts which were suitable for soccer, gaelic football and rugby and our pupils enjoyed learning all three, a first for any school in the area at the time.

We made the most of the setting and a summer barbeque for parents, friends and pupils became an annual event and always incorporated a walk to the top of Slieve Donard led by mountaineering parents and a less strenuous walk to the top of Commedagh which often included mum's pushing buggys.

The development of our integrated school was not without its challenges. We had great community support but also faced the reality of those who saw our efforts as a threat to the status quo. It took many years to build relationships with some of the local churches and schools. Support from some of our political representatives was slow to develop. We had peaks and troughs in relation to pupil numbers, staffing and good relationships, some with the local education board and Department of Education took time to establish.

On 1st April, 1991, five years after the opening of All Children's Integrated Primary and Nursery School, we became the first Controlled Integrated Primary School in Northern Ireland enjoying full support and services provided by the South Eastern Education and Library Board. We closed the nursery school as it proved too expensive to continue and replaced it with a new Reception Class and our school was now fully funded in line with other schools in the area.

Thirteen years later, on 6th May 2004, after 18 long years in shabby mobile accommodation, and following a sustained, determined and at times fraught lobbying process, we moved into our new school. Our new school building is simply magnificent, nestled behind the Walled Garden with panoramic views of the Mourne Mountains. The bright and airy facilities are first class and pupils, staff and parents are thrilled to be afforded such a happy, safe and stimulating environment.

I came on board as a volunteer steering group member in 1985, progressed to become a trustee of the South Down Education Society, established to raise the funds to develop integrated education in the area, was a member of the parent's council and chaired the Board of Governors in total for just over fourteen years.

The successful development of All Children's became an everyday part of my life for over twenty years and like so many others involved, the journey we embarked on took determination, passion, perseverance and at times a backbone of steel.

I have said for a long time that integrated education may be just a baby step towards creating a fully shared and united community, at ease with difference but I firmly believe that it is a giant step in the right direction!

Now to contribute to the inquiry I offer the following:

- Shared and Integrated Education are completely different. In recent years politicians have sought to sell shared education as a viable alternative to integrated education. It is not. Shared Education at its worst is apartheid education with Catholics going in one door, Protestants another. At best it allows pupils to share some time together but in essence, while better than nothing, it is similar to most CRED work. While there are some examples of good work, it is largely ineffective. Two of my children attended a local Catholic primary school for the first five years of their primary school life and despite this Catholic Maintained Primary and the local Controlled Primary being literally across a bridge over the river from one another there was no real engagement between the two. The idea that the CRED programme compares in any way is baffling as my children's experience was going to nice places with another school and not really getting to know the children at all. The good work evident in CRED happens every second of every minute of every day in Integrated schools. More importantly, as the interaction is ongoing and a natural part of daily life, rather than artificial and forced, it IS effective in that the friendships and bonds are developed on an ongoing basis.
- It is the ethos of Integrated Education which so many fail to understand. I have faced the naysayers, those who say integrated schools were developed to satisfy the needs of middle class parents whose children couldn't pass the transfer test. So many of these people I found had never set foot in an integrated, and my term, PLANNED shared school, where parents deeply committed to creating an inclusive society gave years and years of their time to create something new and special.

- We have been made aware that a definition of shared education as opposed to integrated education was provided to Mr Justice Treacy as part of the court proceedings surrounding Drumragh. Why seek a legal obligation to facilitate Shared Education when our assembly, MLAs and educational bodies have ignored and avoided a legal obligation to develop Integrated Education. In fact, since, the Good Friday Agreement Integrated Education has been capped and suppressed. Having been an active member of the Northern Ireland Women's Coalition who along with my colleague Jane Morrice, actually wrote the clause into the final draft of the Belfast/Good Friday Agreement around Integrated Education and mixed housing I can assure you that there was no confusion. Fully integrated, planned shared schools is what we meant, not "integrating" schools or "shared education". This was voted on by our people and passed at Referendum, and as we know this is an International Agreement, no cherry picking, the legal obligations are clear and concise. Seeking a legal obligation to promote 'Shared Education' is just another excuse to **continue to avoid an existing legal obligation to promote Integrated Education**. Do we live in a democracy or a dictatorship? Any legislation underpinning Shared Education must not be to the detriment of Integrated Education which is more effective and financially efficient at achieving the shared aims. Rather it should demand 'shared practice' within the segregated sectors where they exist. This is the way forward. Fully Integrated education and all kinds of sharing practices as well.
- The key barrier for Integrated Education is the 'what we have we hold/no change' mentality of those in power and those working within the segregated sectors of education. Integrated schools have been actively prevented from growing so as not to negatively impact on neighbouring segregated schools. I have been at meetings for years and years with local and national politicians who have described integrated education as 'artificial, false and forced'. They have no knowledge of integrated education, no understanding of it and no desire to either. They fear it because Integrated Education is the only effective means of bringing about real positive change. With thirty years of experience the established integrated sector inc NICIE & IEF and existing Integrated Schools is the only body capable of facilitating it. The biggest barrier to Integrated Education is the existing divided political and educational system that needs a divided society to survive. Integrated Education would heal that division. Add the disgraceful behaviour that I as one parent have been subjected to by various churches and the discrimination which still exists where Catholic children and their parents are still in some cases shunned and not afforded the same pastoral care as other children in the parish.
- Vested interest knows no bounds.
- **Other jurisdictions have come to the Integrated Sector to learn from the model of existing good practice in Northern Ireland.** It speaks volumes that our politicians ignore the obvious answer on their doorstep to seek something else. Why on earth would you look at practice elsewhere and ignore the established practice within our own integrated sector that is seen as a benchmark of good practice? I for one have spent thirty years of my life sharing with others from all over the world, talking to parents here, trying to explain the journey in integrated education that I have taken and helping everyone to understand better what we as parents, and remember this is an education system that parents have driven. Does the education committee at Stormont have a reason for failing to recognise the integrated sector's thirty years of knowledge and expertise? It is beyond belief that the ELBs, are tasked with CRED when they have sought to maintain their status as a single ELB rather than potentially dilute their identity within ESA while the bodies with real knowledge and expertise are sidelined (eg NICIE). When I officially opened our new school building in Newcastle, the then Chief Executive of the South Eastern Education Board, Jackie Fitsimmons, talked of my passion, my knowledge of creating ease with difference and my perseverance in standing my ground in the face of unbelievable opposition coming from a range of statutory bodies and politicians. He talked about me not understanding the meaning of the word "No" and considering the magnificent achievement

that is All Children's, he hoped that I would never learn the meaning of that word "No". I can assure you that I never will because right always triumphs vested interest.

- **CRED programmes and many others like it, are helpful. Every intervention in segregation is important.** Having read about a dissemination of 'outstanding' practice for CRED last year it is no wonder why Northern Ireland is and will remain a divided society. The best facilitators had extensive work experience with NICIE yet NICIE was not part of the process. The outcomes of best practice were minimal and those identified happen every second of every minute of every day in integrated schools. It is what planned, shared integration is all about. Bringing all that is special about every single child into the classroom and working with it. Engaging parents and all levels of our school community, teaching and ancillary staff, friends. Celebrating diversity in a real way, every day. Providing safe enough spaces for the most contentious issues to be explored together and working out how best to make room for all.
- You cannot make a school integrated by simply changing its title/name and artificially forcing pupils together. Integrated schools have a unique ethos and practice. I have personal experience of education boards, obviously seeing the threat of a new parent group exploring integration in their area, targeting small Controlled schools to transform to integrated status. The transformation process is very important and in reality probably takes about ten years to be working effectively and for all the right reasons. Transformation should not be for limited, survival reasons. Long term commitment, willingness to change root and branch practice and buy in to a new and inclusive ethos is organic and complex. A Controlled School is not already an integrated school, something I have heard so many times, particularly from some political representatives.
- As so well written by the late Frank Wright, in his booklet on integrated education twenty years ago, Northern Ireland has British and Irish schools. Controlled schools support a British ethos and Catholic Maintained Schools support an Irish ethos. This permeates all areas of school life including sporting, music, after school activities etc and various emphasis in the everyday curriculum. We have definitely seen some excellent crossover activities and much more inclusion of new peoples and all the richness they bring to the school environment but basically this reality continues.

It is so important that you seek the views of all sectors. It is vital that you engage with the segregated sectors to ascertain the barriers to shared education, the effectiveness of any shared practice and the limits within the current structures.

If you ask a question you must be prepared to listen to the answer. If you want to be informed about Integrated Education you **must talk to the integrated sector**. If you want to bring about change you need to listen to the integrated sector. If you want to continue to promote division, continue to ignore it, sideline it and suppress it.

I hope this inquiry genuinely intends to listen to all the voices, passionate about our children and their education here. I would welcome the opportunity to meet with the committee to elaborate more fully on the points I have made above. I attended a controlled secondary school in the Greater Shankill area of Belfast in the sixties, my husband attended a Catholic Maintained Secondary school in North Belfast, two of my children attended a Catholic Maintained Primary for five years, a Catholic Grammar School for 5 years and a Voluntary Grammar School for A Levels. My younger two children have had an education in All Children's Integrated Primary School, Lagan College and Shimna College.

I am a committed dialogue practitioner having engaged our people in years of focussed conversations and sharing and learning processes for the last thirty years. I am passionate about our need to create real ease with difference, learn from the past and create a truly shared and caring society for future generations.

Yours sincerely
Anne Carr

Carrickfergus College

Submission from the
Governors and Staff of
Carrickfergus College to
the Committee for
Education Stormont

.....
Shared/Integrated
Education Inquiry

Carrickfergus College

bestp

This submission is being made on behalf of the Governors and staff of Carrickfergus College.

A Factual Information.

1. Carrickfergus College has a total school population of 650 pupils when this submission is being written in July 2014.
2. Of those pupils, 122 indicate that they are of “No Religion”, “Roman Catholic”, “Other Christian” or are “Unclassified” in their religious affiliation. As a percentage that comes to 18.76% of the school population. Details available on “E” Schools.
3. The makeup of the borough in which Carrickfergus College sits would be overwhelmingly Protestant/Loyalist, which makes the profile of the College even more remarkable. Its feeder schools would again be reflective of this tradition making it likely that the College would have a very small non- Protestant pupil body.

B Issues/Concerns/Barriers

1. The Governors and Staff of Carrickfergus College have tried for several years to get funding for a variety of shared education projects but have been deemed ineligible as they were unable to partner with a school locally which represented the “other”/ “minority” tradition. Carrickfergus has no Maintained Post Primary School. Such projects would have allowed Carrickfergus College to progress its desire to have a new build, better resources and enhanced teaching facilities.
2. The Governors and Staff feel that with the profile of pupils in the school they go a long way to already being a shared education school welcoming to pupils of any religion or none.
3. The Governors and Staff of Carrickfergus College are concerned that by a quirk of geography they will never be eligible to apply for shared education status. As the criteria stand at present this is the case.
4. The Governors and Staff of Carrickfergus College have adopted a very innovative approach to every initiative from DE over the years. We pioneered the way on the Revised Curriculum and Learning Communities and have been lauded for our ground-breaking work in the field of Emotional Health and Well Being of Pupils and Staff, have assisted upwards of 20 other schools to set up systems to track and raise the outcomes of their pupils, but feel that in the area of shared education we are simply not being allowed access to what is happening.
5. Being a truly Integrated School is, in the opinion of the Governors and Staff of Carrickfergus College, about offering pupils of all abilities the opportunity to access the best teaching and support which can be offered regardless of religious background/ethnicity/sexual orientation/academic ability, allowing those pupils to complete their education as well rounded, independent learners. Schools which are currently deemed as “shared or integrated” schools were established and made to have a body of pupils from a diverse range of religious backgrounds. Carrickfergus College has had this diversity for over 50 years without recognition.
6. Having “Integrated Education” as it is currently defined protected by both the Anglo Irish Agreement and Good Friday Agreement leaves schools like Carrickfergus College feeling very marginalised. We seem to be unwanted by any sectors of Government or the educational establishment. We are spoken of by those who champion “integrated” education as being responsible for division in our society. That is clearly not the case in Carrickfergus College. Fingers are pointed by the same people accusing schools like Carrickfergus College of not delivering good education to their pupils. Again, clearly not the case when both ETI inspection reports and GCSE and GCE results are scrutinised.

C Recommendations

1. The Governors and Staff of Carrickfergus College would ask that the Committee redefine “shared/integrated” schools as being those which open their doors to all pupils regardless of who they are. As indicated above the current definition can mean that statistically a school has “X” % from the Protestant community, “X” % from the Roman Catholic community but there seems to be very little that demonstrates how the school actually meets the needs or desires of its community. How many community groups use its facilities? What level of involvement in the local community does the school have on residents groups or community forums? Is the school disconnected from its community?
2. We would also ask that opportunities to access funding for “shared/integrated” education projects be looked at to allow schools like ours to be able to apply for such funding rather than excluding good innovative schools.
3. Finally the Governors and Staff of Carrickfergus College would ask that the Committee lead the way in getting the message out to the public at large that schools like Carrickfergus College are to be valued and provide excellent opportunities to pupils in some of the most deprived areas in our province.

The Governors and Staff of Carrickfergus College would be prepared to give oral evidence to the Education Committee if asked to do so.

H Webb

Secretary to the Governors of Carrickfergus College
15/10/14

CCMS

Council for Catholic Maintained Schools.

Shared/Integrated Education Inquiry.

Submission of Written Evidence to Northern Ireland Assembly –
Committee for Education.

October 2014

1. This evidence is being submitted on behalf of the Council for Catholic Maintained Schools (CCMS).

CCMS is the Managing Authority for all schools in the Catholic Maintained Sector of education in Northern Ireland. There are 754 Catholic Maintained schools – 32 nurseries, 641 Primary and 68 Post-Primary schools.

CCMS manages the employment of all teaching staff within the Catholic Maintained sector, a number in excess of 8500.

2. CCMS welcomes the opportunity to submit evidence to the Committee for Education in order to inform its inquiry into Shared/Integrated Education and would wish to be considered to give oral evidence to the Committee.
3. There are 171,548 children in pre-school and primary school education in Northern Ireland.
 - 31.3% of children attending Controlled schools come from a Catholic or “no religion stated” background.
 - 3.3% of children attending Catholic schools are from a non-Catholic background.
 - While the Catholic/Protestant share in Integrated schools is roughly similar, 37.5% and 36.0% respectively, 26.5% of pupils indicated no religious background.

From these figures it could be concluded that there appears to be a greater readiness from the Catholic community to consider a primary school outside of their traditional sector.

4. The percentage of children from a background other than Catholic who attend a Catholic school does not reflect Catholic Education’s overall commitment to creating a society in which everyone is respected, irrespective of their cultural, social, ethnic or religious background.

This aspect of Catholic Education along with the high quality of education delivered in the majority of Catholic schools is however, demonstrating increasingly to the community at large that Catholic schools are for all and are not just “schools for Catholics. ”

This is evident in a number of Catholic schools;

- School A in Belfast with an enrolment of 362 has 28% of pupils who come from a background other than Catholic.
- School B in a small seaside town with an enrolment of 53 has 69% of its pupils coming from a background other than Catholic.
- School C in a mid-sized town has an enrolment of 369 pupils, 69% of whom come from a background other than Catholic.
- School D, a large post-primary school of 601 pupils has 58% of pupils coming from a background other than Catholic.

The schools above are only a selection of schools which have a significant number of pupils from a background other than Catholic but they are nevertheless quite clearly and

unapologetically Catholic in ethos and daily practice and are shining examples of integration, inclusion and diversity which has arisen naturally over a period of years.

5. In the post-primary sector, there are 143,973 pupils.
 - 4.7% of children from a Catholic background attend Controlled schools.
 - 2.5% of children in the Catholic Maintained sector come from a non-Catholic background.
 - The Catholic/Protestant split in Integrated post-primary schools is again fairly even, 35% and 48% respectively with 17% indicating “no religion stated”.

It should be noted that more than 33% of children at post-primary stage go to schools of “other management types”. The continued existence of the Voluntary Grammar sector will invariably skew figures on the level of attendance at “non-traditional” schools by one sector of the community or another.

6. Of interest is the fact that, at primary level 18% and at post-primary level 12% of the school population goes to a school for reasons other than religious or other ethos. In that respect, albeit to a small degree, the education system in Northern Ireland is not as “segregated” as some commentators might suggest. In fact, the term segregation to describe the education system in Northern Ireland is incorrect given that segregation, according to the Oxford English Dictionary means;

“enforced separation of racial groups in a community.”

The principle of parental preference in the Northern Ireland Education system in no way implies and should not be understood as “enforced separation”.

7. According to the Northern Ireland Council for Integrated Education (NICIE), Integrated Education;

“brings children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school”.

Integrated Education as an option within an educational system in which most children attend largely religiously separated schools began over 31 years ago. In that time, Integrated schools have developed across the country to the point where today there are 62 schools at Nursery (3), Primary (38) and Post-Primary (21) level.

8. In recent years there has been a tendency for schools within the Controlled sector to transform to “Controlled Integrated” status. In many cases this situation has arisen because of the perceived threat to the future of the school because of the low enrolment.

An examination of the religious breakdown in a selection of ten Controlled schools which transformed to Controlled Integrated status results in some interesting statistics as outlined in the table below.

	% from Protestant background	% from Catholic background	% stating no religion.
Pre-Transformation	55.84%	17.25%	26.93%
Post -transformation	45.09%	30.39%	24.53%

When the schools transformed from Controlled to Controlled Integrated status, the percentage of children from a Protestant background or none fell while the percentage from a Catholic background increased.

Without further in-depth analysis it would be difficult to say why this is the case.

9. In total there are 315,521 children of school age in Northern Ireland. Of that number 21,745 or 6.89% attend Integrated schools at primary and post-primary level.

While NICIE may claim that through their Admissions Criteria Integrated Schools enroll approximately equal numbers of Catholic and Protestant children, as well as children from other religious and cultural backgrounds the fact remains that the number of Catholics attending as a *percentage of the overall Catholic school age* population is only 4.9%. The *percentage of the overall Protestant school age community* attending is only 8.1%.

Therefore, the overwhelming number of children attending Integrated schools indicated that they are of neither the Catholic or Protestant faith, are of other faiths or have no religious affiliation at all.

The figures above indicate that the intention of bringing “Catholic and Protestant” children together in one school has only partially succeeded. The many polls which continue to be conducted on public opinion towards Integrated Education and which appear to demonstrate “significant” support for Integrated schools do not in practice reflect that. Parental preference continues to be exerted along traditional lines, as parents continue to send their children to schools which are largely in keeping with their religious, cultural, social or other beliefs and traditions. Indeed, in many cases their choice of school may be more to do with the quality of education or convenience rather than religious affiliation.

10. What are the factors then that have prevented Integrated Education from achieving its ultimate goal of creating a sector to “challenge” the existing Controlled, Catholic Maintained and Voluntary sectors? They are most likely the same factors that will challenge the development of Shared Education, namely;

- A. The continuation of cultural and social division. There is no concept of shared identity in Northern Ireland with the community at large being divided along Unionist/Nationalist lines. Cultural identity and sectarianism remains rooted in communities, not schools. An unwritten policy of separation remains with the continued existence of “Peace Walls” across the city of Belfast and in other centres across Northern Ireland.

In June 2012, a piece of research funded by OFMDFM and carried out by the University of Ulster entitled “Attitudes to Peace Walls” provided a valuable insight into the attitudes of those who live in close proximity to peace walls as well as those from society in general. Among other things the report concluded that;

- 78% of the respondents in the survey believe that the segregation of communities is common in Northern Ireland even where there aren't any peace walls.
- 69% maintain peace walls are still necessary because of the potential for violence.
- 43% of Protestants compared to 20% of Catholics think peace walls protect their sense of identity.
- Catholics (40%) are more likely than Protestants (30%) to think there should be more opportunities for the two communities to come together to create the necessary conditions for the removal of the peace walls.

There are over 80 peace walls across Northern Ireland with the first being erected in 1969 in Cupar Way between the Falls and Shankill Roads. The Army Major over-seeing the construction of the wall at the time stated;

“This is a temporary measure, we do not want another Berlin Wall situation in western Europe. It will be gone by Christmas”.

- B. Urban gentrification. The economic boom pre-2008 created opportunities for large sections of the community to move up the social and property ladder and a process of gentrification (intended or otherwise at a Government policy level) “created new

layers of residential segregation in a city already preoccupied with ethno-religious territoriality”. (B.Murtagh. Urban Studies 2011).

This alongside a lack of meaningful investment in areas such as North and West Belfast in particular and the political quarrel over, for example, housing as part of the Girdwood Barracks development resulted only in the continued stagnation and growth of many large, social housing developments which remain divided along sectarian lines.

The outcome? Those with the purchasing power, skills, transport and easy access to employment are “differentiated from those trapped in the single entity estates in the inner and outer city”. (B.Murtagh. Urban Studies 2011).

- C. The issues of skills/skills deficit are perpetuated alongside the social division created by an education system which promotes inequality and social differences i.e. selective grammar schooling and the social class implication. Traditional industries have disappeared and given that such industries normally provided access to employment for a, predominantly, working class Protestant workforce without the overt need for education, that community now lags behind in terms of educational outcomes as the need for “education” was not something which was highly valued.

That being the case there is a need for an education system which provides and encourages access for all to high quality education which concentrates on the needs of society and provides young people with the skills and opportunities to meet those needs.

- D. Fear – The dominant communities have become even more polarized since the ‘Good Friday’ Agreement, especially at the working class level and perhaps to a more sanitized degree further up the socio-economic ladder.

11. CCMS would argue therefore that now is the time to consider the whole concept of Shared/ Integrated Education in Northern Ireland in a different light and to look at alternative means of fulfilling the objective put before the TACOT:IE (Towards a Culture of Tolerance: Integrated Education) Working Group in 1998, namely;

“to examine ways in which all schools could contribute further to the promotion of a culture of tolerance as outlined in the Belfast Agreement.”

As a starting point, CCMS would suggest that linguistically we should move away from the term Integrated Education and begin focusing on how schools can explore a spectrum of shared options based on educational provision and access rather than on a political or philosophical basis. The definition of Shared Education used by the QUB Centre for Shared Education is as good a starting point as any;

“Shared Education is broadly defined as any collaborative activity within or between schools or other educational institutions that can: contribute towards school improvement, provide access to opportunity, encourage more effective use of resources, and promote social cohesion”

11. CCMS also believes that after 30 years, the time has come for the Department to dispense with its statutory duty to encourage and facilitate the development of Integrated education. If after 30 years the sector has grown to the point where it commands only 6.89% of the school age population in Northern Ireland, the Department should evaluate the public appetite for ‘Integrated Education’ as a sectoral entity, reconsider the ‘statutory duty’ and look to the promotion of other “initiatives” which have a greater chance of making more effective use of limited resources, promoting social cohesion and delivering on the general principles of TACOT:IT as outlined below;

- a. It is a seminal purpose of the Northern Ireland Education Service to promote a culture of tolerance and reconciliation and, for schools, to do so in keeping with the particular

ethos and circumstances within which they operate. These different approaches should be valued and all schools encouraged to provide further opportunities to promote a culture of tolerance.

- b. There should continue to be a pluralist approach to education, expressed in a plurality of structures (i.e. different types of school) and ethos.
- c. All schools should provide a pluralist curriculum promoting tolerance and mutual understanding.
- d. The present structure for schooling has been determined by parental wishes and, subject to the provision of efficient instruction and training and the avoidance of unreasonable public expenditure, pupils should continue to be educated in accordance with the wishes of their parents.
- e. education policy, administration, school funding and school support should be fair and equitable to all grant-aided schools, i.e. controlled, voluntary, integrated, Irish-medium maintained, denominational, non-denominational, etc.

(TACOT:IT June 1998)

12. The principles outlined in (8) above clearly focus on the fundamental obligation of Government to ensure that, within reason and recognising the Department's Sustainable Schools Policy and the principles of Area Based Planning, pupils continue to be educated in accordance with the wishes of their parents, recognizing that in a society which is truly committed to respecting diversity there can and should be an acceptance of diversity in the nature of education provision – Controlled, Catholic Maintained, Integrated, Irish Medium or other.

The existence of various forms of education, each espousing its own distinctive ethos, is evident throughout the world as is the recognition that where change is deemed to be necessary it can be brought about while maintaining respect for each individual education sector or provider.

This has been delivered in many places across the world through the concept of Shared Education and Shared Campuses.

13. There have been and continue to be many examples of Shared Education in Northern Ireland which have developed from agreed local need or practices and through the EMU and CRED programmes. The Centre for Shared Education in QUB has involved over 7000 students in various shared programmes and the CREDIT - Classrooms Re-imagined: Education in Diversity and Inclusion for Teachers - programme which was delivered jointly by St Mary's University College and Stramnellis University College brought together teachers from all sectors with the aim of enabling them to develop skills and confidence with issues of division, diversity, inclusion and community cohesion in the classroom and on a whole school basis.

In recent months the Office of the First Minister and Deputy First Minister announced the Shared Campus Programme and the first successful projects have only just been approved. As these projects move forward the potential will grow for a range of sharing options, from limited curriculum interaction to shared governance.

This is a very exciting development in education delivery in Northern Ireland and one which has been evident in other countries for some time. We should endeavor to learn what we can from them in order to ensure success in our own endeavors.

14. In the United States of America, Shared Campuses have been the norm for many years. In New York, of the city's 1500 schools, about 600 are shared campuses. Supporters of the shared campus model argue that they increase the number of academic offerings, develop appropriate school sizes and more effectively use the available school buildings.

In one instance a school of 280 students shares a building with a 630 pupil school. A doorway serves as the “boundary” between one school and the other. There are of course hurdles to overcome but the arrangement is “overwhelmingly” successful.

Each school can retain its own distinctive ethos;

“School A’s students wear uniforms, walk in single file and remain in school until 5pm. The walls are adorned with murals of classic book covers and inspirational messages. School B’s hallways are barren and painted uniformly yellow and its students are gone from the building by 3pm. Seven years ago it was considered among the worst schools in the city of New York. Now it’s achieving a Grade B on the city’s progress report”.

The keys to success are meeting the needs of pupils in different ways, sharing instructional practices, students working inside each other’s classrooms learning from and understanding each other, developing relationships and respecting the existence of each other’s school.

Such has been the success of the New York venture that other cities across the USA like Chicago and Denver are moving in the same direction.

15. Closer to home and in an environment more akin to our own is Scotland. In recent years, several local Council areas have developed shared campus options in an effort to ensure that different sectors have retained an educational presence in particular areas while ensuring access to a full-educational experience. The arrangements invariably involve collaboration between Catholic and non-denominational schools. In some cases the Catholic school is the larger partner and in others the non-denominational school. Midlothian, Argyll & Bute and North Lanarkshire Councils are among those which have taken this route. In the case of North Lanarkshire the rationale for the development of the Shared Campus design is;

“based on financial and best value consideration. The building of schools with shared infrastructure generates savings and as a result more schools can be built or refurbished from the available resources. In addition, the model reduces the need to close small schools, particularly in rural areas, and enables the community to access greatly enhanced facilities”.
(North Lanarkshire Protocol for Management of a Shared Campus)

While “financial and best value considerations” were to the fore, the parties concerned underlined their “commitment to the preservation, development and respect for the identity and distinctiveness of each school.” The Council went one step further and emphasized that it was “unequivocally committed to Catholic education”.

All aspects of the Shared Campus arrangement were outlined in a management protocol; from respect for individual school identity and ethos through leadership, collaboration, communication right down to timetabling for use of the various shared facilities.

16. In 2008 North Lanarkshire Council commissioned an independent evaluation of Shared Campus schools within the District Council area. For the most part the findings were very positive in tone;
- It was the almost unanimous view of head teachers and staff that the shared campus environment had in no way impaired the traditional link between the individual school and the chaplain or the local church(es).
 - The smaller school is treated as an equal partner in the shared campus arrangement.
 - The protocol has played a significant role in the development of the shared campus model in North Lanarkshire.
 - The implementation of the authority protocol for the operation of joint campuses had generated no difficulties for head teachers.
 - Managing in a shared campus context is considered by head teachers to be more complex than managing in a single school environment.

- Pupils consider the best feature of sharing a campus with another school is the opportunity to meet more people and make more friends.
- The main pupil dislikes about their new environments have to do with noisy and cramped teaching/learning conditions and dining areas.
- There was almost unanimous support from staff, pupils and parents that the staff and pupils of the schools on a shared campus site show respect and good manners to each other.
- Relationships between staff and pupils of shared campus schools appear for the most part to be positive, solidly grounded and free from denominational tensions.
- Parents perceive the main benefit of sharing a campus to be associated with providing opportunities for children in the local area to travel to school together and to interact socially in their new environment.
- Between 85-90% of parents rated the quality of the educational experience being received by their children in a shared campus environment as very good or good, with no parents rating it unsatisfactory.

It is clear therefore from the experiences in Scotland that under certain circumstances and with the appropriate level of commitment, preparation and planning, a shared campus arrangement can work.

17. Of course, not everyone is at a stage where a shared campus would be a viable option. In those cases where it is hoped to develop such arrangements there is a long history of collaboration between the schools involved. This however does not prevent the development of sharing and the Department should consider how it can facilitate a range of potential options from the very low to very high level, for example;
- Extending the concept of the 'Area Learning Community' to include all phases of education and to use this vehicle as the principal portal for continuous professional development of staff.
 - Putting greater emphasis on EMU/CRED activity being a key element of the curriculum in each year of a child's time in school.
 - Encouraging joint curriculum development days, especially between the staff of small schools where considerable responsibility for several areas of staff development is placed on the shoulders of a small number of staff.
 - Where one school cannot afford to employ additional staff, options for employment of staff across more than one school should be explored, especially in specialist areas such as music, art, physical education. The recent signature project which saw the employment of additional teachers in schools could be developed along these lines.
 - Encourage schools to collaborate more fully in providing children with extra-curricular activities.
 - Joint activities/curriculum workshops for parents across a number of schools.
18. It will not, however, be easy to develop an agreed approach to sharing while the education system in Northern Ireland remains in a state of uncertainty and confusion. The Department must take affirmative action to ensure that the climate across all sectors is conducive to the promotion of shared education. CCMS would suggest that priorities for action should include;
- Promoting, as far as is possible, a 'social balance' in schools;
 - Ending selection in reality and legislating against anything which perpetuates academic and/or social selection;
 - Ensuring equality of access for all based on agreed and enforceable criteria;

- Recognising diversity of provision and the principle of parental preference and moving away from a “duty” to promote Integrated Education;
- Creating a multi-sectoral, equal system for all then exploring how “sharing” might be facilitated.

It must be recognised that integration/sharing/shared education cannot be enforced; it must develop naturally from the bottom up and in a range of different guises. The responsibility for this cannot be left to schools alone and while schools do have a key part to play, integration throughout society has to be a reality and the norm, if we are to work collaboratively to resolve the problems which Northern Ireland continues to face.

In 2004, the First Minister teamed up with Cardinal Keith O’Brien and a representative from the Church of Scotland to open a shared campus, which housed St David’s High School and Dalkeith High, in Midlothian - the first to be opened on Mr McConnell’s watch.

In 2004, the First Minister teamed up with Cardinal Keith O’Brien and a representative from the Church of Scotland to open a shared campus, which housed St David’s High School and Dalkeith High, in Midlothian - the first to be opened on Mr McConnell’s watch.

In 2004, the First Minister teamed up with Cardinal Keith O’Brien and a representative from the Church of Scotland to open a shared campus, which housed St David’s High School and Dalkeith High, in Midlothian - the first to be opened on Mr McConnell’s watch.

19. In conclusion, CCMS believes that an integrated, shared system of education for Northern Ireland is achievable but it has to develop in a society which is mature to the point where individual and distinct sectors are recognized and valued for the contribution they make to a shared society.

CCMS and Catholic Education have consistently demonstrated its willingness to be part of that shared, education system. From as far back as 2001, the Catholic Bishops of Northern Ireland (Building Peace Shaping the Future) were promoting the very strong message that Catholic schools, in living out their philosophy and ethos, are obliged to;

- Provide friendly contacts between pupils of different characters and backgrounds in order to encourage mutual understanding;
- Assist society to move beyond its deeply-ingrained divisions into a new coherence and openness to the world at large;
- Promote reconciliation and the common good;
- Recognize that the attendance at our schools of children from other denominations and none is an enrichment of the education experience offered by the school and is seen as a practical expression of the commitment to inclusivity.

CCMS and Catholic schools recognize that it is only in partnership that Northern Ireland will achieve the peace and reconciliation that all its people deserve. We cannot do that alone and stand ready to face the challenges of working with others across all sectors of Education and beyond to achieve the goal we all desire, a society in which we can live and work together in peace and harmony, not only accepting but cherishing difference.

Ceara Special School

Submission to the Education Committee in relation to Shared/Integrated Education

My name is Dr Peter G Cunningham MBE, my entire teaching career, 35 years, has been spent educating children who have special educational needs. I have been the principal of Ceara Special School, Lurgan for the last twenty years.

I have been a member of the Southern Education & Library Board for the last fifteen years and am currently a member of the Southern Education Transitional Board where I 'chair' Board's Child Protection Committee.

I am a member of the Special Educational Needs and Disability Tribunal, and have been for the last six years.

I am a member of CCEA Council.

I have been an associate inspector of schools (the first ever) for the Department for Education.

I have presented talks for the Regional Training Unit on educational management to educators from all sections of the educational community.

I have spoken on special educational issues to the European Parliament. More specifically, the inclusion of children who have special educational needs into mainstream contexts; and the effective management of ASD in mainstream schools.

I have a 2:1 (Hons.) in Special Education; an M. Phil in Special Educational Issues; a M.Sc. in Educational Management and a Ph. D in Special Education Management.

My evidence to the Committee will look at the advantages of a shared/integrated education from the perspective of the child/pupil and teaching and support staff.

At the outset I would remind everyone that the special school system (special care) when initiated in 1948 was a fully shared/integrated system, open to all children irrespective of religious belief or ability levels and to that end predated the Integrated Education movement by some 40 years.

I also note that the last time the role of the special school was 'looked at' by DE was in June 2006. I suggest that much of that document has merit today and would recommend it to the committee. In the South of Ireland the role of the special school was reviewed in 2009 by the National Council for Special Education (NASP), again much of the report has a great deal of merit.

Current DE policy is to encourage the maximum possible level of inclusion for children who have special educational needs within mainstream schools. This policy trend does give rise to an uncertainty around the role and operation of special schools. This review by the Education Committee is timely given the protracted gestation of the Special Education Review.

School Based Considerations

It is my view that children, irrespective of ability, should be educated with their peers in local schools in schools that are appropriately resourced and taught by highly trained and motivated staff who celebrate achievements and tackle difficulties head on and with enthusiasm; and that ELBs have a responsibility to provide a range of provision to meet those diverse needs. However, I recognize that for some children who have severe and complex special needs that a placement in a special school is an appropriate placement. In this

respect it is important to note that the needs and difficulties faced by teachers within the special school sector have changed significantly over the recent years especially with regard to behavioural issues.

Consequently, the special school should be viewed as an integral part of the totality of the educational provision – a continuum of provision. A special school placement should not be regarded as a segregated placement. An ‘inclusive special school’ is now very much the norm in many of our special schools in Northern Ireland, assisted in no small way by the inclusion of special schools into the Area Learning Communities.

It is my view that mainstream schools with an inclusive orientation are the most effective means of combating discriminatory attitudes, creating welcoming communities, building an inclusive society and achieving education for all and while I believe that there will always be the need for special school provision it need not be segregated provision. The day of the inclusive special school is very much with us. For example

- There is a trend toward increased connectivity between special and mainstream schools and special schools and special units.
- Special schools are part of every Area Learning Community in the country;
- More pupils from mainstream schools now visit special schools throughout the year than ever before.

There have never been as many children who have, or may have, special educational needs (SEN) in the school population. Many of these children attend special schools where, over the years staff have developed a wide range of expertise and skills in education these children. More recently, an increasing number of children who previously would have attended special schools now attend ‘mainstream’ schools. This places additional stresses on ‘mainstream’ staff.

As a group, children who have special educational needs are disproportionately more from disadvantaged backgrounds, are much more likely to be absent or excluded from school and achieve less well than their peers both in terms of attainment at any given age and in terms of their progress over time. Post sixteen years, young persons with special educational needs comprise one of the groups most likely not to be in education, not to be in employment or not to be in training.

Recommendation One

Staff from special schools could/should advise and support their colleagues in ‘mainstream’ schools on many of the issues facing children who have SEN. The Area Learning Communities could be the forum for this to occur. CPD for mainstream staff could take place in special schools. A two way process.

An ‘all encompassing’ approach

There is confusion around the term ‘shared/integrated education’. Does it mean ‘education for disabled children’? Is there a difference between ‘education for all’ and ‘inclusive education’? What does it look like in reality?

A lot has been written about inclusion, a great deal has also been spoken about it with the somewhat unfortunate consequence of polarised views that state that the angels are on the side of the ‘inclusionists’ and the demons are with the ‘segregationists’. Such debates often generate more heat than light. I see the concept of shared/integrated education as inseparable from the concept of quality education: education cannot be considered good quality unless it meets the needs of all its learners.

We need to be clear that the principles of shared/integrated education encompass a much broader range of issues than disability. But the changes needed to ensure that children with disabilities can benefit from education are not very different from the changes needed to help all excluded children get an education.

Recommendation Two

Making education 'shared/integrated' requires schools and education authorities to remove barriers to education experienced by the most excluded children – often the poorest, children with disabilities, children without family care, or children from minority groups. This will require cross-departmental, interagency collaborative working arrangements. Something we really are not very good at.

A Really Special 'Special School'

Currently, special schools cater for a range of special educational need. A broad spectrum of need. With advances in medical science children with very special needs are living to school age. These children require a 'medicalised' educational provision. I would suggest that now there is the need, at least at KS1 and KS2 to have regional schools, which can deal with very specific special educational needs. In this regard I am thinking of those children with extreme behavioural issues. This is the norm in many areas of the UK.

Recommendation Three

Establish schools (units), which, with an integrated approach, could deal with specific SEN from both children from special schools and those from mainstream schools.

Duel Placements

To date, pupils with SEN are enrolled in a specific school. You are special or you are not! This 'them or us' silo mentality does not consider that for the vast majority of children with SEN a 'duel placement' would be very advantageous for both their curricular and social development. The social inclusion benefits cannot be over estimated. Four days in a mainstream school and one day in the special school so to speak – an extended version of ALC 'Entitlement Framework' arrangements. This type of arrange does happen in NI at the moment but where it does it is 'informal'.

Recommendation Three

A change in DE policy that would allow duel enrolments with consideration to school funding and transportation as happens with EOTAS placements. Duel enrolments could be facilitated by co-locating mainstream and special schools.

Interdepartmental Collaboration

In 1986, special schools split from the Department for Health Authorities and became the responsibility of the Department for Education as previously mentioned. In my view, that split was too clean and too clinical. We need a more shared, integrated, inclusive practical working relationship in schools between Health and Education especially in special schools. The complex nature of the needs of the children I work with requires this joined up working collaborative relationships rather than the – what appears some time to be the jealous guarding of departmental boundaries. That is the new battle for shared/integrated education – departmental inclusion.

Recommendation Four

The establishment of collaborative working arrangements with health and social services to enable the development of multi-disciplinary shared/integrated service provision to all schools with all the benefits that could flow from such an arrangement.

Post 16 Provisions

As previously stated, there are increasing numbers of children in our special schools. This means that there are increasing numbers of young adults leaving, or about to leave our special schools. There needs to be the same opportunities available from a FE perspective to young adults with SEN. In this regard the 'shared education' vision implicit in the ALC arrangements could be better utilised.

Recommendation Five

There should be better cooperation between DE and DEL to ensure that our FE Colleges provide equality of opportunity for 'statemented' students.

Oral Evidence

I have no problems should the Committee wish to invite me to present oral evidence.

Dr Peter G Cunningham MBE

Ceara Special School

CnaG

Written Evidence to the Shared/Integrated Education Inquiry

25/3/15

- 1.1. Comhairle na Gaelscolaíochta (CnaG) welcomes the opportunity to present written evidence to the Northern Ireland Assembly Education Committee on Shared/Integrated Education.

Introduction

- 1.2. CnaG is a Department of Education (DE) sponsored council responsible for the provision of advice pertaining to the development and provision of IME. CnaG was established as a direct consequence of the Good Friday Agreement (GFA), which placed a statutory duty on DE “to encourage and facilitate the development IME”. Article 89 of the 1998 Education Order that followed the GFA contained provision to allow DE to pay grants to any “body appearing to the Department to have as an objective the encouragement or promotion of IME”.
- 1.3. There are currently over 5,000 children in the IME sector from pre-school to post-primary level attending IME grant-maintained schools, IME Catholic maintained schools and units, IME controlled schools, IME voluntary grammar school (IME Stream) and IME voluntary non-maintained (IME Stream). In the IME sector, there are 32 voluntary pre-schools, 12 nursery units attached to IME provision, 29 stand-alone IME primary schools, 7 IME units attached to English-medium Primary schools, one stand-alone post-primary school and 3 IME streams attached to English-medium post-primary schools.
- 1.4. In 2011/12 there was a growth of 3.6% in the IME sector, in 2012/13 there was a 5.3% growth and the sector grew by 5.9% in 2013/14. CnaG calculates that the growth in 2014/15 will be 6.0%+. This would be greater if IME post-primary was available to IME primary pupils who lack easy access to this. Currently just above one third of IME pupils do not have easy access to IME post-primary provision.
- 1.5. IME schools cross a number of institutional school sectors. There are IME schools in the Controlled sector, in the Catholic Maintained sector and the Grant Maintained sector. The Irish-medium sector is co-educational, welcoming children from all religious backgrounds or none and all abilities. Although there are currently no IME schools within the Integrated sector C na G would welcome such a development in keeping with the wishes of parents and school communities.
- 1.6. It is CnaG’s role to represent the children, staff and schools in the IME sector as well as the wider IME community. We advise DE and others in relation to the specific needs of IME pupils, staff and schools. CnaG also lobbies on behalf of the sector and provides practical support and advice to parents wishing to establish IME provision in new areas, or those who wish to access IME.

Comments on Shared/Integrated Education

- 2.1. CnaG agrees with and supports the principles of inclusive shared education as a means of providing young people with opportunities to learn together and to reach their potential in educational achievements and as informed citizens and as a means of breaking down barriers arising from historic conflict.
- 2.2. CnaG coordinated a Shared Education project, Together Through Culture, funded by the International Fund for Ireland which involved pupils and teachers in schools learning about our shared Irish language heritage associated with surnames, placenames, songs, dance and

the Irish language. The success of this project is evidence that the Irish-medium Education sector can contribute to the aims of Shared Education in a meaningful and productive way. Irish-medium Education could contribute to many issues associated with the principles of Shared Education including but not limited to the following: promoting greater understanding of and respect for the Irish language and other languages and cultures; wider cultural experience; a greater understanding of lifestyle differences and a greater understanding of the benefits of bilingualism and multilingualism.

- 2.3 CnaG advises the Department of Education that Irish-medium participation in Shared Education developments must acknowledge and respect the language dynamic of the school. It would be unfair to expect Irish-medium schools to engage in Shared Education experiences solely through the medium of English. Opportunities must be planned strategically to ensure that respect for the ethos and language dynamic of the pupils and teachers is secured.

The nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;

- 3.1 CnaG advises that an agreed definition of Shared Education promoted by the Department of Education should be amended to reflect the fact that the education system in NI has both monolingual and bilingual settings and that the Department of Education in its statutory duty to facilitate and encourage Irish-medium Education must ensure that Shared Education is not delivered through one language, namely English.

Key barriers and enablers for Shared Education and Integrated Education;

Barriers

- 4.1. The majority of schools in Northern Ireland are monolingual English-medium schools. However, a creative approach which is sensitive to the Irish-medium ethos can mitigate this barrier in order to deliver authentic and respectful Shared Education opportunities for all pupils, schools and communities.

Enablers

- 4.2. A range of research on the benefits of bilingualism indicates that bilingual children are, on the whole, more open to cultural diversity, due to the cultural enrichment they experienced. Irish-medium Education facilitates greater tolerance and understanding of other cultures; a truly shared educational experience.
- 4.3. In the context of Shared Education, 72% of all IME primary schools are independent, outside of the controlled or catholic maintained sector and have pupils from Catholic, Protestant and other backgrounds. Irish-medium Education is a choice for everyone in every community. Currently 6% of IME primary schools are within the controlled sector, 22% within the catholic maintained sector and 72% within the other maintained sector. Irish-medium Education is a linguistic choice for parents and pupils which can be catered for within all sectors. It actively encourages communities to avail of the advantages of bilingualism.
- 4.4. The system of immersion education which is used in Irish-medium Education is recognised globally for excellence. Not only does it deliver on Shared Education, but on shared heritage, language, traditions and history. It also delivers on the Department of Education's core vision, "Every young person achieving to his or her full potential at each stage of his or her development.
- 4.5. Immersion education is acknowledged as most effective way of developing second language fluency in children and young people. In the context of Shared Education, fluency in

both English as a major global language and Irish as a minority and native language has potential to bring communities together in a shared future as outlined in the Programme for Government.

What priorities and actions need to be taken to improve sharing and integration.

- 5.1 Definition of Shared Education must be revised to reflect linguistic diversity and to deliver the Department of Education's statutory duties to encourage and facilitate Irish-medium Education;
- 5.2 Shared Education pilot projects should be initiated, funded and evaluated which take cognisance of the nature and the specific needs of the Irish-medium school sector.

Date: 10 September 2014

Subject: Inquiry into Shared / Integrated Education

Peter,

At its meeting today the Committee for Employment and Learning considered your correspondence regarding your inquiry into shared / integrated education.

The Committee agreed to note the correspondence and to inform the Committee for Education that it has a number of Hansard transcripts on the NI Assembly website which may be of use.

I should be grateful if you would bring this to the attention of your Committee.

A handwritten signature in black ink that reads "White". To the left of the signature is a stylized, hand-drawn mark that resembles a checkmark or a signature flourish.

To: Peter McCallion – Clerk to the Committee for Education
Subject: Inquiry into Shared / Integrated Education

At its meeting of 10 September 2014, this Committee noted correspondence from the Committee for Education detailing the Terms of Reference for its Inquiry into Shared / Integrated Education.

The Committee agreed to write to advise that if any issues relating to Shared / Integrated Education arise in response to its Inquiry into Building a United Community, that these will be referred to the Committee for Education for consideration.

Regards

Kathy O'Hanlon

October 2014

Dear Committee Clerk

RE: Inquiry into Shared and Integrated Education

The Community Relations Council (CRC) welcomes the opportunity to contribute to the Committee's inquiry into Integrated Education and Shared Education.

Education, both formal and informal, can act as a critical player in developing, supporting and achieving reconciliation in our conflict transformation process. This will require a systematic approach to support the embedding and mainstreaming of good relations across and within educational structures, policies, practices and procedures. The presumption that we have parallel and polarised systems that will meet the needs of children and young people should be replaced with a common commitment to enhance and maximise opportunities for meeting, sharing and collaborating on a cross-community basis both at a policy and a structural level.

CRC supports a vision of educating children together, and whilst CRC does not advocate a single uniform model of sharing or integration, it sets at its core the need to ensure the education of children provides maximum opportunities for engagement and enrichment. Local circumstances will require local solutions, and must be supported by a genuine policy priority to help make it happen. Political will and leadership are crucial to the delivery of these educational commitments.

A core element of CRC's intervention, whether policy comment¹ or financial support, has focused on the quality and the sustainability of the contact. CRC advocates for collaborative relationships and engagement, either through legislation, incentivizing or encouragement, and recommends the following principles - equity, diversity, interdependence, welcoming, open, accessible, and safe, to ground this interaction. Utilizing these principles, during the design and development stages of collaboration and partnership, will help set a trajectory that delivers high quality and long-term sustainable engagement, as well as contributing to reconciliation and peace-building.

General Comments

From the outset, the Committee may want to remind themselves of the various international and domestic legislation relevant to the inquiry (Appendix 1). It would also be useful to note the positioning of education in a number of peace accords/negotiations² as important components in our peace process. However, it is the outworking of these agreements into the legislative and policy environment that will ultimately test the commitment of these political commitments.

1 Appendix 3.

2 In the context of a society emerging from conflict it is important to bear in mind the focus afforded to educating children together within local political accords. The Belfast/Good Friday Agreement (1998) states that 'an essential aspect of the reconciliation process is the promotion of a culture of tolerance at every level of society, including initiatives to facilitate and encourage integrated education and mixed housing'. The Hillsborough castle agreement also included a pledge from the British government to gift four former military bases to the NI executive highlighting an expectation that land in Omagh would be used for an educational campus

Finally, a number of legislative and policy instruments already exist which support or have the potential to further support and enhance the education of children together. Appendix 2 draws attention to some of these mechanisms.

Integration and Sharing - Evidence

The policy development process does not take place in isolation. As well as legislation and policy development there are a number of important external influencers. A range of independent reviews and research have been carried out, with each presenting recommendations that seek to influence and generate change. This includes the Strategic Review of the Schools Estate (2006) Report³, and the more recent report from the independent Ministerial Advisory Group (MAG) on the Advancement of Shared Education' (April 2013)⁴ which published 20 recommendations⁵. The Minister for Education responded positively to the report.

The report also included a definition of sharing 'shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion'⁶.

Other research relevant to this current debate includes the NI Commissioner for Children and Young People's research (NICCY) 'Shared Education - the views of children and young people'⁷, and the Northern Ireland Human Rights Commission's (NIHRC) report on 'Education Reform in Northern Ireland-a human rights perspective'⁸.

In addition to this are the studies that examine the benefits of sustained contact, both in terms of education and inter-community relations. For example Vani Borooah and Colin Knox considered a range of independent research as well as the Shared Education Programme [SEP] initiative, and report on the 'significant types of benefits arising from shared education: economic, education and reconciliation benefits'⁹. They conclude that involvement in the SEP initiative would (A) Increase the likelihood of: getting good GCSE's, gaining fluency in a foreign language, and going to University; (B) reaffirm Hughes et al research that 'separate schooling is more likely to contribute to 'own' group bias, stereotyping and prejudice'¹⁰ and that educational contact is valuable 'as a mechanism for promoting more harmonious relationships that can help promote social cohesion in a society that remains deeply divided'¹¹; and finally (C) budgetary savings e.g. creating sustainable schools, as well as estimated savings of £80m per year¹² to society regarding reduced police costs and increased foreign investment due to reconciliation benefits.

-
- 3 This report called on government to 'provide tangible support to schools that are actively engaged in sharing with other schools, or schools that are developing an inclusive environment in recognition of the diversity of their pupils' religious, cultural and ethnic backgrounds' http://www.deni.gov.uk/letter_and_statement.pdf
- 4 Ministerial Advisory Group on Advancing Shared Education – Terms of Reference; http://www.deni.gov.uk/shared_education_advisory_group_terms_of_reference.pdf
- 5 Recommendations were presented under 5 themes a) mainstreaming shared education b) supporting schools in shared education c) schools and other educational institutions d) area-based planning and the schools estate, and finally e) academic selection. <http://www.qub.ac.uk/schools/SchoolofEducation/MinisterialAdvisoryGroup/FinalReport/>

- 12 Borooah, V. and Knox, C. (2011) The Economics of the Shared Education Programme. University of Ulster

Lastly, it is important to pay attention to the aspirations of society in this area. Opinion polls regularly highlight the high levels of support for educating children together e.g. '79% of parents interviewed said they would back a move to transform their child's school to integrated, while 66% of all people questioned believe integrated schools should be the main model of our education system. Furthermore more than two-thirds said an integrated school best prepares children for living and working in a diverse society¹³'.

Integration and Sharing – Practice

There are many models and approaches that impact positively on collaboration and partnership between schools on a cross-community basis e.g. the department's Community Relations Equity and Diversity (CRED) Policy and Enhancement Scheme; whilst others are financially supported by external and international funders e.g. the International Fund for Ireland (IFI) and Atlantic Philanthropies (AP) support the 'Sharing Education Programme'¹⁴, and the IFI Sharing In Education Programme, and the Integrated Education Fund (IEF)¹⁵ through a range of grants¹⁶.

Recent announcements commit further investment for shared education such as Atlantic Philanthropies¹⁷, as well as the anticipated investment from Peace IV which will be allocated to support 'shared education initiatives'. This range of financial support signifies a huge commitment to encouraging and supporting schools to work and bring children together.

However, whilst these practical interventions produce positive outcomes they affect a small number of children. The current £25 million funding from philanthropy organisations for sharing involves approximately 10,000 children (approximately 2% of the school population)¹⁸, and the formal integrated sector represents 62 integrated schools (42 primary and 20 post-primary) which educates just over 21,500 children and young people. So whilst they are delivering constructive and tangible outcomes it could be viewed as having limited success. Moreover, given that some of the external money is a transitory measure, it could be argued that there is a limit to its success unless the learning and practice is strategically supported by the department. There is a danger programmatic interventions are prioritised and becomes the status quo which could result in limited opportunities for systemic change.

It is crucial for the department to give serious consideration as to how sustained and high quality contact will be secured post-external investment. CRC's response to the Peace IV consultation highlighted the importance of seeking assurances for supporting the development of a commitment from the governing structures – both local and departmental, to tackle the issue of sustainability and quality of contact during and post-Peace IV. These new monies are valuable and need to build on previous interventions – they should not be viewed as more of the same but rather grasped as an opportunity to support long-lasting structural change that enable sustainable, high quality contact across the various educational structures and personnel after Peace IV.

Moving forward

The following comments are CRC's views as to how this could be achieved. There are 4 key drivers in relation to educating children together:

Policy

The advancement of policy, political and economic priorities requires strategic political leadership is critical, therefore the Minister of Education and the Department should give greater strategic direction to the schools sector to ensure the teaching and practice of good relations is successfully mainstreamed across all schools.

Current practice and evidence must have a stronger influence on the development of educational policy in order to improve educational outcomes and advance sharing. Then recommendations from the MAG should be implemented.

Area Planning

The recent consultation process on area-based planning did not convince CRC that due consideration had been given to the legislative and policy commitments e.g. Programme for Government (PfG) commitments to 'substantially increase the number of schools sharing facilities by 2015', Together: Building a United Community (TBUC) commitments of creating 10 Shared Campuses, DE's CRED policy and enhancement scheme, area learning communities and the suite of projects supported by external supporters. Area based planning should require schools to explore options for sharing, with a clear public preference for those options which promote normalised interaction and engagement. Embracing this as a priority will help deliver a schools estate that meets the needs of children in all localities.

Facilitative Dialogue

Where schools are at risk of being closed or new schools are planned, local communities should be kept fully informed of the opportunity for possible collaborations. Wide scale direct debate with parents and children should be encouraged and facilitated at area based planning level. A deliberative poll exercise took place in Omagh in 2007 which facilitated discussions between parents on models of education provision in their locality. The final report revealed that people wanted more sharing with 71% specifically stating that they would support integrated education¹⁹. Those responsible for planning the schools estate should proactively engage with parents and the wider community and examine all options for increased sharing on a cross-community sectoral basis.

Legislation

Appropriate legislation should be developed to ensure shared education is strategically advanced. CRC called for amendments to the current bill regarding the promotion of Shared Education during the Committee Stage of the Bill. Furthermore, the MAG Report included a definition of shared education. This needs to be translated into law.

It is important the Committee inquiry consider current Assembly deliberations on the current bill, as well as any future legislation.

Barriers

Legacy

Our historical context and the legacy of the conflict are other obvious barriers, and it is clear current levels of communal segregation in our society are reflected within the education estate. For example, QUB research (2009) reported that children and young people from

19

<http://cdd.stanford.edu/polls/nireland/2007/omagh-report.pdf>

six communities still remained significantly affected by the conflict and that “*violence has remained a part of everyday life for children and young people living in communities defined by uncertainty, unease and the continued presence of paramilitaries and dissidents*”²⁰. Dealing with the past remains a huge problem for the youth of our society, and despite the experience of relative peace by many children and young people, the traditions of the past continue to impact on their lives.

Teachers have also noted concerns about the impact of sectarianism²¹ on pupil relationships. This poses a potential threat to interaction and could result in avoiding or minimising this type of engagement because of the risk factor.

Policy

Integrated and shared education policy must be viewed as a part of the family of strategic policies – they are crucial in the long-term process of normalising interaction and meaningful engagement.

Area planning proposals were weak regarding shared and integrated education. Many options for mergers and collaborations were proposed on a cross-sectoral basis, but there were few on a cross-community basis. A generic commitment to ‘collaboration’ cannot be allowed to disguise the imperative for inter-sectoral sharing. It is noteworthy that responses to the SIEP evaluation indicated that ‘*less than half of respondents from all school sectors felt that current education policy supported cross-sectoral collaboration*’, despite the fact that ‘*a majority of all head teachers agreed that schools should promote better relations*’²². This requires urgent attention.

In addition to the above comments regarding drivers and challenges CRC has the following recommendations to make. There should be:

Legislation

- A statutory duty on schools to promote good relations;
- A duty to fully consider sharing and collaboration in school development plans:

Policy

- An endorsement of previous recommendations, on the re-structuring and re-organisation of educational structures which explicitly encourage interaction between young people and contribute to the reconciliation of our communities and improve educational outcomes for all children;
- Develop guidance on sharing and collaboration for area based planning;
- Place a responsibility on boards (Education Authority) and governors to adhere to policy commitments regarding good relations issues and ensure these are reflected in area-based plans;

20 Haydon, D., McAlister, S., Scraton, P (2009) *Childhood in Transition Experiencing Marginalisation and Conflict in Northern Ireland*. QUB, Save the Children, The Prince’s Trust

21 ‘Teachers specifically suggested that they were worried about pupil sectarianism or general hostility between pupils’, *SCHOOL PARTNERSHIPS AND RECONCILIATION: AN EVALUATION OF SCHOOL COLLABORATION IN NORTHERN IRELAND*, Project Team: Prof Joanne Hughes, Dr Caitlin Donnelly, Prof Miles Hewstone, Prof Tony Gallagher & Dr Karen Carlisle December 2010, Page 41. <http://www.schoolsworkingtogether.co.uk/reports.html>

22 <http://www.schoolsworkingtogether.co.uk/documents/School%20collaboration%20in%20NI%202010.pdf> Page 32.

- Undertake an audit of current activity - what is being achieved, where and why sharing is not occurring and seek to identify barriers, as well as suggesting programmes to progress this lack of work²³.
- Consider the amalgamation premium in the common funding formula policy and explore how it could support collaborative approaches;
- Carry out audits to identify geographical areas for potential growth and changes in public attitudes;

Practice

- Strategic political leadership is needed to ensure the teaching and practice of good relations is successfully mainstreamed across all schools;
- Enabling a culture change. Good practice should be shared and publicised, and a culture of co-operation and partnership between schools and colleges encouraged;
- Practice and research must influence strategic policy;
- There should be a greater focus on sharing and collaboration within service delivery and the allocation of resources;
- Commit long-term and appropriate budget to support good relations activity across all levels of formal education;
- Develop a transitional programme including guidance relating to models for consulting on and how best to pursue sharing and collaboration. Adequate resources and a realistic timeframe will be needed to assess how suitable the models are to a particular area. Work with board of governors, parents and the wider community should be a central part of this change programme;
- Developmental programmes should be devised and implemented where non-sharing activity is identified. This should be linked to performance and inspections;
- Targeted support and resources - additional targeted support and resources for those schools in areas that continue to experience considerable community conflict, segregation and disadvantage;
- Ethos and identity issues should be dealt with using the UNCRC framework;
- A whole schools approach should be used which includes working with parents and the wider community;
- The curriculum should act as a critical lever for ensuring safety, welfare, dignity and respect in relation to personal understanding, citizenship and cultural understanding;
- Capacity building. Relevant regulatory and training bodies should include compulsory components of study on good relations in their training programmes;
- Stronger collaboration between teacher-training institutions to ensure all student teachers have the opportunity to experience the different sectors and ethos, via the exchange of learning and conducting some practice in another sector;
- Up-dated resources and materials for good relations work should be actively developed by DE, NI Curriculum and CCEA;
- Utilise external support and institutional knowledge to bring added value to internal practices;

23

It must be stressed that a significant amount of this information is should be currently available from departmental and external sources but it would be a useful exercise to assemble it in one place. Importantly this scoping exercise would ensure that those involved in all types of sharing, or those who want to explore opportunities, can access the relevant information and be given the support to have that conversation.

- Non-accredited benefits - creating opportunities for engagement that develop trust, relationships, and improving educational achievement can help create transferable skills that are needed to create and maintain harmonious work environments and cohesive communities;
- Evaluation. Develop a monitoring and evaluation framework that measures levels of collaboration and cooperation between local schools. This should be linked to performance and inspection, and should be published yearly;

The above is a series of suggestions that, if adopted across the various strategic and institutional structures, could positively impact on peace building and reconciliation within the current educational provision. They would also support the development of more formal and stable relationships thereby delivering longer and more sustainable outcomes.

Conclusion

Educational structures have already experimented in collaboration and partnership on a range of curriculum and extra curriculum activities, as well as between schools, pupils, teachers, institutions, and parents. It is important to set the work of this inquiry in this context. Clearly sharing, collaboration and integration are taking place, but the desire and aspiration for more is compelling and it is clear more needs to be done. The Committee should reflect on current provision, the vision and what needs to be done to support the development of this current practice over a sustained period.

CRC welcomes the opportunity to make this submission and would welcome the opportunity to engage with the Committee on this important aspect of peace and reconciliation.

Appendix 1

Rights agenda

Firstly, as a backdrop to this Inquiry it is useful to reflect on the range of international obligations that intersect with educational policy development and practice such as Article 29: United Nations Convention on the Rights of the Child²⁴, *Article 6: Framework Convention on National Minorities*²⁵, *Article 26 of the Universal Declaration of Human Rights*²⁶, and Article 13(1) International Covenant on Economic, Social and Cultural Rights which ‘recognize the right of everyone to education. They agree that education shall be directed to the full development of the human personality and the sense of its dignity, and shall strengthen the respect for human rights and fundamental freedoms. They further agree that education shall enable all persons to participate effectively in a free society, promote understanding, tolerance and friendship among all nations and all racial, ethnic or religious groups, and further the activities of the united nations for the maintenance of peace’²⁷. The Council of Europe’s 2007 White Paper ‘living together as equals in dignity’ drew attention to the role of education in supporting and enabling intercultural dialogue. It highlighted the need to learn the competencies that would promote intercultural dialogue²⁸. Finally, it is important to reflect on the concluding observations from the UN Committee on the Rights of the Child (2008) which recorded its concern regarding “the problem of segregated education” and called on government to take measures to address segregation of education in Northern Ireland²⁹.

-
- 24 Article 29 (1) “States Parties agree that the education of the child shall be directed to: “(c) The development of respect for the child’s parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may originate, and for civilizations different from his or her own; “(d) The preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin; UN (1989) United Nations Convention on the Rights of the Child UN: Geneva.
- 25 <http://conventions.coe.int/Treaty/en/Treaties/Html/157.htm>
- 26 (1) Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.
 (2) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.
 (3) Parents have a prior right to choose the kind of education that shall be given to their children; <http://www.un.org/en/documents/udhr/index.shtml#a26>
- 27 <http://www.ohchr.org/EN/ProfessionalInterest/Pages/CESCR.aspx>
- 28 Living Together as Equals in Dignity. Council of Europe. 2007. http://www.coe.int/t/dg4/intercultural/source/white%20paper_final_revised_en.pdf
- 29 October 2008 - COMMITTEE ON THE RIGHTS OF THE CHILD, Forty-ninth session, CONSIDERATION OF REPORTS SUBMITTED BY STATES PARTIES UNDER ARTICLE 44 OF THE CONVENTION Concluding observations:UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. <http://www2.ohchr.org/english/bodies/crc/docs/AdvanceVersions/CRC.C.GBR.CO.4.pdf>

Appendix 2

Legislation

Ultimately legislation sets the direction for the development of policy that will enforce the legislation. The key legal instruments that can influence how children are educated together include the *Education (Northern Ireland) Act 1978/ Education (Northern Ireland) Order 1984*³⁰; *Education Reform (Northern Ireland) Order 1989*,³¹; *Education (Northern Ireland) Order 2006*³². Further educational reform is progressing under the *education bill*.

Policy

There are a wide range of policies in existence that impact and influence this current debate. The *Programme for Government 2011-2015* includes a number of commitments regarding shared education including a commitment to ensuring that all children have the opportunity to participate in shared education programmes by 2015; to substantially increase the number of schools sharing facilities by 2015; and to establish a ministerial advisory group to explore and bring forward recommendations to the minister of education to advance shared education³³

(Report delivered 2013).

The Executive's 'Together Building a United Community' (TBUC) includes a number of goals relevant to education including summer camps/summer schools, a "buddy scheme" in publicly run nursery and primary schools; and development of age-appropriate primary and post-primary anti-sectarianism resources. However of major significance is the commitment to 'create ten shared educational campuses'³⁴. To date applications have been sought and 3 have been approved. A further call is expected in the near future.

The Department of Education's *Corporate Plan for Education 2012-2015* clearly identifies its relationship with the PfG stating that 'our focus will be on ensuring that every young person achieves to his or her full potential and on maximising the contribution that education can make to shaping a strong and shared community and delivering sustainable economic growth' and will 'promote opportunities for shared learning for pupils in schools in all sectors and all parts of the north'³⁵

30 Controlled integrated status was introduced in the Education (Northern Ireland) Act 1978 and later incorporated into the Education (Northern Ireland) Order 1984 "in order to facilitate the establishment of schools likely to be attended by pupils of different religious affiliations or cultural traditions"

31 clause 64—(1) 'It shall be the duty of the Department to encourage and facilitate the development of integrated education, that is to say the education together at school of Protestant and Roman Catholic pupils'<http://cain.ulst.ac.uk/csc/reports/fraser99d.htm>

32 Provided the broad legislative framework to implement the revised statutory curriculum, to give effect to aspects of the new arrangements for post-primary education, including the curricular Entitlement Framework and powers to introduce new admissions arrangements.

33 <http://www.northernireland.gov.uk/pfg>

34 <http://www.ofmdfmi.gov.uk/together-building-a-united-community>

35 In particular Corporate Goal 4 commits to 'Improving the learning environment' and undertakes to deliver and support an environment that 'provides opportunities for sharing and for building a more cohesive society' via the following objectives: Ensure all children have the opportunity to participate in shared education programmes by 2015; Substantially increase the number of schools sharing facilities by 2015; Significantly progress work on the plan for the Lisanelly Shared Education Campus as a key regeneration project. http://www.deni.gov.uk/de_corporate_plan_2012_english.pdf

Furthermore, the *Community Relations, Equality and Diversity (CRED) Policy*³⁶ has as its vision that it will ‘contribute to improving relations between communities by educating children and young people to develop self-respect and respect for others, promote equality and work to eliminate discrimination, and by providing formal and non-formal education opportunities for them to build relationships with those of different backgrounds and traditions within the resources available”.

It is important to note that the CRED policy enhancement scheme operates under a significantly reduced budgetary heading from its predecessor with an approximate 70% reduction in financial support. The recent good relations indicators revealed that under the CRED enhancement scheme (2011/2012) 12,164 (3.8%) of children were involved participating in community relations activities which equated to 249 (20.6%) schools. The previous policy which had been operational until 2009/10 involved 30, 997 children (10%) equalling 468 schools (38%)³⁷.

Other areas of educational policy relevant to this Inquiry include the *Revised Northern Ireland Curriculum*, the *Religious Education Core Syllabus*, the *Entitlement Framework*³⁸, Furthermore all post-primary schools are members of area learning communities which provide an opportunity to maximise the capacity of schools to deliver the entitlement framework via collaborative arrangements and a departmental circular 2013/10 - *delivering the entitlement framework* drew attention to financial support/incentives for this collaborative approach³⁹ (there is no official information available as to the extent of cross-community sectoral collaboration).

Other strategic policies which, whilst not having a specific community relations angle, have a significant role to play in supporting and developing community relations within the educational arena such as ‘*Schools for the future: policy for sustainable schools*’ (2009) which has as its vision a schools estate of educationally sustainable schools planned on an area basis, with a focus on sharing and collaboration. It states that the education sector will want to ‘uphold an education system that plays a powerful and positive role in the normalising of society, helping to make it sustainable and vibrant, with greater sharing amongst communities’; other policies include *Every School a Good School* (2009); *Area-based planning*, and the *Common Funding Formula* referred to an amalgamation premium, but it is unclear what type of amalgamation this referred to i.e. inter or intra-sectoral.

36 Its three main objectives focus on children and young people as the beneficiaries. It wants to ensure all learners ‘have an understanding of and respect for the rights, equality and diversity of all without discrimination’; to educate children and young people to live and participate in a changing world, so that they value and respect difference and engage positively with it, taking account of the ongoing intercommunity divisions arising from conflict and increasing diversity within our society; and finally to equip children and young people with the skills, attitudes and behaviours needed to develop mutual understanding and recognition of, and respect for, difference <http://www.credni.org/contents/what-is-cred/>

37 Good Relations Indicators 2012 Update; OFMDFM; 2013. <http://www.ofmdfmi.gov.uk/gr-indicators-2012-update>

38 The legislation bringing the Entitlement Framework into operation applies from 1 September 2013.

39 http://www.deni.gov.uk/14-19_cet_2013_14_ef_circular__english_version_.pdf

Appendix 3

Good Relations Forum: Ensuring the Good Relations Work in our Schools Counts - A Strategy to meet our needs for the 21st century (April 2010), CRC& ECNI.

School and local level:

- Compulsory good relations programmes in schools;
- Good practice to be shared and publicised;
- Capacity building programmes for existing school teaching staff;
- Capacity building of parents and local communities;
- Keeping local communities fully informed of the opportunity for possible collaboration, where schools are at risk of being closed or new schools are planned.

Strategic level:

- Strategic leadership - the Minister of Education and the Department of Education to give greater strategic direction to the schools sector to ensure that the teaching and practice of good relations is successfully mainstreamed across all schools.
- Culture change - by creating a culture of co-operation, partner schools and colleges can bring considerable resources and skills that both add value to the learning experiences of children and young people, and crucially, help schools to do things differently.
- Budget commitment to good relations programmes - the Department of Education to identify and commit a long-term and appropriate budget to supporting all schools to provide good relations modules within citizenship programmes.
- Good relations lens – the entire curriculum to be good relations proofed, at least in those subject areas where it is both relevant and appropriate to do so.
- Targeted support and resources - the Department and ESA to offer more targeted support and resources for those schools in areas that continue to experience considerable community conflict, segregation and disadvantage.
- Greater focus on sharing and collaboration within service delivery - the Department, ESA and other key educational stakeholders to focus on maximising value for money and avoiding duplication of educational provision, by placing a greater focus on existing drivers, policies and practices that encourage greater sharing and collaboration, particularly on a cross-community basis.
- Developing tools that measure change – the Department to develop a set of targets, as well as a monitoring and evaluation framework to measure the changes to the level of collaboration and cooperation between local schools. This should be published yearly and publicised widely.
- Teacher, head teacher and governor training - the Department to ensure that amendments are made to the various training programmes by relevant regulatory and training bodies, making good relations modules compulsory components of study.
- Greater sharing and collaboration between teacher training colleges – the Department and ESA to encourage stronger collaboration between the different teacher training institutions, to ensure all student teachers, whatever their community background, have the appropriate time and opportunity to experience other sectors and school ethos. All initial teacher training courses/programmes to encompass an element of teaching from different sectors on a cross-community basis.
- Mapping future opportunities - audits would help identify geographical areas for potential growth in integrated or shared education and changes in public attitudes, thus, providing a strategic context within which the transformation of schools might take place.

- A generic commitment to 'collaboration' cannot be allowed to disguise the imperative for inter-sectoral sharing which must result. Of course, some schools will have more opportunities than others to engage on a cross-community basis and there are already a number of schools delivering this in practice. However without an obligation to explore all options some schools may opt out of this opportunity. This collaboration cannot be allowed to occur on an ad-hoc basis - this could simply come down to it being easier to engage/collaborate cross sector (not cross community) and also happen at the discretion of board of governors or the principal.

Concerned Parent

Open Letter to Committee Integrated Education

I am not an 'academic', I am not politically minded and I am not particularly religious. Yes I have my faith as such but that's about as far as it goes.

What I am is a single mum with a demanding job and two fantastic kids. My children are now 19yrs and 15 yrs old and I would do practically anything within my power for them. I made a very conscious decision that they would be educated in an environment free (well as free as can be expected) from sectarianism and tribalism as possible.

My own upbringing was one of working class with two fantastic parents who happened to be protestant Christians. However, my life was interjected with bombs, needless killings and my mother wanted to know my every move. 'in case I got caught up in an incident!!'. My parents were unionist voters, a fact I only became aware of in my late twenties, but had friends from all walks of life. As my mother worked in Community Development she had worked quite a bit with ex prisoners and some would like to call themselves 'combatants'.

I went to Methodist College, which in some way was 'integrated' even back then, with me having friends from Hong Kong and Dubai.

I have seen the destruction that sectarianism can cause to children. They hate, they fear and they don't respect and it breaks my heart that these kids are missing out on so much of life as my kids know. How do I know this for a fact? I have been a Police Officer for 25 years, working in North and West Belfast, the worst area for bitterness, youth crime and segregation in the North of Ireland! Yes, class, unemployment etc does have their impact, but these kids aren't being given the opportunity to experience the 'other side'.

When I sent my kids to Lagan College, it was to try to reinforce what I had already been teaching them - that we in some ways are all the same yet different and it's OK to embrace the differences.

I have seen the Pastoral care given by Lagan, they 'care' for the kids in their 7 hrs/day control. I admire the staff for wanting to give every child the opportunity to be the best they can be in life. I have seen that they are FULLY integrated – what I'm trying to say is Protestant, Catholic, Seikh, atheist, muslim, able bodied, disabled, girls boys and those in between, rich, poor and all colours sit side by side in class. Gifted and talented, and those academically challenged are all given the opportunity to be the best they can. This is where other schools fail miserably. There isn't that diversity encompassed in one learning location.

My kids have grown up with friends from every part of the City – Cregagh estate, Ladybrook and even rural areas such as Ballywalter. They have experienced a full life, swapping stories, life experiences and most of all RESPECTING others. They have come to realise that just because Conal lives at the bottom of the Ormeau Road, it doesn't mean he is an IRA sympathiser, its fine that Orla speaks fluent Irish – but this does not mean she is intending to disregard English and force everyone to speak Irish! They learn that by embracing the differences, we can actually move forward and that, is something which this wee country really needs.

It has saddened me greatly to that certain political parties and academics are not 100% behind Integrated Education. What are they afraid of?? Why do they not want to offer these experiences to the kids of today and tomorrow? For them to block this opportunity for our youth is tantamount to criminal in my eyes!

I read an article that only 6% of kids go to a recognised integrated school – and this was pounced on by CCMS, however, the CCMS did not take into consideration how many of those other 94% would have attended an Integrated school IF THE CHOICE was available.

As I say, I'm not an academic or politically motivated, I just care about this wee country's future. I care about the kids and I would love to see at some stage other kids experience the same as my kids have been fortunate to.

I know it will take time and money to implement these changes however, these are changes which must be made as a RIGHT for families to decide that they want their kids to be educated in an all-inclusive environment. Again I say to the opposers of this – What exactly ARE you afraid of???

Corrymeela Community

For the NI Education Committee “Inquiry into Shared and Integrated Education”

**The Corrymeela Community is pleased to respond to some of the terms of reference the Education Committee has been asked to consider.
We would be pleased to share our experience with the Committee, if members so wished, at some later date.**

The Corrymeela Community, founded in 1965, as a cross community reconciliation organisation, has continuously initiated diverse Schools Community Relations Programmes since 1966, using a mixture of its own charitably donated resources as well as support from a variety of philanthropic, public and peace funding sources.

Within the Membership of this voluntary organisation we have many educational practitioners associated with Mutual Understanding, Shared Education and Integrated Education.

We have a number of Higher Education Lecturing Staff who have been involved in the professional formation of: teachers, educational managers, Boards of Governors and Principals.

We have a number of school principals, senior school staff and experienced teachers promoting mutual understanding, citizenship, shared and integrated approaches.

Additionally there are now many youth workers, in full time and voluntary community relations practice, who developed their interest in this work through volunteering or being engaged with reconciliation practice at our residential centre over the past 49 years.

The Context

Education in an ethnic frontier society such as ours can readily become a contested theme for people from all traditions. How different people and traditions view education needs to be more widely understood by us all, if we are to really focus on how we build a system centred on:

- the personal, social, intellectual and spiritual development of our children and young people;
- enabling them to embrace a shared future together, with diverse others;
- engaging parents and carers, from all backgrounds and traditions, as partners in this enterprise;
- support professional teaching staff, support staff, management and Boards of Governors work to the fullest possibilities offered to us through the current and exciting Northern Ireland Curriculum.

In view of the different educational providers and the current structures that exist in Northern Ireland, it is important that all initiatives that seek to promote an openness to difference, sharing or integration are welcomed and supported.

It is also important that all educational work is subjected to quality challenges around the extent to which they are explicit about working to reconstruct this society as one characterised by mutual respect and a willingness to share a common life together-

Corrymeela House Belfast
129 Ormeau Road, Phone: +44 (0) 28 9050 8080
Belfast, BT7 1SH Email: belfast@corrymeela.org

Corrymeela is recognised as a charity by the (UK) Inland Revenue. Inland Revenue Reference Number: XN49052A

between children, young people and adults-in this society.

We welcome all contributions that fully, promote sharing and integration and we are working to promote such a supportive culture around our schools. Schools have a central role in assisting us become a shared, mutually respectful and united society. This goal is a task for adults to drive forward.

We ask our own members and staff, and others also, to challenge a tolerance of 'compliance' that only offers minimal responses to the demands of public policy to promote CRED policies. Minimal responses, with no depth of 'a commitment culture' that promotes a more open and shared society, have little place or right to call on public financial support. Our children and young people deserve better.

A. Responding under your terms of reference: "Identify the key barriers and enablers for Shared Education and Integrated Education"

For us:

A 1. There is a need for an open, shared examination between all parties about the fears and dynamics associated with the control of education.

We attach a detailed political history of education analysis by our late member, Professor Frank Wright, published by us some years ago.

This text, together with the detailed historical appendix on 'Education and National Division in Ireland' since the early 19th Century, is an important reminder about the fears and dynamics associated with the control of education.

In Frank's analysis of: separate education, possibly being a means of managing distrust; and integrated education, possibly offering possibilities for reconciling diverse national traditions; he cautions us all to think carefully about making education a political football to serve diverse and opposing traditions and a way of stopping the needs and talents of our children and young people remaining the focus of public policy.

A 2. If the ethos of our schools is not primarily one of trust, then all schooling engagements between pupils from different traditions will be charged with a fear of assimilation.

Drawing on his experience of living in Britain, the former Yugoslavia and Northern Ireland, Frank argues that, in contested societies, histories are about relationships that are always charged with anxiety or tension in the present moment, whereas those living in more stable societies do not have this experience.

He argues that the different traditions and sectors need to understand the dynamics they are too readily caught up in and take courage to move out from them and beyond. Such a move would be a signal of mature political leadership (Shriver)

A 3. A need to offer culturally appropriate education within a united, shared, future vision

Wright argued that “the most important principle to uphold is the parents right to choose a culturally appropriate education for their children - state, catholic, integrated, irish or free presbyterian- where possible, to look for a way of expressing these needs on a united basis.”

He argues for this united approach between the different sectors.

A 4. It is important that the 1998 internationally guaranteed political agreement that addressed integrated education is honoured.

In “*Integrated Education: A Review of Policy and Research Evidence 1999-2012*”, Hansson and his colleagues argue that:

“In terms of education policy, the concept of integrated education was endorsed in the Belfast (Good Friday) Agreement,...., but later Executive documents, such as the strategy for Cohesion Sharing and Integration Consultation Document (July 2010) and the Northern Ireland Programme for Government (2011-2015) avoid any direct references to integrated education and the role it will play in future policy.

Current educational reform, such as the Education Bill (2012) ...do not refer directly to integrated education or to the duty of the Department of Education to ‘encourage and facilitate the development of integrated education’. Instead, there is an emphasis on sharing in education and ‘integrating education’ rather than a policy to increase the number of integrated schools.

A Ministerial Advisory Group on Advancing Shared Education was established in 2012 as part of the Programme for Government (2011-15), but there is no explicit reference to integrated education within its mandate.”

A 5. In our experience one most significant barrier is the resistance of professional educators to engage together in exploring sensitive and challenging societal issues around history, identity and beliefs with colleagues from different political, cultural and religious traditions. It is not primarily the attitudes of parents, carers or children and young people.

Of course we recognise the excellent work of many educators in this area. However, in spite of this body of forward-looking educators, in our experience we have encountered some professional educators as a major challenge.

This is compounded by:

- A still limited embedding of dealing with sensitive issues within the Higher Education training of teachers in our Universities and Colleges;
- The limiting of Continuous Professional Training opportunities that means teachers from diverse sectors do not meet together (**Note: In Scotland each teacher has four to five Continuous Professional Development Days Annually, as a commitment to supporting their children and young people**);

Since 1969 the Department of Education has often supported Mutual Understanding work, however this work has primarily been funded by local charitable organisations, the externally offered Peace Funds and International

- philanthropy.

There is a need for a central public budget to be established that supports this work and a government reliance on philanthropy stopped;

- There are now very limited opportunities to explicitly engage with the sensitive themes around Mutual Understanding issues due to a lack of core Public Budgets in this area;
- This area of work needs prioritised and embedded within the in-service training of experienced teachers, middle and senior management.

A 6. The Peace Agreement of 1998 and subsequent agreements were forged out of many strands of political and civil society actions. Central to these experiences were experiences of politicians being away from home or living with one another at residential venues.

As an educational model of change the residential experience, being with one another, out of our normal space, is one way in which we meet one another deeply. If this experience was essential to the wider peace processes, it remains essential to the future formation of children, young people and adults, many of whom still live quite separate lives.

The work of Sharing and Integrating will be enhanced if resources for residentially meeting together are prioritised.

B. Responding under your terms of reference:

“Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes”

In our experience Northern Ireland has been a lead in developing twinning approaches between schools that other societies could and do learn from.

We would caution the Committee from, too readily, looking elsewhere at the expense of gathering the accumulated experience developed within this jurisdiction. As an aid to this internal knowledge we offer the following examples:

B 1 Since 1940, the early attempts by Dan Mc Call and John Malone with the National Council of YMCA Programmes for young boys from areas of social deprivation.

B 2 Since 1966:

The experience of Corrymeela in developing, long lasting, **twinning programmes** between secondary schools and grammar schools around Mutual Understanding that started before the civil conflict and continued through the worst years of the violence. For example in areas such as Rathcoole; East Belfast-Armagh; Dungannon; North Down; Ballymena; Omagh; Craigavon; Coleraine; Derry/ Londonderry.

The provision of **four-day residential teacher development courses** at Corrymeela around systemic and curricular developments around promoting and sustaining Mutual Understanding.

The development of primary school partnerships in areas of social deprivation addressing poverty and underachievement, some of which were supported by Corrymeela fieldwork / teaching staff.

The provision of **Forgiveness Education and Religious Education** Resources on peace building and reconciliation.

B 3 The current Corrymeela Community 'Facing our History, Shaping the Future' Programme, developed jointly with a US Education Partner.

We have developed this excellent programme over the last years, highly commended by the ETI Inspectors. Together with teacher and student resources this programme, originally funded through the IFI 'Shared Education' initiative, has been curtailed. The programme is very relevant to all Secondary Level Schools.

At present this programme has reached 60% of all post Primary Schools in Northern Ireland. However as we have no substantial long term funding against this project, this is preventing us from releasing its full potential. Currently we are using our charitable resources to augment this work.

B 4 Since 1969 the **Schools Community Relations Programme**, established with King George VI charitable funding and supported by the (then) Ministry of Education under the direction of John Malone. This led to the development of a **Schools Support Service**, then based in QUB but ended in the 1980's.

B 5 In the 1970's many programmes of community relations based school work were developed. These are explored in the recent work of Norman Richardson and Tony Gallagher and in the writings of Alan Smith, Alan Mc Cully, Gerry Tyrell, Alan Robinson and others.

(See Norman Richardson, Tony Gallagher Education for Diversity and Mutual Understanding: the Experience of Northern Ireland. Bern: Peter Lang.)

C Responding under your terms of reference: "Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools"

C 1 In our experience terms such as: reconciliation, mutual understanding and human rights; community relations, equality and diversity (CRED); are terms that should be both structurally promoted and relationally experienced.

This means that systemic approaches to colleges and schools embedding fair treatment, acknowledging diversity and promoting a sense of interdependence between staff, parents and students from diverse backgrounds and traditions need promoted within the daily codes, rituals and working practices of those institutions, as well as within the Department of Education itself.

Alongside these structural supports for Sharing and Integration there needs to be a

relational culture developed between all the interested parties in their day to day interaction and engagement with one another.

In such daily relational events and structures new ways of being with one another; new ways of speaking respectfully about and acknowledging 'different others' who belong to this society, but who may not be in that particular school, are repeated daily, structured and eventually become "the ways things are done here".

C 2 The Need for Systemic Changes in Structures that promote Sharing and Integration as core themes.

Some years ago Corrymeela developed a manual on such approaches called 'Joined Up'. This manual offers a way for schools, systemically and relationally, to develop their resilience and support to processes that support both sharing and integration.

We wish to engage with pilot schools further around this systemic change approach. *(The Joined Up material was made available to the GTCNI Research Repository. This resource base is now closed down-we are arranging to have a disc copy sent to the Committee.)*

As a responsible charity committed to promoting reconciliation, we have currently committed major charitable resources to support informal and formal education that supports sharing and integration.

We are currently reviewing our schools, youth, family, volunteering, faith and inter-cultural work, with a view to launching a new platform of transformative education models of practice that support learning for a new, mutual and shared future.

Sometimes alone, and often with different partners, we hope this will develop specific practices that, adequately documented and researched, will be capable of multiplication across the pre-school, primary, secondary, further and higher and adult education sectors.

Whether these are shared or integrated approaches will depend on the participants and each context. However what is clear to us is that they will be an expression of our commitment to work to promote a more open, shared and respectful society based on fair treatment, a respect for difference and a wish to build interdependent relationships between all citizens in this society.

C 3 All educational spaces have an opportunity to promote or dilute CRED.

In all schools where there are elements of shared or integrated governance, such spaces offer society, and citizens, foundation blocks for taking many of us beyond the more seductive and familiar comfort of our separate traditions and backgrounds.

Therefore all shared and integrated Boards need affirmed and encouraged to go further in the quality of their engagement and risk taking that supports a more open shared society.

C4 Promoting Restorative School Cultures

We are considering the potential of the concept of Restorative Schools as a transcending umbrella that could engage schools from all the sectors in a common programme of work that builds the values and processes we think are central to a shared and mutually respectful society, and which are needed by children, young people and adults.

Drawing on experiences of some members and staff with schools in New Zealand, South Africa, Canada, the United States, the Republic of Ireland, the County of Lancashire and in Scotland, to name only a few, we are convinced that:

- The quality of relationships between pupils, staff, parents and governors can be enhanced;
 - Community engagement affirmed;
 - Pupil attainment, teacher confidence and safety, and parental participation increased, through such an approach.
- (See some resources on this work below).

We repeat again how important it is that we urgently promote diverse manners of structural and relational work that builds a more open, shared, and future oriented inclusive society based on mutual respect and, eventually trust between diverse people.

To support this visionary task, the promotion of shared and integrated educational structures are important, as they will bring quality experiences of being at ease with different others to staff, parents, carers, children and young people, as members of these enterprises.

Yours sincerely

The promotion of good relations is about breaking through the denial and avoidance of the Northern Ireland conflict and acknowledging its impact on the community and organisations working within it. It is also about actively recognising the challenges faced by people in Northern Ireland who are members of minority ethnic communities and minority religious faiths and the additional difficulties that they may encounter. Good Relations challenges sectarianism and racism, promotes equality, develops respect for diversity and raises awareness of the interdependence of the people and institutions within Northern Ireland. It states a public commitment to these beliefs and continually seeks ways to build on them for the future.

DEFINITION DEVELOPED BY THE NORTHERN IRELAND COMMUNITY RELATIONS COUNCIL.

Resources and Information

- 181 Resource List
- 187 Whole School Audit
- 212 Sample Circle Time Outlines
- 223 Sample Programmes

Introduction

introduction

What is the purpose of the resource?

- To support schools in developing a whole school approach to building good relations throughout their school community.
- To provide school senior managers, teachers and teacher educators with guidance and resources to support them in developing effective active learning approaches for exploring controversial and difficult issues with children, young people and adults.
- To encourage you, as school senior managers, teachers and teacher educators, to reflect on your own understanding and ongoing learning as you consider how best to enable children, young people and adults within school communities to explore these themes.

Schools are situated at the heart of communities, playing a crucial part in the lives of children, young people, and the adults who work within them or come into regular contact with them as parents, visitors, etc. These children, young people and adults do not leave their 'outside' lives at the school door when they arrive, but bring with them a wealth of life experiences and learning.

Whether they are acknowledged or not, all the life issues and struggles of identity, relationships and community are present within the school setting. The Northern Irish experience of the conflict has added a particular dimension to this, one which schools are often reluctant to address, given the difficult and divisive issues which it can raise. Other aspects of life, such as the increasing diversity of ethnicity, culture and beliefs within Northern Ireland society, bring valuable opportunities for learning, including more challenging themes such as the experience of prejudice and discrimination.

This resource explores these issues as an essential part of learning how to live in society, specifically in the contested and transforming society of Northern Ireland. The issues that tend to be avoided or kept hidden ('taboo' subjects) may be the very ones that most need to be explored. The resource seeks to promote effective teaching and learning practice, and to provide guidance for exploring some of the more controversial issues which emerge in ways that are safe and appropriate, and which create positive learning experiences for children, young people and adults alike. It recognises that the most effective structure for this is a whole school approach where there is a shared ethos and commitment to being a respectful learning community, which values all its members as well as those outside.

INTRODUCTION: WHAT IS THE PURPOSE OF THE RESOURCE?

Section 75 of the Equality Legislation (Northern Ireland Act, 1998), along with other human rights' frameworks, such as the United Nations' Convention on the Rights of the Child, provide a broader context of good practice, and should be further supported by a holistic, best practice approach to Child Protection.¹ The revised curriculum with its overall emphasis on values and skills builds on earlier work developed through Education for Mutual Understanding (EMU),² and offers clear opportunities for these themes to be explored, particularly in the areas of Mutual Understanding in the Local and Global Community (Primary)³ and Local and Global Citizenship (Post-Primary).⁴ Work in these areas can also be enhanced further by the opportunities offered by the Department of Education's Schools Community Relations Programme,⁵ which encourages partnerships between schools as well as creative exploration of relevant themes within individual schools.

While recognising that this can seem like a huge additional area of work for schools, the resource focuses on principles of effective practice, which support positive ethos and high quality teaching and learning across every dimension of school life.

Who is this Resource For?

The resource was specifically developed to provide more training and support to student teachers, teachers, school senior managers and others involved in education, enabling them to feel more confident in exploring controversial issues with their colleagues or pupils, particularly those relating to identity, diversity and conflict, and to create an appropriate context for this work.

The ideas contained in the resource have been developed and tested over the past number of years in schools, teacher education institutions and Early / Continuing Professional Development contexts. The resource also draws on experience gained in youth and community work settings.

Among other possibilities, this resource would be useful for:

- *teachers working with their classes;*
- *a principal, Education & Library Board (ELB) advisor or external facilitator working with a team of teachers and / or support staff;*
- *two or more schools working together on a community relations programme;*
- *a tutor working with student teachers;*
- *ELB advisors working with Beginning Teachers;*
- *ELB advisors or external facilitators working with a group of school governors or parents;*
- *a principals' cluster group.*

³ CCEA (2002), Primary Values, Belfast, CCEA.

⁴ CCEA (2003), Local and Global Citizenship: A Resource for Post-Primary Schools, Belfast, CCEA.

⁵ DENI (2002), Review of the Schools Community Relations Programme, Bangor, DENI.

How can the Resource be Used?

We have tried to distil usefully, some of the key aspects of this kind of work. In some cases, this means that we only touch on areas which could fill several resource packs in themselves – the resource list at Appendix One will point you to places where you can find out more, if need be.

The resource takes a 'how to' approach, recognising that people will come to the resource with different experiences and learning. Some will find it useful to work through the resource from start to finish while others may choose to focus on particular sections.

Wherever the starting point, it is crucially important to give some attention to the overall ethos and approach before launching into the controversial issues dimension of the work.

Within each section you will find (if applicable):

Questions for Reflection

These can be used individually or as the basis for group discussion (in a tutorial setting, a staff team development setting or governors' / parents' session, etc.).

Theory into Practice

Based on real life examples, these scenarios and suggestions provide the opportunity to think about how the ideas in different sections could be used.

Sample Exercises and Resources

Examples of activities and resources to support groupwork and whole school development.

Session Outlines / Lesson Plans

Examples are given for Foundation Stage, Key Stage One, Key Stage Two, Secondary and Adult – but many of the activities within them can be adapted to suit various ages.

Checklists

These provide general points to think about in preparation for an individual session / lesson or a longer programme / module.

Definitions and Explanatory Notes

INTRODUCTION: WHAT IS THE PURPOSE OF THE RESOURCE?

IDEAS TO GET STARTED

- Start by skimming through quickly, taking in headings and key points.
- Choose sections that look particularly relevant to your situation.
- Begin at the start and work your way through to the end, using the Questions for Reflection to develop your thinking.
- If this kind of work is unfamiliar to you, work through it with an experienced colleague or mentor who can provide support.
- Try out some of the activities.
- Summarise the key points for someone else.
- Persuade someone to summarise it for you!
- Use it as a training resource with colleagues.
- Use it as an aspect of your Early or Continuing Professional Development, or of your Professional Qualification for Headship.
- Use it for bedtime reading!

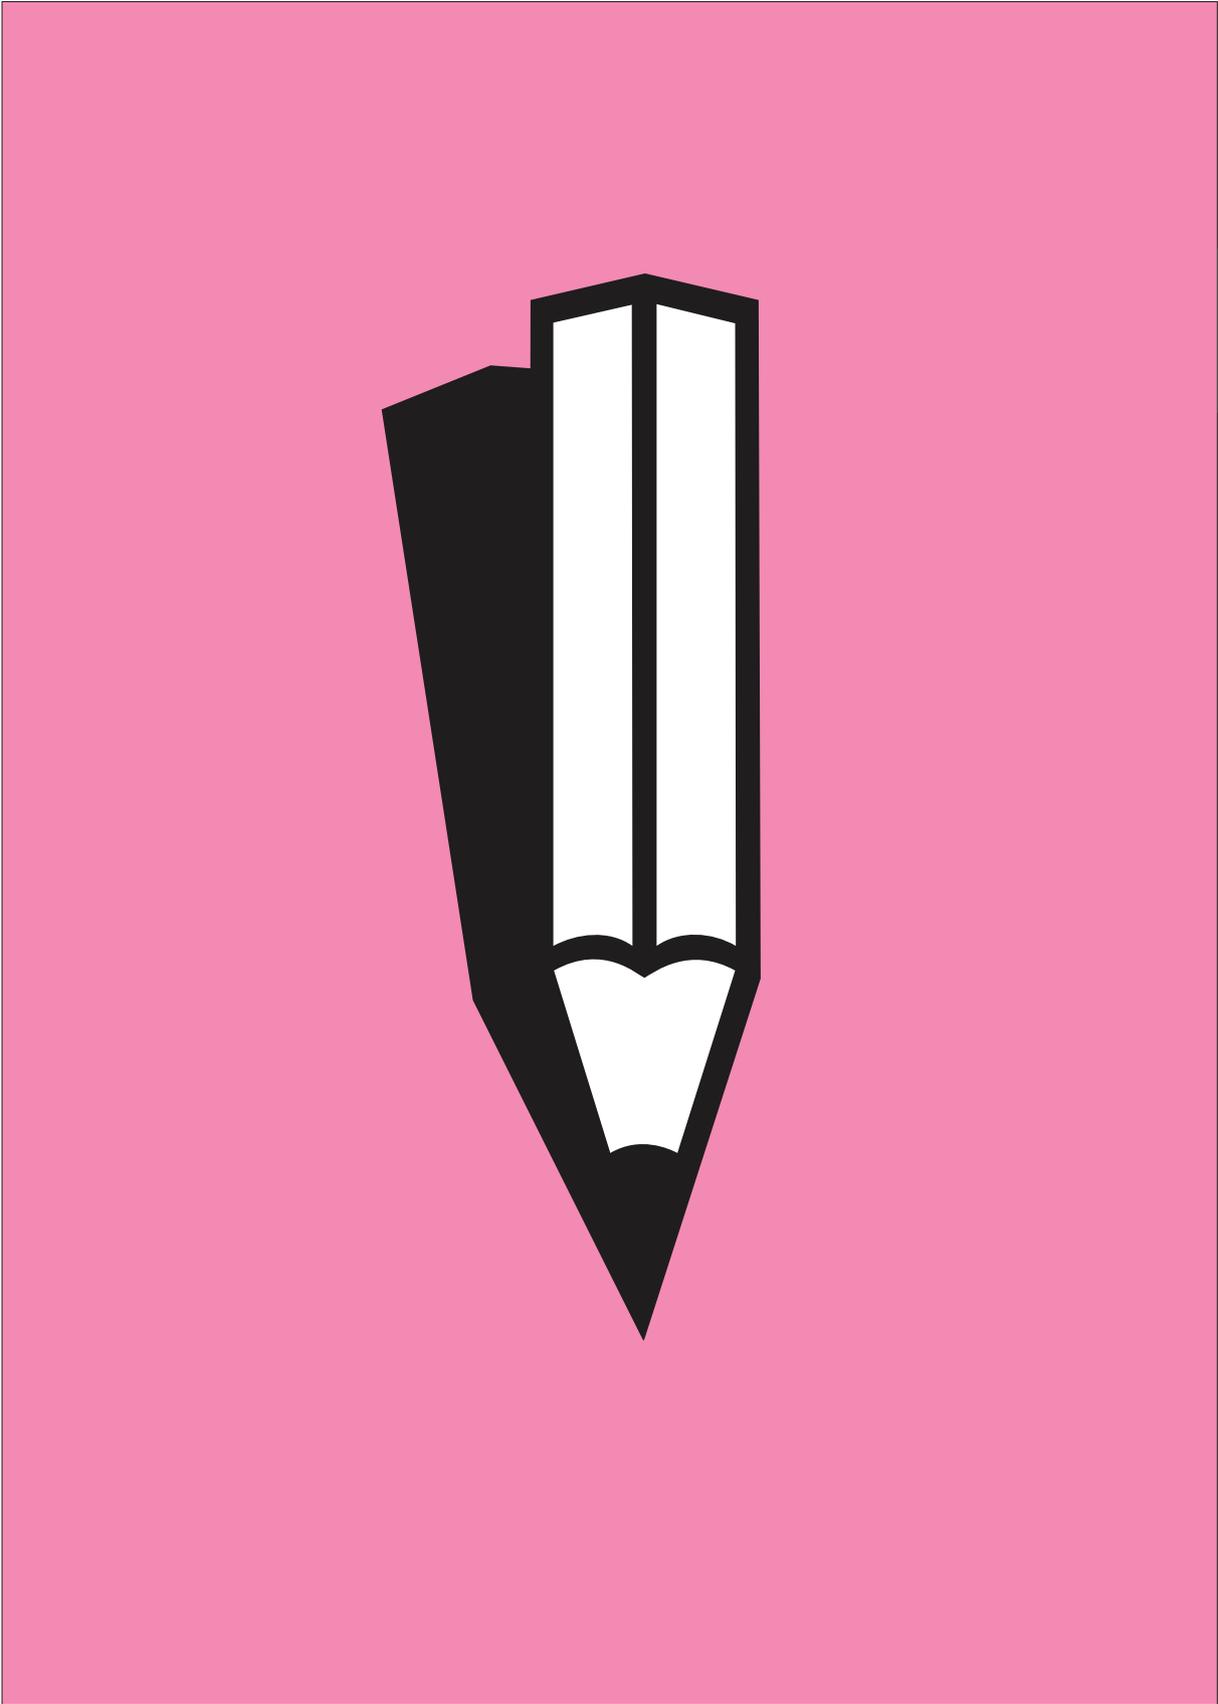

As you consider using the resource, bear in mind some of our starting premises:

- Learning is most effective when it is gained through active engagement in the process.
- Learning is about making connections, and understanding its application across a range of situations.
- Positive learning involves taking appropriate risks.
- Learning requires us to reflect, so that we can consolidate what we have learnt and put it into practice.

There are a lot of ideas and materials in this pack, but do not feel overwhelmed if many of these are new to you!

Take the ideas a step at a time, trying out what you feel confident about, and taking the appropriate risks when you feel ready for them.

Understanding the Context

Teaching and Learning in
a Contested Society

People talking without speaking

People hearing without listening ...

'Fools,' said I, 'You do not know

Silence like a cancer grows.'

LYRICS FROM: SIMON, P. (1964), SOUNDS OF SILENCE.

Understanding the context

1.0 Introduction

Northern Ireland is a curious place. Since 1969 over 3,600 people have died as a consequence of political violence. Since the mid 1990s there has been a peace process of sorts, but people are still being intimidated and killed, and shared political institutions have spent more time in suspension than in operation.

Despite the significant reduction in political violence in recent years, there is still a close relationship between people's religious or community background and:

- *the political party they vote for;*
- *the type of school they attend(ed);*
- *the area in which they live;*
- *their social and cultural preferences;*
- *the names they give to their children;*
- *the way they pronounce the letter 'h'!*

Northern Ireland remains a deeply divided society. In fact, there is some evidence that the level of segregation in our society is getting wider, almost as if it is easier and safer to live apart than to develop a shared future. Recent evidence reveals that children are beginning to show preference for symbols of 'their' community, as young as three and four years old.¹

This research suggests that entering school for the first time represents a significant

milestone in the life of any child. It is likely to be the first time that many will begin to interact with larger numbers of other children and come under the influence of older peers. The report came to two broad conclusions:

- Children, from the age of three, should be encouraged to explore and experience a range of different cultural practices, events and symbols and to appreciate and respect difference and cultural diversity.
- From the age of five, children should be encouraged to understand the negative effects of sectarian and racist stereotypes and prejudices and to be able to identify them in their own attitudes where appropriate.

This clearly points out the role education can play in supporting children and young people to learn about themselves and others. It is complemented by the statutory requirements of the curriculum.

In all cultures people avoid talking about things that would make life difficult. Northern Ireland is not, of course, unique in this regard. There are secrets; taboos that are not talked about but are not forgotten. The reason for this behaviour is usually benign – people do not want to cause upset or hurt, to get into an argument, or to put themselves at risk. These adaptive behaviours are often so ingrained in our lives that we do not recognise them. We might, however, question whether this 'silence' is the best way to deal with the legacies of division and conflict in our society.

¹ Connolly, P., Smith, A. and Kelly, B. (2002), *Too Young to Notice*, Belfast, Northern Ireland Community Relations Council.

UNDERSTANDING THE CONTEXT

The Concept of Northern Ireland as a Contested Society

A stable society is understood to be characterised by people sharing a common sense of identity. Within this a high degree of support and unanimity is accorded to state institutions and the institutions of law and order.

A contested society is one where there is no shared sense of identity and people have traditions / loyalties which can be exclusive and unlikely to accommodate difference.³

Derick Wilson et al. cite the example of experienced teachers on a residential course who spoke of how they had not met 'in depth' with people from other traditions. The opportunity to hear about the lives of others brought up in a different culture / tradition was completely new for them, a silence was broken.² When we hear one another sharing openly a new reality comes between us. We begin to marvel at the separated lives we often lead here.

We live a so-called 'normal life' in the midst of a 'troubled society'. Social structures and inter-group relations have all been impacted by polite behaviours, divisions, fears, hostilities and segregation in contexts such as:

- *family and friendships;*
- *neighbourhoods and public spaces;*
- *school and youth experiences;*
- *church and culture;*
- *sports and recreation;*
- *the workplace;*
- *government, politics and law;*
- *ethnic groupings.*

There are at least three main reasons why it is important for schools and the wider education system to try to break through this 'sound of silence':

- 1** It is difficult to see how we, as a society, can solve the legacies of division and conflict unless we find a way to talk about those legacies. It is not enough to ask people to forget about the past, but neither should we become prisoners of the past.
- 2** Evidence reveals that people find it liberating and enlightening to break through these silences. We often make assumptions about others, but when we are given opportunities to listen genuinely to other perspectives we can begin to develop better and more informed understanding.⁴
- 3** It has long been a matter of policy that schools and teachers have a responsibility to promote better community relations, tolerance and reconciliation among children and young people.

³ Adapted from a concept developed by Derick Wilson et al.

² Morrow, D. and Wilson, D. (1996), *Ways Out of Conflict: Resources for Community Relations Work*, Coleraine, Understanding Conflict Trust.

⁴ Morrow, D. and Wilson, D. (1996), *Ways Out of Conflict: Resources for Community Relations Work*, Coleraine, Understanding Conflict Trust.

Within our political world decisions have been designed to encourage inclusion and a peaceful society. A pattern of developing a new society can be discerned, not just in the Belfast Good Friday Agreement, and Section 75 of the Equality Legislation (Northern Ireland Act, 1998), but in a raft of decisions taken by the British and Irish Governments, Secretaries of State, devolved government departments and other public bodies.

Section 75 places the duty on all public bodies to pay due regard to the promotion of equality under nine different categories, and to promote good relations among people of different religious or racial backgrounds and political beliefs. These categories are as follows:

- *sexual orientation;*
- *age;*
- *gender;*
- *disability;*
- *dependents;*
- *marital status;*
- *racial group;*
- *political opinion;*
- *religious belief.*

Whilst this does not include schools, it does include the Department of Education and teacher training institutions, and it highlights the need to be advocates for good practice in relation to the legislation.

1.1 How has the Education Sector Responded to the Conflict?

There have been many attempts to address these issues through education. In the 1970s some teachers organised contact projects between schools. In the 1980s the Department of Education created a special fund to support this work. During the same period, groups of parents started to establish new Integrated schools for Protestant and Catholic pupils and teachers. In the 1989 Education Reform Order the themes of Education for Mutual Understanding and Cultural Heritage were established as compulsory parts of the Northern Ireland Curriculum, and the government took on a commitment to support the development of Integrated Education.

Throughout these years exemplary initiatives have been carried out by schools and committed teachers. Research indicates, however, that the overall contribution of schools has been limited. The consensus is that education could and should do more to contribute to the improvement of community relations and the promotion of reconciliation and tolerance.

It was partly for these reasons that changes were made to the Northern Ireland Curriculum. These changes include the Local and Global Citizenship module for Post-Primary schools and revised curriculum for Foundation Stage, Key Stages One and Two, i.e. Personal Development Strands One and Two: Personal Understanding and Health, and Mutual Understanding in the Local and Global Community.

Local and Global Citizenship is based on the following key themes, which are addressed in local, national, European and global contexts:

- *diversity and inclusion;*
- *equality and social justice;*
- *democracy and active participation;*
- *human rights and social responsibility.*⁵

⁵ CCEA (2003), *Local and Global Citizenship: A Resource for Post-Primary Schools*, Belfast, CCEA.

UNDERSTANDING THE CONTEXT

These themes are not seen as separate but as closely interrelated aspects of citizenship. The aim is to support pupils in investigating the themes and in developing their capacity to be active and participatory citizens within the Northern Ireland context.

Some teachers will be given specialist training in Local and Global Citizenship, but all those involved in education need to be aware of the positive role they have to play. Most significantly, they can and should help children and young people feel comfortable with difference, whether it is defined in terms of religious or political outlook, ethnic or racial identity, gender, disability, etc.

The revised primary curriculum aims to empower children to develop their potential. It aims to support children to develop as:

- *individuals;*
- *contributors to society;*
- *contributors to the economy and environment.*

The Mutual Understanding in the Local and Global Community strand encourages the exploration of diversity and allows for development of the concept of citizenship.

These changes to the curriculum create further opportunities for schools and the wider education sector to contextualise the support they can offer to children and young people. They also support the school to address the issues of managing diversity in an ever-changing society with increasing levels of racism and sectarianism, and to reflect the ethos of the school in all its practice.

1.2

How can the Education Sector Address Issues of Diversity?

Education can have a role in preparing children and young people to be at ease with diversity, including:

- with people from different ethnic traditions to their own;
- with people from different religious and political outlooks;
- around people of a different gender orientation;
- around people with different levels of physical and mental ability.

These aims can only be achieved if the reality of the contested society is acknowledged by all within the school community.

This can be done by reflecting upon our understanding of our experiences of life in Northern Ireland, which have shaped us as individuals. On a practical level we need to create spaces where children, young people and adults can meet in a new way, so that change is a positive experience and is not forced or contrived. People need to understand each other in an atmosphere of trust, so that they can speak freely without the anxious politeness which so easily generates sectarianism or racism. A useful place to start this process could be with:

- *your whole staff team;*
- *your department or Key Stage group;*
- *your class;*
- *parents / carers;*
- *governors.*

If the Questions for Reflection are used with different groups, they will need to be adapted to suit each particular one.

Questions for Reflection

What do you feel has been the impact of the conflict on:

- *the education sector as a whole;*
- *society;*
- *the school;*
- *children and young people;*
- *you, personally (and professionally)?*

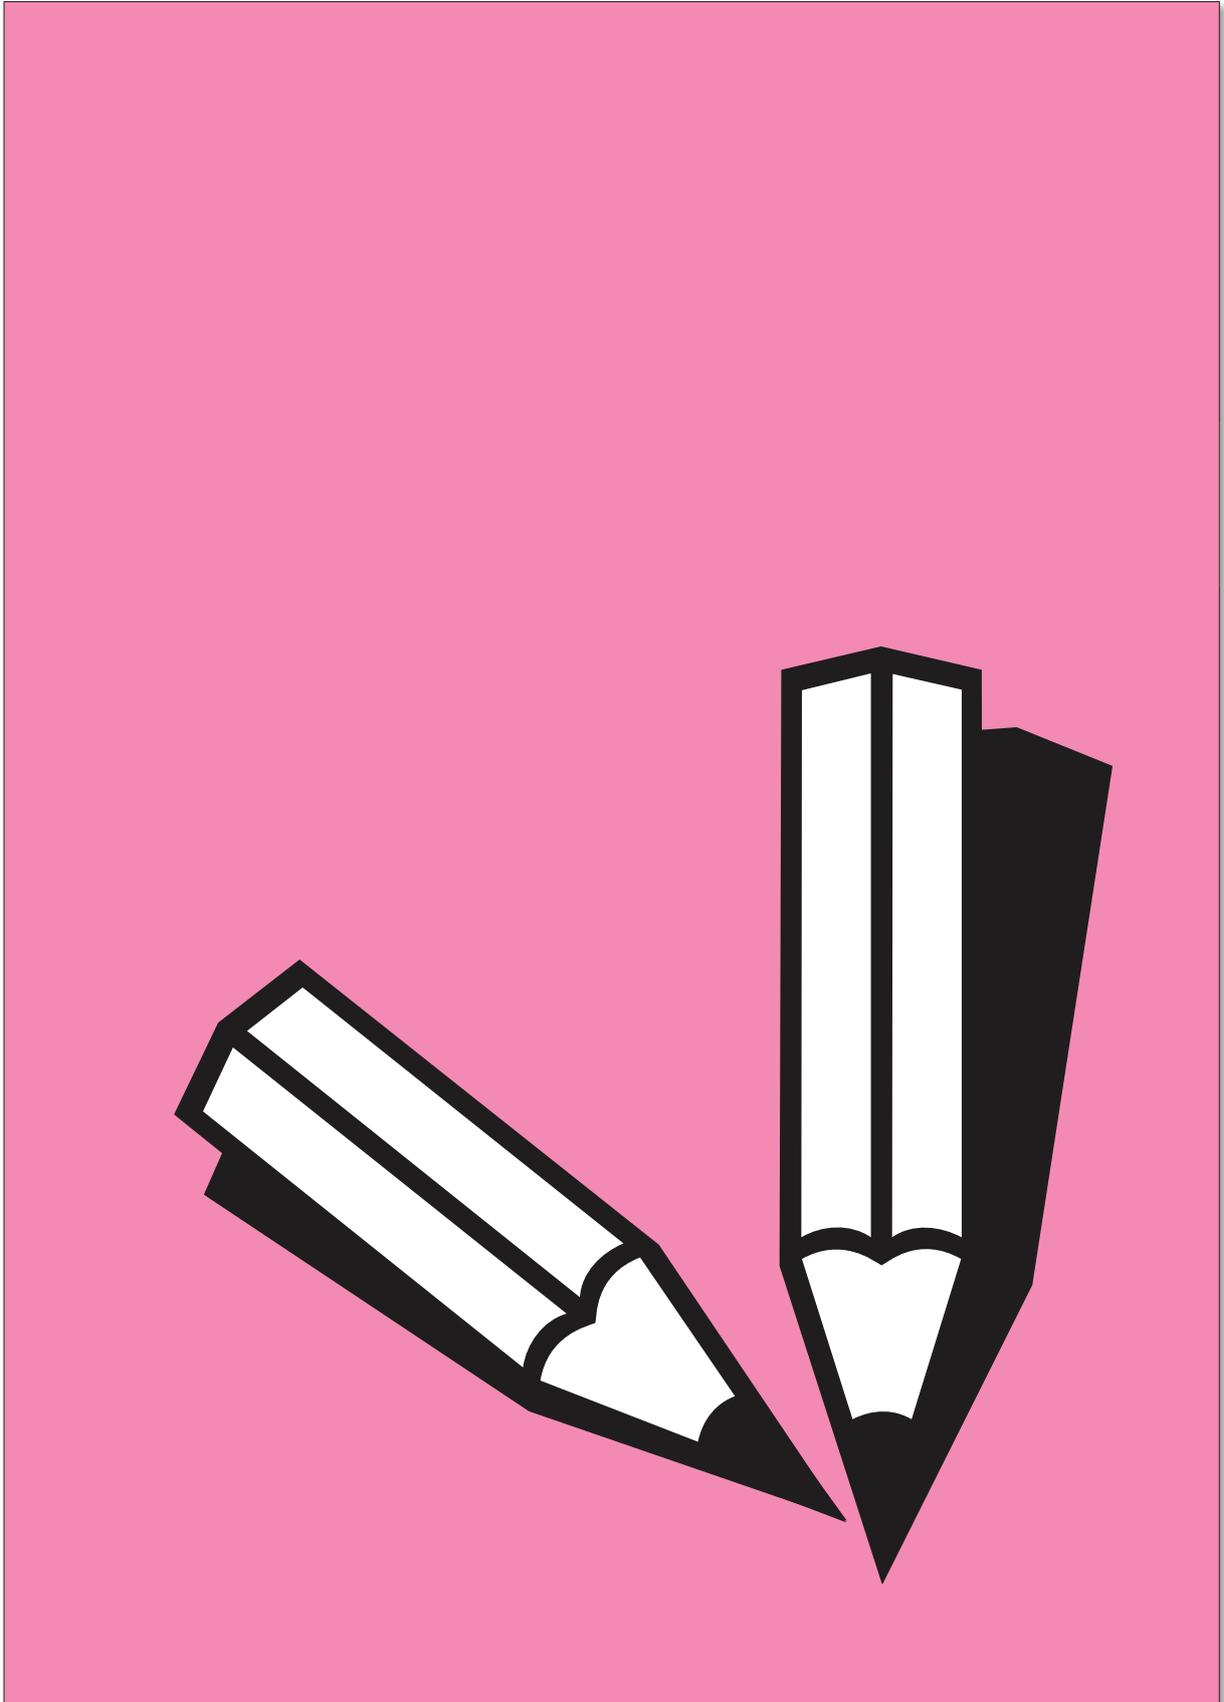

What things do people tend to be private about or have as taboos in Northern Ireland?

Should we be private about certain things?

Are there certain things that are private in the classroom / school?

How can the education sector meet the challenge of contributing to the creation of a peaceful society based on equity?

Does the school see itself as having a part to play in this?

Creating an Inclusive Learning Community

A Whole School Approach

'Genuine learning occurs in the context of our lives, and the long-term impact of any new learning depends on its relationships to the world around us.'

SENGE, P. ET AL. (2000), *SCHOOLS THAT LEARN*, LONDON, NICHOLAS BREALEY PUBLISHING.

creating an inclusive learning community

2.0

What is an Ethos?

Every school has its own ethos in the sense of a dominant pervading spirit or character that finds expression in the behavioural habits of those who are part of it. An ethos is, ideally, owned by the whole school community.

It has both overt and hidden dimensions and is expressed and developed best through 'a shared dialogue on the core values of the school community and the daily practice, which tries to reflect these values'.¹ An ethos is more perceptible to visitors or new staff / pupils as we often adapt to the circumstances we are in and become blind to old habits.

A school ethos should be:

- based on agreed core values;
- reflected in the structures / relationships in the school;
- reflected in the curriculum and other working practices of the school;
- reflected in school policies;
- reflected in the relationship with the wider community;
- reflected in the practices of all within the school community.

It is important to ask whether the school's practice mirrors its mission statement or whether there is a dichotomy between theory and practice?

If values are compartmentalised so that they only exist in certain subjects then the school has not developed a community built on values of fairness, diversity and interdependence (recognition that we are in relationships with a whole spectrum of individuals and communities). The message pupils may receive is that these values are only 'real' in Personal Development / Local and Global Citizenship and that they do not have a role in all aspects of school life.

What is Diversity?

All environments have diversity within them, but for a school the challenge is how to respond to the visible and invisible layers of diversity surrounding it.

Diversity is not simply a 'positive good, it is a necessary element of education.' Senge et al. suggest that the diversity of ideas which comes from the diversity of people is one of the best ways to create the necessary condition of learning. Fostering this diversity of ideas and engaging 'with the individuals who brought with them their diverse personal and cultural histories can contribute to a vibrant intellectual education'.²

¹ Furlong, C. and Monahan, L. (2000), *School Culture and Ethos: Cracking the Code*, Dublin, Marino Institute of Education.

² Senge, P. et al. (2000), *Schools That Learn*, London, Nicholas Brealey Publishing.

CREATING AN INCLUSIVE LEARNING COMMUNITY

Questions for Reflection

Does the school see 'diversity' as a guiding principle, or has it become a 'catchword'; is it advocated to achieve equity?

What plans are in place for the school to be active in contributing to an inclusive and diverse society?

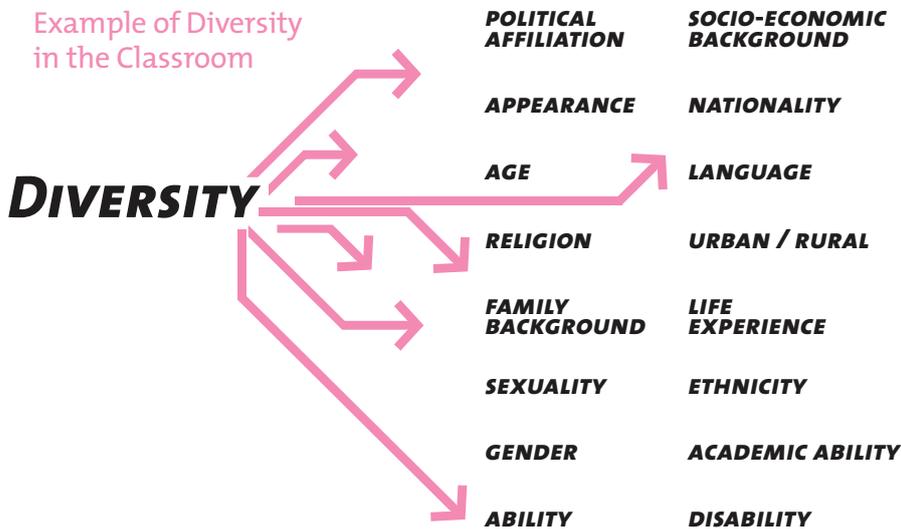

To explore this question it will be important to reflect upon what contributes to a diverse environment: what do we understand diversity and inclusivity to mean?

If an environment exists:

- *which is inclusive;*
- *which is equitable;*
- *where individuals are valued and respected;*
- *where trust is built;*
- *where open and diverse discussion occurs;*

then there will be possibilities for positive relationships and the development of new skills and relevant life learning.

Example of Diversity in the Classroom

What is a Culture of Inclusion?

A culture of inclusion describes a place which appreciates the diversities within it. It requires commitment from a number of areas in the school and it will take significant time, depending on the current climate.

Inclusion involves increasing the learning and participation of pupils, staff and other adults in the school community, and minimising barriers which may stand in their way; it is a set of never-ending processes.

Inclusion in education:

- Inclusion in education is one aspect of inclusion in society.
- Inclusion is concerned with fostering mutually sustaining relationships in schools, between schools and between schools and communities.
- Diversity is not viewed as a problem to be overcome, but as a rich resource to support the learning for all.
- Inclusion is concerned with improving schools for the staff as well as for the pupils.
- Inclusion involves restructuring the culture, policies, practice in schools so that they respond to the diversity of pupils / staff.³

Questions for Reflection

How does the school respond to the needs of an increasingly diverse and pluralist society?

What kinds of diversity are in the school?

How do you know when you are in a diverse environment?

When do you feel diversity is a good thing and can add value to learning and when does it become negative?

Does recognising diversity lead to greater fairness?

Can several identities exist at the same time within the school community?

How do pupils and staff (including support staff) relate? Do people treat each other with respect and dignity? Are opportunities for demonstrating a caring and supportive attitude provided?

Has the staff discussed the school's hidden curriculum?

What strikes visitors as they enter the school:

- *Religious symbols and emblems?*
- *Pictures of successful work / school teams?*
- *Pictures of class groups?*
- *Pupils' artwork?*
- *Are the symbols displayed in the school inclusive or exclusive?*

Has the school a competitive ethos or co-operative / collaborative ethos? How is this manifested?

Are opportunities for exercising responsibility provided for the pupils and for the staff?

³ Adapted from Booth, T., Ainscow, M., Black-Hawkins, K., Vaughan, M. and Shaw, L. (2000), *Index for Inclusion: Developing Learning and Participation in Schools*, Bristol, CSIE.

2.1 A Whole School Approach

For some time there has been widespread agreement among educationalists that collaborative school development and planning is a powerful means of promoting school effectiveness. Increasingly, schools are engaging in ongoing whole school planning in order to create optimum learning environments and to embed fully key initiatives and effective practice, for example:

- any new procedures;
- curricular provision;
- teaching and learning values;
- teaching and learning strategies;
- self-evaluation;
- good relations.

A whole school approach enhances the school's ethos and work and is effective in as far as it includes all who make up the school community.

The whole school approach is essentially a process in which policy and plans evolve from the ever-changing and developing needs of the school community. This approach takes into account the school's uniqueness in terms of its:

- teaching and support staff;
- pupils;
- governors;
- parents / carers;
- support structures;
- local context / community;
- availability of resources, etc.

This approach supports the whole school to manage diversity effectively and build on the principle of inclusivity.

Who is Involved in a Whole School Approach?

As stated earlier, a successful whole school approach requires the involvement of all the stakeholders. The extent to which individuals will be involved will depend on their role within the school.

WHOLE SCHOOL

PUPILS

PRINCIPAL

GOVERNORS

SUPPORT STAFF

CLASSROOM ASSISTANTS

SENIOR MANAGEMENT

LOCAL COMMUNITY

DEPARTMENT, YEAR, KEY STAGE AND SUBJECT CO-ORDINATORS

PARENTS

TEACHERS

What is a Whole School Approach?

A whole school approach is a statement of the educational philosophy of the school, its aims and how it proposes to achieve them. In practical terms, this can be described as a school plan; a written resource which facilitates a co-ordinated development within the entire school community.

Such a document can only be arrived at through a process of interactive and collaborative dialogue within the broader school community, which is continually reflected and acted upon as practice and learning emerges.

The whole school approach should contain some basic principles at its core:

- a commitment to an ethos / culture based on fairness, diversity and interdependence;
- opportunities for involvement of the entire school community in the development and planning processes;

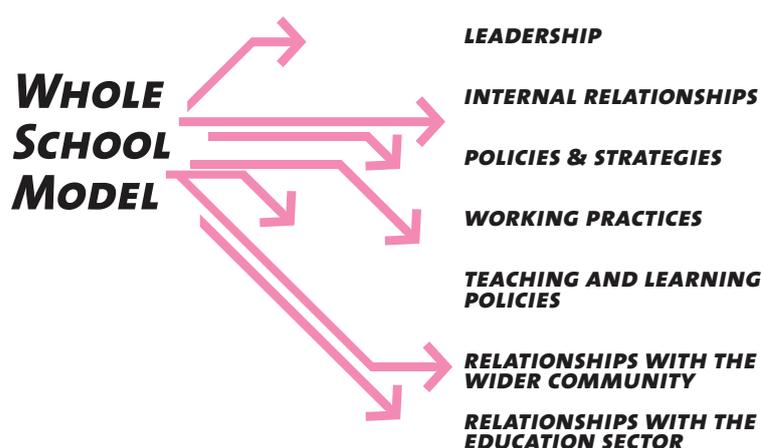

- creating a climate to ensure the ownership and development are encouraged and sustained;
- monitoring and evaluation systems to measure the effectiveness of, and the learning within, the approach.

Essential to the school plan is that it should describe how the school can prepare children and young people for a multicultural, diverse and inclusive society and support the practice of democratic life.

What is Involved in a Whole School Approach?

Leadership

This refers to the management structures (what are they; who has access to them?) and the need for growth in its own understanding and capacity to think in terms of relationships

CREATING AN INCLUSIVE LEARNING COMMUNITY

and negotiating differences: for example, to what extent does management demonstrate a vision of inclusiveness?

Internal relationships

These are the foundation of a good school community. Structures need to be put into place to allow relationships to develop and promote a culture of inclusion. To develop a whole school approach to self-esteem, culture and ethos, staff need to reflect on their own practice in the school. Staff need ongoing professional development.

Policies and strategies

These need to be designed to support a diverse and inclusive environment, for example, a policy / strategy on good relations which could include managing diversity, promotion of understanding, respect and tolerance, symbols / emblems, inter-school projects, positive behaviour, pastoral care, etc. Reflection is needed on what policies / strategies currently exist in the school. How are these tested / monitored and do all the stakeholders know the reasons for these policies and strategies?

Working practices

These show how effective the school is at practising fairness. This will involve reflecting on, for example, the:

- *curriculum;*
- *teacher - pupil dialogue;*
- *meeting pupils' needs;*
- *pastoral care;*
- *personal and social development;*
- *environment – classroom, school, foyer, etc. – is it welcoming?;*
- *pupil morale;*
- *positive discipline;*
- *extra-curricular activities;*
- *sports day;*
- *assemblies;*
- *self-evaluation system.*

Teaching and learning policies

These reflect the school's understanding of the concept of learning; the values which underpin the approaches to teaching; the styles and methodologies used in teaching adopted by the school; the aspiration of developing autonomous learners; the need to take into account the range of intelligences; learning styles; the impact of teaching a diverse group of individuals; and the practice of self-evaluation.

Relationships with the wider community

These show the school identifying its place in the wider community, acknowledging the relationship it has to it and creating strategies to enhance relationships with the school's potential partners, for example, the business and voluntary sectors.

Relationships with the education sector

The school does not exist in isolation from the educational changes that are happening around it and the drive to forge partnerships with other educational bodies. The school needs to be aware of whom they make links with and for what reasons.

2.2 Building an Inclusive Learning Community

Strategies to build a whole school approach must facilitate reflection on existing practice and design practical steps which build on the culture and ethos of the school. The change process must be seen to be integrated into the school development plan and not separate or additional. A framework may include the following. (This is not, however, a blueprint and may need to be adapted to suit the uniqueness of each school.)

OVERVIEW OF THE PROCESS

This process supports the school in learning about itself. It actively creates opportunities for growth and learning, which will enable the school to contribute to a society, which is struggling to build inclusivity.

This process, detailed below, is designed to support the school and all the stakeholders within the school. It can provide you with a focus and a starting point. There may, however, be different starting points that suit your situation better. The process must be owned by the leadership of the school.

EXTERNAL FACILITATOR

This could be an ELB advisor, a Regional Training Unit officer, a representative of the voluntary sector, a mentor, another principal, etc. The role of an external person is to support the school to engage in the discussions that need to happen for a true reflection. The external person also brings new networks, ideas and experiences that challenge the insularity of the school and may enrich the learning.

Some useful points in selecting an external facilitator:

- The school needs to be clear about what they need from an external person so they have clear parameters in which to work and be accountable.
- The person needs to have a good understanding of change management and of the education sector.
- The person needs to be effective in group management and facilitation skills.
- The person needs to be an individual with whom the school feels comfortable and trusts.

ESTABLISHING A DEVELOPMENT GROUP

This is a group which will act as a driver for the process of change and the implementation of a whole school plan / approach.

The group is made up of people from diverse levels of the school and must include the voice of the pupils in some form, enabling them to make a meaningful contribution to the process. It could, for example, include a member of the senior management team, two teaching staff, two support staff, a member from the administrative team, two parents and a Board of Governors' representative.

It will take some time for this group to gel and to establish a set of agreements for how the group will work together, so this must be taken into consideration in thinking about a time-frame.

The role of the group is to ensure the process of change is implemented and remains a priority for the school. It also creates a working space which role models 'good relations' and supports a whole school philosophy.

CREATING AN INCLUSIVE LEARNING COMMUNITY

Some useful points to take into consideration when establishing the development group:⁴

- Establish criteria for membership of the group. It is important to invite those who are initially sceptical or opposed to this process as well as those who are committed.
- Membership of the group should have an upper limit, depending partly on the size of the school.
- The external person should facilitate the group until the group members gain an understanding of the process.
- Communication internally and externally should be discussed and agreed; as should how the group will communicate their function, their learning and deliberations.
- Meetings should be clearly structured.

Questions for Reflection in the Development Group

How should this journey / process begin?

Who needs to be involved and when?

How are those from the wider school community to be engaged?

Can the process connect with the school development plan / vision?

How will we manage the time commitment?

How will we monitor the progress and maintain the changes?

Can we identify an external evaluator?

ESTABLISHING A BASELINE

It is important to know where the school's starting points are and to value what is already being achieved. A useful way to do this is to carry out a school audit which provides you with a baseline of information. This will also assist you in your monitoring and evaluation as you will be able to reflect on where you have come from and where you want to go to. Further details on this are provided in the guidance material which follows.

MONITORING AND EVALUATION

For full exploration of the purpose of evaluation, see Developing a Model for Self-evaluation (Section Six).

Points for consideration:

- The audit will provide baseline information, which can form your performance indicators.
- Keep all records of meetings / consultation.
- Evaluate all meetings / development sessions, using, for example, minutes, feedback sheets from participants, etc.
- Review practice based on the evaluations and include any updated practice, for example, policies, lesson plans.
- Keep copies or a record of all resources used.
- Keep a record of all external facilitators, consultants, etc. who have assisted.
- Check that you are receiving input and feedback from all members of the school community, including children and young people.
- Complete the audit again after, for example, six months or a year to measure progression.

⁴ Adapted from Eyben, K., Morrow, D. and Wilson, D. (2003), *A Framework for Organisational Learning and Change*, Coleraine, Future Ways.

2.3

Creating an Inclusive Learning Community: Guidance Material

Establishing a Shared Vision, Values and Mission Statement

Elements of the Visioning Process

- Take into consideration all stakeholders.
- Develop an agreed set of values, a vision and a mission statement.
- Implementation includes the strategy, plans, procedures and key actions that will form an action plan.
- If you enable the individual to grasp / contribute to the vision, change will be less insurmountable / scary / disconcerting.

Those who anticipate the future are empowered to create it.

John F. Kennedy

Some see things as they are and ask 'why?', I dream of things that never were and ask, 'why not?' G. B. Shaw

Vision

Description of preferred future, which the school wishes to create. A vision statement should include your basic strategy on how you want to achieve your mission. It should include your spoken and unspoken hopes and dreams. Your vision should inspire and touch you.

Values

Values are the principles, the standards, the actions that people in a school represent, which they consider inherently worthwhile and of the utmost importance. Values are the meaning we attach to things. People act from their values, and different people value different things. Shared values provide everyone with a common direction and guidelines. These values, in turn, should underpin policies, practices and standards for the group.

Mission Statement

This answers questions such as:

- *Why do we exist?*
- *What do we do and for whom?*
- *How are we unique?*
- *What is most important about our work?*

CREATING AN INCLUSIVE LEARNING COMMUNITY

SAMPLE VISIONING EXERCISES ⁵

Below are guidelines and then some examples to stimulate individuals thoughts regarding their vision.

- Focus on what really matters to your school.
- Focus on imagining what is happening.
- Focus on what you want to create.
- Avoid how to make it happen.
- Avoid today's problems.
- Avoid what is not working.

1 You are in a lift with an education inspector, you have one minute to convince her / him of the benefits of the vision you have for your school.

2 Imagine achieving a goal that you deeply desire. There is no proper way of answering this and no measurable way to win or lose. Playfulness, inventiveness and spiritedness are all helpful. Imagine accepting into your life the full manifestation of this goal.

What does it look like?

What does it feel like?

What words would you use to describe it?

Now pause and consider your answer to the first question. Did you articulate a vision that is close to what you actually want?

SAMPLE VALUES EXPLORATION EXERCISES

1 Using the series of quotations listed below, which can be spread around the room, ask individuals to select one or two quotations which mean something to them and say something about the values in which they believe. Reflect on these quotations and ask individuals to identify the practice relating to those chosen. Ask how this practice is evidenced in the school, classroom, canteen, playground, parent meetings, Board of Governors' meetings, etc.

Quotations to Consider:

It is easy enough to be friendly to one's friends. But to befriend the one who regards himself as your enemy is the quintessence of true religion. The other is mere business.
Mohandas K. Gandhi, activist (1869-1948)

If we could read the secret history of our enemies, we should find in each man's life sorrow and suffering enough to disarm all hostility.
Henry Wadsworth Longfellow, poet (1807-1882)

Washing one's hands of the conflict between the powerful and the powerless means to side with the powerful, not to be neutral.
Paulo Freire, educator (1921-1997)

There would be no society if living together depended upon understanding each other.
Eric Hoffer, philosopher and author (1902-1983)

A society grows great when old men plant trees whose shade they know they shall never sit in.
Greek proverb

To have doubted one's own first principles is the mark of a civilized man.
Oliver Wendell Holmes, Sr., poet, novelist, essayist and physician (1809-1894)

Your assumptions are your windows on the world. Scrub them off every once in a while, or the light won't come in.
Alan Alda, actor and director (1936-)

The secret of life is honesty and fair dealing.
If you can fake that, you've got it made.
Groucho Marx, actor and comedian (1890-1977)

The truth is rarely pure, and never simple.
Oscar Wilde, writer (1854-1900)

No two persons ever read the same book.
Edmund Wilson, critic (1895-1972)

**The best way to find yourself is to lose
yourself in the service of others.**
Mohandas K. Gandhi, activist (1869-1948)

We are all in the gutter, but some of us are
looking at the stars.
Oscar Wilde, writer (1854-1900)

**If only there were evil people somewhere
insidiously committing evil deeds and it
were necessary only to separate them from
the rest of us and destroy them. But the line
dividing good and evil cuts through the
heart of every human being. And who is
willing to destroy a piece of his own heart?**
*Alexander Solzhenitsyn, novelist,
Nobel laureate (1918-)*

Live as if the change you want to see has
already come.
Mohandas K. Gandhi, activist (1869-1948)

**Never doubt that a small group of thoughtful
committed people can change the world.
Indeed it is the only thing that ever has.**
Margaret Mead, anthropologist (1901-1978)

No child on earth was ever meant to be
ordinary, and you can see it in them, and
they know it, too, but then the times get to
them, and they wear out their brains learn-
ing what folks expect, and spend their
strength trying to rise over those same folks.
Annie Dillard, writer and poet (1945-)

**Die when I may, I want it said of me by those
who knew me best, that I always plucked a
thistle and planted a flower where I thought
a flower would grow.**
Abraham Lincoln, U.S. President (1809-1865)

I tell you, the more I think the more I feel that
there is nothing more artistic than to love people.
Vincent Van Gogh, artist (1853-1890)

**To try to improve society is not worldliness,
but love. To wash your hands of society is
not love but worldliness.**
*Sir Frederick Catherwood, former vice-president
of the European Parliament (1925-)*

2 You could get individuals to reflect on
some of the following questions in small
groups and feedback their responses:

- *What do we stand for?*
- *What behaviours would mirror these values?*
- *How do we treat each other, pupils,
parents, Board of Governors, community etc.?*
- *What core values are most important to us?*
- *How do we want to treat each other?*

These answers should spark a discussion
which supports the identification of the
most important values.

3 Write the values in the school prospectus onto A4 paper and ask individuals in small groups to arrange the statements in a pyramid with the most important at the top and the least at the bottom. Ask individuals to reflect on the pyramid, how they made their decisions and what values held some tension for the group. Encourage the group to explore how these values relate to their practice within the school and all those involved in the school.

SAMPLE EXERCISES FOR THINKING ABOUT A MISSION STATEMENT

Groups have experimented with developing an image of the future – their vision – without referring to their mission. The image tends to become impractical when it is not grounded in the specific mission of the school. The mission statement should say who you are and why you are passionate about it. The mission is directly linked to a broad analysis of the school and its environment. Make it short – try not to have more than three sentences.

A mission statement might include statement starters such as some of the following:

- *We believe that ...*
- *At this school we are committed to ...*
- *Our school community is ...*
- *Our aim is to ...*

Carrying Out a School Audit

An audit is a tool which can gauge levels of need under a specific theme. It is important for the school to test the underpinning values, to map out the current reality in terms of how individuals feel in relation to fairness, diversity and interdependence.

This mapping out of the realities must take into account all aspects of school life, for example:

- *curriculum;*
- *leadership;*
- *relationships internally and externally;*
- *policies and strategies.*

Such a tool must gather the feedback from all sections of the school community. The audit could be done through a number of methods such as one of, or a combination of, the following:

- *written questionnaires;*
- *focus groups;*
- *circle time;*
- *drama or art-based activities.*

See Appendix Two for a Sample School Audit

Priorities for Development

In order to draw up priorities, the development group examines and analyses the contributions from everyone who has been consulted. This is a large amount of work and, therefore, needs to be shared, especially if it is a large school. The external facilitator is a useful resource for this process.

It may be desirable to keep the information gained from the different stakeholders of the school separate initially so that the differences can be genuinely explored.

As the issues are identified, further information may be required to provide a clearer picture. The finalising of priorities must consider the needs of each of the stakeholders within the school so that the voices of the least powerful are not lost. It is not simply a matter of including those issues which are most commonly stated.

It is inevitable that there will be a short-term and long-term list of priorities. The development group must explore the implications of each priority so that a realistic action plan can be agreed. This is particularly important in relation to reviewing the progress of the implementation.

Implementing Change

Key areas for practical change need to be identified and a development plan drawn up to implement these changes. This should outline distinct tasks, identify those responsible for carrying them out and indicate clear deadlines.

Action Plan

What are the areas for reflection?

What are the strengths?

What do we need to do to effect improvement?

What evidence will we seek to monitor the changes?

What resources will we need?

Who will be involved?

How long will it take?

CREATING AN INCLUSIVE LEARNING COMMUNITY

STARTING POINTS

Making the Task of Change more Manageable

After you carry out the audit you might want to focus on one aspect of school life rather than dealing with all the potential learning from the audit at once. Break it down into manageable chunks which can be incorporated into the school development plan and focused on over a set period of time, for example, a year.

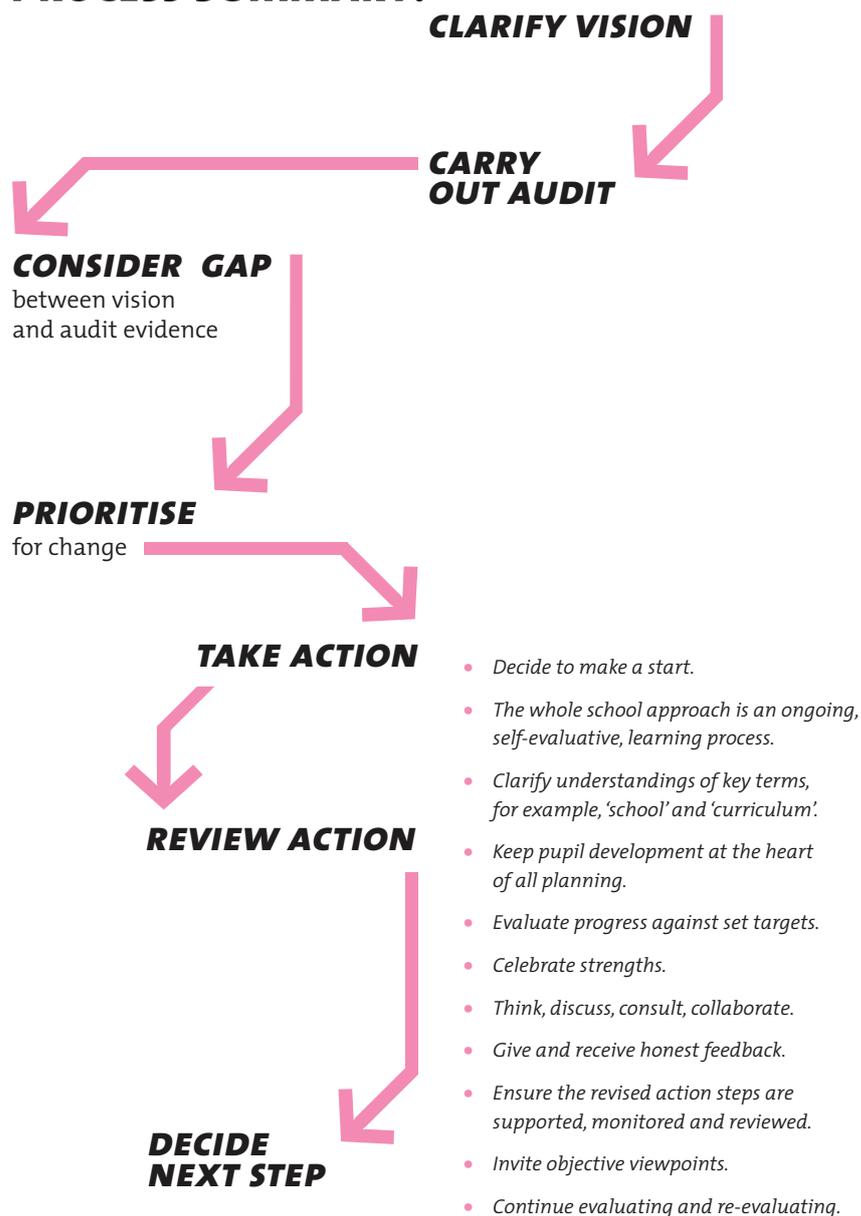

The Process can Start in Many Places

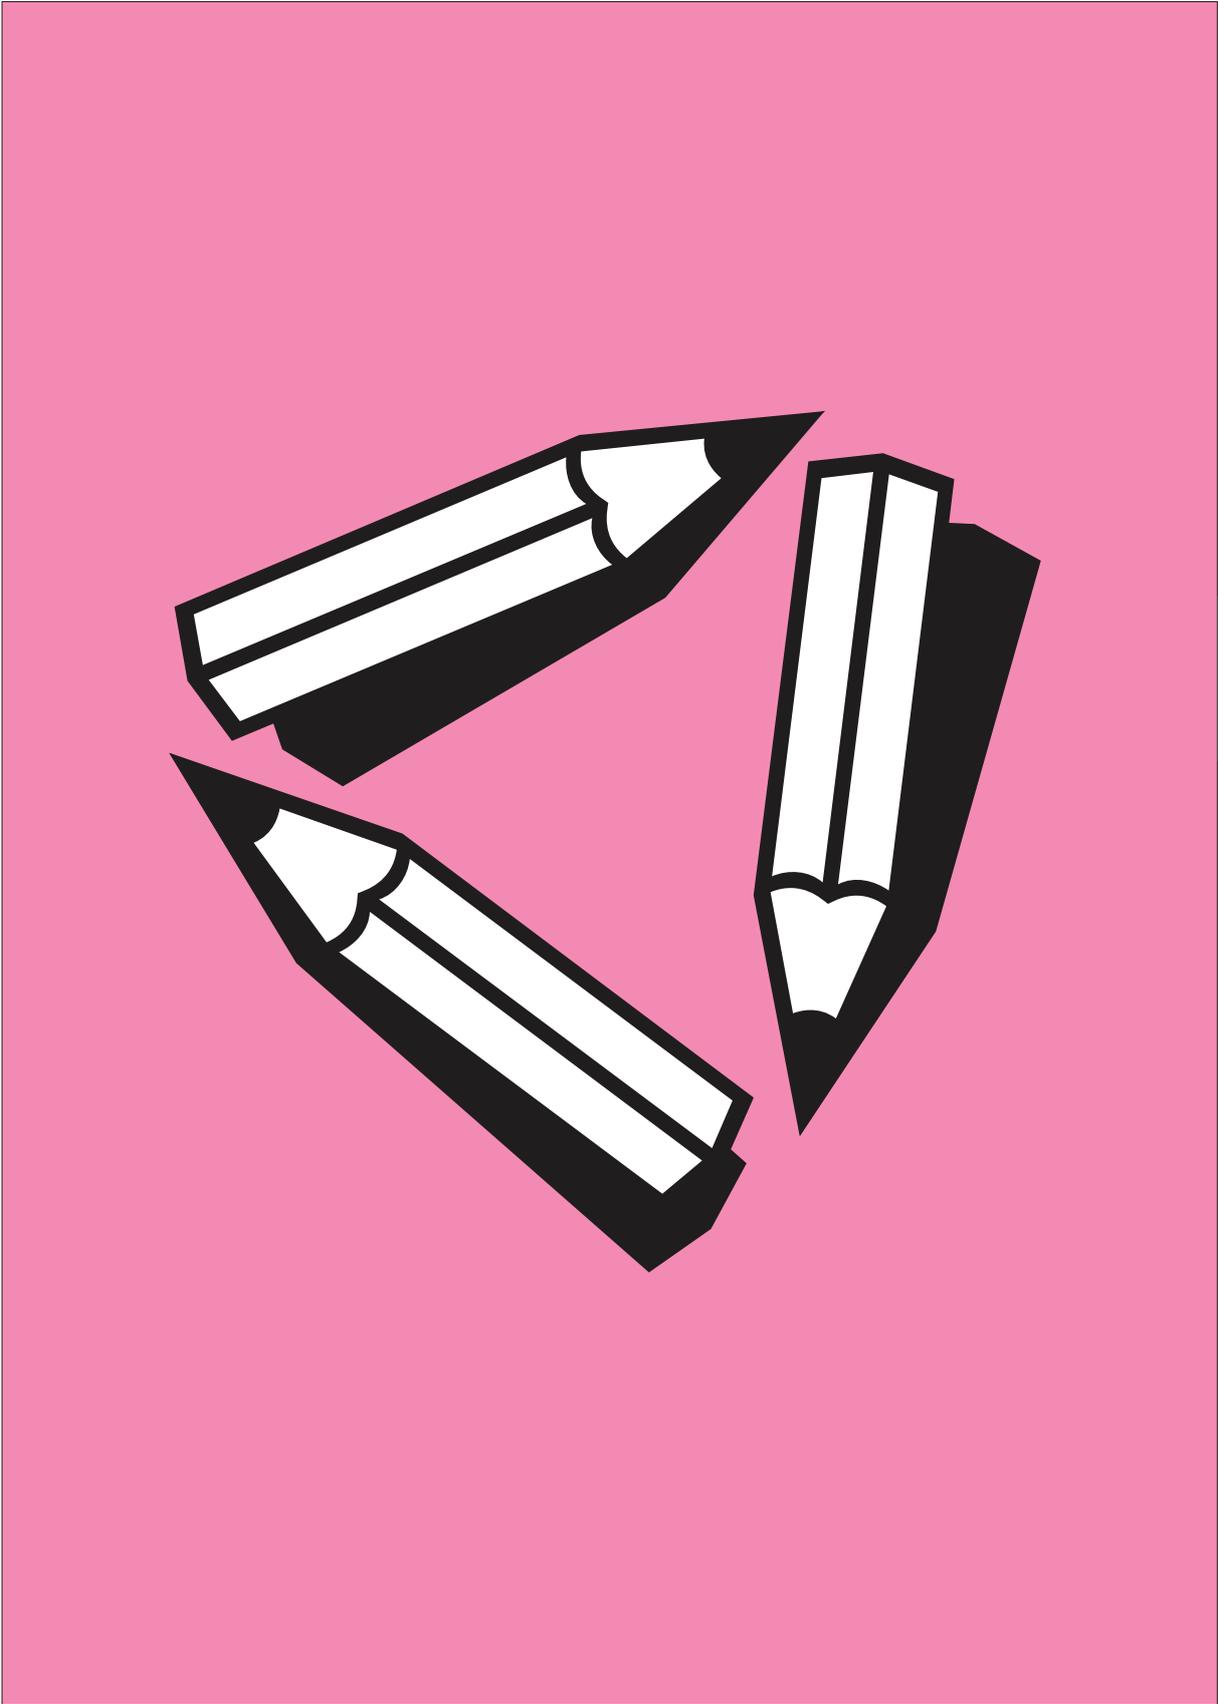

- It might start by looking at the individual classroom climate / ethos where a reasonable question might be: *How can the classroom environment foster self-esteem, positive interpersonal relationships, independence and interdependence?*
- Or it might start with the teaching and learning process where the question might be: *What strategies has the teacher built into the learning and teaching process to ensure opportunities for the development of the whole person?*
- Or equity of opportunity might be the starting point: *What strategies are in place to ensure true equality of opportunity for all, by which individual aspirations may be recognised, encouraged and achieved?*
- Or the promotion of positive behaviour:

How does the school become a place where care and trust are emphasised above the constrictions and threats, where each person is asked to live up to the ideals of kindness, fairness and responsibility?

- Or the environment of the school: *How can members of the school contribute to and enhance the school environment for the mutual benefit of all?*
- Or lines of communication: *How can attention to the nature of communications within the whole school community reflect key ideas such as respect and mutual trust and promote positive relationships?*
- Or leadership: *By what processes does a leader, whether of the school, subject department, classroom or group within the class, ensure a climate of co-operation based on trust and high regard?*

PROCESS SUMMARY:

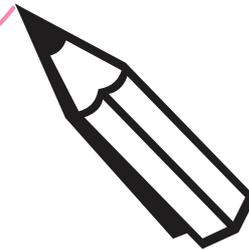

Building a Positive Learning Environment

Using Groupwork
and Facilitation

building a positive learning environment

3.0 Introduction

This section looks at the use of groupwork and facilitation as a way of working, which supports the development of a positive learning environment. The purpose of the section is to:

- provide some definitions and explanations of key terms;
- suggest some general guidelines for using groupwork and facilitation with children, young people and adults;
- look at the benefits and possibilities of another facilitator (co-working);
- encourage personal reflection and preparation on the part of facilitators (this could be a teacher, a senior manager, an ELB advisor, etc.);
- explore how groups work, thinking about the individuals who make them up and the interactions between them;
- consider how the facilitator can best support group members and enable them to learn;
- suggest some guidelines for responding to behaviour which is 'challenging'.

3.1 Groupwork

People come together in groups for all kinds of reasons, and there are many examples of work in groups within a classroom / school setting. These might include a:

- *teachers' Key Stage meeting;*
- *department staff meeting;*
- *group of pupils working on a project together;*
- *teacher working with her / his class;*
- *parents' group meeting;*
- *playground supervisors' training session;*
- *senior management team discussion;*
- *Board of Governors' meeting.*

Any of these gatherings might involve a groupwork dimension which in this context has a specific definition as outlined below. Circle Time is a highly structured example of this kind of groupwork which is already widely used in schools.

BUILDING A POSITIVE LEARNING ENVIRONMENT

Groupwork

Groupwork occurs when a number of people gather together to participate in a purposeful process for which there is likely to be one or more facilitators.

The Process:

everything which takes place within the group: how things happen, the relationships and interactions involved, etc.

The Facilitator(s):

may come from within the group, or be an external person drawn in because of her / his particular experience or skills. The groupwork process will ideally have a clear beginning, middle and end to achieve its purpose. At its most effective, the process is likely to involve:

- *clarity of purpose / aim and expectations;*
- *self-reflection;*
- *listening to different perspectives;*
- *the expression of ideas and feelings;*
- *learning from each other;*
- *exploration of personal and group values and beliefs.*

While the group may set out to complete a **task** together (for example, drafting a mission / vision statement for the school, giving a group presentation to the class, developing a series of positive behaviour strategies), a greater emphasis is placed on the groupwork **process** rather than simply on completing the task itself.

This kind of groupwork is an invaluable methodology for exploring themes which draw on people's life experiences, attitudes and beliefs, because it:

- is based on an inclusive and democratic ethos;
- is relational and interactive;
- encourages co-learning, i.e. the facilitator can learn from group members and vice versa;
- is not dependent on 'right' answers or factual expertise, it encourages investigative approaches.

The benefit of all of these dimensions has been highlighted within Local and Global Citizenship guidance materials.¹

Questions for Reflection

What groups do I belong to as a member or as a facilitator or potential facilitator?

What tasks are these groups focused around?

What aspects of the group process am I aware of?

- *how people relate to each other?*
- *how individuals participate?*
- *the facilitator's style of working?*
- *body language?*
- *other aspects?*

Does the process involve the aspects outlined in the previous box? What demonstrates this? How can we measure this?

How do I participate in the group as a learner?

What am I learning through my involvement in the group(s)?

¹ CCEA (2003), *Local and Global Citizenship: A Resource for Post-Primary Schools*, Belfast, CCEA.

3.2 The Facilitation Process

The Role of the Facilitator

A facilitator is essentially an enabler. Through her / his interaction with group members and attention to the group process, s/he enables group members to participate effectively and to achieve the agreed purpose of their time together.

While group members are being encouraged to take responsibility for their own learning, and to participate in planning and evaluating programmes, it is ultimately the facilitator's responsibility, in conjunction with the group, to:

- keep the group focused on the overall purpose of the session;
- ensure that an inclusive setting and atmosphere are maintained in which people feel safe enough to participate.

This needs to be built on the facilitator's personal and programmatic preparation for work with the group. The facilitator's role will include the following specific elements:

- Building trust within the group. This is likely to mean spending time working together on building relationships before focusing directly on the programme / session's theme.
- Developing ground rules with the group, and appropriately calling group members back to these when necessary. See Section Five (Developing a Contract / Learning Agreement).

- Ensuring clarity about the group's purpose and objectives for their time together, whether this is for a particular session or a series of sessions / module.

- Avoiding jargon and abbreviations which may confuse, exclude or alienate some or all group members. Do not assume that group members, even if they are colleagues, have had access to the same information, documentation, etc. which you have had. If you need to use particular jargon, etc., respectfully check out that group members understand the meaning and context.

- Establishing an atmosphere of respectful listening and ensuring that everyone gets the opportunity to speak without interruption if they want to.

- Maintaining and demonstrating fairness, making sure that no one person or group dominates the discussion or activities but that everyone has the opportunity to be heard and to participate.

- Giving attention to the process. This includes:
 - *being aware of body language and 'mood' within the group;*
 - *recognising reactions and allowing them to be expressed appropriately;*
 - *assisting effective communication between group members, if necessary;*
 - *being sensitive to things which may be difficult for people to say or to hear;*
 - *being aware when someone is experiencing strong feelings but is unable to express them vocally within the group;*
 - *being sensitive to when a group needs a short break for whatever reason;*
 - *attending to conflict within the group.*

BUILDING A POSITIVE LEARNING ENVIRONMENT

- Modelling an enthusiastic and interested approach right from the opening remarks, and keeping an eye on the energy levels within the group. It is useful to have some calming and re-energising strategies ready, in case they are required.
- Choosing appropriate activities for different age groups, abilities (physical, language and literacy, etc.), cultural contexts, genders, etc.
- Working at an appropriate pace for the group, building on their previous experiences and learning. Allowing time to develop the issues being explored – do not be afraid of silence, and do not cut people off too quickly, as they may feel dismissed and lose interest.
- Expressing milestones, summing up the process to date, and helping the group to reflect on what they have achieved so far and what remains to be done.
- Highlighting and seeking alternatives to expressed opinions so a range of perspectives can be heard, points of agreement reached where appropriate, and ways forward discovered.
- Enabling the group to take new directions or move on if they get stuck in a particular discussion. This might be through asking some open questions or through introducing a new activity that will help people to approach the theme from a different angle.
- Bringing the group back to the core purpose / theme if the discussion becomes inappropriately sidetracked (but avoid steering towards a predetermined outcome which you have decided the group needs to reach).
- Being flexible with the programme so that changes can be made in line with group needs.
- Being aware of the time available, structuring it appropriately and making sure group members know how much time they have for particular activities or discussions.
- Limiting your own vocal contributions, bearing in mind that you are facilitating the learning of group members and are, therefore, a different kind of participant. This also means being comfortable with silences, and not filling them unnecessarily with your own voice.
- Being aware of your own learning process, being prepared to listen openly to constructive critique, suggestions and group members' evaluation of sessions / lessons.

Questions for Reflection: Preparation for Groupwork

How can I establish an appropriate atmosphere for the group to work in?

What will I need to do to ensure that all group members feel safe to participate?

How will I ensure a balance in the participation of group members?

How will I need to speak and act in order to demonstrate fairness?

How comfortable am I with silence? Do I sometimes rush on too quickly? If so, what strategies can I use to manage this better?

How will I ensure that the purpose of the group's time together is appropriately met? Am I personally clear about the group's purpose?

What strategies can I use to start and end the session effectively?

What will I do if energy flags within the group?

How attached am I to the lesson / session plan? Have I room to be flexible if necessary?

Roles for Facilitators

None of us comes to the task of facilitation from a neutral position, because we all have our own set of values and beliefs. In most circumstances, however, the facilitator is expected to maintain a high degree of objectivity and fairness in order to ensure that all group members, with all of their different life experiences, feelings and views, feel valued and able to participate equally in the group process.

Having clearly set this baseline, it is sometimes appropriate for the facilitator to take on a particular role in order to enhance the group's learning or to challenge their thinking in a new way. It is important that these roles are taken on self-consciously, for a specific purpose and time. It also needs to be done in a way that signals this to the group, and lets them know that respect, fairness and the other group ground rules have not been set aside. A number of possible roles (and there are many others) are outlined below.²

² Adapted from BAA / Nottingham Project, *Teaching through Controversial Issues*, Nottingham, BAA.

BUILDING A POSITIVE LEARNING ENVIRONMENT

FACILITATION ROLES

ROLE	DESCRIPTION	ADVANTAGES	PITFALLS
NEUTRAL FACILITATOR	Enabling the group to explore a range of viewpoints without stating your own opinion.	As you are clearly not taking sides, this can help facilitate an open exchange of views.	No one is 'neutral', so pretending that you are can be unhelpful to the development of trust within the group.
ADVOCATE	Raising perspectives which are the authentic beliefs of other individuals and groups.	Represents alternative views and experiences which may not be represented within the group. This can also stimulate responses, and demonstrate that there are equally strong (and possibly valid) positions which do not match with their own.	Can leave the group confused as to what you actually believe.
DECLARED INTERESTS	Begin by declaring your own position so that the group knows your views.	May help the group understand that you cannot be neutral. They need to give your views the consideration that they would give to anyone else's.	Some may be dismissive of your views because of your stated position at the outset (i.e. they associate a whole list of characteristics and opinions with the ones you have expressed). It may inhibit group members who disagree with your views.

ROLE	DESCRIPTION	ADVANTAGES	PITFALLS
ALLY	Supporting the views of a particular sub-group or individual (usually a minority) within the group.	Can really help people who are intimidated in a minority position, can help them express and clarify their position.	As you are not necessarily expressing your own views, this can be misleading. The minority group may feel pressured to speak when they are not ready.
OFFICIAL VIEW	Letting the group know the official position of your employer / organisation / statutory authority / the law / etc. This might not be your own view.	Can help the group understand the context in which you and they are working, and any limitations which this may set.	Group may sense any contradiction between your views and the 'establishment' ones which may not always be helpful, as it may raise tensions which may be difficult to resolve.
CHALLENGER	Through questioning, challenging views being expressed, encouraging people to justify their position.	Encourages people to think about their opinions, gets them used to challenge in a relatively safe environment.	The challenge could be too much for someone who already finds it difficult to speak within the group. If challenged, they may be reluctant to speak again.

BUILDING A POSITIVE LEARNING ENVIRONMENT

All of the roles outlined above can have their uses within a groupwork setting. In each case it is important to weigh up the possible advantages and pitfalls, and the specific appropriateness or otherwise for a particular group and programme at a particular time.

Questions for Reflection

Can I think of situations where some of these roles might be useful in my facilitation?

Do I sometimes take on any of these roles without intending to?

What are the particular characteristics of the group with which I am working that I need to bear in mind in deciding to take on any of these roles?

Are there additional advantages or pitfalls for these roles that I can envisage within my particular circumstances?

Are there other roles that I can imagine that might be useful to me?

What do I need to do to ensure that I maintain respect, fairness and the other ground rules at all times within my facilitation?

Managing Change

One of the key areas of responsibility for the facilitator is the management of change within the group. Among other possibilities, this could take the form of changes in:

- *the membership or facilitation of the group;*
- *the way group members relate to and interact with each other;*
- *your relationship with group members;*
- *the group's purpose and direction;*
- *attitudes, opinions and behaviour of group members;*
- *or a combination of the above.*

In order to support group members in engaging positively with change, it will be important that the facilitator:

- affirms and encourages group members, individually and as a group;
- maintains a positive perspective on what can be learned from or gained through change;
- helps the group to recognise the value of past experiences and learning, but not to remain stuck in them;
- assists the group in describing and reflecting on the present situation, and to make connections across their learning;
- explores with the group any unwillingness or uncertainty about moving forward;
- encourages the group to think creatively about future possibilities and ways of working towards them.

It is important to bear in mind that the facilitator also needs opportunities to de-brief and to receive support.

In exploring controversial issues relating to diversity, such as prejudice, stereotyping and discrimination, it is highly likely that it will involve attitudinal challenge and change for at least some group members. In these circumstances, it will be important:

- to appropriately notice and affirm learning that has taken place;
- not to rubbish or condemn previous attitudes and beliefs;
- if those who have changed or those who have not are in a small minority within the group, not to isolate them or cause them to feel unsafe or vulnerable;
- to be aware that these changes often involve a level of risk, for example, in terms of peer, family or community relationships, and ensure that they are given appropriate support. See Beyond Programmes: Learning for Life (Section Seven).

NB. All attitudinal change is likely to involve some level of risk-taking and personal vulnerability, for example, because previously held beliefs may now be seen as wrong or because it may involve stepping out from the crowd. At a certain level, this risk-taking and vulnerability, if handled positively and supportively, is part of what allows the learning to take place. However, if the risk level is high, the support available must be correspondingly so.

Questions for Reflection

How do I feel about change in general?
Do I usually feel comfortable with it, or threatened by it?

Am I aware of potential changes within the group's experience?

How can I support the group in responding positively to these changes?

Is there particular support needed by group members with regard to attitudinal change?

Do I need support (for example, resources, a co-facilitator) myself in order to provide these kinds of support to the group?

What strategies can I use with the group to reflect on the changes which may have taken place?

The Facilitation Process: Managing Change

Outlined below are a number of scenarios, based on real life examples, for you to consider how the theory of managing change might translate into everyday practice. Drawing on the ideas within the Managing Change section and elsewhere in the resource, how might you respond to the situations outlined below?

Alternatively, or additionally, consider examples from your own experience – reflecting on them now, what might you do the same and what might you do differently?

1 A new pupil joins your class in March. You are aware that s/he has struggled with some behavioural issues in her / his previous school.

How can you best support her / his positive integration into the class group?

2 The school's Parents' Group has previously had an almost exclusively fundraising role. Now you (as principal / senior management team) would like them to also act as a consultation focus group to provide input and feedback to staff who are revising some of the school's key policies. The Group has agreed, but members are unsure of their ability to do it.

How can you assist them with this transition?

3 Up until now the staffroom in the school has always actually been the 'teachers' room'. As you (principal / senior management team) develop a whole school approach, you want to change this so that the room is welcoming for all staff.

What can you do to build a sense of team among staff, and a shared wish for this to happen?

4 A new teacher has joined the staff in your department / Key Stage team, and makes it known that they are gay / lesbian. As department head / Key Stage head, you become aware of explicit and implicit prejudice among other staff which is making it difficult for the new teacher to settle in.

What can you do to address this?

3.3 Co-facilitation: Working Together

There will be times when it will be valuable to work with a co-facilitator (such as a colleague, a youth worker, an ELB officer), for example, when you:

- want to try something for the first time;
- want to try something more challenging and invite someone with more experience in that area or way of working to give you some support;
- are planning to explore more controversial issues with a group and feel that another facilitator's perspective and support would be beneficial;
- are working with a group in which a significant number of members are dealing with particular pastoral or behavioural issues;
- want to divide a large group into smaller facilitated groups for particular sessions or activities.

For Co-facilitation to be Productive and Creative:

- Each facilitator needs to be aware of and value the contribution of the other(s).
- Each facilitator needs to be very clear about their role and contribution.
- All facilitators need to be clear and in agreement about the purpose of the group.
- All facilitators need to be prepared to discuss fully conflicts, tensions, feelings, etc. which may be raised through their joint work and group experience.
- All facilitators need to be willing to value their differences in perceptions, styles and approaches.
- All facilitators need to collaborate, share, trust and talk to each other in and out of the group setting. The ability of the group to share and to deal with conflict and interpersonal issues is directly related to how effective the co-facilitators are at this.³

Benefits and Complications

When deciding whether co-facilitation is the best approach for your work with a particular group, being aware of some of the benefits and complications may help you make that decision.

THE BENEFITS

- It increases the resources available to the group and can be enriching. For example, male / female, older / younger, different backgrounds, or just two different people with different ideas and styles of facilitation.

- It may provide a model of co-operation which is useful for group members' learning.

- It reduces the pressure on the facilitator because there is a shared responsibility for guiding the group, feeding in observations, ideas and information, responding to group needs, etc.

- The two facilitators can take responsibility for different emphases. For example, one might promote the task to be achieved while the other promotes the positive relationships within the group.

- It can provide mutual support and enjoyment for the facilitators if they are compatible and work well together. Sufficient time spent preparing together will give some indication of compatibility and ensure that both facilitators go into the group session feeling confident about the way they plan to work together.

- It can add weight to the leadership of the group so that it is more seriously regarded.

- It can increase the effectiveness of the facilitators' reflection, evaluation and personal learning as the two facilitators can give each other feedback and reflect together on the experience.

- It can free one facilitator to observe without distraction or other responsibilities and feed back these observations to the group.

- It can free one facilitator to look after any unexpected event or crisis while the other attends to the group process as a whole.

- It can offer a novice the opportunity to learn through mentoring or two novices to learn together.

³ Adapted from J. Benson (1997), *Working More Creatively with Groups*, London, Routledge.

BUILDING A POSITIVE LEARNING ENVIRONMENT

Preparation for Co-facilitation

THE COMPLICATIONS:

- It can involve irksome and unnecessary extra planning. Joint preparation and evaluation is essential, so it is important to be aware of the additional time this may take.
- Co-facilitators are a role model of collaboration, trust and a creative relationship, so a lot is at stake if the partnership is not successful. Group members will very quickly become aware, for example, of any discrepancy between the values being promoted in the ground rules and the way the two facilitators interact with each other.
- Conflict between facilitators can undermine the group and its purpose, causing anxiety and splits within the group. It is, however, important to note that total agreement and harmony can give a message to group members that conflict is 'not OK'.
- It is essential to clarify roles and responsibilities when there is more than one facilitator.
- The facilitators may have to consult each other within the group when on-the-spot responses / decisions have to be made.
- It can be more expensive in terms of time, people and money. In some situations, co-facilitation may simply not be an option.

AGREEING PURPOSE AND PROCESS FOR WORKING TOGETHER

- What does each facilitator see as the core purpose of the group's time together?
- What are each of the facilitators' hopes for the group's time together?
- What ways can the facilitators support each other? Are there particular concerns that one or other of the facilitators has about the work?
- How will the facilitators communicate with each other during the session when, for example:
 - *one facilitator wants the other to take on the main leadership for a while, or for a particular activity / discussion?*
 - *there is a pastoral or behavioural issue which requires a response?*
 - *they need to 'check out' the mood within the group, one facilitator feels that the group needs a break, etc.?*
 - *the facilitators themselves need time out to discuss something?*

NB. It will be important to sit where you can see each other!

Co-facilitation: Working Together

ROLES AND RESPONSIBILITIES

- What roles / responsibilities will each facilitator undertake? For example:
 - *Who will open and close the session, lead particular activities or discussions, facilitate group evaluation, etc.?*
 - *Will one facilitator take more of a lead while the other takes on the task of observation and feedback if this is needed, or will they alternate?*
 - *Who will keep an eye on timekeeping?*

NB. Even if you are not facilitating at a particular point, you need to participate in ways that will continue to enable group members' learning. If you respond first to all of your co-facilitator's questions or 'jump in' to take leadership in an unfacilitated small group, for example, you will be undermining your co-facilitator's work and limiting opportunities for group members to participate and learn.

- Are there key ground rules which each facilitator feels will be important for facilitation as well as for the group as a whole? What atmosphere do you want to try to create when the group begins?
 - What needs to be said to the group so that they are clear about who the facilitators are and what their roles / tasks are?
 - What practical planning needs to be done? Are there particular resources each facilitator needs to bring / prepare?

EVALUATION

- When will the facilitators meet to debrief, give each other feedback and do any written evaluation, etc. that is required?

Outlined below are a number of scenarios, based on real life examples, for you to consider how the theory of co-facilitation might translate into everyday practice. Drawing on the ideas within the Co-facilitation section and elsewhere in the resource, how might you respond to the situations outlined below?

Alternatively, or additionally, consider examples from your own experience – reflecting on them now, what might you do the same and what might you do differently?

1 You are about to embark on a groupwork-based programme exploring prejudice and discrimination within the local community with your class group / staff group. This is a new way of working for you and within your budget you have the option of asking a local youth worker with experience in this kind of work to co-facilitate with you.

**What would be the possible benefits?
What would be the possible complications?
Are there other facilitation possibilities?
Based on these factors, what do you decide?
Why have you made this decision?**

2 You become aware of some parents' lack of familiarity and resulting unease with one of your new school policies. They find it jargonistic and feel that they could have been consulted. You want to facilitate a meeting for them but are aware that some of their frustration is aimed at you as principal / co-ordinator with responsibility for the policy. You have the option of co-facilitating this meeting with the chairperson of your Board of Governors, or of inviting in an ELB officer as an external facilitator. Both of these people are knowledgeable and supportive.

**What would be the possible benefits?
What would be the possible complications?
Are there other facilitation possibilities?
Based on these factors, what do you decide?
Why have you made this decision?**

3.4 Personal Preparation for Facilitation

3 As caretaker / secretary / playground supervisor / classroom assistant you have just returned from an intensive Child Protection / Safeguarding training course. Your principal would like you to share this learning with all the staff in the school and is confident that you will do a good job. You know your material, but feel very nervous about facilitating a session for your peers and senior management team. You have the option of asking a staff member from another local school, who also did the course, to co-facilitate, and then you would also work with them in their school.

**What would be the possible benefits?
What would be the possible complications?
Are there other facilitation possibilities?
Based on these factors, what do you decide?
Why have you made this decision?**

'Teachers affect eternity: no one can tell where their influence stops.' Henry Adams

Each one of us is shaped by our life experiences, the people around us, and numerous other factors. Each one of us has a value base and belief system which affects the way we view the world and relate to other people.

Given the powerful position which facilitators hold within a group, it is important that this is recognised, and that they understand what they are bringing, both positive and negative, to their facilitation role.

Values are:

'principles, fundamental convictions, ideals, standards or life stances which act as general guides to behaviour or as reference points in decision-making or the evaluation of beliefs or action ...'⁴

Values and Self-reflection

All facilitators need to give honest attention to their own value base, life experiences and attitudes. This process of self-reflection means exploring thoughts, attitudes, feelings, reactions, etc. It involves recognising and acknowledging how these impact on, among other things:

- how I relate to pupils, parents and colleagues;
- the teaching and discipline styles I use;
- the information I choose to share about particular historical or contemporary events and situations;
- anxieties I may have about exploring certain issues.

Values are not restricted to religious education, assemblies, pastoral care, etc. although these may be the places where they are made most explicit. The whole ethos of the school will be shaped by the dominant values within it, just as the ethos of each classroom is likely to be shaped largely by the values of the teacher. It is important, therefore, to be aware of these and of their implications in practice.

These values:

- are conveyed in teaching and learning processes;
- are embedded in school structures, management, policies, language and relationships;
- can be both explicit and implicit;
- can be 'substantive values' (such as honesty, respect) and 'process values' (such as reflection, caring);
- reflect the values and structures of society and the education system, including curriculum, inspection and assessment approaches.⁵

⁵ Adapted from Taylor, M.J. (1998), *Values Education & Values in Education*, London, Association of Teachers and Lecturers.

**Questions for Reflection:
Value Base**

What do I believe is the purpose of education?

What are the values that underpin my work as an educator?

What are my assumptions about children / young people, colleagues, other adults in the school community?

What are the most important things I bring to the classroom / school?

What are the most important things the children / young people bring to the classroom / school?

What values am I conveying through my way of working? Are these the ones I intend to convey? Am I consistent? How do I know this?

Building Support Structures

A Whole School Approach is the most effective structure for enabling staff, pupils and others in the school community to explore themes, some of which might be contentious, that may arise relating to diversity, within the Citizenship framework. See Creating an Inclusive Learning Community: A Whole School Approach (Section Two).

A whole school approach to which all in the school community are committed, particularly the Board of Governors and the senior management team, means that appropriate support can be given to all those involved. For example:

- The work is given a recognised place within the overall prioritising of teaching and learning so that individuals are not left feeling that if they do specific work around

diversity and controversial issues they will be penalised in some way for not adequately covering prescribed areas of curriculum content.

- If a parent expresses concern about or criticism of work being done in the classroom, the staff member involved can be certain that s/he will have the support of the senior management team in talking with the parent, and will not somehow be scapegoated.
- All staff will be supported with sufficient development and training opportunities to enable them to facilitate intentional work in the classroom, to respond to topics which arise (for example, as a consequence of events in the local community or reported in the media) and to address incidents of prejudice, discrimination or bullying. Ideally, this will include opportunities to reflect on their practice through a supervision type model.*
- All staff will have practical support in terms of both financial and physical resources, adequate planning and evaluation time, recognised lesson time within the curriculum to deliver the work.

Support Through Supervision

Supervision has an everyday meaning relating to management. Supervision in the sense that we are using it here, however, is primarily a relationship that enables the staff to explore issues relating to their work. It allows staff to:

- *look back at recent work;*
- *explore the successes and dilemmas which may have arisen through it;*
- *give validation to skills;*
- *consider how to progress with future work;*
- *assure quality and professionalism;*
- *reflect on personal learning and development to date, and future training / support needs.*

Supervision is most effective when there is a positive professional relationship between the practitioner and the supervisor, and when it takes place regularly, possibly once a month. In a school setting, it may be that once a term is more realistic. The supervisor can be someone from within the workplace structures (for example, the principal or a member of the senior management team) or someone external (known as an 'off-line' supervisor).

Where supervision is not available, use other informal, but regular support structures on a monthly or termly basis, for example, meeting with a colleague from your own or another school, an ELB advisor, another experienced teacher, possibly one who has recently retired.

Practically, it is important that all staff:

- work together in developing programmes as this provides opportunities to share ideas, to check out planned activities with others who may have experience of using them, to ensure that programmes are developmental and consistent across different year groups, and to evaluate programmes together;

- ensure that senior management team members are involved in this process so that they have clear information and can give their backing to the programme;
- work with senior management team members to make parents aware of the work being undertaken;
- draw on other support structures as appropriate, for example, through the ELB and relevant voluntary agencies.

Questions for Reflection

Is there a whole school approach in place which supports this kind of work?

Within my work context, what possibilities do I have for carrying out this kind of work?

What support do I need to carry out the work?

Who can help me with programme planning, evaluation, etc.?

How can I work best with the senior management team?

Can parents and others be involved in the process? How can this best be done?

Is supervision a possibility? Where else can I reflect on and learn from my practice?

Preparing for Facilitation: Encountering Diversity

In addition to personal reflection on value base, experiences, attitudes, feelings, etc., facilitators need opportunities to explore these with other people in a similarly safe environment to that which they will create for the children, young people and adults with whom they work.

One way of doing this is to instigate some structured or informal conversation around the issues in question with friends or colleagues who have different views and life experiences. This kind of experience could also be provided through development / training sessions: some suggestions are given below.

You could ...

- intentionally include diversity issues as a theme for internal staff development days;
- organise joint training / development sessions with your Schools Community Relations Programme partner school(s);
- visit local faith centres, churches and others;
- invite pupils and / or parents from ethnic minority communities to facilitate sessions and / or provide information input to staff, governors and parents;
- invite a panel of local politicians to speak on a particular theme or for a question and answer session;
- hold a disability awareness workshop for governors and staff, drawing on the experience and skills of pupils and parents;
- organise a tour for staff living outside the school's local community, led by, for example, parents or local youth / community workers.

BUILDING A POSITIVE LEARNING ENVIRONMENT

As well as having inherent value in itself in deepening personal understanding and relationships, the benefit of this experience is that it:

- allows you to feel the fears and other emotions which group members may also hold;
- provides you with meaningful insights into other perspectives and the life experiences which shape them. This is important if you are working in an environment where everyone comes from a similar background;
- demonstrates that you value the reflection process and do not expect group members to take risks which you have not also experienced in some form;
- enables you to increase your knowledge base in relation to, for example, historical events, flags and symbols, political structures, relevant legislation, etc. This needs to be qualified, however, by recognising that you are not expected to be an expert, and that a response such as, 'I don't know the answer to that question, but I will try to find out for our next session' is an appropriate part of the facilitation process.

Questions for Reflection

What are my concerns and fears about exploring diversity?

What are my attitudes / feelings towards people whose:

- *religion;*
- *ethnic background;*
- *cultural background;*
- *political views and affiliation;*
- *sexual orientation;*
- *physical and learning abilities;*
- *social background;*

is / are different to my own?

Do I have prejudices which I need to examine?

What opportunities do I have to explore life experiences, attitudes, etc. with people from backgrounds different to my own?

Where can I learn more about different traditions, symbols, flags, etc.?

What opportunities are there to bring these aspects into my work?

To what extent am I prepared to talk about my personal experiences, values, beliefs, etc.

- *with colleagues and other adults?*
- *with pupils?*

Developing Facilitation Skills

Facilitation involves a wide range of skills, and it is important that the facilitator models the behaviour and skills which they would like group members to develop. The facilitator, therefore, may need some training support in order to feel confident and competent in her / his facilitation.

Some of the skills which are important for facilitators include:

Group Awareness

It is important for the facilitator to be sensitive to the needs, interests and 'mood' of the group and individuals. Group members may volunteer information but the facilitator also needs to be aware of non-verbal communication (body language, etc.) and to be able to draw out further information. See Group Members and Group Dynamics (Section Three).

Enabling Participation

It is the facilitator's responsibility to ensure that all group members can participate as they feel comfortable, helping the group keep to its contract and maintain the 'safe space': ensuring confident group members do not dominate discussion, and encouraging quieter members to have their say. See Enabling Group Members (Section Three).

Active Listening

This is about absorbing what a person has said, and ensuring that s/he knows that s/he has been heard by giving both verbal and non-verbal responses. It means giving a person your whole attention, and does not mean that you are busily thinking about your reply while s/he is speaking. See Developing Skills within a Group (Section Five).

Giving and Receiving Feedback

This can be about giving affirmation to group members for their skills, contribution to the group process or tasks, etc. It may also be about respectfully and appropriately challenging group members to consider their strengths and weaknesses, to try new things, to look at a situation from different perspectives, etc. See Section Three (Enabling Group Members).

Critical and Creative Thinking

A facilitator needs to be able to reflect on a range of perspectives and ideas, and be able to support group members in exploring different ways of understanding these. Where problem-solving is involved, s/he also needs to be able to enable the group to think creatively about a range of possible solutions or outcomes.

Positive Ways of Approaching Conflict

Where strong differences of opinion are expressed within a group, it is important that the facilitator supports the group in working through any conflict that may emerge. As well as helping the group to keep to their contract, this might include sharing skills in relation to negotiation, mediation, etc. See Managing Conflict (Section Four).

Enabling Closure

The facilitator needs to support the group in bringing a session to an appropriate close, so that everyone is able to move on to whatever they are doing next. S/he also needs to support the group when a programme is ending, so successes and learning can be celebrated and strategies for the next stage can be planned. See The Importance of Closure (Section Five).

The development of skills and confidence is ongoing and increases through experience, but it is good to have some grasp of these skills in starting out to work with a group.

Questions for Reflection

What skills do I feel confident about?

Which skills do I need to work at?

Where can I get support in developing these skills?

Are there situations when it would be helpful to have a co-facilitator?

How can I share these skills and support group members in developing them?

3.5

Building Positive Relationships Between the Facilitator and Group Members

As well as the facilitator's personal preparation, there are a range of other aspects which need to be given attention in order to create a 'safe space' for groupwork. Building positive relationships with group members and enabling them to become familiar with ways of working as a group will help to create a framework for exploring issues, including more controversial ones, together.

Questions for Reflection

Do I really care about each pupil in my class?

Do I speak respectfully to each pupil?

Do I regularly acknowledge the positive attributes of each young person?

Do I expect certain pupils to misbehave?

Do I assume certain pupils are guilty before establishing the facts?

Am I able to apologise to any pupil if I have reacted unjustly?

Am I able to deal positively with conflict?

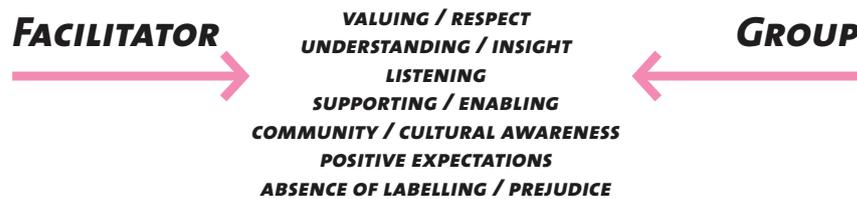

Is my body language consistent with the words I use to each pupil?

Do I organise the curriculum, recognising the diversity of learning styles, so that it's possible for every pupil to achieve daily moments of success, which I then take time to notice? ⁶

Also consider these questions in terms of: the members of my staff team; the parents; the governors; any other group members I work with.

⁶ Adapted from Jenny Mosley (2000), *Quality Circle Time in the Primary Classroom*, Wisbech, LDA.

Aspects of the Relationship between the Facilitator and Group Members

Positive relationships help create a sense of being a team and encourage the group to support each other and work together. This involves:

- valuing each person and getting to know her / his talents, interests, needs and concerns;
- listening to and affirming each person;
- enabling everyone to participate fully by providing learning opportunities suitable for different abilities, needs and learning styles;
- developing an understanding of the community and cultural contexts within which they live, particularly if members of staff live outside the school area or come from a different background to some or all of the pupils;
- being aware of events and relationships within local communities which may impact on individuals or groups, and can affect the level of risk-taking involved in exploring certain issues or in meeting groups from different backgrounds.

Questions for Reflection

How well do you know the local community within which the school is situated?

How well do you understand the cultural / religious / political background of the children, young people and adults who make up the school community?

What do you know? Are these facts, assumptions or judgements?

What issues are being faced by the children, young people and adults who make up the school community?

What spaces are created to discuss these life issues? What support do they have?

What is appropriate in terms of exploration / intervention within the classroom or school?

What is the purpose of the work being undertaken with them?

Is there a 'change' agenda?

BUILDING A POSITIVE LEARNING ENVIRONMENT

It is important to keep a balance between this kind of 'helpful awareness', while avoiding preconceived judgements based upon past experience, perceptions of the community, or what has been said in the staffroom, etc. Try to avoid:

Labelling

perceiving someone as 'quiet', 'a troublemaker', 'someone who overreacts' with the inherent assumption that s/he 'always' (or mostly) has been and will be like this.

Prejudice

feelings or attitudes towards a group or individual without reasonable knowledge of that group or individual.

Transference

where someone within the group reminds you of someone outside the group, and you assume that the group member will also be like that person in other ways.

Projection

putting your own traits, feelings, attitudes, etc. onto group members and assuming that they will respond and act in the same way that you do.

Scapegoating

placing the blame for things that go wrong, negative feelings, etc. on one group member, whether or not there is any justification for this.

Practical Points

- What do I want to be called by the group? For example, if I am working with a class, am I happy for them to use my first name or not? All the time? Just for this kind of lesson / module? Just during name games / activities? Not at all?
- How will I learn the names of group members, if I don't already know them? Name badges? Name game? Introductions? Reminder activities? Other possibilities? See Developing Programmes for Children, Young People and Adults (Section Five).
- What kind of relationship do I want with this group? Why? What style of working will best assist this? What ground rules will best frame this?
- How will group members benefit from this relationship in terms of learning, enjoyment, etc.?

3.6 Group Members and Group Dynamics

Group members are the individuals who make up the group. The term 'group dynamics' is used to describe the nature of the relationships and interactions between these individuals.

Every group, whether it is a class or smaller group of pupils, a staff team or a gathering of other adults within the school community, is made up of individuals who each bring their own skills, needs and life experience to the process. The way each individual behaves and contributes to the group process will be shaped by these factors, and this in turn will play a part in shaping the dynamics within the group as a whole. It is crucially important, therefore, that the facilitator pays attention to these, both because they will be the source of much of the group's learning and because the group may need support in addressing particular issues or conflicts which emerge from them.

What Group Members Bring

In working with any group, some aspects to consider are:

AGE AND LIFE EXPERIENCE

While some aspects of life experience can be loosely determined by age, others vary widely from person to person. Life experience is probably the most important factor in shaping what individuals bring to a group. For example:

- a child who has lived in different places may bring a positive experience of diversity which others in a class may not have;

- a staff member who lives within the local community will bring a knowledge of pupils' day-to-day environment, which those who come from elsewhere may not have;
- a group of young people who have experienced tragedy will bring an insight into grief and its related feelings and struggles which others may not have;
- a parent or governor may bring particular skills from their area of work (within or outside the home) while others may bring different ones.

Without prejudging individuals within a group, it can be helpful to know something of their life story so that sensitivity can be applied to areas which they may find challenging or difficult. While this does not mean avoiding these areas, it is important to remember that this kind of groupwork is not counselling, and if particular behavioural or emotional difficulties arise, it may be appropriate to offer further support elsewhere. See Beyond Programmes: Learning for Life (Section Seven).

SELF-ESTEEM AND CONFIDENCE

Some of the key ingredients of positive self-esteem include:

- *feeling physically safe;*
- *feeling emotionally safe;*
- *having a sense of personal identity;*
- *having a sense of belonging;*
- *feeling capable and effective;*
- *having a sense of purpose and meaning.*

The extent to which group members experience these will affect how they participate within the group. It may be valuable to include some activities within the programme which, as part of their purpose, are aimed specifically at building group members' self-esteem and confidence.

BUILDING A POSITIVE LEARNING ENVIRONMENT

With regard to work around community relations or other controversial issues, people who are confident about and secure in their own sense of identity are likely to feel less threatened by difference. This means that they will be more able to engage in exploration of controversial issues, to gain positive learning from the experience and to deal effectively with any conflict which may arise.

Building a positive atmosphere in the classroom / school in general and for groupwork specifically is easiest when you feel good about yourself. Similarly, it is difficult to build the self-esteem of participants if you yourself have low self-esteem.

- Take time to think about the different things, big and small, which you have achieved over the past week, month, year. If you find this difficult, ask a friend or colleague to help you!
- Everyone has bad days, so do not blame yourself unnecessarily for these. Instead, be honest with the group about how you're feeling, adapt the session to or swap it with one that you can manage more easily or postpone it to a better time.

MULTIPLE INTELLIGENCES & LEARNING STYLES

Rather than thinking of intelligence in purely academic terms, Howard Gardner⁷ has identified at least nine intelligences which individuals have to different extents.

1 Interpersonal

the capacity to understand and work well with others.

2 Intrapersonal

the capacity to understand oneself and learn through reflection.

3 Kinesthetic

the capacity to use mental abilities to co-ordinate bodily movements in effective ways.

4 Linguistic

the capacity to respond to and use language effectively.

5 Logical / Mathematical

the capacity to investigate and analyse problems logically and scientifically.

6 Musical

the capacity to appreciate, compose and perform music.

7 Naturalist

the capacity to appreciate, explore and understand aspects of nature and the environment.

8 Visual / Spatial

the capacity to understand the dimensions and possibilities of different kinds of visual space, and to be creative with this.

9 Existentialist

the capacity to explore and understand in spiritual and philosophical terms.

⁷ Gardner, H. (1993), *Frames of Mind: The Theory of Multiple Intelligences* (2nd Edition), London, Fontana Press. (He has adapted and added to his list of intelligences over time.)

This will affect how individuals participate in terms of the things which interest them, the aspects which they pick up or respond to most quickly, etc. By its very nature, group-work demands that all group members use their intrapersonal and interpersonal intelligence (defined by Daniel Goleman as 'emotional intelligence').⁸ Developing skills in these two areas will increase the effectiveness of group members' participation and learning through the process. Again, it is likely to be useful for the facilitator to include activities within the programme which have such skills development as part of their purpose. This emotional literacy is a necessary and valuable skill for group members in all aspects of their lives.

The recognition that individuals do not have a fixed amount of intelligence means that our capacity for learning is effectively limitless, and, aside from the important issues of respect and self-esteem, make labels such as 'bright' and 'stupid' meaningless. Individuals do, however, learn most effectively in different ways or combinations of ways, as defined below:

1 Visual learning

people who learn best by seeing, for example, reading, looking at diagrams, maps or pictures, etc.

2 Auditory learning

people who learn best by hearing, for example, listening to a talk or lecture, learning by association with particular music, etc.

3 Kinesthetic learning

people who learn best by doing, for example, by trying experiments, making things with their hands, using drama or role-play, etc.

Facilitators, teachers and leaders have a tendency to work out of their own preferred learning style and should be aware of providing for a range of learning styles to maximise the opportunities for all participants.

The ability to learn is also affected by our past experiences, how we feel about learning and the situations in which we find ourselves. Again this reminds us of the importance of self-esteem, and of the facilitator's need to be aware of the emotions that are being experienced during group sessions.

You might want to consider doing an intelligences or learning styles questionnaire in order to reflect on your own strengths, weaknesses and preferred learning styles. The purpose of this is not to put you in a box, but to assist with self-reflection and awareness, and to enable you to broaden the range and types of activity which you include when facilitating a group.

There are a number of websites which offer such questionnaires, for example: www.ldpride.net/learningstyles.mi.htm

⁸ Goleman, D. (1996), *Emotional Intelligence*, London, Bloomsbury Publishing.

BUILDING A POSITIVE LEARNING ENVIRONMENT

EXPECTATIONS

Each group member will come to the process with different hopes and fears. This may affect their expectations of the process and their willingness to engage with it. The first time the group meets, it is likely to be valuable for the facilitator to create a space for group members to express (anonymously or directly) some of these hopes and fears. By doing this, fears can be allayed, and, as appropriate, hopes can play a part in shaping the process or programme. If some hopes or expectations are unreasonable within the possibilities of the group, this can be clarified and the purpose of the group's time together explained again.

It is important to recognise here that within a school context, some people may have a choice about participating and others may not. Where participation is compulsory, clarity about the purpose of the group's time together is especially valuable. If the facilitator can give attention to group members' hopes and work to allay any concerns or fears, this is likely to increase group members' willingness to engage with the process. Being aware of their interests and particular skills will help the facilitator to find 'hooks' which will draw

their attention and enthusiasm for the process. For example:

- children (or adults) with a preference for kinesthetic learning will be drawn into the process more quickly through interactive exercises than by listening to a talk;
- teachers are likely to feel happier about participating in a groupwork activity when they can see its direct relevance to the specific challenges which they are facing in their classrooms;
- young people's interest is likely to be sparked by a theme which relates directly and realistically to their life experience outside school;
- support staff are likely to be more willing to give extra time to participate in training sessions when they feel their contribution to the school is clearly and specifically valued.

Questions for Reflection

Take time to reflect on your own:

- *self-esteem and confidence;*
- *intelligence strengths and weaknesses;*
- *preferred learning style;*
- *hopes and fears.*

How might these affect the way I facilitate the group?

Have I included activities within the programme that will help to build individual group members' self-esteem and confidence?

Have I included a diverse range of activities to enable all group members to enjoy and learn from the group experience?

Personality Types and Group Roles

Within a group, individuals will participate in different ways. This will be partly shaped by personality, and it may at times appear that certain group members are taking on particular roles. Identifying these roles can be helpful in trying to develop an understanding of the relationships and dynamics within the group. However, it is important only to do so when bearing in mind that:

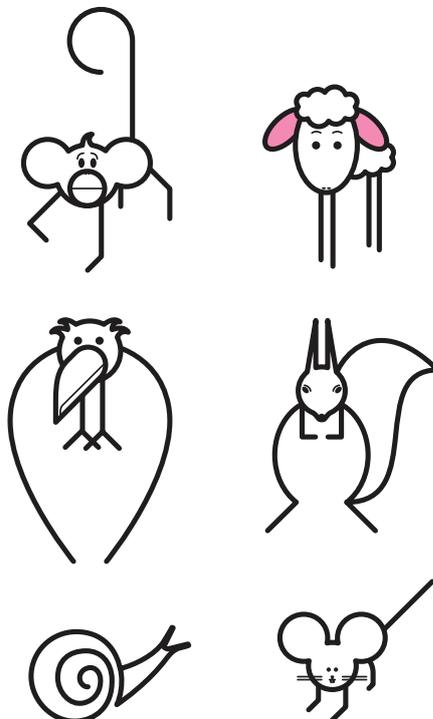

- role definitions apply to specific behaviours and not to the whole person;
- although some roles are disruptive to the group process, others are of benefit, and some can be both, depending on the context;
- some roles are very transitory while others appear to be more enduring, but each

person has the potential and possibility of changing their behaviour;

- if the role is disruptive and needs to be challenged, highlight the specific behaviour and do not condemn the individual;
- identifying roles does not become a labelling of people which prevents them from participating differently within the group or that limits their personal development.

One of the purposes in identifying the roles of particular individuals is to encourage participation in the group process in different ways to the ones they habitually use.

Some roles that it may be helpful to look out for include:⁹

The Monkey

brings humour into the situation but can also chatter a lot and prevent serious discussion.

The Sheep

is a patient listener but can also follow the crowd instead of thinking for her / himself.

The Parrot

is a good talker but also incessantly answers back without taking time to listen.

The Squirrel

stores up all the anger and hurt inside.

The Snail

withdraws when under pressure and refuses to share her / his ideas and opinions.

The Mouse

quietly gets on with things but also finds it hard to speak up.

⁹ Naylor, Y. (2003), *Who We Are: Dealing with Difference*, Belfast, Irish School of Ecumenics.

BUILDING A POSITIVE LEARNING ENVIRONMENT

Interaction and Group Dynamics

Within any group, there are numerous relationships developing, all at the same time. In a group of eight people, for example, there are 28 different relationships happening at any given time. In a class of 30 pupils plus one teacher, there are 465 relationships happening at any given time!¹⁰ It is these relationships which create the dynamics within a group, and the behaviour of one individual or a small group can affect all of them. The facilitator in particular needs to be aware of how her / his own mood, attitudes and behaviour can affect everyone else in the group.

Throughout the life of the group, ways of behaving and interacting develop between group members. As with the roles which people may take on as part of this process, some of these behaviours and interactions will be of benefit to the group while others may be detrimental. One of the facilitator's jobs is to ensure that there is a clear, agreed understanding of respectful behaviour within the group, for example, through the early development of a group contract which can be re-visited at different points throughout the group's life as necessary. If detrimental behaviours and interactions emerge as the group progresses, the facilitator needs to challenge them appropriately and support individuals or the group as a whole in addressing them. See Responding to Behaviour which is 'Challenging' (Section Three).

All groups will also experience conflict at some time or another. While this is a normal part of life, it does have the potential to be harmful rather than creative, so it is vital that it is managed effectively in order to reach as positive an outcome as possible. See Managing Conflict (Section Four).

It is within these interactions that enjoyment, creativity and learning take place. Groupwork is a relational, exploratory model of co-learning which is effective because of what participants bring to the process, supported by thoughtful and compassionate facilitation.

Questions for Reflection

What roles am I aware of within the group?

Am I using this awareness appropriately, or am I limiting people by labelling them?

How many relationships (using the formula) are happening within this group?

Can I see developments within group members' relationships and interactions as they get to know each other better and / or as the programme develops?

Are clear boundaries of respectful attitudes and behaviour being maintained?

What am I learning from group members and through my experience of the group process?

¹⁰ The formula for this is:

$$\frac{(\text{Number in Group}) \times (\text{Number in group, less one})}{2}$$

Kindred, M. (1995), *Once Upon a Group*, London, Roy Allen Print Ltd.

3.7 Enabling Group Members

Group members have the right to expect:

- consistency, fairness and honesty;
- recognition of worth, respect and consideration;
- that the facilitator develop and create new experiences;
- structure, direction and boundaries;
- protection of standards, norms and values;
- feedback, advice, suggestions;
- an increasing and proportionate role in making decisions;
- that the facilitator act as a model of legitimate and compassionate authority.¹¹

Creating the Learning Environment

When setting up the learning environment you need to consider the:

- people who will be involved (who are they, how do they relate to each other);
- time of day, and amount of time you have;
- place in which you are working.

Along with your facilitation, these factors will shape the learning that takes place. This learning will be most effective if the environment is defined by characteristics such as those listed in the diagram which follows.

The term, **Democratic Classroom** is becoming increasingly familiar, particularly within the

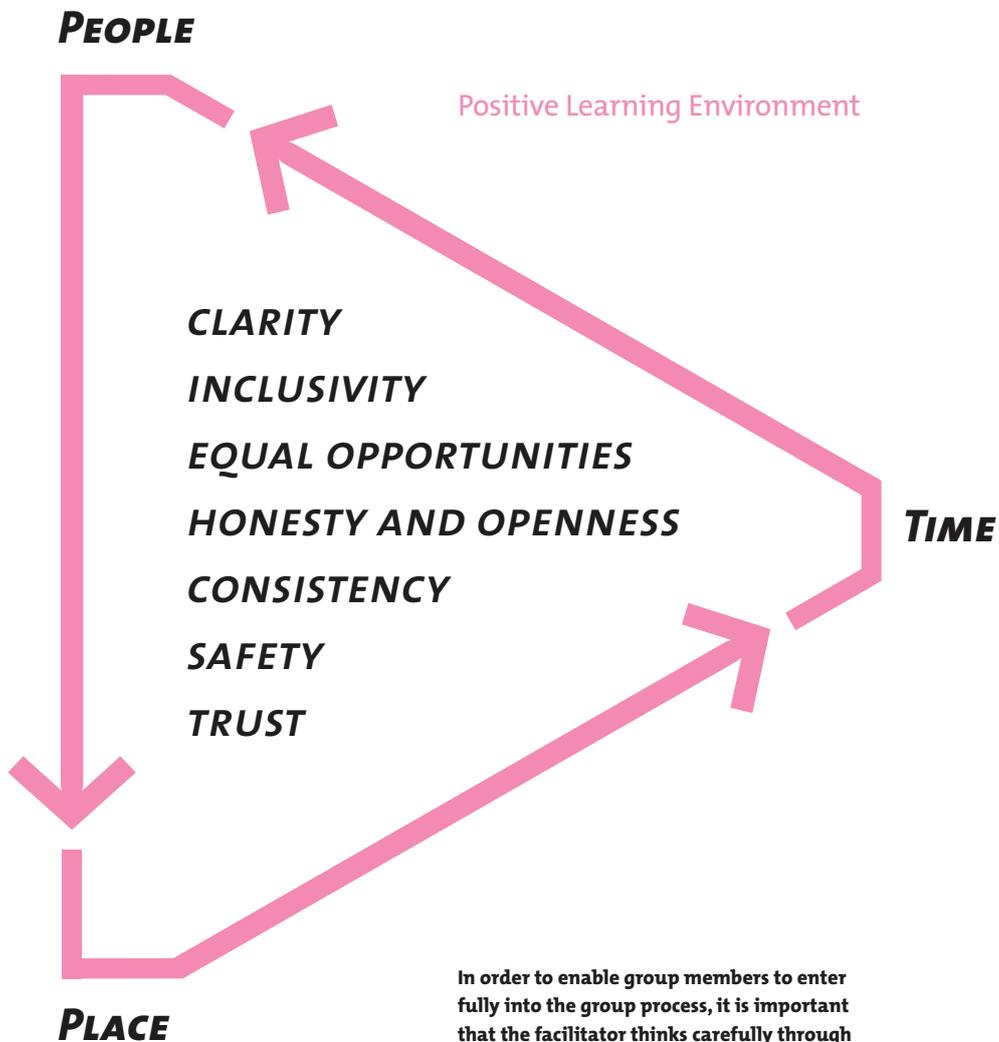

context of Local and Global Citizenship. Groupwork is most effective when it takes place within such a democratic setting, and where:

- group members are supported to take responsibility for their own participation and learning;
- group members are significantly involved in programme planning, development and evaluation;
- the nature of the group process is inclusive and fully interactive;
- learning takes place through open and investigative questioning and discussion rather than purely didactic methods.

To be truly effective, the 'democratic classroom' needs to be underpinned by democratic approaches throughout the school. It is difficult, for example, to expect teachers to model democratic approaches within their classrooms if they do not experience a similar democracy in management styles, decision-making processes, etc. Similarly, if pupils experience a democratic approach in one classroom, but not elsewhere, it is likely to have a detrimental effect on their relationships with different adults in the school community and to leave them uncertain about what is expected of them in terms of their participation, behaviour, etc. Children, young people and adults alike will be quick to spot inconsistencies between what is being advocated in the classroom and what is being practised in the school as a whole. Democratic ways of working are not always familiar within a school setting and although there is some risk-taking involved, the learning and relational benefits can be enormous.

¹¹ From Benson, J. (1997), *Working More Creatively with Groups*, London, Routledge.

BUILDING A POSITIVE LEARNING ENVIRONMENT

In order to enable group members to enter fully into the group process, it is important that the facilitator thinks carefully through the beginnings of the process and the gathering of the individual participants into a coherent, functioning group.

The creation of a 'safe space' in which the group can meet and learn together has an overarching significance, but there are also a number of specific factors which can be highlighted. The creation of a positive learning environment is about finding ways to maximise group members' participation for both their individual benefit and that of the group as a whole.

THE IMPORTANCE OF WELCOME

In many ways, the first session can set the tone for the rest of the group's time together. It will have a large impact on whether group members come back to the next session and / or the extent to which they are prepared to engage with the process. It is important that participants feel welcome when they enter the group space. This is not just about the words which the facilitator uses, but also the warm and inclusive atmosphere which s / he sets out to create.

Within the first session, this might include:

- Ensuring the room is physically comfortable in a way appropriate for the session's purpose.
- Having a starting ('bell') activity which will give people something to do when they arrive and may help them to feel less self-conscious. This could include anything from a structured exercise which encourages people to talk to each other, to offering a cup of tea or coffee.
- The facilitator speaking clear and inclusive words of welcome, backed up by welcoming body language and an overall style which is friendly and respectful.
- Giving people the opportunity to introduce themselves by the name they like to be called, and providing them with some guidance as to what information would be useful, with perhaps one piece of 'fun' information included, for example, your first name and why you were given it, your first name and your favourite film.

The factors which build this atmosphere of welcome need to be sustained throughout the group's life: it is not simply an 'act' for the opening session.

CLARITY ABOUT PURPOSE AND PROCESS

Group members will find it helpful to know what is expected of them in terms of participating, behaviour, etc. It is particularly important that they have a clear understanding of the purpose of the group's time together. A mismatch between the facilitator's and a group member's understanding of the group's purpose can lead to unnecessary frustrations and conflict which will have a negative effect on the experience of individuals and the group as a whole.

It is also important that the facilitator listens to the hopes and fears of group members about the process. As discussed above, where group members see evidence that their hopes and fears have been taken on board, they are likely to participate more fully and effectively in the overall process. Group members will feel more ownership of and commitment to the process where their views and ideas are included in programme development.

SKILLS DEVELOPMENT

As with most other aspects of their experience, each group member will come to the group with different skills and levels of skill. For the group's effectiveness, it can be valuable to include activities and exercises early in the process to ensure that all group members have a shared baseline of opportunity to develop skills that will be useful to them during the group's life and beyond. How each individual responds to the exercises will, of course, vary, but at the very least, some key skills, such as active listening and creative thinking will have been highlighted and can be revisited throughout the time the group is together. See Developing Skills within a Group (Section Five)

BUILDING A POSITIVE LEARNING ENVIRONMENT

It is also important for the facilitator to be aware that previous group and life experiences may have bred negative 'skills' for some individuals or for the group as a whole. One example of this would be group members who have learnt to hide their feelings and opinions, especially about more controversial issues, because past experiences have taught them that these are not things to talk about in a classroom or professional setting. Specific time will be needed to address such 'skills' where they inhibit personal and group development and learning.

ENABLING PERSONAL SHARING

This kind of learning is not necessarily about right or wrong factual answers. It is about investigative approaches, hearing different perspectives and opinions, developing emotional literacy (including empathy), etc. Therefore, the life experiences, thoughts and views of each member of the group are needed so that all of the group can learn and develop. It is the facilitator's job to help people to feel confident and comfortable to do this in a way which is appropriate. This can be supported through strategies such as the following:

- activities which encourage the development of intra / interpersonal skills;
- creation of group guidelines or contract;
- the specific ground rule of using 'I' statements, avoiding the use of generalisations or assumptions about what others might think or experience;
- techniques such as a Circle Time round with a 'Sentence Starter' to aid the expression of feelings or experiences;
- the facilitator appropriately sharing some of her / his own experiences, feelings and views, encouraging a greater openness as group members become aware that the facilitator is not asking them to take risks that s/he is unwilling to take her / himself.

Ultimately, people are most likely to share their personal experiences, feelings and views when they feel that they are being listened to and valued. It is essential, however, that group members do not feel that they are being pressurised into taking risks in sharing personal information, etc. when they do not feel ready to do so or they do not feel it is appropriate.

DEALING WITH DIFFICULT OR DISRUPTIVE BEHAVIOUR

Disruptive behaviour does not just create difficulties for the facilitator, it affects everyone in the group. At its most extreme, it may intimidate or distress people to the extent that they decide not to come back to the group or not to participate in any way beyond what they absolutely have to. It is, therefore, essential that such behaviour is addressed promptly and appropriately, for the sake of all group members as well as for the individuals involved and the facilitator. It is important, however, for the facilitator to be aware of the (sometimes fine) distinctions between purely disruptive behaviour, and challenging behaviour which emerges as the result of an uncomfortable or controversial theme. If handled effectively, the latter can provide opportunities for personal reflection and learning for the wider group as well as for individuals directly involved. A fuller discussion of disruptive and challenging behaviour, and of some response strategies can be found in Responding to Behaviour which is 'Challenging' (Section Three).

GIVING FEEDBACK

Giving feedback is about the facilitator responding to what people say and do within the group setting. Working within the framework of respect and inclusivity, it is a skill which, among other things, can be used for checking out, affirming, encouraging, and challenging.

It is a valuable part of the facilitator's job for a number of reasons, for example:

- it allows the facilitator to check that s/he has understood the points, feelings, etc. someone is trying to convey;
- the facilitator can encourage and build a

group member's self-esteem through commenting positively on her / his contribution to the group;

- it can be a tool for encouraging group members to take their learning further, through affirming what they have learnt, and asking questions which may encourage them to think even more broadly or deeply about something;
- the facilitator can also give feedback on negative behaviour or comments, respectfully challenging group members to think about their words or actions, and how they might participate differently.

The facilitator can also receive feedback from group members, peers and senior colleagues / tutors. Creating opportunities for them to give feedback will both demonstrate how they are valued and enhance their own skills. For the facilitator, this can be valuable for her / his personal and professional development, and for the development of the current and future programmes. This will be most useful if you:

- ask for it to be given in a helpful way (giving examples, positive as well as critical comment);
- listen all the way through;
- remember that it is their experiences of you and their perspectives on the situation;
- give yourself permission not to reply at once, and to take time to think about what has been said;
- give yourself permission to learn from mistakes.

BUILDING A POSITIVE LEARNING ENVIRONMENT

For feedback to be useful, it needs to be:

- planned: consider when and where is most appropriate, how the person will feel, whether s/he has had previous negative experiences, how you hope to follow it up in a constructive way, etc;
- owned: 'This is my feedback to you', i.e. how I see the situation – there may well be other perspectives;
- clear;
- specific and behaviour-focused;
- balanced: highlight strengths / weaknesses;
- relevant and soon after the situation;
- regular and integral to the group process.

Remember to give group members the opportunity to respond if they wish, or to come back to you at a later stage, either within or outside the group setting.

Feedback must always be appropriate in terms of both what the facilitator says and when they says it. For example:

- A young person with low self-esteem who is very aware of her / his position within her / his peer group, may find it difficult to receive public affirmation, so it may be more appropriate to give it on a one-to-one basis after the group session. Otherwise, rather than encouraging greater participation and learning, these may actually be inhibited.
- Yelling at a child or young person about her / his negative behaviour does not constitute appropriate feedback and breaks all the rules of the contract that the facilitator is trying to model to the group!

ENABLING APPROPRIATE ENDINGS

All group processes must come to an end at some point. Although group members and the facilitator may meet in other contexts and for other purposes, the particular process in which they were involved will be completed. Even where a teacher continues to work with the same class or a principal continues to work with her / his staff team, the series of lessons or development sessions need to have a clear finishing point. This does not mean that particular themes or concerns cannot be revisited or explored further at a later date, but this should be seen as a separate stage of the process, and may not involve the same group of individuals.

Appropriate endings provide a sense of closure and contribute to the group's sense of working in a safe space with clear boundaries. Endings are also important because they are part of the learning experience. A clear ending:

- prevents the process from becoming too drawn out, or even boring;
- provides a specific opportunity for reflecting back on the process and assessing the learning which has taken place;
- creates a space for celebrating what has been learnt and the value of the relationships and process which the group has experienced;
- gives the group members the opportunity to think about how they are going to use their learning in school and in their broader life experience;
- allows group members to consider what further learning might be useful to them.

For further information on 'endings' see The Importance of Closure (Section Five) and Developing a Model for Self-evaluation (Section Six).

3.8 Useful Tips for Facilitating Discussions

Outlined below are strategies to assist effective discussion. Consider how these could be replaced (when need be) with, picture or colour cards, one word responses, thumbs up / down, other actions, puppets, etc., particularly when working with younger children.

Ways of Starting

Sometimes it is good to get everyone involved by asking them for a quick contribution. You might set the 'ball rolling' by asking each person for a one word reaction to the theme, to say, briefly, how the issue relates to them or by telling a personal anecdote that is sparked off by the subject. Alternatively, each individual could complete one of these unfinished sentences:

- *I am excited about this discussion because ...*
- *I am not sure about this discussion because ...*
- *Right now I feel ...*

NB. Consider using humour sometimes as a way of introducing controversial issues. It can be a great way of 'hooking' people's enthusiasm and good will and releasing facilitator and group member anxieties prior to a deeper level of investigation.

Questions for Reflection

What are the things I can do to create a positive and democratic learning environment for those I work with?

What practical things can I do to create a warm welcome at the start and throughout the module / programme?

Have I taken time to write down the purpose of this programme? Is it clear, relevant and easy to understand? Check it out with someone!

What skills will group members need for this programme? Have I built in sufficient time and activities to support them in developing these?

What can I do to encourage appropriate personal sharing within the group?

What might it be appropriate for me to share from my own experiences?

What opportunities have I built in to give and to receive feedback?

Have I ensured that the different aspects of ending the programme can be attended to?

BUILDING A POSITIVE LEARNING ENVIRONMENT

Ways of Ending

Stopping a discussion can be as hard as starting one! Marking the end in some way often helps. Ask a member of the group to sum up what has been said, gather some key words / points of learning on a flipchart, or try using these unfinished sentences:

- *By participating in this discussion I have gained ...*
- *New things I have learnt by participating in this discussion include ...*
- *After participating in this discussion I will do things differently because ...*
- *Something I have enjoyed about participating in this discussion is ...*

Effective Discussions

Sometimes a discussion can become sidetracked, people can get bogged down in a particular issue, energy levels can plummet, something can happen to distract people, etc. There are a number of quick interventions that may help. (At other times, a more significant intervention may be needed, or people may simply need some 'time out'.)

Just Checking

Everyone can be asked to say a few words about how they are feeling at that moment, for example, bored, interested, tired, etc. Alternatively, the facilitator can call out suggestions and individuals can stand up if the word matches how they are feeling. This can be useful if the group seems to be breaking up for no clear reason.

Optimists

If a discussion is becoming negative, or the group is becoming irritable and mistrustful, ask everyone to make one positive statement before they criticise an idea. They may need a structure to do this, for example, 'One good thing about that is ... I also feel that ...'

Sides

If discussion is becoming polarised, people should be asked to put forward the opposite viewpoint to their own position or to state their own view, then put forward an opposing case. Alternatively, they could be asked to repeat what they heard the other person say and check this out with the speaker. Indeed you may need to be prepared to do something similar yourself or to play 'devil's advocate'. This can be useful in getting people to consider the others' case and lead to a better acceptance of the others' views.

Turns

To help make discussions less rowdy, to encourage listening as well as talking, to support individuals to think before they speak, a number of techniques can be used:

- put a ball on a table or in the middle of the group. If anyone wants to talk, s/he must take the ball from the table or the middle and return it (always to the table / middle, not to another group member) when s/he has finished.
- give three playing cards to each participant, once s/he uses these, s/he is not allowed to speak again.

Stuck Discussions

Sometimes, discussions just seem to get 'stuck'. No one has anything to say and there is an uneasy, anxious atmosphere. Usually when a discussion is really stuck, something has happened to make people feel very anxious. They are afraid of talking. All their energy is bound up in worrying and they find it hard to speak. This often happens if you have approached an emotional subject too soon, before enough trust has developed in the group. Leave emotional subjects until people know each other better. If it does happen, however, (and sometimes it does quite unexpectedly) try:

- *going back to less threatening topics;*
- *working in pairs or smaller groups;*
- *saying what you think is wrong – talking about the problem can make it less frightening and you can start to rebuild trust.*

Sometimes discussions get stuck because people have genuinely contributed all their ideas. When this happens, even if it is sooner than you anticipated, you need to close the discussion (possibly with one of the suggestions above) and move on. It may be useful for the group to come back to the theme at a later stage when they have had more time to think about it or have learnt more about it through other activities.

Questions for Reflection

Have I thought about how I am going to start and finish the discussions within this session?

Have I a few quick strategies 'up my sleeve' so I can feel confident to respond to situations such as those outlined above?

Considering this session's theme and the group involved, are there any potential difficulties that I may need to watch out for?

What are my fears about this session's potential discussion themes?

Will I be able to be flexible if I need to alter my session plan?

Have I a couple of activities in my head if we finish the planned work early?

3.9 Responding to Behaviour which is 'Challenging'

The starting point for any facilitator in responding to challenging behaviour within a group is to be aware of their own attitudes, actions and reactions within the group process as a whole and within a specific situation.

When we think about challenging behaviour, we often imagine behaviour which is noisily disruptive, aggressive or confrontational. This may 'tap into' our anxieties about a lack of skill or training / support in ways of positively responding to verbal or physical conflict. There may be, however, many other behaviours which we find challenging, and it is important to be aware of which behaviours have an emotional impact on us and which raise anxieties about our ability to deal with or resolve them. Some challenging behaviours within a groupwork setting can include:

- *shyness and linked withdrawal;*
- *disengagement, possibly due to boredom, a sense of irrelevance, etc.;*
- *joking about and a refusal to engage with serious themes;*
- *other diversionary tactics;*
- *cliques, and refusals to work as a group.*

When you are striving to create an inclusive, participative atmosphere, the challenge may be how to ensure that people are genuinely included and able to contribute and learn.

Finding out What's Wrong:

- Don't assume that because you can see a particular behaviour that you know the reasons behind it.
- Jumping to the wrong conclusions may mean that you make the wrong response.
- The priority must always be ensuring the physical and emotional safety of the group.
- Once this is established, take time to check out what is going on with group members.
- This discussion in itself may be enough to resolve the difficulty, otherwise it will allow you to make an informed decision about the next step.

There are many resources which provide helpful insights into positive behaviour management both generally and in a specific groupwork based context. Some of these are listed in the resources section at the back of this pack. Below are some aspects to consider and some specific strategies which may be useful.

Thinking about Ourselves First

There can be a tendency to associate challenging behaviours with children and young people, but adults are equally likely to display any of the behaviours previously listed. Given this, it is important to be aware of your own behaviour as a group member, and the things that you might do which will create difficulties for the facilitator and, potentially, inhibit the group as a whole.

A humorous list of examples (How to 'Wind-up' the Facilitator), but with a serious point, is outlined below. It is worth thinking about how these or similar things irritate you when you are facilitating, teaching or chairing a meeting, for at least two reasons:

- it helps you to be aware of the potential impact of your behaviour on the facilitator;
- it helps you to be aware of behaviour which particularly triggers negative reactions within you when you are facilitating. This can help you to develop some coping strategies and constructive responses in advance, rather than reacting out of irritation or frustration.

Think also about any distinctions you might make in the way that you approach a situation involving adults and one involving children or young people. Sometimes these distinctions will be appropriate, because of the age groups involved and their levels of understanding, personal development, etc. Although working with peers may involve different dynamics, we must respond to children and young people with the same respect which we give to adults.

Sometimes it is tempting to let adults away with behaviour not perceived as acceptable if the group members were children or young people. Often this is the case because we find responding to the behaviour of adults, particularly our peers, more challenging, and some additional support (for example, within a supervision context) may be needed.

HOW TO 'WIND-UP' THE FACILITATOR

- 1 Always arrive late and make a lot of noise finding a seat.
- 2 When talking, use 20 words when five would do.
- 3 Set your watch alarm to go off regularly.
- 4 During discussion yawn and sigh deeply.
- 5 Pass notes to others.
- 6 When the facilitator introduces an exercise, just say that you have done it before and you know that it does not work.
- 7 Always come in late after lunch and fall asleep - alternatively, do not bother to turn up for the afternoon session.
- 8 Organise for friends to call you on your mobile phone during the session, and send text messages to those that do not.
- 9 When asked if there are any questions, ask how long it is until break / lunch.
- 10 During discussions, talk behind your hand to the person next to you.
- 11 When in small groups to do an exercise, spend the time talking about your last holiday or what you're planning to do at the weekend.
- 12 Break the ground rule about speaking for yourself. Make many sweeping generalisations, which suggest that the whole group shares your view that the session is pointless.
- 13 Do not say a word during the evaluation, then go around afterwards being very critical.
- 14 At the end, do not pick up your handouts and take them with you. Ideally, leave them scattered on the floor.¹²

¹² Adapted from Skinner, S. (1992), Training and How Not to Panic, Halifax, Community Development Training Unit.

BUILDING A POSITIVE LEARNING ENVIRONMENT

A Context for Responding to Challenging Behaviour

The starting point to responding to challenging behaviour is to consider whether you, as the facilitator, have done your best to create and maintain a safe learning space. This would include the following:

CLARITY OF GROUP / PROGRAMME PURPOSE

- Have you clearly explained the purpose of the group being together and the specific programme?
- What evidence do you have that group members have understood this and perceive its relevance to them?
- Are you restating the purpose, flagging up any changes / developments and checking this out with group members at appropriate stages throughout the process / programme?

A SAFE SPACE FOR LEARNING

- Have you taken sufficient time in the early stages of the programme to:
 - *get to know group members' names?*
 - *build trusting and respectful relationships between yourself and the group, and between group members?*
 - *work with the group in establishing a clear contract for working together?*
 - *enable the group members to develop the skills they will need in order to participate fully in the process / programme?*
- Are you taking time to revisit these aspects of group building at appropriate stages throughout the process / programme?

PROGRAMME PLANNING AND DEVELOPMENT

- Have you made yourself aware of any appropriate information you need with regard to aspects of group members' life (and, specifically, school) experience which may impact on the way in which they participate in this particular group and programme?
- Have you included a broad enough range of learning experiences to cater for the different learning styles and interests of group members?
- Is there coherence between individual sessions / activities and the overall programme purpose?
- What evidence is there that group members are able to see the purpose and relevance of individual sessions and activities to:
 - *the programme as a whole?*
 - *themselves as individuals?*
- Is there flexibility in the programme to respond to group members' learning needs and interests?
- Have group members been able to share in programme planning, evaluation and further development?

Developing Responses to Specific Behaviours

The ways of working suggested previously may seem time-consuming within the pressures of a classroom or other timetable, however, if you are encountering ‘challenging’ behaviours, it is likely that time is not being spent usefully anyway, and that learning and enjoyment are being restricted.

In order that learning and enjoyment can be re-established the issues and behaviour need to be dealt with and this process, if facilitated well, will involve learning in itself. Sometimes this means having the courage to abandon your original programme, at least temporarily!

Below are some examples of behaviour which will need a response, and some suggestions as to what this process might involve in terms of underlying principles. The list is far from exhaustive, and there are no set answers: different settings, groups and programmes will need different responses. There are also scenarios at the end of the section which you can use to consider your own underlying values and strategies. In each case, the starting point for responding is a respectful and inclusive setting.

A GROUND RULE IS BROKEN

If this happens, it is important that the response is prompt and appropriately visible to the whole group: they need to know that the contract is meaningful, and that they have a responsibility to keep it themselves and to support the rest of the group members in keeping it. Equally, they need to know that there are consequences if a ground rule is broken. Having involved all group members in drawing up the contract, they also need to be involved, where possible, in deciding what happens if a ground rule is broken. See Developing a Contract / Learning Agreement (Section Five).

CONFLICT WITHIN THE GROUP

Conflict can take many forms within the group. A **restorative approach** to behavioural issues¹³ would argue that negative behaviours are not simply about broken rules but are, more significantly, about the breakdown of relationships which require restoration. Any response will need to address the feelings and attitudes of both ‘perpetrators’ and ‘victims’ – it is likely that both or all of those involved may perceive themselves as victims in some way, or may perceive themselves as both at different points in the process. In the example above, if an individual group member breaks a ground rule, the relationships between her / him and the other group members, and between her / him and you are broken. As the facilitator, you are likely to need to take on a mediation role or to involve another facilitator. Depending on the incident and on the group itself, this could be another group member. Some guidance on dealing with conflict situations, including mediation, is provided in Managing Conflict (Section Four).

LACK OF PARTICIPATION

An apparent lack of, or a withdrawal from participation by individual group members can be for all kinds of reasons: shyness, a preference for observation, boredom, no sense of relevance or meaningfulness, distractions, a more pressing priority to think about, etc. Each of these will require a different response, and you are unlikely to know what the cause is unless you check it out with the group or the particular individual concerned. When it does involve one person, it will often be more appropriate to address it with her / him individually. If the cause is shyness or anxiety, for example, picking her / him out within the group is likely to make matters worse.

¹³ See, for example, Belinda Hopkins, www.transformingconflict.org

BUILDING A POSITIVE LEARNING ENVIRONMENT

DISRUPTIVE BEHAVIOUR

All kinds of behaviours can be disruptive, whether it is apparently harmless joking, everyone talking at once and not listening to you or to each other, or numerous other examples. Again, there may be a wide range of reasons for the behaviour, and you will probably need to check out the possible causes in order to deal with it effectively. Is it:

- *boredom;*
- *anxiety about discussing a particular theme;*
- *absence of a sense of connection or relevance;*
- *excitement about other things;*
- *not being challenged or stimulated enough;*
- *finding it too challenging or difficult;*
- *an issue or conflict from outside that has been brought into the group;*
- *the time of year?*

You may need to use some 'containing' strategies in order to create the space for exploring causes and potential responses. Depending on the circumstances, these could include:

- a change of activity – possibly to something more active to enable people to 'let off steam' (see Section Five (Using Games)) or, alternatively, to something calming, perhaps a few moments silence;
- a change of venue – to somewhere where there will be less disruptions or distractions, or with different associations;
- a change of theme – back to a 'safer' theme, until there is greater trust and skill within the group to enable them to explore the one which you had originally planned;
- a five / ten minute break;
- using the break to have a quick one-to-one chat with particular individuals, if need be;

- using 'warning cards' or quietly letting people know that you are unhappy with their behaviour and why, so that any further action is part of a process and is not unexpected or misunderstood;
- 'time out' from the group for an individual member (this needs to be managed appropriately, and be for a set length of time);
- going around the circle and asking everyone for one word to describe how they are feeling at that moment – this will give you a starting point for responding and / or opening a discussion.

Where the whole group seems to be affected, and you are fairly sure of the cause, suggesting this openly to the group and giving them the opportunity to respond and to talk about it, may in itself partly resolve the problem. It may at least give you back their attention, because (if you have got it right!), you are now working with them on something that is relevant, set by their needs and at their level. If you have got it wrong, inviting their input and analysis may in itself be enough to re-engage them with the process. When you are not sure, asking an open question to check out your assumptions may also provide a way in, for example:

- 'It seems to me that some people are feeling a bit unsettled today. Would anyone like to tell me how you are actually feeling?'
- 'What do you think of these activities that we're doing today? Why is that?'

Always try to include those who seem to be less directly affected, or who may have gone quiet as others became more disruptive: they may feel that it is nothing to do with them, or they may feel frustrated by the disruption to the session, etc. These individuals may also be more able to see a creative way out of the difficulty.

Summary Points:

- Start by creating and maintaining an inclusive and safe setting.
- Model the behaviour you expect from group members.
- Affirm and give attention to positive behaviour, rather than focusing on negative behaviour.
- Check out your assumptions: do not assume you know the cause of the behaviour you see.
- Confirm the physical and emotional safety of the group before going on to address the behaviour more fully.
- Consider how the whole group has been affected, not just those most obviously involved.
- Be flexible with your programme – keep reviewing it to ensure relevance, stimulation and enjoyment.
- Take time to resolve situations thoroughly, if possible: it will be worth it in the long run.

NB. It is possible that you will encounter children and young people whose behaviour is consistently challenging and who need additional support. This can be stressful and exhausting for the teacher(s) working with the child or young person on a daily basis, and they also need support, as may the other pupils who participate daily in classes with them. Here, perhaps more than anywhere else, the importance of a supportive staff team comes into play, as does awareness and availability of external resources, for example, through the ELB or other agencies. One source for suggestions on strategies for working with children and young people 'beyond' is Jenny Mosley's Circle Time Model as outlined in her various books.¹⁴

Responding to Behaviour which is 'Challenging'

Outlined below are a number of scenarios, based on real life examples, for you to consider how the theory of responding to behaviour which is 'challenging' might translate into everyday practice. Drawing on the ideas within Section Three (Responding to Behaviour which is 'Challenging') and elsewhere in the resource, how might you respond to the situations outlined below?

Alternatively, or additionally, consider examples from your own experience – reflecting on them now, what might you do the same and what might you do differently?

¹⁴ See, for example, Mosley, J. (2000), *Quality Circle Time in the Primary Classroom*, Wisbech, LDA.

BUILDING A POSITIVE LEARNING ENVIRONMENT

Responding to Behaviour which is 'Challenging'

1 You are facilitating a session exploring a contentious issue. (This could be anything from a playground conflict, to a political or ethical issue, to a change that is proposed for the school's decision-making structures, etc.). One person in the group seems to have particularly strong views on the subject and is dominating the discussion to the extent that the majority of group members have not spoken.

How do you respond?

2 There is a lively discussion taking place within the group, but one person has not contributed at all in this or the previous session. When you used sentence completion around the circle, s/he chose to pass. You are not sure of the reasons for her / his lack of participation, but you are concerned that s/he may not be learning from or enjoying the sessions, and, equally, no one else is benefiting from any contribution this person might be able to make.

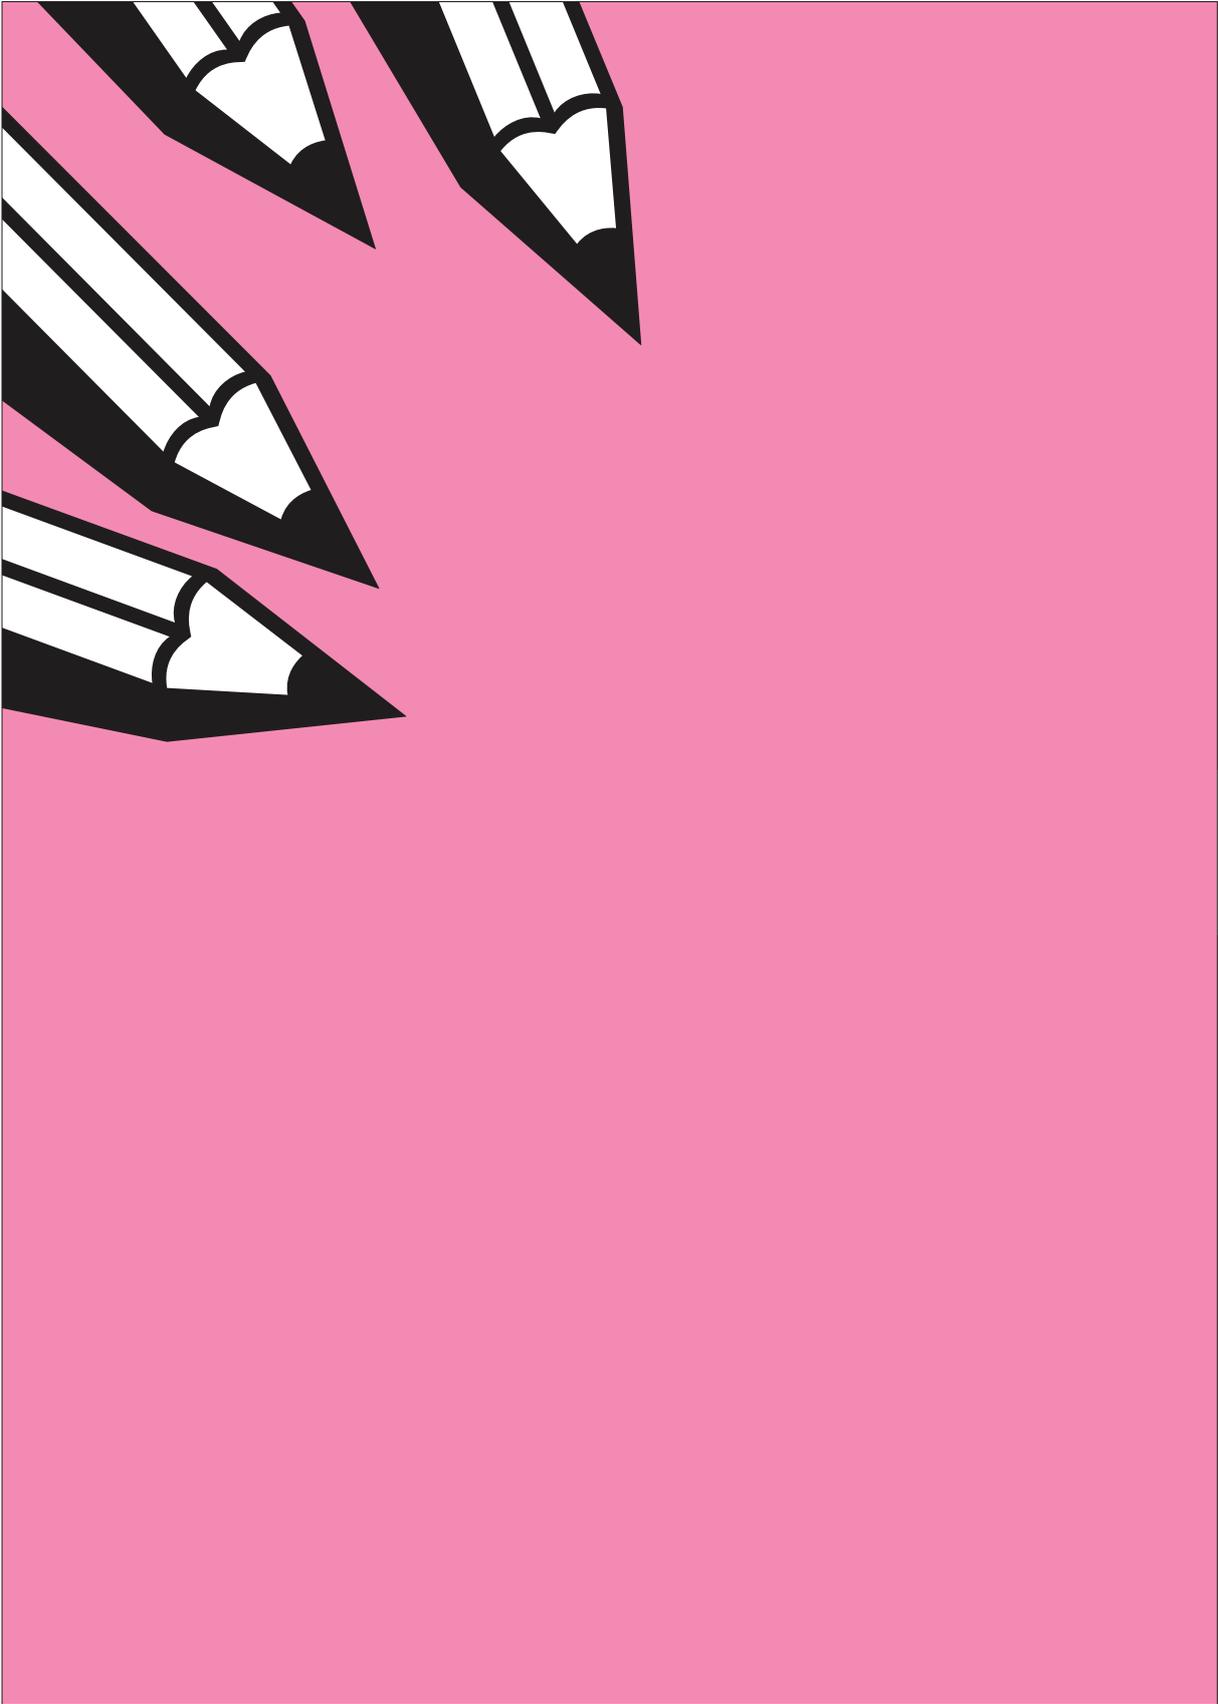

How do you respond?

3 You are feeling frustrated because every time you try to take the group's work and discussion to a deeper level, one group member with apparent influence over others keeps joking, introducing 'red herrings' and generally pulling the conversation back to a superficial level.

How do you respond?

4 You are exploring flags and symbols with a group. After significant preparation, you decide to introduce actual flags as part of a discussion exercise. The behaviour of a small number of group members becomes aggressively disruptive, preventing both them and all other group members from engaging with the exercise.

How do you respond?

Exploring Controversial Issues

'... all learning begins when our comfortable ideas are found to be inadequate ... the diversity of ideas that comes from the diversity of people is one of the best ways to create this necessary condition of learning.'

CAMBRON-MCCABE, N. AND QUANTZ, R., 'GUIDING PRINCIPLES FOR PREPARING TRANSFORMATIVE EDUCATIONAL LEADERS' IN SENGE, P. ET AL. (2000), SCHOOLS THAT LEARN, LONDON, NICHOLAS BREALEY PUBLISHING.

exploring controversial issues

4.0

What is a Controversial Issue?

A controversial issue is 'an issue about which there is no one fixed or universally held point of view. Such issues are those which commonly divide society and for which significant groups offer conflicting explanations and solutions'.¹

By their very nature, controversial issues can involve strong feelings as well as different perspectives and viewpoints. Each person will approach them from her / his own value base and life experiences.

Intentional and Responsive Work

In considering this area of work within schools and other educational settings, it is important to recognise that opportunities to explore controversial issues do not only come about because they have been planned into a scheme of work or a staff training session. Often, they may arise as a result of an external event (in the media or the local community, for example) or as a consequence of an incident of prejudice, discrimination or bullying

(whether general, or of a sectarian or racist nature) within the school itself. In these cases, an immediate response may be required, and / or it may be appropriate to build the issue into future lesson plans and meeting schedules. This means that everyone involved in the school can contribute to learning and may find themselves in a position to respond in particular situations, for example, the playground, the canteen, off-site activities, etc. This kind of responsive work may be very different in its starting points from the intentional work of planned lessons, modules and training programmes, but the underlying ethos and processes will be essentially the same. If a class regularly uses Circle Time, for example, to explore classroom issues, or a staff team regularly uses a groupwork format to reflect on school successes, issues and concerns, the fora for responsive work are already in place. Time taken to create a whole school approach, to build positive relationships, to develop skills and to familiarise adults and pupils with these ways of working will be well spent, and, in fact, crucial in providing a framework for the exploration of more controversial issues however and whenever they arise.

¹ Advisory Group on Citizenship (1998), *Education for Citizenship and the Teaching of Democracy in School*, London, QCA.

EXPLORING CONTROVERSIAL ISSUES

Why do Children, Young People and Adults need opportunities to explore Controversial Issues?

'Stories are the secret reservoirs of values: change the stories individuals and nations live by and tell themselves and you change the individuals and nations. Nations and people are largely the stories they feed themselves. If they tell themselves stories that are lies, they will suffer the future consequences of those lies. If they tell themselves stories that face their own truths, they will free their history for future flowerings.'²

- Children and young people's experience of learning in school needs to be relevant to their broader life experience and the opportunities and decisions which they face personally, socially and vocationally.
- Exploration of controversial issues opens up many opportunities for personal development and learning.
- Avoidance or denial of difficult issues can leave a significant gap in their educational experience.
- Controversial issues often have a strong 'feelings' dimension. Giving children and young people the opportunity to articulate and explore these feelings is an important aspect of developing emotional literacy.
- Exploring controversial issues involves the development of a whole range of skills including active participation and listening, critical and creative thinking, investigative and reasoning skills, decision-making, empathy, finding positive ways of approaching diversity and conflict, etc.
- An indication that a school is a genuinely 'safe place' for everyone in the school community and for those who visit, will be

the extent to which children, young people and adults are able to openly and respectfully discuss controversial issues.

- Perhaps most importantly, research indicates that children and young people are interested in these kinds of issues and want opportunities to explore them.
- These experiences and learning are also important for adults so that when they have the opportunity to explore them with children and young people, they can do so with:
 - *a personal awareness of the everyday nature of such issues;*
 - *confidence in their own ability to participate in and / or facilitate such discussions;*
 - *a recognition of the learning they can gain from children, young people and their peers.*

Questions for Reflection

What are some of the issues that I would define as controversial?

Do I see it as part of the role and responsibility of schools to explore issues such as these with children, young people and adults within the school community?

What do I personally perceive as some of the potential benefits of such exploration:

- *for myself;*
- *for children and young people;*
- *for the adults in the school community?*

What do I perceive as some of the potential difficulties?

Can I see possibilities for creating opportunities for this kind of exploration within my own work and sphere of influence? Where?

4.1 Diversity Dictionary ³

Prejudice

Unfavourable opinion or feeling formed beforehand without knowledge, thought or reason. Feelings or attitudes (positive or negative) towards individuals or groups and based on prior assumptions.

An untested or inherited assumption or belief

Stereotype

Tendency to think or act in rigid, repetitive and often meaningless patterns. A standardised image or perception shared by all members of a social group. Most of our stereotypes tend to be negative, because of this some people prefer to substitute it for the less emotive or value-loaded term 'generalisation'.

Applying fixed notions to people

Discrimination

Unfair treatment of a person, racial group, minority, etc; action based on prejudice. It is important to see discrimination as prejudice in action, since it is based on the creation of unfavourable distinctions between one group or people and another, often because of characteristics such as race, colour, sex and intelligence.

Discrimination can be positive but is usually negative.

Race / Racism

Group of persons sharing a genetic pool. Disputed term as cannot really be shown to exist. Racism occurs when discriminatory action is taken on the basis of a person's or group's perceived ethnic origin.

Sectarianism ⁴

A system of attitudes, actions, beliefs and structures:

- *at personal, communal and institutional levels;*
- *which always involves religion, and typically involves a negative mixing of religion and politics;*

which arises as a distorted expression of positive, human needs especially for belonging, identity and the free expression of difference; and is expressed in destructive patterns of relating to:

- *hardening the boundaries between groups;*
- *overlooking others;*
- *belittling, dehumanising or demonising others;*
- *justifying or collaborating in domination of others;*
- *physical or verbal intimidating or attacking others.*

³ Adapted from an NUS / USI Training Document.

⁴ Adapted from Liechty, J. and Clegg, C. (2001), *Moving beyond Sectarianism: Religion, Conflict and Reconciliation in Northern Ireland*, Dublin, Columba Press.

EXPLORING CONTROVERSIAL ISSUES

4.1 Acknowledging Fears and Concerns

There are people who for different reasons, may feel very positive about the opportunity to explore more controversial or challenging issues. Others may have significant anxieties based around the very term 'controversial issues'. Even for those who do feel positive, there may be concerns about the risks that might be required, and fears that other people will not bring the same degree of openness to the group.

Why do we feel Anxious or Afraid?

When thinking about exploring themes which may be controversial it is important to bear in mind that:

- Fears and concerns are genuinely felt, even if you, as the facilitator, do not share them. Equally, there may be very strong reasons why people feel this way and these may emerge in discussion.
- Fears and concerns are likely to be strongest among a group that does not know each other well and where the levels of trust are low.
- They may be shaped by previous negative experiences, or by stories they have heard from others.
- The tendency to raise subjects such as politics, religion, etc. only with those from the same background and perspective can deepen fears about conversing on these issues with those from different backgrounds.
- A culture of 'polite avoidance' of themes such as politics and religion may mean that people simply do not have much experience

of such conversations and do not know what to expect. They may fear that a 'can of worms' may be opened, rather than feeling positive about things they might learn or the opportunity to hear other people's perspectives.

- Fears and concerns may be caused or heightened by events and relationships within the local community and / or by wider societal and political developments.

Fears and Concerns that might be Experienced?

Below are listed some examples of fears and concerns that were expressed or demonstrated in various ways by group participants exploring themes of identity and sectarianism in Northern Ireland. Remember, these are only examples and the list is not exhaustive!

- *not being listened to or respected*
- *being laughed at, mocked or embarrassed*
- *being misunderstood*
- *giving offence*
- *harming (new) friendships*
- *being 'forced' to talk about difficult / sensitive / personal issues*
- *isolation or being a 'lone voice'*
- *'letting the side down' or breaking the united front presented by the rest of the group or sub-group*
- *being shown up as ignorant of their own or others' traditions*
- *issues being talked about outside the session or group*
- *verbal or physical attack, either during the session or afterwards*

Fears and Concerns that might be Experienced by the Facilitator?

You may share some of the fears and concerns that group members feel, and it is important to explore these as part of your personal preparation. You may also have concerns about how you facilitate this work, and whether you have sufficient support within your school or organisation.

This issue is explored more fully in Personal Preparation for Facilitation (Section Three).

Thorough preparation and finding ways to create a safe space are of paramount importance to allay fears of both participants and the facilitator, ensuring that the risk-taking involved is appropriate and adequately supported. The most effective overall structure is one which is based on a whole school approach where the commitment to, and responsibility for, this way of working is shared by everyone in the school community.

Responding to the Unexpected

Sometimes themes may arise within a session which you as the facilitator did not think would be controversial or emotive but which spark off strong feelings within the group.

Some of the group members may be as surprised by this as you are. If you feel personally well prepared and have put the structures in place which create a safe space for your groupwork, you will already have the tools which you need to facilitate the new development within the group process. Again, this may be a time when you have to significantly change, or even abandon, your original programme.

Questions for Reflection

Do some of the fears and concerns listed above resonate for me?

Where can I get some support in addressing these?

Am I aware of any of these fears and concerns being particularly relevant for the group in relation to the themes we will be exploring together?

What are some of the things I may need to do with the group to address these?

Having worked with group members to address their fears and concerns, what are likely to be some of the positive outcomes for them from exploring these particular themes?

4.2 Working with Emotions

Working with controversial issues involves facilitators in being willing to:

- pay attention to their own feelings and values around sensitive / controversial issues;
- see their own personal development as an integral part of their professional development;
- understand that their growth in confidence and competence will be a continual process – ‘lifelong learning’;
- take account of other relevant programmes both within and outside of school, and support group members in making connections in their learning;
- work towards creating an open and democratic classroom using negotiated ground rules to promote a safe, enjoyable environment conducive to enquiry and learning.

Working with controversial issues involves group members in being willing to:

- recognise and take responsibility for their feelings as opposed to avoiding or denying them through blaming or accusing someone else for making them feel bad;
- pay attention to how they each experience feelings in their bodies and the language that they use to communicate how they are feeling;
- look for and, when appropriate, challenge patterns which connect their feelings and their behaviour;
- operate the ground rules and act in ways that promote fairness and democracy.

All of this needs to be grounded in a framework of positive relationships which is sustained throughout the process. See Building Positive Relationships (Section Three) and Creating Safe Space (Section Five).

What Feelings are likely to be Generated around Controversial Issues?

Possibilities might include:

Anger

Expressions of hatred; stereotyping, insulting, denigrating, blaming, accusing the other person / ‘side’, wish for revenge / retribution.

Pride

in individual / collective identity, culture, a particular cause, place, event, etc.

Hurt

feelings of being ignored / neglected; not having a chance to tell their side of the story; experience of being a victim of conflict.

Kinship / loyalty

towards an individual, group, party, etc.

Guilt and shame

feeling responsible, dishonourable, unworthy; feeling of ‘letting the side down’.

Sadness

sense of loss, grief, disillusionment, hopelessness, despair.

Triumph

sense of achievement, victory (possibly at the expense of another person / group).

How Might they be Manifested?

There are many models for understanding behaviour but a very generalised summary of them could suggest that our emotions can be experienced in three ways. We may, of course, display our feelings in more than one way at the same time. These are through:

- 1 bodily feelings, for example, 'butterflies in the tummy' i.e. 'feeling' the feelings;
- 2 physical behaviour including body language i.e. 'acting' out the feelings through gesture, posture, behaviour, non-verbal communication;
- 3 verbalising i.e. naming and 'talking' about the feelings.

Why do Some People Seem to Act out their Feelings more than Others?

We all have varying levels of self-awareness about how our emotions can affect our behaviour. Our self-awareness can also fluctuate depending on how we are feeling on any given day and on the degree of the emotion aroused by the issue. Strong feelings will usually indicate a high degree of personal involvement with the issue – currently or in past experience.

Are Feelings Always What they Seem to Be?

Instead of demonstrating what we are actually feeling in one or more of the three ways suggested, another option is to mask or translate the feeling into a form that is somehow less frightening or more acceptable (in our perception) either to ourselves or to another, for example, the facilitator. Many of us resort to using **defence mechanisms** when

we are feeling threatened in any way. Common defence mechanisms include:

Resisting or Denial

refusing to accept that there is any emotional reaction, despite evidence to the contrary, for example, 'I'm not angry!!!'

Sublimating

channelling anger towards a safe target as opposed to dealing with the root cause.

Avoidance

disengaging from the session; causing disruption to divert attention away from source of unease; displaying boredom; giggling; 'This is stupid' etc.

Compliance

where a group member appears to be engaging but actually is not.

Minimising

feelings, perhaps by taking refuge in clichés such as, 'It was OK / not too bad', 'I'm alright / fine', etc.

Are Defence Mechanisms Unhelpful when Looking at Controversial Issues?

Defence mechanisms are there for very good reasons: they are forms of learned behaviour that in our past experiences have proved helpful in dealing with threatening situations. As such, they are to be respected and worked with gently. When dealing with controversial issues the aim is to provide enough safety to be able to explore the issue that has set off the defence mechanism in the first place, but at a level and a pace that the person can handle. Too confrontational an approach can cause the person to become more defensive, leaving little opportunity for learning.

EXPLORING CONTROVERSIAL ISSUES

What Can be Done if Someone does Become Very Emotional?

SUMMARISE

When working with controversial issues, periodically summarise what seems to be happening and reflect this back to the group, for example, 'I can see that when I say that there seems to be a variety of reactions. Some of you look a bit annoyed, some of you seem OK.'

In this way, if someone does become very emotional, it will not come as a huge shock to the group. This also creates partnership between the facilitator and the group around the pace and the intensity of the learning processes.

LET GROUP MEMBERS SET THE PACE

The facilitator will need to 'feel her / his way' as to how far and how deep to go within the given time. This also means checking out the group's readiness, perhaps through tentative questions, such as 'Would it be OK to talk about ...,' and making adjustments guided by group responses, such as 'Maybe we could skip on to looking at people's attitudes towards...'

ACKNOWLEDGE WHAT'S HAPPENING IN THE GROUP

If feelings do become strongly engaged do not ignore them or pretend that nothing is happening. If you do, the individual and the group as a whole will lose confidence in your honesty. They do not necessarily expect you to 'fix things' but they will need you to acknowledge something is happening and to work with them in dealing with it.

RESPECT FEELINGS

Do not minimise anyone's reaction otherwise they may feel humiliated, ashamed or exposed. Reflect the person's feelings to them and the group, and offer them a choice: 'Is this something you want to talk about now or would it be better to take some other time to do it?'

If someone is personally aggrieved over something that has arisen out of the group's work provide an opportunity for them to speak, listen, reflect, summarise and acknowledge the level of feeling. This does not mean condoning or rejecting the validity of the feeling. That can be a matter for more discussion once feelings around the issue have been discharged.

If someone in the group feels tearful, it is important to acknowledge this and to reassure her / him and the group that tears are OK. It may be appropriate to offer her / him some 'time out', to talk with her / him individually after the session, or support her / him to stay within the group.

Do encourage everyone as individuals to take responsibility for their own feelings. When taking part in discussions ask everyone to use 'I' statements as opposed to 'We' / 'You'. If necessary, interrupt speakers politely to remind them to do this. Model this yourself as the facilitator.

Allow people to respond to each other's feelings without intervening to 'protect' them unless this becomes necessary. Where appropriate, keep reminding them of the contract – the importance of respect, etc.

NO-BLAME

- Do not make the group feel guilty that feelings are running high; instead encourage them to consider the meaning of such strong feelings and what can be learned from them.
- Do not scapegoat individuals; keep the emphasis on 'us as a group'.
- Try to provide a safe and respectful way for people to express their feelings, for example, through offering a structure: 'When you say ..., I feel ...', etc.
- Be 'up front' (in relationship terms, aim for transparency) about what is happening: 'It's obvious that X and Z are very annoyed by this and we need to sort this out before moving on,' and involve the group actively in creating some sort of resolution.
- Do not force people to take more risks than they are ready for – but, equally, do not limit the group inappropriately by your own fears.

WHEN IT ALL SEEMS TO GO WRONG

Try not to feel that because the session has not 'gone to plan' that it has been a disaster. It can seem unhelpful and contrived to steer discussion too closely. Wherever the group and discussion have ended up will have involved useful learning. Turn the situation into an opportunity for evaluation and learning. See If Things 'Go Wrong' (Section Five).

Questions for Reflection

What are my anxieties around facilitating work which may raise strong emotions?

What can I do to minimise these anxieties without limiting the work itself?

Am I aware of similar or other anxieties within the group?

How can I best support group members?

Have I strategies in place if someone does become very emotional?

EXPLORING CONTROVERSIAL ISSUES

4.3. Managing Conflict

The Chinese word for 'conflict' is made up of two characters.

One character implies that conflict can be a crisis, while the other indicates that it can be an opportunity. Often we focus on the crisis and miss the opportunity to see the positive aspect about conflict.

The reality is that conflict is all pervasive in our lives. It appears in our personal life, exists in our communities and is present in schools.

STARTING POINTS:

- 1 Conflict is a natural part of everyday life.
- 2 Conflict in itself is neutral, however, if not handled appropriately conflict can become very destructive; it can also bring about learning, growth and change.
- 3 Each of us can develop skills to handle conflict creatively.

Conflict is constructive when it:

- *brings about meaningful communication;*
- *addresses the issues;*
- *releases built up emotions or anxiety.*

Conflict is destructive when it:

- *causes aggressive or violent behaviour;*
- *hardens attitudes;*
- *lowers self-confidence, self-esteem or security;*
- *prevents real issues from being addressed.*

Types of conflict can focus on the following themes:

Interests

What 'I' want
What 'you' want

Understanding

What 'I' understand
What 'you' understand

Values

What is important to 'me'
What is important to 'you'

Styles

How do 'I' deal with issues
How do 'you' deal with issues

Opinions

What 'I' think
What 'you' think

Questions for Reflection

What do you understand conflict to be?

Describe a positive / negative experience of conflict?

Was it resolved?

What were your feelings at the time, and now?

Can we Simplify Conflict and Focus on how it is Made Up? ⁵

Behaviour

Often, the first experience of conflict is behaviour (shouting, fighting, withdrawing etc.).

Feelings

Behind the behaviour there is normally a feeling (anger, frustration, hurt, powerlessness etc.). We need to ask, 'What is the person feeling?'

Issues

Behind the feelings there are normally issues or experiences. We need to ask, 'Why are they feeling that way?'

Relationships

In conflicts, issues usually involve another party or relationship. We need to ask, 'Who else is involved?'

Personal Task

Using this structure, describe a conflict with which you are familiar.

concerned about keeping relationships together and fear conflict will damage relationships.

3 Compete

Those who adopt this style try to force others to accept their positions and deny the feelings and needs of others. They believe in 'win-lose' scenarios.

4 Compromise

This style is characterised by a 'give and take' approach to conflict resolution. Compromising is a middle ground, which addresses issues to some depth and leaves people partially satisfied.

5 Collaborate

These individuals confront conflict openly and fairly. They have a high regard for other interests and for preserving relationships.

Questions for Reflection

What strategy do you think you adopt most often?

Is this different in your personal life to how you manage conflict in the classroom / with colleagues / with other adults in the school community?

Does your strategy change depending on the situation?

What other factors influence how you deal with conflict?

How does the school deal with conflict?

Conflict Management Styles ⁶

Five main ways to manage conflict:

1 Avoid

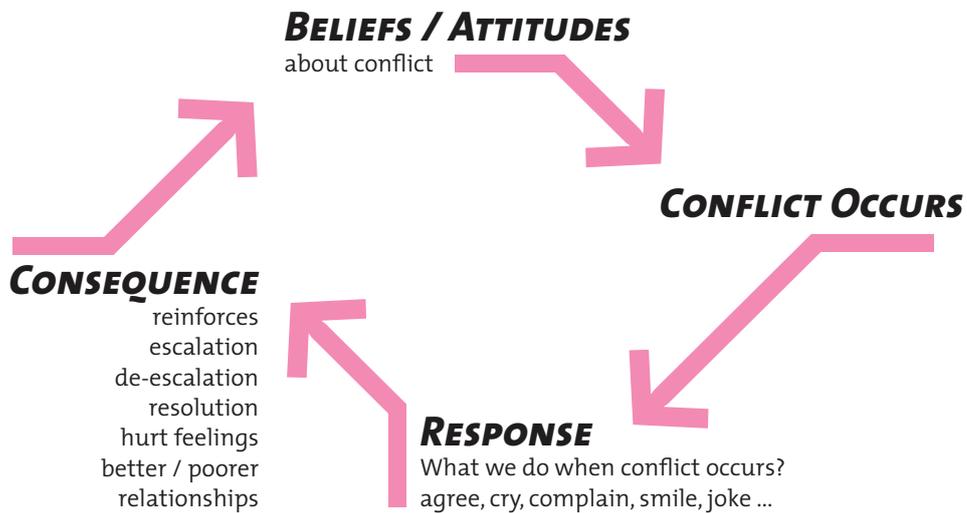

The individual withdraws from the conflict. S/he believes it is hopeless to try and resolve conflict and avoid people and issues that may cause it.

2 Accommodate

These are co-operative individuals who tend to quickly accept the position of others and ignore their own needs. They are very

⁵⁺⁶ Adapted from material developed by Mediation Northern Ireland.

EXPLORING CONTROVERSIAL ISSUES

Conflict Cycle

What we believe about conflict comes from the messages we received from, for example:

- *our parents;*
- *teachers;*
- *the media;*
- *our own experiences.*

These beliefs affect how we respond when a conflict occurs. It is, therefore, important to reflect upon where our messages have come from.

Questions for Reflection

Where did you get your messages about conflict?

What did you learn about conflict?

How was conflict dealt with in your home, with friends, in school or other workplaces?

Is it important that children, young people and adults learn about conflict?

What do you want children, young people and adults in the school community to learn about conflict?

What support do you need to facilitate this work?

Practical Steps for Dealing with Conflict Between People ⁷

Do not let conflict fester. Address conflicts as early as possible, when there is the greatest possibility of resolving the conflict and restoring the relationship.

Talk directly to the person with whom you have the problem (providing there is no threat of physical violence). This is much better than sending a letter, shouting, throwing things or complaining to everyone else.

Think beforehand about what to say. It is important to be clear about what the problem is and how you feel about it.

Choose a good time and place and allow enough time. Try to find a quiet place where you will not be disturbed.

Do not blame the other person for everything, call names or tell him / her what should be done.

Listen and give the other person a chance to talk and try to learn how s/he feels about the problem. Do let her / him see that you are listening and that you are glad that the two of you are talking together.

Give information about how you see the problem and how you feel about it.

Talk it through, and once you start, try to talk about all the things that bother you - even the 'difficult' areas or the things that niggle you.

Plan for the future and begin work on a way forward together. Try to make sure that both of you are going to work at it. Be specific about what you agree.

Escalation and De-escalation of Conflict

The effect of most responses to a conflict is either escalation or de-escalation. It is helpful to understand the conditions that contribute to each of these.

A conflict will be more likely to increase or escalate when:

- other people become involved in the dispute and take sides;
- one or both people feel(s) threatened by the other;
- there is no interest or investment in maintaining the relationship;
- there is a history of unproductive, negative conflict between the parties;
- there is an increase in the acting out (indirect expression) of anger, fear or frustration;
- important needs involved are not acknowledged and met;
- there is a lack of the skills necessary for peacemaking or a lack of awareness of the skills the parties do, in fact, possess;
- there is limited, ineffective communication.

A conflict will be more likely to decrease or de-escalate when:

- those involved focus on the problem rather than on each other;
- emotions of anger, fear and frustration are expressed directly rather than demonstrated indirectly;

⁷ Adapted from material developed by Mediation Northern Ireland.

EXPLORING CONTROVERSIAL ISSUES

Sample Programme: Exploring Conflict

- threats are reduced or eliminated;
- the people involved have co-operated well prior to the dispute;
- needs are openly discussed;
- communication is effective;
- the people involved are able to use their peacemaking skills, or they receive some help in applying them.

Mediation

a 'neutral' body in the dispute, assisting communication between individuals or groups in order to manage or overcome difficulties and effect positive change.

Negotiation

to attempt to come to an agreement on something through discussion and compromise.

TIME AVAILABLE:

Three hours *

AGE GROUP:

KS3+ or adult

INTENDED LEARNING OUTCOMES:

- *explore our perceptions of conflict*
- *reflect on how we have learned about conflict*
- *develop understanding of and assess our own conflict style*

1 WELCOME AND INTRODUCTION:

- *Share aims for the session*
- *Reminder of contract / guidelines*

2 ACTIVITIES:

'Conflict' Wordstorm

Purpose:

to focus thinking, gather thoughts, personal and group reflection

Resources:

flipchart, markers

Gather ideas about the term 'conflict', writing all the comments on the board. Once all the thoughts have been exhausted, ask the group to identify from the words the ones which were positive and the ones which were negative. Ask individuals to reflect on the range of negative and positive words and explore what the overall perception of conflict is and how this impression has been formed.

Conclude with a discussion around the question, 'Where have we learnt about conflict?' A definition of conflict can be presented at this stage. Use the starting points highlighted at the start of this section.

Personal, Local and Global Conflict: Pairs Discussion

Purpose:
to explore the levels at which conflict occurs

Resources:
paper, pens

In pairs, ask each group to identify the type and range of conflicts that occur at a personal, local and global level. Reflect on these lists and ask each pair to identify which of the listed conflicts are destructive and which are constructive.

Conflict Spectrum

Purpose:
self-reflection, to establish a baseline of understanding

Resources:
paper, markers

Using the full space of the room, place at one end of the room the statement 'Avoid conflict' and at the other end 'Confront conflict'. Individuals are asked to imagine a line between both ends of the room and to stand at a point in the line in relation to their perceived approach to conflict. When individuals are positioned they are encouraged to explain their place and ask each other questions.

Difficulties in Dealing with Conflict

Purpose:
self-reflection, communication skills, skill analysis in managing conflict

Resources:
flipchart, markers

In small groups, ask individuals to share their answers on what they see as the blocks which they face in dealing with conflict.

These can be written up on the board / flipchart. Using this information, ask individuals to discuss the most appropriate way of dealing with the range of conflicts that they may face.

You could develop this activity further by using role-play of the situations they come up with.

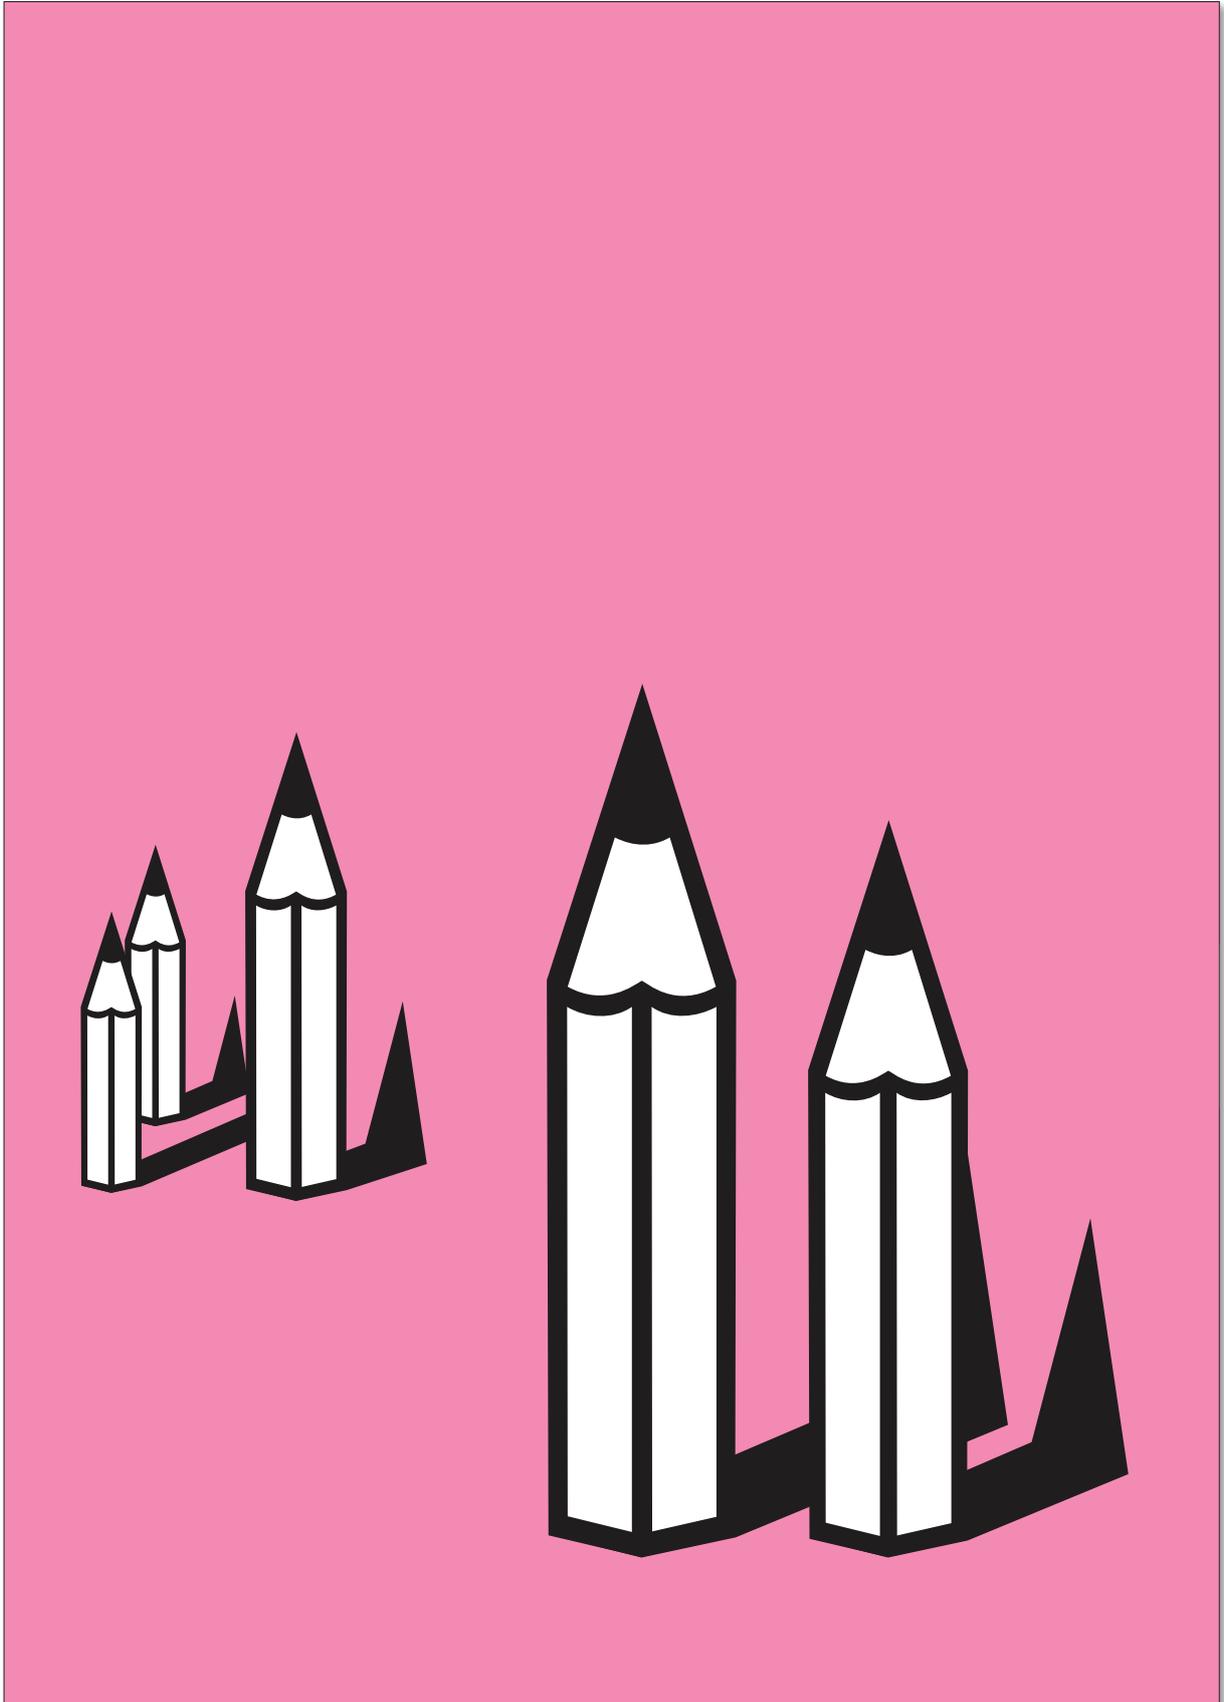

3 CLOSURE:

Sentence Completion

Purpose:
review and evaluation, communication skills, encouraging the participation of all

Use a sentence completion statement around the circle: 'One new thought about conflict ...'

* Alternatively, this session could be delivered in 45 minute sections. It will be important to allow for introduction and closure for each one.

Developing Programmes

For Children, Young
People and Adults

'Children will always need safe
spaces for learning. They will
always need launching pads
from which to follow their
curiosity into the larger world.'

SENGE, P. ET AL. (2000), SCHOOLS THAT LEARN,
LONDON, NICHOLAS BREALEY PUBLISHING.

developing programmes

5.0 Creating Safe Space

WHAT IS 'SAFE SPACE'

A 'safe space' within groupwork and the classroom / school is one where everyone is enabled to reflect individually and together on the themes which are raised, and to apply that learning to their life experience. It will be a space where people feel supported to take appropriate risks in talking about their personal experiences and views, in building relationships and in exploring areas of potential and actual conflict.

A safe space does not necessarily mean that group members will find these things easy to talk about, or that they will agree about everything – in fact, it is much more likely that there will be a range of perspectives. What it does mean is that they will feel able to trust the rest of the group and that the overall experience of participation will be positive.

The principles and ethos which characterise a 'safe space' have been explored in more detail in Building a Positive Learning Environment: Using Groupwork and Facilitation (Section Three). In this section, we consider the practical tools and ways of working which can be used to build this kind of atmosphere and setting.

STRATEGIES FOR CREATING SAFE SPACE

The strategies outlined in this section give some ideas about the reasons why different tools and methodologies are used, and about what makes them effective. Their overall effectiveness is grounded in respectful, relaxed facilitation which values each group member and is aware of their needs, interests and potential.

Questions for Reflection

What do I understand to be a 'safe space'?

What things might make me feel unsafe and might restrict my participation / facilitation?

As you work through this section, consider:

- How could these tools and strategies build my sense of safety as a participant or a facilitator?
- As a facilitator, how could these tools and strategies enable me to contribute to the safety of group members?

5.1 Working in a Circle

Circles have been used as a forum for meeting throughout history and within many different cultures. A circle is an appropriate structure for groupwork because it:

Encourages Equality

There is no beginning or end to a circle, no fixed 'first place / last place', no hierarchy and no leader. It is helpful, therefore, if everyone has the same seating.

Builds Trust

Everyone can see and hear everyone else, and may talk more honestly about experiences and views when they can see everyone else's reactions. The contrast, for example, might be rows of desks where a child or young person in the front row worries about what reactions might be happening behind as s/he speaks.

Encourages Participation

The nature of the circle and the use of tools such as a talking object encourage each person to contribute as s/he feels able. It is also easier to move about if an exercise requires it.

Promotes a Sense of Belonging

As people participate they can be encouraged to think about themselves as a team and increase their support to each other.

Creates Opportunities for Affirmation

When giving affirmation, the giver and the listener can see each other easily.

Encourages a Sense of Personal and Group Responsibility

The equality within the circle and the supportive group setting encourages people to take responsibility for themselves and develop this as a group. For example, this might be around what they contribute to the sessions and how they keep the ground rules they have developed in their contract / learning agreement.

Questions for Reflection

What experience do I have of working in a circle, either as a participant or a facilitator?

What key reasons make working in a circle valuable?

Do I feel comfortable and confident working in a circle?

Where can I gain some experience, training or support in relation to this?

How can I best familiarise group members with this way of working?

What resources might I need?

Some Strategies for Circle Based Work

Not all children, young people or adults will feel comfortable speaking in a large circle all the time. There are a number of different strategies which you can use to encourage and support group members in their participation. These include:

Using a talking object

An object is passed around the circle, and the person who is holding it is allowed to speak. This helps the group members to focus on and develop listening skills, as well as enabling them to see when their turn is coming.

Being able to say, 'Pass'

While you want to encourage everyone to participate, there may be some who feel unable to do so from time to time, and being allowed to say, 'Pass' can take the pressure off

these people. Sometimes people say, 'Pass' because they have not had time to think, so it is worth asking at the end of a circle round whether there is anyone who passed who now feels ready to contribute.

Using partners or small groups with feedback

Some people feel much more comfortable speaking to one other person or to a smaller group. It is good to mix in activities where group members work in pairs or in small groups (threes or fours) and then provide feedback about their discussion to the large circle. Not only does this support participation in general, but it also enables more in-depth discussion of the theme being explored. Feedback to the large circle may form the basis for a whole group discussion.

Supporting shy or less confident participants

There may be individuals who consistently find it difficult to participate and who may need specific support to enable them to grow in confidence. In part, this is about sensitive and appropriate facilitation, as well as recognising that listening is as important a form of participation as speaking. Specific strategies, such as the use of puppets and masks as a medium to talk through, can be useful in this process. With younger children, allowing a friend to speak for them or asking them if they would like to sit beside you so that you can speak for them can be useful starting points. It is important to try to move on from this position by using some of the other strategies outlined above.

What is Circle Time?

The term 'Circle Time' has come into increasingly common usage in schools. While often associated more with primary schools, it is also a valuable methodology for use at Post-Primary level, particularly where pupils are already familiar with the process from their primary school experience, and for use with adults (for example, in staff meetings, with a group of parents).

The purposes behind it include developing:

- *self-esteem and self-discipline;*
- *communication skills;*
- *emotional literacy;*
- *positive relationships and a sense of team;*
- *problem-solving and conflict resolution skills.*

It is most effective when:

- it is part of a whole school approach, where all school staff work within the context of the ethos which it promotes and operate a consistent rewards and sanctions policy;
- adults in the school community participate in Circle Time, and understand its purpose and structures;
- all classes have regular Circle Time sessions, so that children and young people experience progression in their learning through their years at the school;
- Circle Time sessions have a clear purpose, structure and intended learning outcomes.

One such model is the Whole School Quality Circle Time Model developed by Jenny Mosley.¹ Her books provide information on how the model works, including suggested outlines for individual Circle Time sessions with different age groups. See the Resource List (Section Eight) for further details.

¹ Mosley, J. (2000), *Quality Circle Time in the Primary Classroom*, Wisbech, LDA; Mosley, J. and Tew, M. (1999), *Quality Circle Time in the Secondary Classroom*, London, David Fulton Publishing.

Questions for Reflection

What kind of school ethos would support effective Circle Time work?

How can I practically integrate Circle Time into my teaching plans and classroom ethos?

- *When would be the best time in the week / within the module / training programme?*
- *How will I introduce it to the class / group?*
- *What planning and evaluation time do I need?*

What personal preparation would I need to do?

What support / training needs do I have?

What resources might I need?

- *ideas for structure, activities, etc.?*
- *support or co-facilitation at the start?*

How can I reinforce the Circle Time learning within other aspects of classroom work / training and development, and vice versa?

Developing an Outline for Circle Time ²

Intended Learning Outcomes

In preparing for the session, you need to start by defining your purpose and intended learning outcomes for the series of Circle Time sessions and for this particular session. The learning outcomes should:

- *address specific individual and group learning needs;*
- *enable continuity and progression between sessions;*
- *encourage risk-taking within a safe environment;*
- *provide you with a starting point for selecting focused and purposeful activities.*

Welcome and Introduction

It is important to set a positive atmosphere at the start of the session and to remind participants briefly of important ground rules. This demonstrates to group members that both they and the activity which they are participating in are valued. These statements will also explain what the session is about so that the participants are clear about what is expected of them. It also makes links to past and future sessions.

Introductory Game

This game aims to:

- *create a relaxed atmosphere;*
- *encourage mixing and new friendships / working partnerships;*
- *provide a fun / light introduction to the theme being explored;*
- *allow the facilitator to assess the group situation and respond flexibly to group and individual learning needs.*

Sentence Completion

Participants are given a 'sentence starter' to complete which will focus on the theme being explored. Asking for a volunteer to start, the 'talking object' is then passed around the circle enabling everyone to have a turn in speaking. This activity:

- encourages group participation;
- assists in developing thinking, talking and listening skills;
- develops confidence in speaking in a group;
- encourages self-reflection (identification of personal needs, feelings, etc.) and responsibility for self.

Discussion Activity / Sharing more Information

This is where the main exploration of the theme will take place, and where use of pairs / small group work, role-play, creative arts activities, etc. with feedback to the large circle can be useful tools. Effective activities will demonstrate development across a wide range of skills as well as achievement of your specific intended learning outcomes.

Closure

It is important that the Circle Time session is brought to an appropriate close so that participants can move on to whatever they are doing next. This needs to involve all group members and might take the form of:

- a Closing Circle (possibly using sentence completion) which allows people to evaluate the session or say how they are feeling;
- a game to release any tension;
- a simple guided meditation to help bring a sense of calm to the group;
- an affirmation exercise.

Evaluation / Planning Ahead

As you consider how the Circle Time has gone and plan for the next Circle Time session, some questions to consider are:

- *What feedback did I obtain from the group?*
- *What other evidence is there that intended learning outcomes are being achieved?*
- *Were the intended learning outcomes and activities focused at the right level? Do I need to make adjustments for future sessions?*
- *What will be the next step in terms of continuity and progression?*

EVALUATION / PLANNING AHEAD

5.2 Developing a Contract / Learning Agreement

A contract is essentially an agreement between all of those involved in a group (both facilitators and participants) about the ground rules which they need in order to work together safely and effectively.

This needs to be based on a shared understanding of the group's purpose, and a commitment from all group members to work within the agreed rules. The issues being addressed need to be perceived as relevant to all group members, and the reasoning behind any ground rule needs to be clear to everyone. They may be about the way people relate to each other within the group, the way people participate, and general expectations about behaviour.

Why Use a Contract / Learning Agreement?

Creating a contract or learning agreement together is an important part of a group's development. Some of the reasons for using a contract are that:

- A contract enables each person in the group to have a sense of ownership for the group and the framework within which they are working together. With this in mind, both the contract and any possible sanctions need to be discussed and agreed by the group.
- A contract asks each person in the group to take responsibility for her / himself and to be accountable to each other for how the experience of the group develops. It is not the facilitator's role alone to call people back to the contract, although it may be appropriate for them to do this at times.
- A contract enables a group to clarify their purpose and hopes for their time together. If the facilitator is coming from outside the group, it ensures that s/he and the group are agreed on the purpose of their work together.

- A contract enables a group to think about their needs as individuals and as a group in order to feel safe and comfortable to participate.

- A contract helps people to know what is expected of them within the group.

- A contract allows people to explore the meaning behind the words they use, and to think carefully about what different values or ground rules mean in practice. For example:

- *What does 'respect' mean in practice?*
- *When we ask everyone to participate, how do we ensure that each person feels safe to do that at a comfortable level?*
- *When we talk about confidentiality, what are some of the limitations and responsibilities around this (for example, the facilitator's responsibilities in relation to Child Protection)?*

- Within this context, a contract helps create a setting where people feel safe enough, for example, to discuss more controversial issues, to take appropriate risks around sharing personal experiences and views and to listen to those of others without feeling defensive.

Making an Effective Contract / Learning Agreement

In order for the contract to be used effectively, it is important that it is genuinely agreed by all group members and that it remains relevant to their context. There are a number of factors which it is useful to bear in mind in relation to this:

- In order to keep the contract 'live' it needs to be re-visited at different stages of the group's time together to ensure that the guidelines within it are still relevant and do not need to be revised. This will be particularly important if a new person joins the group.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

- The group also need to consider what the consequences will be if the contract is broken, both in terms of the implications for the group's experience and in terms of appropriate 'sanctions'.
- There need to be clear distinctions between Safety Rules (for example, fire procedures) which are non-negotiable, and the ground rules within the contract which are agreed by the group.
- Where possible, particularly at a classroom level, it is usually helpful to create one set of ground rules together which apply to all activities which the class group is involved in both in the classroom and outside. These also need to be consistent with the general school rules.
- It is usually best to keep the contract fairly short and straightforward. If there are too many rules, people can find it hard to remember and apply them, and can feel restricted by the very fact that they are there.
- It is helpful to display the agreed contract as a visible reminder to people about what they have committed themselves to.

DRAWING UP A CONTRACT / LEARNING AGREEMENT

- 1 Outline and check understanding of the purpose of the programme / session.
- 2 Explain the need for ground rules.
- 3 Gather suggestions for rules and note them down where everyone can see them. This can be done as a whole group, or by working in pairs / small groups and feeding back to the large group. It is important that all contributions are valued.
- 4 Decide together which rules are most necessary and appropriate.
- 5 Keep the list of ground rules manageable.
- 6 Together make a commitment to try to keep the agreed rules. You may like to sign your names to the contract to show your ownership of it.
- 7 Display the finalised rules where everyone can see and re-visit them at the start of the next few sessions, and at intervals after that.

Contracting with All Age Groups

It is possible to develop a contract with any age group, but it is important that the language used is age appropriate.

Younger groups may need more prompts to help them come up with ideas, and it is important to keep their list of rules short. When re-visiting the contract at the start of a session, it can be used as a memory exercise. Where children have not yet learnt to read, pictures can be used to represent the different rules. Even with older young people and adults, pictures and symbols representing the different ground rules can be useful.

When Time is Short

When working with a group within a very limited time-frame, it is still important that some ground rules are put in place. The facilitator needs to clearly outline the purpose for the group's time together and, in presenting a small number of ground rules, needs to ensure that participants understand the reasoning behind them.

This circumstance should be the exception, rather than the rule – time taken with a group at the start of a programme or an academic year to develop and agree a contract together will be time well spent in the long run!

If the Contract is Broken

It is important that the group understands that if the contract is broken there are consequences in terms of the quality of relationships within the group, the level of trust, willingness to participate and to share personal experiences and opinions, etc.

Having involved all group members in drawing up the contract, they should also be involved, where possible, in deciding what the sanctions will be if the contract is broken. This discussion will take time, but is of great importance because it demonstrates the way the contract is valued, and enables group members to use and develop skills such as listening, empathy, conflict resolution, etc. Some key tasks for the facilitator within this process will be:

- enabling everyone, including those who have broken the contract and those who may have suffered as a consequence to feel safe to participate in this discussion;
- encouraging the group to listen to and understand different perspectives in the group;

- providing guidance in developing appropriate sanctions – children and young people can sometimes tend towards overly harsh sanctions;
- checking all group members feel that the sanctions are appropriate and fair;
- ensuring sanctions are carried out fairly.

It is crucial that the facilitator ensures fairness when the contract is broken, and that a similar process is followed each time so that there is no sense of some people being punished arbitrarily.

If a rule in the contract keeps being broken, there are a number of options:

- It may reveal a low level of skill in relation to a particular rule (for example, listening to each other) among some or all group members. The programme could be revised in order to spend more time on skill development.
- More work may need to be done around empathy so that group members have a greater understanding of the consequences of their actions and the impact on others.
- It may be that some aspects of the contract are no longer appropriate for the group, and it needs to be re-negotiated.
- It may be that some group members have not understood the importance or relevance of a particular rule, and this needs to be re-clarified.
- It may be that new members who have joined the group since the original contract was made, do not understand the reasoning behind some of the rules or do not have any sense of ownership of the contract. A new contract needs to be developed that is owned by the whole group, or at the very least, the existing contract needs to be re-visited and amendments made.

SAMPLE CONTRACT

We agree to:

- Listen to each other
- Give each person a chance to speak – don't interrupt
- Respect each other's opinions – agree to disagree
- Support each other / be kind – no put downs
- Speak for myself – use 'I' statements: for example, 'I think', 'I feel'
- Keep confidentiality – what is said in the room, stays in the room*
- Respect people's right to pass / not answer personal questions
- Have fun!

*** In agreeing to maintain confidentiality, which will enable people to participate without fear of repercussions beyond the session, it is important that the facilitator is clear that this cannot be absolute when the facilitator has responsibilities in relation to Child Protection. The commitment of group members to keeping this ground rule, balanced by individuals taking responsibility for what they choose to say, is crucial for people's safety outside the programme as well as within it.**

Sample Exercises: Ways into Contracting

Suns and Clouds

Purpose:

to explore people's hopes and fears about the group's programme, ensuring that hopes are realised and fears / concerns are minimised by developing a contract

Resources:

paper cut-out sun (yellow); paper cut-out cloud (blue) - or people can make them for themselves (paper, scissors, crayons / pens)

Each person in the group is given a cut-out sun / cloud. The sun represents their hopes for the session and the cloud represents their fears / concerns. They are asked to write or draw a hope on the sun and a fear / concern on the cloud.

These hopes and fears can be shared in the group in a number of ways, for example by:

- laying them all on the floor, or sticking them all on the wall, so that people can come and look at them. This way they remain anonymous;

- collecting them all in a box, and getting each person to pick one sun and one cloud from the box. They are then read out / shown around the circle. Again, they remain anonymous;

- going around the circle, allowing each person to read out / describe her / his hope and fear.

This can be followed by a group discussion, perhaps using questions such as:

- Does anyone have any comment that they would like to make about the hopes / fears we have shared?
- Is there anything in particular anyone has observed about the hopes / fears we have shared?

At this point, people have the opportunity if they wish to point out their own hope or fear to make a more detailed comment on it.

Ideal Island

Purpose:

to think creatively about an ideal setting, specifically, about rules / laws which would ensure that it remained ideal for everyone, providing a basis for rules needed in the classroom / school

Resources:

large sheet of paper (A3+)
smaller sheets of paper to draw / prepare on
coloured pens, pencils, etc.
scissors, glue, old magazines, newspapers

Situation:

After being shipwrecked you and a few friends find yourselves stranded on a small island.

There may be others living on the island but you are not sure.

Group activities:

- *Think of a name for your island.*
- *Draw your ideal or perfect island - natural resources? food? housing? other buildings? roads? etc.*
- *Make a list of laws you think will be needed to make sure that people can live safely and happily on your island.*

Other questions you could think about:

- *What kind of government will you have?*
- *What punishments will you have for those who break the laws?*
- *What jobs will you and your friends do?*
- *What kind of schools will you have?*
- *What do specific groups need on the island (for example, elderly people, families)?*
- *What other things will be important?*
- *What will you do if you discover other people living on the island?*

Evaluation:

- *How did you get on in your group?*
- *Did your group work well together?*
- *Did one person take leadership / control?*
- *How did you decide on what laws / rules to have?*
- *Do you think that if you stuck to your laws everyone would be safe and happy?*
- *When you wanted different things, how did you work that out?*

The maps and ideas can then be presented to the large group, and the maps displayed. The large group can use the ideas about laws / rules as the basis for thinking about what rules we need to ensure that the classroom / school is a place where everyone feels welcomed, is able to learn and can enjoy being.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

5.3 Developing Skills in a Group

'Emotional life is a domain that, as surely as math or reading, can be handled with greater or lesser skill, and requires its unique set of competencies ... emotional aptitude is a meta-ability; determining how well we can use whatever other skills we have.'⁴

As well as developing her / his own interpersonal and facilitation skills, the facilitator needs to support group members in building the skills which will enable them to make best use of the learning experience. These skills will be useful not only for this process, but in the whole of their lives. There are a number of overlapping skills areas which will be involved, including those outlined below.

INTRAPERSONAL SKILLS

These skills focus on developing the ability to think about what is going on 'inside me', and are essential for assimilating learning and moving forward on a personal level. They include aspects and qualities such as:

- *Self-awareness / Self-knowledge*
- *Self-reflection*
- *Self-respect / Self-esteem*
- *Self-management / Self-responsibility*
- *Self-motivation*
- *Openness and honesty*
- *Assertiveness*
- *Emotional literacy: awareness and clear expression of personal feelings, values, etc.*
- *Effective self-expression of opinions, ideas, etc.*

This skill area focuses on questions such as:

- How do I feel about this and why?
- What do I think about this and why?
- What have I learnt?
- How will this shape my future thinking, feelings, actions?
- Are there things I need to think about or do differently? If so, what?
- How will I do this? Do I require help to do it?

INTERPERSONAL SKILLS

These skills are about the way we relate to and interact with others. They are essential for making the best of our relationships, both personal and professional, and enable us to maximise our learning from each other. They include aspects and qualities such as:

- *Active listening*
- *Communication*
- *Respect for others*
- *Respect for and understanding of diversity*
- *Working co-operatively, as part of a team*
- *Empathy*
- *Affirmation of others*
- *Managing and resolving conflict*

This skill area focuses on questions such as:

- What can we learn from each other?
- How can we best work on this together?
- Have I really understood what you are saying and feeling? Do I need to check it out?
- Do we have a good understanding of and respect for each other's positions?
- Do you know the specific ways in which I value our relationship / conversation / interaction?
- Can I / we find a way of positively acknowledging and responding to the conflict between us?

THINKING AND PROBLEM-SOLVING SKILLS

These skills are about the way we process ideas and draw conclusions both individually and collectively. They include aspects such as:

- *Creative thinking*
- *Critical thinking*
- *Identifying issues*
- *Recognition of multiple perspectives, possibilities, solutions*
- *Reflection*
- *Decision-making*
- *Negotiation*
- *Mediation*

This skill area focuses on questions such as:

- What sparks creativity within me?
- Are my thinking skills strongest:
 - if I have peace and quiet for myself?
 - when I can work collaboratively with others?
 - what are the benefits of these for me?
- Do I take what I see / hear / read for granted, or do I ask questions and analyse it?
- Do I think before I speak?
- How do I make major decisions?
- In a discussion, how do I think through and present my views?
- In a situation of conflict, am I able to imagine a number of possible solutions?
- Am I able to work with others to come to a shared conclusion, or a respectful difference of conclusions, where appropriate?

ACTIVE LISTENING

One of the key skills upon which many others can be built is active listening. This is a crucial skill for both facilitator and group members as it is essential for good communication.

Active listening is about absorbing what has been said and ensuring that the speaker knows that s/he has been heard. This is conveyed to the speaker through both verbal and non-verbal responses.

The effectiveness and usefulness of active listening will be undermined for both the speaker and the listener if:

- the listener is experiencing anxiety or other strong emotions which distract her / him from focusing on what the speaker is communicating both verbally and non-verbally;
- the listener has a negative or judgemental attitude which prevents her / him from listening with openness to what the speaker has to say;
- the meeting place is inappropriate: too many distractions, poor acoustics etc.

People will not feel that they are being heard if, for example:

- the listener is looking elsewhere and is giving no eye contact;
- the listener is demonstrating very 'closed' body language;
- it becomes apparent that the listener is so busy thinking about her / his response that s/he is not really hearing what is being said;
- the listener interrupts and goes on to something else;
- her / his contribution is ignored, not valued or negatively judged.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Sample Exercises: Developing Listening Skills

Newspaper Game

Purpose:

to introduce a session on listening and communication

Resources:

newspaper cuttings, paper, pens

People are asked to find a partner and to stand at opposite ends of the room. Those at one end of the room are given a newspaper cutting each, and their partners are given a piece of paper and a pen. When the facilitator says, 'Go', the people with the newspaper cuttings have to read them out while their partners write down what they hear. Each pair gets two points for every word and one point for every piece of punctuation they get right. This can get very noisy!

People will feel that they are being heard if, for example:

- the listener's facial expression and eye contact shows that s/he is paying attention;
- the listener's body language indicates that s/he is relaxed and attentive;
- the listener demonstrates that s/he is listening and interested by encouraging the speaker, and asking open-ended questions allowing her / him to develop what s/he is saying;
- the listener clarifies / reflects back what the speaker has said to ensure that the listener has understood.

Questions for Reflection

How effective are my active listening skills?

What evidence do I have of this?

What distracts me from listening actively to the people I work with?

When listening to someone, how aware am I of:

- *my body language;*
- *my facial expressions;*
- *my thoughts, feelings, etc.*

Do I take time to reflect back what has been said to make sure that I have understood?

How can I best support group members in developing active listening skills?

What I had for Breakfast

Purpose:

to begin to explore what it feels like not to be listened to

People are asked to find a partner, and label themselves A and B. A's task is to tell B all about what s/he had for breakfast, while B has to do everything s/he can to make sure s/he does not hear – this can involve covering her / his ears, making lots of noise, running away, etc. – but not using physical violence! After a few minutes they swap over and do it the other way round. In the pairs and then in the large group, questions can then be explored around:

- *what it felt like not to be listened to;*
- *what it felt like to deliberately not listen to someone else;*
- *what the consequences of this could be.*

Chair / Table / Flower

Purpose:

to explore how much we actually listen to what other people say

Resources:

slips of paper with a word written on each (for example, chair, table, flower, tree)

People are asked to find partners and to label themselves A and B. A is given one of the slips of paper which s/he must not show to B. A's task is to describe the word on her / his paper without using the word itself for three minutes. Following these instructions, they begin. At the end of the three minutes, the Bs are told that they must now repeat back to the As everything they said within the three minutes. In most cases they will find this almost impossible, as they will have switched off from what A was saying as soon as they thought they had worked out what the word was. In the large group questions can then be explored around, for example:

- *how much real listening we do;*
- *how we can jump to conclusions and stop listening;*
- *why we might do this;*
- *how we value each other if we do not listen.*

Personal Space / Magic Spots

Purpose:

to take time individually to listen to the sounds around us that we may not normally notice

Everyone goes and finds a space on their own, preferably outside and not talking to anyone else. They then spend ten minutes (vary as appropriate to the group) listening to the sounds around them. This also provides a space for individual reflection and listening to ourselves.

Pennies

Purpose:

to explore how we evaluate / make choices about what we have to say, how different people participate within a group, and the power balances involved in speaking and listening

Resources:

enough pennies or tokens (for example, cardboard cut-outs) to give three to five to each person in the group

Working in small groups, each person is given three to five pennies / tokens, and each group is given a topic to discuss. These might include:

- *men are better drivers than women;*
- *blondes have more fun;*
- *school uniform should be abolished;*
- *cigarette smoking should be made illegal;*
- *a topic which is directly relevant to the theme which the group is currently exploring – however, at this stage, do not introduce something that will take the group 'too deep' too soon within the process.*

Each person may only speak when s/he puts one of her / his pennies in the middle of the table, and once s/he has spent all her / his pennies s/he may not speak again. The group needs to create a supportive atmosphere where those who normally do not speak very much feel able to use their pennies.

This highlights questions and issues around, for example:

- the right and responsibility to speak;
- the choices we make about our participation;
- the way these choices impact on others;
- how much thought we put into what we are about to say;

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

5.4 Using Games

- the fact that everyone has something of value to contribute;
- the frustration felt by those who are used to speaking a lot when they have to keep silent;
- the value of listening;
- issues of power and justice when the image of pennies is translated to group, community or global level. Who are the people in our society who have lots of pennies / power, who are the people who have little or no pennies / power? How does this affect the way they relate to each other?

WHY USE GAMES?

The perception of games can be that they are 'just a bit of a laugh' and not really very valuable within the context of education and learning. They can be, however, purposeful exercises which have clear learning outcomes, and very useful tools when trying to create 'safe space'.

Some of the reasons for using games in this way are that:

- Games are fun - they can help people relax and have a laugh together, perhaps as an ice-breaker activity at the start of a process, or as a closure exercise to release tension after a more difficult discussion. Remember, if facilitators do not enjoy or feel confident about the experience, it is unlikely that group members will either!
- Games can enable people to get to know each other - they can allow people to learn each other's names, to talk to each other and to find out information about each other in a non-threatening way.
- Games can enable individuals to become a group - they can help people to become aware of each other and of each other's skills, needs, contribution to the group, etc., encouraging people to support each other and work together.
- Games can involve everyone - including those, for example, who may not feel so confident about speaking out in a discussion.
- Games can enable people to experience success and affirmation – and to demonstrate talents and achievements in a way that they might not, for example, in an academic setting.

- Games can enable people to develop skills - they can create opportunities for people to use skills such as listening, communication, co-operation / teamwork, aspects of leadership, problem-solving, etc.
- Games can enable people to learn - they can raise awareness and understanding of all kinds of issues, for example, sense of identity, diversity within a group, etc., and provide a more light-hearted introduction to deeper discussion or more demanding exercises.

Using Games Effectively

In order to be effective, the games which are chosen need to be appropriate for the particular group and the individuals within it.

Some people dislike the idea of games, especially ice-breakers, and others actually dread being asked to participate. This may be because of previous negative experiences and may be linked into concerns about:

- feeling stupid or embarrassed;
- feeling pressured to join in when they would rather not;
- the games seeming to have no real purpose;
- the games going on for too long;
- an atmosphere of tension rather than ease or appropriate challenge being created;
- a lack of thought on the facilitator's part as to whether the games are suitable for the group, its individual members and their purpose of meeting together;

- the games having an unexplained ulterior motive, known only to the facilitator(s).

To be most effective and enjoyable, games need to be chosen carefully so that:

- they are appropriate for the ages, cultural backgrounds, gender mix, physical and learning abilities, etc. within the group;
- they are appropriate for the stage in the group's life (i.e. how well people know each other and how comfortable they feel together as a group);
- they are physically safe;
- they fit within the values reflected in the contract or learning agreement you create with the group. For example, a game which leaves one person feeling left out and laughed at will not 'match' the values of respect, being supportive to each other or participation which are being encouraged within the group. Given that the games are an integral part of building the group, games which encourage competitiveness may not always be appropriate;
- they are purposeful and need to be included with particular learning or developmental outcomes in mind as an integral part of the overall learning experience.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Different Ways of Using Games

Outlined below are some specific ways in which games can be used. Some samples of each of these are provided at the end of the section. Many games can be used in a number of different ways and will be most effective if there is clarity about their purpose and appropriateness.

NAME GAMES

These enable group members to learn and remember each other's names in a fun way. These are particularly important when a group is coming together for the first time, but it can be helpful to use them again to refresh people's memories. Name games are also a valuable way into a theme such as 'Identity' because names are a core part of our sense of who we are.

ICE-BREAKER GAMES

These help a group to relax and feel comfortable with each other. Some groups will find these useful at the start of most sessions, but they are particularly important when a group comes together for the first time.

GROUP BUILDING GAMES

These encourage a group to build a relationship around a task, to work as a team and to develop trust. These games will also help a group to explore the roles which different individuals take on within a team and to begin to think about the skills which they need to work together effectively.

Some points to bear in mind:

- Some group building games involve physical challenge. It is important that games are chosen which are age and ability appropriate, and sufficient attention is given to health and safety.

- Similarly, some group building games involve physical contact. There may be cultural reasons why these games will be inappropriate for some groups or individuals. Some people may simply feel uncomfortable about physical contact with others of the same / opposite sex.

- Trust within a group will not be built by games alone. It is crucial that the level of trust within a group is not over-estimated and that sufficient time is given for trust to be developed. Awareness of the degree of trust within the group and being able to assess the appropriate level of risk-taking is a core part of the facilitator's role.

ENERGISING GAMES

These are games which help a group to re-engage with a process or task, for example, after a break or when energy levels are low, and will usually involve getting people to move around. They may also involve getting people to think about the theme or task from a different angle to encourage new ways of thinking and creativity.

BRAIN GYM⁵

These 'brain exercises' can be used to help a group to refocus on the process, as research has demonstrated that our brains actually work better if we take a break from what we are doing and try some of these kinds of physical activities at different points throughout the day. The exercises stimulate both sides of the brain, develop co-ordination and dexterity, and reduce stress or tension, which may enhance the end of a challenging session.

Some Brain Gym Examples:

- Practice yawning! Stretch your mouth as wide as you can. Stick your chin out and move it from side to side.
- Hold your ears with your opposite hand and slowly roll your earlobes between finger and thumb.
- Stand with a partner shoulder to shoulder, now move apart so that you can touch the tips of your forefingers. Now try to trace a circle together.
- Sitting with your hands holding your seat, extend your feet forwards and rotate your feet together one way, then the other.
- Write the keywords from the lesson in the air with one hand.
- Trace the number eight in the air with two hands held together. Follow your hand movements with your eyes only. Keep your head still. Keep your lips and teeth together.

Session Preparation: Choosing Games

- What is the purpose of the session?
- What are the intended learning outcomes?
- Would a game(s) be useful?
 - *as an ice-breaker?*
 - *to develop skills and a sense of team?*
 - *to introduce the theme?*
 - *to re-energise or re-focus the group?*
 - *to help close the session?*
- What game(s) would be appropriate for this particular group – their needs, abilities, ages, etc.?
- How will this fit the time and space available?
- Are there other considerations?

THEMED GAMES

These provide a way for a group to begin to explore the theme of a particular session. The intention is to provide a safe, light-hearted way into a subject which can be explored in more depth through other exercises and discussions.

CLOSURE GAMES

These enable a group to bring a session to a close in a way which affirms their group identity and the positive relationships which have developed. If the session has involved more difficult discussion, a game which involves laughter and / or appropriate physical contact may help to diffuse any tension and enable the group to move on to whatever they need to do next.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Sample Games

A range of games and activities are included within the sample lesson / session plans in Section Eight.

Outlined below are some specific examples of the different kinds of games described within this section.

NAME GAMES

Name Graffiti

Resources:

large piece of paper (A3+), markers

Place a large piece of paper (A3+) and some coloured markers in the centre of the group. In turn or when they feel they want to, people write their name on the sheet and tell something about themselves - perhaps something about their name (such as, what it means). They can also draw a picture / symbol beside their name as a reminder to everyone of what they have said. The poster can then be displayed as a representation of the whole group.

Name and Action

Each person needs to think of an action to express her / himself. One person begins by saying, 'My name is ... and my action is ...', and performs the action (for example, a clap, turning round, clicking fingers, etc.). The second person says, 'His / her name is ... and his / her action is ...'. My name is ... and my action is ...', This continues around the group. It is only a good idea to include the repetition of others' names and actions if the group is not too big, otherwise people can become bored and / or the task of remembering everything can become too threatening. The group needs to work together to help each person to remember – it is not a competition!

Alternatives:

name and rhyme / adjective / animal / food / country / etc., (starting with the same letter)

ICE-BREAKER GAMES

The Alphabet Game

Resources:

A4 size cards, each marked with a letter of the alphabet

Lay cards with the letters of the alphabet around the room. Invite participants to go and stand beside the letter which is at the start of, for example:

- *the place they live;*
- *the place they were born;*
- *their favourite food;*
- *their ideal holiday destination;*
- *the name of a person they admire;*
- *the last book they read;*
- *a film they have seen recently.*

Encourage participants to introduce themselves to the other people who are standing beside the same letter, and to find out their response to the statement that had been called out. If people are standing on their own beside some letters, encourage them to talk to the people near to them. This is a good game to use as an ice-breaker, to help people get to know each other and to talk informally, and to introduce the session theme.

Group Dividers

Sometimes it is necessary to divide a large group into smaller groups for the purpose of the session(s). If you want to try to avoid cliques, or the same people always working together, you could use one of the ideas below, rather than simply numbering people off. These games are useful at the ice-breaker stage as they are fun and require people to work together.

Animals

Resources:

sets of cards with animal names (same number of each name, enough in total for each group member to have one)

In silence, give each participant a card, having explained they are to find other members of their group by making the sound of their animal.

Dots

Resources:

a coloured sticky dot for each group member (using equal numbers of each colour)

Stick a coloured dot on each group member's forehead. In silence, they have to find the other people with the same colour of dot as themselves. Afterwards ask the group about how they worked out what colour dot they had and how they found the other members of their group.

Back-to-Back

Resources:

sticky labels, with the name of half of a pair written on each one (enough in total for each member of the group to have one)

A label is stuck on each person's back with, for example, an animal, a famous person, a fairy tale character, etc. written on it. Asking questions that can be answered with 'Yes' or 'No', they have to find out who they are, and then find the other half of their pair, or the other people who would be in the same group as them.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

GROUP BUILDING GAMES ⁶

People Machines

This exercise can be done in small groups. The group work together to create a machine, acting it out using themselves as parts – everyone in the group must be involved. They can then act it out for the rest of the large group to guess what it is. This can be done in silence or with the appropriate noises!

Alternatively, one person begins with an action and a noise, and others gradually join in, adding their action and noise, to create a connected imaginary machine.

Another version, is where a group work together to create a vehicle, using themselves as parts, to travel from one point to another. It can be a 'real' or imaginary one. The challenge is to include everyone in their group, and to actually get from A to B in one piece.

Human Knots

The group stands in a circle, hands outstretched and crossed in front of them. They move forward quietly and slowly with eyes closed and take hold of two hands - not the people on either side of them and not hands belonging to the same person! The group's task is to sort itself out into a circle again without letting go hands. If you have a very large group, divide it into smaller groups of a manageable size (about eight people).

Fawly Towers

Resources:

newspapers, pieces of string, cardboard boxes, masking tape / sellotape, scissors
You could also add a couple of things which are 'red herrings'!

Working in small groups, the aim is to see how high a tower each group can build within a certain space of time. Afterwards, evaluate the exercise with the group, exploring how they worked together and what they learnt from the process. In order to develop the team building aspect, one or two members of the group can be blindfolded, one or two others can have their hands tied together, etc. Part of the evaluation will focus on how the group included these people, and how everyone worked together as a team.

ENERGISING GAMES

Paper Islands

Resources:

newspapers

Spread large sheets of newspaper on the floor. Explain that these pieces of paper are islands and that the other area is the shark-infested sea. While music is played the group moves around the room and when it stops they jump onto an island. Each time the group stops more paper is taken away.

Finish by seeing how many people can fit onto one large piece of newspaper.

Another version of this game is to divide people into pairs, and give each pair a sheet of newspaper the same size. Each time the music stops, they have to fold their newspaper in half and stand on it, so that each time the piece of newspaper gets smaller. The pair that can balance on the smallest piece of newspaper are the winners.

⁶ Be aware that many group building games involve a high level of physical contact and you need to consider whether this is appropriate for your group and / or the group's current stage of development.

Ducks and Corrals

The group is the corral fence and stands in a circle holding hands. Approximately four to six people volunteer to be ducks, and stand in the middle. They have to hold their ankles, close their eyes, quack and walk backwards! A break is made by the corral fence people at one point in the fence, and the ducks have got to find their way out. Once a duck has found the break, s/he has to quack loudly to let the other ducks know where it is. To prevent them hearing, the fence has to sing 'Row, row, row the boat' as loudly as they can. The game finishes when all the ducks have escaped.

BRAIN GYM

See examples on page 125

THEMED GAMES

Ideal Islands 2

Resources:

A3+ sheets of paper / flipchart paper, markers

This is a version of Ideal Islands which explores the themes of diversity, conflict and negotiation.

Working in groups of five to eight people, each group imagines that they are stranded on a desert island and as a new society, they have to come up with three to five rules which everybody on the island agrees to live by as their new constitution. They have 15 minutes to do this.

The group can also think about drawing up:

- a map of their island;
- a list of all the things they would choose to have on their island;
- a list of all the things they would choose not to have on their island. These go in the surrounding sea.

As the time draws to a close, ask for a volunteer from each group. While the remainder of the group finalises their constitution, privately brief the volunteers that they are to be washed from their original island and stranded on another island. On the new island, they will be presented with the constitution whereupon they will decide to break one of the rules. Their violation needs to be reasoned as they will need to justify it to the other islanders.

Bring the volunteers back into the room and allocate them to a new group, explaining they have been washed from their original island and landed on a new one. The original islanders are invited to introduce the new islander to their constitution. Once this is completed the new islander informs them that s/he cannot live by Rule X and must break it.

Leave the groups for about ten minutes and observe the process of settlement – whether it is compromise, expulsion, conflict, etc. Bring the groups back together, display the constitutions and discuss these questions:

- What was the original process of rule-making – consensus, majority decision, negotiation, etc.?
- What was the new arrival's experience of the new society?
- What were the settlements reached?
- Were any punishments given appropriate? Did they fit the crime? Who decided?
- What were the islanders' feelings when the constitution was broken?
- How do we deal with diversity, difference?
- What can people learn from this in terms of how they handle conflict?

CLOSURE GAMES

Affirmation Exercise

Resources:

paper, felt tip pens, ribbon (for scrolls)

These exercises focus on affirmation and recognition of people's qualities, skills and the aspects that you have enjoyed about spending time / working with them. It is one part of reflecting on the programme / session you have been involved in together. It also involves interaction and movement - good after a quiet / sitting down / discussion session! It is worth noting that some people may find giving and receiving affirmation difficult so this exercise can be a challenging one. Within the group, people can be gently encouraged to help each other and all comments must be positive.

- 1 Each person gets a piece of paper, writes her / his name on it, and sticks it on her / his back.
- 2 Everyone then has the opportunity to write on each other's pieces of paper, a skill or quality they have noticed that person has, or something s/he has contributed to the group, or something they have enjoyed about spending time / working with her / him. Try to write something on everyone's piece of paper.

One variation of this exercise is to get people to sit in a circle and draw around their hand on an A4 page, putting their name at the top. The hands can be passed round the group in a clockwise direction and each person writes an affirmation for the named individual on her / his sheet.

Another variation is to have an envelope with each person's name on it pinned on a noticeboard with slips of paper available so that people can write affirmations and put them in each person's envelope either in a structured session, or in their own time.

Where literacy may be an issue, the facilitator can gather the ideas verbally about each person and write them on a piece of paper which can then be turned into a scroll and presented to the person. Children and young people can then be encouraged to take these home to share with parents / carers who can re-read the affirmations to them.

Wool Web

Resources:

large ball of wool

A Wool Web can be used to explore all kinds of questions and discussion, and ensures that each person in the group has the opportunity to speak. One session it can be used for is a group evaluation.

- 1 Each person in the group thinks about a key question such as the following:
 - *What has been the highlight of the session for you?*
 - *What have you learned from / through the session?*
 - *What have I enjoyed about this session?*
 - *What have I learnt from other people in the group?*
- 2 One person takes the ball of wool, and gives her / his answers to the questions. S/he twists a bit of the wool around her / his finger (not too tight!), and throw the ball to the next person. This person then gives her / his answers, twists a bit of the wool around her / his finger, and throws the wool to someone else, and so on.

3 When everyone has spoken, you will all be linked up by a web of wool. This is a valuable way to talk about a subject which ensures that everyone in the group gets the opportunity to speak, and also provides a symbol of our inter-connectedness, i.e. that everyone is in relationship with each other at different levels - a good way to finish a session or a programme.

4 Now somebody has the fun of rolling the wool up again - the easiest way is if everyone lays it down on the floor as it is, and lets one person get on with rolling it up!

5.5

The Importance of Closure

Closure, the act of bringing things to an appropriate end, is important both for individual sessions / lessons and for finishing programmes / modules. In each case, people need to be supported to reflect on past experiences and to move on to whatever will be next for them.

In any session exploring controversial issues, there is the likelihood that people's emotions will be touched, some tension and anxiety may be experienced and some strong, conflicting views may be discovered. In order to ensure that people are able to leave the session feeling relaxed, with their relationships affirmed and the discussion appropriately brought to a close, it is important that sufficient time is always allocated for closure. In some cases, this will mean resisting the temptation to let the 'fantastic discussion' continue for 'just another five minutes'!

Achieving Closure

WAYS OF ACHIEVING CLOSURE AT THE END OF A SESSION / LESSON CAN INCLUDE:

- giving the group a brief (verbal or written) outline of the session / lesson plan at the start so that they know what to expect in terms of timing and the things which need to be covered before the end of the session;
- calling the group's attention to the time five to ten minutes before the end of the discussion / exercise so that they have a clear conception of the time-frame in which they are working and can bring it to an appropriate close;

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

- using a closure activity which allows group members to say something about how they are feeling at the end of the session;
- using a closure activity which allows group members to affirm their relationships with each other;
- using a closure activity which allows the release of any tension, for example, a game which involves having fun together.

Questions for Reflection

Have I left sufficient time for closure within my lesson / session plan?

Would it be useful to have a timekeeper other than myself to ensure that enough time for closure is left?

What are likely to be the key learning points that need to be drawn together at the end of the session?

Is this session likely to raise strong emotions? Will there need to be some form of closure relating to this?

What will be the most appropriate closure activities for this group at the end of this session?

WAYS OF ACHIEVING CLOSURE AT THE END OF A PROGRAMME OR MODULE CAN INCLUDE:

- The use of an entire session at the end of the programme / module for affirmation, reflection and looking ahead.
- Affirming what each person in the group has learnt and contributed, through giving certificates or prizes. The affirmation will be most effective if it is person specific, naming the particular learning and skills which have been evidenced.
- Celebrating the end of the programme / module – inviting guests to see the work that has been done, presenting certificates, having a special meal / cake, going on a relevant visit / trip, etc.
- Evaluating what has happened within the programme / module. As a form of closure, it allows group members to reflect on what they have been doing, the feelings they have experienced, what they have learnt, etc. and to contribute to the planning of future sessions, both for themselves and for others. Evaluation and reflection processes and tools are discussed more fully in Developing a Model for Self-evaluation (Section Six).

Ways of achieving closure at the end of an entire programme / module could also involve some of the suggestions for closure at the end of a session.

5.6

Other Groupwork Tools and Strategies

Questions for Reflection

Have I planned sufficient time into the programme / module for effective closure?

What closure elements are likely to be most useful for this particular programme and group:

- *affirmation;*
- *celebration;*
- *personal reflection;*
- *programme evaluation;*
- *looking ahead?*

What are the key learning points from the programme / module that need to be drawn together at the end?

Have I included sufficient time for group members to give me feedback on their learning and on the programme / module?

How will this feed into the overall evaluation of the programme / module?

What support or further learning / development opportunities may group members need beyond this particular programme / module?

Will group members be able to leave the final session with a sense of achievement, well-being and completion – and an openness to new challenges and learning?

For examples of Closure activities, see sample Games, page 130

In addition to games and similar activities, there are a wide range of other tools and strategies which can contribute to the learning possibilities within a particular programme. A variety of styles and ways of working will allow the facilitator to cater for the breadth of learning styles within a group.

Some of the ways of working may be new to group members (and possibly to the facilitator), and this trying out of new experiences can be in itself a very valuable part of the learning process. In order that people feel able to take appropriate risks in trying something new, it will be especially important that the boundaries of safe space are securely in place and that clear introductions and explanations are given. It may also be appropriate to use other activities to build up to the new exercise / way of working rather than plunging straight in.

If the facilitator is trying something for the first time with a group;

- *thorough preparation;*
- *observing another facilitator using the activity / way of working (for example, on video);*
- *the opportunity to try the activity first as a participant (for example, with a group of colleagues);*
- *the support of a co-facilitator;*

can all help to build her / his confidence.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Questions for Reflection

How do I feel about trying out new ways of working, or activities that are in a different style to what I normally use?

Are there opportunities I can take to try them out first as a participant or facilitator?

- *through a training / development session?*
- *with a supportive group of colleagues?*

Is there anyone I know who has used them before who I could talk to, or who could work with me?

A whole range of ways of working and activities are listed in the box below. Some of these are largely self-explanatory, but longer explanations are given for others. As explained in Using Games (Section Five), it is important to think carefully about which way of working / activity will best fulfil the purpose of the programme you are planning and will be most appropriate for the group with which you are working. There is some overlap between the different types of activity: for example, the learning from the more practically based activities will often need to be drawn out through a debriefing style discussion at specific points throughout or at the end of the activity.

- Wordstorm
- Group Debate
- Worksheet
- Puppets and Masks
- Circle Time
- Participant-led Discussions
- Collage
- Question and Answer
- Paired Work
- Journals
- Story
- Silent Personal Reflection
- Facilitator-led Discussions
- Role Play
- Reportage
- Small Group Work
- Walking Debate
- Facilitator roles, e.g. 'Devil's Advocate'
- Think, Write, Share
- Art-based activities
- Scenarios
- Presentations
- Practical Tasks or Challenges

Maximising Participation within the Group

As well as having different preferred learning styles, individual group members will also have different personalities, experiences, skills and levels of confidence / self-esteem.

These factors will impact upon the ways of working with which they feel most comfortable, for example, some people feel confident speaking within a large group, while others prefer to share ideas with one other person. If all of the activities take place within the large group, some people may never contribute their ideas and experience to the group. An appropriate mix of groupings could include the following:

INDIVIDUAL WORK

Giving people time and opportunity to think and reflect for themselves through thinking time, drawing or writing, etc. Sometimes it will be appropriate for them to share their thinking afterwards in pairs, small groups or the large group. You also need to consider whether it is appropriate for everyone to share their thoughts or whether it should just be volunteers.

PAIRED WORK

Encouraging people to work in twos can be of value in itself, or can give people the chance to test out their ideas with one person before sharing them with a larger group.

SMALL GROUP WORK

As well as being more comfortable for some group members, working in groups of three to five people allows the participation of a

greater number of people within a limited time-frame. Where appropriate, the small groups (or a nominated speaker from each one) can feed back or show what they have discussed / made / learnt to the large group. If their work is visual (for example, ideas on a flipchart, a piece of art), these could be spread out on the floor or put up on the wall for other groups to walk around and look at instead of (or as well as) using verbal feedback.

NB. The nominated speaker from within the small group needs to be willing, not someone who has been negatively pressurised into taking it on.

LARGE GROUP WORK

The large group includes everyone who is involved in the process, for example, the whole class, the whole staff team, etc. The advantages of work in the large group are that everyone is aware of and part of each stage of the process together. However, within a set time-frame and given people's different personalities and levels of confidence, it may limit participation and the wealth of contribution which people have to make to the process. It is useful for smaller groupings to feed back to the large group at various points during the process so that the learning can be gathered and there is a shared sense of purpose and direction.

CIRCLE TIME

This structured form of groupwork can enable everyone to participate, even in a large group. See Working in a Circle (Section Five).

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Discussion-based Activities

FACILITATOR OR PARTICIPANT-LED DISCUSSIONS

In planning a programme or session, you do not need to assume that the facilitator will always be the person leading. There will be times when it is valuable to give group members opportunities to facilitate and lead particular activities and sessions. In all cases, it is important that the opportunity is appropriate and open to any group member who might benefit from it. This opportunity can:

- promote the concept of a democratic setting / classroom;
- give individual group members the opportunity to develop new skills;
- allow group members to share their knowledge, skills and interests;
- give group members the opportunity to receive feedback from the facilitator and from their peers;
- build confidence and self-esteem;
- give the facilitator a structured opportunity to learn from group members;
- allow the facilitator to take a break!

Questions for Reflection

Am I willing to consider handing over the facilitation of a particular activity or session to a group member?

Will this be appropriate:

- *in the context of the intended learning outcomes of the programme?*
- *for this particular group?*
- *for the broader personal development of the individual group members?*

What might be the specific learning outcomes from this particular experience for the individual concerned?

Are there particular feedback and reflection opportunities that I need to put in place for the individual and for the group when planning the programme?

Who would I consider offering the opportunity to? Am I restricting the opportunity inappropriately?

NB. Some children and young people (and adults!) whose behaviour is difficult within a group can rise to the challenge of being given this kind of responsibility, and demonstrate skills and maturity that might not otherwise have been evident.

FACILITATORS' ROLES

At times, it may be useful for facilitators to take on a particular role in order to challenge the group's thinking and to take their learning further. See The Facilitation Process (Section Three).

WORDSTORMING / IDEAS GATHERING

A simple way of getting a lot of useful ideas about a subject in a short period of time. It provides the opportunity for maximum participation and should increase self-esteem by valuing the contributions of everyone involved. It can be done in the large or small groups with feedback to the large group.

People are encouraged to say whatever comes into their head – it doesn't matter how silly / funny / odd the ideas are. Each person should only speak a couple of times on each idea. All ideas are written up on a large sheet of paper / flipchart with a felt tip pen / marker so that everyone can see the suggestions.

After five minutes or so (when the ideas stop flowing) you will end up with a list to start working on. You will engage the group in deciding which ideas have possibilities and which ideas are unrealistic in this situation. An alternative way to reach consensus on the ideas is to engage the group in voting for ideas that could be worked upon.

**Example wordstorm
results for the phrase:
Community Relations**

RELATIONSHIPS
SHARING IDEAS
CONFIDENT
DIFFERENCE
CONFLICT
OUR HISTORY
PEACE
FAIRNESS
PERSONAL HISTORY
RECONCILIATION
DIVISION
NORTHERN IRELAND
SECTARIANISM
HARD WORK
OPPORTUNITIES
EUROPE
FLAGS AND EMBLEMS
CULTURE
RACISM
POLITICS
RELIGION

GROUP DEBATE

This provides the group with a formal structure in which to discuss the different ways of looking at a particular theme or issue. Where the issue may be contentious, this has the advantage of ‘containing’ it. On the other hand, its focus can be reasoning-based and may limit people’s reflection on how they feel about the theme in question.

The group selects the topic for discussion and volunteers are sought for the roles of protagonist (arguing the case for the motion), antagonist (arguing against the motion), chairperson, timekeeper, etc. The room needs to be laid out so that the group is in a semi-circle with the main speakers at the front. Following presentation of the case for each side and facilitated by the chairperson, group members can ask questions of the speakers. At the end, a vote can be held for and against the motion.

Explain that you will be reading out statements and they must respond by choosing a place along the line depending on their strength of feeling, or go to the corner that most closely represents their view. It is important to encourage the group members not to go along with the crowd, but to follow their own instinct. Once they have taken up a position, you can ask questions of the individual members, encouraging them to explain to others in the group why they have taken up this position. This can lead to a group discussion on the issues raised – remember there are no right or wrong answers, the activity is all about discussion and debate. It is important to inform individuals that, it is okay for them to change their mind and to take up a different position. At some stage, it is possible that the discussion may become difficult to facilitate in a line and you may find it more useful to form a circle.

WALKING DEBATE

A walking debate works best with at least ten people and space is required for the whole group to stand in a line. Label one end of the room ‘Agree’ and the other ‘Disagree’ to create an invisible continuum. Alternatively, label the four corners of the room, ‘Agree’, ‘Disagree’, ‘Don’t Know’ and ‘Don’t Care’. When using this exercise for the first time, begin the session with a light, non-controversial statement that invites opinion on a current television programme, football team, etc. If you are not going on to further discussion about the debate themes, it can also be useful to end the session with a similar statement. The Walking Debate can be used to support participants, for example:

- *to explore their opinions and feelings about different issues / themes;*
- *in evaluation of a session / programme;*
- *in resolving a classroom dispute;*
- *in gauging interest in a particular topic.*

**Sample statements:**

- *Reality TV shows should be banned.*
- *Football players should have to give 30% of their income to charity.*
- *The legal voting age should be lowered to 16.*
- *People should have the freedom to fly the flag of their choice over their door.*
- *Class A drugs should be legalised.*
- *It is important for us to learn about other people’s opinions.*
- *Changing the curriculum / our training programme to include this subject has been worthwhile.*

PRESENTATION

This is a useful way of giving the group a chunk of information about the particular theme which they are exploring. It can be delivered by an individual or a small group using Powerpoint, an overhead projector, a flipchart, a whiteboard, etc. However, it is important:

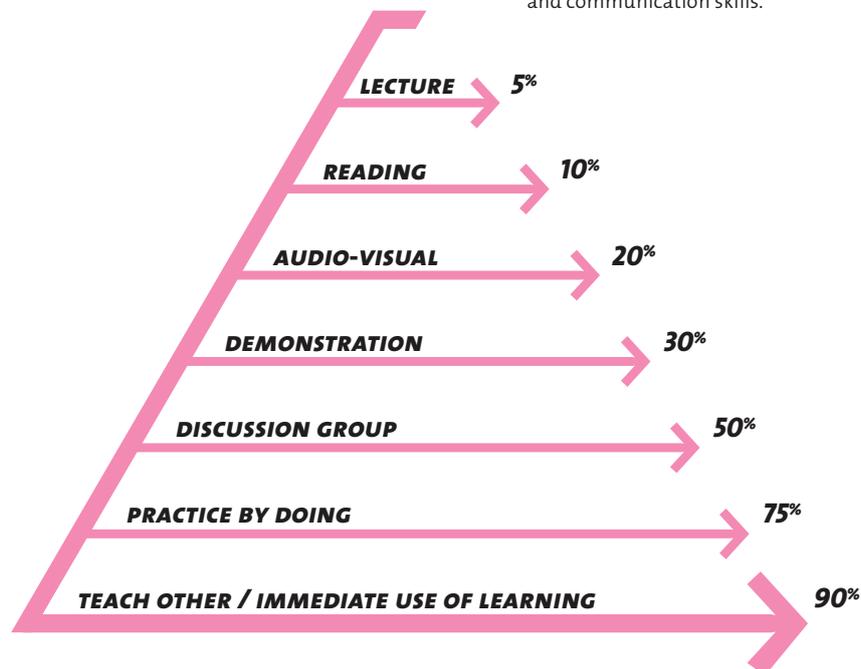

- to enable group members to understand the relevance of the input and how it fits in with what they are doing in the programme as a whole;

- to make sure that the input fits within group members' concentration spans (for example, depending on the time of day, group age, energy levels, etc.);
- that you do not overload people with too much information at a time.

With this in mind, set yourself a time limit, and stick to it.

Breaking up the input with discussion and other activities may help with this. In addition, bear in mind that often people learn and remember most effectively by 'doing': a more useful way of working may be to set small groups the task of finding out about aspects of the particular theme, and for each of them to give a presentation to the large group. As well as learning about the theme, they will also be developing other investigative, thinking and communication skills.

LEARNING PYRAMID ⁷

⁷ Adapted from National Training Laboratories, Bethel, Maine.

139

QUESTION AND ANSWER SESSION

This allows the group(s) to focus on a particular theme through the structure of questions and answers, rather than through open discussion. The questions may be addressed to the facilitator, to an individual group member or to a particular small group within the group. This may be in response to a presentation, in the light of the specific experience or expertise a group member is known to have, etc. It is essential to check that the individual or small group is comfortable with being the focus of questions and is happy to have a go at answering them. As the facilitator, it is also important to know when to end such a session, perhaps because enough time has been given to it or because the person fielding the questions seems to have had enough. One way of doing this is to check with her / him now and again, for example, by asking, 'Would you like to leave it there, or are you OK to take a couple more questions?' Remind the questioners to keep their questions focused and the responder to keep her / his answers succinct. It is always important to work within the context of the group contract, so that both questioning and answering are respectful, even when challenging someone else's perspective.

SCENARIOS AND STORIES

Particular scenarios can often give a context for understanding life implications that might otherwise seem theoretical or irrelevant. A fictional story can give groups a fantasy space in which to safely explore a theme within their own life context. There are many excellent children's stories that can be used in this way, including with adults. Alternatively, you can create your own scenario or story to suit the situation. Scenarios and stories in picture or video / DVD form are also useful.

In order to develop an understanding of the theme and to relate it back to 'real life', some ways of using scenarios and stories include:

- considering the situation / theme from the perspective of different characters;
- developing alternative endings or outcomes;
- thinking about what might have been happening just before the story / scenario;
- thinking up questions you would like to ask particular characters, and their possible answers;
- examining the possible positive and negative ways characters relate to and interact with each other, and considering alternatives;
- considering where I would put myself in the scenario / story? What would I have done the same / differently?

It can be valuable to use fairy tales and to look at the situation from the perspective of different characters, not just the 'hero / heroine', for example, the wolf in Little Red Riding Hood, the ugly sisters in Cinderella.

Stories for exploring identity:

- Inkpen, M. (1996), *Nothing*, London, Hodder Children's Books.

Stories for exploring fear and conflict:

- *Long Neck and Thunder Foot*, London, Puffin, Piers, H. / Foreman, M. (illustrated) (1984);
- For further examples, see CCEA (2002), *Primary Values*, Belfast, CCEA.

Scenarios are often developed directly or indirectly from the facilitator's or group members' own experiences. Telling your own story can be an important part of understanding your experiences, just as listening to others' 'real life' stories can provide a way of learning from theirs. The very experience of being heard can be hugely affirming.

TELLING OUR OWN STORY: LIFELINES

This exercise allows individuals to tell their own story based on key events in their lives to date. It allows us to see our lives differently: pictorially and in positives and negatives. You can do it in different ways – you could take it from birth until now, from age 15 until now, over the past year, etc.

Give participants a large sheet of paper and pens / crayons, ask them to find a space on their own and to work for 15 – 30 minutes (depending on the group). They can illustrate their 'line' using words, pictures, symbols, newspaper / magazine cuttings, etc.

Participants can then share their Lifeline with a partner or in a small group. Make sure that you allow time for everyone in the group to tell their story. The Lifelines can also be displayed, if participants are happy with this. Be aware that Lifelines can be emotive and contain very personal information, so always work within the contract framework and ensure that people know that they choose what they want to illustrate and share with others.

You might want to give the group some specific guidelines to work with, for example, 'a time ...':

- *I felt proud*
- *I felt happy*
- *I felt embarrassed*
- *I became aware of difference*
- *I felt aware of belonging*
- *I felt (un)fairly treated*
- *I was aware of divisions in Northern Ireland*
- *I was aware of global conflict*

These possibilities can also be explored through drama, writing and arts-based activities.

Drama-based Activities

ROLE-PLAY

Role-play can be an exciting technique where you encourage people to play the role of another person or indeed a position they themselves have previously experienced. It can also be valuable for people to take on a role they have not previously experienced, particularly a role reversal, for example where they take on the role of someone they have different views from or with whom they have been in conflict. They will take up this role for a certain period of time (to be specified at the start of the role-play) and should be encouraged to play this role to the best of their ability. You could introduce the concept of role-play by outlining the different roles you undertake in every day life, for example, son, daughter, father, mother, teacher, pupil, caretaker, governor, tutor, etc.

You can prepare for role-play in advance by preparing role cards, but be conscious not to make them over-complicated so that players do not become over-anxious about trying to remember everything. It is important that you set realistic boundaries, and the scene for the role-play so that everyone understands what is happening.

Role-play can encourage people to appreciate that our behaviour, feelings and self-image may vary depending on the role we are playing. We can also develop self-confidence through an increased awareness of our capacity to cope with different roles. There is no script for role-plays and you need to be prepared for the unexpected, for example:

- *emotional issues emerging;*
- *players drying up;*
- *the need to challenge negative stereotypes.*

After the role-play, allow as much time for follow-up as for the role-play itself. Feelings that arise during role-play are very real and should not be discounted. Give players time to come

out of their role and talk about their feelings now and those during the role-play. This can be done in small groups or in the large group.

Simple 'de-roling' techniques enable people to leave their roles and become themselves again. Explain that the role-play is over and get them to think of who they are, for example, turning to the next person and saying their name and favourite football team / food / music etc. It is important to create time so that there is a definite break for the group to debrief – how did they feel, what did they learn, linking the role-play to real life situations, etc.

NB Some people feel deep anxiety about 'role-play'. It is always important to be clear about what is involved, that no fantastic acting skills are required and that this, as with everything else, takes place within a supportive, respectful space. There is a big difference between being asked to role-play a particular conversation with a partner while everyone else is doing the same, and being asked to do a role-play in front of the rest of the group which they will then discuss afterwards. You need to consider:

- that it is appropriate to give people a choice as to whether or how they participate;
- giving people time to think about the role-play before they act it out;
- asking for volunteers when it is for role-play in front of the large group;
- approaching people to allow them to prepare in advance of the session if it will help them to feel more confident;
- giving people the option of taking on an observation and feedback role;
- building up to role-play by doing other, lower key drama-based activities first.

USING PUPPETS AND MASKS

Puppets and masks allow people to take on roles within a discussion or drama, but often also give them confidence to say things or to explore things which they might not do while 'being themselves'. On a basic level, shy children can use a puppet to speak through, where they might not speak within the group by themselves. On another level, group members can express feelings, thoughts, concerns, etc. that the puppet or mask persona is experiencing where they might not have said it directly about themselves. Using puppets to act out stories and scenarios is a valuable experience in itself, and can also be a way into group members engaging in role-play.

The experience of actually making the puppets or masks and of writing stories / scenarios can also be an extremely useful part of the process.

Other Arts-based Activities ⁸

As with drama-based activities, these can be very effective with group members who are less confident about their verbal communication and literacy skills. They:

- encourage a range of other creative skills;
- can provide an important outlet for the expression of emotions;
- enable people to express things that they might not be able to put into words.

As with drama, it is important to allay people's concerns by emphasising that we all have creativity within us, and it is not about being good or bad at art, music, etc. as we may have previously been told. Encourage people to consider the importance of the process and learning rather than the product.

Before moving into the main activities, it may be useful to do a couple of short introductory

⁸ See Craig, C. et al. (2002), *Different Tracks – Experiential Learning: A Practical Resource Guide for Community Relations Work*, Belfast, Corrymeela Community.

activities to help build people's confidence. For example:

- Ask people to use only marks or lines (no pictures, symbols or letters) on a page to represent different feelings.
- Ask people to think about which colour / shape they associate with different feelings, places, experiences, etc., for example, 'think of a colour which represents ...':
 - *how you see the world;*
 - *your motivation;*
 - *how you see yourself.*
- Give people a piece of clay and ask them to simply feel it in their hands with their eyes closed. Keeping their eyes closed, they could then go on to make something (anything at all, it does not have to be complicated!) of their choice.
- Ask people to sit in silence for two to three minutes and to listen to the sounds which they can hear around them.
- Develop a simple clapping rhythm within the circle, possibly beginning with everyone clapping once, passing the clap around the circle. As the group becomes confident, divide people into several small groups with different rhythms.
- Play a piece of music (any style!) and ask participants to write / draw what the music meant to them, the feelings it raised or what they thought about.

COLLAGE

Participants spend approximately 45 minutes searching through old magazines and newspapers cutting out relevant material relating to the subject of the collage. It is a good idea to write up about four relevant headings as a guide to the content of collages. These headings will not restrict the contents of the collage as participants soon become engrossed and are merely a support to get everyone started. Upon completion of their collages participants / small groups display them around the room. Each person / group in turn explains their collage to the others with time allocated to ask questions, discuss and affirm each collage.

Collage Headings Example: Conflict

- *Words and images associated with conflict*
- *Personally, locally, globally*
- *Resolving conflict: the ideal and the reality*
- *Consequences of conflict:
for example, intimidation, refugees,
famine, unemployment, etc.*

Group members often feel great pride in their collage, and the depth of content displayed can be surprising. For this reason it is important that collages, as with all creative work, are treated with a certain amount of reverence – allowing them to stay on display for a period of time, or be taken home afterwards. It is important to create a safe space and this means that there are no spectators in this activity, including the facilitator. You and the group will benefit greatly from your participation – you might even be surprised by what you learn about yourself!

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

ART SPIRAL

Lay out a large spiral of paper / card, spread widely enough so that group members can access different parts on which to work. Provide crayons, paints and pens.

Everyone, including the facilitator, selects a spot on the spiral and in the space they have chosen, draws / paints something which represents their thoughts in response to the question. You may want to encourage them not to use words in their art, and you may also want to ask everyone to work in silence. After a time (for example, ten minutes), ask them to find another space, and respond to a follow-on question. This can be repeated as is appropriate and according to space on the spiral.

Sample questions could include:

- *How would you represent important aspects of your past?*
- *How would you represent important aspects of your present?*
- *What are your hopes for the future?*

Afterwards, allow time to stand back and look at the spiral, walking around to see other people's contributions. Follow this by de-briefing as a group, talking about what people can see on the spiral or what they chose personally to depict, and considering the process of working together. For example:

- How did people feel if someone used 'their' space and developed or added to their work?
- How did it feel to work in silence?
- How comfortable were they with an art-based activity? When had they last done something like this?

Writing-based Activities

These activities are useful because they require people to articulate their thoughts and feelings and, therefore, help to build all kinds of literacy, including emotional literacy. It is important to be aware of literacy levels within the group. Using only or mostly writing-based activities can reduce the opportunities for participation, contribution and learning for those who are not confident about their literacy. At worst, they may opt out of activities or stop coming to the group altogether.

REPORTAGE

A similar exercise to the collage, where individuals / small groups are asked to design a news report for a specific communication medium such as radio, television, newspaper or the internet to explain the work they have been doing. They should consider to whom the report is to be made available. The report could include:

- the value of the work, including both positive and negative points;
- what they have learnt and what action needs to be taken;
- interviews with people who have views on the issue in question;
- examples of written or artwork;
- celebration of the group, the learning, etc.;
- future plans.

WORKSHEET

Using worksheets individually, in pairs or small groups can help to focus people's thinking because they need to express it clearly in writing and often in response to

particular questions. It can be limiting, however, if the questions are not open enough, if there is no opportunity to share their learning and depending on the size of the sheet. (For sample worksheets, see end of section.)

SILENT PERSONAL REFLECTION AND JOURNALS

It is important that people have the opportunity to develop skills of personal reflection and to be comfortable with themselves. There will also be those within the group who will learn most effectively in this way. It is useful to develop silent reflection when you want people to give a considered response within a discussion rather than simply their first reaction.

Similarly, using a journal can help to focus thoughts and reflections, whether it is done through writing, drawing or a combination of the two. A journal also allows people to reflect back on their learning over a period of time. This provides useful reminders and can be hugely affirming as they see what they have learnt, the skills they have developed, etc. To help give a sense of the purpose of journals when working with children, Jenny Mosley calls them 'Think Books',⁹ and this, or a similar name may be more appropriate for your particular group.

It is crucial that before people begin using journals there is a very clear understanding as to whether they are totally personal or whether they will be shared with the facilitator and / or the group. People are likely to record very different things depending on who is going to see them. Where the facilitator is going to have access to them, it may be appropriate to write responsive comments which will give affirmation, assist reflection and learning, etc. However, again, it needs to be made clear that this is going to happen at the start.

⁹ Mosley, J. (2000), *Quality Circle Time in the Primary Classroom*, Wisbech, LDA.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

THINK, WRITE, SHARE

This allows people time to think and reflect, to focus their thoughts in writing or in a picture / symbols and then to share them with a partner or group. It is especially useful for people who may feel 'put on the spot' when an instant response is expected from them. A worksheet could be used as the starting point for this.

Group Tasks and Challenges ¹⁰

These could include many of the activities outlined above and many of the games described in Section Five (Using Games). There is a valuable group-building purpose within such activities, and they can also be arranged to suit the particular theme of the programme / session. Setting the group a shared task or challenge, for example, to solve a problem together, to make something together, to undertake a community-based project, to investigate and respond to a particular social or global issue, etc. is a useful way of embedding learning. A good example of this is the action component within Local and Global Citizenship.¹¹ As with the other practical activities, this can be emphasised by debriefing questions.

¹⁰ Craig, C. et al. (2003), *Different Tracks – Experiential Learning: A Practical Guide for Community Relations Work*, Belfast, Corrymeela Community.

¹¹ CCEA (2003), *Local and Global Citizenship: A Resource for Post-Primary Schools*, Belfast, CCEA.

SAMPLE DE-BRIEFING QUESTIONS:

- Did your group worked well together?
- Did your group elect a leader?
- Did a leader emerge?
- Was there any attempt at planning how to perform the various tasks?
- Was enough time spent on planning the tasks? Did this save time later?
- How did the group operate as a team?
- Was there conflict, differences of opinion, etc.?
- What skills did you need to use?
- Did anyone monitor the time available?
- Did everyone understand what was going on and what was expected of them?
- Did different personalities emerge, for example, analyser, peacemaker, etc.?
- Were the later tasks better organised by the group than the earlier ones?
- What kind of atmosphere was there?
- Did you use the time between tasks to review progress and plan improvement?
- Was everyone involved? How were the tasks shared out?
- Did the task get so complicated / disorganised that it had to be started again?
- List four strengths your group demonstrated.
- Did your approach have any weaknesses?
- What would you do differently if you could do the task again?

Questions for Reflection

Have I chosen a wide enough and appropriate range of ways of working and activities for this particular group and programme?

Are there ways of working which would be new to me, but that I would like to try?
Where can I gain experience or get support for doing this?

Are there ways of working that I feel wary about? Would it help to see them in action, or experience them as a participant? How can I do this?

Is there someone else with particular skills who could work with me for specific activities?
(Make sure that it's appropriate – having told the group that they do not need to be drama or art experts, it may undermine that to bring one in!)

Worksheet: Similarities and Differences

**Three things about me which are the same
as everyone else in the room:**

- _____
- _____
- _____

**Three things about me that I feel make me
different from everyone else in the room:**

- _____
- _____
- _____

**Five things which are the same as some
other people in the room:**

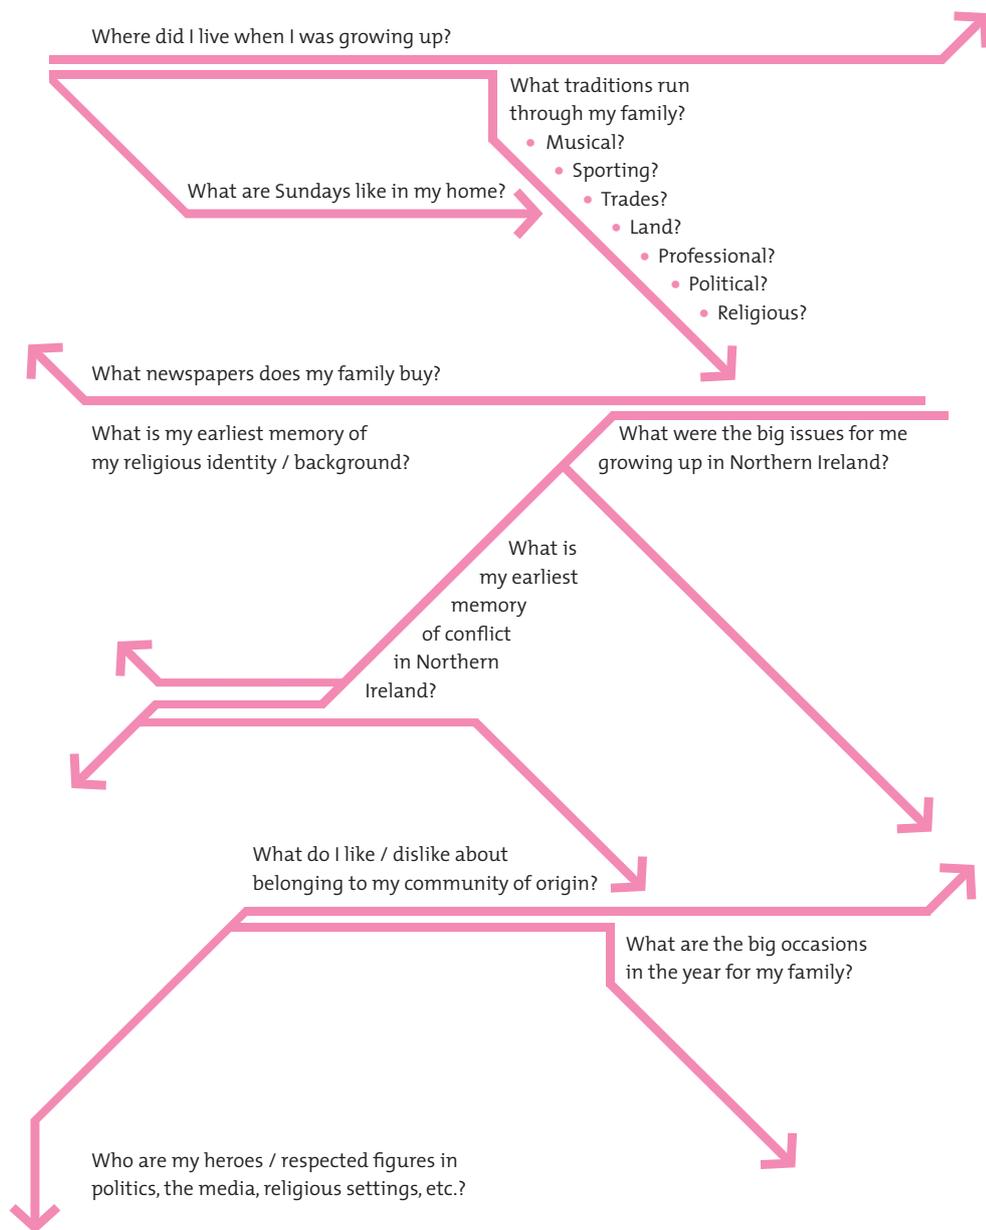

- _____
- _____
- _____
- _____
- _____

**Three qualities that I feel other people in
the room have that I do not have:**

- _____
- _____
- _____

**Worksheet:
Heritage and Identity**

5.7 Practical Preparation for Groupwork

Although 'safe space' is about far more than the physical surroundings, these and other practical considerations will play an important part, and need to be considered by the facilitator within the overall planning. Very basic things will affect people's level of comfort, sense of safety and, therefore, their ability and willingness to participate.

THE PHYSICAL SETTING

For a class group working on their own, the best place to do the work will probably be their own classroom as this is likely to be the place in the school where they feel most at home. This also recognises that the work is integrated within the life of the classroom and is not something additional or exceptional. In a similar way, a staff team might find their staffroom the most appropriate place for this kind of work. On the other hand, if the staffroom is really only, or is perceived to be only, the 'teachers' room', this might not be the appropriate place for work involving the whole school staff team.

It is important to bear in mind that some rooms, such as a science laboratory, have fixed workspaces and it may not be possible to use these rooms for groupwork. Some aspects of groupwork may still be possible with a bit of creativity and compromise, for example, partner work and work in small groups with feedback to the large group, even though not in a circle.

Setting up a circle for group discussion:

- Does a circle need to be set up and put away for each session?
- Does everyone, including the facilitator, have the same seating?
- Does everyone have eye contact?
- Do I need a 'talking object' for discussions?

Practicalities:

Have I checked with group members that:

- everyone has a seat / space (and a seat / space is left for anyone you are expecting to arrive late)?
- they are warm enough / not too warm?
- the lighting is OK (for example, no one is being blinded by sunlight)?
- everyone can see and hear everyone else?
- there is a good balance between giving people their 'personal space' and a sense of actually being together as a group?
- possibilities of interruption are minimised (for example, all mobile phones are switched off, the facilitator is aware at the start of anyone who needs to leave early)?

Other considerations:

- Is there sufficient space for any games or other activities I am planning?
- Are there any health and safety implications?
- Do I need a sign on the door so that the session will not be interrupted?
- Is there the possibility of another room if the usual workplace is not suitable?
- If the room has limitations, what are the possibilities I could still creatively develop, or adaptations I could make?

Where two or more groups from within a school or from different schools are meeting together, the co-ordinators / facilitators will need to discuss together the most appropriate place to meet.

- How many people (including facilitators / leaders) will be involved?
- Will it be possible to work in one circle, or will it need to be split up into smaller groups?
- If working in more than one group, will there need to be feedback to the whole group at points during or at the end of the session?
- What space will be needed for this – more than one room?
- What will be the most appropriate venue (in one school or external)?
- Is there sufficient space for any games or activities which we are planning?
- Have we checked out any health and safety implications?
- Have we organised consent forms for children / young people who are going to a venue other than their own school?

NB. For example: An assembly hall or gym may provide plenty of space for games and circles, but some group members may feel overwhelmed by such a big space or feel that their voice is too exposed if they express a personal view, and it can be 'echo-y' and harder to hear people.

Weighing up the pros and cons is important!

THE TIME AVAILABLE

For individual sessions, this is likely to be more flexible within a primary school than within a post-primary school context, but in both cases the balances between flexibility and other curriculum demands need to be maintained. The bell ringing for the next class / break / end of school is usually a non-negotiable limit, and it is crucial that the programme has reached an appropriate point of closure before this happens.

Aspects such as starting and finishing on time can assist children, young people and adults to see that the work is purposeful and planned, and that they and their time are valued. If group members are late for the start of a session, it is important to respond to this appropriately and respectfully. If they are late for no clear reason, it may be because they do not perceive the session to be a good use of their time, and it may be necessary to clarify the session's purpose, its relevance to them and the contribution which they can make for the benefit of the group as a whole.

DEVELOPING PROGRAMMES FOR CHILDREN,
YOUNG PEOPLE AND ADULTS

Whether planning an individual lesson, a module / series of lessons or a development / training programme for adults, it will be important to think about how much time is needed for the different aspects of:

- *introduction;*
- *relationship and trust building;*
- *exploration of the themes;*
- *evaluation and closure.*

The appropriate depth to which the discussions can be taken will depend in part on the time available to ensure that each of the introductory and ending steps is sufficiently developed. Within a longer session, and particularly if the programme / process is very in-depth or emotive, time will also need to be allocated for breaks.

- What time is available for the overall programme / module?
- What time is available for each session?
- When is the best time within the day / week for a regular session?
- How can the programme purpose best be achieved within the time available?
- What size is the group? (This will affect how long it takes to do different exercises.)
- How long is it appropriate to spend on different activities or discussions? (This may depend on the ages, abilities, and concentration skills within the group.)
- Have I allowed sufficient time for introductory activities (for example, sharing purpose and plan for the session, introductory / ice-breaker game, re-visiting contract, etc.) and for evaluation and closure?
- Have I allowed time for appropriate breaks (including meals!)?
- Have I considered how I will respond if people are late for no clear reason?

RESOURCES

There are many resources available which can support this kind of work, outlining exercises, games and activities. Such resources will enable more creative programme planning and will support the facilitator in introducing a range of learning opportunities. It is important, however, that facilitators thoroughly familiarise themselves with a particular activity before introducing it to a group, paying particular attention to its appropriateness for that group and the programme in which they are participating.

People are also an important resource, not least the group members themselves, who may have different skills and activity ideas to share. Provided it does not contravene group needs or disrupt the group in other ways, there may be times when it is useful to:

- work with a co-facilitator, see Co-facilitation: Working Together (Section Three);
- invite someone in to lead a session / programme because of their particular experiences or expertise;
- invite other members of the school or local community to participate in or lead a session / programme;
- invite a colleague, tutor, etc. to participate in the group to support you in reflecting on your own learning and skills development.

- What resources are available to me?
- Which resources might be useful for this particular group and programme?
- Do I feel confident leading this exercise?
- How will I evaluate its effectiveness?
- Do I have a resource budget?
- Do I need any support in facilitating this programme?
- Is there someone who could co-facilitate or lead a particular session?
- Is there someone who could help me reflect on my practice?
- Is it possible to bring in someone external?
- *Is there money available for this if needed?*
- *Have they completed any necessary Child Protection documentation?*

5.8 Developing a Programme

As with all other areas of session planning, this work needs to have a clear **Purpose** and intended **Learning Outcomes** (for individuals, the group as a whole, yourself as the facilitator). The biggest challenge may be that the facilitator is less in control of the process than s/he might be in other areas of their work.

There are a number of reasons for this:

- The material for the work is drawn largely from the life experiences of group members and is dependent to a significant extent on what they choose to bring to the process.
- A commitment to a democratic way of working means that the facilitator does not come to the process as an expert with knowledge to share with the group members. While maintaining a co-ordination role, the facilitator is also a listener and a learner, recognising what each of the children, young people and / or adults brings to the group.
- There is an emphasis on the process itself, rather than on completing a specific task. This requires a high degree of flexibility on the part of the facilitator and a strong sensitivity to the needs and feelings within the group.

Given these circumstances, it is highly appropriate to involve the members in planning as they are the 'experts' on their own life story and situation, and know which issues are of interest and relevance to them.

All of these factors may challenge the facilitator's sense of safety. Feeling reasonably confident about her / his personal preparation, her / his facilitation skills and having a positive relationship with her / his group members will help to ensure that s/he feels equipped for her / his facilitation role. The consequences have the potential to be hugely dynamic and rewarding!

Group members will also feel safer and better able to participate fully if the programme:

- *has a clear purpose they are able to buy into;*
- *is genuinely relevant;*
- *provides a range of learning opportunities which match their different learning styles;*
- *is appropriate for their age group, ability range, etc. and builds from the level of previous experience.*

See Building a Positive Learning Environment: Using Groupwork and Facilitation (Section Three) and Creating Safe Space (Section Five).

Developing Learning Outcomes

The facilitator needs to consider in advance how s/he will reflect on and evaluate both individual sessions and the overall programme. Establishing the purpose of the work and the intended learning outcomes means that these can be used as indicators to measure the learning which takes place.

You will need to consider learning outcomes in relation to aspects such as:

- *factual knowledge;*
- *skills;*
- *understanding;*
- *relationships / interactions;*
- *attitudes and behaviour;*
- *making connections*
i.e. will group members be able to understand that the learning is relevant and transferable to other settings and experiences?

Gathering evidence of learning will enable everyone to see where learning has taken place, to value the work and to feel confident that it is an important use of their time.

For more information on monitoring and evaluation, see Developing a Model for Self-evaluation (Section Six).

Once the purpose and intended learning outcomes of the programme and individual sessions are set, you can begin to look at which ways of working and specific activities will be most likely to ensure that these are met and that learning actually takes place. Both within individual sessions and across whole programmes, there needs to be a sense of appropriate **progression** and **development**. This means that there needs to be:

- *a sense of continuity and connection between each activity and session;*
- *a structure of activities which allows each new level of learning to be built on further;*
- *opportunities along the way to re-visit and reinforce key learning points.*

It is important, therefore, to get a good balance between keeping the process moving and trying to ensure that key learning is in place before moving on to the next stage.

Common Mistakes ¹²

- There is a failure to base the programme on identified individual or group (learning) needs.
- A failure to link the programme objectives to the group's hopes and expectations.
- The programme is too rigid, for example, because of over-planning, failure to allow for spontaneous or unexpected incidents.
- There is an inability to use unexpected incidents to develop programme objectives or to take an entirely new course where this might be appropriate.
- There is not enough balance between individual and group needs, and the group's task requirements.
- The programme is aimed above or below the capabilities and potential of group members, leading to frustration, boredom, competition, etc.
- The programme is unimaginative, repetitive, unstimulating or inappropriate.
- There is too much focus on completing tasks / activities at the expense of attending to and learning from the process which is happening within the group.
- There is a failure to create clarity for group members in relation to the programme and its purpose.
- There is a failure to monitor and evaluate the programme as a way of fine-tuning or even redesigning it if necessary.

¹² Adapted from Benson, J. (1997), *Working More Creatively with Groups*, London, Routledge.

PREPARATION QUESTIONS

Purpose and Learning Outcomes:

- *What is the purpose of the programme?*
- *What are the intended learning outcomes for the programme / module?*
- *What are the intended learning outcomes for the session?*
- *How will learning outcomes, and the whole programme, be monitored and evaluated?*

Involving Group Members:

- *How can group members be involved in programme design and planning?*
- *How can group members be involved in programme monitoring and evaluation?*

Practical Considerations:

See previous checklists on physical setting, time and resources.

- *Bearing all of the above in mind, what will be the most appropriate ways of working and specific activities to use?*

Maximising Learning:

How can I maximise the learning opportunities for group members through:

- *the range of activities offered;*
- *repetition of key themes;*
- *re-visiting key themes using different types of activities;*
- *making clear connections with other learning environments and life experiences?*

5.9 If Things 'Go Wrong'

Given the nature of groupwork and all of the relationships and interactions within it, there is always the possibility that the programme will not go as originally planned. There can be all kinds of reasons for this, and many of these can be turned into constructive learning experiences in themselves. Some of them will be very minor and / or may be immediately positive while others may prove more challenging. There are a few basic foundations, explored in more detail elsewhere in the resource, which will enable the facilitator to respond in ways which will minimise any disruption or anxiety within the group.

These include:

- *a respectful and consistent facilitation style;*
- *taking sufficient time at the beginning of a programme to establish good relations and clear ground rules within the group;*
- *ensuring that the group are able to understand and engage positively with the purpose of the programme;*
- *flexibility in your programme – to suit the group and the circumstances;*
- *taking sufficient time along the way to reflect and evaluate;*
- *ensuring that support structures are in place for the facilitator and for group members.*

The situations which arise will be different in each unique group and will require appropriate responses. They may include:

- *a ground rule being broken;*
- *different forms of challenging behaviour;*
- *people expressing strong emotions;*
- *the formation of subgroups or cliques;*
- *rebellion or refusal to engage;*

- ‘red herrings’ which take the group off on irrelevant tangents (NB. sometimes they may not be ‘red herrings’ at all, but may be indicating something which is important within the group);
- the group needing to make an important decision and struggling to do so;
- a mismatch between the programme content and the group (for example, too theoretical, pitched at an inappropriate level, a sense of irrelevance, etc.);
- avoidance or denial of particular issues;
- conflict within the group.

Starting Points for Responding

DON'T PANIC!

- If you have attended to the basic principles outlined above, you already have all the tools in place that you need to respond to whatever situations arise.
- Has something really ‘gone wrong’ or is there something in particular that is triggering your own anxieties? If possible, check this out with a co-facilitator or colleague. Positive learning may well be occurring within the group.

TAKE YOUR TIME IN RESPONDING

- Provided the physical safety of group members and yourself is assured, there is no need to rush to respond.
- Give yourself time to observe what is going on within the group and to ask the group what they think is happening.
- Consider whether this is something which needs an immediate response, whether it is

something that can be worked out through the group’s ongoing activities and discussions, or a combination of the two.

DON'T ASSUME THINGS HAVE GONE WRONG

- Disruption to your carefully planned programme may not be a disaster! In fact, it may be a useful indication of immediate needs within the group which need to be explored and addressed before they will be able to move on.
- It may indicate gaps within your programme which the group feel or demonstrate are important (for example, the need for more skills development, significant aspects which had not occurred to you, relational issues which have been preventing the group from working effectively together).

CONSIDER THE POSSIBLE CAUSES

- Do not assume that whatever has happened is the responsibility of a perceived ‘troublemaker’ who ‘always’ disrupts things / leads others astray.
- Consider carefully what the genuine and practical causes for the situation may be – again, ask the group what they think. Bear in mind that things going on outside the group (within an individual’s circumstances, in a peer group, another class, the wider school, the community, etc.) may be impacting on what is happening within the group.
- If there are individuals who you believe carry particular responsibility for what has happened or who have been particularly affected, consider where and when the appropriate place to respond is. It is important to keep the whole group appropriately informed.

DON'T AUTOMATICALLY BLAME YOURSELF

- Unforeseen circumstances can arise within any group, and sometimes, because of your knowledge of a group, you can be aware that you are taking some level of risk in introducing the next planned topic.
- Take time to reflect with a supportive colleague, with your teacher tutor, or in supervision if it is available, so that you can consider all of the factors involved and use what has happened as a situation to learn from.

SHARE RESPONSIBILITY WITH THE GROUP

- Groupwork is a democratic process, and it is the facilitator's task to enable the group to learn and develop.
- Supporting group members to explore, and respond to difficulties is a key part of the facilitator's role. If the process is well facilitated, group members will be enabled to develop in a whole range of skills including, for example, self-reflection, self-expression, active listening, empathy, other aspects of emotional literacy, problem-solving, conflict resolution, etc.
- As suggested above, group members may well have the answers you are looking for as you yourself think about how to respond!

Strategies for Responding

Some specific responses to the situations suggested above are outlined in other sections in the pack. However, some general strategies which may be useful include:

TIME OUT:

for the group and for yourself. A quick break can give people a bit of space, time to re-gain perspective to reflect and think through options.

RE-VISIT THE CONTRACT / GROUND RULES:

if the issues emerging are around behaviour or relations within the group, it will be important to look again at the ground rules, to make sure that everyone is clear about their purpose and meaning. This may be sufficient to address the issue, or it may become appropriate to use the agreed warning and sanctions system.

CHANGE THE PROGRAMME:

while recognising that there may be curriculum restraints, it may be useful to alter the learning methods, or even the actual content. Pushing on with your original plan will be futile if no learning is going to take place.

RE-VISIT EARLIER STAGES OF THE PROGRAMME:

have the difficulties emerged because learning from an earlier stage of the programme has not yet been assimilated? Or because there has not been sufficient development of particular skills?

WORK WITH A CO-FACILITATOR:

if it is appropriate and possible at this stage within your programme, it may be useful to invite someone to co-facilitate with you for the next session(s).

USE AN EXTERNAL FACILITATOR:

if you feel that you are too involved in what is going on, it may be useful and appropriate to ask an external facilitator to explore the issues with the group, with you also participating. This may be particularly useful if there is a conflict which needs to be mediated.

SUPPORT STRUCTURES FOR GROUP MEMBERS:

bearing in mind that this kind of groupwork is not about counselling or therapy, occasionally it may be appropriate to encourage or enable individuals to receive this kind of support elsewhere. Equally, if Child Protection issues emerge, it is essential to follow through the appropriate procedures for responding to these.

REVIEW AND EVALUATE THOROUGHLY:

take time to thoroughly reflect on and evaluate what has happened, and build this into your planning for future sessions. Use your own support structures to help you to reflect, to check out your ideas and to obtain other perspectives and insights.

Questions for Reflection

What are my fears as to things that could 'go wrong' with this group and this programme?

What positive learning for myself and for the group could come out of such situations?

Is there anyone in this group I might have a tendency to scapegoat? Why?

Have I thoroughly planned and prepared for the work?

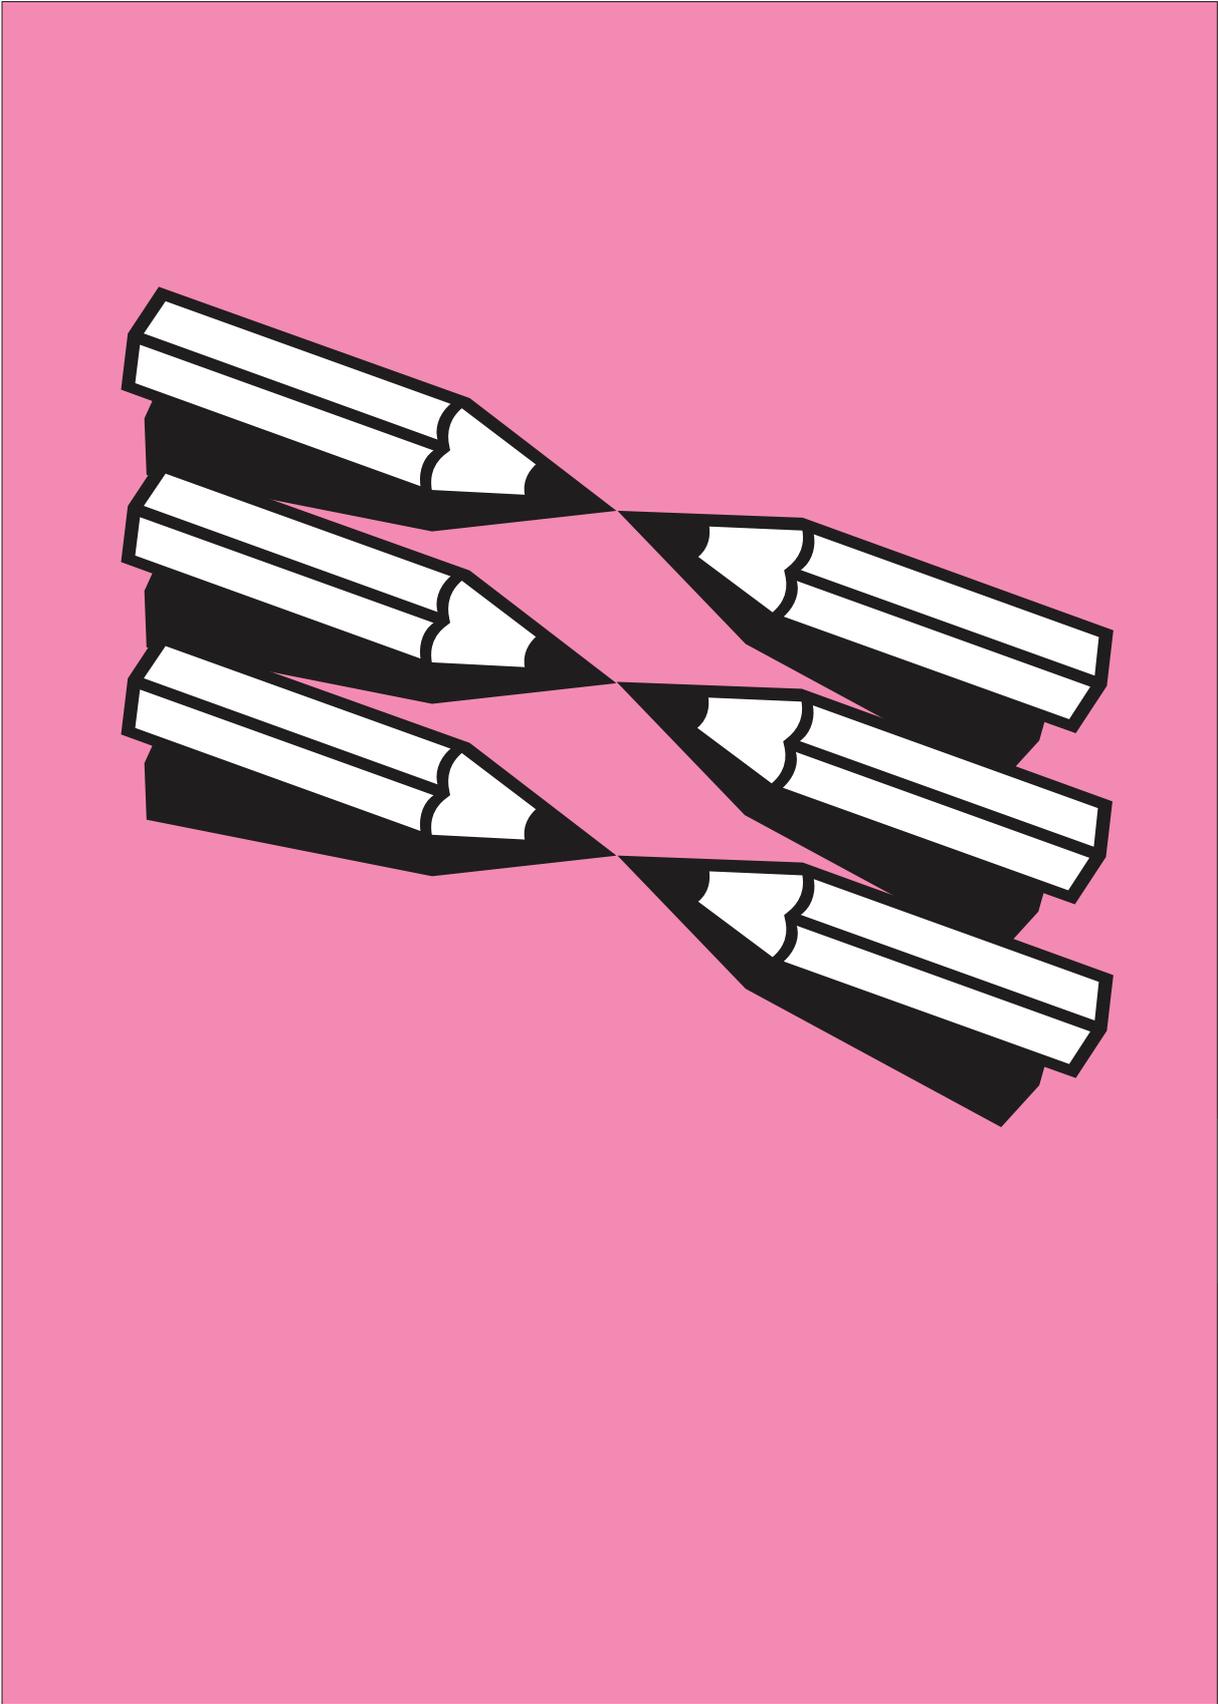

Have I allowed sufficient time for building relationships establishing ground rules, developing skills, etc.?

Is there a clear and appropriate rewards, warnings and sanctions system?

Am I prepared and confident to be flexible with the programme?

Have I some alternative possibilities ready?

What support is available to help me reflect, evaluate and plan for the next session?

Developing a Model for Self-evaluation

People talking without speaking

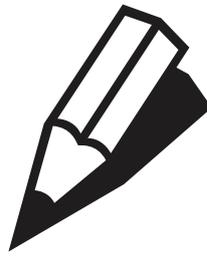

People hearing without listening ...

'Fools,' said I, 'You do not know

Silence like a cancer grows.'

LYRICS FROM: SIMON, P. (1964), SOUNDS OF SILENCE.

developing a model for self-evaluation

6.0

To evaluate means to collect information about the results of an action and set this against predetermined goals in order to judge the value of the results. The evaluation allows you to maintain, to change or to suspend, justifiably, a defined plan. In this way it supports you to decide the direction you need to go and the best way to get there.

A simple word 'Evaluation':

- *What for?*
- *When? In which circumstances?*
- *With whom?*
- *How to do it?*

The Self-evaluating School ¹

Self-evaluation is a process through which an individual teacher, groups of staff, the staff as a whole and senior management can:

- *reflect on their current practice;*
- *identify and celebrate the school's strengths;*
- *identify and address areas for improvement in their work;*
- *engage in personal and shared professional development;*
- *focus on improving the quality of learning and teaching.*

The process of self-evaluation:

- is ongoing and sharply-focused, and involves monitoring and evaluating the effectiveness of the existing provision and the pupils' achievements;
- recognises the need for the staff and governors to have a clear and agreed view of the school's current stage of development and through school development planning, to identify priorities which will have a positive effect on learning and teaching;
- informs and influences classroom practice and the quality of learning and teaching, and promotes development and improvement;
- requires staff to evaluate their work critically, reflect on the extent to which expectations are being realised in the work of the school, and establish a clear vision and future direction for the school.

This process requires a climate where all involved are encouraged to be open about their work, evaluate and where necessary improve their own performance.

¹ Adapted from the Department of Education's Education and Training Inspectorate, *Together Towards Improvement A Process for Evaluation*, Bangor, ETI.

6.1 Reviewing

In this context, reviewing is understood as a process of reflecting, asking questions and making learning connections, which is informal and integrated into the fabric of how you work.

Evaluation takes place when this process is formalised and broadened to include aspects such as structures, programme content, delivery style, numbers participating, etc.

Learning does not take place in a vacuum, but in the context of everyday life. Optimum learning is achieved when it is connected. For example, the Northern Ireland Curriculum supports the links between subject areas / themes, although this requires further integration as children / young people also need support in understanding the links between different aspects of learning. Similarly, adults need to see the relevance of any training they receive, to the work which they are required to do or the responsibilities which they carry.

Reviewing is about the link between experience and learning. Just as we need experience in order to learn, we need to use our knowledge to plan our actions and experiences.

REVIEWING INVOLVES FOUR BASIC PROCESSES:

1 Reflection

- *understanding what happened and why;*
- *judging progress in terms of the objectives within the learning programme;*
- *making connections for ourselves;*
- *relating experience gained through the learning programme and existing knowledge.*

2 Making Connections

Personal growth can be viewed as making new connections in any of several directions:

- *upward to achieve one's full potential;*
- *outward to contact and encounter others;*
- *inward to increase our awareness of who we are and what we want, need, sense and feel.*

Some activities have value in their own right, and do not depend on the kinds of connections that are made with other experiences.

We continually come to know ourselves and our worlds by making connections between past, present and future. Threads and themes help us to draw separate experiences together into stories about ourselves and who we are. This can be restricted if, for example:

- people's development is held back by others around them who will not let them change or grow up;
- whatever they do gets explained by themselves or by others in terms of labels from the past.

3 Planning

The experience and learning gained through activities is used to plan what happens next in the programme.

4 Learning Transfer

This is a process of continuous development, which focuses on identifying new knowledge, understanding and skills and thinking about how these can be used in current or future situations.

Questions for Reflection

Do I regularly consider my teaching with a view to identifying aspects that can be usefully developed?

Do I make use of systematic evaluation methods of collecting data about my current practice that may be helpful?

What do I do about what I have learned?

6.2

Assessment as Evaluation

Assessment is an integral part of the learning process through which teachers / trainers build a comprehensive picture of the progress and learning needs of each child, young person or adult in order to plan future work and improve learning. Improvement in learning through assessment is enhanced by:

- the active involvement of children, young people and adults in their learning, including:
 - *sharing learning intentions with children, young people and adults;*
 - *raising their awareness of the skills and knowledge that are being developed;*
 - *developing their awareness of strategies which they employ in their own learning;*
- the provision of effective feedback to children, young people and adults (recognising the profound influence this can have on motivation and self-esteem, both of which are crucial influences on learning) and creating circumstances whereby everyone can give feedback to the teachers / trainers about their learning experiences;
- developing their ability for self-assessment by helping them to :
 - *reflect on and evaluate their own work;*
 - *affirm their own successes and learning;*
 - *set their own goals following supportive questioning and feedback;*
 - *develop practical strategies to improve;*
- the adjustment of teaching / training to take account of the outcomes of assessment.

6.3 Evaluating Learning

ESTABLISHING A BASELINE

Several methods and techniques can be used in an evaluation, depending on the circumstances. Whatever method you choose, it is important to reflect on the starting point of the group so that you have a baseline.

This starting point could be in connection with, for example:

- *new learning;*
- *change of attitudes;*
- *development of skills.*

This baseline will enable you to see what has been achieved and can fit into what you are already doing, for example, the school development plan, monthly plans, training agendas, etc.

SETTING LEARNING OUTCOMES

Once the baseline is established, it is important to set a purpose / learning outcomes for any session or programme. These will provide you with indicators against which to measure your evidence, i.e. how far have you moved from the baseline in achieving the goals (learning outcomes) which you have set?

GATHERING EVIDENCE

A varied range of evaluation techniques need to be used as an integral part of the learning and teaching process, not just at the end of a session / lesson. Facilitators need to select techniques that best suit the nature of the work and the needs of the group members at the particular time, for example:

- *observation;*
- *discussion;*
- *oral, written, visual presentations, including photographs, videos, etc.;*
- *creative arts displays or presentations, including drama, puppetry, etc.;*
- *individual or group tasks;*
- *project work;*
- *homework;*
- *lesson and monthly plans;*
- *feedback questionnaires;*
- *reports and policy documents.*

The evidence from these activities should help facilitators:

- *evaluate the individual and group learning;*
- *plan the next stages of learning for this group;*
- *adapt the programme for a similar group;*
- *evaluate their own learning.*

Ideas for Inclusion to Ascertain Learning

Looking Back

- What have we learned so far?
- *What do we know now that we did not **know** at the beginning?*
- *What do we **understand** now that we did not understand at the beginning?*
- *What can we **do** now that we could not do before?*

- Which of these things helped us learn?

- How have they helped us learn?
 - *the group as whole;*
 - *particular group members;*
 - *the group atmosphere;*
 - *the learning approaches;*
 - *the facilitator;*
 - *the material / resources used;*
 - *specific activities?*

- Did any of these things interfere with our learning in any way? If so, how?

- What have we found out about our personal ways of learning things?
 - *methods we find helpful, for example, trying things out, using books, being instructed by others, using videos and learning aids;*
 - *the style of learning we like best, for example, working alone, working in small groups, in pairs, working co-operatively, competing against other groups;*
 - *the personal skills we use, for example, observing, listening, memorising, comparing one thing with another, making notes?*

Looking Forward

- How can we use this knowledge about the way we learn to help us with future learning?

- Where do we go next with this programme?

- If the programme is finished, is there a need for follow-up / further support for individuals or for the group?

Reflection Questions for Staff

- What are the main learning methods used in the session / programme?

- How interesting and useful are they?

- What role do you play in the process?

- Do the group members help one another learn?

- Are there any changes you would make to the session / programme?

- What role could the participants play in the session / programme?

- How did the participants organise themselves during the activities; how were decisions made?

- Did the groups work well together, how do you know this?

- How good was communication, did people share ideas, information, questions?

DEVELOPING A MODEL FOR SELF-EVALUATION

Evaluation Example: Feedback Sheet

DATE OF ASSEMBLY _____

What did you enjoy most and why?

What did you enjoy least and why?

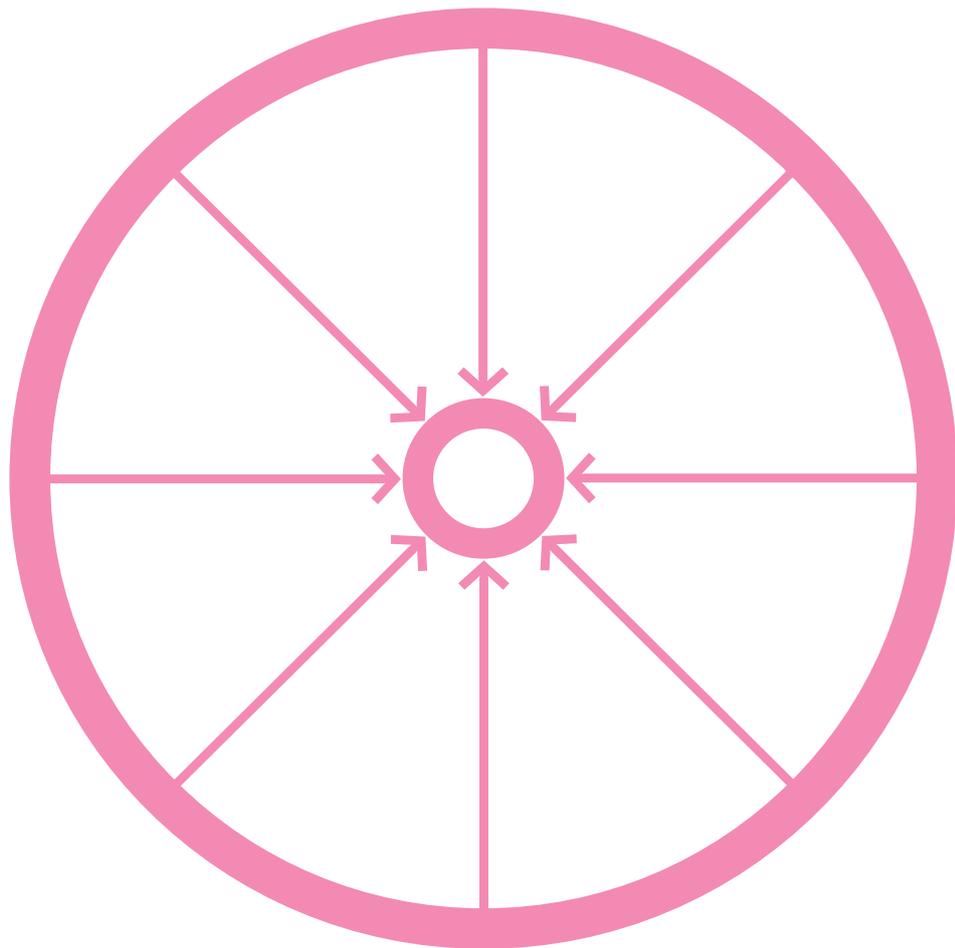

One thing you did not know before this assembly?

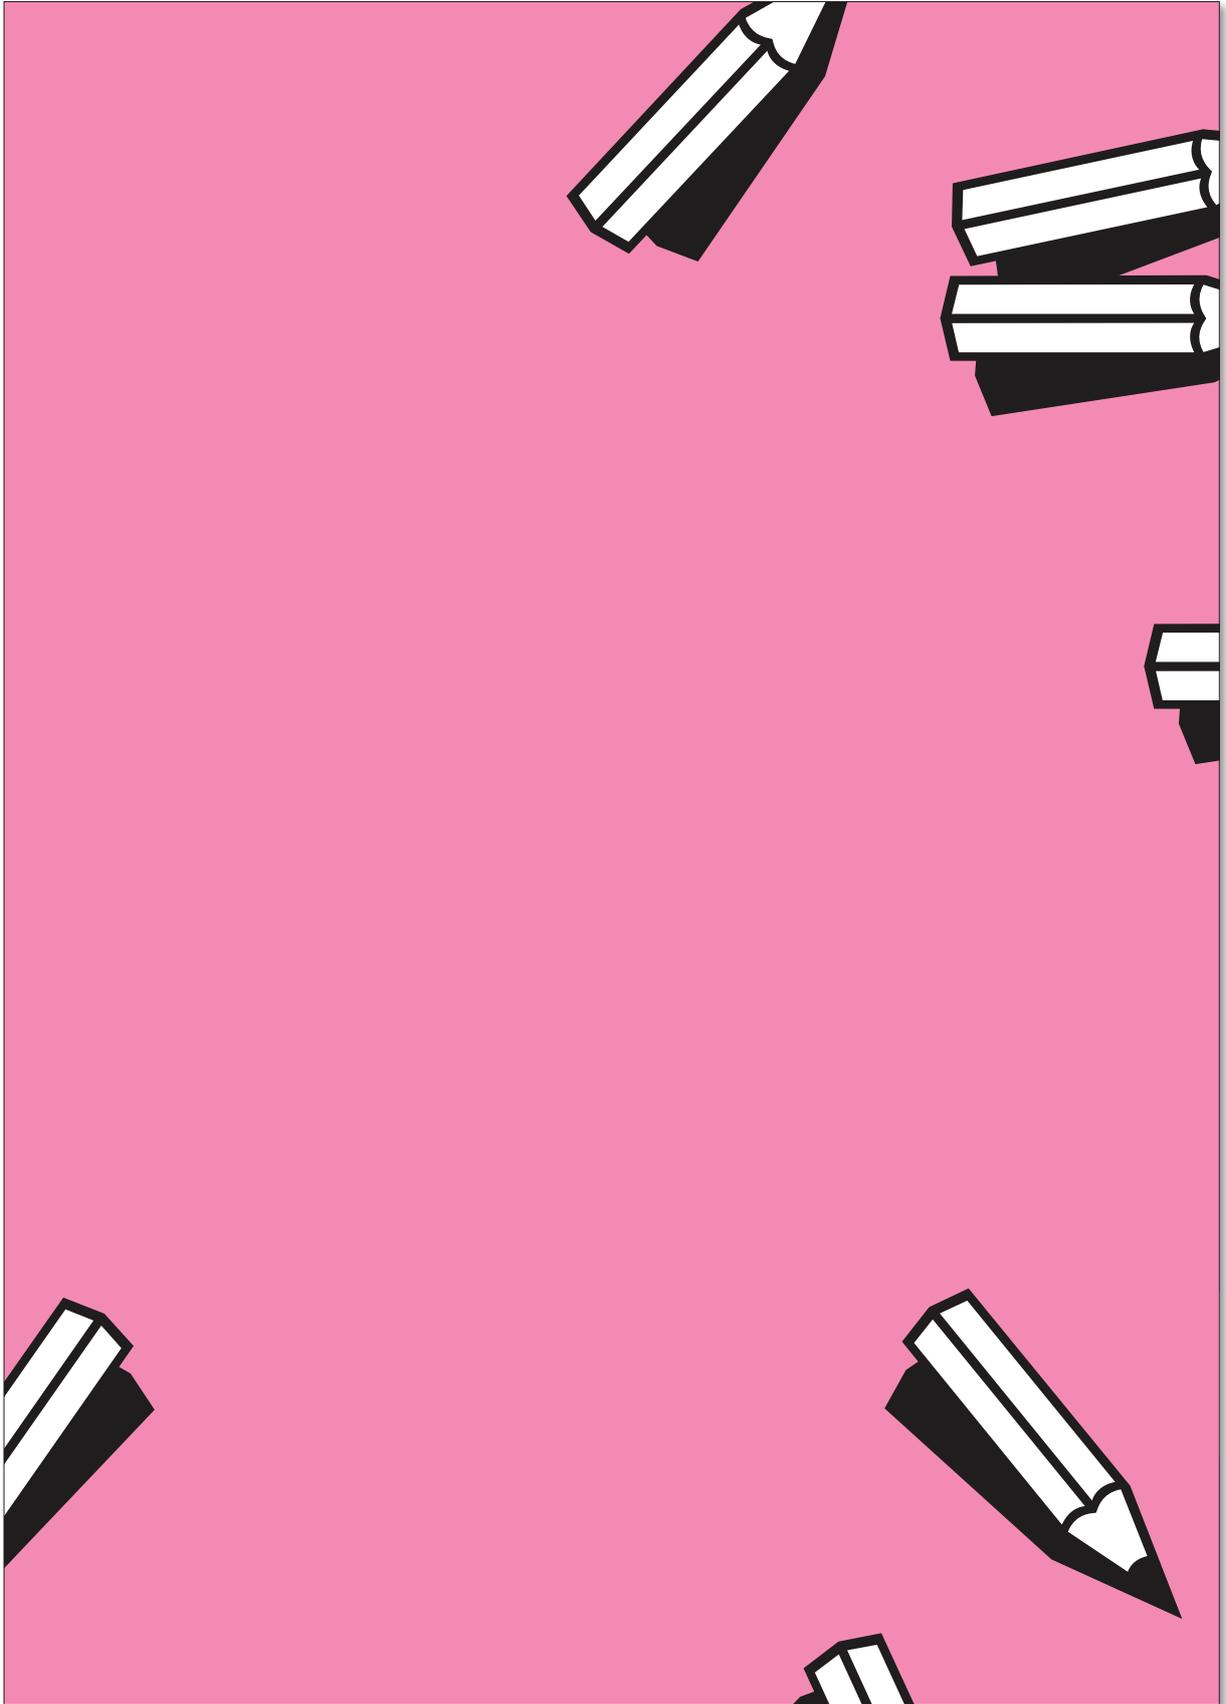

What will you remember about this assembly?

Evaluation Example: Dartboard Evaluation

Label each segment to represent an aspect of the programme, for example, different activities, venue, etc. Assuming that the centre of the circle (the Bull's Eye) is excellent and the outside is not so good, mark each section with an 'X' or a colour to show how you felt about that programme aspect.

Beyond Programmes

Learning for Life

Beyond programmes

7.0

Opportunities and Support for Group Members Beyond the Programme

All learning involves some degree of change, whether in terms of:

- *levels and areas of knowledge;*
- *new and developed skills;*
- *attitudes;*
- *breadth and depth of understanding;*
- *emotions;*

or a combination of these and other factors. Therefore, if the groupwork process has been effective, this means that people are impacted in ways that go beyond the duration of the programme itself.

This should generally be a very positive thing – after all, this learning is a key reason why people were participating in the first place. Providing people with resources and support beyond the programme will help them to remember what they have learnt, and to build on it further. Some possibilities for doing this include:

- providing handouts, resources and resource lists (for example, relevant books, videos, website addresses);
- programming follow-up sessions into the class timetable, staff development strategy, etc.;
- asking people informally, individually or in a group setting, whether they have thought any more about or done anything further with their learning;
- working as a staff team – making colleagues aware of what you are doing so that they can make connections and reinforce the learning;
- follow-up through a supervision meeting;
- referring back to key learning points in other contexts to which they are transferable and encouraging the group to discuss their relevance;
- using other opportunities such as assemblies, displays, staffroom noticeboards, etc. to highlight the key learning points;
- providing people with information about other relevant training opportunities outside the school setting, and providing support in applying for these;
- drawing on other educational and external resources, for example, ELBs, local youth workers, community-based projects, issue-based organisations, etc.

BEYOND PROGRAMMES: LEARNING FOR LIFE

People may also need support beyond the programme if the themes explored and the learning have been particularly challenging. It is important that the programme itself is structured so that closure, personal reflection and evaluation are all thoroughly attended to. Beyond that, some of the strategies listed above will provide opportunities to check how people are progressing with their learning and how it has impacted on their life experience. If appropriate, specific follow-up can be designed with them in order to meet their learning and support needs. Very occasionally, the work may raise personal issues for a particular individual, and it may be appropriate to encourage or enable her / him to seek specific external support such as counselling. As with all aspects of the work, it is essential to follow school procedures in doing this.

Opportunities and Support for Children and Young People

Hopefully, the themes explored and learning which takes place within the groupwork sessions will be genuinely relevant to the lives of the children and young people involved. If this is the case, it is unlikely that the experience will finish when they leave school at the end of the day or after the final session of a module / programme.

Most learning involves some level of change and if the facilitator looks honestly at the purpose of this kind of work, it is probable that there is an explicit element of change intended. This might include:

- *developing critical thinking skills;*
- *developing emotional literacy;*
- *challenging prejudice and discrimination;*
- *encouraging group members to relate more positively to those who come from backgrounds different to their own;*
- *approaching conflict situations differently.*

This is likely to be the case particularly when the themes being explored are controversial, and the groupwork is demanding with regard to the feelings, attitudes they touch and viewpoints which they challenge. In some circumstances, particularly for young people, there may be a number of difficult consequences to this. For example:

- They may experience a significant change in their ways of thinking and relating to other people, particularly those whose background or views are different to their own. This may be a challenging experience which raises feelings of uncertainty and even anxiety.
- They may find themselves in conflict at some level with family members, friends, peers and others in their community.
- For some, even to participate in a programme with people from a different community may make them vulnerable in their own community, regardless of whether or not they demonstrate changes in attitudes or behaviour as a result of their participation.

It is, therefore, really important for the facilitator to think clearly about the purpose of the work, the potential learning and change outcomes, and the support structures which are needed. There are limitations which a school will face within its particular community and societal context, but participants' safety and personal development must be appropriately attended to beyond the actual module or programme.

Below is a list of some possible structures and ways of working which will contribute to the physical and emotional safety and development of children and young people beyond the programme itself.

- The whole school model allows for a broader support context than an individual teacher working with a group on their own.

- Where appropriate, informing and involving parents and others (such as local youth workers) will broaden the support structure.
- Throughout the programme, the facilitator needs to hold a balance between acknowledging genuine fears and concerns, and encouraging participants to recognise the potentially positive outcomes of their participation and learning.
- The development of skills within the programme must be done in a way that is transferable to the rest of life. The facilitator needs to ensure that these connections are sufficiently made.
- The ethos of encouraging people to take responsibility for their own learning needs to be supported by discussion which helps them to contextualise this within their longer term experience.
- This will also involve developing their awareness and understanding of the relationship to the social and political context in which they live.
- The facilitator and others within the school need to be available to offer appropriate individual support on both an informal and formal basis. This will be dependent on the building of good relationships.
- There may be opportunities to provide training and support to older pupils so that they can take on a mentoring role for younger pupils.
- Informal and more formalised peer support structures can be developed through the programme (where hopefully a strong sense of team has been built) and beyond.
- Children and young people will benefit from the opportunity to articulate their learning

with others, whether their peers or adults. As well as enabling them to develop further skills, this process affirms them, and their learning and achievement as something hugely positive.

Opportunities and Support for Adults

Many of the principles outlined in the section above will also be relevant when working with adults in the school community or in a teacher education setting.

As well as application within their broader life experience in general, it is likely that their participation in the programme is intended to have specific reference to their interaction with children and young people in the school and related settings. With this in mind, some additional forms of support beyond the programme could include:

- resources which will enable them to translate their experience as a participant into the development of programmes and the facilitation of similar work with children and / or young people;
- opportunities (through supervision meetings, follow-up sessions, etc.) to reflect on this facilitation, particularly in the early stages;
- opportunities to reflect on occasions when they have had to put their training into practice in responding to specific incidents in the classroom, the playground, etc.;
- opportunities to share their learning with other adults, for example, teachers and other staff in their own school or in other schools, governors, parents, etc.;
- further training and development opportunities which will enhance their learning and confidence.

7.1 Working in Partnership: The School in the Community

Questions for Reflection

Have I thoroughly considered the broader context of the programme / module which I am planning?

Have I built in sufficient time for personal reflection, evaluation and closure?

Are there likely to be physical and emotional safety issues arising from this programme?

What support and follow-up will be useful and possible beyond the programme? For example:

- *What handouts and resources can I provide?*
- *Is there scope within my time-frame for follow-up sessions?*
- *What opportunities do I have to find out informally how people are doing (for example, at the end of a class or staff meeting)?*
- *How can I ensure that future programmes for this group build on the current learning?*
- *What other appropriate external training / development opportunities can I suggest?*

Who might I need to work with to develop these options effectively?

Will this person / these people be working directly with children and / or young people? If so, what Child Protection forms need to be completed?

It can sometimes seem that schools are expected to do everything, and this can be an enormous pressure within the restrictions of the weekly timetable, the demands of the curriculum, curricular changes, etc. It is important to remember that schools are situated within communities and there are likely to be rich human and physical resources within the local and wider community which can support the work within a programme and beyond it.

Building partnerships with, for example:

- *youth workers;*
- *community projects and residents' groups;*
- *other schools and further education colleges;*
- *churches and other faith centres;*
- *the local Council;*
- *Health and Social Services Trusts;*
- *local businesses and other workplaces;*
- *homes for elderly people;*
- *the police and fire services;*
- *local charities or voluntary organisations;*
- *cultural centres and agencies, including museums, galleries, etc.;*
- *local libraries;*
- *sports centres and facilities;*

will provide the school with a valuable pool of experience and expertise across a whole range of issues and practice, and may be useful within a particular programme and beyond it.

Some specific examples might include:

- a local community project or residents' group which is able to provide teachers who live outside the area with some insight into issues affecting the local community;
- local youth workers offering to run a linked programme in conjunction with, or as a follow-up to, the programme you are running within the school setting;
- local churches and other faith centres hosting sessions as a follow-up to a school-based programme exploring themes such as diversity, sectarianism, etc.;
- older people within the community working with children and young people to help them build their knowledge and understanding of the development and changes within their local community over the past century;
- local businesses and / or charities and voluntary organisations providing people with opportunities to put their learning into practice, for example, giving teachers and others the opportunity to work within a youth work setting, or supporting young people developing an action project as part of Local and Global Citizenship;
- the school and individuals within it using local shops, businesses and services.

The school can similarly be a resource to the community in which it is situated. The time taken to build these partnerships will be a valuable investment, not least because, within and outside the school, it will increase people's understanding of the school as a part of the community. The positive relationships and experiences which form through these partnerships will enable children, young people and adults to connect with the community in new ways, becoming more aware of the richness and diversity within it and of the opinions and perceptions held of the school.

Questions for Reflection

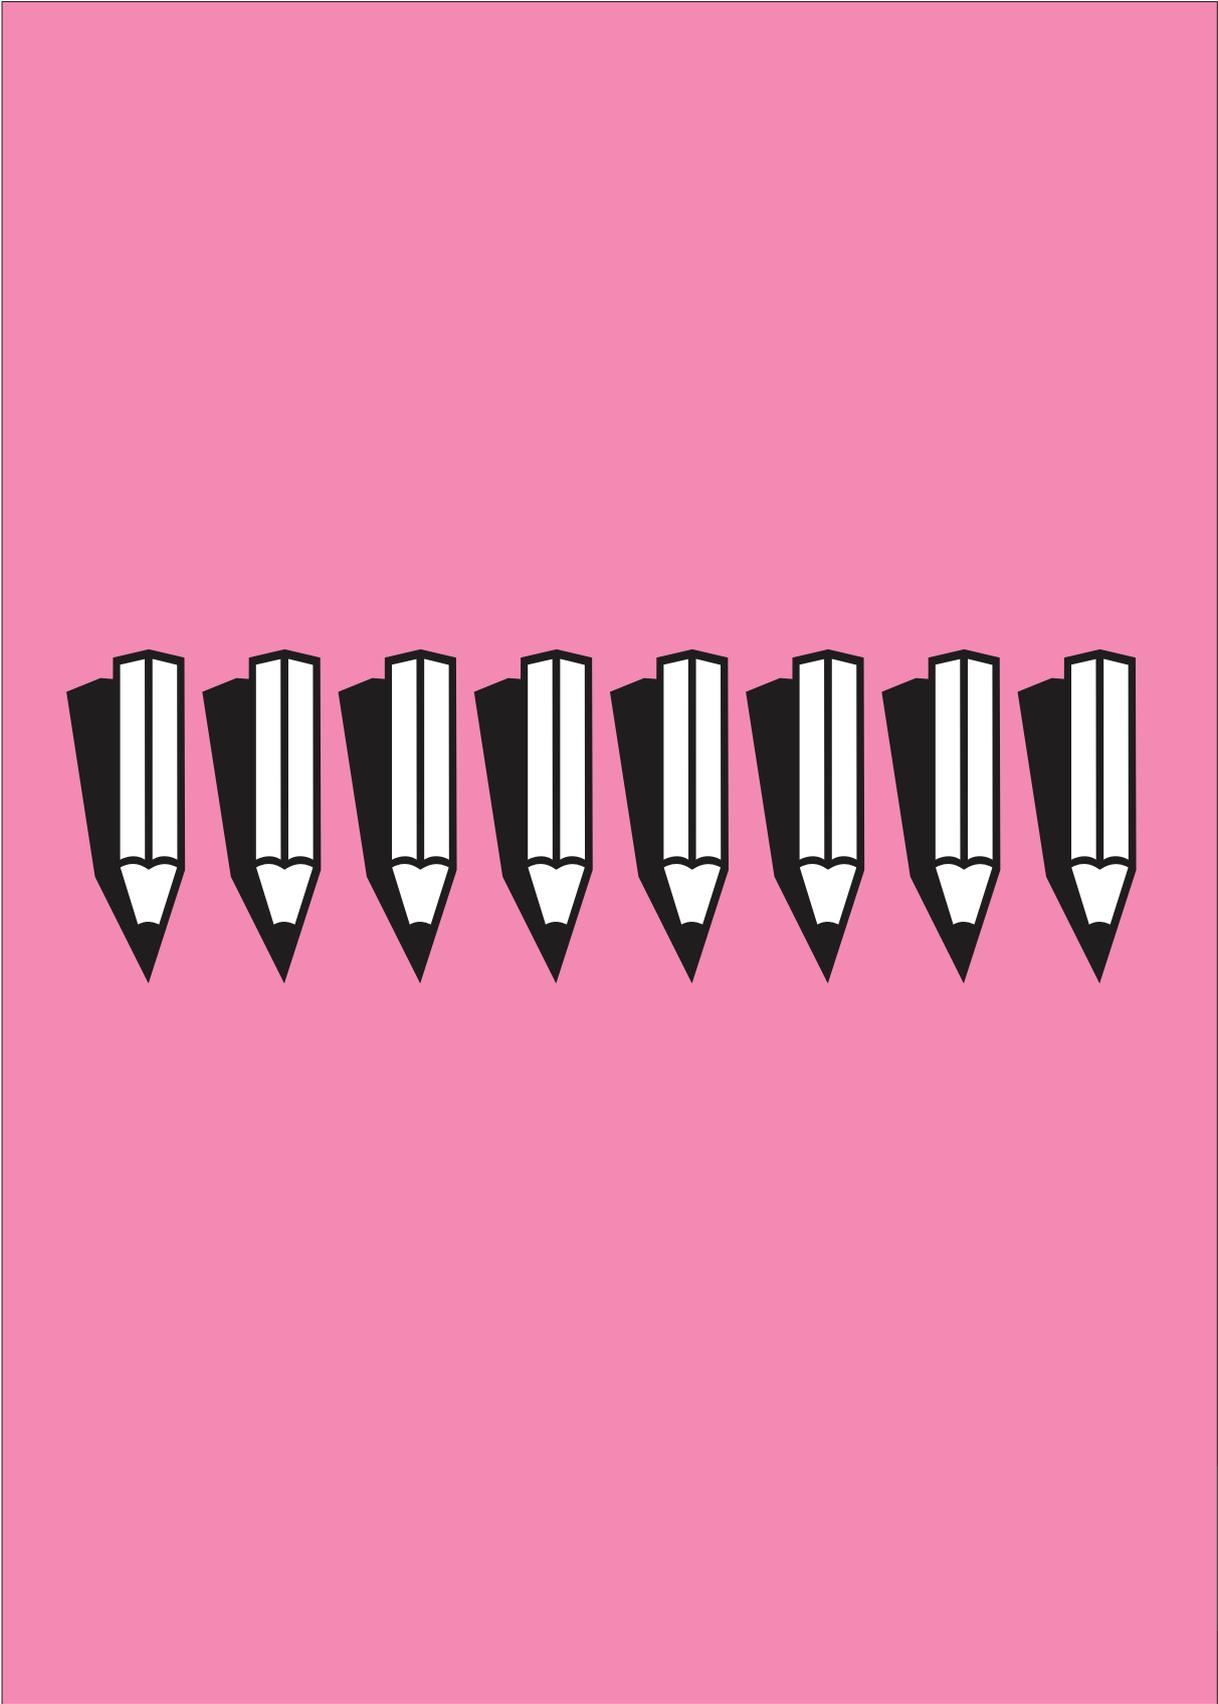

What range of partnerships can the school as a whole and I in particular build within the local community?

What opportunities are there for members of the local community to contribute to the curriculum and to school life in general?

Is there a regularly updated resources and contacts list that is accessible for everyone in the school?

Is everyone, including pupils, aware of the community resources available to them?

In what ways can the school also serve the community, so that the partnership works both ways? For example, allowing groups within the local community to book facilities within the school, such as the computer suite, playing fields, assembly hall, gym.

Appendix Two: Whole School Audit

This general audit¹ needs to be adapted to the particular context of the individual school, which may mean adding, changing or omitting certain questions from the sample outlines over the following pages.

The questions can be changed into questionnaire format appropriate to particular groupings (for example, teachers, other staff, pupils, parents, and governors). In the questionnaire format, it can be more useful to frame the questions around 'what do you think' to elicit personal responses and views. It is also important to ensure that the language used is appropriate for the target grouping, for example, avoiding jargon / abbreviations, using a few questions with picture-based responses for younger children, etc. Too many questions can put people off – so select a number of key questions (or write alternatives) for each section, rather than including all of them.

In both the questionnaire and general audit format it is important to provide appropriate practical and / or anecdotal (avoiding use of names, etc. to maintain confidentiality) evidence to support the answers. The answers and evidence will provide the baseline from which you can develop your action plan for achieving your vision goals.

¹ Some questions adapted from Booth, T. et al., *Index for Inclusion: Developing Learning and Participation in Schools*, Bristol, CSIE.

RESOURCES AND INFORMATION: APPENDIX TWO

Sample Outline: Whole School Audit

Leadership: Management Structures and Decision-making Processes

WITHIN THE STAFF TEAM

How many staff² make up the whole staff team?

Describe the leadership / management structures within the school.

Is it a priority of the school to have a diverse leadership team?

Are staff aware of the priorities of the school development plan?

Are staff given opportunities to be involved in contributing to the school development plan?

Do staff feel that they are sufficiently involved in school decision-making?

188

² Throughout the audit, 'staff' is used to refer to all staff, support staff as well as teachers.

How are decisions communicated to the whole staff team?

What support is available to staff through the management structures, for example, in terms of supervision, in responding to challenging behaviour or incidents, etc.?

What structural support is available to the leadership / senior management team?

Are staff involved in the development of the school policies?

Does the leadership of the school encourage staff to use their full expertise, skills and creativity?

How is in-service training decided on, delivered and managed?

Are there sufficient staff meetings?

Are support staff invited to attend relevant meetings?

RESOURCES AND INFORMATION: APPENDIX TWO

Is there wide participation in staff meetings?
Do all staff feel comfortable to contribute?

Do staff feel that their contribution is valued,
irrespective of their position in the school?

BOARD OF GOVERNORS

Do staff understand the role and
responsibilities of governors?

Do governors share in-service training
opportunities with staff?

Do governors and staff work well together?

Do governors and staff agree about what
governors can contribute to the school?

Do governors and staff have a shared
commitment to the school's vision and
values, and support each other in their work?

Internal Relationships: Pupils, Staff and Parents / Carers

PUPILS AND STAFF

Do staff treat all pupils with respect, regardless of their backgrounds, abilities, etc.?

Do pupils treat all staff with respect, regardless of their position?

Do staff attempt to counter negative views of and derogatory comments about pupils by both pupils and other staff?

Do staff promote equality of opportunity for all pupils?

Do staff treat all pupils with fairness, regardless of background, abilities, etc.?

Is there a forum for pupils to express views and to be involved in school decision-making?

Do pupils' opinions and ideas make a real difference to the school?

RESOURCES AND INFORMATION: APPENDIX TWO

Do staff see the personal and cultural diversity of pupils as a rich context for learning?

WITHIN THE STAFF TEAM

Do staff treat each other with respect, regardless of their position?

Do staff feel comfortable discussing challenges and dilemmas with colleagues?

Do staff recognise how their behaviour and interactions are a model for pupils?

Do staff know whom to turn to if there is a problem?

Do staff recognise the richness of their own diverse backgrounds, skills and qualities?

Do all staff have structured opportunities for collaborative working and reflection?

Do all staff take responsibility for trying to make the school more inclusive?

Do staff demonstrate effective conflict resolution skills with pupils, colleagues and others?

Is the staffroom a welcoming and comfortable place for all staff?

STAFF AND PARENTS / CARERS

Are parents / carers made to feel welcome in the school?

Do staff and parents / carers treat each other with respect?

Do staff encourage the involvement of all parents / carers in their children's learning?

Do parents / carers take an active part in their children's learning? Are they clear about what they can do to support their children's learning at home?

RESOURCES AND INFORMATION: APPENDIX TWO

Are efforts made to overcome any barriers there may be to parents' / carers' involvement in their children's learning?

Is there good communication between staff and parents / carers?

What opportunities are there for parents / carers to consult teachers about their children's learning?

Are parents / carers well informed about school policies and practices?

Are parents / carers involved or consulted in school decision-making?

Are parents' / carers' skills and knowledge utilised within the school?

Is there a Parents' / Carers' Group or Parents' / Carers'-Teachers Association?

BETWEEN PUPILS

Do pupils have good self-esteem?

Do pupils treat each other with respect
regardless of background, ability, etc.?

Do pupils appreciate the achievements of
others, recognising that different people
have different starting points?

Do pupils help and support each other, not just
those in their immediate friendship circle?

Do pupils work well together on group /
team activities?

Do pupils demonstrate effective conflict
resolution skills?

Is bullying being minimised among pupils?

Are there peer (pupil – pupil) mentoring or
mediation programmes within the school?

RESOURCES AND INFORMATION: APPENDIX TWO

School Policies

PROMOTING INCLUSIVITY ACROSS POLICIES

How does the school attempt to minimise all institutional prejudice and discrimination?

How do policies explicitly contribute to and support anti-discriminatory practice?

Are policies written in inclusive language?

Do policies and practice ensure that minority groups in the school do not experience prejudice, stereotyping, discrimination or exclusion?

Do staff avoid stereotyping and discrimination in choosing pupils for tasks, roles in school productions, etc.?

Is it recognised that individuals have multiple dimensions of identity, and that within a particular grouping individuals will have different beliefs, attitudes and experiences?

Are policies developed in ways which overcome barriers to participation and learning?

Is the school addressing aspects of physical accessibility throughout its buildings and grounds?

STAFFING POLICIES

Does the composition of the staff team reflect the communities in the school's locality?

Do the management posts reflect the balance of genders and backgrounds of staff in the school?

Is a commitment to the values of inclusivity, respect for diversity, enabling participation and open communication regarded as an essential criterion for the appointment of staff?

Do all appointments and promotions procedures demonstrate fairness and transparency?

Are strategies in place to develop a sense of team among the staff, particularly with regard to welcoming new members?

How democratic are the policy development processes within the school?

RESOURCES AND INFORMATION: APPENDIX TWO

**PASTORAL / LEARNING SUPPORT / POSITIVE
BEHAVIOUR POLICIES**

Are pupils, parents / carers and others consulted
in developing these and other policies?

Do pupils know who to go to if they have a
particular difficulty? Do they feel comfortable
to do this?

Is support for pupils who experience barriers
to learning and participation seen as a
responsibility of all members of staff?

Do all staff receive training and support in
responding to pupils who may approach
them because they are troubled about
something within or outside school?

Is there a pro-active approach to bullying
attitudes, language and behaviour?

Do all staff receive training and support in
challenging sectarianism, racism, sexism,
homophobia and other forms of prejudice
and bullying?

Are relational and restorative approaches
used to respond to behavioural issues?

Are pupils involved in developing school / classroom rules as a matter of policy?

Are there clear reward, warning and sanction systems, which enable pupils to be clear about the likely consequences of their behaviour?

Are there clear procedures in place to respond to the extremes of challenging behaviour?

What support structures are there for individual staff members who have to respond to persistent challenging behaviour?

In what ways are pupils positively involved in overcoming behavioural issues and disaffection?

Once a behavioural issue has been addressed, do pupils experience 'forgiveness' and the freedom to start with a 'clean slate'?

RESOURCES AND INFORMATION: APPENDIX TWO

Teaching and Learning Approaches

What does the school understand 'learning' to consist of?

How does the school understand itself as an inclusive learning community?

Are there opportunities for everyone in the school to learn and develop, and to make informed choices with regard to their learning needs and opportunities?

Do teaching approaches within the school reflect a commitment to inclusion, respect for diversity, enabling participation, and open communication?

Does the school provide support for pupils for whom English is not their first language?

How does the school value and give affirmation to people in the diversity of their intelligences, skills and achievements?

How are opportunities created for everyone to learn effectively and to experience success?

Are all pupils and staff encouraged to have high aspirations about their learning?

Are people encouraged to view mistakes / failures as positive learning opportunities?

How are opportunities created for people to be co-learners, learning from and with each other?

Where pupils have areas of particular skill and experience, are they encouraged to share these with their peers and also with staff?

Are there opportunities for learning and relational skills development for all the different groupings within the school community?

Do staff feel confident and supported to explore challenging or controversial themes with pupils, colleagues and others?

Are issues of prejudice and conflict openly, respectfully and constructively discussed?

RESOURCES AND INFORMATION: APPENDIX TWO

What opportunities are there for self and team evaluation?

Are there positive relationships in place so that people are able to give each other constructive feedback and learning support?

Other Working Practices

CLASSROOM AND CURRICULUM ISSUES

Do staff members avoid classist, sexist, racist, disabilist or homophobic and other forms of discriminatory remarks and thereby act as positive role models?

Are pupils encouraged to work with others who are different from themselves in terms of background, gender, impairment and ethnicity?

Does the curriculum seek to develop an understanding of differences of background, culture, ethnicity, gender, impairment, sexual orientation and religion?

Is stereotyping questioned in curriculum material and during classroom discussion and after school activities?

Is there a range of assessments used that allow all pupils to display their skills?

Do teachers share in planning schemes of work for lessons and homework?

Do teachers and classroom assistants share in working with individuals, groups and the whole class?

Are learning support assistants involved in curriculum planning and review?

Do teachers welcome comments from colleagues?

Do teachers share their attention equitably, irrespective of gender, ethnicity, class and culture?

Do all pupils feel fairly treated?

RESOURCES AND INFORMATION: APPENDIX TWO

RELIGIOUS EDUCATION (RE) PROVISION

Is RE delivered to take into consideration the diversity of faiths?

Are world faiths celebrated within the school?

If the school has a Christian ethos is it inclusive for non-Christians?

What festivals / holy days do you celebrate in the school calendar?

Are key milestones in individual pupil's spiritual development marked by the school community?

Are religious symbols displayed in the classroom and school building?

Are the religious symbols balanced for all faiths and none?

SCHOOL DISPLAYS

How do you ensure that all the communities within the school are represented in the displays?

What is the purpose of the displays within the school?

In what way does display enhance pupils' and adults' learning?

How is diversity evident in library materials and school / classroom displays?

ASSEMBLIES

Do you have daily, weekly or monthly assemblies?

What is the purpose of assemblies in the school?

RESOURCES AND INFORMATION: APPENDIX TWO

Does the whole school gather for assembly or is it in smaller groups?

How often does a whole school assembly take place?

What themes are selected for assemblies - how are they selected?

Who is responsible for organising assemblies?

Are children and young people involved in the planning and delivery?

Are guest speakers used for assemblies? If so, how often and which organisations are represented?

Are the speakers representative of a diverse society?

Is attendance at assemblies voluntary or mandatory?

Do you use prayers during assemblies?

Does the assembly have a Christian emphasis?

Is there provision for non-Christians during assemblies?

EXTRA-CURRICULAR ACTIVITIES

Is there a range of after-school activities?

Is transport made available to enable those who have far to travel?

Are there opportunities for boys and girls to take part in single sex activities?

Are pupils discouraged from monopolising the play areas with, for example, football?

RESOURCES AND INFORMATION: APPENDIX TWO

Are pupils who get chosen to represent the school representative of the diversity of the school?

Do sports days include activities in which everyone can take part irrespective of skill level, etc.?

What clubs, societies, charity work does the school support? How are they chosen - are they balanced?

Are religious dietary requirements taken into consideration in the planning and preparation of school meals?

Relationships with the Wider Community

Is the first contact that people have with the school friendly and welcoming?

Does the school involve local communities in activities in the school?

Do members of the local community participate equally in the school regardless of their background (religious, ethnic, economic, etc.)? Is there a positive view of the school within the local community?

Are the school's entrance criteria for pupils inclusive and enabling to all children / young people within the local community, regardless of background, ability, etc.?

Do many of the staff team come from the local communities?

Does the school view the local communities as a valuable learning resource?

Is there a regularly updated record of resources in the locality that can support teaching and learning?

Do members of the local community contribute to staff development / training and to the pupils' curriculum?

Does the school have a good relationship with individuals in the local communities who can help build an understanding of community issues / events which may be impacting on pupils' needs, learning, behaviour, etc.?

RESOURCES AND INFORMATION: APPENDIX TWO

Relationships with the Wider Education Sector

Who does the school liaise with within the sector?

Is there a record of contacts maintained in the school?

Has the school discussed the impact of the developments within the education sector?

How do you see the school responding to the changes within the education sector of which it is part?

How do you see the school responding to the changes with technology?

How do you see the school adapting to political changes?

What resources does the school share with other educationalists?

How does the school represent itself to other educationalists?

What does the school foresee to be the biggest challenge in the next three years?

Does the school have relationships with other schools? Do these support the pupils and adults to learn about diversity?

How does the school relate to and work with other practitioners who work with children and young people?

Appendix Three: Outline Circle Time Session 1 ³

THEME / TITLE:

Exploring Identity – ‘Myself’

TIME AVAILABLE:

25 minutes

AGE GROUP:

Foundation Stage / KS1 *

INTENDED LEARNING OUTCOMES:

- To enable the children to explore their awareness of themselves
- To encourage the children to relate positively to each other
- To build self-esteem and respect for self and others

1 WELCOME AND INTRODUCTION:

Purpose:

to find out more about each other and the things that are important to us

Reminder of Circle Time Rules:

We listen to each other; we are kind to each other; we have fun together. (Use written / picture posters and / or actions to help children remember.)

‘What skills am I going to be watching out for?’ (Listening / looking / speaking / thinking / concentrating – use actions / pointing together to help children remember.)

2 INTRODUCTORY GAME / ACTIVITY:

Handshake Game

Purpose:

importance of name as part of identity, communication skills, encouraging participation

One person starts by turning to the person on her / his right, shaking her / his hand and saying, ‘Hello, my name is ...’. The second replies, ‘Hello, my name is ...’. S/he then turns to the person on her / his right, and this continues right around the circle.

3 SENTENCE COMPLETION:

‘Something I like doing in school / at home / at the weekend is ...’

Purpose:

thinking about myself / self-reflection, responsibility for self, communication skills, encouraging participation

Resources:

talking object – e.g. a teddy

Give the children a few seconds to think about the sentence, then ask for a volunteer to start. S/he can choose which way around the circle to pass the ‘talking object’. Encourage the children to say the start of the sentence as well as completing it as this supports them in taking responsibility for their own thinking.

**4 DISCUSSION FORUM /
SHARING MORE INFORMATION:**

Star Badges

Purpose:

self-reflection, creativity, affirmation, communication skills

Resources:

card stars, crayons

Give each child a star cut out of cardboard, and give them five minutes to write their name (or you can do this in advance, if need be) and draw a picture of something they are good at doing. Afterwards, go around the circle, using the sentence starter such as, 'I am good at ...' to enable the children to describe their picture. You could finish with a clap for everyone.

5 CLOSURE:

Rainstorm

Purpose:

working together, concentration skills, using up energy, bringing group to quietness at the session end

For this game, everyone needs to keep quiet and copy the leader's actions (once the children learn it, the leader does not always have to be the teacher!). Begin by clicking

your fingers, or tapping one finger on each hand together, then rub your hands together, then clap them slowly and not too loudly, then get louder, then pat your hands on your knees, then stamp your feet as well, as loudly as you can. Then work backwards through the sequence until the sun comes out (make a big circle shape with your hands) and everyone is completely quiet.

6 EVALUATION / PLANNING AHEAD:

* This outline provides ideas that might be suitable for Foundation Stage / KS1 pupils. However, it needs to be adapted to suit the specific group of pupils with which you are working. For example, with a younger group, you may need a shorter session, so include fewer activities in the middle part of the session. Alternatively, you could divide this session into three to four ten minute sessions, ensuring that you have an opening and closure point with each one.

Outline Circle Time Session 2 ⁴

THEME / TITLE:

Our Local Community *

TIME AVAILABLE:

30 minutes

AGE GROUP:

KS2 **

INTENDED LEARNING OUTCOMES:

- *To enable the children to become more aware of their local community and how they feel about it*
- *To build respect for each other and the people who live in their community*
- *To develop awareness of difference / diversity within their local community*

1 WELCOME AND INTRODUCTION:

Purpose:

how we feel about living / going to school in our local community, the different things we find here, what it looks like, what there is to do, the people who live here, etc.

Reminder of Circle Time Rules

2 INTRODUCTORY GAME / ACTIVITY:

Silent Statements Mixing Up

Purpose:

gently splitting up any cliques, encouraging different people to work together, introducing the session's theme, opportunity to observe what some key interests / issues might be

When you call out a statement, everyone to whom it applies gets up and moves to another seat. They must not move to the seat on either side of them or, within that go, return to their own seat.

Start with some fun statements, moving from the visual to things that cannot be seen – do not include statements that will only apply to one person. It can also be important to finish with a more light-hearted statement.

As an alternative, you can take away a seat, and let the person left in the middle each time come up with the next statement – if s/he is stuck, s/he can say, 'everyone change places.' You cannot determine the statements, although you can give some guidance as to the theme. Also, be aware of your group – being left in the middle may put some children under too much pressure, particularly in the early stages of the academic year, and this method may be inappropriate.

Examples, where everyone:

- *wearing blue, change places*
- *who had cereal for breakfast, change places*
- *who lives near the school, change places*
- *who walks to school, change places*
- *who buys at the local shops, change places*
- *who has friends on their street, change places*
- *who likes living in this area, change places*
- *who likes fruit, change places*

3 SENTENCE COMPLETION:

'Something I like about living in this area is ...'

Purpose:

developing the theme, communication skills, enabling participation

Resources:

talking object – e.g. soft toy, bean bag

Give the children a few seconds to think about the sentence, then ask for a volunteer to start. S/he can choose which way around the circle to pass the 'talking object'. Encourage the children to say the start of the sentence as well as completing it.

4 DISCUSSION FORUM / SHARING MORE INFORMATION:

Community Maps

Purpose:

exploration of theme, communication skills, reflection, decision-making

Resources:

A3 paper, crayons / pens

Small groups of approximately four pupils are asked to draw a basic map of the area where they live, marking on it any buildings, places, etc. that they have noticed. Encourage the small groups to discuss their maps, including the things they like and dislike about their area, other things that they wish were there and where they could be located, whether they think it is a friendly place to live, etc. A volunteer from each group can then feed back to the large group two important things they talked about, and / or all the maps can be spread on the floor / desks so that everyone can walk around and have a look. The teacher can

then facilitate a general discussion, possibly gathering the main points on a flipchart / whiteboard for exploration in future sessions.

5 CLOSURE:

'Electric Shock' Game

Purpose:

bringing everyone together at the end of the session, easing out of the discussion, teamwork, concentration skills

Everyone sits without speaking and holds hands (not too hard!). The teacher squeezes the hand of the person on their right, s/he passes the squeeze on, and so on right around the circle. Variations include seeing how fast the 'shock' can be passed around, passing a 'shock' in both directions so it has to cross in the middle, etc.

6 EVALUATION / PLANNING AHEAD:

* This is a theme which it would be useful to explore over a number of sessions. It could include supplementary activities such as going on a walk around the local community, taking photographs / video, exploring local history with older people who have lived in the community for a long time, looking at flags and symbols in the area, etc. It is important to note that if all pupils do not live locally, you will need to re-frame the session as the school's local community, or look at the different areas that pupils live in.

** This outline provides ideas suitable for KS2 pupils. However, it needs to be adapted to the specific group with which you are working.

Outline Circle Time Session 3 ⁵

THEME / TITLE:

Prejudice and Stereotyping *

TIME AVAILABLE:

45 minutes **

AGE GROUP:

KS3+ ***

INTENDED LEARNING OUTCOMES:

- To encourage empathy and respect for self and others
- To build an understanding of the terms 'prejudice', 'stereotyping' and 'discrimination'
- To explore 'real life' examples of prejudice, stereotyping and discrimination

1 WELCOME AND INTRODUCTION:

Purpose:

sharing intended learning outcomes, encouraging everyone's participation

Reminder of Circle Time Rules

2 INTRODUCTORY GAME / ACTIVITY:

Pattern Ball

Purpose:

introductory game to encourage the group to work together and build a sense of team, co-operation, thinking / concentration skills

Resources:

soft ball / bean bag, flipchart, pens

Everyone stands in the circle. One person begins by throwing the ball / bean bag to another person, saying her / his own name and the second person's name. The second person then throws the ball / bean bag to someone else. Once someone has received the ball, s/he then sits down which ensures that everyone gets a turn, completing the pattern. Variations can include repeating the same pattern of throwing as fast as possible (safely!), reversing the pattern, etc.

'Today we are going to begin thinking about prejudice, stereotyping and discrimination. Can anyone tell me what they think any of those words mean, or give me an example of them?'

Discussion of meanings / examples, possibly noting key points on a flipchart / whiteboard.

2 INTRODUCTORY GAME / ACTIVITY:

**Mixing Up Activity:
Concentric Circles**

Purpose:

developing the theme, giving people the opportunity to talk about related topics on a one-to-one level before discussing them in larger groups, gently breaking up cliques, encouraging different people to work together, thinking and communication skills

Everyone gets into pairs, labelling themselves 'A' and 'B'. The As form an outer circle, facing inwards, and the Bs form an inner circle, facing their partner. All of the pairs are then given a topic to discuss, then the outer circle moves one (or more) places to their right / left, and a new topic is given. This continues for several topics, including both fun ones and ones relating to the session theme. When the pairs have finished their final topic, they will be with someone different and they sit down beside that person.

Topic examples:

- *The best film I've ever seen.*
- *Somewhere I'd really like to visit.*
- *A time I felt different from other people.*
- *An example of prejudice / stereotyping / discrimination I've seen in the media.*
- *An example of prejudice / stereotyping / discrimination I've seen or experienced.*
- *A time I was left out / laughed at, and how I felt about it.*

3 SENTENCE COMPLETION:

Pairs Discussion

Purpose:

to give people time to think and test ideas with a partner before sharing them in the large group, to enable people to talk about experiences they may have had without personalising them in the large group at this stage, to develop emotional literacy, particularly empathy, reflection and listening skills

Resources:

talking object – e.g. juggling ball

Short discussion in pairs about how someone might feel if they were discriminated against.

Everyone feeds back one idea to the large group: 'When someone is discriminated against, they might feel ...'

**4 DISCUSSION FORUM /
SHARING MORE INFORMATION:**

Collages

Purpose:

developing the theme, building understanding of the connections between prejudice, stereotyping and discrimination, teamwork, thinking and communication skills

Resources:

A3 paper, newspapers / magazines, scissors, glue, pens

Working in groups of approximately four people, give each group 10 - 15 minutes to make up a collage of images which they

RESOURCES AND INFORMATION: APPENDIX THREE

consider to be stereotypes. They can also draw their own examples. Give each group the opportunity to report back on their collage.

This could be followed by a general discussion, considering questions such as:

- What kinds of stereotypes came up most often? (gender, race, age, etc.)
- What other kinds of stereotypes can you think of?
- Do you think these stereotypes are positive or negative? Why?
- How might stereotypes be linked to prejudice and discrimination?

5 CLOSURE:

Sentence completion

'Something I have learnt today is ...'

Purpose:

consolidating learning, reflection and evaluation, useful feedback for the teacher / facilitator – (have the intended learning outcomes been met?), encouraging participation

Resources:

talking object – e.g. soft ball / bean bag

Pattern Ball

Purpose:

bringing the group together at the end of a potentially challenging session, helping to release any tension / heightened emotions through a physical and fun activity, concentration and co-operation skills

Resources:

talking object – e.g. soft ball / bean bag

6 EVALUATION / PLANNING AHEAD:

* This theme needs to be built up within a series of Circle Time sessions, and will need to be explored over a series of sessions in order to maximise learning and reflection.

** The time available is likely to depend on the length of class periods, so the content of this session could be divided over two sessions if need be. For example, you might focus the first session purely around definitions and the second around the feelings that might go with the experiences. This will also give pupils some time between sessions to think about their own experiences in preparation for the second session.

*** This outline provides ideas that might be suitable for secondary school pupils. However, there is a big difference between Year 8 and Year 14, so it does need to be adapted to suit the specific group of pupils with which you are working.

Outline Circle Time Session 4 ⁶

THEME / TITLE:

Values and Diversity

TIME AVAILABLE:

45 minutes

AGE GROUP:

Adult *

INTENDED LEARNING OUTCOMES:

- *To explore the values which underpin our work in schools*
- *To explore our attitudes to difference, and how this relates to our values*
- *To consider how we express our values in practice*

1 WELCOME AND INTRODUCTION:

Purpose:

sharing intended learning outcomes, encouraging everyone's participation

Reminder of Circle Time Rules

2 INTRODUCTORY GAME / ACTIVITY:

Name Game

'My name is ... and I am ... (positive adjective, starting with the same letter as name)'**

Purpose:

thinking, listening and concentration skills; getting to know each other

Resources:

talking object

It can be valuable to ask for a volunteer to start, and they choose which way around the circle to pass the talking object. However, as this is the first activity, it is appropriate for the facilitator to start in order to model the response. If the group is not too big, this can be used as a fun memory game, where people have to remember the names and adjectives of everyone who has gone before – the emphasis is on helping each other come up with adjectives and to remember.

Silent Statements Mixing Up Activity

Purpose:

gently splitting up any cliques, encouraging different people to work together, introducing the session's theme, opportunity to observe what some of the key interests / issues might be

When you call out a statement, everyone to whom it applies gets up and moves to another seat. They must not move to the seat on either side of them or, within that go, return to their own seat. Start with some fun statements, moving from the visual to things that cannot be seen – do not include statements that will only apply to one person. It can also be important to finish with a more light-hearted statement. As an alternative, you can take away a seat, and let the person left in the middle each time come up with the

⁶ Adapted from a Circle Time format by Kathryn Edgar, SEELB.

next statement – if they are stuck, they can say, 'Everyone change places.' However, this does mean that you cannot determine the statements, although you can give some guidance as to the theme. Equally, you need to be aware of your group – this method may put some people under too much pressure and will, therefore, not be appropriate.

For example:

- Everyone wearing red, change places
- Everyone who likes chocolate, change places
- Everyone who has been to the cinema in the last month, change places
- Everyone who thinks pupils should be involved in designing school / classroom rules, change places
- Everyone who thinks young people should be able to give feedback to a teacher after a lesson, change places
- Everyone who thinks that they have a responsibility to promote reconciliation in the school, change places
- Everyone who thinks they have a responsibility to challenge sectarian or racist comments or behaviour, change places
- Everyone who feels confident exploring controversial issues with pupils, change places
- Everyone who deliberately includes diversity issues within their lesson planning, change places
- Everyone who is looking forward to the holidays, change places

3 SENTENCE COMPLETION:

Pairs Discussion

Purpose:

to give people time to think and test ideas with a partner before sharing them in the large group, to enable people to talk about experiences they may have had without personalising them in the large group at this stage, to develop emotional literacy, particularly empathy, reflection and listening skills, to develop responsibility for self and own contribution

Resources:

talking object, flipchart / whiteboard, pens

Short discussion in pairs about some of the values which are important to me in my work in school.

Feedback to the large group, with each person sharing one value. These could be gathered on flipchart / whiteboard for future reference / discussion.

'A value which is important to me is ...'

**4 DISCUSSION FORUM /
SHARING MORE INFORMATION:**

School / Classroom Scenarios

Purpose:

to encourage people to think about how their values translate into practice, sharing and checking out ideas with colleagues, self-reflection, problem-solving and communication skills

Resources:

scenario sheets

Divide the large group into groups of approximately four people (mixing teachers and non-teaching staff, if working with a whole staff team). Give the groups a list of scenarios to choose from (you will need to draw this up in advance, based on the situation in which you are working – see following sheet for examples), and / or ask them to come up with a situation which one or more of them has experienced in school of, for example, diversity or a controversial issue, prejudice or discrimination, conflict, etc.

Ask the groups to think about how they would respond to the situation in the light of their own values / the values which have been gathered on the flipchart / whiteboard. Ask them to consider whether this is what they would actually do.

Each group can then feed back to the large group, and after a group has finished others can share ideas / questions / etc.

5 CLOSURE:

Sentence Completion, for example, 'Something I have learnt today is ...'; 'Some support / training I would like (in relation to this theme) is ...'

Purpose:

consolidating learning, reflection and evaluation, useful feedback for the facilitator – (have the intended learning outcomes been met?), encouraging participation

Resources:

talking object

6 EVALUATION / PLANNING AHEAD:

* This Circle Time is aimed at staff working in schools, with some specific examples for teachers. As well as adaptations needed to suit your particular group, the content would need to be adapted slightly for work with governors, parents and others.

** Adjectives beginning with letters like 'K', 'Z', etc. can be difficult, depending on linguistic ability, and it is especially important to encourage group members to help each other with ideas. However, other introductory sentence completions could be used instead, for example, 'My name is ... and something I am good at is ...'

Positive Approaches to Conflict Scenarios

1 The caretaker informs you that some of the girls in your class have been picking on another girl from the class at break and lunchtimes. This bullying has included name calling, excluding her from games and pushing past her when they are going back inside. The caretaker has spoken with them but it has had little effect.

How do you respond?

2 Among a group of boys who play football together, one of them is from a Chinese background. The other boys, who all come from White Northern Irish backgrounds, use racist language which they describe as 'a bit of a laugh' between mates, claiming, 'Sure, he knows it's just a joke'.

How do you respond?

3 You work in a maintained school which has a mainly Catholic staff. You notice that when politics or religion are discussed in the staff room the two Protestant members of staff don't participate, and often find a reason to leave the room.

or

You work in a controlled school which has a mainly Protestant staff. You notice that when politics or religion are discussed in the staff room the two Catholic members of staff don't participate and often find a reason to leave the room.

How do you respond?

4 You have been developing circle time in your classroom and have done a lot of work with your pupils around respectful relationships. In the corridor, you discover another member of staff yelling at one of your pupils in front of other pupils and staff, in a way which you feel is inappropriate.

How do you respond?

5 You are running a Schools Community Relations Programme (cross-community) event with your partner school. Some of the boys turn up wearing Rangers and Celtic tops. No one had told them not to, but you are aware of tensions within the group, and this comes to a head when you find two of the boys shouting sectarian abuse at each other while some of the others 'egg them on'.

How do you respond?

Appendix Four: Exploring Controversial Issues in Early Years *

THEME / TITLE:
Exploring Diversity /
Building Positive Relationships

TIME AVAILABLE:
five sessions, 20 minutes each

AGE RANGE:
Foundation Stage / Key Stage One **

INTENDED LEARNING OUTCOMES:

- To explore similarities and differences within the class group and beyond
- To develop respect for self and others
- To encourage positive relationships and empathy
- To explore positive ways of responding to conflict

Session One: Making Our Classroom a Happy Place ***

1 WELCOME AND INTRODUCTION:

Purpose:

to think about how we can make our classroom a happy place for everyone, using Circle Time rules

Reminder of Circle Time Skills:

looking, listening, speaking, thinking, concentrating

2 INTRODUCTORY GAME / ACTIVITY:

Pass the Rain

Purpose:

concentration skills, awareness of others, co-operation and teamwork, encouraging the participation of all

Everyone holds their hands out in front of them, palms downwards, and wiggles their fingers. This is the rain. They put their hands back on their knees. The teacher / facilitator begins by wiggling her / his fingers and pointing them in the direction of the person on her / his right / left. This person wiggles her / his fingers in response, then turns to the person on her / his other side and 'passes the rain' on to her / him, continuing the whole way around the circle. As the children become familiar with the game, you can ask for a volunteer to start, rather than always beginning yourself.

RESOURCES AND INFORMATION: APPENDIX FOUR

3 SENTENCE COMPLETION

'I feel happy when ...'

Purpose:

self-reflection, talking and listening skills, developing confidence, encouraging the participation of all

Resources:

talking object

Then talk together about the different rules they might need on their island so that everyone could enjoy it.

What similar rules might they need so that everyone can be happy in our classroom?

These can then be written / drawn on a poster, or represented by actions so that the children can be reminded of these when need be; for example, at the start of Circle Time sessions.

4 DISCUSSION FORUM / SHARING MORE INFORMATION:**'Ideal Island' activity****Purpose:**

co-operation and teamwork, creative thinking, decision-making, self-reflection, empathy

Resources:

A3 paper, crayons

Draw an outline of an island. Tell the children that you want them to imagine that they have all been shipwrecked together on this island (You can make a story of this, or do a guided meditation, if appropriate and not too scary!) and they are to imagine what the island is like - what would they really like to have on the island? What would make it a really special place? What might they need on the island? Either draw on, or invite different children who come up with ideas to draw on, the various things which are suggested.

If it is appropriate, divide the children into small groups of approximately four people, and get them to draw their own maps. They can then explain them to the rest of the group, followed by the rules discussions.

5 CLOSURE:**Pass the Smile****Purpose:**

awareness of each other, concentration skills, closing on a positive note

The teacher begins by turning to the person on her / his right / left and smiling at her / him, encouraging her / him to smile in response. S/he then turns to the person on the other side of her / him and smiles at her / him, and so it continues right around the circle. As the children become familiar with the game in future sessions, invite a volunteer to start off, instead of always beginning yourself.

Session Two: Diversity in Our Classroom

1 WELCOME AND INTRODUCTION:

Purpose:

think about things which are the same / different about people in our class

**Reminder of Classroom
and Circle Time Rules / Skills**

Divide the children into pairs and ask them to find out two things that are the same about them and two things that are different.

Each pair then feeds back to the circle with one child saying the things that are the same, and the other saying the things that are different. This can be broadened into a more general discussion about the diversity in the class.

2 INTRODUCTORY GAME / ACTIVITY:

Pass the Rain

Page 223

If you have more time, the children could draw pictures of the things that are the same and different, and use the pictures as the basis for their feedback to the circle.

3 SENTENCE COMPLETION:

'Something I like about me is ...'

Purpose:

self-reflection, talking and listening skills, developing confidence, encouraging the participation of all

3 CLOSURE:

Touch Fingers

Purpose:

awareness of each other, concentration skills, closing on a positive and calm note

Everyone sits quietly and holds out their pointer / index finger. The teacher / facilitator touches the end of her / his left index finger to the right index finger of the person on her / his right. S/he then touches her / his left index finger to the right index finger of the person on her / his right, and so on around the circle.

4 DISCUSSION FORUM / SHARING MORE INFORMATION:

Pairs Work ****

Purpose:

self-reflection, getting to know each other, talking and listening skills, building confidence in participation

Again, as the children become familiar with the game, you can ask for a volunteer to start off rather than always beginning yourself.

Session Three: What Makes a Good Friend?

1 WELCOME AND INTRODUCTION:

Purpose:

think about the things that make a good friend, what do your friends do that make you feel happy, what do you do to make your friends happy?

Reminder of Classroom and Circle Time Rules / Skills

2 INTRODUCTORY GAME / ACTIVITY:

'Simon Says'

Purpose:

concentration skills, physical co-ordination, having fun together (ice-breaker)

The teacher / facilitator calls out instructions, for example, 'Simon says, 'Touch your nose', 'Simon says, 'Stand up,' etc. If the instruction does not have 'Simon says' at the start, the children should not copy it. Don't put people out if they get it wrong: the emphasis is on having fun together as friends (as well as developing listening and concentration skills).

3 SENTENCE COMPLETION:

'I am a good friend when I ...'

Purpose:

self-reflection, empathy, talking and listening skills, developing vocabulary around the theme, encouraging the participation of all

Resources:

individual cards, flipchart

If the children are able to read, write these ideas down on a flipchart page or on individual

cards in the middle of the circle as the children suggest them so that they can see all of the key words. Depending on the range of ideas which have been suggested, you may want to follow this up with a more general discussion.

4 DISCUSSION FORUM / SHARING MORE INFORMATION:

'Good Friends' Figures

Purpose:

reinforcing new friendship vocabulary, creativity, empathy, talking and listening skills

Resources:

A4 paper, crayons / pens, scissors

Depending on time and age group, either make in advance or during the session, concertina figures joined at the arms. (For example, fold a piece of A4 paper in four, like a fan. Draw a figure on the first section, with the arms going to the edge. When you cut around it and unfold the paper, you should have four figures 'holding hands'.) Give each child a set of figures (or get them to make their own) and give them crayons to create four happy friends. If they are able to, they can write one of the key words of what makes a good friend on each figure.

Each child can then show their figures to the rest of the circle, maybe highlighting one key word, or saying why the friends are happy.

5 CLOSURE:

Rainstorm

Page 213

Session Four: Feeling Left Out

1 WELCOME AND INTRODUCTION:

Purpose:

what it feels like when we are left out or when someone laughs at us, perhaps because we are different from others or because they think we are different

Reminder of Classroom and Circle Time Rules / Skills

laughed at / left out of a game by another. Ask the children, for example:

- *How does the puppet who is left out / laughed at feel?*
- *How does the other puppet feel?*
- *How might the two puppets sort it out / make friends again?*
- *If they find this difficult, who might be able to help?*

2 INTRODUCTORY GAME / ACTIVITY:

Touch Fingers

Page 225

If you have more time, the children could make their own puppets (for example, finger puppets, stick puppets, wooden spoon puppets, etc.) and make up their own stories in small groups, which they could then perform for the rest of the class. This could then be followed by a discussion based on questions similar to those above.

3 SENTENCE COMPLETION:

'Today I feel ... because ...'

Purpose:

self-reflection, talking and listening skills, developing confidence, encouraging the participation of all, developing a vocabulary around the theme

5 CLOSURE:

Mexican Wave in the circle

Purpose:

awareness of each other, co-operation and teamwork, concentration skills, closing on a positive note

4 DISCUSSION FORUM / SHARING MORE INFORMATION:

Using Puppets

Purpose:

self-reflection, empathy, problem-solving, critical and creative thinking, conflict resolution skills

Resources:

puppets

Use hand puppets to create a story about a situation where one of the puppets is

Session Five: Affirmation *****

1 WELCOME AND INTRODUCTION:

Purpose:

to think back over the things we have learnt over the past few weeks in Circle Time

**Reminder of Classroom
and Circle Time Rules / Skills**

Elmer's elephant friends – give them a piece of paper and get them to draw their elephant with the colourful design they would wear on the special Elmer day. They can then show their picture to the rest of the group, and the pictures can be displayed afterwards.

2 INTRODUCTORY GAME / ACTIVITY:

'Simon Says'

Page 226

5 CLOSURE:

Sentence completion

'Something important I have learnt is ...'

Purpose:

self-reflection, evaluation, assimilation
learning, talking and listening skills

3 SENTENCE COMPLETION:

'Something I enjoyed doing (in the last four sessions) was ...'

Purpose:

self-reflection, talking and listening skills,
developing confidence, encouraging the
participation of all, evaluation

'Electric Shock'

Page 215

4 DISCUSSION FORUM / SHARING MORE INFORMATION:

Elmer ⁷

Purpose:

self and group reflection, assimilating
learning, affirmation, creativity

Resources:

Elmer book

Read the story, Elmer, and use it to draw out from the children some of the key things they have learnt over the past four sessions about diversity / differences and building positive relationships / being a good friend. Get each child to imagine they are one of

228 ⁷ McKee, D. (1990), *Elmer: The Story of a Patchwork Elephant*, London, Red Fox.

* This series of sessions uses Circle Time as its structure. For information on the purpose and process of Circle Time, please see Section Five (Working in a Circle).

** As this is a general outline, it will need to be adapted to the specific age group with which you are working, and to the particular needs of the group. Sessions may need to be shortened or lengthened, activities may need to be adjusted, etc. However, it is always important to include sufficient time for introduction and closure, and to 'warm up' to more challenging topics. Some activities may need to be simplified or an alternative chosen for Foundation Stage groups.

*** The Circle Time sample outline given for Foundation Stage / KS1 (page 212) could be used as an additional session after this introductory session.

**** Ideally, this exercise will draw out in a natural way diversity such as ethnicity, (dis)ability, etc. within the class. If these do not emerge from the children's initial ideas, try to draw them out through further discussion, not in a way which creates issues, but which affirms the value of diversity within the class, and the uniqueness of each person.

***** If you have more time, it would be valuable to begin to look at specific kinds of diversity within and beyond the classroom and in the community. As well as further Circle Times picking up these themes, you could go out for a walk in the community, invite some older people in to do a session around games that they played as children, look at other cultures and religious festivals, do some work on flags and symbols, etc.

Exploring Diversity at Key Stage Two

TIME AVAILABLE:

Four week Programme for a SCRP Link

(Schools Community Relations Programme which is administered through the Education and Library Boards funded by the Department of Education Community Relations Branch)

The programme must have clear aims and objectives related to the promotion of the community relations dimension of Education for Mutual Understanding and must have clear learning objectives which can be monitored and evaluated.

NB: Each session could last three hours but the content can be changed to accommodate the time available. The programme can also be adapted for a single class.

AGE RANGE:

KS3 (8 – 11 year olds)

INTENDED LEARNING OUTCOMES:

- To explore similarities and differences
- To develop respect for self and others
- To explore personal identity
- To learn about aspects of difference
- To encourage healthy relationships within the class and with the other class

PROGRAMME PROCESS:

Mixture of small group discussions / physical games and learning about each other.

Session One: Ice-breaker

This Session is to encourage co-operation and teamwork, encourage those within the group to get to know each other on a personal level, to learn names, etc.

1 INTRODUCTORY GAME / ACTIVITY:

Parachute Games

Purpose:

to mix the group and to encourage individuals to come out of friendship groups

Resources

parachute

Time:

20 – 25 minutes

The group holds the parachute with both hands at chest height. A person will be asked to state something that is true about her / himself, for example, 'I am wearing black shoes', or 'I watch Eastenders'. If that statement is true for other people in the group, they walk under the parachute and go directly opposite to where they are standing.

Debrief:

The game is designed to help participants think about how people in the room can be very different or similar to themselves.

It is important to stress that it is OK to be different and that this is what can make life more interesting and healthy.

Human Bingo

Purpose:

to encourage participants to make contact with as many people as they can in a limited time

Resources:

human bingo sheets, pens

Time:

20 minutes

Participants are given a sheet with 15 boxes. In each box is a statement such as 'Find someone who goes to a different school than you', 'Find someone who plays football' etc. Participants have to get the signature of the person for which the statement is true. They are not allowed to have anyone's signature more than once, so they have to find 15 different people if they are to fill their sheet. Be aware of group members who may be shy or have difficulty writing and help them if necessary.

Debrief:

Encouraging people to think about difference and commonalities. Acknowledge that it is not always easy to talk to someone you do not know, but when you do, it can be rewarding.

Personal contracts

Purpose:

to encourage people to think about what they would like to get from the programme, what is expected from them and what they hope / expect from others in the group

Resources:

sticky shapes, card, flipchart sheets, pens etc.

Time:

20 – 30 minutes

The group will be divided into small groups of approximately four people. Everyone in the group will be given a piece of card and some brightly coloured crayons / markers. In groups of two to four they will write a rule or something important for the programme to make it fun, safe and memorable. Use different sticky shapes to decorate their contract.

The cards will be kept for the rest of the programme and displayed in the venue / classroom. The group can be asked to sign the cards they made to help them to get a sense of making and keeping a contract.

Blobs

Purpose:

to generate energy, work in small groups, teamwork and co-operation

Time:

15 minutes

The group is asked to form blobs based on a number, colour and theme called out. A 'blob' is a cluster of people touching each other. Examples: form blobs of six people, of the colour blue, of those with 'a' in their name etc.

2 SESSION EVALUATION

Sample questions for group feedback:

- *Did you meet someone you didn't know?*
- *Would you come back?*

Session Two: Personal Identity

This aim of this sessions is to learn about others and ourselves in a positive way

Grand National

Purpose:

to have fun together, to improve concentration, to explore other means of communication, teamwork and co-operation

Time:

5 minutes

For the next five minutes everyone is a horse in the Grand National! Instructions for the leader to call out and actions for the participants to carry out are as follows:

Canter

Everyone taps their own legs lightly & slowly

Gallop

More speed tapping own legs

Left

Turn to person on left and tap their knees

Right

Turn to person on right and tap their knees

Jump

Jump out of seat like jumping a hurdle

Double jump

Same only twice in quick succession

Water jump

Jump, and hold you nose on the way down

Rickety bridge

Rattle over a bridge – with sound effects

Photo finish

Smile for camera, and say 'cheese'

Fruit Salad

Purpose:

to have fun together, appropriate competitiveness, mixing activity

Time:

10 minutes

Everyone in the group is given the name of a fruit: apple, orange or banana, etc. There is a chair less than the total number of people in the group. The person without a seat will stand in the middle and shout out a fruit. For example, when s/he shouts 'bananas' all bananas must leave their seat and run for a new one. The person left without a seat is then in the middle. Later in the game introduce 'fruit salad' - this means everyone in the group must get up and find themselves a new seat.

Rules:

You cannot get up and sit on the seat immediately to your left or right.

Health and safety:

Remind everyone to keep an eye on moving chairs, to be aware of each other and not to run so fast that it becomes unsafe.

Secret orchestra

Purpose:

to encourage teamwork and co-operation

Time:

15 – 20 minutes

The group stands in a circle and two people are taken outside the room. One person will be nominated to lead the rest of the group in performing simple actions that can be done without breaking the shape of the circle, for example, patting head, clapping hands, hopping on the spot etc. After every twenty seconds or so, the action will have to be changed by the leader. After the leader has been nominated, that person will begin leading the actions and the people outside the room will be invited back into the circle. It is the task of these two people to work out who the leader of the group is. The task of the leader is to wait until the attention of the detectives is off her / him, then change the actions - in other words s/he will be trying hard not to be caught. The task of the rest of the group is to follow the leader's actions subtly, so that the leader is not caught. The detectives have three chances to guess correctly and the game repeats as many times as appropriate.

NB. The two detectives should be encouraged to work closely together and talk about their guesses together before making them.

Same Difference:

Purpose:

to explore and acknowledge personal differences

Resources:

pens / paper

Time:

20 – 30 minutes

Pupils will be assigned into small working groups as balanced (for example, gender, ability, mix from the different schools) as possible. In these groups the pupils will have a set time (three to five minutes) to list all the things that they have in common. This can take into consideration everything about themselves, broad or specific, i.e. they are all human, in primary schools, all living in ..., etc.

They will also have the same set time to come up with all the things that make them different from each other, i.e. they may all have different birthdays, they may all have a different number of brothers / sisters etc.

Debrief:

Pupils will be encouraged to think about what they have in common. Ask about their differences: what sort of things did they come up with? Encourage the pupils to think about why these differences are important to them. Sometimes people are only encouraged to think about what they have in common but difference is really important too.

And it's OK to be different!

Get them to think about how boring life would be if everyone thought the same way, supported the same football team, was the same religion and wanted to be the same things when they grew up. Would they rather all be exactly the same or have differences from one person to the next?

People Jigsaws

Purpose:

personal development, self-awareness, teamwork and co-operation

Resources:

coloured card, markers / crayons

Time:

1 hour

Pupils will work in their small groups for this activity. Everyone will be given materials for this exercise including markers, crayons, coloured paper, etc.

First of all, people will be asked to pick one of their favourite colours. This will make up one quarter of their flag colour. Their name will go over this first coloured card. See diagram for clarification.

Pupils will then pick three words that describe them best, for example, friendly, patient, sporty, nice, happy, funny, etc. These should be qualities they see in themselves or that other people have pointed out to them. Instead of using the words, they have to think of a shape or an object that best describes the word.

Next, they should pick another three colours that would best go behind these words, something that they feel stands for the qualities. For example, if they feel they are friendly, maybe a bright colour like yellow or white would suit, or if they are sporty, a darker, more striking colour would be good, like red or blue. The pupils will write or stencil the words on the appropriate colour of card.

They should now have four pieces of coloured card that will make up the whole of their flag.

The flags will now hopefully represent them in some small way. They will be encouraged in their small groups to present their flags to the rest of the group and explain their shapes, colours, etc.

Debrief:

Show the group your appreciation, for taking the time to do the flags and recognise the hard work they put into the exercise. The flag helps to describe them as individuals and what they are proud of.

John (shape)

Sporty (shape)

Patient (shape)

Helpful (shape)

Session Three: Symbols

Palm trees

Purpose:

use as a 'loosening up' exercise, to get the group working as a team and using listening skills

Time:

15 minutes

The group stands in a circle. A volunteer will stand in the middle of the circle and point to someone. S/he can shout 'elephant', 'palm tree' or 'rabbit'. The person in the middle must make up the body of whichever object is called out, with the people either side making up the outer parts. For example, if 'palm tree' is called out, the person pointed to must raise her / his arms upward, and the people either side must form the branches. If they do not do the right action, the person in the middle of the object will come into the middle of the circle and nominate someone new. Try to play the game at speed, as it's a bit more fun.

Flags and Symbols

Purpose:

to explore myths and realities about flags and symbols, to explore people's feelings about flags and symbols

Resources:

flags, football jerseys etc.

Time:

30 minutes

The facilitators will present the group with the main flags of Northern Ireland / the Republic of Ireland (the Irish Tricolour, the Union Jack, the Ulster flag and possibly the Ulster provincial flag) and the European flag. You could also include Celtic, Rangers, Linfield tops, an Ulster rugby jersey and various sports supporters' scarves. The pupils will have five to ten minutes to look at the flags / symbols and discuss / write down what they feel they

already know of them. The group will get the chance to handle the flags and see them up close. After the pupils feed back their information in the bigger group, the facilitators will then spend a little more time giving some more background information on the flags, including why the specific flag colours were chosen.

Debrief:

- *What did we know about the flags?*
- *Where did we get our information from?*
- *Was our information accurate?*
- *Where can we find correct information?*
- *Where do we normally see these flags?*
- *What feelings did the flags raise for me?*

Wishing Tree

Purpose:

exploring aspirations

Resources:

willow branches, planting pots, light bulb shapes, star shapes

Time:

30 – 40 minutes

The willow branches and planting pots will make up the 'trees'. Each person will be given a cut-out of a light bulb and a star. The light bulb will have space to follow on from the sentence, 'One wish I have for my school is....' The star will have, 'If I had one wish for the future, it would be....'

Pupils will work in two mixed groups at a tree each. After filling in their cut-outs, they will go and hang them on the branch of a tree. Each school will be able to take the trees back to their class and maybe display them in their room or at the reception area of both schools. Pupils might want to share what they wrote or they can be given time to walk around the trees to read what everyone else has written.

Session Four: Closing Activity

Spiders Web

Purpose:

to refresh group knowledge of names, to draw on the themes of teamwork and make new 'connections' within a group

Resources:

ball of string

Time:

20 minutes

The group will stand in a tight circle. The first person will be holding the beginning of a ball of string and will call out a name of someone s/he knows from the other school and something s/he likes about her / him. S/he then passes the ball of string to that individual. This person then calls out another name and says something s/he likes about that person and passes the string to her / him, the game continues until everyone in the group has had their name called out.

Debrief:

The string should make the shape of a spider's web and there are themes that can be drawn from this:

- The web is held together by hundreds of tiny silk threads and if one or two threads break, the web cannot do its job as well as it might. This relates to teamwork and everyone participating in the activities if the group is to get the most from it.
- Everything is connected in the web. Hopefully by the end of the programme people will have made new connections or friendships within the group. At the least, they will have met some people they did not know before and got to know them a little better.

Pass the hand-clap

Purpose:

to encourage teamwork and co-operation

Time:

5 minutes

The group stands in a circle. An individual will be nominated as the first person, and will start the hand-clap and they will 'pass' the clap around the group in a clockwise direction. This means that the person next to her / him claps as quickly as s/he can after the previous person. The clap must pass around the group without anyone missing her / his go, and the exercise is timed by a leader. See how fast s/he can get it down to with four to five attempts!

Evaluation

Time:

10 minutes

In small groups the individuals are asked to reflect on a number of questions such as:

- *What was useful about this programme?*
- *What would make it better for the next year group?*

Exploring Identity at Secondary Level

TIME AVAILABLE:
Four week programme

AGE RANGE:
KS3+

INTENDED LEARNING OUTCOMES: *

- To explore the factors which shape our identity
- To reflect on how labels and judgements contribute to prejudices
- To explore and learn about prejudices

Session One

This sessions aim is to develop and prepare the group for teamwork, communication and being facilitated rather than taught

This session could be divided into two comprising forty minutes each, the natural break after paper tower exercise.

Name Game

Purpose:
exploring identity, getting to know each other, sharing personal history

Time:
10 minutes

Ask each student to say their name and what they know about their name, why they were called their name, was their name chosen for a specific individual in the family etc.

Warp Speed

Purpose:
concentration skills, teamwork and co-operation, creative problem-solving

Resources:
soft ball / bean bag

Time:
5 – 10 minutes

The group is asked to stand in a circle and to pass the ball to each person in the group shouting the name of the person the ball is being thrown to. The object of the game is for everybody to touch the ball and say the respective names in the fastest time.

Eventually someone should come up with the idea of not doing it in a circle but, for example, in a line, rolling the ball between their legs.

Line Up

Purpose:

team building and co-operation, non-verbal communication skills

Time:

30 – 40 minutes

The group are asked without speaking to form a line with the smallest person at one end and the tallest at the other. It is important that the group are encouraged not to speak. You can give the group several minutes to decide how they might complete the task.

Variations of this:

Ask the group to line up depending on the month they were born - so January at one end and December at the other end. Alphabetical line using the first letter of their first name. age, shoe size etc.

'And I Thought I Knew You!'

Purpose:

to allow participants to be more comfortable with disclosure, to give space to all participants to speak

Resources:

pens, paper

Time:

10 minutes

Group members are given a few minutes to write down three things about themselves they think no one in the room knows. Pieces of paper are folded, collected and re-distributed at random. A piece of paper is then read out by one of the participants and everyone tries to guess who it belongs to. Eventually the culprit identifies her / himself to the group. As participants are often quite open in this activity some closure may be required.

Paper Tower

Purpose:

team building, creative problem-solving

Resources:

newspapers, sellotape

Time:

15 – 20 minutes

The group is split into teams of three. Each group is given newspapers and sellotape and are given the instructions 'to make a free standing tower made with only paper and sellotape, and it has to be as high as possible'.

Debrief:

- *How did individuals complete the task?*
- *Who came up with the design?*
- *Was everyone involved?*
- *Were everyone's ideas heard?*
- *Was there a natural leader?*
- *How were decisions made?*

Session Two

Counting to 20

Purpose

to encourage the group to work together as a team; to improve communication within the group

Time:

5 – 10 minutes

The group sits / stands in a circle. As a group, the aim is to count to 20. There are two rules:

- No person is allowed to speak after the person sitting either side of her / him.
- Two people cannot call out the same number at the same time.

If these rules are broken, the count restarts at one. If someone has played the game before, ask her / him not to tell the group the solutions.

Debrief:

- *How did people know when to speak?*
- *What signals were people watching for?*

Trust Exercise **

Purpose:

to explore the value of trust and to reflect on how it can be developed within the group

Resources:

blindfolds if possible

Time:

10 minutes

In pairs, one person is 'A' and the other 'B'.

OPTION ONE

A closes her / his eyes and is led around the room avoiding others and obstacles by B, placing their hands on A's shoulder. B should

reassure A about the environment. Switch so that both have had the experience. The space the group has to move around is limited, for example, you may move chairs around to make a confined space for the group to work in. *Highlight health & safety considerations!*

OPTION TWO

Again, one person is A and the other is B. A has to lead B around by hooking fingers with her / his and avoiding others and obstacles. Switch so that both have had the experience.

OPTION THREE

Again, one person is A and the other is B. A closes her / his eyes and is led about the confined space. When you shout, 'Stop,' B moves to find another partner whilst all the As keep their eyes closed. You shout, 'Stop' again and B moves again to another A. Then the exercise is repeated with the As leading and the Bs with their eyes closed.

Debrief:

- *How did it feel to be 'blind' and to have to trust another person?*
- *Did you open your eyes at any time? Why?*
- *Did your partner make you feel safe?*
- *What was it like to have different partners?*
- *How was the trust built between you and your partner?*
- *In talking about yourself in a group, what do you need to feel you can trust the group?*

Using the last debrief question write up some of the points the young people stated and remind the group that these are something to work towards.

Contract ***

Purpose:

a set of ground rules for people to consider and remember when working with each other, it aims to provide boundaries within which the group can feel comfortable

Resources:

flipchart, markers

Before the contract, ask individuals to identify any of their hopes and fears regarding the day. What people expect gives you an idea of interests, and the fears will give you an idea of what could be done to make people comfortable.

Review

The group are encouraged to reflect in small groups or individually:

- *What did they find useful about the previous two sessions?*
- *What did they learn about each other?*
- *What did they enjoy about the sessions?*
- *What would they change?*

The feedback can be recorded by you and is a useful way of reviewing the process.

Session Three: Identity

All Change

Purpose:

warm up activity and to lift energy

The group sit on chairs in a circle with you as teacher / facilitator standing in the middle. The purpose is for the person in the middle to say, for example, 'anyone with jeans change places' however individuals cannot move immediately to her / his right / left when they move.

It is useful to encourage individuals to think of invisible features such as believing in God; liking / disliking something; thinking integrated education is a good idea; cannabis should be legalised etc.

Possible statements: "All change if you ..."

- *have met a politician*
- *have hair*
- *watch the news*
- *go to church*
- *like pizza*
- *have been involved in a cross-community project*
- *like your name*
- *been to America*
- *have a wish for your country*
- *own a pet*
- *want to do something for N.I.*
- *know whom you would vote for*
- *liked school*
- *want to be on T.V.*
- *vote*
- *enjoy sport*

Paper not Floor

Purpose:

to encourage individuals to work as a team, to encourage individuals to problem-solve

Resources:

newspaper

Lay out enough sheets of newspaper for the entire group in the room to comfortably stand upon. Facilitator explains that there is one rule.

All participants have to simultaneously be in contact with the paper but not in contact with the floor. Inevitably the group all stand on the paper provided. Facilitators should check that no part of anyone's foot is touching the floor. Once the group has successfully completed this, the facilitator asks individuals to get off the paper then takes the paper away. This is repeated until the group has difficulty standing on paper.

Health and Safety:

Remember that sitting on someone's shoulder is not allowed, because, in doing so, they are not in contact with the paper.

They cannot use any furniture so push the group to achieve the task.

The solution is for all group members to be holding one piece of paper between them and jump in the air at the same time.

Debrief:

- *How did the group reach a solution?*
- *Were everyone's ideas heard?*
- *Who found the task frustrating?*
- *Did anyone think the exercise was impossible?*

Variety is the Spice of Life:

Purpose:

to encourage participants to value diversity

Resources:

paper, pens

Time:

20 minutes

Divide the group into small groups and ask them to list as many things which make the group different. Below are some examples, which you can mention to stimulate examples.

- *For each colour of hair*
- *For each different BT Number*
- *For each different school attended*
- *For membership of each different uniformed / youth organisation*
- *For each different religious denomination represented*
- *For each different football team supported*
- *For each different favourite sports personality*
- *For each different favourite hobby*
- *For each different nationality represented*

Commonalities

Purpose:

to discover how much participants have in common

Resources:

paper, pens

Time:

10 minutes

Break larger group into small group to instil some competition. Teams get one point for everything they write down that each person in their group has in common. They must not be visible commonalities, for example, colour of shoes. Inform teams that there are big bonuses for the most unique and funny commonalities.

Debrief:

- Which list was easier to put together?
- Are people more comfortable with differences or similarities?

Session Four: Prejudice Awareness ****

Not up my Street *****⁸

Purpose:

to explore how prejudices are part of life, to reflect on how we make generalisations that can lead to prejudices being formed

Resources:

paper, pens, flipchart

Time:

30 – 40 minutes

The key element of this exercise is the process the young people engage in; that is, how they make their decisions, what did they find themselves saying in relation to judgements they were making about the individuals in the exercise.

- Explain to the whole group that a house in their street has become vacant. The local council has decided that they will consult with the resident's i.e. you, on who should be allocated the house as they have eight prospective tenants.
- You have been given a list of eight people with limited information at this point and have been asked to rank from one to eight people you feel should be given the house individually.

- In small groups (five to six) ask them to come up with a group ranking using the information on each prospective tenant. This may take some time as individuals will have to negotiate and make compromises.
- The group feed back their choices and these are noted on flipchart paper.
- Then each group are given additional information on each tenant.
- Ask the groups to reconsider their ranking based on the new knowledge.
- The groups feed back their reconsidered lists and these are noted on the flipchart.

Debrief:

- *How easy were the tasks?*
- *What were your initial assumptions?*
- *Was this information based on knowledge or perceptions?*
- *As a complete group reflect on the ranking and check if there is a comparison between the first and second lists on the flipchart?*
- *With the new information did people change their lists – why?*
- *Why do we make judgements based on limited knowledge?*
- *Why is it helpful to gain more knowledge before making judgements?*
- *How and why do we label people?*

PROFESSIONS OF PROSPECTIVE TENANTS:

Reformed Drug Dealer

Unemployed Youth

Retired Bank Manager

Member of the Orange Order

Gay Nurse

Head Teacher

Sinn Fein Councillor

Refugee from Eastern Europe

INFORMATION ON PROSPECTIVE TENANTS:**Reformed Drug Dealer**

Helen is aged 47, and was a heroin and cocaine addict for ten years while living in Belfast. She has now been 'clean' for the past ten years, and for the past five years she has been working as an Education Officer with the Health Promotion Agency. She wishes to move to your area because she has been offered a job in the local Drug Rehabilitation Unit.

Unemployed Youth

Gary is aged 19, and was recently made unemployed after serving a two year apprenticeship as a joiner. He wishes to move to your area as a couple of new developments have started in the neighbouring town and he believes he might be able to get some work there. He also feels he might be able to help his neighbours out by doing a few odd jobs.

Retired Bank Manager

Susan is aged 52, and was recently asked to take early retirement because she was involved in fraud at her branch. Her employers did not want the case splashed all over the newspapers so they agreed to give her early retirement. She now wishes to start a new life in your area and get involved in a scheme to provide financial advice to her new neighbours.

Member of the Orange Order

William is aged 74, and has been a member of the Orange Order since he was 21. He follows in a proud family tradition that has spanned generations of his family. He has been very concerned in recent years about the Orange Order's policy in not working more closely with residents' groups. He has always had excellent relationships with his Catholic neighbours. His wife, Gladys, died recently and he now wishes to move into your street to be closer to his son, Tom, who is one of your neighbours.

Gay Nurse

Jim is aged 22, and has lived with his parents until recently. He told them that he was gay and while his parents did not ask him to leave, he felt that he could not live there any longer. Jim works in the hospital in the nearest large town and is soon to gain promotion. He is a trained paramedic and has advanced First Aid training.

Head Teacher

Mary is aged 47, and has just left her job because of allegations that she has assaulted a pupil. A vacancy has come up in the local high school and she is considering applying for the job.

Sinn Fein Councillor

Frankie is 36, and has a young family. He decided to get involved in Politics three years ago and felt that Sinn Fein best represented his political views. He has always been active in the community, and has been very successful in helping elderly people access cold weather payments and in helping young people to fill out job application forms. Recently, he was elected as a councillor for your area and politicians on all sides speak very highly of his tireless work for the community.

Refugee from Eastern Europe

Rudi is 57, and has recently come to Ireland from the conflict in Kosovo. Rudi is a Serb and was the manager of the local factory in his town. He had to escape because his factory was burnt down by the local Albanians after Nato troops liberated the town. Nobody knows why the factory was burnt and there are stories that Rudi had moved most of his money out of the country. For now he is a refugee and needs somewhere to live.

Session Five: Labelling / Perceptions

The aim of this session is to explore how we make assumptions, to understand how our perceptions influence our decisions

Perception Exercises

Purpose:

to highlight that we will see many things differently because of how we interpret information. These interpretations are because of who we are, where we were brought up, our histories etc.

Time:

10 minutes

OPTION ONE

The group is told that a statement will be written onto a flipchart sheet and they will be asked to read it and count the number of 'Fs' in the statement. They will only be able to see the information for just a minute. Write this on the flipchart:

'Finished files are the final result of years and years of scientific study'.

Once they have read the statement ask participants to take a place in the room, based on the number of 'F's. For example, each corner is given the following numbers three, four, five, six.

Once they have taken a place ask them how confident they are about their decision? Did they follow another person because they thought s/he might be right? Could they convince another person that they are 'wrong'? What does it feel like to be told you are wrong?

After the discussion let the participants see the information again so they can count the 'Fs'. Remind participants it is not about getting it right or wrong but about understanding how we see the same message differently.

Follow this exercise with another perception exercise, again following the same process and review. Individuals are given a pen and piece of paper and asked to follow the instructions in Option two / three and once they have completed the task, it is useful to draw a few of the examples on to the flipchart.

Then again use the debrief questions to discuss - was someone right or wrong; why did we do things differently if we were all given the same information?

OPTION TWO

Read this out:

Fold an A4 sheet of paper in half; tear off the right-hand corner; unfold it; tear off the left-hand corner; show it to others in your group.

OPTION THREE

Read this out:

Draw a 2cm line across your page. Take the first letter of your first name and the first letter of your second name and write them on either side of the line.

Reflection

Ask the group to reflect on the following areas:

- *What do people say about your school and the pupils attending the school?*
- *Are these labels fair, accurate?*
- *How can the school and you change these perceptions?*

Session Six: Cultural Awareness

Human Knot

Purpose:

trust, team building and co-operation, problem-solving

In a circle, ask an even number of people to close their eyes. Stretching their right hand across the circle, ask them to find another hand. Repeat this with their left hand when they open their eyes without letting go. The group has to untie their Human Knot and get back into a circle.

Remind people it is possible.

Debrief:

- *Did the group work together?*
- *Did anyone give up?*
- *Who took the lead?*

Cultural Quiz *****

Purpose:

to reflect on symbols, to explore knowledge and attitudes, to identify myths

Resources:

cultural quiz sheet

Time:

5 – 10 minutes

A sheet of symbols is passed around participants. This exercise can be done as a quiz. Individuals can be put into small teams and given five to ten minutes to identify what each symbol is; where they might see it; what they know about it and what they do not know; what makes them feel comfortable / uncomfortable?

Debrief

- *Where did we get our information?*
- *How do we get our information?*
- *Is it useful to know more about symbols?*
- *Do people feel more comfortable with some and less with others?*
- *Can symbols be shared in Northern Ireland?*

Cultural Object *****

Purpose:

to explore personal identity, to share personal histories

Resources:

cultural object of individual's choice

Time:

20 minutes

Individuals are asked to bring in an object, which represents something from their community. (If someone has not brought one they could have a few minutes to draw their symbol - something they see often / not.)

It might be best to allow individuals to share object in pairs or in smaller groups; but the purpose of this is to support each person to talk about the object, what it means to them and if they know any of the history of the object. You could encourage individuals to ask each other questions, but ensure people don't criticise each other and their object.

Debrief

This can be done in pairs or threes and recorded for the evaluation of the programme:

- *Which symbol did they know nothing about?*
- *Which symbol do they know something about now?*
- *What is the benefit of learning about symbols?*

Press Release

Purpose:

teamwork and co-operation skills, communication skills, sharing experiences and personal aspirations, critical reflection on the role of symbols

Resources:

paper, pens, cartoon board

Time:

10 minutes

Ask the group to divide into smaller groups, the task is to design a press release or a mime as a group, which will answer questions from other countries about symbols in Northern Ireland.

In the press release let the countries know:

- *What symbols mean in Northern Ireland*
- *The role symbols play in Northern Ireland*
- *As young people, the relevance of symbols in your life*
- *What is a good response when symbols cause conflict?*
- *Why can they cause conflict?*

Each group present their mime / press release / cartoon board and as a group agree one thing they would like to be said about symbols on behalf of the school.

Symbols in Northern Ireland

An extra exercise if you feel it is useful or if the young people are reluctant to talk about the symbol they brought.

Purpose:

to explore some of the symbols / emblems of identity in Northern Ireland

Resources:

pack of symbol cards; (refer to the template at end of this section)

- Place pupils into small groups and distribute a pack of the symbol cards (face down) to each pupil. Ask pupils to turn over one card ⁹ from the top of the pack and place it in front of them. The cards may need to be explained.
- They should then turn over a second card and compare it with the first. If they think that there is a connection between the cards then they should start to form a cluster. (For example, they might connect a flute to the Union flag or connect the flute to a bodhran; it's up to them! There's no right or wrong answer- this exercise is about exploring how pupils perceive the symbols). If there is no connection then they should place the new card a distance away from the first. (For example, a crucifix and a rugby ball may be placed apart.)

- They should continue to turn over cards, adding more to their clusters or swapping cards into other clusters or breaking their clusters into sub-clusters!¹⁰ (For example, religious symbols might be sub-divided etc.)
- When pupils have settled on their groupings, ask them to give each cluster a 'name', for example, 'music'.
- Ask each group to show the rest of the class their clusters and to explain why they have clustered the cards in this way.
- Use pupil feedback to introduce the idea of identity in Northern Ireland being religious (for example, ashes, cross etc.), cultural (for example, music, dance, language) and political (for example, national identity, political parties etc.).

CONCLUSION:

Ask pupils to identify which symbols of identity cause the most difficulty in Northern Ireland. Which symbols are used to annoy / antagonise 'others'? How are they used? Is it always just about religion? Or are religious, cultural and political issues 'mixed up together'? During the discussion, pupils will most likely mention the term 'sectarianism'. Use the discussion to define this term.

Session Seven: Reflection and Recap

The programme focused on a number of areas and we want the young people to reflect on these creatively and remind ourselves of what we achieved today:

- *Team building / Group*
- *Prejudice: Perceptions / Labelling / Judgements*
- *Perceptions of your school*
- *Symbols: their role in this society*

Using leaf outline ask participants to reflect individually on and write down or draw their thought on the leaves, which will be collated and used as a display for the school:

On a leaf write / draw a symbol which is important to me and why?

On a leaf write / draw what you feel we need to challenge?

EVALUATION

Another option is to use a designed sheet which will highlight the learning for the programme.

¹⁰ Encourage pupils to keep their clusters fairly small (for example, no more than six or seven items in a cluster). This will encourage more creative thinking.

* This series of sessions uses Circle Time as a structure. For information on the purpose and process of Circle Time, please see Section Five (Working in a Circle).

As this is a general outline, you will need to adapt the content to the ability of the group and the needs that the group presents. Sessions may need to be shortened or lengthened and activities may need to be adjusted; please feel free to use what you think will work for the group.

You will note the first session concentrates on a number of warm-up activities, this is important as it enables you to get to know the group and what would work in your context. These activities are also important as it ensures that safety has been developed within the group especially as some of the sessions will focus on sensitive issues.

** Trust exercises are important in a group as they can support an open discussion on what the concept of trust means generally and in particular within the group. The exercises support the individuals to explore what trust will mean in their group, which is important in building the safety within the group.

*** The contract is important as it supports the group members to take responsibility for themselves and the group. Most classes have group rules displayed, it is important that these do not become filled with 'Don'ts' and a positive approach to behaviour is taken. Often the contract is linked with expectations and when individuals have described their expectations this can be followed with what we need to do to achieve this, i.e. the group as a whole and as an individual.

**** This exercise provides a gentle introduction into the concept of prejudice. It is important

RESOURCES AND INFORMATION: APPENDIX FOUR

to encourage participants to recognise that this is a natural process for all humans as it is not possible to manage the amount of information, which we receive on an hourly basis. It is also important to support individuals not to feel ashamed about their differences.

**** This explores the concept of prejudice in more depth. Encourage individuals not to censor themselves. The key to the exercise is not the actual exercise but rather the process of how the groups made their decisions, what information they used to work out their ranking. You should encourage the group to reflect on how they made their decisions, did they compromise for example?

***** There is a range of ways of using symbols with a group, you can collect a range of symbols, use pictures of symbols, use the internet or encourage individuals to bring in their own symbols, emblems.

***** An important health warning, if young people are encouraged to bring in their symbols please notify other staff members so that there is a whole school understanding of the reasons. If flags are brought in remind the pupils to respect the flag and not to have it wrapped around their body. Also for transport home ensure that the young people put their symbol away safely for their own safety.

As the facilitator you should spend some time becoming familiar with the meanings behind flags and the historical significance of symbols / emblems.

INTEGRATED EDUCATION AND NEW BEGINNINGS IN NORTHERN IRELAND

by
FRANK WRIGHT

WORKING PAPER: SIX

**UNDERSTANDING CONFLICT ...
AND FINDING WAYS OUT OF IT**

**"Understanding Conflict ... and finding ways out of it" is supported by Charitable
Trusts and the Lawlor Foundation working through The Corrymeela Community,
The University of Ulster and The Queen's University, Belfast.**

**Published by
The Corrymeela Press**

Integrated Education and new beginnings in Northern Ireland

INTRODUCTION

These papers are part of an occasional series produced by "Understanding Conflict...and finding ways out of it"

They are working papers based on our meetings with people in a wide variety of different areas of life in Northern Ireland.

These papers are a response to some of the themes which have been raised in the course of our work during 1990. We hope that they will inform and encourage people working throughout the community.

We would value any comments and views in response to the contents. These can be sent to Derick Wilson, "Understanding Conflict ...", Centre for the Study of Conflict, University of Ulster, Coleraine, BT52 1SA. Tel: (0265) 44141 Ext. 4550/4666.

Integrated Education and new beginnings in Northern Ireland

Integrated Education and New Beginnings in Northern Ireland

Frank Wright

Integrated Education and new beginnings in Northern Ireland

INTRODUCTION

Many people in Northern Ireland want their children to be educated together with children of other traditions. There have been earlier occasions in the history of the North of Ireland when it has happened, at least in some places. Yet however much support there is for the idea of integrated education, putting it into practice seems to be exceedingly difficult. The gap between the amount of vague support there is for the idea and the actual extent of integrated education is usually wide. The purpose of this paper is to warn against over hasty plans to try to close this gap. The main reason why I am saying this is that I believe such an attempt will jeopardise what is most positive about the integrated education that exists at the moment.

While I was writing about 19th century Ulster, I learned about how educational conflict had had a very big part in the division between Nationalism and Unionism. Indeed it is hardly an exaggeration to say that at the core of each community [of Catholic and Protestant] there were fears of the threat to "Our" schools from the "Others". The National System of education in Ireland, founded in 1831, was nominally integrated. But there was a tendency for people to support integrated education most keenly when they thought their 'side' would gain from it. For example between about 1859-71 Presbyterian supporters of National Education - which they described as "Mixed secular and separate religious instruction"- were less than clear about how much control they already had over the mixed schools whose role they wished to expand. No debate about the benefits of an overall integrated education policy in the North of Ireland can ever be about the abstract advantages of mixing. There is a long history of suspicion about who controls education. For good reasons, people in the North of Ireland have been very cautious indeed about who they trust with the education of their children. The future of integrated education depends on how these anxieties are coped with.

Since the 1970s the idea of integrated education has had a new burst of life. What is really new about the integrated schools of today and different from previous ideas of mixed education is that they involve parents coming together and meeting and cooperating with each other. In Dorothy Wilson and Seamus Dunn's *"Integrated Schools- Information for parents"*, this aspect of the school is centrally emphasised. Difficulties involved in respecting each other's tradition, whether in the syllabus, the style of teaching, the use of

Understanding Conflict ... and finding ways out of it

symbols and so on... are resolved by parents and teachers together. In a school where parents have come together freely to create a shared environment for their children, knowing that there are risks and that there will be difficulties to work through together, it is very possible that new relationships will grow. But if instead children are pushed together most of the old problems which led to segregated education in the first place will resurface only slightly changed.

We can say that children are being pushed together whenever integrated education is seen as a way of changing other people rather than ourselves. This matter of emphasis is very important. There have been many occasions when people said what a good idea it would be to integrate all the schools so that children would grow up together without bigotry. But such dreams about how integrated education could change everything in Northern Ireland usually leave unanswered all the real difficulties.

To explain the point further, ask yourself who you have ever heard speaking casually in favour of integrated education. Do you know either of the following? Someone with a fantasy of Catholics and Protestants standing reverently before a Union Jack fluttering from the school flagpole; or someone with the fantasy of Protestant and Catholic children dutifully absorbing a history syllabus which puts Protestants "right about their Irishness". These kinds of supporter of integrated schools may say how they would like to see all children being educated together and brought up without bigotry, but their desire to put something across on the 'others' is a bad omen. Of course we all may have some fantasies of this kind, but there is little integrated education until parents themselves are prepared to face such possible conflicts of expectation.

The theme of this paper is that parent initiative in integrated schooling has real promise for the future, whereas if integrated education depends heavily on governmental promotion it will probably lead to big disappointment. If parents play some part in resolving the inevitable difficulties of integrated education, parental learning will go on and the school as a 'Meeting' of traditions will flourish. Whereas if integrated schools multiply as a result of favourable financial incentives, some schools may leapfrog the growing experience that the established integrated schools have been through. This will build concealed conflicts into their foundations. At worst people will end up rediscovering the advantages of separate education. So let us begin by trying to see what these advantages might be.

Integrated Education and new beginnings in Northern Ireland

ADVANTAGES OF SEPARATE EDUCATION. THE MANAGEMENT OF DISTRUST.

Throughout Northern history many people have sensed both that segregating children in different schools allowed bigotry to grow and also that separate education was the only secure way to ensure that schools respected the values of the childrens' families. Many of us know this somehow and we cannot argue away either half of it, though we are always tempted to do so.

For example opponents of separate schools have sometimes claimed that they 'cause' sectarian distrust and division. It is obvious that anything which keeps people apart, who might otherwise have got to know each other, must be doing something to sustain an atmosphere of distrust. But the argument understandably exasperates supporters of separate schools. In a society where distrust is pervasive between adults, it can be difficult to secure trust between their children. Unless people who distrust each other have some shared trust in an authority above them both, the management of that distrust can be exceedingly difficult. Separate systems of education have often been a way of making distrust between national communities manageable.

One of the few things which northern nationalists have ever praised the Stormont Government for was its handling of Education. Essentially from around 1930 onwards the Stormont government accepted an arrangement in which both communities felt their education system was secure against the encroachments of the other side. In other situations where different communities exist side by side, as they do in Northern Ireland, control over education has also been a central question. Where the communities have been more unequally placed than they are in Northern Ireland, the less powerful communities have not controlled their own education systems. Then the education systems have tended to atomise and demoralize these dominated communities. This was true for Muslims in secular schools in French Algeria and it was also true for the separate black [but white controlled] schools in the US Southern States.

By contrast, taking a long historical view from the 1830s, the separate school system in the North of Ireland has allowed Catholic society to build itself up to a level where it has not feared comparison with the dominant Protestant society. The Catholic middle class has built itself up around its teachers,

Understanding Conflict ... and finding ways out of it

although at the same time the boundary between Protestant and Catholic has been frozen by the parallel school systems. So even if the dual school system is a factor contributing to the present day conflict, it has also meant that the two subsocieties [roughly Catholic and Protestant] have been in a relatively more equal position in Northern Ireland than they would have been without it. There is nothing at all unusual about this: separate education has almost universally been sought by nationalist movements in Europe to build their communities and make them more cohesive. No national group ever trusts another nation to control the education of its children, if it has any choice in the matter at all. Whenever anyone proposes integrated education in these situations, it is almost invariably suspected of being a ploy to uproot the culture of the less powerful community.

Sometimes accepting the need for separate education systems has prevented struggles which might otherwise have torn up the unity of a nation. The strength of this argument for separation of schools can be illustrated by the story of Scotland. In 1918 the state school system was placed on a firmly segregated basis. Segregated schools no doubt play a part in keeping alive Celtic v Rangers feeling today, but Scotland has by and large remained tranquil, even during the last twenty years when sectarianism might have fed back into it from Ulster. The Catholic church has been content with a state system that contains a Catholic system within it. It is very probable that one of the reasons why the Labour party in Scotland has been able to span the gap between Catholic and Protestant has been that the truce of 1918 suited the Catholic clergy and a large enough part of the non-Catholic Labour supporters. Had the anti-catholic movements of the 1930's been able to seriously affect the working of the Act, it is probable that they would have been able to precipitate a religious division amongst Labour voters, and introduce politics back into the sectarian division. The essential point is that existing educational arrangements are part of an unwritten treaty in Scotland, whose full implications would only become clear if an effort was made to undo it.

No one today could argue that enforcing integrated education upon Scotland would have made for a deeper peace than Scotland has actually had. There are groups in Scotland now who are aware of how far apart religious differences keep people, and they are trying to work upon their common heritage as Christians in Scotland. In the course of their work together they might do something about the football hooliganism of the Old Firm. But the

Integrated Education and new beginnings in Northern Ireland

important point is that no one in Scotland is arguing for a global plan for integrated education to combat dangers of sectarianism at the moment. It is easy to see that a political campaign to do this would start to politicise religion and create the very problem we are suggesting it would be advocated to prevent. Because we have had so much sectarian conflict here in Northern Ireland it is tempting to blame it upon one of the factors which may have facilitated sectarian continuity. But the Scottish situation, which is in some respects very like Northern Ireland, helps us to underline the difference between people working together to promote integrated schools and a hypothetical policy decision to desegregate Scottish schools. If sectarianism in Scotland did become menacing that would be both the worst occasion to suggest imposing integrated education and the most urgent reason for those committed to it to start promoting it on a voluntary basis. It is the same for us in Northern Ireland.

THE INVOLVEMENT OF PARENTS AND TEACHERS IN INTEGRATED EDUCATION.

The central difference between the two ways in which integrated education might come to pass have to do with how much of the dynamic is coming from the people directly involved. The hope behind most visions of integrated education in Northern Ireland is that if children mix together early enough, they will get so used to being together that they will be relatively immunized against sectarianism in adult life. What does this mixing together mean? Upon whom will the responsibility for creating and cherishing this unusual environment fall? When few adults have experienced it themselves how do we expect that teachers will be able to do it? There is a great danger of putting onto teachers the responsibility for achieving something by magic, something they probably cannot do for our children, if we are not in earnest about wanting to do for ourselves.

What actually happens in an integrated school will not depend on the syllabus, so much as on the human relationships within the school. Teachers are not superhuman and whether children from different national traditions can really meet as equals, sensing the acceptability of their feelings and their home experiences, depends upon how the teachers and other figures of authority in the school create the space for them. There is probably little

Understanding Conflict ... and finding ways out of it

chance of teachers developing these new ways unless the context they are working in is supportive. Here especially the input of parents may be decisive.

Any integration, if it is to avoid the pitfalls that made separate education attractive in the past and in so many other situations, must be a meeting on an equal basis where neither community has the upper hand over the other. What does this mean? Although there are many ways in which this problem could be formulated, we can see an example of it at the heart of the Anglo-Irish agreement. In the Agreement the British and Irish governments refer to two traditions in Ireland or two communities within Northern Ireland. The two traditions are defined as one wishing to have no change in the status of Northern Ireland and the other aspiring to a sovereign united Ireland. The two governments speak of diminishing the divisions in Northern Ireland and of recognizing and respecting the identities of the two communities in Northern Ireland. How do you diminish the divisions and at the same time recognize and respect the identities of the two communities or traditions, when they have such diametrically opposed opinions?

Much of this involves enabling children [and adults!] to experience differences as enriching aspects of the others that we just accept. But there are deep and antagonistic roots to the different traditions and although it will often be inappropriate to introduce children to the antagonistic aspects of their parents' different cultures, the occasions and ways for doing so will be better chosen if the parents and the teachers have themselves experienced real meeting with each other. Let us consider what is involved for parents and teachers.

"TOLERANCE" AND ACCEPTANCE

In the beginning I distinguished abstract support for integrated education and the growing process involved in actually creating it. This is very like the difference between just claiming to be 'tolerant' and making real relationships of trust. Acceptance comes out of meeting where we both feel secure and able to trust. In such Meetings together we hear what it feels like to be the other and we accept each other with our differences; and we change in ways we probably cannot anticipate. We hear one another telling about each others' experiences and we are not distracted with clash of opinion. We can only have ideas about what this will mean for us politically.

Integrated Education and new beginnings in Northern Ireland

We have seen that in a divided society separate school systems can make distrust manageable and allow for the growth of a polite distance between communities. This makes distrust less painful, but it also allows us to delude ourselves about how tolerant we are. Very often 'tolerance' in the North of Ireland, as indeed in any divided society, is a kind of weapon for point scoring. "We are tolerant, but there is no relationship between us and them, because of ..xyz....which they are responsible for."

Here are some examples of this kind of tolerance: those who say that they are tolerant of Protestants, and that most of the distrust in the North of Ireland is on the part of Protestants towards Catholics, but who support the murder of [mostly Protestant] members of the security forces as part of a campaign to secure the unification of Ireland. Likewise there are those who say that there is no need for integrated schools, because the only reason the state schools are not integrated is the Catholic Church. They see no contradiction between attacking Catholic schools for creating segregation and claiming that, of course, Protestant clergy must have places on the management of state schools. These kinds of 'tolerance' are abstract theory and have nothing to do with acceptance.

In all divided societies it can be very difficult to cope with what the 'others' actually feel and say themselves about their own identity. When there are language differences as there are in many divided societies, they at least provide some tangible sign of difference which can be [sometimes reluctantly] accepted as a mark of national difference. But there are some societies of which this is one where people are nationally divided from each other by religion rather than language. In the Yugoslav Republics of Croatia and Bosnia, the Serbs [Orthodox], the Croats [Catholics] and the Bosnian Muslims all speak the same language, Serbo-Croatian, and they are three nations distinguished from each other by religion. Like ourselves they also have had difficulty recognizing each others' integrity. In the inter war years in Yugoslavia the dominant Serbians used to infuriate the Croats by treating them as though they were just Catholic Serbs. During the war the Croatian fascists attempted to wipe out Serbians by forced conversion to Catholicism and extermination. Only the victory of the cross-community Communist partisans, [despite their other drawbacks], brought any sanity to Yugoslavia.

Some insist that Ulster Protestants are part of the Irish nation, because it is

Understanding Conflict ... and finding ways out of it

'only' their religion that distinguishes them from Irish Catholics. Others insist that Irish Catholics in Northern Ireland are British, because they speak English and live under British rule. These approaches are similar to those which afflicted Yugoslavia before 1945 and may be about to happen again. Like the Serbs, Croats and Bosnian Muslims in Yugoslavia, Unionists and Nationalists in the North of Ireland have a choice about whether to accept each others' identities or to deny them and thence provoke continued conflict. Just as the Protestants' Britishness can never be reduced to a matter of denominational rights of a religious minority in the Irish nation, nor can the need for the Irish Catholic school system ever be reduced to one of mere denominational rights of a religious minority in Northern Ireland.

Like the Yugoslav nations, Catholics and Protestants in Ulster have different experiences of where threat, violence and humiliation come from. I have seen this theme unfolded many times as people tell each other about themselves. When we look at violence in N. Ireland, people are often attacked for who they are, not for anything they have done themselves. This is not just something about the present troubles. It has been true for much of our history. If someone is attacked, the first thing we need to know...if we want to understand it ...is what religion were the attacker and the victim. We are very interested in the reasons for violence, even when we don't agree with it. Violence can spread from one incident in a chain reaction. For example a Protestant avenges an attack on his community by attacking a Catholic. Then another Catholic attacks another Protestant and so on. If people know that an attack upon some person is an attack upon a whole group of people, of whom that person is only a representative, it has a massive effect. This is quite unlike an isolated murder in a normal society. It isn't necessary for people to agree with violence. They only have to understand what is happening and to be frightened by it. Once a cycle is under way, some acts of violence are seen as self-defence, reprisal, preemptive strike or deterring action. "They were provoked" we say. "They had good reason for their anger" we think. An attack is on us; or it is something done by our side to them, in which case we understand it in some way. We may give reasons for it, which somehow take away from our sense of outrage. Or we may be especially ashamed of it, because we feel somehow responsible for it. What distinguishes one sort of attack from another is how we relate to the perpetrators and the victims. This reality makes us different from each other.

Integrated Education and new beginnings in Northern Ireland

Ordinary criminalization of the kind that happens in normal societies is impossible in Northern Ireland because we are so interested in the reasons why people did things, and we are not therefore united by our feelings against what they did. The Law is not an anchor, but more like an axis of conflict. Some fear that the "Law" will not protect us from "them" and others feel the law in some way tolerates or helps "them" against us. In Northern Ireland, no one feels entirely secure. Any tranquility this society has known has been more like a truce than a peace. The story of the Apprentice Boys of Derry, the marching of the Orange Order [which was once explicitly about patrolling rebellious natives], and many other aspects of Unionism, such as the permanent establishment of the 'B' Specials until 1969, show how tranquility was preserved by deterrence. Peace was never taken for granted. Just as the West and the USSR spent 40 years keeping the 'peace' by using nuclear weapons to deter each other, so Unionists always felt the need to deter the Nationalist threat. Nationalists resented the things done to deter or control them. So even when they disagree with Republican violence, they are less than enthusiastic about the British state power opposing it. Our different identities as Nationalists and Unionists largely depend upon the direction from which we expect violence and humiliation to come towards us and those closest to us.

It is because our experiences of threat divide us that there is such a strong aversion to talking about anything to do with politics or religion in mixed company. In fact it is an almost elementary aspect of keeping good relationships with people of the 'other' community that we do this. So we nearly always share our own trauma - the experiences which make us what we are - with those who are also traumatized as we are. Any cross national discussion about such experiences might turn into showing how much 'we' suffered at 'your' sides hands; and an argument about whose violence is worse. Polite avoidance of these issues and feelings both ensures that we make every day life as manageable as possible and that we go on reinforcing the differences which are always there and threatening to erupt.

When we see things in this way it becomes clearer why it is rather unfair to blame the schools we have at the moment for promoting sectarianism. As a rule schools in divided societies probably only reinforce the lessons that every other situation already teaches, including homes. Distrust of the 'others' is hinted at and intuited in countless ways, even as in this case when it becomes

Understanding Conflict ... and finding ways out of it

politeness and fear of offending. Schools may for example reinforce the sense that politics, religion and history are subjects to be avoided in mixed company for fear of giving offence. We make a very great mistake to imagine that schools 'teach bigotry', if by that we imagine that they have some specially malignant influence.

If our children are to have a better future, they must experience new ways of meeting with others. Then perhaps they will become free to deal with the big things that divided their parents, who were often restricted to polite avoidance of difficult subjects. If an integrated school is a meeting place where people find that their experiences are valid and that they are worth listening to, then it may give them this. The best integrated schools will be the ones where the parents have educated themselves together while creating and running the school. That can only strengthen the trusting environment of the meeting. In the rest of this text I shall suggest a few of the things this may mean in practice.

HISTORICAL REFLECTIONS

In the historical appendix, I shall develop some of the story of how 19th century efforts to promote integrated education came adrift. In 1831 the British government introduced the National Education system in Ireland. At very least for the first decade the system was integrated in spirit and it involved building trusting and cooperative relationships between clergy of all denominations. In the North this meant Presbyterian and Catholic particularly. But gradually Catholics pulled away from it, and a different kind of Presbyterian also came to support it. Eventually the defence of this system turned into a crusade against the Catholic clergy without whose cooperation it could not carry on in spirit as well as in name. This is one of the reasons why the early effort to create an integrated education in Ireland decayed.

The National Education system, introduced in Ireland in 1831, was intended to become a system of mixed secular and separate religious instruction. It came into existence after Catholic Ireland had been mobilized by Daniel O'Connell to secure Catholic Emancipation. The system was necessary because the existing, mainly Anglican, quality education was regarded as proselytizing. In the North the Catholics and a large minority of Presbyterians welcomed it and worked together to make it a success. They observed fairly

Integrated Education and new beginnings in Northern Ireland

rigorous conditions which included recognizing that each religious minister was responsible for the faith of the children of their flock.

But many Presbyterians did not accept the system until it was modified. In 1839 they were allowed to pursue their "missionary" effort towards Catholic children in 'their' National schools, subject only to a conscience clause permitting children to leave at times of religious instruction. This modification was the beginning of a process. First more and more Protestants, who regarded Ultramontane Popery as a menace, began to support the National System on the grounds that they were only required to make minimal concessions to "Popery". And once the Catholic clergy opposition to National education began to harden from the late 1840s, more Protestants began to support it because the Catholic hierarchy were against it. By the 1860s many saw it essentially as a rampart against Catholic clerical control of education. These kinds of "supporters" of National Education distracted lay Catholic attention away from the sincere Protestant advocates of school integration. In 1871 Orangemen with sashes took the platform at a meeting to defend the National Education system in Cookstown. The Ulster Examiner, a Catholic paper, said that these speakers with their sashes etc "exposed the real feelings" of the liberal clergy who spoke about the need to soften prejudices by mixing children in schools. This was probably nonsense, but it did show that for Catholics mixed schooling was increasingly likely to be judged by what its most anti-catholic advocates said about it. It had become very plain that many Protestants were now favouring mixed education precisely because they saw it as a way of breaking up the cohesion of the Catholic community. The liberal advocates of integrated education would have needed to do something to put a clear distance between themselves and the No-Popery advocates. They would have needed to look for ways of developing trusting relationships with those Catholics, who like themselves, really valued mixed education as a way of softening prejudice.

It can be argued that because the Catholic hierarchy were completely against integrated education from around 1850 onwards, it was they who killed it. It is true that once the Catholic church had a lot of National schools under de facto Catholic management, it pressed for their denominationalisation. In fact the Catholic church sought denominational education throughout Europe at this time. But the claim that they were responsible for destroying integrated education is too simple. It fails to explore why virtually all Catholics in Ireland

Understanding Conflict ... and finding ways out of it

vent along with the Hierarchy on this issue. This did not happen in other parts of Europe. What happened in Ireland can only be understood when we see how the choices looked to Irish Catholics in the North. Where they had experience of working together with Presbyterians on a basis of equality in national schools run according to the original plan, they had something real to chose. But when they were invited to side with those who saw mixed education as a way of breaking the cohesion of the Irish nation, that was no choice at all. Even the most anti-clerical Catholic would chose the Hierarchy position without a moments hesitation when it became a power issue between the protectors of "our" schools and the traditional enemy.

The essential point is that in this society the meaning of any proposal for integrated education depends entirely upon the terms upon which the parties to the integration meet. Given the not unfounded Catholic suspicion of anti-Irish and proselytizing intention of schools outside Catholic control, there is always a risk that schemes for integrated education might drift into de facto British-unionist-Protestant education. If it gets into deep enough rivalry with the Catholic hierarchy, its liberalism or anti-clericalism becomes a thin veneer for unionism.

This underlines the essential difference between a mixed school where it happens that there is large minority of one kind in the other kind's school and an integrated school where pupils of both communities come together on equal terms. When integrated schools grow as a compact between the parents, who know and trust each other from their work together, the kinds of dangers outlined above become less threatening. Political difficulties are manageable if the relationships between the parents are close. But for integrated education initiatives to happen on any scale, it will be much easier if people from the two communities sense that they are coming together from positions of relatively equal power. If it is relatively easy for people from one community to become involved and much more difficult for those of the other then mixed schools will tend to be only mixed rather than integrated. If the school systems of both communities are secure, and integrated education is not being promoted in opposition to them, then paradoxically integrated education is most likely to flower.

In thinking about the need to anchor the existing school systems, there would be an obvious role for a power sharing administration or [failing that] for the

Integrated Education and new beginnings in Northern Ireland

Anglo-Irish Conference. Something is needed to anchor both the state system and the Catholic maintained system, while at the same time making support available to voluntary groups setting up integrated schools on the same basis as other maintained schools. Each national community's school system must be cherished and seen to be cherished if integrated education is to be able to flourish on a voluntary basis beside them.

INTEGRATED SCHOOLS AND RECONCILING NATIONAL DIVISIONS.

Let us now come back to the question of what education has to do with resolving national conflicts? And what part might integrated education play in it specifically. It is essential to underline the fact that integrated education will only mature if it is allowed to grow without being burdened with unrealistic expectations. There are no magical ways of overcoming national divisions through educational systems. In fact quite commonly mixed educational systems in divided societies have been seen not as solutions to conflict but as part of the problem, a source of unacceptable power of one group over another. So what passes for peace in these societies depends on entrenching separate educational systems. This does not eradicate mistrusts, but it makes them more manageable because it leaves each group with their own space. When the problem of distrust is so real, as indeed we know it is here, it is quite unreal to think that the solution is to uproot separate education and impose an impartial syllabus in mixed schools. It is quite possible to stand in front of a class with wonderfully impartial words and to teach skin deep. The content of what is formally taught is much less important than the spirit in which it is taught. As parents or teachers, we often think that we teach with our words and yet when we reflect on our own experience as children we ourselves recall the feelings we sensed in our parents and teachers, rather than their words.

Again Yugoslavia may have given us a warning about what can and cannot be done with more or less impartial "syllabus" in an mixed or integrated educational setting. Since 1945 the Serbs, Croats and Muslims seem to have lived in something like harmony in Bosnia and Croatia. The ethos of the common curriculum was provided by the Communists unifying myth, which -unlike those in other parts of Eastern Europe- had a very large core of truth. It told how all the nations of Yugoslavia had taken part in the liberation

Understanding Conflict ... and finding ways out of it

together. The story of the Partisans was like an umbrella [or transcendence] over all the Yugoslav nations. In 1988 I heard this story told often and with conviction, but it was combined with slightly over-anxious denials that the differences between the Serbo-Croat speaking nations mattered anymore. For example at Jasenovac, the site of the concentration camp where the Croatian Ustashi had massacred Serbians in 1941-4, I saw school children being shown a film, which told how all the various Yugoslav nations had produced criminal elements in World War 2 who had collaborated with outside forces. Without much attention to how much support or how little support each type of collaborator had had, the harmonizing message was that all the nations of Yugoslavia could get on very well, so long as they kept clear of outside troublemakers.

But history, the history of why 'we' have cause to fear 'them', seems to have been only sleeping. Today it turns out that the divisions which so much energy went into suppressing and abolishing are again alive and well. In recent times the Serbians have pushed for dominance within the communist party; and the other nations, most notably the Croats, have become increasingly anti-communist. Since the decay of Communism in 1990, fairly intolerant nationalists won an absolute majority in the Croatian parliament. Their leader explained that they wanted to reduce the influence of the "fifth column", the Serbian minority in Croatia. They proposed to ban the Cyrillic alphabet used by Serbs. Serbs rose up to assert autonomy for Serbian districts in Croatia. They explained that they took weapons with them to guard the polling stations because "when the Croats last came in 1941, we were not ready for them".

Of course we cannot know what the unifying story of the liberation of 1945 did or did not do to bring some of the younger generations of Yugoslavs together. It must have provided a shelter under which some people came to terms with the things which had divided them. But what made the difference as to whether or not it did this must have to do with what went on in particular schools and villages and towns. It is clear that by itself integrated education has not had a great impact in mixed towns like Petrinja, where ethnic polarization even runs through the school staff room. The central point is that what changes us and allows us to grow is the trust which allows repressed feelings to be expressed in relationships with those who those feelings relate to. If power merely imposes a crudely 'impartial' story of how opposed peoples are not really so divided from each other as they themselves sense,

Integrated Education and new beginnings in Northern Ireland

then a hidden agenda remains just buried. What is repressed does not change. It either lies dormant or it erupts. The communist integrated history, however well intentioned it had been, has not prepared a new generation to cope with the trauma of the past. Indeed the first outbreak of physical hostilities occurred at the Serbo-Croatian equivalent of a Celtic-Rangers match in Zagreb.

The difference between history in Northern Ireland [or any divided society, such as Yugoslavia] and histories of normal societies is that normal societies' histories are not about relationships which are charged with any anxiety or tension today. People who live in normal societies do not realize what a good fortune they have being able to see things the way they can in fact see them. Learning about how to make seriously divided societies 'normal' is like trying to teach naivety. Normal societies histories are shared stories of how peace came. The devils cast out were the same devils for all the citizenry. And that is why the past has become the past. From that time they have lived in concord, disturbed sometimes by minor divisions, oblivious sometimes of their hypocritical unconcern with certain groups of victims, but nonetheless knowing with their being the difference between the past and the present.

For separate national communities in a divided society, for whom there is no common story of how or when peace came, the easiest way to teach about history and society is from the standpoint of 'our' community. In this history the 'other' community appears as an obstacle or threat. The separate school system can then make the best of a bad job, by institutionalising the avoidance of real meeting. Feelings linked with 'our' history can run most smoothly when 'they' are not actually present with 'us'. This does not mean that we cannot acknowledge the pain of the 'others'. But however we acknowledge it in theory, we do not have to actually feel it as a lived reality. If any of 'them' are present as a minority in 'our' school, it is possible to ignore 'their' feelings, so that the story still runs smoothly. If this happens the result is a kind of assimilation of the minority to the community dominant in the school. Alternatively feelings which are at the heart of the conflictual reality are avoided, while tangential bits of the story are concentrated upon and the story ends with "what a pity" it was that the two communities ended up in confrontation. We should not understate how difficult it can be to improve on this approach, if the ethos of the school is not one of trust.

Understanding Conflict ... and finding ways out of it

In an integrated school different feelings would be given space to to be heard. In all probability it will be in historical learning that this is experienced most directly. Integrated learning of history will not just be a matter of finding an impartial approach. An integrated history would be like a vessel in which our different feelings can find expression and interact. Each of our versions of history in a divided society are related to our ways of explaining our feelings and especially our fears in the experience of our families and friends and indeed in our own everyday life. If we explore our histories together with people who have experienced the opposite side of the fear relationships new aspects of history will become interesting and important to us. We can only find common history together when we first treat antagonistic national relationships seriously. Having recognized their coercive power over us, we are better able to see the 'others' historic failings as mirroring our own failings. Then we begin to look at history with new eyes. Perhaps we become aware of those who stood against tides not because they thought they would succeed, but as witnesses to transcendent values, which we will need to discover as a shelter to live under together. They may provide us with role models in place of heroes of ethnic conflicts.

CONCLUSIONS

The main reason why I wrote this paper is the situation that has arisen since the Government and Dr Brian Mawhinney made a very strong commitment to integrated schooling. Because there is an objective need to rationalise school provision, especially in some of the state secondary schools, severely affected by falling numbers, some of the state school providers are feeling threatened by government encouragement for what amounts to a rival system. At the same time the Catholic hierarchy has taken the British Government to court over its supposed intention to discriminate financially against Catholic and in favour of integrated schools.

Some people who support integrated education are understandably very encouraged by what is happening, seeing the old forces of division being at last pushed aside by a dynamic reformer. They imagine that at last the sensible and moderate middle ground, Catholic and Protestant, will come forward and that something will be done to strike down bigotry at its supposed roots. I am sure that this vision is fundamentally misconceived. I predict that

Integrated Education and new beginnings in Northern Ireland

sooner or later, if the confrontation with the Hierarchy is allowed to grow, then certain other developments will occur.

First the government will have to look for allies for its schemes and the terms upon which a state school can transfer to integrated status will be made progressively easier. [In terms of the historical appendix, that will produce a rerun of 1839] Many state school providers already consider their schools to be "integrated" -and at all events not Protestant- and will be able to secure official recognition for that claim with fewer and less serious conditions. Secondly the more deeply the government becomes locked into opposition with the Hierarchy, the more likely it is that certain kinds of Unionist politicians will come out in favour of "integrated education". [a rerun of 1871] Thirdly, as these two things happen, many Catholics who have up to now looked upon integrated education, in the abstract, as a good idea, will begin to ask themselves whether in the light of the support of English ministers and Unionist politicians on the one hand and the opposition of Catholic clergy on the other, they should think again. [a rerun of 1864-71] It might become another of those tragedies like the Hunger Strikes of 1980-81, when people were divided from each other, not by their rational intellect but by their gut feeling. Catholics might find themselves asking whether integrated schools set up in this climate could really be spaces where both traditions receive equal recognition. I hope very much that integrated education will be spared this trial, which could confound its real possibilities.

At the present time the most important principle to uphold is the parents right to chose a culturally appropriate education for their children [state, Catholic or integrated..or Irish or Free Presbyterian]. It is important, wherever possible, to look for a way of expressing these needs on a united basis, as a government keen to make education more efficient [ie cheaper] may find economizing much easier if educational interests are divided against each other. Integrated education might be destroyed by excessive governmental 'incentive' to promote it, such as financial advantage not enjoyed by other maintained schools whose main effect would be to change the labels on some of the existing grammar schools with sizeable Catholic minorities. It is of paramount importance that integrated schools do not appear as a tool of government policy in opposition to the existing schools. Probably the best thing that could be done to permit integrated education to grow would be to link its access to government funding to a firm commitment to the security of the other two

Understanding Conflict ... and finding ways out of it

systems. It is far more important that some integrated schools grow in the way that the ones which already exist have grown, going through the creative experiences involving the parents, than that many nominally integrated schools be created.

January 1991

Integrated Education and new beginnings in Northern Ireland

**Historical Appendix to "Integrated Education and new beginnings in Northern Ireland"
by Frank Wright**

EDUCATION AND NATIONAL DIVISION. THE 19TH CENTURY LEGACY.

At the beginning of the main text I showed how different national groups could make relationships between themselves more manageable by accepting that each needed their own education systems. Despite the ongoing conflict between Unionism and Nationalism in the North of Ireland, by the late 1870s, Home Rulers [later Nationalists] and Conservatives [later Unionists] were tacitly accepting this kind of arrangement. But before that time a lot of people continued to support "mixed secular and separate religious instruction". What happened to these people is instructive, when we look at the difficulties facing integrated education today.

{1} **Background.** Education controversies in their 'modern' form begun in Ulster around the 1820s. Before the 1780s, Catholics had been subject to the penal laws, which were intended to prevent the growth of a Catholic middle class and intelligentsia and to ensure that Catholics remained hewers of wood and drawers of water. Education of Catholics was conducted mostly in illegal 'hedge' schools. The imposition of the Penal laws slackened after the failure of Catholic Ireland to join the 1745 Jacobite rebellion. When 'hedge' schools became legal, the Catholics at the bottom of the socio-economic pyramid had nothing to match the endowed Protestant schools. But so long as quality education was still something for higher status social groups only, the Catholics in Ulster aspiring to it were very few.

Outside Ulster, only the ruling classes were Anglican Protestants and the mass of the people below them were Catholic. These Protestants tended to be very defensive about granting Catholics legal equality. But within Ulster, and particularly in the North-East, there were large areas where Catholics were a minority and there were almost no Catholics of power or consequence. In many of these areas the mass of the population was Presbyterian and had been opposed to the Anglican Landlords during the last years of the Irish parliament [1772- 1801]. Some had supported the United Irish Rebellion of 1798 for equal citizen rights. But the question of what to do about education was far more difficult than simply abolishing the anti-catholic legislation of the penal law era. Controversy over education developed as education became a need for wider social strata, and therefore for an ever greater number of Catholics.

In all divided societies, dominant groups tend to be less frightened of small groups of dominated people than of larger groups who can outnumber them. The risks of

Understanding Conflict ... and finding ways out of it

Relaxing the grip upon a dominated group are as small as the group is small. Small minorities of people, who were once dominated, can be treated just as a few individuals with rights like the rest of 'us'. But larger groups cannot be treated like this. After they have emerged from an experience of being dominated, they will demand sooner or later that the qualities for which they have been stigmatised are shown full respect.

During the United Irish period in Inner Ulster there was a big difference for Protestants between tolerating Catholics as individuals with rights and accepting that Catholicism as another denomination of the Christian faith, entitled to group rights and the same respect as their own denominations. Before 1820, schools in parts of Ulster were "mixed", both in the sense that pupils were drawn from Catholic and non-Catholic sources, and that frequently teachers would be found in charge of schools the majority of whose pupils were of opposite denomination to the teacher. Although it was commonly Protestant teachers with a Catholic class, in some cases [for example in the Glenavy, Crumlin and Tullyrusk district] there were schools with Protestant children under Catholic teachers. Being tolerated and not distrusted, Catholics probably did not feel provoked because no one was trying very hard to convert them to anything. That would change only when Catholics started to assert themselves as Catholics throughout Ireland and encountered defensive Protestant reactions.

But Daniel O'Connell's movement for Catholic Emancipation in the 1820s mobilised Catholics as Catholics on a scale unprecedented. Protestant opponents of Catholic Emancipation responded with a campaign to undermine Catholicism through the educational system. The so-called "Second Reformation" intended to prevent a Catholic middle class forming by ensuring that education led to Protestantization. This basically revived the idea behind the Penal Laws.

The second reformation changed Catholic attitudes towards the endowed schools. Whatever assimilation of Catholics to urban commercial [and Protestant] values may have been going on before this, it had not previously seemed to be so actively intended. It was up to Catholics who went to these schools to imbibe the atmosphere of the school; not; and even if these schools were actually far more influential than this, nonetheless they were outwardly tolerant and confident. But now some of those who were over endowed education began to look upon the assimilation of the educated Catholics as a positive duty. Assimilation and conversion now became a conscious design, intended to detach educated Catholics from the mass of Catholic society. With the rise of an embryonic Catholic middle class whose power became visible in the Emancipation campaign, the Protestant response spurred Catholics to build an education system of their own to rebut the avowedly anti-Catholic impact of the second Reformation.

Integrated Education and new beginnings in Northern Ireland

[3] Conflicts over educational systems were the beginning of many or perhaps most modern European national conflicts. There came a point in time when dominated groups were in a position to organise behind their own middle class. While the dominant group tried to obstruct the rising group's efforts to control the education of its own children, the old mark of stigma became the badge of pride of the rising nation. If the Penal Laws had been focused against the Irish language rather than Catholicism then perhaps the different school systems in the 19th century would have been distinguished by language. This was what happened between the Germans and the Poles in eastern Germany or the Germans and the Czechs in Austrian Bohemia. But the Irish language had declined because the spread of commerce brought English in its wake. So instead of giving up Irish at the dictation of Britain, the Irish people had the freedom to abandon the use of Irish in their own way and at their own time. If the British had used much deliberate effort to try to eradicate the Irish language [as they did to Catholicism] there would almost certainly have been a reaction from the Irish which would have restored it to the status of first language. Defending Catholic education has been seen as a sacred duty for Irish nationalists, even for ones who are not believers, because attacking Catholic education had always been seen as a way to uproot Irishness. Theological issues have become important because Catholicism and Protestantism have become the distinguishing features of opposed national groups. Catholic institutions are assets of the Irish nationalist community and Protestant institutions are assets of the Ulster unionist community.

[4] The National System of Education In Ireland. A false start at integrated education? The first effort to create something like a system of integrated education begun in the aftermath of O'Connell's Catholic Emancipation victory. From now on no English government would willingly attempt to govern against Catholic Ireland if there was an alternative. The new Liberal government accepted the impossibility of Catholics relying on the existing Protestant educational agencies like the Kildare Place Society and the necessity of providing an educational system that would meet Catholic anxieties about proselytising.

In the National Education system [1831] they hoped to create an educational system which would service all denominations in Ireland, a proto-type of some subsequent ideas of integrated education in the North of Ireland. Central funding was the principal attraction and the rules were designed to promote interdenominational co-operation at local level. The National Board provided for two-thirds of the building costs and [after 1834] the running costs of schools that would be under local management. To begin with attempts were made to encourage applications jointly sanctioned by members of different denominations in a locality in preference to those which emanated from one denomination only. All Clergy had ex-officio visitor status (with rights of entry during school hours). And at specified times of religious instruction, all children would be withdrawn to the charge of their respective clergy. Existing schools could come under

Understanding Conflict ... and finding ways out of it

he scheme and receive running costs if they accepted these rules. In taking these steps the government was beginning to recognise not merely the formal equality of Catholics as citizens, but the legitimate role of the priest as leader of the catholic people.

The difficulties for Presbyterian relations with the Board arose from the ex-officio status accorded to Roman Catholic priests (especially at hitherto Presbyterian schools joining the Board system), the "restriction" on the use of the Bible in school hours, and the duty to send Catholic children to their priests at the times of religious instruction. These moves accorded a status to Catholicism equivalent to that of a participating Protestant denomination, a very big step from the abstract rights of individuals to the rights of groups. Any Presbyterian minister who cooperated with priests in educational matters was doing far more than merely accepting a technical equality of rights for Catholics. Wolfe Tone had optimistically fudged this issue, saying that when the Catholics were emancipated, the bond of oppression which bound the rapist to his priest and the priest to the pope would be undone. In much of County Antrim and North Down, where the mass Presbyterian populations had supported the United Irishmen, how did they feel about according such status to the Catholic priest?

As Catholics organised as a bloc to secure the removal of the last of the Penal laws, the touchstone of success or failure would be whether their religion was accepted as having status (at least) comparable to other religions. There has been a tendency with some writers not to see how natural it was that when Catholics became more powerful, the earlier relatively effortless Protestant tolerance of individual Catholics would give way to reaction over these kinds of questions. Thus the rise of Dr. Henry Cooke to leadership of the Synod of Ulster has been seen as a sort of personal and accidental triumph of anti-Catholic intolerance over the Presbyterian Liberalism of Dr. Henry Montgomery. But Cooke was not objecting to formal equality of Catholics as equal citizens under the law. His demands for an "open Bible" was in effect a demand for no let or hindrance, beyond that which was compatible with a minimal recognition of the rights of private judgement, to evangelise all children in schools including all Catholic children who didn't actually object to being so evangelised. Any Presbyterian opponent of Cooke's position who supported the early concept of National Education and did not try to skirt round the recognition of the priests' guardian role were accused of compromising articles of faith.

5] **Priests become political as well as spiritual authorities in the North.** This happened often in the mixed nationality belts of the Middle East and Eastern Europe. The hierarchy or clerical leadership in the North of Ireland gave the Catholic community bargaining power in dealing with local powers. The Liberal government reforms in the 1830s which were a response to the rising power of Catholics in the rest of Ireland, gave Catholic clergy in the North some leadership functions in relation to Education

Integrated Education and new beginnings in Northern Ireland

and Law and Order. Any power the Northern Catholics had depended in the first place on being part of Catholic Ireland as a whole. Once priests had such influence, they were often accorded recognition by for example landlords, which tended to build their position up yet further. Many secured sites for National schools from landlords who might not have facilitated the establishment of National Schools as a matter of right, but who stood to gain by good relationships with the leaders of their Catholic tenants.

[6] Where there is a gulf between ethnic groups, an area of anxiety, distrust, or thinly buried history of hostility, they tend to keep their distance from each other. Then "we" do not know very much about "them" and "we" tend to judge "them" by the worst things any of "them" do which the rest of "them" do not seem to repudiate. The worst things "they" do validate "our" suspicions of them. But what can become a blind spot for us is the extent to which "they" judge us by "our" worst. Dr Henry Cooke for example had a very understandable distaste for an educational system which he thought prevented schools from evangelising Catholic children. In 1833-4 two Presbyterian ministers in the Ahoghill/Portglanone districts toured the countryside with mobs vandalising schools that had been placed under the National Board. The letter "P" for Popery was scrawled on their doors. Cooke spoke of their 'excessive zeal' against Popery, indicating how far the duty to the 'open Bible' could be stretched and how it might be legitimately interpreted by anyone on the relieving end of such mob action.

[7] To create something like integrated education, minister and priest as guardians of their flocks, had to work together in trust. It seems very clear that in the early days of National education, when it could only work on that basis of mutual respect and trust, that there were lots of places where integrated education actually happened. In 1849 at least twenty-five of the sixty-one vested schools in County Antrim (where the Board's regulations as to religious instruction applied) were under Presbyterian management. There was even one in Ahoghill, the centre of the 1833-4 agitation.

But the implication of mixed education subtly changed over the next 15 years. Towards the end of the 1830s, when the Catholic hierarchy became more dissatisfied about the system, the government became more and more anxious to conciliate Presbyterian opposition. The compromise of 1840 allowed non-vested schools to merely give children of different denominations the right to leave the schoolroom during hours of religious instruction. No longer was it necessary to accept the guardian role of the priest in relation to Catholic children. Then the Presbyterian followers of Cooke began to declare the system acceptable. But this new support came from people who were not interested in working with Catholic clergy as the first wave had been. The spirit of anything like integrated education was already being undermined. This showed particularly clearly when an effort was made to extend the National

Understanding Conflict ... and finding ways out of it

school idea at university level. Lord Clarendon, the lord lieutenant, circulated the proposed statutes to the Hierarchy for their comments and criticisms, assuring them that Catholic clergy would have visitors status and that "in the council, professorships and other posts of such Colleges, the Catholic religion will be fully and appropriately represented". One statute provided that a student's failure to attend the place of worship prescribed by his parent or guardian would be sanctioned by the threat of expulsion. The official Presbyterian paper the Banner of Ulster described this as a provision that a Roman Catholic youth "may be expelled ... for attending a Protestant place of worship". The Banner's response indicated that an institution run according to its principles should keenly encourage Catholics to turn to Protestantism. "If the Government are determined to play into the hands of the Papists in this manner, we say, perish the Queen's Colleges. Let them be shunned by all true Protestants, let them be handed over at once to Dr. Murray and to the Pope". Fortunately for the Banner and for Presbyterian educational interests generally, they did not have to live with this anathema. The Colleges were condemned by the Hierarchy and two years later the Banner suggested that Presbyterians should now "take possession" of the Queen's colleges "so as to obtain a practical establishment within their walls". This, at least as far as the Belfast college was concerned, was what actually happened. And in later years when many Presbyterians were defending the principle of 'united secular and separate religious education', this slogan was often a smokescreen for a "practical establishment" of Presbyterians.

9] The Catholic church had been glad of National Education when it was first created because it was the only way to secure Catholics education outside normally Protestant institutions. This changed as more de-facto Catholic but nominally National schools were built and once they saw the compromises the Presbyterians extracted.

The Catholic church in mid-century moved towards a denominationalist position as it did every where in Europe. The bishops' demands were highly disagreeable to anyone who wanted to preserve mixed education as a form of integrated education. In 1859 the Hierarchy issued a Pastoral Letter stating the necessity of separation in the educational sphere and they made explicit demands that the Government finance a wholly denominational Catholic system. Included in the demands were the chartering and endowment of the Catholic University in Dublin, the dividing up of the National Schools between the various denominations, and the total and unrestricted oversight of all such Catholic educational institutions by the clergy.

There were then a lot of Catholics still going to Protestant managed National schools and some going to higher level endowed schools. There were others attending the model schools for teacher training and some at the Queen's Colleges. But the fact that

Integrated Education and new beginnings in Northern Ireland

within twenty years Catholics almost unanimously had followed the spirit of the 1859 Pastoral cannot be explained without looking at the actions of the movement to preserve mixed education.

[9] The Defence of Mixed Education up to 1871.

This section underlines our earlier theme that any attempt to preserve the National Education system as a genuine cooperative venture could only work so long as there was no question of it being a proselytising agency. Clergy had to accept that a Catholic was a Catholic by birth, and likewise a Presbyterian was a Presbyterian by birth. But this could only happen when there was local trust between the clergy and the educational providers. As the Catholics promoted more and more Catholic national schools, the integrated idea was under threat. But to respond to this danger by any other means than to concentrate upon preserving relations of trust locally, was to make matters worse.

Some Protestants started to see the Hierarchy as the obstacle to mixed education, and as actual relationships between Protestants and Catholics grew more distant, they made more and more noise about mythical "Intelligent Catholics", meaning ones who were prepared to ignore the Hierarchy's pronouncements. Just how counter-productive this approach could be for promoting cooperative relationships with Catholic liberals can be gauged from the story of the Catholic Institute in Belfast.

In the 1860s, the Catholic middle-class in Belfast was still fairly small and in a great measure its existence depended upon service of its own community. Just as today when such a large part of the Catholic middle class is involved in the Catholic teaching sector. The wealthier Catholics, far from being rejected, were treated as an asset by the Catholic Community. The interdependence between Catholics was very strong and perhaps best expressed in Bernard Hughes' remark about Catholic opposition to the Indemnity Bill of 1864. The only Catholics, he said, in favour of it were "those out of the church, such as Freemasons and those holding government appointments".

In 1865 Bishop Dorrian was involved in a dispute with the lay trustees of the Catholic Institute over which he sought to impose direct control, including the supervision of the books and newspapers provided within it. The lay trustees refused to give ground. After several months of quite bitter argument the Bishop threatened to withhold the sacraments from those who would not bow to his demands. In the end the trustees signed over the deeds to him. Whether or not they would have done so under other circumstances is an open question. But the dispute drew the attention of other parties whose interest in the welfare of Catholicism was to say the least questionable. For example the 'Carrickfergus Freeman' had had this to say of the dispute:

Understanding Conflict ... and finding ways out of it

"The firm stand taken by the laity against the tyranny and usurpation of their Bishop prove that we were mistaken . . . and that the Roman Catholics are not such serfs or poltroons lying under the feet of their clergy as we supposed"

A.J. McKenna editor of the 'Observer' was profoundly embarrassed by the support coming from quarters such as this. He was opposed to the Bishop's actions, but seeing what "allies" the laity were collecting, he could hardly afford to say so. In fact, during the period rumours were widely circulated that he was writing anonymously against the Bishop in the 'Newsletter', a charge that hurt deeply and which he was only given the chance to refute when the rival 'Ulster Examiner' printed the innuendo three years later. The 'Newsletter's' intervention drew these words from him;

"We hardly need say that Catholics can settle their own affairs, without any interference on the part of their enemies. They require no instruction from the ignorant, no assistance from the hypocritical.... That subject will be settled by Catholics themselves, who are not accustomed to make scandals, or to perpetuate them, and whose unbroken unity is the best guarantee of their continued concord.....The only effect which the comments of our Orange contemporary could have on the Catholics of Belfast would be to make them adopt exactly the opposite course of that which it had the presumption to recommend. . . . The feeling of apprehension entertained by the Romans of the gift of the Greeks, was no more natural than is Catholic alarm at Tory approval and Orange advocacy".

The message to Protestant Liberals about how to keep alive cooperation with Catholic Liberals ought to have been clear enough. It was utterly fatal to mix up non-sectarian causes with opportunities for pot-shots at the Hierarchy. You could not expect to build trusting relations with Catholics on a basis of hostility to their church leaders. In other words all windows of trust had to be looked into however dim the promise might be. But as the Catholic Church became increasingly adamant in its support for denominationalization, Rev John MacNaughton pioneered a new tendency to make the Presbyterian Church a political force for defence of the status quo in the National system, the Queen's College and the Model Schools (for teacher training).

Very few Catholics availed themselves of the opportunity to go to Queen's College, Belfast, which the Hierarchy had condemned. In 1865 only 22 of its 405 students were Catholic. When agitation began for a charter for the Catholic university in April 1865, the Presbyterian 'Banner' denounced it because, if it was granted, Roman Catholics could withdraw from the Queen's Colleges. Initially there seemed little chance of the charter being granted, but then the Presbyterian General Assembly voted to approve an application from its own Magee College in Derry to apply for affiliate status to the Queen's University. The proponents of the Roman Catholic university shelved their demand for a charter and seemed to be negotiating instead for affiliate status on the same basis that Magee was asking for. Here was an opportunity for a compromise to

Integrated Education and new beginnings in Northern Ireland

resolve the very difficult issue of denominational safeguards at university level, or was it?

How did the Presbyterians regard the prospect of affiliation not merely of Magee College but of the Roman Catholic university also to Queen's? A special meeting of the General Assembly was held in February 1866 to discuss the issue. This meeting, which withdrew the Magee application for fear of it being a precedent for the Catholic application, was greeted by both the 'Northern Whig' and the 'Banner of Ulster' as a "Liberal victory". MacNaughton opened the debate by arguing that the Presbyterian church was committed to the system of united secular education as a matter of principle; that the denominationalization of the National Education system through the introduction of the principle of sectarian representation on the Board was dangerous; that the Magee College application would be employed as a "wedge" to secure changes in the Queen's University Senate constitution which (in the process of affiliating Magee and the Roman Catholic university) would permit the denominational principle to creep in here too.

Much was said of the need to defend the rights of the Catholic laity to education that was not dominated by clerics. If Roman Catholic colleges were affiliated this, it was said, would reduce the incentive to go to the Queen's Colleges "and mix with their brethren of other denominations". At the moment Catholics went to these colleges "in the face of priestly denunciations". The Roman Catholic university was "an institution which was to regulate the Roman Catholic youth of the country in such a manner that it would not be possible for the superstitions which they advocate to be touched by the enlightenment of the present age". Put simply, defending "non-sectarianism" meant keeping "Popery" out of higher education.

Today we might well remember the small minority in the Presbyterian Assembly who, while they supported non-sectarian education, had some grasp of how the issue looked to Catholics. They understood the dangers of alliance with anti-Catholics. And they grasped quite clearly that the prospect of Catholic university affiliation to Queen's, rather than the granting of a separate charter, might be a viable solution to a very real difficulty. Most of the time there did not seem to be much chance of compromise in dealing with Ultramontane educational demands, but here were the promoters of the Catholic University doing something unusual and something which promised a possible route to a compromise. Admittedly Rev Richard Smyth, as a professor in Magee College, had a vested interest, but his speech sums up the knots that the advocates of "united non-sectarian education" had tied themselves in.

"I warn you that if you follow the view put forward by these ardent defenders of the status quo, it will land you in embarrassment and perhaps disgrace. No one has yet attempted to show what is wrong with the Government proposal. The students who

Understanding Conflict ... and finding ways out of it

will be admissible for degrees under the new charter can get them now in London University (by external examination) at additional expense. And what I want to know is whether what is right in London can be wrong in Dublin? What right have you to banish our students to London for degrees? Will you tell young Irishmen of education that if they wish to be admitted to the right of literary citizenship they must go to England and there they will find a door open which is shut against them here? 'Liberty of conscience', say these its latest expounders, does not include an Irish University degree. They can afford to be generous, comprehensive and liberal in England, but Ireland would not be Ireland if it did not retain some remnant of intolerance. But I now push the battle into the enemy's camp, and I tell our opponents that they are the worst friends of United Education, for when a great crisis does arise, as some day it shall when United Education will be in real danger, these noisy brethren will be regarded as consistently discontented, hard to please, and their influence will be lost. Concede what is right without reference to wedges and resist where you should offer resistance."

Although it is almost certain that the Catholic proposal to follow the Magee precedent was only tactical, there is no way of knowing what might have followed if they had been successful in pursuing this tactic. An open hand from Presbyterianism then might have changed the way Catholics pursued educational questions. Someone had to change and here was a possible starting point. Instead Protestants carried on the farce of "defending the rights of the Catholic laity" against clerical despotism. At a Queen's College Convocation meeting, the Vice Chancellor was hissed and groaned when he mentioned the charter. The debate that followed was of such a character that 45 Roman Catholic graduates walked out. And the Presidents of the Colleges refused to co-operate with the Senate in giving it effect until its legality was tested.

The tendency for the defence of Mixed education to slip over into Hierarchy bashing grew stronger and stronger, as the cause attracted the support of more and more anti-Catholics. In early 1867 a meeting in Belfast of "Friends of United Education" was called to oppose the use of convents as alternatives to the Model schools as teacher training establishments. Rev. J.S. Porter, a Unitarian and one of 19th century Belfast's most active promoters of what we would today call integrated education, said that teachers would emerge "with strong prejudices having never seen a Protestant child or teacher". The Catholic paper the 'Observer' said "There were Whigs, who would be insulted or pretend to be insulted, if you called them bigots, who stood on a common platform with men who glory in their bigotry, and who espouse the 'mixed system' of education simply because they believe it inimical to Catholic interests". The 'Observer' found the meeting discreditable to Belfast Protestants and offensive to Irish Catholics.

In late 1871, there were rumours that the Powis commission proposals in favour of denominationalisation were to be acted upon. Even the [Anglican] Church Education

Integrated Education and new beginnings in Northern Ireland

society moved toward the National Education League. So great was the seeming conversion of hitherto denominational Protestants to "non-sectarianism" that some Liberals became alarmed at the prospect of national education becoming the "pet" of Irish Toryism. Alex Johns, J.P. a moderate Conservative from Carrickfergus warned against letting the issue become a "Protestant question" and permitting its meetings to be infected with talk of "Romish errors". Yet William Johnston, the Independent Orange MP for Belfast spoke at a meeting of the League in Cookstown. He and other local dignitaries appeared wearing Orange sashes. The meeting, said the Ulster Examiner, threw off the non-sectarian disguise of the League. "The Orange sashes and paraphernalia of the Cookstown education meeting will carry this question beyond the domain of non-sectarianism, exposing as it does the real feeling which animates the Presbyterian and Unitarian ministers on the subject". This was nonsense but it illustrates the way in which, once an issue develops a hint of a sectarian colour, it is in danger of being judged by the most sectarian statement or action made on its behalf. Only actual relationships of Trust across sectarian division, and their preservation as the primary consideration, can be a foundation for work whose aim is to promote cross-sectarian understanding.

Cranmore Integrated Primary School

Evidence for Education Committee Shared and Integrated Education

Introduction and Background

Cranmore Integrated Primary School was established in 1993 as an all-ability integrated primary school. The school initially opened with 37 pupils and 3 teaching staff in rented accommodation off the Lisburn Road, Belfast.

Demand, Growth and Expansion

In the last two decades the school has grown and developed beyond the imagination of the founding Principal staff, governors and parents. In September 2001 the school relocated to a new purpose built school on a site off Finaghy Road North. The school is a very popular choice both in the local community but also across south Belfast and beyond. The school has a current enrolment of 208 with a further 24 children attending the attached pre-school setting. Year on year we are oversubscribed for places in the school and pre-school.

Parental demand for integrated education has been growing steadily over the last two decades. In the transforming Northern Irish society many parents are opting to have their children educated together in an integrated context, in an effort to heal many of the sectarian divisions that have caused so much trauma in Northern Irish society. Indeed many of the pupils in our school come from areas where periodic inter community difficulties are a regular feature. However our parents have a great desire for their children to experience tolerance, respect and understanding of difference. They recognise that these aspirations are delivered by integrated schools like Cranmore. Indeed, many of our parents deliberately choose to drive past local schools and in many cases schools with excellent reputation so that their children can attend Cranmore.

Shared Education vs Integrated Education

Shared Education and Integrated Education cannot be seen as one and the same. They are two different models, with different aspirations and with varying degrees of success. Integrated Education has at its core the desire to see young people from Protestant, Catholic, other or no religious background educated together. Opportunities for achieving this are presented to the staff and pupils on a daily basis, sometimes in a formal way and at other times informally.

...a creative education for the modern Belfast child.

Cranmore Integrated Primary School Ltd Company Registration No: NI027338

In recent years it has become fashionable for other schools to market themselves as ‘integrated’. In doing so these schools hope to attract additional pupils based on claims they are ‘a naturally integrated school’. Integration is not about ‘mixed’ schools nor is it about children from different backgrounds sitting in the same classroom. Integrated education is about a much deeper commitment to providing our young people with a child-centred education in the context of a school where everyone is driven by the values of the promotion of equality and good community relations.

While there are good examples of collaboration between schools these projects are mostly ineffective as they focus on the issues at the time and provide nice encounter sessions between schools but they are rarely followed up when funding is no longer available. Any attempt to define shared education must not be an opportunity to propagate this model at the expense of integrated education.

Integrated education is a project for the long term stability of Northern Irish society. Attempts at shared education and providing funding for short term projects merely tinkers at the edge of the problems of sectarianism and division. Integrated schools have survived and prospered despite community tensions, a reluctance to challenge and change the status quo, issues with enrolment, accommodation and finance in the early days of existence.

Integrated education in many parts of Northern Ireland has shown that with tenacity we can overcome the barriers. However, integrated education is not as widespread an option as it should be nor could be due to those barriers.

Barriers and Enablers for Integrated Education

Barriers	Enablers
<ul style="list-style-type: none"> • Provision of integrated education in Belfast is very small and yet 66% of parents want to see the percentage of pupils attending integrated school rise from 4% to 33%. (Belfast Telegraph survey) • DE cap on enrolment numbers for integrated schools. (Cranmore IPS is currently capped at 203 and all classes are full) • Integrated primary schools have never been able to open with nursery provision. This is the reason why many of our schools have voluntary playgroups. The Minister has resisted several attempts by integrated schools to change from playgroup to nursery status – the argument of displacement. • The Shared Education agenda could impact on Integrated Education. Parents and the wider community may think that provision for sharing is the same as integration. • Development proposals are considered on the basis of impact on nearby schools. This ignores parental demand and also that the ethos, philosophy and general character of schools is different depending on the sector. 	<ul style="list-style-type: none"> • Parental demand for integration is strong as indicated by many surveys and opinion polls. • Demographic change has led many to see the importance of educating children together. • The number of newcomer families in Belfast has created a greater desire to see children educated together. • Changing mind-sets – parents no longer send their children to the school they attended. • Increasing number of parents have the experience of having attended an integrated school themselves. • Commitment between stakeholders to the school ethos. • Performance of many integrated schools during ETI inspections. • The model of Integrated Education is help in high esteem across the world. • Cranmore IPS like many other integrated schools has hosted delegations of students, teachers and philanthropists from around the world who are keen to find out more about our good practice.

Barriers	Enablers
<ul style="list-style-type: none"> • Area based planning focusses on consolidating and a rationalising of the existing segregated system of education. • DE failure to fulfil the statutory duty to facilitate the development of integrated education as set out in article 64 of the 1989 Education Reform Order. • Pre-school settings seen as non-sectoral and non-denominational. This is not the case for the vast majority of these settings the children in attendance are predominantly from one religious background. • The decision to form a single Education and Library Board is a lost opportunity and a lost voice to promote integrated education. The new ELB will have no direct representation from the sector. 	

- Please note the Board of Governors of Cranmore IPS have submitted two development proposals to change our PEAG funded playgroup to nursery status. Despite being oversubscribed year on year and with an established building which would require little capital spend from DE the Minister has refused the proposals. The Minister has cited his reason as displacement of existing PEAG placement. We dispute this and see a change to nursery status as a way of enhancing early years education in our area.
- Playgroup and Nursery provision is not a level playing field. A voluntary playgroup is funded differently, professional staff have no access to services provided by the local ELB such as psychology, Education Welfare and SEN support.
- A further inequality exists in that the early years curriculum is the same for both settings but a voluntary playgroup is inspected both by ETI and annually by Social Services. The restrictions on staff ratio and vetting procedures required by Social Services is a bureaucratic nightmare for the leader of a voluntary playgroup.

Conclusion

It is firmly our belief that planned integrated education offers the following benefits:

- Integrated education provides a united community wherein difference is celebrated, diversity and respect are at the core of the school ethos. Opportunities arise informally and formally on a daily basis to explore difference and celebrate our shared traditions and beliefs.
- Good examples of community cohesion is delivered without the difficulty of reaching agreement across different schools. There is no impact on timetabling, no need for the added expense of a neutral venue and additional transport.
- Financially integrated schools meet the needs of the whole school community without over duplication of resources.
- Educating our children together allows pupils to experience good practice in relation to conflict resolution, peer negotiation, CRED, PDMU and citizenship on a daily basis with their own peer/friendship groups.

Yours faithfully

Mr William Doherty

3 November 2014

Dear Peter,

Committee for Education – Shared and Integrated Education Inquiry

The Committee for Education wrote to the Department for Employment & Learning on 12th September 2014 requesting information on how the Department believes that the further and higher education sectors currently interact with shared education programmes and the integrated education sector.

Please find enclosed the Department's written submission in response to this inquiry.

Yours sincerely,

FIONA STANLEY
Departmental Assembly Liaison Officer

COMMITTEE FOR EDUCATION – SHARED AND INTEGRATED EDUCATION INQUIRY

Written Submission from the Department for Employment and Learning

The Department for Employment and Learning thanks the Committee for the opportunity to provide evidence to this inquiry. The provision of education to all learners regardless of their background is an unwritten tenet of the further and higher education (FE and HE) sectors in Northern Ireland, and the Department is entirely supportive of the delivery of professional and technical (vocational) education as part of the core school curriculum through the entitlement framework. We set out below some relevant features of the FE and HE sectors in relation to shared and integrated education, how they have engaged in this area in the past and what role they may usefully play in the future.

Further Education

An Integrated Sector

All six further education colleges offer fully integrated education and training. They are required under Section 75 of the Northern Ireland Act 1998 to promote good relations between persons of different religious belief, political opinion or racial group, and report to the Equality Commission on their progress.

The FE sector has played a significant role for over 30 years in providing education and training for members of all sections of the community in a society divided by social and political conflict. Divisions continue to be evident in politics, cultural expression, education, employment and many other aspects of daily life. However, by enabling students from different traditions and cultures to come together to work and learn with others from different backgrounds further education has made an important contribution to the development of a stable and more harmonious society, and has the potential to make further contributions.

The statistics relating to the section of the community from which further education learners are drawn is shown in table 1. This demonstrates clearly that the further education sector as a whole is integrated, with learners from all backgrounds

studying in FE. Colleges are also reflective of the geographical areas they serve, with their intakes closely reflecting the breakdown of the communities in their areas.

Table 1: Accredited Enrolments⁽¹⁾ at NI Further Education Institutions by Background - 2008/09 to 2012/13

Background⁽²⁾	2008/09	2009/10	2010/11	2011/12	2012/13
Catholic	52,919	60,728	55,902	55,726	56,206
Protestant⁽³⁾	46,625	51,988	46,744	46,643	50,566
Other Religion	583	1,266	486	548	621
No Religion	6,080	6,349	6,550	7,126	9,088
Not Stated/Not Known	36,279	43,019	45,743	43,033	40,325
Not Stated/Not Known (%)	25.5	26.3	29.4	28.1	25.7
Total	142,486	163,350	155,425	153,076	156,806

Notes:

1. Enrolments are for courses leading to regulated qualifications.
2. Background is not a mandatory question and has a high non-response rate.
3. Protestant includes other Christian.

Working with Schools

Formal and informal links between schools and colleges have been a feature of the educational landscape for many decades. However, the more recent policy of school and college collaboration has its origins in the Costello Report – “Future Post-Primary Arrangements in Northern Ireland: Advice from the Post-Primary Review Working Group” (January 2004). Between 2004 and 2008 DEL and DE worked together to deliver the Vocational Enhancement Programme (VEP), with DEL being the lead department and budget holder. The VEP was developed to progress the recommendations contained in the Costello Report and in the Further Education Means Business strategy to enhance the profile of professional and technical education, and to promote the need for collaboration among schools and FE colleges in the interest of all pupils.

The VEP grew from fewer than 2,000 pupils in the 2004/05 academic year, to around 10,000 pupils in the 2007/08 academic year who were enrolled on over 12,733 professional and technical education courses. Of the 12,733 courses, around 72% were taken up by 14 to 16 year old school pupils, and around 28% were taken up by 16 to 18 year old school pupils. By 2007/08, 220 post-primary schools (including 32

special schools), nine training organisations and all six FE colleges were involved in the VEP.

The VEP ended in June 2008, being replaced by the Entitlement Framework, which was also intended to take forward the recommendations in the Costello Report. Since September 2008, funding has been channelled through DE to schools through the Entitlement Framework funding formula, with schools 'buying' provision from colleges. The Entitlement Framework aims to provide access for pupils to a broad and balanced curriculum to enable them to reach their full potential no matter which school they attend or where they live. Under the Entitlement Framework, one third of the curriculum made available to pupils must be general (academic) in nature, one third must be professional and technical (DE use the term applied) in nature, while the remaining third is at the discretion of the school. However, pupils can still choose to follow a 100% academic course of study, the 'entitlement' being that applied courses have to be made available to all pupils. The Entitlement Framework is enshrined in legislation, and is being implemented by DE on a phased basis.

Currently further education colleges work together with schools in the delivery of the Entitlement Framework. Colleges are in the main tasked with the provision of high quality applied (professional and technical) education. The school and college collaboration aspect of the Entitlement Framework has worked well since its introduction, and colleges have had school pupils from different backgrounds attending their campuses to avail of the high quality courses on offer, delivered in state of the art facilities and led by industry expert lecturers. For example, in 2012/13 around 11,500 pupils availed of applied opportunities delivered by further education colleges under the Entitlement Framework policy.

School and college collaboration is important for two main reasons. Firstly, because of the enriched and industrially relevant courses that are made available to pupils as part of their wider curriculum. Secondly, as indicated above, colleges are recognised as being genuinely cross-community integrated educational establishments and, in addition, when attending colleges as part of the Entitlement Framework classes are often a mixture of pupils from different schools and from different backgrounds. Therefore, colleges' involvement in the delivery of the Entitlement Framework can contribute substantially to the shared education policy intent.

It is also important to highlight that college and schools work together on the area planning of provision to be delivered under the Entitlement Framework.

While school/college collaboration has worked well, there is a considerable risk that changes to how the Entitlement Framework is funded, in particular the removal of the 'ring fenced' budget allocation, may reduce schools' willingness to collaborate with colleges. Evidence is emerging that the view of many schools is that they will not be able to afford to collaborate with colleges to the extent that they have in the past when the funding model is changed from the 2015/16 academic year. If schools collaborate less with colleges, there is a risk that the lecturing capacity that has been built up over a number of years will be lost.

All of this is bound to have an adverse impact on the delivery of the shared education agenda, as colleges are fully integrated environments where school children would be studying professional and technical qualifications in classes made up of people drawn from all sections of the community. Additionally, we believe that further education colleges are much better equipped than schools to deliver these qualifications due to their facilities and expertise, so any retrenchment from colleges to schools of the applied section of the Entitlement Framework is likely to jeopardise the shared education outcomes and, indeed, the qualifications outcomes and wider education experience of school children, from whichever part of the community they are drawn.

Shared and Integrated College Estates and Facilities

As indicated, further education colleges, as cross-community institutions that cross all educational boundaries and welcome all ages and backgrounds, are at the forefront of shared education. This continues to be manifested through the continuing development of the college estate. For example, Southern Regional College has an approved outline business case to build a new college in Craigavon which will open up integrated education for a wider section of the population of the area than is currently the case in the existing separate campuses in Portadown and Lurgan. Also relevant is the recent progress of the Lisanelly Education campus in

Omagh which would open up opportunities for South West College to further develop engagement with the post-primary education system.

Colleges also continue to work together to share resources and facilities between themselves through the implementation of a shared services programme. While shared education is not a direct aim of this approach (it is more concerned with realising potential organisational efficiencies and bringing colleges together as a more coherent sector), the lessons learned from these processes may well be of interest to the schools sector when planning their own collaborative arrangements to deliver the shared education agenda.

Higher Education

The majority of Higher Education provision in Northern Ireland operates largely on a shared and integrated basis. The sector is comprised of five institutions, Queen's University Belfast, University of Ulster, the Open University, Stranmillis University College and St Mary's University College. The institutions are committed to the promotion of equality of opportunity and to creating and sustaining an environment that values and celebrates the diversity of staff and students. The institutions are supported in their efforts by their respective Students' Unions.

Students enrolled at the institutions include all sections of the community as illustrated in the extract from the most recent HESA data below:

Religion ^{(2) (3)}	2007/08	2008/09	2009/10	2010/11	2011/12	2012/13
Protestant	14,200	13,570	14,415	14,740	14,505	14,065
Catholic	19,820	19,380	20,995	21,380	21,275	21,115
Other	1,345	1,395	2,270	2,765	3,510	4,115
Not known	6,720	7,355	5,990	5,070	3,970	4,085
Non NI Domiciles	6,110	6,540	7,320	8,040	8,645	8,335
Total	48,200	48,240	50,990	52,000	51,905	51,715

Source: HESA

2 Information on religion, marital status and dependents is only collected for NI domiciled students studying at NI HE institutions.

3. Religious affiliation is not a mandatory question and therefore can have a high non-response rate.

Initial Teacher Education

Within the initial teacher education sector, i.e. the two universities and university colleges, accommodating faith based education provision within current structures leads towards religious imbalances in student enrolments at the teacher training colleges. This is also reflected in the table of NI domiciled enrolments at the university colleges below:

Religion	Stranmillis University College			St Mary's University College		
	2010-2011	2011-2012	2012-2013	2010-11	2011-2012	2012-2013
Protestant	715	820	895	5	5	10
Catholic	355	400	445	930	975	1,045
Other	25	30	30	5	5	5
Not known/available	160	40	45	10	5	10
Total	1,250	1,290	1,415	950	990	1,070

Source HESA

Note: Figures have been rounded to the nearest 5 in line with HESA Policy.

The principle of shared and integrated education was a key issue in the recent Stage Two Review of Initial Teacher Education Infrastructure. The Minister recently commissioned this review to consider how best to develop teacher education to a world-class standard; to enhance and improve sharing and integration; to examine whether the funding provided could be used more effectively; and the structural changes that need to be made achieve that. The Review Panel invited submissions from across the teacher education sector and held meetings with key stakeholders including representatives of the integrated education sector.

The final report reflects the evidence provided to the Panel, demonstrating commitment throughout the teacher education sector to the principle of shared education, and also the commitments outlined in key public documents such as *Programme for Government, Together: Building a United Community*; and the *Department of Education Ministerial Advisory Group 'Advancing Shared Education'*.

The Panel commented:

"It is clear from evidence submitted to us, and from our discussions with the teacher education institutions, that all subscribe to the principle of shared education, that all make a contribution at present to what shared education entails, and that all are

willing to contribute to the further development of shared education. Moreover, shared education is a key policy objective supported by all political parties in Northern Ireland and therefore has important implications for initial teacher education.

As the recent report to the Minister of Education defined it, shared education involves two or more schools or other institutions from different sectors working in collaboration in a way that “delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion”. Moreover, just as faith-based teacher education is accepted to require active participation in and personal experience of what it means to teach in a particular faith tradition, so we maintain that all teacher education students should, as part of their total programme and experience, engage in shared education activities of the kind we have mentioned.”

The Review Panel also draws attention to the future sustainability of the current Initial Teacher Education system and acknowledges that although this can build on the existing high quality provision, there is a need “to accelerate those developments in a way that will ensure financial sustainability. The report provides examples, such as encouraging providers to diversify their provision through perhaps greater collaboration and jointly offered undergraduate degrees between the Universities and the University Colleges, drawing on their different expertise.”

The Panel concludes:

“Underpinning all of these considerations is the need to make the best use of limited financial resources in training and developing a teaching force for Northern Ireland that is truly world-class. Given what we have learned about the commitment to achieving that objective that already exists in Northern Ireland, we believe there are good grounds for being hopeful.”

This is consistent with the Stage One Study of Initial Teacher Education (2013), conducted by independent consultants, which analysed the financial stability of the two university colleges and demonstrated that the colleges are heavily reliant on maintaining intake numbers and grant levels per student in the future to remain

financially viable and concluded that both colleges are unlikely to be financially viable unless significant efficiency savings can be obtained or additional income earned.

The Review Panel has included in the '*Conditions for Change*' section of their report that it recommends for any new Initial Teacher Education infrastructure, that each institution should ensure that every teacher education course should include a programme of shared education. The Review Panel acknowledged that this was a matter for the Department of Education however it believed that,

"initial teacher education has a vitally important role to play in the achievement of effective shared education and we hope that DE will agree to make the preparation of new teachers in shared education a significant and compulsory element for all programmes. Such an element is an integral feature of all four policy options outlined in the report."

Work is underway on engaging with the HE institutions about the detail of the report including the focus on shared education.

Conclusion

Taken together, the further and higher education sectors in Northern Ireland have a good track record in delivering education to all citizens, regardless of their background. In the light of the FE sector's remit for delivering the Entitlement Framework, the Department believes that there is the potential for the schools sector to learn from the experience of FE in delivering this approach successfully, whether it is through direct engagement with colleges or engagement at a departmental level. Engaging colleges as partners in delivering the Entitlement Framework will also assist greatly in achieving the aims of the shared education policy, as well as ensuring that the best professional and technical education is available to all school-age learners.

We wish the Committee well with its inquiry.

Drumlins Integrated Primary School

Drumlins IPS

43 Lisburn Road
Ballynahinch
Co Down
BT24 8TT
Tel: 028 9756 3755
Fax: 028 9756 3755

Principal: Mrs Janice Marshall

24th October 2014.

Dear Mr McCallion

I am writing in response to your request for written evidence with regard to Shared and Integrated Education.

I am principal of Drumlins Integrated Primary School, in Ballynahinch. Our school opened 10 years ago due to parental demand; parents in Ballynahinch wanted the choice of integrated education for their children in this town. Drumlins met all necessary criteria for the school to receive full Department of Education funding and approval. The school opened in September 2004 with 12 Primary 1 pupils and currently has over 170 pupils and is one of the most oversubscribed schools in the area.

This oversubscription has certainly not been achieved through the school having better resources and physical structure than other schools; indeed the school currently sits in an industrial estate, in a number of mobiles on our third temporary site. Our school has faced a number of very significant challenges since opening; outgrowing each site, having poor physical accommodation, facing uncertainty as to where – or even if – a permanent school site could be identified and having low admissions and enrolments set for the school causing difficulty for the school's growth. Despite these obstacles the school has remained a popular choice with parents and in most years has been oversubscribed.

We were delighted on 24th June 2014 when the Minister for Education, John O'Dowd, announced that Drumlins was to receive a new purpose built school to serve the children of the Ballynahinch area – but our success has not been dependant on this announcement.

In Ballynahinch sharing occurs successfully across sectors at both primary and post-primary level; we are fully in support of this and are often involved in sharing activities with the other schools. However the parents in the town still wanted to have the choice of integrated education for their children. A huge amount of work had to be undertaken over several years for the parents to achieve this goal and I personally have a huge amount of respect for the school steering group as I had the privilege of joining them at a later stage, when so much of the work had already been done. I do however have the shared goal with those early parents and our current parents of achieving academic excellence for our pupils through learning in an integrated setting.

Our pupils have opportunities to learn about and develop respect and understanding of one another's culture, religion, beliefs and abilities. I have no doubt that this happens in other educational settings which are not integrated but we value having 'Integrated' in our title as it clearly states our intention in both learning and ethos.

Sharing is a term which can be open to much misinterpretation; for example, how much sharing? In what ways are things shared? What is shared? How is the sharing regulated? Integrated schools clearly state what integration is and how it is regulated in the schools

by adopting NICIE's Statement of Principles and by adhering to the legal structures set out through the Scheme of Management and the adherence to the Department of Education's requirements for Integrated Schools.

Integrated schools allow children to learn, play, develop friendships and set in place the building blocks of respect and understanding for the adults of Northern Ireland for our future. There is no ambiguity or misunderstanding in this goal; it is one which clearly sets out the intention – to educate children together side by side in the same classrooms with clearly set out aims and objectives.

Our concern is that Shared Education would be seen as the same as, or equivalent to, Integrated Education when these two systems are entirely different, with totally different goals. There is no doubt that many schools and educational establishments would benefit from greater sharing – but this does not equate to integrated education, integrated education exists in Integrated Schools. We do not want to see the excellent work which exists in Integrated Schools being undermined by a separate system albeit one with good intentions and positive elements.

I would be happy to add to this submission or discuss this further if required.

Yours sincerely

Janice Marshall

Drumragh Integrated College - Student Council

Northern Ireland Assembly Committee for Education Inquiry into Shared and Integrated Education

Submission from The Student Council of Drumragh Integrated College

24th October 2014

1. Factual Information

- 1.1 Drumragh Integrate College has two Student Councils. The Junior Council is for KS3 and the Senior Council is for KS4 and KS5. The remit of both councils is to canvas the opinion of the student body on a range of issues and feed back to the Senior Leadership Team via regular Student Council meetings. The students can if they wish, ask members of staff to attend their meetings, and the council attend SLT meetings to present their opinions.
- 1.2 Each council consists of one representative from each form class.
- 1.3 Both councils met recently to consider their submission to the Inquiry into Shared and Integrated Education.

2. The Student Voice

- 2.1 'I came to this school because it's the better type of school, because no matter what you believe or where you're from you can make friends with anyone... It is important to meet people from different backgrounds so you can learn about other people's point of view.'
- 2.2 '... my best friend is a different religion and I'm glad she is because I learn about her and she learns about me and we learn to accept each other.'
- Rachael*
- 2.3 'An integrated school is good because you have more of a community.'
- 2.4 'The friends I meet inside of school are now some of my best friends outside of school.'
- Harry*
- 2.5 'Stop worrying about the political side of this. Worry about the thousands of lives that depend on integrated education.'
- Mark*
- 2.6 'In today's society integrated education is fundamental to safe and settled students. The Belfast flag riots are in my opinion a direct result and a fantastic reminder of how people cannot get on... 20,000 people can make a dramatic difference... integrated education has never been more relevant in today's society. Take a look around you.'
- Elliott*
- 2.7 "Genuinely, I am all for Integrated Education. I find this school to be very calm in terms of everyone being together in the one building, mostly because it's widely understood by the students in this school that we are all individual people to be respected as you would anyone else. Every student is offered the same opportunities here and we are encouraged to do our best. There is no bias towards any certain ethnic or religious groups because we as students are all just children who come here to learn in a place we feel safe. It would be wrong to force a child into a situation where they feel insecure about their physical attributes or name, because they don't fit into a certain religious ethos. I really value Integrated Education

because in a sense it teaches children to unlearn any personal grievances against groups of people, which mostly makes the difference as they grow older and are able to develop their own tolerance and understanding. School is about learning, becoming a more educated person and academic growth. To me it seems wrong to stunt that growth with the segregation of people.”

Kellie

- 2.8 “I think Integration is the only way we as a country can move forward, away from the “troubles”. It truly is the only way to move forward and personally I think the government should be doing more to support Integrated Education”.....”Integration teaches that everyone’s viewpoint and opinion matters and that everyone should be treated equally no matter what.”

Lauren

- 2.9 “A shared education is when different schools come together and be with each other for like two hours, then go different ways and forget about it. Integrated Education is when we are all together like two streams meeting into one”

Courtney

- 2.10 “The difference between Shared Education and Integrated Education is that in Shared Education you still have the different schools with different uniforms only sharing some things for a while, but Integrated Education has the one uniform and the one school and your together all the time.”

Morgan

- 2.11 “Integrated stay united together for work, play and education. Integrated are stronger together. Shared means retreat back to your own separate schools.”

Jamie

- 2.12 “Attending a school that promotes an integrated ethos will help to benefit society as it will encourage everyone to embrace and accept people of all parts and religions of the world. Not only will it benefit the society of today, it will also help the future generations to come...being educated in an integrated atmosphere is helping to break the old traditions, helping to benefit the future of Northern Ireland..”

- 2.13 “Integration promotes equality and diversity which I feel is important because all members of the community should be accepted. In my friendship group we have different religious backgrounds and that doesn’t seem to be a problem because we are all human beings... Disagreeing with Integrated Education is promoting the conflict that has been inflicted upon people in earlier years...Integrated education provides a model of education fit for building a prosperous and peaceful 21st century.”

Racel

- 2.14 “Please take our views into consideration as we are the students in the school.”

Drumragh Integrated College

Northern Ireland Assembly Committee for Education Inquiry into Shared and Integrated Education

Submission from Nigel Frith, Principal of Drumragh Integrated College

23rd October 2014

'We have flown the air like birds and swum the sea like fishes, but have yet to learn the simple act of walking the earth like brothers.'

- Dr. Martin Luther King Jr.

1. Introduction

- 1.1 Drumragh Integrated College is a grant-maintained, integrated, post-primary 11-19 college. It opened in 1995, having obtained the minimum number of pupils required for commencement. It was based in the Victorian Tyrone and Fermanagh Hospital building until 2009, when it moved into its present, much-appreciated new accommodation on the Crevenagh Road, Omagh. There are currently just over 660 students on roll.
- 1.2 The College's ethos is genuinely and pro-actively integrated, as evidenced for example by its effective approaches to Ash Wednesday, Remembrance and responding to conflict. Drumragh IC was one of the first schools in Northern Ireland to achieve the 'Excellence in Integrated Education Award', in 2010. Its mission statement is 'Excellence for Everyone'. We strive to offer a shining example of integration in practice and to provide a quality of education that is second to none.
- 1.3 I have had the privilege of being the principal of Drumragh Integrated College since September 2005.

2. The nature and definition of Shared Education and Integrated Education, including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education

- 2.1 A working definition of shared education, endorsed by the Ministerial Advisory Group in their March 2013 report, 'Advancing Shared Education', is this:
- Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.*
- 2.2 Integrated schools are based, amongst other things, on the 'Statement of Principles'. This Statement declares that:
- The integrated school provides a learning environment where children and young people from Catholic and Protestant backgrounds, as well as those of other faiths and none, can learn with, from and about each other. The promotion of equality and good relations extends to everyone in the school and to their families regardless of their religious, cultural or social background. Integrated education is value-driven and child-centred. It is delivered through a holistic approach with an emphasis on developing every aspect of a child's or young person's potential.*
- 2.3 High quality shared education and integrated education both have the potential to transform society, based on contact theory; the more time children spend together side by side, in a mutually respectful safe space, the more transformation of values is possible. Wherever

shared or integrated education can achieve these goals, it should be led, encouraged and facilitated; because this is what NI needs for the future. But this should only apply to quality shared or integrated education, where conditions are pro-active, where much more is happening than children from different communities or schools being introduced to each other; where in fact they are immersed in a learning experience that encourages the development of mutually respectful values on a day-by-day, moment-by-moment, practical and meaningful basis. This is about quality contact, in other words, not lip service nor superficial and ineffective approaches.

- 2.4 Quality shared education and quality integrated education should both be formally defined, with a statutory obligation to facilitate and encourage them – as is currently specified in Article 64 of the 1989 Order. The obligation should however be very clear and insistent in distinguishing between quality and ineffectiveness. Every school should be required to fulfil one and/or the other duty, and facilitated in doing so with excellence. All educationalists and politicians should be united in seeking not just academic success, but the effective shaping of young people's values so that they can lead Northern Ireland out of its dark past.
- 2.5 Integrated schools are not the only solution to society's ongoing problems but they are a key part of the solution. It is the responsibility of us all to work together to resolve these difficulties, for the sake of our children, society and the future of Northern Ireland.

3. The design and aims of integrated education; 'the thing works'

- 3.1 Some people have a limited or flawed understanding of integration, thinking it is just a mixing of cultures and at worst encourages a 'watering-down' of one's own beliefs. In fact integration encourages young people to respect difference, to define themselves and to present themselves confidently. It is an all-ability, inclusive approach to education, thereby reducing barriers to learning and encouraging excellence.
- 3.2 The integrated sector has defined expectations and requirements regarding religious and cultural balance amongst the student body, the staff and even the governors. These are largely to create a sense of community wherein no-one feels isolated and where mutual respect can flourish.
- 3.3 Looking beyond the importance of balance and admissions, an essential difference between an integrated and a mixed learning environment is what happens after the student body has been enrolled. We do not simply admit students from different traditions and expect them to 'muddle along', nor to pretend that everyone is the same. Our approach counters sectarian, divisive messages and positively promotes mutual respect.
- 3.4 The ethos of an integrated school is deliberately planned. It involves tolerance, not simply toleration of someone from another tradition or culture. We are alert to the dangers of sectarian attitudes and actions. Difference is not 'swept under the carpet' but rather is recognised and embraced, with respect. This is all done strategically and staff are aware of how to both encourage and monitor its effectiveness.
- 3.5 Some examples based on approaches taken at Drumragh IC will perhaps prove helpful. First of all, the delivery of the curriculum is carefully handled. In Religious Education, students are given a balanced, respectful presentation of different religions and beliefs, encouraging them to accept difference and to explore what they believe themselves. In History, different views of historical events and perspectives are recognised, with an emphasis on thinking skills and analysis. Elsewhere, where the curriculum is perhaps less sensitive in a sense, teaching is still deliberately mindful of the views and backgrounds of those present.
- 3.6 Important events in the Drumragh Integrated College calendar also illustrate the distinctiveness of an integrated ethos. Remembrance involves a proactive education programme in the weeks running up to it, where staff help students to understand the college's view of this annual event. Remembrance is seen in the college as a time to remember and respect those who have died in war, but also to strive to learn the lessons of

history; that dialogue and understanding, not violence, are the keys to a peaceful society. This perspective is also presented in whole-college assemblies, and students are then invited to wear poppies or not, as they choose.

- 3.7 Another example of the integrated ethos in action at Drumragh IC is Ash Wednesday, a central event for the college every year. Here the whole college community is brought together for the Ash Wednesday service. Clergy from both Catholic and Protestant denominations are welcomed, to speak during the services and, in the case of the priest, to administer the ashes. The service opens with the principal stating that for all of us the service is an opportunity to consider how we are living our lives and, if we see the need, to resolve to make changes for the better. The terms 'Catholic' and 'Protestant' are not used, but later in the service it is explained that those who would like to receive ashes are welcome to do so. It is emphasised that equally, those who would prefer not to receive ashes may remain seated, to listen to the quiet music, consider the quotations being shown through the projector, to think, or to pray as they choose. The whole college community is together in this often beautiful service, respecting each other's differences.
- 3.8 When something significant is going on in wider society, the college will often explore it with its student body. During the Queen's Jubilee, for instance, the college held a tea party, including a fun fashion parade, despite the fact that there are more Catholic than Protestant students in the college. During the flags protests the college explored what was going on, in assembly, explaining the background, talking about what was happening and drawing the conclusion that while protest can be justified, violence and rioting cannot.

4. What do young people say about integration?

- 4.1 There is a variety of research studies, reports and surveys on the impact of integrated education. The following however are the views of a number of students who attend Drumragh Integrated College, where the voice of students – the major stakeholders of our education system – matters:
- 4.2 'I really value integrated education because in a sense it teaches children to unlearn any personal grievances against groups of people... School is about learning, becoming a more educated person and academic growth. To me it seems wrong to stunt that growth with segregation of people.'
- 4.3 'I came to this school because it's the better type of school, because no matter what you believe or where you're from you can make friends with anyone... It is important to meet people from different backgrounds so you can learn about other people's point of view.'
- 4.4 '... my best friend is a different religion and I'm glad she is because I learn about her and she learns about me and we learn to accept each other.'
- 4.5 'An integrated school is good because you have more of a community.'
- 4.6 'The friends I meet inside of school are now some of my best friends outside of school.'
- 4.7 'The difference between shared education and integrated education is that shared education you still have the different schools with different uniforms only sharing some things for a while but integrated education has all the one uniform and all the one school and you're together all the time.'
- 4.8 'Stop worrying about the political side of this. Worry about the thousands of lives that depend on integrated education.'
- 4.9 'In today's society integrated education is fundamental to safe and settled students. The Belfast flag riots are in my opinion a direct result and a fantastic reminder of how people cannot get on... 20,000 people can make a dramatic difference... integrated education has never been more relevant in today's society. Take a look around you.'

5. What do some parents say about integration?

5.1 The following are comments made by two parents of students at Drumragh

Integrated College:

5.2 'Although some progress has been made politically, Northern Ireland is, in many ways, still a divided society. This has an enormously negative effect on individuals, families, and communities. On a very real level, economical and social advance is compromised, which negatively impacts both on a national as well as on an international level. Real, tangible positive change is badly needed and long overdue. The only way true change can take place at grass-root level is through altering the perspective and perceptions of our young people. Prejudice and stereotypes need to be broken down and fear of "otherness" eradicated. This is a gradual process which can only happen when communities mix on a daily basis.

Integrated schools have a unique opportunity to be at the forefront of this long-term effort by educating young people from all communities together. They need to be given full support by DE in their endeavours to provide co-educational facilities for as many pupils as possible.

The management and staff at Drumragh Integrated College are doing an excellent job at providing the best possible integrated education, with a strong leadership, vision and passion. The teaching body are equally motivated and motivating, forward thinking, advocating inclusion, tolerance and acceptance of all and embracing of differences. I feel very thankful and privileged that my daughter has been able to obtain a place at the school a few years ago. She is thriving academically and personally, is very happy there, and has developed a very mature social attitude. The more children are given such an opportunity, the better for their future and for the future of Northern Ireland.

Sincerely,

Dr Dagmar Corry, PhD, CPsychol, AFHEA, AFBPsS'

5.3 'I think deciding to send a child to a different type of education is difficult here. Both my husband and myself were educated in grammar schools, so our parents made that decision. There is always that worry, are we sacrificing something else because we believe in Integrated Education? We have never regretted sending Ellen here, even after she did both sets of tests for the other schools and had the choice of where to go. Rather mean of us! She is pushed and challenged as we had hoped. Even more importantly, she is also very happy.

Gayle Hegarty
Programme Manager
Drug and Alcohol Training Programme
Western HSCT'

6. Key barriers, potential enablers and priorities for developing integrated education

6.1 Lack of vision, tribal politics and systemic inertia have restricted the further growth of integrated education; and that is a disgrace.

6.2 Inertia is dangerous when in fact change is needed so urgently, for our legacy to the young people in our schools to be the right one - comparable to the myth of Nero fiddling while Rome burned.

6.3 A key solution is to facilitate integrated education wholeheartedly and actively; for DE and the Assembly to embrace as never before a vision of the potential of education to lead the way in shaping a unified, diverse and peaceful society.

6.4 Parent power has achieved a remarkable 6-7% of the NI school population in integrated education, either by starting new schools from nothing or through transformation. So what could be achieved if both the Department of Education and our political leaders supported it

fully? At present the integrated sector largely continues to move forward despite, rather than because of, full encouragement and facilitation.

6.5 Support that could and should be given to integrated education includes:

- Pro-active, practical support where there is demand for an integrated school in a particular area, either to build from nothing or to transform to integrated status;
- Helping over-subscribed integrated schools to grow;
- Promoting choice and gauging public demand for integrated education, as part of area planning;
- Giving the integrated sector a statutory seat and voice on area planning groups;
- Giving the integrated sector a statutory seat and voice within the new single education and library board;
- In other words, giving each sector a statutory voice and role within the educational system.

7. Conclusions

7.1 We all need a strong vision and committed focus not on the past nor on the status quo, but on how to make life better in the future.

7.2 The integrated sector is well defined and very clear about what it strives to achieve.

7.3 Integrated education should be given equal emphasis, political support and resourcing with quality shared education – two routes to the same vision.

7.4 In a society that is scarred and struggling toward real peace, it seems completely obvious that young people should be educated together – all day, every day. A central goal of integrated education is the transformation of young people's hearts and minds. This is achieved by actively helping them to respect difference and encouraging them to form friendships that break down barriers. This is not always easy, but it matters. And so we can shape a future that includes tolerance, peace and healing.

Moneynick Primary and Duneane Primary working together in Shared Education

Our Partnership

Moneynick and Duneane are two rural primary schools which lie on the outskirts of Toomebridge and are situated 1.7 miles from each other. They had been working together over the last ten years and joined the Primary Integrating Enriching Education Project (PIEE) which began in 2009 and were funded by the International Fund for Ireland and Atlantic Philanthropies. Both Moneynick and Duneane are small schools and since the cessation of the PIEE project, have continued to grow and develop as a confederation.

The principals saw how PIEE impacted positively on all areas of their school communities: principals, staff, pupils, parents and governors. For principals and staff, being in PIEE meant that they were able to avail of opportunities to train and plan together.

The Boards of Governors play a vital role in the continuing development of the partnership, supporting joint events showcasing pupils' work. In 2012 a joint subcommittee of Governors was formed. They have overseen the running of the Partnership including the appointment of a shared teacher in 2012 and have played an integral part in our development to date.

The Governors made a joint submission to the Area Plan for Primary Schools in Northern Ireland the outcome of which called for the schools to work together in shared education. Initially our intention was to seek a shared space through investment in a mobile classroom, where our children could learn together and our communities could meet.

After a visit from the Minister of Education to our Partnership in September 2013, we submitted a business plan to the Department of Education outlining our vision for the shared space. The Principals were aware of the existence of Shared Campus Schools in Scotland and visited four schools in Lanarkshire in September 2013. The visit confirmed that the direction our schools were taking could lead to a successful shared future on one campus.

Following an announcement by OFMDFM in early 2014, with full support of governors and parents, we submitted an Expression of Interest in a Shared Campus for our schools. Prior to this the whole school community was involved in a stringent consultation process the outcome of which gave 100% commitment from governors and staff, and over 90% commitment from parents.

What Shared Education means for us?

Over the last number of years, our pupils have taken part in regular shared classes which have now become part of normal school routine. In 2012-2013 we had P1EE funding for a full time shared teacher and since then the two schools have been funding a part-time shared teacher from their own budgets. Funding for transport between the two schools has come from Shared Education at Queens, through Atlantic Philanthropies. Each Monday and Tuesday our pupils work together in single year groups. Our aim is to raise standards across both schools and give our children an opportunity to cement friendships and become comfortable working side by side.

Both schools currently have three composite classes. Shared classes provide our children with the opportunity of being taught in joint, single year groupings. This also benefits the pupils who are left behind with their own class teacher who are also left as a single year group or smaller composite class. The majority of the shared lessons are literacy and numeracy based and areas targeted are identified from both school development plans in line with Count, Read; Succeed. Raising standards in both schools is the priority for our children.

Our current Y7 children have been involved in shared classes since they were in Y1. Sharing is now accepted as a normal part of their school routine. Although harder to quantify, our involvement in shared education has delivered wonderful opportunities for developing friendships and building relationships pupil to pupil, teacher to teacher and family to family. The children have also had the opportunity to reach out to the wider community and develop links with a local Residential Home and with local Sports Clubs.

Our children now have a joint School Choir who performed on Radio and last year achieved second place at Ballymena Festival. Last Christmas they sang for the residents of the nearby Nursing Home. We have also fielded joint Sports Teams at local competitions and would see this developing further on a shared campus.

Moneynick Mothers & Toddlers has welcomed parents and younger siblings from Duneane Primary School, enhancing community cohesion at its most fundamental level. We hope to expand the Mothers & Toddlers provision if we move to a shared campus.

Parents have enjoyed attending joint showcase events and have even taken part in joint parent-only events such as salsa dancing. They have been consulted at every step along our journey and are very supportive of the partnership. Links have been established between both Parent Teacher Associations with joint events to enhance social cohesion and raise some funds for joint activities.

Barriers

- We feel that the biggest barrier to the development of Shared Education and our partnership in particular, is the lack of support and acknowledgement at department level. For a number of years we along with other principals within the P1EE project were under the illusion that the Education Committee at Stormont were aware of the different Shared Education projects that were running within Northern Ireland. Following a visit to both schools by a local MLA we discovered that this was not the case. Our partnership has been seen as 'pathfinding' and yet the education committee was unaware of our existence.
- We feel there is a lack of vision at government level. We hear the words 'SHARED FUTURE' but there is a lack of process in achieving this within education, eg. through our business plan submitted in 2013 it became evident that there was no application process for a shared space. Even though both schools had the support of their managing authorities, there appeared to be no system to follow or no particular individual within the department that we could take advice from.
- For our partnership the biggest barrier to date has been the rejection of our bid for a shared campus announced in July 2014. Without a doubt we are the most pro-active

primary partnership in Northern Ireland and are seen as pathfinders in Shared Education, yet we were told that our bid appeared to be more about co-locating than sharing.

Enablers

- Tremendous support and advice from our local MLAs who have encouraged us to have a voice at Education Committee level. It is important for all partnerships to have cross-party support.
- Pro-active thinkers at education board level who have the vision to create successful projects such as PIEE and have the business acumen to secure funding from external bodies.
- Support from authorities who give encouragement and recognition and source funding for shared partnerships eg. Shared Education at QUB.
- Positive leadership with energetic and enthusiastic staff and governors who share the vision and are aware of the bigger picture.

Priorities and Actions needed to move forward

- Committee for Education who engage with shared education partnerships in Northern Ireland. The Committee would benefit from visiting successful partnerships to witness sharing first-hand.
- Cross party agreement on making shared education a priority.
- A team of active educational practitioners who have first-hand experience of Shared Education directing DENI policy and contributing to decision-making for future programmes of sharing.
- Honesty and integrity in dealing with shared education partnerships and clear guidelines and criteria for any application process.
- Development of a continuum of good practice in sharing with guidance for schools on how to move forward.

Committee for Education

Shared and Integrated Education Inquiry

I. Table of Contents

1. Introduction and context of submission
2. The nature and definition of Shared and Integrated Education
3. Key barriers and enablers for Shared and Integrated Education
4. Approaches and good practice models
5. Priorities and actions
6. Expression of interest in the further submission of evidence

II. Summary

Early Years – the organisation for young children warmly welcomes this opportunity to submit evidence to the Committee’s Inquiry. In 2015 the organisation will celebrate 50 years of working to promote and develop high quality, evidence-informed, cross community early childhood services for young children, their families and communities.

We have successfully worked in all communities across Northern Ireland including some of the most divided interface areas in Northern Ireland in delivering projects and activities relating to child focused community based health and education; tackling social and educational inequalities; working with young Traveller children and their families; shared spaces, community development and working with children, practitioners, management boards, parents and carers to develop a culture of respect to the various forms of difference in our society

This submission, in the advancement of approaches to shared and integrated education, emphasises the following:

- Adopting an approach beginning at the earliest levels of education and building on this consistently up through the tiers of the education pathway

- Embracing an ecological approach actively incorporating wider support networks involving parents, families and all communities as well as staff and leadership within schools and education providers
- Focusing on challenges specific to urban and rural areas
- Effective linkages and commitment to resourcing of key policies and strategies
- Capacity building, training and evaluation
- Utilisation of current best practice and evidence locally and internationally

1. Introduction and context of submission

- 1.1 Early Years¹ is the largest voluntary organisation working with and for all young children 0-12 in Northern Ireland and the Republic of Ireland. It is a non-profit making organisation and in 2015 will celebrate 50 years of working to promote and develop high quality, evidence-informed, cross community early childhood services for young children, their families and communities. Our vision is that children are strong, competent and visible in their communities; physically and emotionally healthy; eager and able to learn and respectful of difference. We have currently over 1,000 members across the statutory, community, voluntary and independent sectors supporting the child care and early education needs of over 30,000 children on a daily basis. We have a leadership role in 10 Sure Start projects supporting 15,000 children 0-4 and their families
- 1.2 Currently Early Years provides a range of information, training, and advice and support services for parents, early childhood care and education providers, management committees and boards, employers, local authorities, departments and agencies. We have successfully worked in some of the most divided interface areas in Northern Ireland. Projects and activities relate to child focused community based health and education; tackling social and educational inequalities; working with young Traveller children and their families; community development and working with children, practitioners, management boards, parents and carers to respect the various forms of difference in our society.
- 1.3 These and other local and cross-border evidence-based services and projects offered by our organisation also have proved to be internationally applicable through our participation in a number of international partnerships and networks designed to 'export' and share knowledge and best practice concerning peace building, shared spaces and early childhood education and care.
- 1.4 Early Years welcomes this opportunity to submit written evidence. We participated previously in the study of the Ministerial Advisory Group on the Advancement of Shared Education². This included both the submission of written and oral evidence and facilitating site visits by the Advisory Group members to Hobbyhorse Playgroup and Roden Street Playgroup in Belfast to receive an insight into shared education and the application of the principles of the MIFC Respecting Difference Programme at pre-school level. There is much to be commended in both the recommendation report released by the Group and also in the Minister's statement to the Assembly in October 2013 responding to the recommendations³.
- 1.5 The organisation would also be willing to further participate in this process by giving oral evidence to the Committee on anything contained in this submission. 1.6 Commentary on elements of the Terms of Reference set for the Inquiry relevant both to our remit as established above and our practice based experience is as follows.

1 For more see <http://www.early-years.org/>

2 <http://www.qub.ac.uk/schools/SchoolofEducation/MinisterialAdvisoryGroup/>

3 http://www.deni.gov.uk/advancing_shared_education_-_22_october_2013_docx.pdf

2. The nature and definition of shared and integrated education

- 2.1 The Committee's undertaking within the set terms of reference to review and explore shared and integrated education across all educational phases is greatly welcomed. The shared/integrated education pathway begins in our pre-school settings, groups, day nurseries, parent and toddler groups and Sure Start programmes operating across the region. This work has always been delivered on a cross-community basis and been underpinned by sound equality of opportunities policies.
- 2.2 It is vital that the approach to shared and integrated education embraces an ecological framework approach beginning in the earliest years and continuing through primary and secondary education levels. In developing a positive sense of self and others it is essential to address issues of inclusion and exclusion from an early age. It is well documented in early childhood research that children as young as three years old are aware of difference and by age six can develop negative attitudes and behaviour towards others who are different⁴. Such work must be underpinned by a clear perspective on children's rights and universal services to promote accessibility and inclusion of all children towards the best outcomes.
- 2.3 Relevant approaches must then also embrace wider support networks involving parents, families and communities as well as schools and education providers. In this area opportunities must be provided for parents from diverse backgrounds to share their beliefs, concerns and positive learning experiences across socio-economic, ethnic, cultural and gender borders with other parents and agencies. Furthermore, there needs to be outreach work built in to reach hard to access or hard to engage families in order to address barriers to participation and ensure equality of opportunity. Such approaches must be fully understood and supported by Management Committees and Boards of Governors.
- 2.4 Engaging with parents and other adults is also vital in order to address the intergenerational transmission of prejudicial attitudes to young children. Engaging with parents, carers and practitioners courageously therefore allows for attitudes and behaviour to be explored, including addressing prejudices and stereotypes. It is vital that space is created that is both safe and challenging for exploring these issues.

3. Key barriers and enablers for shared and integrated education

- 3.1 Barriers- Potential barriers include:
- Lack of recognition of the impact that emotional development and feeling excluded can have on children's ability to learn.
 - Failures to actively engage or adequately collate the views of hard to reach communities.
 - Lack of training and support for practitioner staff to actively and reflectively implement a shared education approach.
 - Lack of value placed on vital role practitioners in the pre-school sector play in establishing cross-community relations and advancing shared education.
 - Lack of understanding of and between the various roles (teachers, practitioners, policy makers) that have a key part to play in this process.
 - Impact of conflict on attitudes and behaviour in Northern Ireland and continuing inter group and intra group tensions.
 - Prejudicial attitudes and beliefs at child, parent, community and governance levels.
 - Fear of loss of cultural/political/religious identity by participation in shared education.
 - Vested interests in maintaining the status quo.

4 Too Young to Notice? The Cultural and Political Awareness of 3-6 Year Olds in Northern Ireland Connolly, P, Smith, A. & Kelly, B. (2002)

- Bad or poor experiences from previous initiatives that have not worked which dissuade people from coming on board again due to a belief that their voice is not being satisfactorily heard.
- Programmes not being sufficiently large in scale or developmental enough to be effective and being more than just bringing children together for short periods of time.
- Agencies working in isolation.
- Short term funding of certain projects which does not lend well to the in-depth work that needs to be done or the necessary time required.
- Schools being seen as autonomous, separate units instead of interdependent networks from a policy and funding perspective.
- Overemphasis on creating new programmes rather than looking at what is currently operating well.

3.2 Enablers

- 3.2.1 Early Years has designed, developed and implemented a flagship programme focused on developing respect for diversity and inclusion in the early years which is informed by and includes all of the principles outlined in section two above.
- 3.2.2 This is highly innovative in that the approach addresses inclusion in all its aspects focusing on ability, race, cultural ethnic and religious identity through age appropriate programmes. The Media Initiative for Children (MIFC) Respecting Difference Programme has been externally evaluated⁵ through a randomised controlled trial and found to have a positive effect on young children's attitude towards and respect for others who are different.
- 3.2.3 The MIFC Respecting Difference Programme is currently linked to relevant curricula for children aged from two to seven years and consideration is being given to further development of the programme covering the timeframe right through to the end of primary school.
- 3.2.4 Through shared parent workshops and in management committee/board of governors workshops, adults have the opportunity to share their own experiences including experiences which as children shaped their identities and attitudes. They also have opportunities in an informal way for discussion and sharing with others who have been raised with different perspectives and attitudes. In this way parents, teachers, pre-school staff, governors and management committee members are themselves engaging, reflecting and building their own understanding of others who are different.
- 3.2.5 Many elements associated with the MIFC Respecting Difference programme make clear links into not only the pre-school but also the Foundation Stage curriculum (Personal Development and Mutual Understanding) and Community Relations, Equality and Diversity in Education (CRED) by addressing such themes as self-awareness, similarities and differences, relationships and feelings and emotions.
- 3.2.6 The key strengths of MIFC Respecting Difference are that it places a strong emphasis on promoting socio-emotional development as the foundation upon which diversity work can be undertaken and it looks at diversity and inclusion in all its aspects focusing on ability, race, cultural ethnic and religious identity through age appropriate programmes. The programme looks first at sameness before addressing difference. This is done using persona dolls where a character is developed which incorporates different aspects of identity. The children see the points of similarity and subsequently the points of difference. The persona dolls are an ideal practical tool to encourage the development of empathy, to see a situation from another's perspective.

5 Evaluation of the Media Initiative for Children: <http://www.early-years.org/coral/research.php>

- 3.2.7 It is vital therefore that children's identity is validated in the school or pre-school setting. One of the innovative aspects of the MIFC is that it explicitly addresses issues of identity with young children rather than ignoring or attempting to neutralise identity. In this way the ethos and identity of individuals, families and communities are respected and validated while children also grow in awareness of the identity of others.
- 3.2.8 Practices that foster multiple identities need to avoid two pitfalls – colour-blindness and tokenism. Colour-blindness is the denial of differences, very often out of an honest concern to treat 'all children equally'. The message children get from this is to be silent about difference. Tokenism is an effort to be inclusive in a limited time-bound way such as acknowledging cultural difference but only on a particular day e.g. Chinese New Year. Such activities risk being both patronising and stigmatising, in that they overlook the complexities of children's personal histories and family cultures and ignore socio-economic and other differences.
- 3.2.9 An example of this reflection from evaluation was that parents from the Unionist tradition participating in the MIFC programme in the Derry/Londonderry area commented positively on the fact that the programme actively engaged in open, honest dialogue with aspects of their tradition, for example in portrayal of marching bands. They felt that this contrasted sharply with other programmes which attempted to neutralise identity: "Looking at this town, people from the British tradition do tell their children not to mention certain things because of the fear factor. I've even encountered this in integrated education where people are not encouraged to talk about things like the Orders, the parades, it's a no-go area."

4. Approaches and good practice models

- 4.1 Engagement and partnership working
- 4.1.1 In addition to many of the core principles associated with the MIFC Respecting Difference Programme outlined above we would further draw attention, concerning engagement and partnership working best practice with a shared focus to improve outcomes for children, to the Toybox Project⁶ strategic partnership implemented by Early Years - the organisation for young children.
- 4.1.2 The Toybox Project is a rights-based outreach service development model which aims to significantly reduce social and education inequalities experienced by young Traveller children aged 0-4, maximise participation in available programmes and services and strengthen capacities, engagement and partnership working.
- 4.1.3 The Toybox project also was subject to an independent evaluation⁷ which stated that in terms of service delivery, the project has been very successful in terms of engaging families and supporting the development of children through play. Furthermore the evaluation found that the project has been very successful at filling the gap, and being a catalyst, between families and statutory support services, health visitors, social workers and others in the statutory sector. We believe that this innovative project represents a successful outreach model for enhancing child development outcomes for disadvantaged groups. By using the above practical strategies, informed by a robust programme design, the principles of equality of opportunity and access to education are translated into inclusive practice in the classroom.
- 4.2 Focusing on challenges specific to both urban and rural areas
- 4.2.1 Many communities in rural regions can encounter invisible community division lines with fewer opportunities for rural interfaces and have high levels of new immigrants in the area due to employment opportunities. A greater level of detail and focus is also required in these respects to promote social inclusion, equality and respecting difference in the areas of gender, religion, ethnicity, disability and sexual orientation.

6 <http://www.early-years.org/toybox/>

7 'Toybox: Early Years development through play for Traveller children'; <http://www.early-years.org/toybox/toybox-evaluation.pdf>

- 4.2.2 Over recent years our organisation has been involved in a range of success initiatives and projects in this area.
- 4.2.3 One practical example of this has been delivery of the Media Initiative for Children (MIFC) Respecting Difference Programme through the Fermanagh Shared Education Programme, to schools in Co Fermanagh to provide a vital foundation for teachers, boards of governors, parents, children and local communities to successfully engage in the provision of shared education. Every primary school in County Fermanagh has used the Media Initiative Respecting Difference Programme as the basis of their shared education initiatives.
- 4.2.4 Furthermore, the organisation has been involved in the implementation of a 'Faces and Spaces' project, funded by Atlantic Philanthropies/OFMDFM's Contested Spaces programme, in schools and early years settings in five contested/interface communities in Northern Ireland including urban interfaces in Belfast and Derry and rural contested spaces in Castlederg and Newtownstewart. Such work has given us a model in designing and implementing a robust evidence-based approach with pre-school, primary, youth, parents and the wider community. This project has been robustly evaluated by the University of Ulster.
- 4.2.5 The project was overseen by both a regional steering group and importantly by four local partnerships which ensured that the schools, playgroups and SureStart projects had ownership of the project and that a shared community development ethos underpinned the programme.
- 4.2.6 This approach enabled the development of a community of learning based upon shared beliefs and approaches to inclusion to be created around the needs of all children aged between two and seven in the area. The local partnerships met on a rotational basis in each other's premises to plan the development of the programme. In addition to implementing MIFC within their own settings, the schools and pre-school groups came together for shared implementation, for shared parent workshops and for shared management committee/board of governors workshops.
- 4.2.7 The shared implementation was very different from a basic contact approach to shared activity. Settings came together to plan purposeful activities that engaged with the programme themes around inclusion. Together, they had opportunities to participate and reflect on issues of identity, culture, race, ethnicity and ability communicated in an age appropriate way.
- 4.2.8 In further reflection of the significance of such issues in and for rural communities our organisation, in partnership with the Northern Ireland Rural Development Council and the Border Counties Childhood Network implemented a Rural Respecting Difference Programme⁸ part-funded under the PEACE programme, based on the MIFC Respecting Difference Programme.
- 4.2.9 This project brings another dimension to the MIFC Respecting Difference Programme as it gives Early Years an opportunity to engage with harder to reach families in rural areas through an innovative approach to inclusion and diversity related work.
- 4.2.10 The Rural Respecting Difference Programme is aimed at rural-based primary schools and afterschool clubs in a number of geographic areas along the border in both Northern Ireland and the Republic of Ireland across counties Armagh, Cavan, Donegal, Down, Fermanagh, Leitrim, Louth, Monaghan and Tyrone.
- 4.2.11 The Programme includes workshop based training delivered by Early Years Specialists; comprehensive curriculum resource packs containing persona puppets, cartoon/media messages, CD of songs and rhymes, age appropriate jigsaws and games; a Teacher/Leader Service Design Manual; ongoing on-site support from an Early Years Specialist to assist programme implementation; Support for Board of Governors or Management Committees

8 <http://www.early-years.org/rural-rd/index.php>

in practical delivery of equality opportunities and anti-bullying policies and opportunities to participate in good relations workshops and develop tailored good relations plan for school or after school.

- 4.2.12 The Rural dimension of the MIFC Respecting Difference programme has recently been further enhanced with the addition of a new message, persona doll and associated resources addressing issues from a rural perspective⁹.
- 4.2.13 The content for these was developed by a steering group consisting of representatives from the Rural Development Council, Early Years and the Border Counties Childhood Network alongside the GAA, Grand Orange Lodge of Ireland, Southern Education & Library Board, South Tyrone Empowerment Programme and South Armagh SureStart. This programme has been independently evaluated as a very successful model for shared approaches in rural areas.

5. Priorities and actions

5.1 Capacity building, training and evaluation

- 5.1.1 The considerable capacity building in the initial phases and on-going support elements of this work cannot be understated. The work of Early Years has always been underpinned by a strong community development, grass-roots mobilisation ethos focused on helping communities to assess the need for, develop and manage their own early years setting.¹⁰
- 5.1.2 Here we would advocate reference to many of the required principles and skill-sets as reflected in the work of a Community Development Team within our organisation which works directly with independent and voluntary organisations in the sector by building capacity and empowering local communities and services; providing start-up support and information and ongoing training, information, coaching and mentoring in governance, leadership and management to develop quality sustainable childcare services.
- 5.1.3 Shared and integrated education must facilitate the acceptance and inclusion of children from all backgrounds and of all abilities. It would also be suggested, based on practical experiences and engagement, that there is a need for greater awareness raising and training around the Section 75 legislative provision as not all who have a key role to play in this would be fully aware of the categories included in Section 75.
- 5.1.4 Shared and integrated education can potentially provide opportunities for developing a wide range of knowledge and life skills. Examples relevant to the early years include the development of empathy and the ability to socially and emotionally understand the position of others, problem solving and the ability to reflect on the best course of action if someone is excluded. Equally fairness, sharing and taking turns develops not only social skills but early mathematical experiences for young children and identifying sameness and differences encourages a respect for diversity as well as encouraging children to explore and understand the world around them.
- 5.1.5 To fully develop and foster such essential life skills practitioners and parents need to be skilled in order to support their children, their setting and each other and adequate time and resources have to be allocated for this.
- 5.1.6 In relation to initial teacher education, there is a need to ensure that knowledge and understanding of diversity issues inform all aspects of the curriculum. In addition, specific components of training are required that seek to provide teachers and practitioners with the knowledge and skills required to deal skilfully and effectively with issues of diversity in their own classrooms and settings. Regular evaluation of programmes must also be carried out to review services and make any necessary changes.

9 <http://www.early-years.org/rural-rd/meet-lucy.php>

10 <http://www.early-years.org/committee-mgt/>

- 5.1.7 A practical example of this is again provided by the Fermanagh Shared Education Programme which has involved our organisation carrying out training with teachers from year one and two to implement principles associated with the MIFC Respecting Difference programme and come together with partner schools to carry out related activities with children in the area.
- 5.2 Adoption of an ecological approach: participatory whole-community engagement
- 5.2.1 Early Years firmly endorses participative approaches whereby the active participation of relevant members and the children, families and communities and agencies they represent form an essential part of the development, evaluation and ongoing monitoring of progress on the implementation and delivery of any plans, policies or strategies. Early Years is in the process of implementing and establishing a robust focus on participatory evaluation pedagogy and practice.
- 5.2.2 Prior to the adoption of this approach, research on and evaluation of the work of Early Years had been carried out by external evaluators and in the main focused on quantitative research methodology. The evidence gathered has provided greater credibility and visibility for the work of Early Years locally and nationally. Building upon this culture of evaluation and research, Early Years now wish to develop a capacity for participatory evaluation within the organisation and sector so that Early Years staff become skilled in on-going evaluation and reflective practice and develop the ability to use this evidence to further improve practice and programmes.
- 5.2.3 The enhanced and more developed usage of more participatory approaches to evaluation will not only help us understand how our projects and programmes are improving outcomes for our youngest citizens but it will also enable us to assess our impact and embrace a more fuller and participative method of engaging with our members, customers and stakeholders in truly finding out from them the types of the information, support and materials they need and how best to provide that to them.
- 5.3 Effective linkages and adequate resourcing of key strategies
- 5.3.1 The effective linkage and adequate commitment to resourcing of such key strategies as Delivering Social Change, Together: Building a United Community, the Programme for Government, the Racial Equality Strategy and other policies and strategies is strongly encouraged. To these we would further add the UN Convention on the Rights of the Child; the Child Poverty Strategy, the Traveller Child in Education Action Framework, the Early Years Learning to Learn Framework, CRED and, given not only the considerable developmental benefits for young children but also wider employment, economic and social opportunities and benefits¹¹, the Bright Start Child Care Strategy, presently under development.
- 5.4 Consideration of best practice and evidence both locally and internationally
- 5.4.1 Early Years continues to build upon a significant knowledge base derived from practical experience and evidence-based research relating to diversity and inclusion with our youngest citizens, their carers and families and the communities in which they live.
- 5.4.2 We feel that it is vital that practice is informed by impact based evaluations of previous initiatives and through international and local best practice and partnerships. We support the development of such measures and see this as vital in the growth of future social and economic developments.
- 5.4.3 Services and projects provided by our organisation also extend to the Republic of Ireland, through HighScope and other cross-border initiatives, and beyond though a number of international partnerships and projects designed to 'export' knowledge and best practice. Some recent examples of this include:

11 See 'Contribution of the Voluntary, Community and Independent Early Years Sector in Northern Ireland' report; Early Years; 2011 <http://www.early-years.org/policy/state-of-sector.php>

- An International Network on Peace Building with Young Children¹² project leading the sharing of best practice across countries experiencing conflict and post-conflict situations through the use and development of internationally applicable programmatic tools and resources and contribution to the ongoing implementation of a Masters Programme on Applied Peace and Conflict Studies with early years, in partnership with the International Conflict Research Institute (INCORE) at the University of Ulster;
- Participation in the Network for the Quality in Early Childhood Education from 0-6 years (NetQ6) , which is a cooperative network with educative and training institutions in Europe. The project aims are to compare, analyze and face the socio challenges that arise in the growth of early childhood and compile the best practices in the field to find solutions for the new realities and special needs found in a range of education systems;
- Contribution to the work of the Partnership for Reconciliation through Early Childhood Education and Development in Europe (PRECEDE)¹³ which aims to support civil society influence over reconciliation process and cohesion through education in early years in the Balkan region and Europe. It will develop a sustainable Balkan Region Network of civil society organisations concerned with young children and promoting acceptance of others and respect for diversity; develop sustainable country level networks of civil society organisations promoting acceptance of others and respect for diversity through early childhood education (ECD) in the Western Balkan region countries; and will link country level networks and the PRECEDE Network of civil society organisations with the International Network for Young Children in Conflict and Post-conflict Countries;
- Participation in the Determinants to Reduce health Inequity Via Early childhood, Realising fair employment and Social protection (DRIVERS) project funded by the 7th Framework Programme to promote health equity through policy and practice in early childhood development, employment & working conditions, and income & social protection;
- Supporting the delivery of pre-school programmes within Serbia and Turkey;
- Hosting annual Service Learning Trips in partnership with Wheelock College, Boston to allow students from the College undertaking disciplines in psychology and early childhood development a unique opportunity to experience the work that is currently underway in Northern Ireland and study exemplary peace building efforts in early childhood settings;
- Hosting visits by Turkish delegates from the Ministry of Education and UNICEF to view models of good practice, visit settings and participate in round table debate; and
- Advocating, along with other members of the Early Childhood Peace Consortium¹⁴, UNICEF and the Global Movement for the Culture of Peace, for the next Millenium Development Goals and a new UN Resolution to include peace building through Early Childhood Development.

5.4.4 Such activity enables Early Years to both consolidate and extend its international relationships and to continue to work to develop practice materials, training, advocacy tools and strategies on reconciliation and peace building through early years programmes to the benefit of local and international service providers.

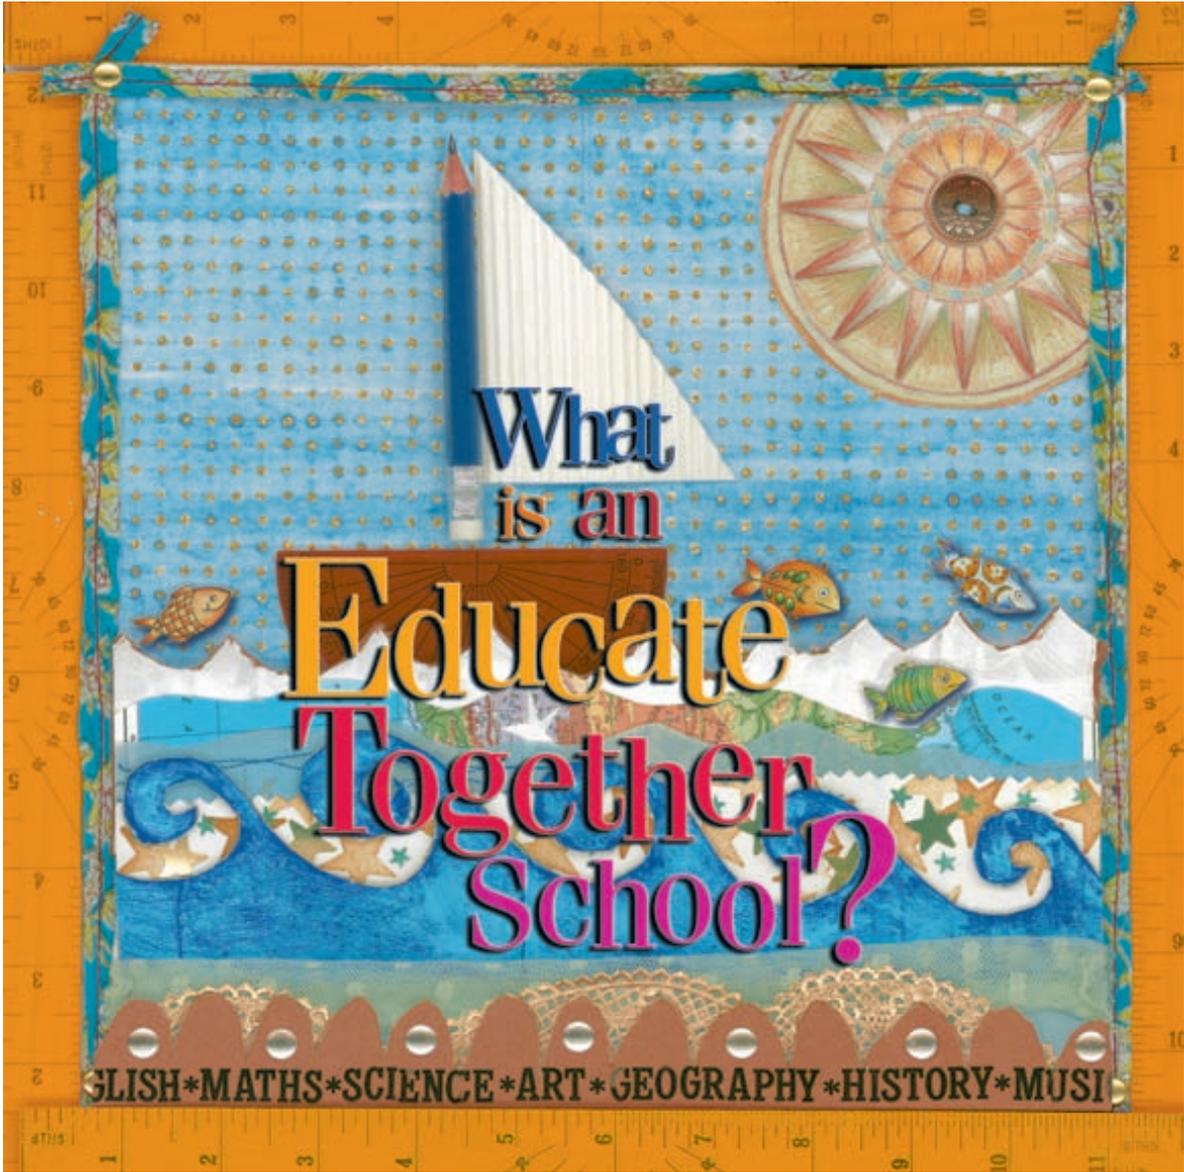

6. Expression of interest in the further submission of evidence 6.1 Early Years welcomes this opportunity to submit written evidence. The organisation would also be willing to further participate in the process by giving oral evidence to the Committee on anything contained in this submission.

What is an Educate Together National School?

A Brief Introduction

Educate Together National Schools are a specific type of state-funded primary school in Ireland. They are part of the National School system that was established in 1831 and which, together with the Special Schools, comprise all State-funded primary education in Ireland.

All National Schools, whether Roman Catholic, Protestant, Islamic, Jewish or Educate Together schools are funded by the State on an equal basis. They operate the same National Curriculum, follow the same Rules for Boards of Management and are staffed by teachers who have the same level of professional qualifications and recognition.

What Makes Educate Together Schools Different?

Where schools differ from each other is in their "ethos". The ethos of a school describes its spirit and character. This is built upon its aims and objectives, its policies and procedures and should be reflected in all interactions within the school community. Thus, the ethos of a school impacts strongly on the kind of education delivered to its pupils.

What is an Educate Together National School?

The Patron and the Board of Management

Within the Irish National School System, responsibility for determining the ethos of a school rests with the "Patron". The main legislation that governs education in Ireland (the Education Act 1998) confers significant powers on school patrons.

Amongst other powers, the Patron:-

- establishes a new school
- sets up its Board of Management
- selects the first Principal before the school opens
- directly appoints two members of the Board, approves the selection of other members and appoints the Chairperson
- approves the appointment of all teaching staff
- lays down the fundamental ethos base of the Board.

Under the Education Act, the Board of Management must undertake to run the school according to the ethos determined by the Patron. In addition, one half hour period of teaching per day for children in the school is reserved for the Patron's exclusive religious curriculum.

In the denominational schools that constitute the majority of National Schools in Ireland, the Patron is usually the Bishop of the religion concerned, but in an Educate Together National School, the Patron is a company limited by guarantee whose activities are regulated by its Memo and Articles and the Companies Acts and whose decisions are made at General Meetings of its members. This has created a modern, transparent and accountable model of patronage that is defined in clear legal terms.

The fundamental legal concept of Educate Together's patronage is that the Board of an Educate Together school is bound to operate a school that delivers equality of access and esteem to all children, irrespective of their social, cultural and religious backgrounds.

What is an Educate Together National School?

This very simple idea is the foundation of all policy and practice in the school, whether it is the enrolment policy, the way that the Board carries out its work, the way that a code of behaviour is developed or the manner in which the curriculum is delivered.

The legal documents of Educate Together commit both the Patron and the Board of all schools to uphold the following principles.

All schools should be:

Multi-denominational i.e. all children having equal rights of access to the school, and children of all social, cultural and religious backgrounds being equally respected

Co-educational and committed to encouraging all children to explore their full range of abilities and opportunities

Child centred in their approach to education

Democratically run with active participation by parents in the daily life of the school, whilst positively affirming the professional role of the teachers

Ref: The Educate Together Charter

Commitment to the Educate Together Charter

It is important to note that these principles are not 'mission statements' or merely statements of aspiration or intent. They form real commitments to deliver an education that reflects these binding principles. The Board of Management of an Educate Together school must judge its performance against these core principals at all levels of school activity.

It is worth considering these commitments in some detail.

What is an Educate Together National School?

Multi-denominational

From its formation in the mid-1970s, Educate Together has defined this term to include all denominations of all faiths. Thus Educate Together schools are committed to the principle that all religious backgrounds should be equally respected in the operation of the school. Included in this definition are humanist, agnostic and atheistic viewpoints and a generic concept of 'personal creed'.

The term 'respect' is carefully chosen. There is a clear distinction made between the concept of accommodation or tolerance of difference and the concept of respect. Toleration and accommodation inherently imply that a majority view must make allowances for minority views and minorities must make requests to achieve this accommodation; respect implies care and equal treatment as of right.

In practice, the objective of an Educate Together school is to create a school culture and practice in which the identity of every child is guaranteed active support. Neither the child nor parents or guardians should have to ask for that respect to be given.

The school works hard to create a positive, comfortable atmosphere. The underlying concept is that human diversity enhances life, enriches cultures and provides huge educational resources for current and future generations.

The Ethical Education Curriculum

In an Educate Together school*, the daily period of time set aside for the patron's religious education programme is used to deliver our Ethical Education Curriculum. This programme is called the "Learn Together" curriculum and is published by Educate Together. It is subject to review and development by the Education Committee and decisions at Annual General Meetings of the organisation. A copy of the curriculum is available from the school or from Educate Together.

The programme is divided into four strands 'Moral and Spiritual Development', 'Justice and Equality', 'Belief Systems' and 'Ethics and the Environment'. The curriculum specifically addresses the Educate Together ethos and it is here that the values that the school seeks to model in its 'characteristic spirit' are articulated and explained in greater depth.

Please note: In some Educate Schools opened before 2000, this programme may operate locally under different names and headings.

What is an Educate Together National School?

In the strand called 'Belief Systems', the programme explains and explores the major belief systems in the world in an educational manner, teaching children about these faiths and beliefs without endorsing any particular one as religious truth. During the year, an Educate Together school may mark - in an age appropriate way - festivals such as Chinese New Year, Easter, Bealtaine, Hindu Festival of Lights (Diwali), Harvest Festivals, Samhain (Halloween), Ramadan and Eid, Hannuka and Christmas. The programme allows the school to explore the similarities and differences with the older celebrations that underlie many of these festivals. Examples would be the Celtic festivals and practices that underpin Easter or the solstice festivals that occur around Christmas.

It is normal that the treatment of these events becomes integrated into the whole school programme, involving drama, art, music, history and geography and also in many cases, parental and community participation. This may mean exploring wider cultural themes such as cuisine and family celebrations. The range of such activities within an individual school will be determined by local conditions.

The educational aim of this work is to model positive information about world faiths in a respectful atmosphere which highlights rights and responsibilities.

Doctrinal Instruction

In addition to offering the ethical education programme, Boards of Management of Educate Together schools enable any group of parents who wish to use the facilities of the school outside school hours to organise specific doctrinal instruction classes. In most Educate Together schools, for instance, Roman Catholic sacramental preparation is available in these out-of-hours programmes; these are organised by Roman Catholic parents often with the direct participation of the local parish. These classes mix naturally with other extra-curricular activities of the school. Parents of other faiths are similarly facilitated. It is important to note however, that the Board is not responsible for the establishment of such classes and is only involved in so far as to ensure that they are responsibly organised, covered by insurance and that the necessary steps have been taken to ensure the safety of the children attending. There is never any obligation placed on a child, parent or staff member to become involved in doctrinal instruction.

What is an Educate Together National School?

This approach to 'multi-denominationalism' has a number of consequences:

- 
- When this model of school ethos is conscientiously implemented, no child is ever placed in a position in which they feel themselves an outsider in the school programme because of their family or individual identity. The approach minimises the situations in which parents or children feel the need to absent themselves from aspects of school life.
 - It maximises the school's ability to address the religious rights of all families without favour or discrimination.
 - Responsibility for religious formation of children is assumed to be that of the family and religious organisations, while the responsibility of the school is to provide a safe, caring and respectful environment for all children. This encourages children to have a strong and secure contact with their own identity and comfort in interaction with people of different faiths and persuasions.
 - The human rights of teachers and other workers in the school are addressed, as staff are never placed in a position in which they may be required to put forward as religious truth a viewpoint that they may not themselves hold.

Whilst Educate Together holds that this way of treating religious difference in an Irish school context offers many advantages, we appreciate that there are families for whom this model may not be suitable. For instance, an Educate Together school depends on parents who are happy to allow their children to explore and be exposed to different religious views and who do not regard it as their religious duty to seek to persuade others of their beliefs. In the case of families who observe strict guidelines around their children's exposure to artwork, games or sports of other faiths, a denominational school of their conscience, or a recognised programme of home education may well be a more appropriate choice. If such options are not available in the locality, however, Educate Together schools will attempt to handle these questions as sensitively as possible.

From an educational perspective, the inclusive nature of the Educate Together ethical programme permeates and influences all teaching in the school. The focus is on an explorative approach to learning that is managed and facilitated by the teacher. Children are encouraged to gain personal understandings in a creative and supportive learning environment. They are encouraged to evaluate

What is an Educate Together National School?

information, form judgements and articulate these judgements in a supportive, respectful and safe environment.

Educate Together schools promote an approach to education which is based on the core values of mutual respect, self-esteem, dignity and critical awareness.

The child is formally recognised as a participant in the education process and a valued part of the learning organisation that is Educate Together. Participation in school affairs and listening to the voices of the children is part of the democracy that underpins the school. This core value of partnership aims to nurture a deep appreciation of the concepts of participation and rights in society, organisations and the world.

The approach taken to ethical education in Educate Together schools aims to directly promote the life skills that are essential to a generation of children, growing up into a diverse and varied social environment. Their adult experience will be genuinely global in scope.

Co-educational

The co-educational principle was included in the Educate Together Charter at a time when co-educational schools were in a minority. Today, this is no longer the case and the significance of this element of our charter has changed. It now obliges the Board of an Educate Together school to work to ensure that all children are empowered to fulfil their potential irrespective of gender.

Co-educational education is far more than simply putting girls and boys into the same classroom and teaching them the same curriculum. Instead it should ensure that the school develops a comprehensive programme to counter gender stereotyping in all its forms. Schools should be proactive in promoting an approach to learning that encourages and supports the wide variety and range of talents among the children irrespective of gender.

This is a complex issue that a school cannot solve on its own; nevertheless it must be addressed and discussed within schools in partnership with parents, teachers and students. The significance of this element of a school's work should not be underestimated. The rebalancing of gender roles based on

What is an Educate Together National School?

equality and respect is central to the growth and development of society and Educate Together is committed to ensuring that children are given every opportunity to explore and develop an equitable approach to gender. As a result of its place in Educate Together's Charter, active encouragement of children of both sexes, and the combating of gender-based discrimination is an important part of the 'school plan' in an Educate Together school.

Child-centred

The Curriculum of National Schools and the approach adopted in the training of National School teachers has been defined as "child-centred" for many years. However, the inclusion of this term in the Educate Together Charter as a founding principle means rather more than the definition of a teaching philosophy or the articulation of the national curriculum. It defines another element of the policy formation of an Educate Together school. It obliges its Board to take decisions primarily based on the broad educational and developmental needs of the children over and above other external factors. This for instance, would influence decisions on opening hours, school holidays, code of behaviour and allocation of funds. Many of these decisions involve striking a balance between conflicting obligations. Nevertheless, this aspect of Educate Together's Charter ensures that the needs of the children of the school strongly influence the decision making process.

It should be noted that we refer to the "children of the school". A school is a collective organisation that strives to address the individual needs of every child. However, any school must balance these needs with the general interests of all the children.

What is an Educate Together National School?

Democratically-run

All Educate Together schools have been set up by volunteer groups of parents in a community. As patron body, Educate Together facilitates this process and empowers those involved by providing advice, training and support in negotiating with relevant organisations, including the Department of Education and Science. The key stakeholders in the process are the parents and supporters who tackle the difficult and complex task of establishing the school. As a result, parents have a vital role in the operation of the school and its ethos reflects this. High levels of parental involvement in the work of the school are encouraged. The Charter of Educate Together obliges the school's Board to encourage and welcome this involvement whilst balancing it with an equal obligation to "positively affirm the professional role of the teacher".

Educate Together schools have been pioneers in the development of the concept of partnership between parents and teachers in the operation of schools. A critical element of this lies in the involvement of parents and guardians in the educational process itself. This is achieved through the provision of support for the teacher inside and outside the classroom and in providing educational activities that are not available to the school in the normal way.

Examples of such support include:

- participation in classroom activities
- the organising of extra-curricular activities
- participation in educational support activities such as paired reading.
- help with the artistic, musical, dramatic, linguistic or science and technology programmes
- support in the delivery of the ethical curriculum
- support in the maintenance of the school building
- serving on Boards of Management and other school committees.

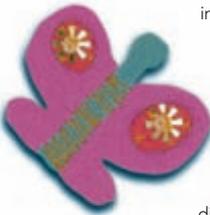

What is an Educate Together National School?

Educate Together and the Community

Once a school opens itself up to the participation of parents, guardians, grandparents and the community, it has access to a wide and rich range of resources that would be impossible to provide by funding alone. This is of great support to the teachers in the school and of immense educational benefit to the children.

It requires skill and care to operate a primary school which respects the delicate balance between the intense individual commitment of parents to their child's education and the professional, objective care and attention of highly qualified teaching professionals. Educate Together is committed to ensuring that schools nurture this partnership and provides training and support for school Boards in order to maximise the potential of this approach.

The involvement of parents in partnership with the staff provide children with examples of practical community co-operation. This is a powerful support to the values articulated in the classroom. Children thrive in this atmosphere and are similarly inspired to work together in diverse settings in order to achieve common goals.

This approach to education promotes the democratic involvement of children in the school. We have found that it is possible to operate effective Students' Councils in primary schools and that it is vital to the success of codes of behaviour that children and parents directly participate in the drawing up of such policies. Once children have a safe space in which they can participate, assured of support of teachers and parents, they can influence the growth of many other school policies and have done so very successfully. In recent years, for instance, many school environmental policies have been successfully driven by children's committees and have resulted in the awarding of Green Flags to many schools.

What is an Educate Together National School?

Conclusion

This is a very brief overview of some of the key concepts involved in the Educate Together model of National School in Ireland.

Educate Together does not claim any exclusive rights to these ideas. Many of them are implemented in other schools in Ireland and abroad and we fully endorse the efforts of dedicated educators operating in schools of different patronage.

We do not see our future as an exclusive or niche provider in the Irish system. Rather we see the sector as part of a complementary development, providing choice where there has been no choice. We are committed to work with other providers to bring the structure of primary education into balance with the needs of our rapidly changing society and to address the human rights of children, parents and teachers.

We hope that this booklet has been helpful in answering some of the questions about an Educate Together school and our aims as an educational charity. If you would like to know more, would like to enrol your child in an Educate Together school or help us with our work, further information is available from our website or from our national office.

We look forward to meeting and working with many people and organisations to provide an educational system that is inclusive and respectful of all.

1 Introduction

- 1.1 We welcome the opportunity to make a submission to the Education Committee of the Northern Ireland Assembly, to assist in their Inquiry into Shared and Integrated Education.
- 1.2 The Commission's response is confined to those areas of the inquiry that are core to our remit, responsibilities and expertise¹.
- 1.3 The Commission intends the positions set out in this paper to be forward facing, mindful of the past but not bound to it. The Commission has referenced evidence on sharing in education and educational inequalities throughout the submission. The submission also makes some suggestions as to how existing education policy may afford additional opportunities to advance shared education.

2 Summary of Recommendations

- 2.1 The Commission considers that societal mixing and social cohesion is limited by separation in our education provision. It is the Commission's view that a system of shared education has a central role to play in advancing a shared society. The Commission also recognises the important role that education can play in cultural development.
- 2.2 Aligned to the focus of the enquiry our submission, in summary, includes:

With regards to a definition and obligation in statute:

- The Commission's recognises the benefits of an **agreed definition of 'shared education'**, supported by clarity on the **inter-relationship between 'shared' education and 'integrated' education**; and how they will collectively interact to achieve overarching policy goals.
- We consider that such a definition and policy framework must:
 - Ensure that sharing **impacts meaningfully and substantively on every learner**
 - Ensure that a shared experience should be **central to the education system as a whole**, encompassing at **all stages of educational provision** – pre-school;

¹ See **Annex 1** for further information on our remit.

early years; primary; post-primary; special needs; and tertiary levels.

- routinely teach learners together via **a shared curriculum in shared classes**.
- better provide learners with **shared awareness**, understanding and experience of the **value and range of diverse cultures, identities and backgrounds** in Northern Ireland; while also enabling learners from different cultures/communities to **experience a shared society**.
- We **recommend** that the above is taken into account in the development of a definition of ‘shared education’
- We recommend that any definition providing for a continuum of sharing ensures that sharing is central to the system of education as a whole and that it impacts meaningfully and substantively on every learner.
- We consider that ‘Shared Education’, once appropriately defined, and its inter-relationship with ‘integrated education’ made clear, **is likely to benefit from an appropriate obligation in statute, supplementing but not replacing the existing Article 64 obligation** on integrated education.

With regards to barriers,

- we **highlight separateness** in the education system and summarise research regarding **a range of barriers to shared and integrated education**. We recommend that the Department **utilises lessons** drawn from the existing body of research² regarding sharing in education
- we recommend action to address wider issues linked to sharing in education (including **academic selection** at age 11; **teacher training** to advance shared education; the removal of the **teachers’ exemption under FETO**; and to gain a better understanding of the reasons for, and impacts of, any **differential patterns of enrolment** to education providers).
- that action is taken to ensure **coordination** across relevant policies and programmes.

² Our 2012 Submission to the Ministerial Advisory Group on Shared Education summarises a range of research regarding integrated education and the QUB Shared Education Programme.

With regards to **enablers**, we continue to highlight the clear opportunities to **build upon existing education policy – including:**

- How **Area Learning Partnerships** / Communities might effectively encourage sharing between providers from different sectors / management types – including those not already involved in community relations work.
- How funding can be used to incentivise increased sharing on cross-sectoral and ability lines, including via the common funding formula.
- The importance of key school level enablers including high-quality contact; school leadership; links between teachers; a focus on the curriculum and the sharing of resources between teachers.
- The importance of **guidance** for schools who wish to embark on shared education and for those who wish to move toward greater interdependency.
- The importance of **Indicators and Evaluation** to measure and review sharing and collaboration in education provision and governance – both to acknowledge success and promote improvement.
- The importance of **data collection, across all Section 75 grounds** and FSM eligibility, for all educational projects, including key Delivering Social Change projects.

With regards to the specific areas raised in the Inquiry terms of reference

- We note the potential offered by the **Community Relations, Equality and Diversity (CRED) policy** and the calls for it to be reviewed. We **encourage** steps to maximise the effective use of CRED and available funding to support the advancement of equality of opportunity and good relations, via CRED and the school curriculum.
- We reiterate the importance of **engaging with pupils, parents, education providers and wider stakeholders** to communicate the rationale for the proposed system - to take account of barriers and enablers; to improve associated policy proposals and to incentivise any moves.
- We reiterate our recommendation that the Department explore how a shared experience can be central to the education system as a whole, encompassing at all stages of educational provision – including **routine sharing and**

collaboration between pupils and staff at special and mainstream schools.

3 Advancing Equality of Opportunity and Good Relations via Education

- 3.1 The Commission is mindful that any consideration of the role of the education system in maximising good relations must also take account of the important role of education in maximising equality of opportunity across the full range of equality grounds, including the need for a particular focus being on the steps required to assist those groups identified as being at particular disadvantage³ to facilitate delivery of improved educational attainment for particular groups.
- 3.2 While this submission focuses on the importance of education in advancing good relations it also recognises that sharing in education, across the full range of equality grounds, not only has the potential to provide meaningful and sustainable relations between pupils of different cultures and backgrounds, but also has the potential to tackle inequality and improve educational outcomes for pupils from a diverse range of backgrounds and abilities.
- 3.3 As part of our ongoing work to highlight key inequalities, we have commissioned Queens University to undertake in-depth research into educational inequalities in Northern Ireland which we hope to publish early in 2015.

4 Inquiry into Shared Education and Integrated Education

- 4.1 The Equality Commission has long advocated support for a shared system of education in Northern Ireland. In the Commission's (November 2008) publication "Every Child an

³ See Annex 2 for a summary of key findings from ECNI (2010) 'Inequalities in Education: Facts and Trends 1998-2008'. The Commission also notes 2014 research undertaken by the University of Ulster which highlights access and performance inequalities in post-primary education between grammar and secondary schools, between Catholic and Protestant Schools and for those on FSM; and which also highlights the potential for shared education to address a range of educational inequalities. (Borooah and Knox (2014) Access and Performance Inequalities: post primary education in Northern Ireland. Journal of Poverty and Social Justice - vol 22, no 2, 111–35).

Equal Child: An Equality Commission Statement on Key Inequalities in Education and a Strategy for Intervention”⁴ the Commission noted that it was:

‘hard to escape the conclusion that educating children of different backgrounds together has the potential to reduce the fears and tensions between communities that are founded on ignorance. It is equally difficult to avoid the conclusion that the long experience of separate educational provision has represented a lost opportunity for everyone in Northern Ireland.’

- 4.2 In our February 2012 response⁵ to the consultation on “Building A Better Future: Draft Programme For Government 2011-2015” we recognised *“the steps taken in terms of shared resources, including the schools estate and teachers, and shared programmes”* and endorsed:

*“the development of a clear focus on shared education so as to maximise equality of opportunity and good relations, recognising that this will be facilitated through the teaching of a shared curriculum in shared classrooms”.*⁶

- 4.3 The Commission remains of the view that the overall system of education provision in Northern Ireland has an important role to play, not only in the development of the child, but in advancing cohesion, sharing and integration across all equality grounds, with particular reference to promoting good relations. We have also made it clear that we are committed to using our full range of powers across equality and anti-discrimination statutes *‘to ensure that all children and young people in Northern Ireland have the opportunity to flourish and succeed to the best of their abilities’.*⁷

- 4.4 The Commission considers that societal mixing and social cohesion is limited by separation in our education provision. It

⁷ ECNI (2008): Every Child an Equal Child – An Equality Commission Statement on Key Inequalities in Education and a Strategy for Intervention. Available at <http://www.equalityni.org/archive/pdf/ECKeyinequalities.pdf>

is the Commission's view that a system of shared education has a central role to play in advancing a shared society and that children should have the opportunity to be educated together regardless of faith or background.

- 4.5 This is not to undermine the rights of parents to make choices regarding their child's attendance at specific schools, or for the provision of faith-based schools. However such considerations cannot overshadow the importance of a system of education seeking to maximise equality of opportunity and good relations. The Commission also recognises the important role that education can play in cultural development – providing immersion in literature, language, sport, activities, art, music etc.
- 4.6 It is for this reason that the Commission recommends a move towards a system of sharing across the full spectrum of education providers which teaches a diverse range of pupils together via a shared curriculum in shared classes. The Commission considers that sharing in education must impact meaningfully and substantively on every learner and we have highlighted the importance of sharing at all stages of educational provision – pre-school; early years; primary; post-primary; special needs; and tertiary levels.
- 4.7 We set out below a number of further key points, aligned to the specific terms of reference of the Inquiry. As noted at the outset, we confine our response to those areas of the inquiry that are core to our remit, responsibilities and expertise.

5 'the nature and definition of Shared Education and Integrated Education as it applies across all educational phases'

- 5.1 We draw attention again to our detailed advice to the Ministerial Advisory Group on Shared Education and earlier recommendations, which we summarise below.
- 5.2 In our November 2012 Submission⁸ to the Ministerial Advisory Group on Advancing Shared Education we advocated:

⁸ ECNI (2012) Submission to the Ministerial Advisory Group on Shared Education

“a move to a system of sharing across the full range of education providers at each level of provision; one which routinely teaches students together via a shared curriculum in shared classes.

The Commission considers that such an approach could better provide children with shared awareness, understanding and experience of the value and range of diverse cultures, identities and backgrounds in Northern Ireland; while also enabling children from different cultures/communities to experience a shared society.

The Commission considers that sharing in education must impact meaningfully and substantively on every child and that a shared experience should be central to the education system as a whole”.

5.3 The Commission also noted in that response that it considered that a shared system of education was aligned to the delivery and aims of a range of government strategies and programmes (for example, the Programme for Government; Good relations strategies; Every School a Good School etc) and maximising efficiencies in the school system and estate.

5.4 We specifically highlighted:

- The need to see improved equality of opportunity and educational outcomes across all equality grounds, in particular taking account of particular circumstances (e.g. Travellers; Protestant working class boys; children with disabilities and/or special educational needs; and those for whom English is an additional language etc).
- The need for advancement of sharing in education to maximise good relations across all relevant equality grounds, including community background.
- That a future based on cohesion, sharing and integration should seek to maximise sharing in a range of areas, including in education; and that we would expect to see Government investing in a shared educational experience as a route to increased social cohesion in society.
- The importance of sharing at each stage of educational provision – pre-school; early years; primary; post-primary; special needs and tertiary levels.

- The importance of sharing across the full range of education providers (ethos; identity or management / governance arrangements etc).
- That promoting equality and good relations within a school should complement school ethos and reinforce the importance of promoting equality and good relations in education.
- The importance of the rights of parents to choose individual schools (within appropriate economic constraints) - but in a context that does not impact on the development of a shared system as a whole.
- The potential to enhance existing mechanisms (e.g. the Entitlement Framework, Area Learning Partnerships, Area Based Planning; Common Funding Formula etc) using lessons learnt to date (such as from the Integrated Education Model and that emerging from the QUB Shared Education Programme), while providing appropriate mechanisms to incentivise and advance partnership working and shared delivery (e.g. via funding mechanisms etc).
- The importance of engaging with pupils, parents, education providers and wider stakeholders to communicate the rationale for the proposed system and model(s) - to improve associated policy proposals and to incentivise a move.
- The importance of agreeing and mainstreaming indicators to measure and review on sharing and collaboration in education provision and governance – both to acknowledge success and promote improvement.
- The importance of addressing wider issues linked to sharing in education – including academic selection at age 11; teacher training and the need for ‘greater sharing and collaboration between teacher training colleges’; the teacher’s exception under FETO; and better understanding the reasons for, and impacts of, any differential patterns of enrolment to education providers.

‘a) consideration of the need for a formal statutory definition’

- 5.5 We note that there is no agreed definition of shared education in Northern Ireland and note the concerns raised by some stakeholders around the absence of a definition e.g. that the language of ‘shared education’ has introduced ambiguity in

terms of what this aims to achieve in practice. For example, a 2013 report by Hansson et al⁹, noted that *‘for policy implementation to be effective a much clearer distinction between ‘integrated’, ‘mixed’, and ‘shared’ schooling needs to be drawn’*¹⁰.

- 5.6 We note that the terms of reference, which was provided by the Department of Education to the Ministerial Advisory Group on the Advancement of Shared Education, asked them to adopt the following broad definition of shared education:

“Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.”

- 5.7 We also note the May 2014 High Court decision by Judge Treacy (the ‘Drumragh’ judgment¹¹) where he considered that, upon analysis, **“integrated education”** was a standalone concept; and that the type of education that is to be supported is *“integration between Protestant and Catholic Pupils as opposed to integration within school of any other distinct sets of pupils. The provision plainly envisages education together at the same school”*; and that integrated education was *“education that is integrated throughout and not education that is delivered by a partisan board”*;
- 5.8 We also note the ‘continuum’ arguments that have been advanced regarding the potential inter-relationship between shared and integrated education. DENI, for example, have advised *‘Sharing across schools is at different levels along a continuum, and integrated education should be at the upper end of that continuum’*¹². Knox¹³ has also set out the

⁹ Hansson, O’Connor and McCord (2013): *Integrated Education – A review of policy and research evidence, (Children and Youth Programme, UNESCO, University of Ulster)*. Available at http://cain.ulst.ac.uk/issues/education/docs/ief_2013_report_unesco.pdf

¹¹ http://www.courtsni.gov.uk/en-GB/Judicial%20Decisions/SummaryJudgments/Documents/Court%20Delivers%20Ruling%20on%20Department%20of%20Education's%20Approach%20to%20Long%20Term%20Planning/j_j_Summary%20of%20judgment%20-%20In%20re%20Drumragh%20Integrated%20College%2015%20May%2014.htm

¹² Hansard (2014): *Inquiry into Shared and Integrated Education Inquiry – DENI Briefing*. Available at <http://www.niassembly.gov.uk/assembly-business/committees/2016-2017/education/calls-for-evidence/inquiry-into-the-education-and-training-inspectorate-eti/departamental-correspondence/>

consideration that *'shared education' can be seen as part of 'a graduated journey towards greater inter-dependence between schools'* and that *"there are opportunities for schools here depending on where they are now, where they want to take this and the extent to which they want to broker interdependencies with other schools"*.

- 5.9 In the context of current debates now comprising discussions regarding discrete concepts of 'integrated' and 'shared' education, **the Commission recommends** that a clear definition of 'shared' education is set out, supported by clarity on the inter-relationship between 'shared' education and 'integrated' education¹⁴; and how they will collectively interact to achieve overarching policy goals (including the promotion of equality of opportunity and good relations).

Developing a Definition of Shared Education

- 5.10 In so far as it may assist with the development of a definition, we set out the following points for consideration:
- 5.11 While it is neither the Commission's intent nor remit to advocate a specific model or models of education, we have set out the broad equality and good relations goals that we would expect a system to deliver.
- 5.12 Reflecting our advice to the Ministerial Advisory Group, we recommend that sharing in education must:
- Ensure that sharing impacts meaningfully and substantively on every learner
 - Ensure that a shared experience should be central to the education system as a whole, encompassing at all stages of educational provision – pre-school; early years; primary; post-primary; special needs; and tertiary levels.
 - routinely teach learners together via a shared curriculum in shared classes.

[Evidence/Session-2013-2014/July-2014/Inquiry-into-Integrated-and-Shared-Education-Department-of-Education-Briefing/](#)

¹³ Hansard (June 2014): *Sharing in Education and Shared Education Programmes: International Fund for Ireland, Education and Training Inspectorate and University of Ulster*. Available at <http://www.niassembly.gov.uk/Assembly-Business/Official-Report/Committee-Minutes-of-Evidence/Session-2013-2014/June-2014/Sharing-in-Education-and-Shared-Education-Programmes-International-Fund-for-Ireland-ETI-and-UU/>

¹⁴ We note the definition of integrated education contained in The Education Reform (Northern Ireland) Order 1989, with the interpretation as confirmed in the 'Drumragh Judgement'

- better provide learners with shared awareness, understanding and experience of the value and range of diverse cultures, identities and backgrounds in Northern Ireland; while also enabling learners from different cultures/communities to experience a shared society.

5.13 We consider the above to be relevant to the development of policy aims associated with ‘sharing’ in education, and thus **we recommend** that it is taken into account in the development of a definition of ‘shared education’ that would seek to advance those aims.

5.14 **We further recommend** that any definition providing for a continuum of sharing also ensures that sharing is central to the system of education as a whole and that sharing impacts meaningfully and substantively on every learner.

5.15 With regards to the *aims* set out in the definition of shared education supplied to the Ministerial Advisor Group (“*promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion*”) we consider that the good relations relevant aims in any definition should mirror the language used in other relevant definitions so as to promote consistency across policy goals.

5.16 However, in the absence of an agreed definition of good relations, we would highlight the following concepts for consideration alongside the above:

- In work further to the T:BUC strategy, the Commission has highlighted the importance of ensuring “*a high level of dignity, respect and mutual understanding*” as well as the importance of ensuring “*an absence of prejudice, hatred, hostility or harassment*”¹⁵
- The Equality Act 2010 highlighted the need to “*tackle prejudice, and promote understanding*”¹⁶.

¹⁵ Evidence to the Assembly Committee for the Office of the First Minister and Deputy First Minister. Inquiry into Building a United Community, October 2014.

¹⁶ Equality Act 2010, section 149 (5)

‘b) An obligation in statute to facilitate and encourage Shared Education’

- 5.17 We note that Article 64(1) of the Education Reform (NI) Order 1989 (“the 1989 Order”) provides a duty on the Department of Education to “*encourage and facilitate the development of integrated education, that is to say the education together at school of Protestant and Roman Catholic pupils*”.
- 5.18 As noted earlier, the May 2014 ‘Drumragh’ judgment set out that “integrated education” was a standalone concept, and did not extend to what is currently being referred to as shared education.
- 5.19 The **Commission considers** that ‘Shared Education’, once appropriately defined, and its inter-relationship with ‘integrated education’ made clear, is likely to benefit from an appropriate obligation in statute, supplementing but not replacing the existing Article 64 obligation on integrated education.

6 ‘Key barriers and enablers for Shared Education and Integrated Education’

Barriers

Separateness in the Northern Ireland Education System

- 6.1 In Northern Ireland, the majority of children are educated separately with little opportunity to mix with children from a diverse range of backgrounds. Recent research¹⁷ supports that post-primary provision in Northern Ireland remains mainly one of separate provision. As highlighted by Borooh and Knox, Department Statistics from 2013/14¹⁸ show that:

- In the primary sector: 6.2% of Catholics attend controlled primary schools; 1% of Protestants attend maintained primary schools; and 5.7% of primary school children attend integrated schools.
- In the secondary (non-grammar) sector: 2.8% of Catholics attend controlled secondary schools; 1% of Protestants

¹⁷ Borooh and Knox (Nov 2012) Delivering Shared Education: Knowledge Exchange Seminar

¹⁸ Borooh and Knox (October 2014): Briefing to the Education Committee

- attend maintained secondary schools; and 14.9% of secondary (non-grammar) pupils attend integrated schools.
- In the secondary (grammar) sector: 8.3% of Catholics attend controlled grammar schools; and 0.9% of Protestants attend voluntary Catholic grammar schools
- Overall, 6.7% of primary and post primary pupils attend integrated schools.

6.2 While all publicly funded schools are technically open to pupils from any background, the general pattern of school enrolment is not one of diversity and while integrated schools *‘represent a highly significant and distinctive approach to integrated education...only the minority of the school population attend them’*¹⁹. Tertiary education, where formal separation is not a feature, may thus be the first place for many students in which informal mixing occurs among people from a diverse range of equality backgrounds²⁰.

6.3 As the general pattern of school enrolment is not one of diversity, work to understand the reasons for, and impacts of, differential patterns of enrolment to education providers may therefore in itself suggest factors of relevance in the development of a more shared system of education in Northern Ireland.

Barriers impacting on Shared Education

6.4 A number of research reports and evaluations have highlighted the barriers to shared education across providers. For example, practical challenges to school collaboration include matters such as timetabling, transport and curriculum planning²¹. Some schools have also experienced challenges around the presentation of their cultural ethos or in relation to discipline policies.

6.5 Research by ARK²² in 2013 on Shared Education has highlighted concerns from Children and Young People including

¹⁹ Bain (2006): Schools for the future – funding strategy and sharing, para.13.11, page 179. Available at http://www.deni.gov.uk/review_of_education.pdf

²¹ Ministerial Advisory Group for the Advancement of Shared Education (May 2013). Report

²² ARK (2013): Shared Education - Views from Children and Young People

concerns around being bullied; having to mix with children from a different religious background; and concerns about pupils from grammar and non-grammar schools engaging in shared activities and classes. NICCY research (2013)²³ also found that whilst many pupils recognised the value of shared education for some their experiences had been a *“shared but separate experience...”*.

- 6.6 A 2013 evaluation by the Education and Training Inspectorate²⁴ of the International Fund for Ireland’s Sharing in Education Programme has also stated that there are challenges in sustaining and embedding learning on shared education. These include insufficient funding for collaboration, and for CPD; the perception from within schools around competing priorities and initiatives from DE; and changes in staffing arrangements and the loss of staff. The Commission’s response to the Ministerial Advisory Group also noted that, based on available research, there also appeared reticence to collaborate across school management types and even greater reluctance to collaborate with schools that have a different approach to academic selection. The ETI evaluation concluded that *‘much remains to be done to ensure the experience is effective, sustained and progressive, particularly in schools that have not yet begun the process’*²⁵.
- 6.7 The Commission **recommends** that the Department utilises lessons drawn from the body of research²⁶ regarding sharing in education – including that relating to Integrated Education Model and the QUB Shared Education Programme²⁷ to overcome already identified barriers.

²³ NICCY (2013) Shared Education: The Views of Children and Young People 2013

²⁴ ETI (2013): A final evaluation of the International Fund for Ireland’s Sharing in Education Programme. Available at <http://www.etini.gov.uk/international-fund-for-irelands-sharing-in-education-programme/a-final-evaluation-of-the-international-fund-for-irelands-sharing-in-education-programme.htm>

²⁵ Ibid, page 33

²⁶ Our 201 Submission to the Ministerial Advisory Group on Shared Education summarises a range of research regarding integrated education and the QUB Shared Education Programme.

²⁷ The SEP encourages schools to make cross-sectoral collaborations an integral part of school life, creating enhanced educational and personal development opportunities for everyone involved. The SEP has, since 2007, involved over 100 schools at Post-Primary and Primary level in cross-sectoral collaboration concentrating on substantive, curriculum based activities. In the year beginning Sep 2010, SEP2 partnerships involved over 4,000 students across Northern Ireland. See <http://www.schoolsworkingtogether.co.uk/>

Barriers impacting on Integrated Education

- 6.8 While only a minority of children attend integrated schools, the integrated sector has raised a number of key concerns in relation to the Departments approach to encouraging and facilitating integrated education including a perceived failure to take into account parental demand for integrated schooling²⁸ (as evidenced by opinion polls) or to actively seek opportunities to increase the number of integrated schools places.
- 6.9 A 2013 report by Hansson et al, commissioned by the IEF²⁹, has highlighted how *'key policy documents now no longer make explicit reference to integrated education despite the statutory duty to support and facilitate it'*.
- 6.10 Representatives of the integrated sector have also raised concerns that *'public support for integrated education remains extremely high, but education policies are based on maintaining separate schools'*³⁰. For example IEF has raised concerns around the area based planning process and have criticised proposals to establish a single Education and Library Board as *'copper-fastened segregation'*³¹.
- 6.11 The Commission also notes the judgement of Mr Justice Treacy in the 'Drumragh' judicial review which highlighted that *'using an analytical tool to plan for an area is both flexible and necessary however, the inflexibility of the projections used [in relation to area based planning] will have the effect of making it difficult to accommodate the section 64 duty in future day to day decisions. The Department need to be alive to the Article 64 duty at all levels'*³².
- 6.12 We **highlight** the importance of ensuring fulfilment of the Article 64 provisions of the Education Reform (Northern Ireland) Order 1989 to 'encourage and facilitate' integrated education at

²⁸ However, as the Committee will be aware, in recent evidence to the Committee the University of Ulster stated that that the number of school places in the integrated sector "slightly exceeds demand", leaving "about 2000" places unfilled, although there are pressures in particular areas due to parental preference.

³¹ IEF (2014): Streamlining should mean eliminating division: the latest education plans reinforce it.

³² **Drumragh** Integrated College's Application for a Judicial Review [2014] NIQB 69.

all levels; and again **recommend** using lessons drawn from the body of research on integrated education to overcome already identified barriers.

Barriers in wider educational policy

- 6.13 In 2010 the Commission jointly published a challenge paper entitled *“Ensuring the Good Relations Work in our Schools Counts - A Strategy to meet our needs for the 21st Century.”*³³ The paper also included, inter alia³⁴, a number of wider recommendations to progress sharing and good relations in education, including:
- continued concern about the system of academic selection at eleven years old;
 - that all teachers should be able to enjoy the same legislative protection as other workers and the exemption in FETO should be abolished at secondary level, as previously recommended, with early consideration given to urging the removal of the exemption at all levels; and
 - the need for ‘greater sharing and collaboration between teacher training colleges’³⁵.
- 6.14 We again highlight the need to address wider issues linked to sharing in education - including academic selection at age 11; teacher training; and the teachers exemption under FETO.

Academic Selection

- 6.15 School collaboration is set in the context of the wider political debate on education. There is currently no agreement on academic selection with 2009/10 having seen the introduction of unregulated tests in which some 7,000 primary school pupils took part in exams set by the Association for Quality Education (largely Protestant students) and 6,700 children sat the GL assessment tests (largely Catholic students)³⁶.

³³ The Good Relations Forum (2010): Ensuring the Good Relations Work in our Schools Counts – A Strategy to meet our needs for the 21st century. Available at <http://www.equalityni.org/ECNI/media/ECNI/Publications/Delivering%20Equality/EnsuringGoodRelationsWorkinourSchoolsCountsApr2010.pdf>

³⁴ A wider summary of relevant recommendations can be seen in Annex 3.

³⁵ Ibid, page 17

³⁶ Knox (2010) *Sharing Education Programme – Views from the White Board*, page 12. Available at <http://www.schoolsworkingtogether.co.uk/documents/Views%20from%20the%20White%20Board%20May%202010.pdf>

- 6.16 The Commission reiterates our continued concern about the system of academic selection at eleven years old.

Teacher Training and Employment

- 6.17 In 2003, the Commission funded research by QUB which concluded that:

‘A significant barrier, identified by teachers, to their wider professional development in these areas was the relative lack of opportunity to teach or work outside their own community background. Aligned with this, was a concern about the unequal access for employment across the Controlled and Maintained school sectors for all teachers.’³⁷

- 6.18 This issue is inextricably linked with the maintenance of the teacher’s exception within the Fair Employment and Treatment Order (FETO). In 2004³⁸, the Commission undertook a formal investigation and called for the removal of the teacher’s exception from posts in secondary level education. In 2008, the Commission reiterated this position and further called for *early consideration to be given to the question of urging the removal of the exemption at all levels*”.

- 6.19 In our 2013 response to the Review of the initial teacher education infrastructure in Northern Ireland, we noted “we consider that sharing in education must impact meaningfully and substantively on every participant and at all stages of educational provision – including tertiary levels. The Commission is mindful that, in 2013, teacher training in Northern Ireland represents the sole segregated area in the provision of third-level education in Northern Ireland.”

- 6.20 The Commission remains concerned about the impact that the separate provision of teacher training has on job opportunities, professional development and the promotion of good relations; and considers that closer collaboration between all initial teacher training providers in Northern Ireland would have a range of benefits, including in relation to good relations.

- 6.21 There is a compelling need for placing equality of opportunity and good relations at the heart of education structures.

³⁷ [Equality Awareness in Teacher Education and Training in Northern Ireland 2003 QUB](#)

³⁸ [Formal investigation under Art 41 \(FETO\) on the Teachers Exception \(2004\)](#)

Improvements to teacher education are an essential part of moving to the Commission's vision of a society where all children and young people are valued equally and allowed the opportunity to develop to their full potential.

- 6.22 We also consider that teachers should be equipped with a curriculum, resources and skills to deal with contentious issues in the classroom and note the evidence already given to the Inquiry that *'Developments on teacher training and teacher development will ultimately lead to the embedding of shared education as a concept in the mainstream education system'*³⁹.
- 6.23 We reiterate our **recommendation** that the exemption in FETO should be abolished at secondary level, as previously recommended, with early consideration given to urging the removal of the exemption at all levels; for greater sharing and collaboration between teacher training colleges; and for teachers to have the support and training to embed shared education in the classroom.

Alignment of Government Policies

- 6.24 Academics from Queens University have highlighted the need for greater alignment in relation to policies on education and on good relations. For example, the University of Ulster recently highlighted⁴⁰:

"We have the review of the Education and Training Inspectorate (ETI), area planning, the Education and Skills Authority (ESA), the common funding formula, school closures, shared education and the 'Together: Building a United Community' document. To us, there does not seem to be any real alignment between some of those areas. They almost seem to be undertaken as separate processes, yet there is an interrelationship between some of them"

- 6.25 The Commission **recommends** that action is taken to ensure coordination across relevant policies and programmes so as to facilitate and encourage shared and integrated education.

³⁹ Hansard (2014): *Evidence to the Education Committee - Sharing in Education and Shared Education Programmes: International Fund for Ireland, Education and Training Inspectorate and University of Ulster*

⁴⁰ See <http://www.niassembly.gov.uk/Assembly-Business/Official-Report/Committee-Minutes-of-Evidence/Session-2013-2014/January-2014/Area-based-Planning-Queens-University-Belfast-and-University-of-Ulster/>

Enablers

- 6.26 We welcome the indication in T:BUC Strategy that the key aim relating to education is *'to enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience'*⁴¹ and the commitment to pilot 100 shared schools by 2015.
- 6.27 The Commission considers that there are clear opportunities to build upon / extend existing education policy and **recommends** that consideration is given to how this might be achieved.
- 6.28 Research⁴², for example, has pointed to the possibility of *'incentivising Area Learning Communities to deliver the entitlement framework on a cross community basis; incentivising the delivery as part of the core curriculum; promoting the reconciliation benefits as having wider societal value; and argue for the economic benefits when set alongside the costs of separate denominational provision'*⁴³.
- Area Learning Partnerships / Communities
- 6.29 Research in 2008⁴⁴ showed that collaboration through the Area Learning Partnerships offered many benefits such as the opportunity to share expertise amongst teaching staff; a wider range of curricular opportunities for young people and the opportunity to break down barriers and build informal relationships, particularly between grammar and secondary schools.
- 6.30 Despite this generally positive assessment of collaboration *'participants indicated that sustainable collaborative relationships were difficult to establish and a range of factors were reported to have an impact on the process of school collaboration'*⁴⁵. Of relevance is that schools were more hesitant about establishing collaborative links outside of their

⁴⁵ Ibid, page 5

sector than those within it (only 35% of schools suggested that they had established collaborative links with a school which took a different approach to academic selection) or between State maintained and Catholic Controlled; or integrated and non-integrated schools. The research also suggested that schools placed *'considerable emphasis on cultural issues and sought to establish collaborative relations with schools where the culture was deemed to be compatible with their own'*⁴⁶. Further, Borooah and Knox note, in their submission to the Inquiry into Shared and Integrated Education⁴⁷, that *'it is claimed that ALCs are putting in place shared education. There is no evidence to support this assertion. DE claims that they do not gather evidence on the extent of sharing in ALCs, their impact on educational outcomes, and the value for money of these collaborative arrangements'*.

- 6.31 **The Commission recommends** that consideration is given to how best Area Learning Partnerships/Communities might effectively encourage sharing between providers from different sectors / management types etc in a way which could serve to advance good relations.

Sustainability and Funding

- 6.32 Those involved in shared education have highlighted the importance of funding in sustaining collaborative partnerships. As highlighted in evidence to the Committee recently, *'the uncertainty which exists around funding for the entitlement framework is unhelpful - senior Leaders and Governors need clear direction and information relating to funding which is required to sustain our collaborative arrangements'*⁴⁸.
- 6.33 An evaluation by the ETI of the Sharing in Education Programme highlighted that while the programme promoted effectively links between schools in shared education partnerships, *'the extent of the sustainability of these partnerships without additional funding remains to be seen'*⁴⁹.

⁴⁶ Ibid, page 5

⁴⁷ See <http://www.niassembly.gov.uk/globalassets/documents/education-2011---2016/inquiries-and-reviews/shared-and-integrated-education/knox-and-borooah-2.pdf>

⁴⁸ Written evidence to the Shared and Integrated Education Inquiry from both Ballycastle High School and Cross and Passion College

⁴⁹ Education and Training Inspectorate (2013): *An evaluation of the International Fund for Ireland's Sharing in Education Programme*, page 32.

6.34 Further, where viability criteria put local education provision at risk, sharing between and/or merging existing schools, may both advance good relations and help ensure that a school provides an anchor point for the wider community as envisaged in the Extended Schools Initiative.⁵⁰

6.35 We understand that the Common Funding Formula Review is still under consideration. Our response to the Ministerial Advisory Group noted that Common Funding Formula

“along with area based planning creates further room for ‘creative thinking’ in relation to directing funds so as to reward sharing between schools (of different management type etc) in a way that would advance Good Relations”.

6.36 Our 2014 response⁵¹ to the review of the funding formula for schools noted

“The Commissions vision is to create an education system where children are routinely educated together, in inclusive environments, regardless of their background or ability.⁵² It will be important that the common funding formula is able to take account of the outcomes of the above considerations”

“Any funding mechanism can have a transformative effect on an education system and this is a clear opportunity to incentivise increased sharing of educational resources on cross-sectoral and ability lines”.

6.37 We are aware that while the Ministerial advisory group recommended⁵³ a shared education premium within the common funding formula, the Minister has reserved his position

⁵⁰ Education and Training Inspectorate Report (2006). Available at <http://www.etini.gov.uk/the-extended-schools-initiative-in-northern-ireland-a-baseline-survey-by-the-education-and-training-inspectorate.pdf>

⁵² Every Child an Equal Child(2008) see also Ensuring the good relations work in our schools counts (2010)

⁵³ Recommendation 3 of the MAG Group report states that “As part of the proposed revised common funding formula ... a ‘shared education premium’ should be incorporated into the funding formula for schools and other educational institutions. This premium would recognize the added value of shared education and should be weighted in terms of: The number of children and young people that are engaged in shared education activities, as defined in this report; and the proportion of school time that children and young people are engaged in such activities.”

on whether that is the most appropriate way to fund shared education⁵⁴.

- 6.38 The **Commission recommends** that consideration is given as to how best to incentivise increased sharing of educational resources on cross-sectoral and ability lines, including via the common funding formula.

School Level Enablers

- 6.39 As highlighted by the Commission in its 2012 submission to the Ministerial Advisory Group, school leadership and school ethos will be important drivers in future collaborative work as well as the schools relationship with the local community. The overall goal will be to create a system of shared education and collaboration which is curriculum- focused; has a shared educational experience at its core and is integral to the way all education is delivered in Northern Ireland.
- 6.40 A number of research reports have highlighted key school level enablers in advancing shared education including the importance of high-quality contact; school leadership links between teachers; a focus on the curriculum and the sharing of resources between teachers.
- 6.41 The report of the Ministerial Advisory Group⁵⁵ highlights that *“Research evidence from a range of studies carried out in Northern Ireland over the years ... suggests that limited contact resulting from bringing children together for short periods of time – either in school or elsewhere – has little or no long-term effects on their attitudes”* and notes *“support for longer term-sustained contact between learners”* (aligned to inter-group contact theory - Hewstone et al. 2005; Hughes et al. 2007⁵⁶), summarising that *“the contact literature makes a clear distinction between superficial and intimate contact in respect*

⁵⁴ NI Assembly (Hansard – 2nd July 2014): Inquiry into Integrated a Shared Education – Department of Education Briefing.

Marques, and M. A. Hogg (Eds) The social psychology of inclusion and exclusion, pp. 265–292 Philadelphia, PA: Psychology Press.

Hughes, J. and Donnelly, C. (2007) Integrated schools in Northern Ireland and bi-lingual/bi-national schools in Israel: Some policy issues. In Z. Bekermann and C. McGlynn (Eds) Sustained peace education in post-conflict societies, pp. 121–134. London: McMillan.

of positive outcomes. The latter refers to encounters where individuals have a more positive emotional disposition towards others and trust them enough to “self-disclose”, thereby creating an opportunity for perspective-taking and out-group empathy’ (Hughes and Donnelly, 2012: p. 191). 2010”.

- 6.42 Research has also highlighted the importance of local solutions to cross-sectoral working; the need for shared education to enhance the delivery of core curricular activities or meet real educational need (e.g. increased access to specialist teaching).
- 6.43 Factors such as geographical proximity, levels of cross community integration and interface areas have also been highlighted as important all factors in the workability of Shared Education Programmes⁵⁷. ETI have also noted⁵⁸ that a key challenge remains “to engage schools/ organisations not already involved in community relations work”.
- 6.44 We **reiterate our recommendation** that the Department utilises lessons from the body of research⁵⁹ regarding sharing in education – including that relating to Integrated Education Model and the QUB Shared Education Programme⁶⁰ etc.

Guidance

- 6.45 The Commission recognises the importance of guidance for schools who wish to embark on shared education and for those who wish to move toward greater interdependency.
- 6.46 Both the Ministerial Advisory Group on shared education and academics from Queens University have stated that there is a lack of guidance for schools who wish collaborate to sustain a federation, a confederation or shared communities of

⁵⁷ Knox (2014):

⁵⁸ ETI (2013) A Final Evaluation of the International Fund for Ireland’s Sharing in Education Programme <http://www.etini.gov.uk/international-fund-for-irelands-sharing-in-education-programme/a-final-evaluation-of-the-international-fund-for-irelands-sharing-in-education-programme.htm>

⁵⁹ The Commission’s 2012 Submission to the Ministerial Advisory Group on Shared Education summarises a range of research regarding integrated education and the QUB Shared Education Programme.

⁶⁰ The SEP encourages schools to make cross-sectoral collaborations an integral part of school life, creating enhanced educational and personal development opportunities for everyone involved. The SEP has, since 2007, involved over 100 schools at Post-Primary and Primary level in cross-sectoral collaboration concentrating on substantive, curriculum based activities. In the year beginning Sep 2010, SEP2 partnerships involved over 4,000 students across Northern Ireland. See <http://www.schoolsworkingtogether.co.uk/>

learning⁶¹. Queens University highlighted that *'even where the post-primary area-based plans have suggested that x number of schools should work together in a certain town for the betterment of education outcomes for all the pupils.... there is no real assistance or support for them to do that, be it actual resource or even just advice and guidance about how they would grow that particular partnership'*⁶².

- 6.47 We welcome the work being undertaken by the Department to provide guidance on the different models of shared education. ETI has also highlighted that *'in helping to address these challenges DE officials need to work more collaboratively to ensure that school improvement policies signpost connections to, and opportunities for, shared education'*⁶³.

Indicators and Evaluation

- 6.48 In order to acknowledge success and promote improvement, sharing and collaboration between schools should be evaluated. Bain (2006)⁶⁴ recommends that all models of sharing and collaboration, from the locally evolving partnerships to the more formally structured arrangements of sharing and collaboration, can be evaluated against a set of indicators⁶⁵.
- 6.49 Evaluation of existing barriers and enablers to a shared system of education will be important. Focus will need to be placed on lessons learned to date – for example the reported difficulties encountered by teachers in teaching in shared classes, or the reported anxiety of some pupils about participating in the Shared Education Programme.
- 6.50 Over time, the relative effectiveness of different types of partnerships and activities will need to be evaluated, including establishing what type of collaboration is most effective in

⁶¹ Hansard (2014): Area Based Planning - Queens University and the University of Ulster. Available at <http://www.niassembly.gov.uk/Assembly-Business/Official-Report/Committee-Minutes-of-Evidence/Session-2013-2014/January-2014/Area-based-Planning-Queens-University-Belfast-and-University-of-Ulster/>

⁶² Ibid

⁶³ Education and Training Inspectorate (2013): *An evaluation of the International Fund for Ireland's Sharing in Education Programme*, page 32.

⁶⁴ Bain (2006): *Schools for the future – funding strategy and sharing*. Available at http://www.deni.gov.uk/review_of_education.pdf

⁶⁵ Ibid, page 170 - Bain recommended indicators covering: quality and effectiveness of provision; equality and accessibility; diversity and choice; community well being and cohesion; economy and efficiency (including matching provision to need and reducing overprovision); and cross-community and cross-sector sharing and collaboration. Source:

delivering good educational outcomes and experiences as well as promoting good relations.

6.51 Evaluation should be through both self-evaluation and through inspection and should take account of both the distinctive character of the school and the community environment. Systems of measurement and rolling evaluation of policies/programmes will be important. Involvement of the Education and Training Inspectorate would likely provide an effective means to mainstream this process.

6.52 The Commission **continues to recommend** indicators to measure and review sharing and collaboration in education provision and governance – both to acknowledge success and promote improvement. The Commission therefore recognises the potential for the indicators being developed by the Education and Training Inspectorate, on behalf of the Department for Education, to assist schools in evaluating programs of shared education and inform future guidance in this area.

6.53 The Commission is also of the view that there is a real opportunity to progress and mainstream learning from the sharing in education and shared education programs through such projects as the recently agreed Delivering Social Change (DSC) signature project. Data should be collected on the educational impacts on Section 75 Groups and children on FSM as part of the DSC and other programmes.

Areas of Specific Interest to the Inquiry

6.54 Aligned to the specific terms of reference to the inquiry, we also make the following comments:

The effectiveness of the relevant parts of the CRED policy

6.55 Aligned to our remit and expertise, the Commission has not undertaken a detailed consideration of the effectiveness of the CRED policy

6.56 The Commission however recognises the crucial role that schools have in contributing to the reconciliation of our society. This is not solely a job for schools, but schools do play a critical

role⁶⁶. The current policy environment provides a further opportunity to address persistent inequalities in education and make a substantial contribution to improved social and community cohesion within our society.

- 6.57 We note that the Department’s Community Relations, Equality and Diversity (CRED) policy commits to *“encourage greater sharing and collaboration across and between all educational settings on a cross community basis”*⁶⁷. We **welcome** that the intended outcomes set out in CRED policy; namely *“to develop learners who understand and respect the rights, equality and diversity (including linguistic diversity) of all S75 groups”* have the potential to promote equality of opportunity and good relations across the full range of equality grounds.
- 6.58 We however note that the NIHRC has recommended⁶⁸ that *“there is therefore arguably a need to align curriculum content more carefully with CRED aspirations”* and that recommendation 10 of the Ministerial Advisory Group recommends *“an independent review should be undertaken of current practice... The review should consider the effectiveness of the current Community Relations Equality and Diversity (CRED) policy and also include consideration of the opportunities that are provided for children and young people to discuss and explore issues associated with divisions, conflict and inequalities in Northern Ireland.”*
- 6.59 We also note the reply given by the Minister for Education⁶⁹ indicating that following the closure of the International Fund for Ireland’s Sharing in Education Programme in December 2013, schools were encouraged to apply for CRED funding but that some schools did not apply and that in some Boards the Scheme was under-subscribed. We would **encourage** steps to maximise the effective use of the CRED policy and available funding to support the advancement of equality of opportunity and good relations via CRED and the school curriculum.

⁶⁹ Assembly Question - AQW 30553/11-15

Engagement, including with parents and carers

- 6.60 The Commission reiterates the importance of engaging with pupils, parents, education providers and wider stakeholders to communicate the rationale for the proposed system and model(s) - to improve associated policy proposals and to incentivise any moves.
- 6.61 We recommend, in line with our consistent call for effective engagement with Section 75 groups, that the Department and other key bodies also take steps to ensure effective engagement with children & young people (C&YP) in the design, delivery, implementation and review of shared education initiatives. We note that a recent NICCY report⁷⁰ has revealed an absence of robust systems by Departments for recording, analysing, evaluating and providing feedback to C&YP on the outcomes of engagements.
- 6.62 Further NICCY research (2013)⁷¹ into the views of C&YP on shared education has also reported that whilst many pupils recognised the value of shared education and its objectives, for some their experiences of sharing had been less positive; with some pupils indicating that the collaborative activities and joint classes had been a “*shared but separate experience...*”.
- 6.63 Gallagher and Duffy (2012) have also noted the importance of parental support and involvement in their analysis⁷² of the Shared Education Programme (SEP):

“Some of the schools talked about cross-sector collaboration needing parental support and involvement. Those schools situated in contested space appeared to experience the most resistance from parents; perhaps due to concerns about safety moving through contested space or their children mixing with young people from the other side of the community. According to some Coordinators, parents were also dealing with the legacy of the conflict themselves.”

⁷⁰ NICCY (2014) 'Walking or Talking Participation - evidencing the impact of direct participation with children and young people in the development of departmental policies, strategies, legislation and services

⁷¹ NICCY (2013) Shared Education: The Views of Children and Young People 2013

⁷² Duffy, G., Gallagher, T., (2012) Sustaining Cross-Sector Collaboration: An examination of schools involved in the first cohort of the Sharing Education Programme - <http://www.schoolsworkingtogether.com/documents/Sustainability%20Report.pdf>

- 6.64 The recent evaluation of Sharing in Education Programmes, noted that when projects involved parents/carers, it lead to a more enriched experience for participants. The Commission has also noted that sharing between and/or merging existing schools, may both advance good relations and help ensure that a school provides an anchor point for the wider community as envisaged in the Extended Schools Initiative.⁷³
- 6.65 As highlighted in our response to the Ministerial Advisory Group - without unduly delaying progress, there will be merits in looking at lessons learnt from the Integrated sector; the Sharing in Education and Shared Education Programmes; and other similar initiatives to identify key lessons regarding engagement.

The Role of Special Schools

- 6.66 Aligned to the terms for reference for the inquiry, we reiterate our view that sharing in education, across the full range of equality grounds, not only has the potential to provide meaningful and sustainable relations between pupils of different cultures and backgrounds, but also has the potential to improve educational outcomes for pupils from a diverse range of backgrounds and abilities.
- 6.67 We consider that sharing in education must impact meaningfully and substantively on every participant and we have highlighted the importance of sharing at all stages of educational provision – pre-school; early years; primary; post-primary; special needs; and tertiary levels.”
- 6.68 We note that the Ministerial Advisory Group report quotes the ETI as reporting *“Other key benefits included improved social and personal skills for all learners; children from mainstream schools developing a better understanding of those with SEN and the transmission of special education staff expertise to their mainstream colleagues.”*
- 6.69 The Commission supports action that encourages routine sharing and collaboration between pupils and staff at special and mainstream schools, or actions which promote positive attitudes and challenge negative stereotypes.

⁷³ Education and Training Inspectorate Report (2006). Available at <http://www.etini.gov.uk/the-extended-schools-initiative-in-northern-ireland-a-baseline-survey-by-the-education-and-training-inspectorate.pdf>

6.70 We **recommend** the Department explore how a shared experience can be central to the education system as a whole, encompassing at all stages of educational provision – including **routine sharing and collaboration between pupils and staff at special and mainstream schools.**

7 ‘Alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes’

7.1 Aligned to our remit and expertise, the Commission has not undertaken work to evaluate education policy interventions from other jurisdictions.

7.2 This submission, and the further detail set out in our submission to the Ministerial Advisory Group in 2012, has however sought to point to and reference a range of literature and research regarding lessons to date from the Northern Ireland experience.

8 ‘Priorities and actions to be taken to improve sharing and integration’

8.1 The Commission recognises the potential for shared education to tackle inequality and promote equality of opportunity and good relations across the full range of Section 75 groups

8.2 We consider that any priority actions to advance shared education should be aligned to achieving these goals.

8.3 We summarise below the key recommendations developed across this paper.

A Legal and Policy framework

8.4 **The Commission recommends** that a clear definition of ‘shared’ education is set out, supported by clarity on the inter-relationship between ‘shared’ education and ‘integrated’

education⁷⁴; and how they will collectively interact to achieve overarching policy goals (including the promotion of equality of opportunity and good relations).

- 8.5 Reflecting our advice to the Ministerial Advisory Group, we recommend that sharing in education must:
- Ensure that sharing impacts meaningfully and substantively on every learner
 - Ensure that a shared experience should be central to the education system as a whole, encompassing at all stages of educational provision – pre-school; early years; primary; post-primary; special needs; and tertiary levels.
 - routinely teach learners together via a shared curriculum in shared classes.
 - better provide learners with shared awareness, understanding and experience of the value and range of diverse cultures, identities and backgrounds in Northern Ireland; while also enabling learners from different cultures/communities to experience a shared society.
- 8.6 We consider the above to be relevant to the development of policy aims associated with ‘sharing’ in education, and thus **we recommend** that it is taken into account in the development of a definition of ‘shared education’ that would seek to advance those aims. **We recommend** that any definition providing for a continuum of sharing ensures that sharing is central to the system of education as a whole and that it impacts meaningfully and substantively on every learner.
- 8.7 We consider that that the allocation of responsibility for mainstreaming shared education needs to be explicit, and therefore **consider** that ‘Shared Education’, once appropriately defined, and its inter-relationship with ‘integrated education’ made clear, is likely to benefit from an appropriate obligation in statute, supplementing but not replacing the existing Article 64 obligation on integrated education.

⁷⁴ We note the definition of integrated education contained in The Education Reform (Northern Ireland) Order 1989, with the interpretation as confirmed in the ‘Drumragh Judgement’

Addressing Barriers to the Advancement of Shared and Integrated Education

- 8.8 The Commission **recommends** that the Department utilises lessons drawn from the body of research⁷⁵ regarding sharing in education – including that relating to Integrated Education Model and the QUB Shared Education Programme⁷⁶ etc. We also **highlight** the importance of ensuring fulfilment of the Article 64 provisions of the Education Reform (Northern Ireland) Order 1989 to ‘encourage and facilitate’ integrated education at all levels.
- 8.9 With regards to barriers in wider education policy, we continue to **recommend** action to address wider issues linked to sharing in education (including academic selection at age 11; teacher training to advance shared education; the removal of the teachers’ exemption under FETO; and to gain a better understanding of the reasons for, and impacts of, any differential patterns of enrolment to education providers).
- 8.10 The Commission remains of the view that, for shared education to be mainstreamed, it needs to be facilitated and promoted through the wider policy context. There is a need for a joined-up approach to sharing and alignment of the policies to promote and facilitate it. The Commission **recommends** that action is taken to ensure coordination across relevant policies and programmes.

Better Utilising Existing Enablers

- 8.11 The Commission continues to highlight the clear opportunities to build upon / extend existing education policy to be used to better advance shared education and **recommends** that consideration is given to how this might be achieved.
- 8.12 We **recommend** that consideration is given to how best Area Learning Partnerships / Communities might effectively

⁷⁵ Our 201 Submission to the Ministerial Advisory Group on Shared Education summarises a range of research regarding integrated education and the QUB Shared Education Programme.

⁷⁶ The SEP encourages schools to make cross-sectoral collaborations an integral part of school life, creating enhanced educational and personal development opportunities for everyone involved. The SEP has, since 2007, involved over 100 schools at Post-Primary and Primary level in cross-sectoral collaboration concentrating on substantive, curriculum based activities. In the year beginning Sep 2010, SEP2 partnerships involved over 4,000 students across Northern Ireland. See <http://www.schoolsworkingtogether.co.uk/>

encourage sharing between providers from different sectors / management types in a way which could serve to advance good relations.

- 8.13 We note the importance of sustainability and the role of funding in that regard and therefore welcome the Departments commitment to use the shared education programme to determine how best to mainstream shared education funding for schools.
- 8.14 We continue to **recommend** that consideration is given as to how best to incentivise increased sharing of educational resources on cross-sectoral and ability lines, including via the common funding formula.
- 8.15 A number of research reports have highlighted key school level enablers in advancing shared education including the importance of high-quality contact; school leadership links between teachers; a focus on the curriculum and the sharing of resources between teachers. ETI have also noted⁷⁷ that a key challenge remains *“to engage schools/ organisations not already involved in community relations work”*. We **reiterate our recommendation** that the Department utilises lessons from the body of research⁷⁸ regarding sharing in education to advance key enablers.

Guidance

- 8.16 The Commission recognises the importance of guidance for schools who wish to embark on shared education and for those who wish to move toward greater interdependency and we **welcome** the work being undertaken by the Department to provide guidance on the different models of shared education.

Indicators and Evaluation

- 8.17 The Commission **continues to recommend** indicators to measure and review sharing and collaboration in education

⁷⁷ ETI (2013) A Final Evaluation of the International Fund for Ireland’s Sharing in Education Programme <http://www.etini.gov.uk/international-fund-for-irelands-sharing-in-education-programme/a-final-evaluation-of-the-international-fund-for-irelands-sharing-in-education-programme.htm>

⁷⁸ The Commission’s 2012 Submission to the Ministerial Advisory Group on Shared Education summarises a range of research regarding integrated education and the QUB Shared Education Programme.

provision and governance – both to acknowledge success and promote improvement.

- 8.18 The Commission is also of the view that there is a real opportunity to capture and mainstream learning from projects such as the recently agreed Delivering Social Change (DSC) signature project. Data should be collected on the educational impacts on Section 75 Groups and children on FSM as part of the DSC and other programmes.

Areas of Specific Interest to the Inquiry

- 8.19 Aligned to the specific terms of reference to the inquiry, we also make the following comments:

Community Relations, Equality and Diversity (CRED) policy

- 8.20 Aligned to our remit and expertise, the Commission has not undertaken a detailed consideration of the effectiveness of the CRED policy

- 8.21 We **welcome** that the intended outcomes set out in CRED policy; namely *“to develop learners who understand and respect the rights, equality and diversity (including linguistic diversity) of all S75 groups”* have the potential to promote equality of opportunity and good relations across the full range of grounds, but **we note the recommendations** from the NIHRC and the MAG calling respectively for alignment and review of CRED. We **encourage** steps to maximise the effective use of CRED, and available funding to support the advancement of equality of opportunity and good relations via CRED and the school curriculum.

Engagement, including with parents and carers

- 8.22 The Commission reiterates the importance of engaging with pupils, parents, education providers and wider stakeholders to communicate the rationale for the proposed system and model(s) - to take account of barriers and enablers; to improve associated policy proposals and to incentivise any moves.

The Role of Special Schools

- 8.23 We consider that sharing in education must impact meaningfully and substantively on every participant.

- 8.24 We reiterate our recommendation that the Department explore how a shared experience can be central to the education system as a whole, encompassing at all stages of educational provision – including routine sharing and collaboration between pupils and staff at special and mainstream schools.

Equality Commission for Northern Ireland
October 2014

9 ANNEX 1: The Equality Commission for Northern Ireland

1. The Equality Commission for Northern Ireland (the Commission) is an independent public body established under the Northern Ireland Act 1998. The Commission is responsible for implementing the legislation on fair employment, sex discrimination and equal pay, race relations, sexual orientation, disability and age.
2. The Commission's remit also includes overseeing the statutory duties on the Department to promote equality of opportunity and good relations under Section 75 of the Northern Ireland Act 1998 (Section 75) and to promote positive attitudes towards disabled people and encourage participation by disabled people in public life under the Disability Discrimination Act 1995.
3. The Commission's general duties include:
 - working towards the elimination of discrimination;
 - promoting equality of opportunity and encouraging good practice;
 - promoting positive / affirmative action
 - promoting good relations between people of different racial groups;
 - overseeing the implementation and effectiveness of the statutory duty on relevant the Department;
 - keeping the legislation under review;
 - promoting good relations between people of different religious belief and / or political opinion.
4. The Equality Commission, together with the Northern Ireland Human Rights Commission, has been designated under the United Nations Convention on the rights of Persons with Disabilities (UNCRPD) as the independent mechanism tasked with promoting, protecting and monitoring implementation of the Convention in Northern Ireland.

10 ANNEX 2: Inequalities in Education: Facts and Trends 1998-2008

10.1 The Commission's 2010 publication "*Inequalities in Education: Facts and Trends 1998-2008*"⁷⁹ sought to consider patterns of educational attainment in Northern Ireland. Key findings included:

- Community background: Amongst school leavers, there has been considerable improvement in the highest level of educational attainment of both communities, although the gap between highest educational attainment of Protestant and Roman Catholic school leavers has widened. When the different equality groups are compared, community background is the area where fewest differences exist in 2007/08.
- Gender: Some differences are notable when looking at gender, particularly with regards to levels of highest educational attainment and subject choices within Further or Higher Education. While there has been considerable improvement in the highest level of educational attainment of both male and female school leavers, this improvement has been markedly more evident for females than for males.
- Those with / without a declared disability: There are still considerable differences in the highest educational attainment and in participation in Further or Higher Education between those with and without a declared disability. With regards to participation in third-level education, while those with a declared disability remain under-represented at this level, an improvement has occurred in the proportion who are accessing institutes of Higher Education in Northern Ireland.
- Irish Travellers: There has been a noticeable gap between the highest education attainment and destinations of Irish Traveller and non-Traveller school leavers. The majority of Irish Travellers left school with no GCSEs, while the majority of non-Travellers left school with GCSE or higher qualifications.

⁷⁹ ECNI (2010): *Inequalities in Education – Facts and Trends 1998-2008*. Available at http://www.equalityni.org/archive/pdf/InequalitiesinEducation_ResearchReport.pdf

11 ANNEX 3: “Ensuring the Good Relations Work in our Schools Counts” (2010): Relevant recommendations

“j) Greater focus on sharing and collaboration within service delivery - the Department, ESA and other key educational stakeholders to focus on maximising value for money and avoiding duplication of educational provision, by placing a greater focus on existing drivers, policies and practices that encourage greater sharing and collaboration, particularly on a cross-community basis. These include:

- **Every School a Good School – a Policy for School Improvement** – with a focus on the best educational interests of all children, whatever the identity. This should particularly include the needs of those most at risk of not reaching their potential, such as the children of new residents and Travellers.
- **Adding good relations conditions to budgetary allocations criteria**, particularly in relation to capital builds and development plans, so there is a greater focus on cross-community relationship building.
- **The Review of Public Administration and Community Planning** – by encouraging greater local and regional clustering of services, particularly with respect to school and community resources, based on whole community need and not upon continued separate community provision. Good relations must be a direct underpinning principle within this planning process. Education should be seen in the broadest sense of the word
- **a holistic approach** which takes account of external family and community life as well as the school environment.
- **The Entitlement Framework** – encouraging schools to see what actions they can take to collaborate on a cross-community basis to meet the Entitlement Framework requirements.
- **Area Learning Communities** – the Department of Education to add a cross-sectoral and cross-community element to the funding criteria for the Collaboration Element, and to support the roll out of ALCs to all areas.”

Dear Mr McCallion

Re: Shared and Integrated Education

I write in response to your letter dated 6 February 2015, following the Commission's presentation to the Committee's Inquiry into Shared and Integrated Education.

First, my apologies for the delay in responding to your letter but I was keen for the Commission to discuss and approve its response to the Department of Education's consultation on "Shared Education Draft Policy and Legislation" consultation before I responded. I have enclosed a summary of this response for the Committee's information and I would be happy to answer any questions the Members might have or indeed forward our full response if required.

In response to the Committee's request for sight of the relevant research into Educational Inequalities in Northern Ireland, we have commissioned Queens University to carry out this out and as noted in our written submission, as this work is still ongoing, we are not in a position to share it at present. However, when it is completed the Commission will forward it to the Committee and we would be willing to discuss the issues raised further at that stage if the Committee would find this useful.

The Committee sought further information on the Equality Commission's position in respect of religious instruction in schools. Whilst the Commission does not have a specific policy on this, it is our core position, as outlined in our written submission to the Inquiry, that we recommend a move towards a system of sharing based on teaching a diverse range of pupils together

Chief Commissioner: Michael Wardlow

INVESTOR IN PEOPLE

Chief Executive: Evelyn Collins CBE

through a shared curriculum in shared classes across the full spectrum of education providers. This is not to undermine the rights of parents to make choices regarding their child's attendance at specific schools, or for the provision of faith-based schools, but we consider that such considerations cannot overshadow the importance of a system of education seeking to maximise equality of opportunity and good relations.

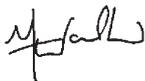

The Committee also sought further information from the Commission on the shared campus proposal for Moy Regional Primary School and St John's Primary School, Moy. As noted at the Committee session, the Commission is not aware in detail of the particular situation in the Moy thus it would inappropriate to comment on the specifics.

However, as set out in the aforementioned consultation response, our considered view is that a system of shared education has a central role to play in advancing a shared society and that children should have the opportunity to be educated together regardless of faith or background.

We hold the view that sharing in education must impact meaningfully and substantively on every learner and to this end we have highlighted the importance of sharing at all stages of educational provision. This, we believe, mirrors the Executive's commitment to sharing becoming "*a central part of every child's educational experience*" as set out in Together: Building a United Community, a position we have already welcomed.

I trust this is helpful and again, please feel free to contact me if the Committee Members have any further queries.

Yours sincerely

Dr Michael Wardlow
Chief Commissioner

Equality Commission

FOR NORTHERN IRELAND

EQUALITY COMMISSION FOR NORTHERN IRELAND

Summary of Response to Consultation on 'Shared Education Draft Policy and Legislation Consultation'

March 2015

1 Summary of Response

- 1.1 The Equality Commission welcomes the opportunity to respond to the Department of Education's consultation on a Bill and policy to advance sharing in education.

We welcome the draft Bill and policy as seeking to set out a definition and policy framework. We also welcome the actions in the draft policy providing for:

- co-ordinated support for schools and teachers;
- the development of a new teacher professional development strategy;
- advice and guidance on options for sharing;
- engagement with parents, carers, children and young people.

- 1.2 However, we do not consider that the proposed overall approach is sufficiently robust. We therefore set out a number of key concerns and associated recommendations.

Overarching Concerns

- 1.3 Our overarching concern is that the proposals are neither clearly nor sufficiently defined to ensure the development of a system of education with meaningful and sustainable sharing at its core, and which is aimed at positively changing the relationship between pupils, schools and the wider community.
- 1.4 We also consider that the proposals have the potential to fall short of the commitment set out by the Executive in Together: Building a United Community to ensure that "sharing in education becomes a central part of every child's educational Experience" [our emphasis]
- 1.5 We are also concerned that:

- there is a fundamental lack of coherence between the 'policy description' of shared education in the draft policy; and the definition of shared education as set out in the draft Bill.
- that the policy aim and associated outcomes for shared education have not been sufficiently developed.

1.6 In summary, while the consultation exercise and the detail provided are to be welcomed, we consider that for the potential of shared education to be realised in practice, it must be appropriately defined in legislation and clearly articulated through a coherent and co-ordinated policy framework.

1.7 To assist, we recommend that the Department take account of our full consultation response and our published recommendations on sharing in education, available via www.equalityni.org/sharededucation.

1.8 We would also welcome early engagement with the Department on their proposals.

Summary of Key Recommendations

1.9 We set out below a summary of key recommendations. Our full consultation response expands on these key points as well as providing further information in direct response to other specific aspects of the consultation.

Focus of Shared Education

1.10 It is recommended that the Department refines both the policy document and the draft Bill to ensure that there is a clear and definition of shared education and coherence between the policy document and the draft Bill.

1.11 We consider that the policy and Bill for shared education must:

- ensure that sharing impacts meaningfully and substantively on every learner.
- ensure that a shared experience should be central to the education system as a whole, encompassing at all stages of educational provision – pre-school; early years; primary; post-primary; special needs; and tertiary levels.
- routinely teach learners together via a shared curriculum in shared classes.
- better provide learners with shared awareness, understanding and experience of the value and range of diverse cultures,

identities and backgrounds in Northern Ireland; while also enabling learners from different cultures/communities to experience a shared society.

- 1.12 We note reports that only around 65% of schools would be eligible to participate in the proposed DSC programme. We recommend that the Department makes clear that the proposed sharing will fulfil the commitment set out by the Executive in *Together: Building a United Community* to ensure “that sharing in education becomes a **central** part of **every** child’s educational experience”¹ [our emphasis]. We also highlight the requirement on the Department to assess the equality impacts of proposals.

Definition of Shared Education

- 1.13 The Commission highlights the apparent inconsistency between the Bill and the Policy, noting that the proposed definition of shared education in the draft Bill is narrower than the stated aims and objectives in the draft policy on shared education.
- 1.14 We are of the view that defining shared education only in relation to religious/political *and* socio-economic lines, limits the potential for shared education to advance equality of opportunity and good relations across other S75 grounds.
- 1.15 We recommend that the focus and wording of both the draft Bill and policy are further developed to ensure consistency in focus and clarity in implementation; including that:
- The core focus of the Bill should be centred on ensuring meaningful and sustained sharing between learners of different community background, while also ensuring that any definition is not so narrow as for other types of sharing to fall outside the legal definition.
 - The associated policy seeks to find ways, alongside the core focus on community backgrounds, to encourage and facilitate sharing across all equality grounds; and to address the socio-economic issues which are experienced by a number of equality groups.
- 1.16 We also recommend that it may be appropriate that criteria for the prioritisation of support across a range of equality grounds are set out in the shared education policy (and DSC application process

¹ OFMDFM (2013) *Together: Building a United Community* (p29) - <http://www.ofmdfrni.gov.uk/together-building-a-united-community-strategy.pdf>

etc), rather than narrowly defining Shared Education in the Bill. For example, the Department could set criteria to prioritise support to those applications which evidenced the greatest degree of sharing beyond a core focus on community background – for instance on other equality or socio-economic grounds).

Proposal to include ‘religious belief’ and ‘political opinion’ within the definition

- 1.17 The Commission recommends that the Department gives consideration as to how the Bill and Policy will operate in practice and ensure this is more clearly articulated in the policy.
- 1.18 The Commission’s Section 75 “Monitoring Guidance for use by Public Authorities”² notes that there are two options for monitoring religious belief - current stated religion or community background.
- 1.19 It is recommended that, in these particular circumstances, the Department give consideration to the potential of utilising the concept of the ‘community background’ of individuals for the purposes of assessing participation.

Statutory Obligations

- 1.20 It is recommended that the obligation on the Department in respect of shared education should be a duty, not a power; and that the duty should be to ‘*encourage and facilitate*’ shared education.
- 1.21 The Commission is also currently of the view that the statutory obligation should sit with the Department. The Commission recommends that the Department sets out and further expands upon any specific rationale for proposing that certain additional arms length bodies be subject to a power.
- 1.22 We are aware that public discourse regarding the potential to further advance equality of opportunity and good relations in schools has set out a range of potential approaches - whether it be a discrete statutory obligation; Section 75 or some variant thereof; a policy directive from the Department; or mainstreaming through the curriculum.

²ECNI “Section 75 - Monitoring Guidance for use by Public Authorities” - <http://www.equalityni.org/ECNI/media/ECNI/Publications/Employers%20and%20Service%20Providers/S75MonitoringGuidance2007.pdf>

- 1.23 We note the consultation proposals to designate and place an obligation on schools under Section 75 of the Northern Ireland Act, but with proposals to *“reduce the demand... in terms of meeting their specific responsibilities”*³
- 1.24 The Commission has not to date supported the designation of schools under Section 75.
- 1.25 Whatever the model proposed, there are likely to be number of pertinent issues that require careful and robust consideration. These include, for example, key questions such as:
- whether or not a legislative approach is the most appropriate;
 - if a obligation is to be placed to schools, should it be a discrete duty; under Section 75; or via some other means;
 - what lessons can be learnt from the application of public sector duties in schools in other jurisdictions.
- 1.26 We would welcome early engagement with DENI, including on their reported work to examine options for the application of a statutory duty to schools, based on an examination of models from other jurisdictions.

Funding and Long Term Sustainability

- 1.27 The Commission recommends that the Department ensures that partnerships are sustainable in the long term.
- 1.28 We note the Department’s intention to end earmarked funding for CRED and raise concern that this does not appear to be in keeping with mainstreaming shared education as a priority issue. We therefore ask the Department to clarify how community relations, equality and diversity work will be mainstreamed in the absence of earmarked funding.
- 1.29 We highlight the potential to build upon and extend existing education policy and practice (for example common funding; area learning partnerships etc) and recommend that consideration is given to how to best incentivise increased sharing on cross-sectoral and ability lines. Detailed proposals for the further mainstreaming of shared education, including through the inspection process, should be made explicit.

³ DENI (2014) – Consultation – *“Sharing Works: A Policy for Shared Education”* – page 22

- 1.30 We also recommend that, in due course, the Department undertake work to further define the costs/savings associated with the proposed DSC projects and to evaluate to what extent these partnerships are likely to remain sustainable, after the initial funding period.

Clarity needed on policy outcomes and measures

- 1.31 We also consider that the policy aim and associated outcomes and measures for shared education have not been sufficiently developed.
- 1.32 We consider that the vision should be clear that it includes raising levels of educational attainment, and also seek to encapsulate that partnerships should be sustainable and aimed at positively changing the relationship between pupils, school and the wider community.
- 1.33 It is not clear how progress towards shared education will be measured in practice. For example, while Department officials have indicated in evidence⁴ that they expect schools to move one point along a continuum of sharing in three different areas, this is not set out in the policy. We request further clarity around the focus of the continuum model and how it will work in practice. There should also be a clearer and stronger message in the final policy framework that schools should be moving towards a system of education which routinely teaches pupils together via a shared curriculum in shared classes.
- 1.34 We also highlight the importance of setting out a range of measures and goals – linking actions, outputs, outcomes and impacts. It is important that such measures move beyond describing policy outputs to consider specific measures of the outcomes and impacts that we would expect to see in society. For example, that sharing has impacted meaningfully and substantively on every learner; and provides learners with shared awareness, understanding and experience of the value and range of diverse cultures, identities and backgrounds in Northern Ireland etc.
- 1.35 We note that of the nine potential 'types of sharing' set out on page 12 of the consultation, only one explicitly focuses on sharing between learners (the others being centred on educator expertise, resources; professional development etc). We are thus concerned

⁴ Shared and Integration Education Inquiry: Education Committee (21st January 2015): Evidence – Department of Education and Education and Training Inspectorate.

that subsequent delivery may advance sharing which is not centred on ensuring a meaningful and substantive impact on every learner. Again, we raise concerns that this may fall short of the commitment set out by the Executive in *Together: Building a United Community* to ensure “that sharing in education becomes a central part of every child’s educational experience” [our emphasis]

1.36 We reiterate our 2010 and subsequent recommendations regarding:

- The importance of indicators and evaluation to measure and review sharing and collaboration in education provision and governance – both to acknowledge success and promote improvement.
- The importance of data collection, across all Section 75 grounds and FSM eligibility, for all educational projects, including key Delivering Social Change projects.

Engagement with Parents, Carers and Children & Young People

1.37 We recommend that engagement should seek to communicate the rationale for any proposed system; to learn from experiences to date; to inform and improve associated policy frameworks / implementation plans; and to incentivise any moves.

1.38 We also recommend, in line with our consistent call for effective engagement with Section 75 groups, that the Department and other key bodies also take steps to ensure effective engagement with children & young people (C&YP) in the design, delivery, implementation and review of shared education initiatives.

Wider Issues in Education

1.39 Finally we take this opportunity to stress the need for wider action to address the structural barriers to shared education, including our concern about academic selection at age 11; our recommendations for the removal of the teacher’s exception under FETO at secondary level; the need for greater sharing and collaboration in teacher training; and for actions to better understanding the reasons for, and impacts of, any differential patterns of enrolment to education providers. There is also a need to promote good relations and tackle prejudicial attitudes in all spheres, both inside and outside schools, so that steps taken to promote good relations in schools are supported by actions and behaviours at home and in the wider community.

Fermanagh Trust

Summary of Fermanagh Shared Education Programme

Shared Education is where schools deliver part of the curriculum jointly on a cross community basis with their nearest neighbouring school from a different sector. In practice it means pupils from different schools coming together for joint classes, usually for half a day per week, each week during the academic year. On average, this equates to approximately 50 – 60 shared hours per school year for the participating pupils.

The Fermanagh Shared Education Programme commenced in September 2009 and progress in the first 3 years of the Programme is reflected in the uptake, in terms of participating schools, pupils and the extent and level of shared classes.

No. of Participating Schools

The following table shows the high proportion of schools participating each year in Shared Education. Note, that there are 43 primary schools and 14 post-primary schools in the County.

No. of Schools involved in Fermanagh Shared Education Programme (2009 – 2012/3)

	No. of Primary Schools Involved*	No. of Post Primary Schools Involved	Total Schools Involved
Yr 1 (2009/10)	43	6	49
Yr 2 (2010/11)	41	10	51
Yr 3 (2011/12)	42	14	56
Yr 4 (2012/13)	44	14	58

* 3 Church of Ireland National Schools in the RoI are involved in the Programme

The above shows that schools wish to be involved in Shared Education and that that interest is not waning.

No. of Pupils participating in Shared Education

The following table shows the increasing number of pupils participating each year in Shared Education.

No. of Pupils involved in Fermanagh Shared Education Programme (2009 – 2012/3)

	No. of Primary Pupils Involved	No. of Post Primary Pupils Involved	Total Pupils Involved	% increase from Yr 1
Yr 1 (2009/10)	1658	202	1,860	N/A
Yr 2 (2010/11)	2404	324	2,728	47%
Yr 3 (2011/12)	2645	672	3,317	78%
Yr 4 (2012/13)	3442	822	4,264	129%

The number of pupils involved in Shared Education has increased by 2,404 pupils from Year 1, which represents an increase of 129%, demonstrating the high level of demand for Shared Education in the County. Note that the number of pupils enrolled in Fermanagh schools in 2011/12 was as follows:

- Primary School pupils: 5,372
- Post Primary School pupils: 5,149

In the region of 64% of primary pupils in Fermanagh will be involved in Shared Education this year 2012/13 and 41% of all pupils in the County will participate in Shared Education this year.

No. of Shared Classes / Projects

The number of classes getting involved in Shared Education has increased incrementally over the 4 year period, as summarized in the table below.

No. of Shared Classes - Fermanagh Shared Education Programme (2009 – 2012/3)

	No. of Classes (Primary)	No. of Shared Classes (Post Primary)	Total Shared Classes
Yr 1 (2009/10)	30	17	47
Yr 2 (2010/11)	37	15	52
Yr 3 (2011/12)	52	21	73
Yr 4 (2012/13)	57	21	78

Community Relations Training for School Staff

Training was delivered to help schools in the implementation of Shared Education. The following table shows the participation in training that was organised by the Fermanagh Trust for schools.

No. of School Staff Trained in Community Relations Fermanagh Shared Education Programme (2009 – 2012/3)

	No. of Staff Trained
Yr 1 (2009/10)	59
Yr 2 (2010/11)	114
Yr 3 (2011/12)	106
Total	279

Further staff training is planned for Year 4.

Joint Training / Events for Teachers, Parents, Boards of Governors and Families

In Year 2 & 3 of the Programme, the school partnerships were encouraged to further develop their linkages. To this end, partnerships provided joint training and events for parents, staff, members of boards of governors and also wider family members. The following table summarises the levels of participation at these events.

Partnership Building (Joint Training & Events)

	Parents	Boards of Governors	School Staff	Family Members	Total
Yr 2 (2010/11)	429	89	458	404	1380
Yr 3 (2011/12)	702	121	498	1013	2334

Again, it shows the growth in the joint collaboration taking place within the cross-community partnerships.

Respecting Difference Workshops for Parents

In addition, training was provided for parents on Respecting Difference in Years 2 & 3. The number of parents who attended the training is summarized in the table below.

**No. of Parent Attendees at Respecting Difference Training Workshops
Fermanagh Shared Education Programme (2009 – 2012/3)**

	No. of Parents who Attended
Yr 1 (2009/10)	N/A
Yr 2 (2010/11)	230
Yr 3 (2011/12)	169
Total	399

Another series of parent workshops are planned for Year 4 (2012/13).

Evaluation

External evaluations of the Programme concluded that Shared Education in Fermanagh has:

1. Helped break down barriers between communities and helped increase trust and improved relationships between different sectors;
2. Increased relationships and friendships between pupils from partner schools;
3. Reduced fear, suspicion and mistrust of the 'other' community;
4. Contributed to greater understanding of and respect for cultural diversity;
5. Increased awareness of the benefits of shared education including educational, societal and economic benefits.

Area Planning

In February 2012, the Department of Education issued Guidance on Area Planning to develop a network of viable and sustainable schools that are of the right type, right size, located in the right place and have a focus on raising standards. The Terms of Reference for this work includes the in its aims and objectives:

- To reduce duplication of provision;
- To identify realistic, innovative and creative solutions to address need, including opportunities for shared schooling on a cross sectoral basis; and

- To maximise the use and sharing of the existing schools estate.

A number of school partnerships in Fermanagh have requested that shared models are explored in the area planning process.

Programme for Government (PfG)

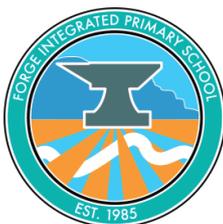

The commitments in the PfG, provide an opportunity to sustain the impact and benefits of Shared Education:

1. Establish a Ministerial Advisory Group to explore and bring forward recommendations to the Minister for Education to advance shared education; and
2. Ensure all children have the opportunity to participate in shared education programmes and substantially increase the number of schools sharing facilities by 2015.

Concluding Notes

1. Shared Education has strengthened curriculum delivery and enhanced educational opportunities for pupils;
2. There is a demand from school communities for Shared Education;
3. The PfG and the on-going area planning process provide opportunities to sustain and embed shared education;
4. There is a need for joined up policy planning & implementation to ensure that shared education is effectively mainstreamed, to maximise its potential.

Forge Integrated Primary School

Fax 028 90 641858

Submission to the Inquiry for Shared & Integrated Education from Forge Integrated Primary School.

24 October 2014

Dear Committee,

Thank you for inviting submissions to the Inquiry on Shared and Integrated Education. I write on behalf of the Board of Governors of Forge Integrated Primary School with particular reference to key barriers and enablers for Integrated Education.

It is our view that although the development and growth of Integrated schools in Northern Ireland has been significant over the course of the past 33 years there have been inhibiting factors that have resulted in growth being much less than would have been the case in different circumstances.

To choose to send your children to an integrated school in a society with deep and established divisions requires a degree of courage. For such schools to be successful they must be accessible and supported in order to become established.

Integrated schools have been supported through the 1989 Education Reform Order (NI) and subsequently by the Good Friday Agreement 1998 both of which underline a duty at governmental level to encourage and support integrated education.

In practice however, it is our view that this duty has, at times, been interpreted and administered in such a way as to act as an inhibiting factor on the growth of admissions and enrolments at integrated schools. The process for approval of permanent increases in admissions and enrolment numbers has, in some cases, led to integrated schools remaining artificially small.

This has suppressed the number of pupils in integrated schools and in some cases helped support the maintenance of pupil numbers in schools in other sectors.

The 'needs model' as employed by DE in recent years is an example of how permanent growth in integrated schools has been allowed only on the basis of a corresponding decrease in both the maintained and controlled sectors in a given area.

We contend that the application of such a model is inequitable and has not been applied to either of the dominant sectors where need is based on the number of places available only in the sector in question. The findings of a recent judicial review taken by Drumragh College seem to support this contention.

A number of integrated schools have struggled to gain support and make progress with these issues recently. It is ironic that we see suggestion from some academics and from CCMS that the integrated model hasn't grown to the extent that may have been expected.

No model of education can realistically grow if the mechanisms for growth are structured in such a way as to give more emphasis to protecting other sectors than to enabling growth in the sector that is developing.

We are not opposed to other genuine paths towards greater integration and there may be merit in some models of shared education. However, if shared education amounts to little more than having two or more separate schools in close proximity sharing some resources then we are likely to be investing in something that has a very limited impact.

There are hundreds of examples throughout Northern Ireland of sub-communities living in very close proximity to one another but quite separately. Sometimes that separation has a physical element as in the case of peace walls. More often the boundaries are invisible but none the less real. There are also numerous examples of such divided communities sharing resources such as leisure services and community facilities to an extent, but too often superficially.

Northern Ireland has dealt surprisingly effectively with some of the issues around segregated practices in the public realm and the idea of having different publicly funded institutions in terms of public sector workplaces or services is now unthinkable. Education remains the exception.

We believe that to fail to address the fact that the overwhelming majority of government funded mainstream schools here are still single identity institutions is out of step with almost every other country in Europe and beyond.

We accept that in some areas there are continuing difficulties with community relations that makes fully integrated schools difficult to establish. However, there is much research to support the fact that in many, many areas there is a real appetite for more integrated education. Our experience and observations are that the greatest impediment is not community relations or lack of appetite for integration but inadequate support and encouragement from authority. We feel that this lack of support is often a symptom of the opposition faced by ELBs and DE from those who would like to impede change and maintain the existing situation through limiting choice.

Integrated schools are a proven and sustainable means of bringing children together, promoting good community relations and developing a more cohesive and positive society for the future.

As we look towards exploring experimental models such as shared education it is also vital that that established and proven integrated schools are allowed the freedom to grow to their true potential and those barriers and impediments to growth are removed.

There is no more reliable or cost effective way of providing a genuinely shared education in those areas where integrated schools already exist and have demand for growth.

If we fail to encourage and develop proper, meaningful integration we will be failing our children and grandchildren. Sharing things out and creating two of everything has not worked in the past. There is plenty of evidence to underline the fact that sectarian divisions are still deep and that issues such as race and hate crime are developing problems here. Why on earth are we nurturing a system that keeps our children apart from their peers and neighbours during the most formative years of their lives?

Those political leaders who genuinely want to make Northern Ireland a safer, better, more prosperous place for all of its people must have the courage to meaningfully address segregated education. Generations to come will not thank us for baulking in the face of opposition from those in positions of influence who are prepared to put short term protectionism before long term peace, stability and prosperity.

We have outlined on the pages that follow our own story as a case study that illustrates the demand there is and the challenges we have faced around the growth of our school.

We will also happily engage in any verbal/face to face evidence gathering the committee are seeking input on. We held discussions with P5-7 pupils to discuss their views on and understanding of, Integrated, Shared and Segregated Education in Northern Ireland. A collation of their comments is included in this submission at Appendix 3. We have no doubt that we could put forward a delegation of pupils who would relish the opportunity to discuss their school with members of the committee.

Yours Sincerely,

Neville Watson

Principal & Secretary to the Board of Governors

1. Background

- 1.0 We are one of two Integrated Schools serving South East Belfast the other being Loughview Integrated Primary School.
- 1.1 We opened in 1985 without DE approval and initially funded by the founding parents, some of whom re-mortgaged their homes in order to fund the start-up.
- 1.2 Forge has grown from 28 pupils in September 1985 to its current 304 pupils in September 2014. Along the way the school went through the process of becoming an officially recognised school and took on controlled status to become the province's first controlled integrated school.
- 1.3 Pupil numbers in integrated schools have grown continuously since 1981.
- 1.4 Forge IPS is currently the most over-subscribed primary school at P1 admissions level in any sector in the South East Belfast area. This is evidenced in a written response from the Minister of Education to a question asked by Dr Alasdair McDonnell on 06 June 2014 (Appendix 4)
- 1.5 Forge IPS has also experienced a greater degree of growth than any other primary school in South Belfast over recent years with Department of Education figures for the period from 2009 – 2013 showing a growth of 22%(Appendix 3). If the period of growth is extended to the start of the current school year we have seen a 7 year growth rate of 35%.

2. Current Issues

- 2.0 We are at a crucial point in our development. The school no longer has the accommodation to allow further growth. We have previously been able to source additional accommodation through support from the Integrated Education Fund and with the support of BELB.
- 2.1 Difficulties in progressing a development proposal put us at risk of being unprepared for the start of the school year in September. The explanation given for slow progress is that decisions have to be weighed carefully as change could be detrimental to other schools. This argument is well versed in terms of the possible impact of growing integrated schools on non-integrated schools. However, it is not applied in the same way to schools in other sectors. Growth in Maintained and Controlled single identity schools is measured against the impact there may be on other schools in those sectors, not all sectors.

- 2.2 To put the timescale into context, we have been operating on a temporary variation to our enrolment and admissions number because we have been oversubscribed since 2007. We have asking for support for a development proposal from BELB since the spring of 2010.
- 2.3 In December 2013 we received acknowledgement from BELB that they would accept submission of a development proposal. We immediately began the process. In March 2014 the proposal was discussed at a BELB Board meeting but deferred pending clarifying information.
- It will now be November before the BELB can next schedule the proposal at a meeting and we have been asked to carry out the pre-publication consultation exercise for a second time at DE's request due to the time lag between its completion in February and now. The pre-publication consultation exercise was completed fully in February 2014 well within the 12 month period stipulated in the most recent DE circular on Development Proposals. It is difficult to see the logic in this repetition of process.
- 2.4 Given that we need to prepare for P1 admissions process in January this lag in terms of time has the potential to obstruct our ability to meet the demand for Integrated Education in our area.

3. The Case for a Permanent Increase to Admissions/Enrolment Numbers at Forge IPS

- 3.0 Enrolment and admissions numbers are decided by the Department of Education, often when a school is first officially established. At Forge these are 250 and 36 respectively. These numbers were put in place in the late 1980s when the school enrolment was still below 100. As the demand for Integrated Education has increased these numbers have become increasingly problematic for us and clearly need to be revised to take account of the significant change in demographic and parental preference over the course of more than 20 years.
- 3.2 An admissions number of 36 for P1 is not functional. If we get more than 30 applications we have to split the class. Two small classes of 18 is desirable from a learning and teaching point of view however, these small classes do not attract enough funding to pay a teacher's salary. The school could not sustain classes of 18 throughout the school. Nor can we have classes of 36.
- 3.3 For the past seven years the school's Board of Governors have applied to DE for a temporary variation in our admissions and enrolment numbers to allow us to admit all applicants who have an Integrated school as first preference if they can be accommodated within two P1 classes under DE class size policy.
- 3.4 The reasons for aiming to admit all applicants are twofold. It allows us to be financially viable in terms of pupil teacher ratio in P1 classes. Primarily though, it means that we are providing an integrated school place for those in the area who want it. It is the view of our Board of Governors that the school has a responsibility to meet that demand and this is in keeping with Article 64(1) of the Education Reform (NI) Order 1989 which states a duty on the part of the Department of Education to 'encourage and facilitate the development of integrated education'.
- 3.5 Successfully being granted a temporary variation has allowed us to enrol most of our P1 applicants. As this is a temporary arrangement DE policy requires us to allow this enrolment number to reduce if pupils leave or do not take up offered places.
- 3.6 If we had not pursued this policy over the past seven years and instead sought a temporary variation to admit only 30 P1 pupils per year (one full class) 121 children would have been refused admission to Forge and forced to attend a school that was not of their preferred sector. This year, despite having admitted 60 children on the basis of a temporary variation, four children whose parents had elected an integrated school as first preference have had to be rejected. These children are unlikely to get a place in an integrated school in the South

- Belfast area. Were we to adhere to our admissions number 24 children whose parents had chosen an integrated school place would have been rejected this year.
- 3.7 If we had not been prepared to go through this process year on year, seeking approval and additional accommodation our numbers would have remained artificially low, potentially adding weight to the misleading suggestion that integrated schools have not expanded as much as might have been expected. Our school could have grown more had there been a more encouraging policy towards growth.
- 3.8 Whatever your personal opinion on integrated education a situation where the equivalent of an entire class of children could be unable to get a place not only in the school of their choice, but also in the sector of their choice within a reasonable travelling distance of their home is inequitable. We do not believe this situation would be allowed to continue in either the established controlled or maintained sectors when the main impediment to resolving the situation is an artificial cap and concern about upset in other sectors. To be fair to the DE and our ELB such a situation has been avoided through the granting of temporary variations, however, without a more permanent arrangement we could face the same situation in 2015 but be unable to resolve it due to lack of accommodation.
- 3.9 Given that there is a legal duty for the Department of Education for Northern Ireland to facilitate and encourage the growth of integrated education the role of schools such as ours in facilitating that growth is of great benefit in helping meet that obligation and should not be inhibited.
- 3.10 As things stand we need a more permanent solution so that that we can be viable and help ensure that the demand for integrated school places in this area can be met. We want to have our enrolment and admissions numbers changed to allow the school to continue the natural growth we have seen in recent years and become a stable two form entry school.
- 3.11 We are now feeling positive and hopeful that our ELB will work very hard to support us through the development proposal process and we hope this is indicative of how things will be looking ahead for all schools in Northern Ireland. However, we know that experiences vary and ultimately the decision makers in this regard are DE.
- 3.12 Our pre-school enrolment and general trends in the area suggest that we will have another high number of applications in 2015. We also receive a significant additional number of applications from outside our own pre-school Unit. It is worth noting that up until the 2010 school year our pre-school had only 24 places meaning that in the three years prior to 2010 on average 39% of our P1 applications came from beyond our own pre-school.

4. Imminent Pressures on Forge IPS

- 4.0 Forge IPS must either continue to grow to enable class sizes that will attract income through the common funding formula that will sustain the school or, the school must reduce its staff, consequently reduce the number of classes, create composites and ultimately shrink in terms of enrolment. We found ourselves, for the first time in a decade, having to put in place composite classes for September of 2012 in order to live within our budget.
- 4.1 The reality is that our enrolment number of 250 is not and never was a number that can be sustained under the current common funding scheme. Likewise, an admissions number of 36 is nonsense given that the maximum number of children permitted in classes at Foundation Stage and Key Stage 1 is 30 and to split 36 pupils into two classes of 18 is not a situation any school could sustain under the current budget system
- 4.2 Reducing the enrolment number would reduce parental choice in this area specifically regarding integrated places which would be contrary to both to our ethos and the very reason the school came into existence in 1985. It would also be contrary to article 64(1) of the Education Reform Order 1989 which refers to the Department of Education's duty to 'encourage and facilitate the development of integrated education'.

- 4.3 It would also be self-destructive for a school to pursue a reductionist policy in the current climate. We understand that the education minister is minded to look at making significant decisions around area based planning and school sustainability in the near future and a shrinking school will not sit well with this.
- 5. The School's View on Future Provision and Related Challenges**
- 5.0 We believe that there is very obvious potential for Forge to develop into a sustainable double intake primary school during the course of the next 2-5 years and the development proposal we have submitted to BELB is for that kind of phased growth. We submitted a proposal asking that from September 2014 or as soon as possible thereafter, to have our admissions number increased to 60 and our enrolment number increased to 320 rising to 420 by 2018.
- 5.1 The issue of under provision in the integrated sector in this area is quite straightforward. Our school and Loughview Integrated Primary School are both oversubscribed. While we know that there are local schools with unfilled places they are not integrated schools. There has been a tendency in the past for reference to made to a DE 'Needs Model' which has often been interpreted as suggesting that an increase in the Integrated sector should be matched by a decrease in other sectors. We would point out that this is not equitable, has not been applied to other sectors and is not fit for purpose.
- 5.2 The impact of growth on other schools has consistently been cited as an inhibiting factor in allowing our school to expand permanently. Our growth has been gradual and it is our view that we are not having a significant effect on the enrolment of other local schools. Many of them have also experienced some growth and it is not legitimate to suggest that other schools are declining due to our gradual organic growth. Nor is it legitimate to argue that one sector should be suppressed in order to arrest decline in another (see points 5.1 & 5.3).
- 5.3 The findings of a recent judicial review taken by Drumragh College in Omagh has underlined the obligation on the Department of Education and in turn ELB's to comply with article 64(1) of the Education Reform Order 1989 which refers to the department's duty to 'encourage and facilitate the development of integrated education'. The findings of this review recognise that the needs model, is an analytical tool that can aid area based planning but should not impede the implementation of article 64. It also recognised a major flaw in the model in that it assumed no growth in the integrated sector, which is clearly not the case in reality. Justice Treacy commented in his summing up that, 'The department needs to be alive to the article 64 duty at all levels, including the strategic level.'
- 5.4 At time of writing we have been told that BELB that due to the repetition of the pre-publication consultation process our proposal will not be scheduled by BELB until their November meeting. It then has to progress to DE and go through the formal post-publication consultation process.
- 5.5 This leaves the school grappling with questions around how many children to admit in January 2015? Whether intended or not, the rate of progress of the development proposal submitted nine months ago but as yet unpublished has the potential to diminish our ability to plan and prepare effectively.
- 5.6 We are very pleased that the process is moving along and that the current management at BELB are working with us to progress the matter, however the process has been slow and out of sync with the needs of schools in terms of aligning with key events in the school and financial year.
- 5.8 If we as educationalists at school, ELB and Departmental level are to continue to enhance this community then the importance of developing effective and sustainable schools like Forge that are experiencing growth and success cannot be understated.
- 5.9 It would be a travesty if a growing and sustainable school were to be arrested in its development because it was unable to obtain the necessary permissions and support from

the Department of Education and the Education and Library Boards to reach its optimum sustainable size.

- 5.10 The demand for Integrated Education in this area can most effectively be met in terms of sustainability, cost and quality of provision through the development of the resources and experience that already exist at Forge.

6. Conclusion

We hope that our case helps illustrate how demand for Integrated Education in Northern Ireland has been growing in recent years and the difficulties encountered by schools such as ours in seeking to meet that demand.

It is too difficult for integrated schools to gain support from the authority bodies in order to grow.

It is deeply disturbing to read at time of writing in media reports that there is no plan to have any representation for the integrated sector on the new single Education and Library Board. In such circumstances these difficulties will persist and policy and practice is likely to be dominated by the interests of the controlled and maintained sectors.

We appeal to the committee to work towards the provision of an equitable system that upholds parental choice and does not inhibit the growth of integrated schools in order to preserve an educational landscape that limits choice and reinforces separation.

Pupil Voice

We want to include the views of some of the children at our school as part of our submission. We had discussions with P5, 6 and 7 children (8-11 year olds) based on the questions below. Pupils made notes and we've bullet pointed most of the main comments. We have included most (some comments that were of a very similar nature haven't been repeated) without elaboration, as the children recorded them. The comments are therefore in keeping with the age and sophistication of the children but we think that the underlying message comes through. 'Out of the mouths of babes...'

Questions about Integration

1. What do you think it means to be at an Integrated Primary School in Northern Ireland?
 - I feel good to go to an integrated school because you have a different mix of friends. P5
 - I think it means we come from different religions and countries. P5
 - What makes us integrated is that we take care of all children. P5
 - It means that people from all over the world can come P6
 - We accept any religion or culture. P7
 - It is a great opportunity as there aren't that many integrated schools. P7
 - We love learning together. P7
 - At Forge there is no discrimination against anyone who comes from a different country or is of a different religion. P7

2. What do you think makes this school different from other schools that aren't integrated?
 - I think it means that we are all different and although we come from different cultures, religions and countries we are friends. My friend is from Poland and we have fun together. P5
 - Our school is different because there is a mix of people from different countries and religions. P5
 - It makes everyone learn more and discover loads. P6
 - I think that being an integrated school is very good and can help people learn about new religions. P6
 - We are different because we share lots of things and it's better. P6
 - Being in an integrated school is different from other schools in that it doesn't matter where you are from. P6
 - Being in an integrated school is different because some schools separate the boys and girls and some schools separate religions. P6
 - You can be educated and learn from each other. P7
 - One of my best friends is Catholic and without an integrated school I wouldn't have met him. P7
 - You can believe that Protestants and Catholics can work together. P7
 - In my old school - it was perfect but it was posh and boring and everyone was the same. If you're in an integrated school everyone is different. P7
 - It doesn't matter whether you have religion or not. We have the choice to take part or not in religious activities like prayers.
 - You can make friends with children from other faiths, we are not all the same. P7

-
- We worry less about people getting offended, about differing opinions. We appreciate and accept that we are all different and have different thoughts on different matters. For example, football shirts aren't banned on non-uniform days because we can express our identity in a safe, secure place.
 - There are equal opportunities for all.
 - We are more relaxed/freer to be ourselves here!
3. How would you feel if you couldn't go to an integrated school because there were no places and you had to go to a school where most pupils were just Catholic or Just Protestant?
- I wouldn't like it if I went to just a Protestant or Catholic School because I wouldn't have a mix of friends. P5
 - I think it would not be fair. They might have a good education but some people would not be able to go. P5
 - It's not a good idea to separate Catholics and Protestants because you might never get to meet new friends. P7
 - I wouldn't be able to meet friends with different backgrounds. P7
 - You wouldn't have the same choice of friends because everyone's the same. P7
 - Wouldn't feel comfortable/wouldn't be as diverse so it would be boring. You would be with the same type of people as yourself. P7
 - Children who don't relate to either the Catholic/Protestant faith would feel excluded or uncomfortable. At Forge we can learn about each other's beliefs. P7
 - You would feel cross that the choice of having an integrated school has been taken away from you.
 - If you had no Faith you could be upset because people might question you – they might not be as open minded. P7
 - During religious lessons you might feel shunted aside and uncomfortable. P7
 - I'd be worried about bullying because I might be the odd one out. P7
4. What do you think of the idea of having two schools, one Catholic and one Protestant close by and those schools sharing some things like sports' halls or classrooms and maybe also sharing some teachers or lessons?
- I suppose it's alright but it would be better if they were integrated. P5
 - They might share some lessons or school trips.P6
 - I think it would be good for two different schools to use the same buildings together. They'd have to be friends.
 - I think it would be better to wait for a while to see if they like it! P6
 - I think it would be good for Catholic and Protestant schools to make friends. P7
 - Two schools would have very different ethos and wouldn't necessarily marry together well. P7
 - Building two schools and swapping teachers seems far more effort/hassle in an already busy day. P7
 - We are submerged all day in different cultures. Anything else would be watering down what we do naturally every day. P7
 - This sounds like a government money saving scheme. Do they really want us to mix or is it just a half measure to make it look as if they are addressing the issue of more integrated education? P7
-

5. Is there anything else you would like to say to our local politicians about integrated schools?
- Give us more spaces in integrated schools and more integrated schools. P5
 - I would like to say get more integrated places. P5
 - I think that there should be more integrated education. P6
 - I think that there should be more integrated education because everyone feels welcome. P6

Mr P McCallion
 Clerk to the Committee
 Committee of Education
 Room 375, Parliament Buildings
 Ballymiscaw
 Stormont
 Belfast

22nd October 2014

Dear Mr McCallion

I wish to respond to your request for written evidence with regard to Integrated Education.

Following a successful ballot of parents and approval from the Department of Education, Fort Hill Primary officially gained Integrated Status as from 1st September 2009 and now is a controlled integrated school.

As a school we welcome children of all faiths and ethnic backgrounds while still retaining an overall caring Christian ethos where children can be educated in a safe and friendly environment. This in itself is not that different from most schools; however, as a school we have seen the beneficial impact of **TRUE Integrated Education** on our pupils, parents and staff. It is far more than rubbing shoulders with fellow human beings, whatever their size, on a daily basis who we think *may have* differences to ourselves.

Integrated Education is **not a porridge pot** where everyone is blended together and only share the same facilities. I liken true Integrated Education to a **salad bowl**, learning together but also being educated about each other's different traditions, views and faiths whilst being proud of our own individual culture and learning always, to respect others different from ourselves.

Over the last five years of gradual transition, Fort Hill's journey has totally widened and enriched adults' and children's views and why our school is now different to many others. I firmly believe this is a main reason why we have become heavily oversubscribed with 67 applications for 26 nursery places and 51 applications for 30 P1 places this year leaving many families disappointed about not getting the school of their choice. The Department of Education is currently not meeting the demand for TRUE Integrated Education within Lisburn City.

I would recommend that you visit schools such as Fort Hill to experience first-hand what we are achieving with our whole community.

We change tomorrow's world by what we build into our children today.

Yours faithfully

 C S Anderson
 Principal

General Teaching Council Northern Ireland

NI Assembly Inquiry into Shared and Integrated Education in Northern Ireland

Written Submission from The General Teaching Council Northern Ireland

1.1 Introduction: a neutral position

As the professional body for teachers in Northern Ireland the General Teaching Council (GTCNI) maintains a neutral position in relation to sectoral interests.

1.2 Terms of Reference

For that reason the Council as a body which represents all teachers and all sectors considers that it is not in a position to offer specific views and the Terms of Reference in relation to:

- *The nature and definition of Shared Education and integrated Education as it applies across all educational phases;*
- *The key barriers and enablers for Shared Education and Integrated Education;*
- *Alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;*
- *Priorities and actions to improve sharing and integration.*

The Council wishes, however, to offer a view in relation to **promoting the professionalism and capacity of teachers to meet the competences outlined in specific statements in the Northern Ireland Teacher Competence Framework (GTCNI 2007) and the Revised Code of Values and Professional Practice (GTCNI 2012) that relate to the concept of Shared and Integrated Education**

This response replicates elements of the Council's response to the Ministerial Group on the advancement of Shared Education in Northern Ireland November 2012

2.1 The Northern Ireland Teacher Competence Framework

The Northern Ireland Teacher Competences statements (2007) highlight:

- *at statement (8)*

'Teachers will have developed a knowledge and understanding of the need to take account of the significant features of pupils' cultures, languages and faiths and to address the implications for learning arising from these'.
- *at statement (12) 'Teachers will have developed a knowledge and understanding of the inter-relationship between schools and the communities they serve, and the potential for mutual development and well-being'.*

2.2 The NI Code of Values and Professional Practice for teachers

The Code of Values and Professional Practice for teachers was reviewed in 2012 to include a new section called, 'Commitment to the Community' and including the following statements

- *Teachers:*
 - *promote good community relations within and between schools and across the wider society in Northern Ireland;*
 - *promote social justice and equality of opportunity as fundamental to community development and well-being.*

2.3 Review of the Northern Ireland Teacher Competence Framework and the Code of Values and Professional Practice

In line with its Corporate Plan 2013-16 and in response to recommendations from the OECD NI Report into Assessment and Evaluation Frameworks (2013) the Council is reviewing the Teacher Competence Framework and the Code of Values and Professional Practice with a view to developing them into a working tool to assist schools in school development planning, self-evaluation and planning for Continuous Professional Development (CPD) and Performance Review and Staff Development (PRSD). Should a commitment to Shared Education be made statutory this may have implications for the revision of the Teacher Competence Framework.

3.1 Building Teacher Capacity in relation to ‘Community-related’ Competences and the Code of Values and Professional Practice

Building Teacher Capacity in relation to ‘Community-related’ Competences and Code of Values and Professional Practice will require that all sectors consider the nature of the ethos and identity which they promote and the extent to which their ethos and identity is welcoming and inclusive to others.

The Council considers that the limited focus and resources dedicated to these key educational priorities to date has constrained the development of teachers’ professional capacity to respond to the aspirations articulated within the Teacher Competences and the Code of Values and Professional Practice.

Deep professional engagement with these challenges is crucial. The ‘Anti-Bias Curriculum’ (ABC) and the ‘Sharing Classrooms, Deepening Learning’ Project provides models of good practice within this jurisdiction.

3.2 Evaluating teacher/school capacity building for the community-related aspects of the Teacher Competence Framework and Code of Values & Practice

A system is considered “coherent” when curriculum, pedagogy, assessment and other drivers and incentives are all ‘aligned and reinforce one another’ (Oates, 2010: 13).

To help schools to ‘self-evaluate’ the extent to which they are developing teachers’ professional capacity to respond to the aspirations articulated within the competence statements and code of values and practice (outlined at 2.1. & 2.2.above) the Council has developed and the CLASS Dynamics Matrix (set out at Appendix 1)

This matrix has been shared with the NI Council for Integrated Education; the Shared Education Project at Queen’s University; and members of ETI who will be evaluating the Shared Education project.

Deep engagement with all of the components set out in the matrix is considered to be essential for effective development of teachers’ capacity to engage with the competence framework. From the Council’s perspective, the component relating to strategic staff support –(enhancing teachers capacity to understand, embrace and respond to the potential of shared education for the good of young people, society and the economy as outlined in the teacher competence framework) – is of central importance.

The Council’s report ‘School –Based Professional Development’ suggests models of CPD that would support collaborative working between schools.

3.3 Evaluating teacher/school capacity building in relation to pupil community-related engagement

The matrix also encourages evaluation of the extent to which pupils are empowered to initiate, plan and engage co-constructively with their teachers (and pupils and teachers in other schools) in worthwhile cross-cultural and community-related activities.

Appendix: 1 SOLO or SHARED?

A taxonomy for evaluating the quantity and quality of schools' engagement and potential for transformation in response to Shared Education

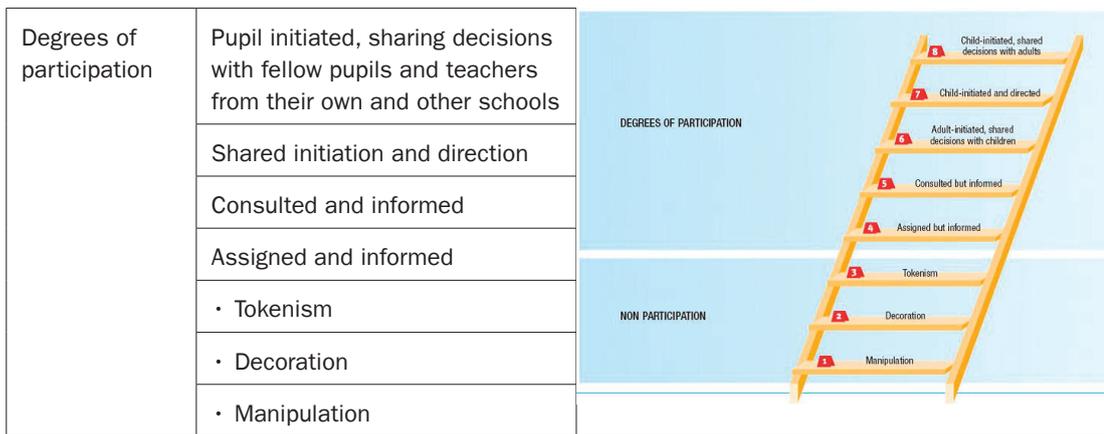

SOLO stands for the Structure of Observed Learning Outcomes (Biggs and Collis 1982). The criteria have been adapted to encourage schools to self evaluate and ask deep questions about the quantity and quality of their engagement with other schools and communities. The aim is to offer reflective challenge, within the confines of logistical constraints, towards deeper engagement and sustained sharing activities that can influence the wider education policy context. Evaluation should consider:

Quantitative data: number and frequency of shared pupil, teacher, senior management, whole school, board of governor and/or community engagement

Qualitative data: breadth and depth of engagement in planned activities related to Curriculum Learning Assessment Strategic Support and its Social Significance for pupils*, teachers, senior management, whole school, board of governors, wider community

The nature of engagement is categorized as:

- **Prestructural** – schools engage in unconnected activities.
- **Unistructural** – schools make simple and obvious connections between areas of engagement
- **Multistructural** – schools make deeper connections, but do not avail of the potential for meta-connections
- **Relational** – schools demonstrate how engagements relate to one another to achieve deeper value
- **Extended** – schools make deep connections and demonstrate how learning has been generalised and transferred into new situations

Degrees of participation

(Adapted from HART, R. 1992 which was concerned with pupil-teacher sharing)

SOLO or SHARED? - Evaluation Matrix

Criteria to challenge and evaluate the quantity and quality of school engagement with other schools and communities

	Quantity, quality and 'dynamic' of CLASS engagement	Prestructural Haphazard poorly planned unsustainable (Decorative)	Unistructural Singular planned regular engagement (Tokenistic)	Multistructural More than one planned regular engagement (assigned and informed)	Relational Multiple areas of engaged, coherent regular and sustained (embedded)	Extended sustained whole school engagement with issues of equality, inclusion and cultural diversity (deeply embedded)
C	Curriculum Any shared activity to enhance breadth of provision					
L	Learning any shared activity designed to enhance active pupil learning					
A	Assessment Any shared activity to gather, analyse, interpret and use information about students' progress and achievement to improve teaching and learning					
S	Strategic Support any shared activity designed to enhance active teacher learning & CPD					
S	Social Significance measurable (educational, reconciliation, social, cultural) outputs	Impact likely to be decorative tokenistic narrow and transient	Impact likely to be lower-order, surface and narrowly experienced		Impact likely to be higher-order deep and sustained, going beyond the mechanics of sharing towards genuine working together to address shared challenges and reconciliation	

Hart Memorial Primary School and Presentation Primary School

Shared and Integrated Education

When completing this submission, Presentation Primary School and Hart Memorial Primary School have considered the following directions:

1. Review the nature and definition of Shared Education as it applies across all educational phases- including consideration of the need for formal statutory definition and an obligation to facilitate and encourage Shared Education
2. Identify the key barriers and enablers for Shared Education
3. Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes
4. Consider what priorities and actions need to be taken to improve sharing and integration –including the effectiveness of the relevant parts of the CRED policy. The need to engage more effectively with parents/carers

1. Background to Shared Education in Hart Memorial Primary School and Presentation Primary School

We strongly feel there is a need “*for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education*”. We believe the shared history and commitment between our schools have led us to a place where we can deliver Shared Education.

Background

Hart Memorial PS and Presentation PS have worked together in Shared Education for over 20 years firstly through Education for Mutual Understanding programmes then the Schools’ Community Relations Programme. We applied for and were accepted for Primary Curriculum Partnership Programme and we now have funding through Community Relations, Equality & Diversity. During this time, our schools have developed strong professional and personal relationships among staff and pupils.

Education for Mutual Understanding

This began with one teacher from each school working together and ensuring their sporting activity encompassed all aspects of the cross community ethos in that children were encouraged to sit together, work together and have mixed groups at all times. This project between the two P7 teachers was a success due to the commitment of both teachers who went over and above their remit to make all activities truly cross community based.

Development

In 2003 Presentation PS got a new principal and in 2005 Hart Memorial had its P7 teacher promoted to the principal’s post. This P7 teacher was the teacher who had built the initial link with the P7 teacher from Presentation Primary School.

From this budding relationship and under two newly appointed principals the schools decided to explore the initial P7 project and deepen the link between the two schools. The commitment from the principals and teachers in both schools has seen Presentation Primary School which now has an enrolment of 257 pupils (from 60 in 2003) and Hart Memorial Primary School which has an enrolment of 387 pupils work together to develop and build their link to what it is today: nine classes from each school involved in CRED partnership projects addressing real issues.

Schools' Community Relations Programme

The initial link began with sport. With SELB advice, we wished to develop the link (at that time still only between the two P7 classes) and to begin to look at real community relations issues. So, with help from BEAM, we dramatized and performed Dave Duggan's short story "The First Ship in the Sea." This play tackled deeper issues around religion and culture and was performed to parents from the two schools in Portadown Town Hall - a bold step from both schools due to the content of the play. It was very well attended by all stakeholders along with representatives from DENI and SELB.

The schools then moved to the next level by developing SCRCP connections between as many year groups as possible. This was ably endorsed and supported by Jayne Simms, SELB, who worked with and encouraged both schools to participate in a variety of activities for all year groups. Many of these joint projects used drama, art and sport as media through which issues were addressed. During one year, our P7 classes joined in developing a joint school song with Tommy Sands entitled 'Portadown' which culminated with a performance in front of the Mayor of Craigavon, parents, families and other dignitaries. Other highlights included a performance in the Market Place in Armagh comprising drama and song and which was attended by an ETI representative. Towards the end of the SCRCP, we began what has become an annual trip for the P7 children to Corrymeela, reinforcing 7 years of working together – an incredible and most memorable experience for all concerned.

Primary Curriculum Partnership Programme

The PCPP programme was introduced in 2011 and was a two year project which encouraged deeper relationships with and involvement by *all* stakeholders in both schools. Through the PCPP project we held many joint ventures such as parent sessions with Paul Grey/Peter Sherlock. Teachers and classroom assistants had more in-depth planning and training and also experienced joint workshops.

Through PCPP, we moved on to address controversial and divisive community relations issues. We were also interested in widening children's cultural awareness since 55% of Presentation Primary School's enrolment was made up of Newcomer children. For example, P3 classes explored the area of celebrations perceived to belong to specific communities - St. Patrick's Day and the 12th July - which concluded with a performance to a packed audience of over 200 parents and Governors and which included the Lord Mayor of Craigavon and ETI. A DVD was made of this show for parents and also for ETI dissemination of good practice. Primary 5 classes undertook the topic of Community which involved visits to churches of differing denominations in the neighbourhood; some parents were initially resistant to this. Primary 6 classes worked on Identity through the medium of flags. A display of their work was publically launched in a unit of the town's High Street Mall at the height of the regional 'flag crisis'. P7s looked at Sectarianism whilst the P4s examined Shared History through World War 2. The schools created a merged school choir which went to a recording studio to cut a cd.

Throughout the programmes, parents from Hart Memorial Primary School were encouraged to collect their children from the joint sessions in Presentation Primary School and vice versa. We held joint assemblies where parents from one school came together with parents from the host school in the audience.

Community Relations, Equality & Diversity

By using the model developed through PCPP and by building on already well established relationships among staff, we have continued to address the issues which need addressing. The link between the two schools continues to strengthen and develop: shared SLT meetings; joint training at Baker Days and School Development Days; inter school standardisation of levels for cross curricular assessment; regular co-ordinator meetings; shared Boards of Governors meeting...to name just a few areas where our schools come together.

2. Identify the key barriers and enablers for Shared Education

Enablers

We believe Shared Education involves the **shared vision of all stakeholders**. It is the embodiment of all the years of building **relationships** and relies greatly on the **enthusiasm** of all staff. On a practical level, it requires **joint planning, spending time together** and **addressing the real issues** of Strand 2 of the PDMU curriculum.

It **takes time** and relationships need to be established, supported and cemented. CRED is an excellent way in which this can take place although Shared Education involves so much more, as is laid out in this submission.

We have **joint Baker Day and School Development Days**. We **share training and resources**. This only works because **we link areas in our School Development Plan** through **joint SLT meetings, reporting regularly at Boards of Governors meetings**. With regard to developing working relationships among staff, we need to build in **time for planning** as this is an essential aspect of making Shared Education work; without this dedicated time between partners, the good work we have done over 20 years would not have been possible.

We have been held as an example of good practice in Shared Education by ETI – a dvd was made of the success we experienced through PCPP. We have invested a lot of **time and effort** in getting **all stakeholders on board** and this has not always been the easiest path for both schools. Through **openness and good communication** with all stakeholders we have achieved this. The geographical proximity of our two schools has been an advantage to us in building our relationship on a genuine level.

Another important point for success in Shared Education is that both schools continue to have **strong individual identities** as well as having a **shared ethos**. This is an important feature which enables all stakeholders to feel safe to come on board.

Barriers

One barrier to Shared Education is definitely **budgets** which can restrict planned activities although worthwhile Shared Education does not require a large financial outlay. However, funding for joint planning - the major foundation for a successful relationship – is essential. **Time** for staff members to meet is essential for planning and relationship building.

3. To improve shared education

We both feel there needs to be an **obligation** placed on all schools to participate in Shared Education. To link and work effectively with another school in their area, to share vision, expertise, resources and experiences need to be a **statutory part of the curriculum**.

We believe Shared Education requires **ring fenced money** without lengthy application forms. In the past we have spent much time form-filling for small pots of funding. Planning and evaluations can be used to account for the funding received. Shared Education should be part of the ETI **inspection process** as with any area of the curriculum.

Parental involvement is vital and could be increased with help from outside agencies. Schools may not always have the expertise, time or funding available to do this. **Parental education** on Shared Education is necessary for full community support.

4. Pupils views

We would like to share with you the opinions of our current pupils who have been working together for up to seven years. We believe their opinions are the most important part of our report as Shared Education impacts on them directly.

We asked our pupils 3 questions:

1. Name 3 benefits of working with your partner school
2. Name one highlight of working with your partner school
3. How could we make Shared Education better in the future

Name 3 benefits of working with your partner school

Presentation	Hart
<ul style="list-style-type: none"> • We meet new friends and visit their school • We learn lots of things which make us different such as cultures, religions, schools • We get to work as part of a team • We visit many community places which we would never get a chance to see 	<ul style="list-style-type: none"> • Making new friends & getting to know each other; meeting them at clubs outside school • Doing fun activities together to learn in an enjoyable way • Learning about our own identities and others' • Learning to accept and respect people from different cultures / countries / religions – and not to fight about these things • Learning what happens in a different school

Name one highlight of working with your partner school

Presentation	Hart
<ul style="list-style-type: none"> • I love working with the respecting differences puppets. They really make me see how problems can be easily solved • Being creative with ICT and having different opinions when working as part of a team to create Powerpoints and videos • I enjoy working together on everything we do • I loved designing new school crests. It was really enjoyable and gave us a new identity. I had never thought of this before 	<ul style="list-style-type: none"> • Creating shared art and displaying the results in the town for our parents and the community to see • Presenting our shared learning at a performance for lots of schools and the Minister for Education • Making friends from other countries and talking in their language; meeting up with new friends • Making shamrocks and sashes then putting on a play

How could we make our shared education with our partner school better in the future?

Presentation	Hart
<ul style="list-style-type: none"> • We should come together to have assemblies together in each other school as I love to see my mummy make new friends with parents just as I have made with my friends in my partner school • I would love to have Golden Time together in each other's school • We could learn new languages together • We could have more ICT tasks together • I love having a new teacher to listen to • We need to meet more often 	<ul style="list-style-type: none"> • More opportunities to play together before lessons start; more time to complete work – sometimes activities are rushed • More shared educational trips and some just to have fun eg wall climbing • Opportunities to help younger children in our partner school, maybe as Reading Buddies • Meeting up more in other venues to socialise ; have film nights; put on a play for our parents

Hazelwood Integrated College

Hazelwood Integrated College

Specialist School in Creativity & Visual Arts

Registered Charity No. XR 22627

24 October 2014

Dear Mr McCallion,

In Celtic tradition hazel woods are synonymous with knowledge and wisdom. Hence the name 'Hazelwood' encapsulates the aspirations of the pioneering Protestant and Catholic parents who, back in 1985, wanted something different from the segregated and selective education system that existed then and still exists today in Northern Ireland. Against a backdrop of daily sectarian violence it was the dream of those courageous parents that the new Hazelwood schools would shine like beacons and be rooted in a wisdom that would spread far and wide.

Today the Hazelwood beacons shine brighter than ever. Hazelwood College is a thriving integrated, non-selective, and mixed, 11–19 secondary school of 917 students (with growing demand). It is situated on a sectarian interface on the Whitewell Road in North Belfast. Its physical campus is *truly* a shared space, but it is its unique integrated ethos that sets it and other integrated schools apart.

Ethos is often a loosely defined term and is used to describe the affective as well as cognitive learning that takes place in a school. Results and research have consistently indicated that the integrated schools can compete very favourably in the cognitive aspect of the equation. However, the same research and evidence, gathered from hundreds of parents and pupils, shows that where they excel and where they are significantly different from segregated schools is in the informal, day to day learning that takes place. In Hazelwood Integrated College our Catholic children, Protestant children and those children of other or no faith, meet, greet, and squabble, make-up, laugh and play with each other, every single day, throughout their most formative years.

If schools are to shape social change, which in a post-conflict Northern Ireland it is generally recognised they should do, and be supported by government to do so, then this change must fundamentally begin in the very institutions we educate our children in and in the way we educate them. Change of any significance will never happen when over 90% of our young people remain in a highly selective and divided education system. This is particularly illogical when that lack of will appears to be because there are already unfilled spaces in the segregated schools.

Starving the supply for parents wanting integrated education at pre-school also shows lack of will. Pre-school education provision attached to existing segregated schools disenfranchises those parents who desire integration and they are left with no choice than to send their children to these alternative segregated schools. This perpetuates the problem and normalises segregation in infants from the very earliest days of their learning experiences.

Doing little also appears to us to be contrary to what was agreed in the Good Friday promise which charged Government with the promotion of integrated education. It is difficult to accept that the Northern Ireland Assembly Committee for Education should consider the need to obligate in statute the facilitation and encouragement of shared education when there is already a legal obligation to promote integrated education. 'Where there's a will there's a way' and integrated education must not be sacrificed at the expense of what at best can be described as isolated success stories of sharing, to at worst, diluted initiatives and unsustainable passing fads.

We fully recognise the merits of sustainable and meaningful movement towards any arrangement that encourages the development of mutual respect and understanding between our communities, and particularly our young people. In this context Hazelwood Integrated College has always demonstrated its willingness to lead by example and offers our wider community an already established and recognised shared space through its Extended Schools programme.

In its recent OFMDFM Shared Education bid to locate a North Belfast STEM Centre on the Hazelwood campus, support was forthcoming from practically every school in the North Belfast and Newtownabbey Area Learning Communities. The bid was rejected. Nonetheless, we remain committed and it is our intention to enter into Phase 2 of the OFMDFM Shared Space bid process. Indeed we would be pleased to be included in any initiatives that we consider would develop the extensive groundwork in integration and integrated education for which we are recognised both here in Northern Ireland, in the United Kingdom and also abroad, particularly in the United States.

Integrated education works. There is a plethora of evidence that supports what we in integrated education already know, and that is, the friendships and relationships that develop between our pupils last a lifetime and the values of tolerance and mutual respect learned side by side in the classroom are carried with our young adults into an increasingly diverse and pluralist society.

We would be delighted if the Committee for Education would accept an open invitation to visit our integrated college. We would also be more than happy to offer our shared space to them to host some of their meetings in the future.

I went out to the hazel wood

Maurice Fitzsimons

Deputy Principal, Hazelwood Integrated College

Hazelwood Integrated Primary School Board of Governors

Response to Department of Education Committee request for Evidence: Integrated and Shared Education

October 2014

Introduction

Hazelwood Integrated Primary School was established in September 1985 by parents who were committed to providing Integrated Education to their children in North Belfast. They believed that bringing children together (Protestant and Catholic) from an early age would help heal the divisions that had blighted Northern Ireland society for many years.

We have over 450 children attending our Primary School and Nursery, 50% of whom are entitled to Free School Meals, 30% having Special Educational Needs and over 10% are newcomer children. The religious breakdown for the school is 46% Catholic, 30% Protestant and Other/None 24%.

We are an integrated, co-educational, inclusive school. We value all our pupils as individuals and respect their right to be different and to excel in different ways. It is our intention that all children attending Hazelwood Primary School will develop an understanding, acceptance and appreciation of those from different cultural backgrounds.

Historically, the communities located within the Whitewell area have experienced sustained inter-community issues for many years. However, it is our view that Hazelwood Integrated Primary has had a positive impact on easing tensions and improving community relations.

Why Integrated Education?

A report commissioned by the Integrated Education Fund in 2011¹ demonstrated that there was strong public support for integrated education with almost nine in ten people favouring integrated schools. In fact, many surveys such as: Millward Brown Ulster (2008, 2003); Ipsos MORI (2011); Young Life and Times Survey (2003-2011); and Northern Ireland Life and Times survey (1999-2010), all highlighted that support and preference for integrated education remains high. For example the 2003 survey showed a majority of people surveyed (82%) personally supported integrated education in Northern Ireland and in 2011 this had increased to 88% of those surveyed. Respondents also seen Integrated Education as 'very important to peace and reconciliation in Northern Ireland' increased from 60% in 2003 to 69% in 2011. The Northern Ireland Life and Times (1999) and Young Life and Times (2003-2010) surveys found that over one third of respondents would like to send their children to an integrated school if there was one in the vicinity.

As a Board of Governors of an Integrated Primary School we are somewhat dismayed that the recent political and policy discourse has moved away from Integrated Education – where support is extremely high – to 'shared education'. 'Shared Education' is not the same as Integrated Education. We believe 'shared' is a disguise for politicians saying that for the foreseeable future our children (from all communities) will continue to be educated separately. This is not what we want for our children and it is not what we want for future generations growing up in Northern Ireland.

1 Attitudinal Survey on Integrated Education
<http://www.ief.org.uk/wp-content/uploads/2011/09/Attitudinal-Survey-Final-Report.pdf>

It is unacceptable to be promoting 'shared education' while there is a complete lack of regard for the statutory responsibility on the Department of Education to encourage and facilitate Integrated Education.

Many policy initiatives in Northern Ireland do not reflect many of the preferences expressed by parents from many surveys (as noted above) which consistently support Integrated Education which they see as promoting mutual respect and understanding. We would remind you that the concept of Integrated Education was endorsed in the Belfast (Good Friday) Agreement, 1998, being seen as a way to contribute to peace and reconciliation.

Integrated Education is not about Catholics going in one door and Protestants in another – being educated in separate parts of a building. Integrated Education is about children from all sections of our community learning and sharing together, experiencing all religions, building trust, having a mutual understanding and respect for their own and each other's religion and differences.

Surely we do not need to remind you of the problems related to segregation? Integration in school from a young age has been well documented to make a positive contribution to societies in Northern Ireland. A 'shared school' lacks the deeper commitment to structural and social change for our children – we cannot allow the commitment shown to our children offered by Integrated Education to be lost.

Our school not only provides benefits for children and young people, it also offers benefits to the local area and society as a whole within Northern Ireland. Research conducted by Montgomery et al² noted that Integrated Education fostered good relations and had 'significant and positive social influence on the lives of those who experience it.' Other research³ also noted that pupils attending an Integrated School adopted a more positive position on issues such as politics, religion and identity.

An example of our integrated approach is seen day and daily in our activities. All our children celebrated the Queen's Jubilee in 2013, children take part in Gaelic sports, children are involved in projects relating to Protestant history, Irish Language as well as learning about other faiths. The school is also seen as a beacon for the community with sporting and leisure classes held in the evenings and weekends, the school has also acted as a centre for mediation when tensions have developed among local groups.

Northern Ireland is a society in transition, demographics are changing. It is no longer an issue of Catholics and Protestants but about all religions. The model of Integrated Education lends itself to ensuring newcomer children are treated with respect and mutual understanding and they feel a sense of inclusion in school and community life.

Below is a personal statement from a Governor and a Parent:

I am a mother of 4 children, who have all attended Hazelwood nursery, primary and college. As a parent from a strongly nationalist tradition living in segregated North Belfast I made a conscious decision to send them to school where they would make friends with children from other traditions and grow up with an innate awareness that there were different ways of viewing our society and 'others' were not to be feared or regarded as suspicious. Hazelwood was the right choice.

Integrated education is not just about 'throwing together' children from protestant/catholic backgrounds but has a core commitment to:

■ *Equality and diversity*

2 Gallagher, T., Smith, A. and Montgomery, A. (2003). Integrated education in Northern Ireland: Participation profile and performance. Coleraine: UNESCO Centre

3 Stringer, M., Irwing, P., Giles, M., McClenahan, C., Wilson, R. and Hunter, J. (2010) Parental and school effects on childrens political attitudes in Northern Ireland. British Journal of Educational Psychology (80), pp. 223-240. DOI: 10.1348/000709909X477233.

- *Child centred education*
- *A partnership with parents*
- *Christian ethos*

Hazelwood takes an active daily role in these principles, taking the 'whole child' into account, not just their academic ability or social standing. They explore and celebrate the traditions of different cultures throughout the year; e.g. when my children made their first communion and confirmation their whole class attended. They in turn attended their friends' cultural events and gained first-hand knowledge of diverse cultural backgrounds.

Today, they are in their 20's and still remain in close contact with the friends they made at school. While taking an active part in their personal cultural background, they have learned to express this in an informed way and are comfortable in any social setting.

Integrated Education is not just about sharing a building but giving children an opportunity to discuss history, politics and culture from different perspectives in a safe environment and seeing those with different opinions as friends first and foremost. This can only be learned by growing up together, attending the same classes and forming a close social bond with others by having similar childhood experiences; through attending Hazelwood my children have learned that difference is to be celebrated not feared.

Terry McKeown

Conclusion

It is clear that public opinion supports Integrated Education as a means of contributing to peace and reconciliation as well as promoting mutual respect and understanding. We have demonstrated that Integrated Education makes a positive contribution to children and societies within Northern Ireland, promoting positive attitudes and reducing sectarian attitudes. There is little doubt that Hazelwood Integrated Primary has made a positive impact upon the lives of all children and the community within the Whitewell area. We would therefore recommend the Education Committee makes a clear statement of support to encourage more integrated education as a way of supporting a shared future for all of our children.

The Board of Governors of Hazelwood Integrated Primary is pleased to make this response, we would be very happy to give oral evidence to the committee if needed.

Principal: Mrs Patricia Murtagh

Dear Mr Mc Callion

I am writing in response to your request for written evidence with regard to Shared and Integrated Education on behalf of the governors, staff, parents and pupils of Hazelwood Integrated Primary School.

In recent years huge investment in shared education has revealed, that it seems to the key decision makers, to be a good idea that some concession is made to educating children together. We agree that this is indeed a good idea – we feel it would be more effective if they were in a shared context all the time. There are some ‘shared projects’ that have produced useful outcomes and the integrated movement are happy to see the beginning of any relationship building – but as politicians try to sell shared education as a **viable alternative** to integrated education- those of us who see integration every day in practice know it is not.

Shared education projects that create a school in which Catholics go in one door and Protestants another - are nothing short of insane! At best it allows pupils to share some time together but in essence, whilst better than nothing, it is similar to most CRED work.

These projects are a step towards encouraging children to engage with each other for a limited time –but by returning to their own environment after a brief engagement the effects on attitudes are minimal. In our schools the positive relationships we foster go on every second of every day and beyond the classrooms into communities. These friendships are real, long lasting and make a difference.

The recent judgement by Mr Justice Treacy as part of the court Proceedings surrounding Drumragh clarified that integrated education ‘is a standalone concept’ that is to say educating together at school, protestant and catholic children.

This is sharing at its most effective and the success of this case and its re-emphasis that DE are obliged to ‘encourage and facilitate integrated education’ raises the question - is the search for a legal obligation to support Shared Education an avoidance of this obligation to support Integrated education? We continue to demand the implementation of Article 64.

Surely there is an ethical duty on all of us to recognise the potential of educating children together all the time as a means of nurturing friendships across boundaries and across generations –therefore making cultural strife and conflict less palatable- some of our schools are educating third generation children – a lasting impact made.

The nature of our society remains complex – falling levels in English and Maths, underachievement in Protestant working class boys, racist tensions, issues around flags and emblems all proving to be challenges – we should be normalising our schools in the recognition that a mix of social groups, religions, cultures and academic abilities ensures better outcomes for all. From a young age, bias and prejudice can become embedded however influencing young minds to think in a different way makes for well-balanced young people and adults of the future.

Groups from other parts of the world have come to the Integrated sector to learn from us and to apply elements of the model to their own troubled environments. Why then is it so difficult for our own politicians to see what is under their nose – a model for removing barriers,

for opening hearts, for sharing and most importantly for giving children skills to deal with difference in a respectful way.

There is a need for an explicit reference to Integrated education in Shared Education Policy – funding should be given to all on this continuum – to maximise its effects.

At Hazelwood integrated Primary we practice meaningful engagement each day and challenge all to face their own prejudices and deal with all the areas which in our society have caused conflict – open and honest engagement with each other adults and children alike creates positivity and a context for creative change.

If there is a genuine desire to move Northern Ireland forward we urge you to talk to the integrated sector in particular to NICIE and in addition we welcome you come and visit our schools - see what we do and talk to our children- we are not a gimmick or a phase – we are real and strong and determined to persist because we know that what we do is important!

Integrated Education Alumni Association

Integrated Education Alumni Association Submission to Education Committee

To the Committee for Education,

I am writing on behalf of the Integrated Education Alumni Association in response to the request for written evidence in regards to shared and integrated education.

Sixteen years on from the signing of the Belfast Agreement, Northern Ireland is enjoying a period of relative peace and stability. Yet, despite efforts to promote integration in our political and policing institutions, our educational system remains largely segregated. Of Northern Ireland's total number of pupils, a mere 7% attend integrated schools. As alumni of integrated schools, we have benefitted from an education instilled with tolerance and understanding which has positively enabled us academically, professionally and socially. However, this option is not available to all children in Northern Ireland and we believe that this is a factor which continues to promote division in our province.

This response aims to propose the opinions of past pupils of the integrated education sector and address the key areas set out in the Committee's Inquiry.

- We believe that the nature of the education system in Northern Ireland fundamentally hinders the growth and development of integrated education. Only an approximate 6% of schools, both primary and post primary, are currently designated as integrated. This poses a number of important issues which should be addressed. Firstly, the sparse nature of integrated schools in Northern Ireland severely limits both the number of pupils these schools can individually enrol each year, and also geographically limits who can attend these schools. It is difficult to accurately judge the demand for integrated schools in Northern Ireland as it is largely based on public opinion, however numerous polls, such as those carried out by the Belfast Telegraph, and research undertaken by the Integrated Education Fund among others, has shown evidence of a strong demand for the sector. The small number of integrated schools in Northern Ireland also continues to complement the opinion that integrated schools are 'special/other' instead of promoting the sector as 'normal'. The implementation of a formal definition for integrated education may be of benefit in improving the understanding of the sector and help clearly designate other schools as integrated. For an example, Botanic Primary School in Belfast could be regarded as integrated due to the diverse demographic of its pupils however it is not designated as such.
- In recent years, the Executive has attempted to develop the shared education sector in Northern Ireland. However, the development of this sector should not act as a substitute to integrated education. The demographic of Northern Ireland is rapidly diversifying which in turn provides further reason to promote and develop the integrated sector. Encouraging a Protestant and Catholic school may reduce costs but it does not develop the relationships and tolerance that are integral parts of integrated teaching. If anything, shared education campuses crystalize the division within our education system. Shared education further instils the 'us and them' mentality, a botched solution to a deep problem. If we can teach Protestant, Catholic and other faiths in the same campus, why can't we teach them in the same classes together? Within integrated education, all cultural and religious beliefs and identities are protected and championed – religious freedom is a core principle of integrated education. Not only does integrated education teach tolerance for other cultures and religions, it prepares pupils for full participation and understanding of the changing face of Northern Ireland's work place and broader society as a whole.
- To address the second area of the Committee's Inquiry regarding barriers and enablers of integrated and shared education, there are a number of important issues in regards to this. Firstly, as previously stated, there are a number of hindrances to the development of integrated education such as the small numbers of integrated schools in Northern

Ireland and geographical issues. However these are just two of a number of issues. The image and perception, whether misconceived or not, of integrated schools is something that requires addressing. For example, Lagan College, despite having high quality teaching standards and some of the highest GCSE/A Levels in the country, did not have the best facilities prior to the opening of their new school, which may have led to prospective pupils attending different schools and not benefitting from the unique educational and social experience of attending an integrated school. Another substantial issue is breaking the status quo that is prevalent in many families across Northern Ireland. The influence of family members in the choice of which school a child should attend is arguably the most important factor in this decision-making process. It is of the highest importance that integrated education is promoted as risk-free and a pathway to post-educational success, and that parents are given an equal opportunity to send their children to an integrated school. The possible domino effect that this could have would be greatly beneficial to the development of integrated education. A more concerted effort from the Office of First and Deputy First Minister to promote the benefits of integrated education beyond academic results may help address some of the misconceptions around integrated education. Another issue that hinders the growth of integrated education is segregated housing. Integrated education produces great advocates of the sector, however many pupils return to divided communities. We believe that the development and expansion of integrated education would help in the future to break down barriers, including physical 'peace' walls, and in turn help the development of integrated housing.

- In terms of the Inquiry's third area of looking to other jurisdictions for possible ideas for the development of integrated and shared education, we believe that this is unnecessary. In Northern Ireland, we already have a successful integrated system, despite its small nature, which is producing students with impressive academic qualifications and debunking ill informed misconceptions amongst some of our population. Like our policing system, many jurisdictions have come to Northern Ireland to research our integrated education system in order to adopt some of its core values and apply them in their respective educational structures. If other countries are using our integrated system as an example of how to teach those from different religious backgrounds and divided communities together, why is it necessary that we look to other nations for a different solution? We should promote the successes of our integrated education sector and herald it as something to be proud of, an example of the importance of teaching our youth together. Children born at the time of the ceasefires are now adults and their children will soon be entering the education system. It is of the utmost importance that the Executive promote integrated education – not as a distant solution or a possibility, but as a forward thinking, positive change in the now. As previously stated, Northern Ireland's demographic is constantly changing with many people from around the world coming to live and work here. Conservation of an ineffective, duplicative binary system will continue to hinder our future generations in all aspects of life. Now is the time to change this system and prevent future generations from missing out on the invaluable benefits of integrated education. It is now beyond a question of having the option to change, there is a clear need for change in our education system to prepare our citizens for being vital members of an increasingly globalised stage.

Thank you, in advance, for your consideration of our views in relation to integrated and shared education.

Regards,

Robert Magee, on behalf of the Integrated Education Alumni Association.

Integrated Education Fund

Submission to Shared and Integrated Education Inquiry

Opening Minds

Integrated Education Fund

The Integrated Education Fund (IEF) welcomes the opportunity to make a written submission to the Education Committee's Shared and Integrated Education Inquiry. The IEF would also welcome the opportunity to present evidence to the Education Committee.

About the IEF

The IEF is a charitable trust established to provide a financial foundation for the development and growth of integrated education in Northern Ireland. It is recognized as a charity by the Inland Revenue under Reference XR52574 and is governed by its Deed of Trust. Its mandate is derived from the expressed demand of parents and individual schools who seek integrated education for their children and pupils.

What is integrated education?

Integrated education brings children, staff and governors from Catholic and Protestant traditions, as well as those of other faiths or none, and other cultures, together in one school. Integrated schools differ from most other schools in Northern Ireland by ensuring that children from diverse backgrounds are educated together every day, side by side in the same classrooms. Integrated schools are not secular but are essentially Christian in character while welcoming all faiths and none. Through their admissions criteria, schools aim to ensure a balanced number of Catholic and Protestant children. But it is also the ethos that is particularly distinctive; it is deliberately and strategically planned to promote inclusiveness and mutual respect. Integrated schools do not simply admit students from different traditions and expect them to fit in, nor to pretend that everyone is the same. For example, Catholic children are offered Sacramental preparation at P3, P4 and P7; Protestant children can generally avail of the Delving Deeper programme to develop their own faith knowledge while all pupils are introduced to the ideas, beliefs and practices of the major world religions and humanist philosophies.

In the post-primary schools the integrated ethos is apparent in approaches to Religious Education and History, for example, where sensitive and deliberate care is taken to address different, potentially contentious viewpoints in a balanced and thought-provoking way.

The integrated ethos also extends to the staff and the Board of Governors of each integrated school.

Introduction

Northern Ireland is committed to shaping a united future and one of the main tests of that commitment will be in how we choose to educate our children: largely apart, as at present, or increasingly together. The idea of educating all children together under the same roof, instead of apart in separate Catholic schools and State schools, is not new. Arguably there is more goodwill towards it now than at any stage in the past. The OFMDFM strategy 'Together: Building a United Community' (2013) recognises '...the segregated nature of Northern Ireland's education provision' and takes the view that 'achieving a full shared education system...is a crucial part of breaking the cycle of ...sectarianism...'

Northern Ireland maintains an education system that educates its children separately, by religion. 91% of Protestant primary children attended controlled (mainly Protestant) schools and 88% of Catholic primary children were enrolled in Catholic maintained primaries in the last academic year. At the same time, 88% of Catholic post-primary pupils attended Catholic maintained or Catholic managed voluntary schools and 89% of Protestant postprimary pupils attended controlled schools.¹ Only 7% of children overall attended integrated schools.

Consequently, pupil interactions are mostly with peers, teachers and others from their own community, with limited opportunity to understand other perspectives and cultures. In contrast, many parents here wish for their children to be educated together with children of other traditions. A recent LucidTalk survey identified that 79% of parents would back a move to see their children's school change to integrated education.²

Much research and analysis has been carried out about the segregated nature of schooling. A detailed insight into the cultural and political awareness of 3-6 year olds found there is a rapid increase in the proportions of children beginning to identify themselves with one particular community and to make sectarian comments at the ages of five and six. The fact that these represent the first few years of compulsory schooling is unlikely to be a coincidence. One explanation is likely to be the segregated nature of the school system itself.³

Educating all children together is an essential part of the reconciliation process and of building a society that celebrates respect, understanding and friendships across traditional divides. The IEF believes that integrated education can help all children become better citizens of Northern Ireland and of the increasingly global world we all inhabit.

Achieving quality educational outcomes for all should be the central focus for the Executive and the Education Minister. This is best achieved within a reformed education system in which children of all faiths or none, and regardless of ability, ethnicity, cultural or social backgrounds, learn and are taught together in their local area. This would make best use of scarce educational resources in a time of unprecedented reductions in public expenditure and would undoubtedly bring longer-term economic, educational and societal benefits to us all.

Successful reform of a long established education system cannot happen overnight but Northern Ireland has already come a long way and taken major steps forward. Further change is needed - and communities should be at the heart of education planning.

The current area based planning process provides an opportunity to ensure parental choice is at the very heart of the education system, by embedding a mechanism which reflects real parental demand rather than the current system, which simply ratifies the existing institutional or sectoral structures.

Northern Ireland cannot afford to wait to change how we educate our children. The cost of inaction will mean another generation of children growing up with limited contact with the 'other community' and limited experience of diversity. We need to open minds to the benefits of educating our children together, side by side, in the same classrooms. It needs to be the norm – not the exception.

Review the nature and definition of Integrated Education as it applies across all educational phases

On 15th May 2014 the High Court delivered its judgment in the judicial review action brought by Drumragh Integrated College. The Court clarified the statutory duty to ‘encourage and facilitate the development of integrated education’ enshrined in both Article 64 of the Education Reform (NI) Order 1989 and the Good Friday Agreement. The Court held that integrated education was a standalone concept and plainly envisages education together at the same school. It also held that an integrated school strives to achieve an equal balance in relation to worship, celebration and exposure to both faiths. This is reflected in its constitution, and the Board of Governors must strive in its ethos to achieve this. The statutory duty in Article 64 applies to education that is integrated throughout and not education that is delivered by a ‘partisan board.’

Key paragraphs of the Judgement

‘Integrated Education is a standalone concept’ [para. 50]

‘Integrated Education must be the service of imparting knowledge to young people from all backgrounds as equals’ [para. 51]

A school which has a predominantly Catholic or predominantly Protestant ethos which is reflected through the religious events celebrated, the religious symbolism present throughout the school, the manner of worship engaged in the school cannot be said to be delivering integrated education (i.e. serving members of different religious groups equally) [para. 52]

‘[This is] because, as part of its constitution as an institution it is fundamentally oriented to one religious cannon over another. Therefore, the minority faith in any denominational school is not receiving ‘equal’ exposure to its faith as the majority faith’ [para. 52]

‘As against this, an integrated school strives to achieve an equal balance in relation to worship, celebration and exposure to both faiths’ [para. 53]

‘For these reasons it must be the case that the integrated education referred to in the article is education that is integrated throughout and not education that is delivered by a partisan board’ [para. 53]

Consider the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education

The IEF would support the need for a formal statutory definition of Shared Education because such clarity is essential for effective monitoring, assessment and accountability. Shared education is currently defined by the Department as involving two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

Increased collaboration between schools is a positive development. It represents the chance to increase contact between pupils, teachers, governors and parents from different backgrounds. Shared classes should, in theory, strengthen the potential for greater integration as pupils and schools experience the benefit of learning together.

However, shared facilities and shared campuses do not equate to shared education. They may facilitate the potential for collaboration between schools but it is the level of interaction and contact between pupils that counts the most.

Shared education cannot be considered a substitute or alternative for integrated education and it must not develop as a barrier to integrated education. The choice of a fully integrated school must be encouraged and supported if that is what is desired by the local community.

Whilst shared education takes place between schools, a fully integrated school represents the most inclusive form of sharing within a school.

The IEF would therefore not support an obligation in statute to facilitate and encourage Shared Education as this would perpetuate Northern Ireland's divided education system.

Identify the key barriers for Integrated Education

The High Court's judgment (May 2014) in the judicial review described the Department of Education's 'Needs Model', which is the basis for long-term education planning, as *'inflexible' and provides an 'additional difficulty' impeding the progress of expansion in integrated schools. This creation of an 'additional difficulty' is the opposite of '...facilitating and encouraging (integrated education).'* The Court ruled that DE needed to be *'...alive to its Article 64 duty at all levels, including the strategic one.'*

Research conducted by Millward Brown Ulster (2003) suggested that almost three quarters of respondents (72%) would choose an integrated school if there was one close to where they live, assuming no negative differential in academic or other standards.

It is the lack of access to integrated education which ensures that only a small percentage of pupils attend integrated schools.

The current overhaul of our education system is putting in place structures that future generations will have to live and deal with. As the most recent opinion polls demonstrate, voters believe that our politicians, instead of seizing the opportunity to shape an education system fit for the 21st century, are side-stepping the issue of desegregating our education system.

Public opinion has repeatedly demonstrated a demand for moving beyond our current segregated education system and towards a united future. The Executive and the Assembly must, at the very least, match the public's vision for an education system of schools attended by pupils from all traditions.

It is unacceptable for education planning not to take into consideration citizen demand or aspiration. And whilst it cannot be left solely to existing education providers or sectors to determine the future of education in an area, equally it should not be left to pioneering parents to have to establish an alternative choice.

The current discourse on shared education assumes that the vast majority of our children will continue to be educated in separate schools for the foreseeable future. By accepting this, political parties move toward education policies that plan for separate development rather than structural change and reform of the separate school system.

Identify the key enablers for Integrated Education

Effective area planning offers the possibility to deliver real change. The process thus far has been rooted in the existing, segregated structure rather than any innovative proposals for a new approach to delivering education. Integrated schools, established through parental demand, demonstrate that it is possible to educate children together without diluting cultural identity. Increasing integrated school places would send out a powerful message that we are creating a truly shared future rather than merely managing the divisions of our past.

Overwhelming Public Support

Integrated education is seen as the most popular of a range of possible options for securing long term peace in Northern Ireland.⁴ Integrated education has widespread public backing, with the latest attitudinal survey showing support running at 79% of those expressing an opinion.

An overwhelming 79% of parents with children at school, who expressed an opinion, said they would support a request to transform their child's school to integrated status.

Young people have important opinions and ideas, and may be better equipped to challenge sectarian norms and assist society towards a shared and reconciled future. Moreover, Article 12 of the United Nations Convention on the Rights of the Child (UK, 1992), confirms that children have the right to say what they think should happen when adults are making decisions that affect them, and have their opinions taken into account.

In April 2014 the IEF commissioned independent polling company LucidTalk to carry out a survey among 16-24 year-olds across Northern Ireland. A representative sample of 1,075 completed the survey and all data results were weighted to reflect gender and community background. More than 83% of those questioned agree that an education system where children of all faiths and none go to the same school would be an important step in combating sectarianism.

Societal Benefits: the Evidence

There is a growing body of evidence of the societal benefits of integrated education. Much research and analysis has been carried out about the segregated nature of schooling.

Research (Stringer et al., 2009, p.252) suggests that pupils of mixed or integrated schools had higher levels of out-of-school contact with members of the 'other' community than children in segregated schools, with pupils reporting '...significantly higher levels of contact with other group members both within and outside school than their segregated counterparts'. Carter (2004) has highlighted sustained and positive contacts between pupils from the two main communities in Northern Ireland through integrated education as crucial in fostering relationships and collaborative learning.

A detailed insight into the cultural and political awareness of 3-6 year olds found there is a rapid increase in the proportions of children beginning to identify themselves with one particular community and to make sectarian comments at the ages of five and six. The fact that these represent the first few years of compulsory schooling is unlikely to be a coincidence. One explanation is likely to be the segregated nature of the school system itself.⁵

A University of Ulster research project into the effects of integrated and segregated schooling in Northern Ireland highlights that sectarianism could be defused if more Catholic and Protestant children were sent to mixed-religion schools.⁶

A Community Relations Council and Equality Commission report highlighted the contribution made by integrated education to '...enabling and promoting continued engagement with children from different backgrounds' and the role of integrated schools in providing opportunities for interaction between individuals from the two main communities in Northern Ireland.⁷

4 Lucid Talk Attitudinal Polling 2013

5 Connolly, R, Smith, A. & Kelly, B. (2002) Too young to Notice? The Cultural and Political Awareness of 3-6 years Olds in Northern Ireland. Northern Ireland Community Relations Council

6 Integrated Education, Intergroup Relations, and Political Identities in Northern Ireland, Hayes, B, McAllister, I, Dowds, L (2007)

7 Community Relations Council and Equality Commission, 2010, p. 23

The Northern Ireland Life and Times survey concluded that by separating Protestant and Catholic children, the education system has exacerbated community divisions. It is argued that the separation of children leads to ignorance about the other community and, in the words of Seamus Dunn (1986), fosters ‘an atmosphere of mutual distrust and suspicion’. By contrast, the goal of integrated schools is to foster an understanding of both traditions and to overcome negative stereotypes. By encouraging children to understand their historical and religious differences, it is hoped that they will feel less threatened by the other community, and form enduring cross-community relations.⁸

Integrated education can be a fundamental driver for change. It develops pupils’ skills and knowledge when they learn together so that they can contribute to an open, diverse and inclusive society. When children learn together, it crucially increases positive attitudes to others, reduces negative stereotypes and encourages cross-community friendships.

Research evidence suggests that integrated schooling has a significant and positive social influence on the lives of those who experience it, most notably in terms of fostering cross-community friendships, reducing prejudicial attitudes and promoting a sense of security in religious, racial, or ethnically diverse environments⁹

The Integrated Education Fund does not want to impose any specific model of education provision on anyone; we act purely in response to parental demand and fully respect the wishes of parents who select various types of schools. The IEF seeks to ensure that all schools are wholly inclusive and provide full equality of opportunity.

It is indisputable that parents will send their children to what they believe are the best schools. They are unlikely to send their children to a school simply because it is integrated, Catholic Maintained or State Controlled, if it isn’t considered a good school. Many schools of different types perform to the highest standards and will remain popular choices for parents. All schools aim to do their best for their pupils – the question that must be asked is, would they perform any less well if they were open to, and encouraged to include pupils, teachers and governors from different religious and cultural backgrounds?

Educational Benefits: the Evidence

There has been little research on educational attainment in integrated schools beyond analysis of examination results. The evidence suggests that pupils perform as well academically at GCSE and A-level as pupils from other non-selective schools.

It should be noted that boys in grant maintained integrated schools have a better pass rate of 5 or more GCSE in comparison to other non-selective schools.¹⁰

Economic Case: the Evidence

Northern Ireland is facing challenging economic times. In addition to public spending demands, a government commissioned report on the *Financial Cost of Division* (Deloitte, 2007) estimated the cost of division in areas such as education, housing, policing and security to be in the region of an extra £1.5 billion spend every year.

The IEF commissioned a scoping paper from Oxford Economics, *Developing the Case for Shared Education*, which called for a thorough debate on new ways to deliver education in Northern Ireland in economically straitened times. The report demonstrated that the NI

8 In Search of the Middle Ground: Integrated Education and Northern Ireland Politics. 2006, The Northern Ireland Life and Times survey is carried out annually and documents public opinion on a wide range of social issues. The survey is a joint project of the two Northern Ireland universities and aims to provide an independent source of information on what the public thinks about the social issues of the day.

9 Stringer, 2009, 2000; Montgomery et al., 2003; McGlynn, 2001; Irwin, 1991

10 AgendaNI, Issue 66, p19

Executive cannot continue to fund empty desks while buildings fall into disrepair and staffing budgets are squeezed. In effect, the status quo is unaffordable and unsustainable.

Consider what priorities and actions need to be taken to improve integration

The Department should enhance the curriculum to include the development of skills, structures and relationships that enable schools, pupils and their parents, staff and governors and the wider community to increase their understanding, acceptance and respect for political, cultural and religious difference. This should be embedded through the ethos of schools and be an integral part of the curriculum to ensure all children can contribute to the shared vision of building a united community. The Department should also develop age-appropriate primary and post-primary anti-sectarian resources and ensure that teachers are trained, equipped and supported to deliver these effectively in the classroom.

Integration should inform all future models of social infrastructure; for example the Department for Social Development and Department of Education should establish an interdepartmental strategic approach to mixed housing and integrated education.

All schools in receipt of public funding should have a duty placed on them to be inclusive spaces so that their policies and practice reflect the diverse range of religious and cultural backgrounds that make up pupils, staff and governors across Northern Ireland schools. Moreover, the Department should ring fence funding for integrated education to enable key measurable indicators to be incorporated within the funding formula for schools and other educational institutions. This financial support would recognise the added value of integrated education with particular emphasis in the curriculum and daily routines on understanding, accepting and respecting political, cultural and religious differences. It should be weighed against the quality and the effectiveness of integration provided to ensure continuous progression towards a desegregated, inclusive system. Progress would be monitored by the Education and Training Inspectorate or other objective body as appropriate.

The impact of Integrated Education

The Integrated Education Movement is a parent-led cross-community movement in Northern Ireland with little or no mainstream political backing and yet it has not been without major consequence:

Positive Social Attitudes

For the 28 children in 1981 to 22,000 attending integrated schools in 2013 (and thousands more in between), there has been a measurable impact on social attitudes. Put simply, children who attend an integrated school have more friendships with children from other religions and cultures (Hayes and McAllister, 2009).

A Shared Future

The existence of integrated schools has demonstrated that people from all religious, cultural and social backgrounds can learn and work together. Considering that not one integrated school has been established through government planning or policy, it is a great achievement that 62 schools, educating 22,000 children, now exist in Northern Ireland. But more are needed.

The development of integrated education works as a barometer of a shared society. When full integration in our schools is the norm rather than the exception, we will be truly approaching a shared future.

Challenging Separation

The growth of integrated education to 7% of the school population has had a powerful impact. It has highlighted the fact that the majority of other children in the system are unlikely to experience day to day interaction with those from different religious and cultural traditions. Addressing this has led to initiatives for schools to work more closely together in what is termed 'shared education'. Whilst a fully integrated school represents the most inclusive form of sharing within a school, the fresh drive for shared education between schools has witnessed increased support from government. This suggests a growing political acceptance that our children can and should learn together.

The IEF has had 14 years' experience of funding shared education through our Promoting a Culture of Trust grant programme, and see shared education as a valuable mechanism to bring children together. The aim of the programme is to fund projects in schools to promote the development of skills, structures and relationships that enable schools, pupils and their parents, staff and governors and the wider community to increase their understanding, acceptance and respect for political, cultural and religious differences.

The IEF launched PACT in the year 2000 and is delighted to have been able to support projects in schools of differing levels and management types across Northern Ireland which have delivered and surpassed the stated aim of the programme. Over the past fourteen years, through PACT 1 – 14, £1,034,463 has been awarded in grants for 232 projects in 530 schools, directly involving and benefiting over 13,000 children and young people. However, simply agreeing on the benefits of children learning together, or even putting this into practice through PACT or other projects, does not provide a vision for the future of education. It falls short of showing a community the possible destination of the journey that has begun.

The time has come to think about what could be achieved with full government support for an education system based on children learning together.

In order to achieve a unified, coherent education system, the NI Executive should:

- Carry out a major review of the economic cost of maintaining a segregated education system.
- Place a duty on all schools in receipt of public money to be inclusive spaces; to be open in both school policy and practice to children, staff and governors from all the religious and cultural backgrounds that make up Northern Ireland.
- Ring fence funding for integrated education to support schools in their progress towards integrated education, measured against key indicators, with particular emphasis in the curriculum and daily routines on understanding, accepting and respecting political, cultural and religious differences.
- Develop area based planning which is shaped by the community and which reflects parental choice, community needs, desire for a shared future and fiscal realities
- Establish a single authority for the administration of education.
- Establish a single teacher training system, where teachers of all faiths and none are trained together on the same courses at the same locations.
- Establish a single model of governance for all schools.
- Extend fair employment legislation to the recruitment of teachers.
- Extend the application of Section 75 of the Northern Ireland Act 1998 to schools.

Papers and research on Integrated Education.

Integration for reconciliation? The impact of integrated schools in Northern Ireland 01/01/2004 A paper presented by Dr Claire McGlynn at the Research Initiative on the Resolution of Ethnic Conflict Conference, "Peace-building after Peace Accords", at the University of Notre Dame, Indiana, September 11-13, 2003.

Moving Barriers: Promoting Learning for Diversity in Initial Teacher Education 01/01/2004 paper presented at The European Conference on Educational Research, University of Hamburg, 17-20 September 2003 by Hagan, M., McGlynn, C.W. and Wylie, K. of Stranmillis University College, Belfast, Northern Ireland

Integrated Education in Northern Ireland in the context of Critical Multiculturalism 29/09/2004 Irish Educational Studies Vol 22 No 3 Winter 2003 Claire McGlynn

Moving out of Conflict: Integrated schools in N. Ireland 30/09/2004

Journal of Peace Education Vol1 No 2 Sept 2004 McGlynn; Niens, Cairns and Hewshaw.

As the integrated education movement in Northern Ireland passes its twenty-first anniversary, it is pertinent to explore the legacy of mixed Catholic and Protestant schooling. This paper summarises the findings of different studies regarding the impact of integrated education in Northern Ireland on social identity, intergroup attitudes and forgiveness and reconciliation. The research is discussed in relation to its implications for the theory and practice of integrated education in Northern Ireland and also for other societies with a legacy of ethnopolitical conflict. It proposes that integrated education in Northern Ireland impacts positively on identity, outgroup attitudes, forgiveness and reconciliation, providing hope and encouragement for co-education strategies in other countries that have suffered from prolonged conflict. Despite a number of challenges, it is clear from the research presented here that integrated education holds great potential both for building social cohesion and for promoting forgiveness and reconciliation.

The Right to Education Tomasevski, T. (2003), , Report submitted by Special Rapporteur to the Fifty-ninth session of the United Nations Commission on Human Rights.

Transformation: Julie McGonigle, Tony Gallagher and Alan Smith Integrated Education in N. Ireland 2003 UNESCO

In Search of the Middle Ground: Integrated Education and Northern Ireland Politics Bernadette C. Hayes, University of Aberdeen Ian McAllister, Australian National University

Lizanne Dowds, ARK Education is often seen as a means of achieving social change. Underlying this view is contact theory, which argues that increased contact between social groups will serve to reduce prejudicial attitudes and alleviate racial and ethnic divisions. A recent study, undertaken by Bernadette C. Hayes, Ian McAllister and Lizanne Dowds, tests and extends these propositions by examining the long-term impact of segregated and integrated education on political identities and attitudes. Using a pooled sample of surveys conducted on the adult population in Northern Ireland between 1998 and 2003, it addresses, for the first time, the question of whether or not experiencing a religiously integrated education has a significant effect on the political outlooks of Protestants and Catholics within this society. The results suggest that attendance at a religiously integrated school – either one formally constituted as integrated or a religious school incorporating a proportion from

the opposite religion – has positive long-term benefits in promoting a less sectarian stance on national identity and constitutional preferences (for a comprehensive account of the study and a detailed discussion of its findings see:

- Integrated education can and does have an impact on the outlooks of pupils who attend them.
- The effects of integrated education extend into later life.
- As the numbers experiencing integrated education grows, there is the potential to create a new common ground in Northern Ireland politics.

The management of pupil difference in Catholic-Protestant and Palestinian- Jewish integrated education in Northern Ireland and Israel

Claire McGlynn and Zvi Bekerman Queen's University, Belfast, UK; Hebrew University, Jerusalem, Israel Compare Vol. 37, No. 5, October 2007, pp. 689–705

This paper considers issues related to integration in education, specifically those related to the integration of ethnic/religious populations in conflict. The case study we will use is the educating together of Catholic and Protestant children and Palestinian and Jewish children in two troubled societies, Northern Ireland and Israel, where children are normally kept segregated within the education system. Using a multi-theoretical approach the paper presents data collected in a parallel study of principals, policy makers and stakeholders in the two contexts. Whilst there are striking similarities between integrated education in Northern Ireland and Israel there are also clear differences around the management of pupil diversity which are critically teased out in the paper. It is argued that a cross-fertilization of theoretical perspectives is necessary both to analyse integrated school settings and to support those involved in these ventures.

Education for Peace in Integrated Schools: A Priority for Northern Ireland? Claire McGlynn 29/09/2004: Child care in Practice Vol 10 No 2 April 2004

Carfax

Although violence in Northern Ireland has been “neither halted or prevented” (Tomasevski, 2003a, p. 7), few would deny that the scale of the conflict has been reduced. This paper argues that a vital purpose of education in Northern Ireland should be peacebuilding and the promotion of social cohesion. In particular, the paper looks at the lessons that can be learned from integrated education by societies moving out of conflict. As part of a larger study of the impact of integrated (mixed Catholic and Protestant) education, former and current Principals of the two longest established post-primary (for children aged 11–18) integrated colleges were questioned about the policies and practice employed by their schools with regards to promoting respect for diversity, dealing with cultural symbols and affirming or challenging identity. The potential of integrated education to promote tolerance and understanding is discussed. This paper concludes that the needs of children and society for reconciliation through integrated schooling should perhaps take preference over the rights of parents to segregated education.

Rhetoric and reality: are integrated schools in Northern Ireland really making a difference? Claire McGlynn Irish Educational Studies Vol. 26, No. 3, September 2007, pp. 271_287

This article explores perspectives on the current contribution of integrated schools to society in Northern Ireland and asks whether there is a mismatch between what some expect from the schools and what they may be able to provide. It suggests that integrated education may for some be a magic panacea, whilst those leading the sector see the benefits of integrated education as emerging over a much longer and more realistic timeframe. Based on a series of interviews with principals and with other leaders, this article explores how integrated schools balance the practice and evaluation of integration with other conflicting priorities. It questions the extent to which the schools show variation and argues that greater coherence within the integrated sector might be helpful in the current climate.

Integrated and Faith-Based Schooling in Northern Ireland

Claire McGlynn *The Irish Journal of Education*, 2005, xxxvi, pp. 49-62

Issues are explored relating to the diversity of schooling provision in Northern Ireland in the context of the debate around faith-based schooling in England and elsewhere. The benefits to individuals from a religious point of view are off-set against any potential impact on social cohesion. Integrated schools as models for shared education are considered, as are innovative methods of co-management that may emerge in the future. In the context of a fragile society emerging from conflict and yet apparently more polarized than ever, it is argued that choices inevitably have consequences and that the long-term price of separate schooling may be further division.

Leading integrated schools: a study of the multicultural perspectives of Northern Irish principals Claire McGlynn* *Journal of Peace Education* Vol. 5, No. 1, March 2008, 3–16

This article is concerned with the sustained peace education initiative of integrated schooling and in particular with leadership responses to cultural diversity. Using a case study group of principals of integrated (mixed Catholic, Protestant and other) schools in Northern Ireland, the author explores how principals perceive and lead their visions of integrated education. A combined framework of multicultural and school leadership theory is employed to analyse the findings. The perceptions of the principals reported are consistent with liberal interpretations of multiculturalism, although there is also evidence of a more pluralist perspective. Core liberal values appear to be central to the leadership style of these principals, in line with values-led contingency models of leadership. The article suggests that a sole emphasis on common humanity is an inadequate approach to peace education. It tentatively suggests a relationship between leadership styles and approaches to multiculturalism, and argues that a synthesis of multicultural and leadership theory can usefully guide the development of peace education leadership.

Background Paper

Date: 18th June 2014

Subject: Background on the Fund's investment in Shared Education

1.0 Summary

In Northern Ireland, 93% of pupils are educated in separate schools. There many different types of school, each proud of their identity and ethos and which parents and communities value and care about passionately.

The accepted system of having children educated separately runs counter to the International Fund for Ireland's objective of bringing people and communities together and since 2007, shared education models, sponsored by the Fund and Atlantic Philanthropies, have brought together schools from different sectors in strategic partnerships.

These models have sought to make the case for sharing and provide a diverse range of approaches that enhance academic and personal development and good relations between communities.

In building a more cohesive society, shared education and integrated education are different routes to the same objective. However, communities have genuine concerns about the potential loss of school identity and ethos should they merge into or be replaced by new integrated schools.

The Fund's investment has made the case for shared education and outlined its potential to be a practical and achievable way for all schools to retain identities, respect difference and build relationships between local communities.

These models of shared education have demonstrated that schools can find and develop innovative solutions to deliver education on a cross-sectoral basis. They provide effective ways of breaking down the barriers arising from our historic conflict by providing a range of opportunities for young people to learn together and reach the highest possible standards of educational achievement.

In October 2013, the Northern Ireland Education Minister, John O'Dowd MLA, recognised the Fund's contribution and signalled his intention to provide a legislative requirement for sharing and called for "sharing to become the accepted reality at every stage of education, from early years to post-graduate study" (Address to the Northern Ireland Assembly, 2nd October 2013).

2.0 About Shared Education

Shared Education refers to schools from different sectors working together in a sustained process ranging from two or more schools making shared use of specialist facilities, through to co-ordinated timetabling and pupils taking classes across a network of schools. It looks

to work within the current system to promote opportunities for sustained curriculum based contact between pupils across the sectoral divide.

The focus of Shared Education is delivering core curriculum activities where teachers and pupils work together across schools to achieve higher quality educational experiences.

3.0 The Fund's contribution to Shared Education

The Fund has invested significantly in shared education. Since 2007, it has funded 22 projects (£18m) to facilitate reconciliation for a shared future through the medium of education in order to:

- promote shared education by linking schools representative of the two communities;
- build on community relations within and between schools;
- support cultural outreach amongst young people representative of the differing communities/traditions; and
- address strategic gaps in achieving reconciliation through a cross community, cross-border approach through education and the related services sector.

Some 19 of these projects constitute the Sharing in Education Programme (SiEP) and the remaining three form the Shared Education Programme (SEP) operated through: Queen's University, the Northern Eastern Education and Library Board (PIEE), and the Fermanagh Trust. The latter three projects are co-funded with Atlantic Philanthropies.

The strategic relationship between the Fund and AP has led to a total investment of more than £24 million (Fund £18m and AP £6m) in 22 shared education projects.

4.0 Achievements

Over six years, the Fund in collaboration with AP has made the case for shared education and achieved much.

- (a) Outworkings from the Sharing in Education Programme provided a proven and credible evidence base for discussions between educationalists and government which helped shape commitments in the Programme for Government (PfG: 2011-2015) for shared education, viz:
 - (i) Establish a Ministerial Advisory Group to explore and bring forward recommendations to the Minister of Education to advance shared education.
 - (ii) To ensure all children have the opportunity to participate in shared education programmes by 2015.
 - (iii) To substantially increase the number of schools sharing facilities by 2015.
- (b) A June 2013 announcement by the First and Deputy First Ministers (Together: Building a United Community) stated that work on 10+ shared education campuses will commence within the next five years, offering the potential for shared classes and subjects and also adding significant momentum to the PfG commitments. They also confirmed plans to provide more opportunities for sharing within teacher training to build on initiatives underway involving the two teacher training colleges. SiEP has already made considerable gains in this area.
- (c) In May 2013 the Ministerial Advisory Group's (MAG) final report referenced the 'laudable' examples from SiEP as it put forward 17 recommendations on advancing shared education which the Fund supports. Three of which, if implemented, will move shared education from an external intervention to the mainstream, viz:
 - (i) Statutory duty on the Department of Education and the new Education and Skills Authority to encourage and facilitate shared education.

-
- (ii) A central unit within ESA to take lead responsibility on developing and driving forward a strategy on advancing shared education.
 - (iii) A shared education premium is incorporated as part of the revised funding formula for schools and other educational institutions.
- (d) On 22nd October 2013, the Northern Ireland Education Minister, John O'Dowd MLA, responded to the Ministerial Advisory Group recommendations and outlined the way forward for shared education.

The Minister signalled his general acceptance to proposals around the mainstreaming of funding for shared education and committed to bring forward a statutory definition of shared education in the Education Bill and provisions to ensure the Education and Skills Authority would have a duty to encourage and facilitate it.

- (e) The Minister said: "Shared education is rolling out as we speak. I would like to see a legal definition put in place through the ESA Bill. However, if the ESA continues to be delayed, I will consider bringing forward legislation to introduce a definition of shared education separate from the ESA Bill, as I place such importance on it."
- (f) Speaking at the Sharing in Education Programme Final Conference in November 2013, the Minister outlined the challenges to ending separation in schools and said:

"[SIEP] projects represented at today's conference, supported by the Fund, have together addressed many of these challenges. Together they provide real and tangible evidence to support the case for Shared Education.

"Hence the education aspects of the Fund's work is of significant importance as we in government seek to advance shared education. I commend the Fund on their vision to invest in this work and one which has made a real, and lasting, difference to the young people who have undoubtedly benefited."

5.0 Conclusion

The Fund has played a key role in moving shared education from an embryonic working concept towards maturity and the point where it can become a mainstreamed aspect within the Department of Education and a part of education delivery in every classroom in Northern Ireland.

Kilbride Central Primary School

Evidence for Education Committee Re: Shared Education

A Perspective from Kilbride Central Primary School, Ballyclare, Co. Antrim

This document was prepared following a request from the Stormont Education Committee as part of their inquiry into Shared/Integrated Education.

Introduction and Background

This evidence has been submitted on behalf of our school and Board of Governors by Mr C. Currie, Principal of Kilbride Central Primary School.

I am 33 years old and was appointed in September 2012 so I am now entering my third year of headship. I previously had a successful teaching career for 8 years in Loanends Primary School, Nutts Corner which included achieving a Masters in Education and a Professional Qualification of Headship (PQH). I am pleased with what I have achieved and consider myself to have a very neutral and rounded view of education (and all its foibles!) in Northern Ireland.

As a child of a Protestant mother and a Roman Catholic father (both from North Belfast) I was brought up in the controlled sector of education in Bangor but was always taught to maintain a balanced opinion and look at things from all angles before forming an opinion. I continue to do this now and consider it one of my strengths as a school leader.

The following paragraphs are my responses to the issues being debated by the Committee:

1.0 Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;

- 1.1 As the above has two clear aims I will address them one at a time...
- 1.2 As Shared Education and Integrated Education has always been the 'add on' or treated like a luxurious afterthought if one had the political foresight to see its potential since its inception some years ago I think, given the current political deadlock and fact that the country appears to be going backwards rather than forwards, this is an excellent time to review, promote and formalise this sector of education- even better if it expands.
- 1.3 There can only be good things that come from a legislative requirement to facilitate and encourage Shared Education. At the moment it is too easy for political parties to 'back their own horses' when it comes to education which results in an ever-widening gap between the maintained and controlled sectors. Nobody seems to take ownership of the integrated sector. The result? Some of the most educationally sound, popular and over-subscribed schools/ colleges in the country eg. Slemish, Lagan, Bangor Central, Ulidia etc. filled in the large part by rational-thinking masses who value a good education over political polarisation. The more this is forced upon extremist parties like the PUP/DUP and Sinn Fein, the better education will become and the better future we will have for our country.

2.0 Identify the key barriers and enablers for Shared Education and Integrated Education;

- 2.1 Unfortunately there are more barriers than enablers however the enablers I can think of are the many, many people (the silent majority of the population I expect) who would back and support the philosophy. I also expect that the majority of professionals would also be behind it.

- 2.2 Where do we begin with the barriers? The disastrous approach by taken by successive Sinn Fein Education Ministers who appear to have pursued their own political agendas under the guise of 'Putting Pupils First'. It has been one calamity after another, I expect you don't need me to list them. All they have succeeded in doing is segregating the education system further and destroying the morale of teachers everywhere. Whilst we have two large political parties with completely opposite viewpoints and unwilling to compromise (unless a shady deal for mutual benefit has been done in a back room somewhere), it is unlikely the aims of this debate will ever be realised.
- 2.3 I would absolutely love to promote CRED (Community Relations, Equality and Diversity) and market ourselves as a 'Voluntarily Integrated' School, especially in an area like Ballyclare where pain runs deep, however myself and the staff have been so overwhelmed with changes to the curriculum (indeed some have been necessary) and getting our heads around successive failed initiatives like Computer Based Assessment and Assessment of the Cross Curricular Skills amongst the many other initiatives that constantly get fired at us that we simply don't have enough hours in the day. Whilst schools continue to be judged and inspected on failing measures of assessment these will always be the priority. As a person who has to bridge the gap between educating young children to the best of my ability and a system which has so many rotten fingers in its pie I can confirm that the whole thing is an absolute mess; it needs knocked down and started again. We are handcuffed by a failing system and until these are removed Shared Education will forever seem like an impossible dream.
- 2.4 Even as I sit and write this on a wet morning in July I still have no idea what direction assessment will go this incoming September. In the last two months I have received communications from my union that Cross Curricular Assessment (which shapes my whole School Development direction) is to be shelved; the same week I received a letter from the Minister telling me that it is clearly not working but that it will NOT be shelved. Where do we go?

3.0 Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;

- 3.1 I can't comment on any detailed analysis of the sector having never worked in it. My only experience has been gained through working alongside Integrated Colleges as a feeder primary and additional experiences from parents which have always been very positive.

4.0 Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools;

- 4.1 I see the solution here as very simple: remove the current failing barriers in our system such as Cross Curricular Assessment; allow schools to use their existing and effective individual approaches to assessment; inspect schools on an individual basis rather than using a one-size-fits-all approach; this will free up time for schools to pursue CRED much more freely and invest in paired/shared projects across the sectors. I don't even see much expense involved!

5.0 Report to the Assembly on its findings and recommendations by Spring 2015.

- 5.1 I am happy for any of this information to be used by the Assembly and am happy to take part in any kind of further consultation to support my views or elaborate on them. I would actually be quite keen to do this as it's genuinely something I believe is necessary for the future of this country and whatever children/grandchildren I am fortunate enough to eventually have.

Best Regards,

Christopher Currie
Principal
Kilbride Central Primary School

Knox and Borooh 1

Briefing Notes for Education Committee 15th October 2014 Colin Knox and Vani Borooh

Definitions

Difference between shared education and integrated education:

Shared Education

Shared Education encompasses a number of different types of sharing, from projects and shared classes through to shared education models, such as those defined in the Bain report (eg: Federations/Confederations; Shared Campus and Shared Faith schools).

Under Article 64 (1) of The Education Reform (NI) Order 1989, integrated education is defined as “the education together at school of Protestant and Roman Catholic pupils (Minister of Education)

The Terms of Reference for the Ministerial Advisory Group on Advancing Shared Education defined Shared Education as:

The organisation and delivery of education so that it: meets the needs of, and provides for the education together of, learners from all Section 75 categories and socio-economic status; involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion (MAG Report)

By its nature, Shared Education involves *more than one* school type. This view has been endorsed by the Ministerial Advisory Group, which further refined the definition to “...involves *two or more schools* or other education institutions from different sectors working in collaboration...” (Minister for Education)

Integrated education

Integrated schools bring together children and adults from Catholic, Protestant and other backgrounds in each school. The schools strive to achieve a religious balance of pupils, teachers and governors and acknowledge and respect the cultural diversity they represent (IEF)

Integrated Education brings children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school(NICIE)

Under Article 64 (1) of The Education Reform (NI) Order 1989, integrated education is defined as “the education together at school of Protestant and Roman Catholic pupils” (legal definition).

Integrated education brings children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school. Integrated Schools ensure that children from diverse backgrounds are educated together (DE website)

There are two types of integrated schools. New planned integrated schools are *Grant-Maintained Integrated (GMI) Schools* which are funded directly by the Department of Education under the arrangements set out in the Common Funding Scheme for the Local Management of Schools. Existing controlled schools which transform to integrated schools are *Controlled Integrated* and managed by the Education and Library Boards through the Boards of Governors.

Justice Tracey decision

"Mr Justice Treacy has confirmed the situation as to what constitutes an integrated education. He has made it clear that integrated education is a stand-alone concept:

"the education together at school of Protestant and Roman Catholic pupils."

He further confirms that integrated schooling as defined cannot be delivered by schools with a predominantly Catholic or Protestant ethos. The article 64 duty therefore relates to integrated schools only — schools that are properly constituted to achieve an equal balance in worship, celebration and exposure to all faiths, with a board that is charged to strive in its ethos to achieve those aims. Our motion therefore calls on the Minister to accept and act on the duty under article 64 to facilitate and encourage, not just to pay lip service, and to accept that integrated education in the meaning of the 1989 Order has now been legally defined as a concept envisaging the education of pupils together in the same school, rather than in a school with a predominantly Catholic or Protestant ethos" (Trevor Lunn, Alliance Party).

Under Article 64 (1) of the Education Reform (NI) Order 1989, the Department of Education has a statutory duty to encourage and facilitate the development of integrated education. To help encourage and facilitate the development of integrated education, the Department of Education provides annual funding to help schools with the process of transformation to integrated status. This supports schools in the initial stages of the transformation process and with the employment of a teacher, from the minority community in the school, to assist with religious education. The budget available for 2014/15 is £191k. In addition, Article 64 (2) of the 1989 Order allows the Department to pay grants to a body which has as an objective the encouragement or promotion of integrated education. In fulfilment of this legislation, the Department of Education provides funding annually to the NI Council for Integrated Education (NICIE). Funding of £665k has been allocated for 2014/15.

The Extent of Segregation

Education provision demonstrates the extent of division between the communities. As the Department of Education statistics (2013/14) show:

- In the primary sector: 6.2% of Catholics attend controlled primary schools; 1% of Protestants attend maintained primary schools; and 5.7% of primary school children attend integrated schools.
- In the secondary (non-grammar) sector: 2.8% of Catholics attend controlled secondary schools; 1% of Protestants attend maintained secondary schools; and 14.9% of secondary (non-grammar) pupils attend integrated schools.
- In the secondary (grammar) sector: 8.3% of Catholics attend controlled grammar schools; and 0.9% of Protestants attend voluntary Catholic grammar schools.
- Overall, 6.7% of primary and post-primary pupils attend integrated schools.

Catholics are therefore much more willing to go to schools in the controlled sector than Protestants are to attend maintained schools. The greatest movement by Catholics is into controlled grammar schools. Many young people in Northern Ireland never experience cross community education until they attend university.

Demand for integrated education

Research evidence on the impact of integrated education tends to focus on its reconciliation and societal benefits in the divided society that is Northern Ireland. These benefits accrue from intergroup contact which can positively influence social attitudes about ‘the other’ community and create a more plural society (McGlynn, 2011; Stringer et al, 2009; Hayes et al, 2007). The evidence is summarised by Stringer et al (2000:11) when they conclude that meaningful contact with peers from the other religion in school is more likely to make them ‘more accommodating to issues that have divided the two religious groups’ in their adult life.

Education Minister said:

“In any year, the popularity of a school sector is most appropriately measured by the number of parents expressing a first preference on the application/transfer form for schools in that sector.

Within the integrated sector, the number of places available in both the primary and post-primary sectors slightly exceeds demand, although there may be pressure in particular areas, or for particular schools, due to parental preference.

Where pressure on places exists at a school, the Department will consider any request from a school for a temporary increase to its admission and/or enrolment numbers. Temporary

variations will not be granted if there are other schools of the same sector within reasonable travelling distance with spaces available. Each case is considered on its own merits.

In the longer term, the Area Planning process aims to assess the demand for places in every sector based on robust and verifiable evidence. Where there is identified need the school managing authority will consider that need in the overall context of the area plan and if appropriate bring forward a Development Proposal to increase the number of places. In addition, any existing grant-aided school, with the exception of a special school, may consider transforming to integrated status.”

Table 1: Summary statistics: integrated schools 2013/14

	School type	Protestant	Catholic	Other religions/religion not known (includes Christians and non-Christians)	Minority community %	Unfilled places	Total pupils	First preference applications 2013/14	Approved admissions number
Primary Schools (Y1-7)	Controlled integrated (n = 19)	1,502 (42%)	1,050 (30%)	1,003 (28%)	30%	718	3,555	593	613
	Grant maintained integrated (n = 23)	1,805 (33%)	2,356 (42%)	1,384 (n = 25%)	33%	210	5,545	855	822
Post primary schools	Controlled integrated (n=5)	1,681 (66%)	416 (16%)	460 (n=18%)	16%	533	2,557	347	560
	Grant maintained integrated (n = 15)	4,048 (42%)	3,910 (41%)	1,591 (n = 17%)	41%	511	9,549	1435	1556
TOTAL	62 integrated schools	9,036 (42.6%)	7,732 (36.5%)	4,438 (20.9%)	36.5%	1,972 (8.5%)	21,206	3,230	3,551

Notes:

1. In addition to the above numbers there are 539 pupils in integrated nursery and reception classes making a grand total of 21,745 pupils in integrated schools from an overall school population of 326,205 pupils. Integrated education therefore represents 6.7% of the overall school population.
2. There are questions asked about the classification of pupils attending integrated schools. Critics argue the high numbers of pupils recorded as 'other religions/religion not known' is an attempt by the sector to comply with government requirements that there should be 30% pupils from the minority community. Notwithstanding, the above statistics show that post-primary controlled integrated schools are clearly not meeting this target. See also Annex 1 (table 8) which shows some voluntary and controlled grammar schools which have a good mix of children from different community backgrounds.
3. Table 1 above shows that 8.5% of approved enrolments to integrated schools remain unfilled. Shaded rows in the tables 7 - 9 (in Appendix 1) highlight those schools where there are no unfilled places (7 primary schools and 7 post-primary schools).
4. In the overall integrated sector, there were 3,230 first preference applications for 3,551 approved places – an excess of 321 places. The sector is therefore 9% undersubscribed.

Tables 2 below show the top/bottom 3 primary and post-primary schools which were over and under subscribed respectively in 2013/14 to the largest extent are as follows:

Table 2: Extent of over and over subscription in Integrated Education Sector 2013/14

Primary School	First preference applications	Approved admissions number	Over (+) or undersubscribed(-)
Forge Integrated Primary School	60	36	+24
Glencraig Integrated Primary School	45	30	+15
Bridge Integrated Primary School	72	58	+14
Saints & Scholars Integrated Primary School	28	55	-27
Rathenraw Integrated Primary School	9	30	-21
Glengormley Integrated Primary School	46	60	-14

Post Primary School	First preference applications	Approved admissions number	Over (+) or undersubscribed(-)
Slemish College ¹	161	120	+41
Lagan College ¹	236	200	+36
Drumagh College	117	96	+21
Malone Integrated College	45	130	-85
Crumlin Integrated College	11	75	-64
Fort Hill College	115	160	-45

¹ Please note that Slemish College and Lagan College are selective schools which may skew the results here.

Performance of Integrated Education

The data on the performance of integrated schools (see Figure 1 below) show that Controlled Integrated schools are the poorest performing in the post primary sector, if judged by the educational outcomes of pupils attaining 5 or more GCSEs including English and Maths. Grant Maintained integrated schools perform at a level comparable to non-selective secondary schools which, in turn, achieve significantly lower results than controlled or voluntary Catholic grammar schools.

Figure 1: School performance by management type

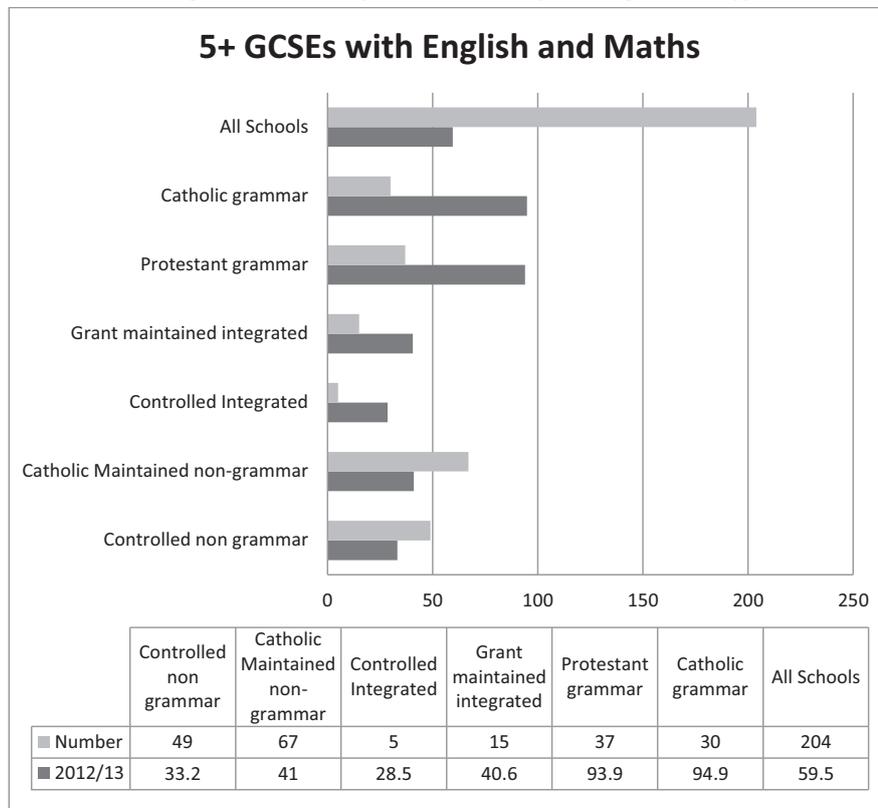

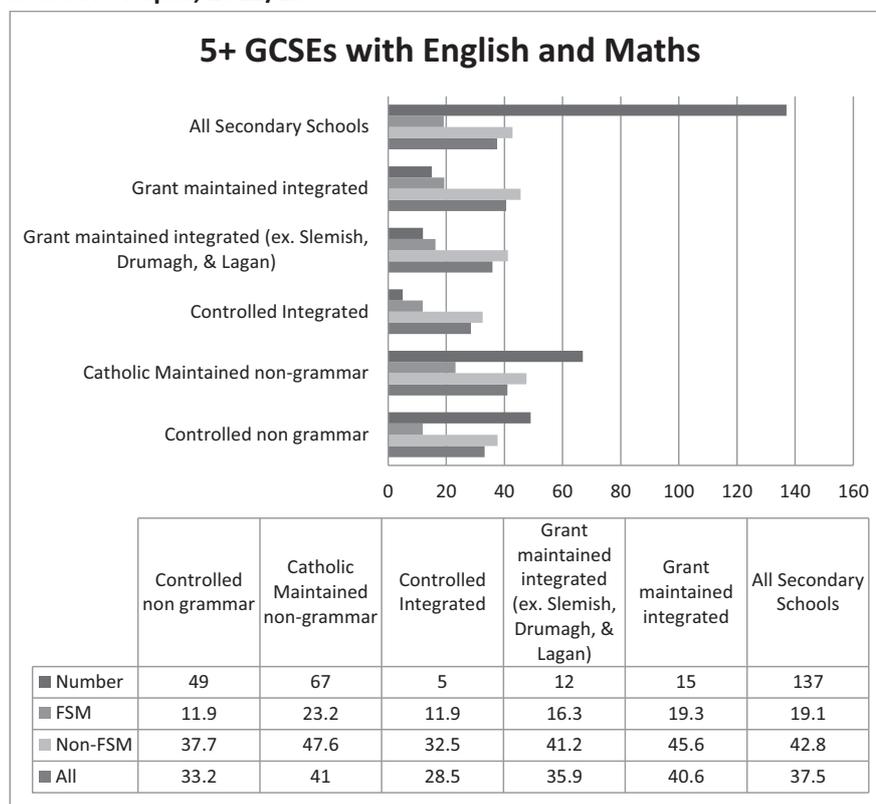

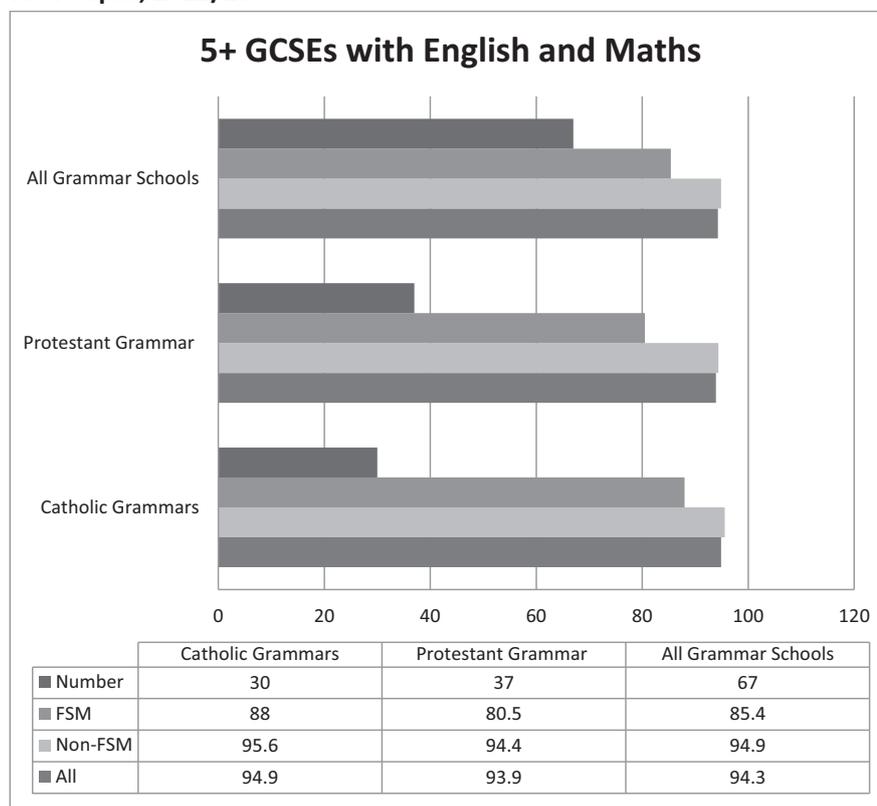

Figure 2: Non-Grammar School performance by management type, FSM and non-FSM Pupils, 2012/13*

* Note there was one 'other maintained school'.

Figure 3: Grammar School performance by Catholic Protestant, FSM and non-FSM Pupils, 2012/13*

Note that four Catholic grammars and 14 Protestant grammars did not have *any* Year 12 FSM pupils

Figure 4: Percentage of FSM Pupils in Total Enrolment by Management Type, non-Grammar Post-Primary Schools, 2013

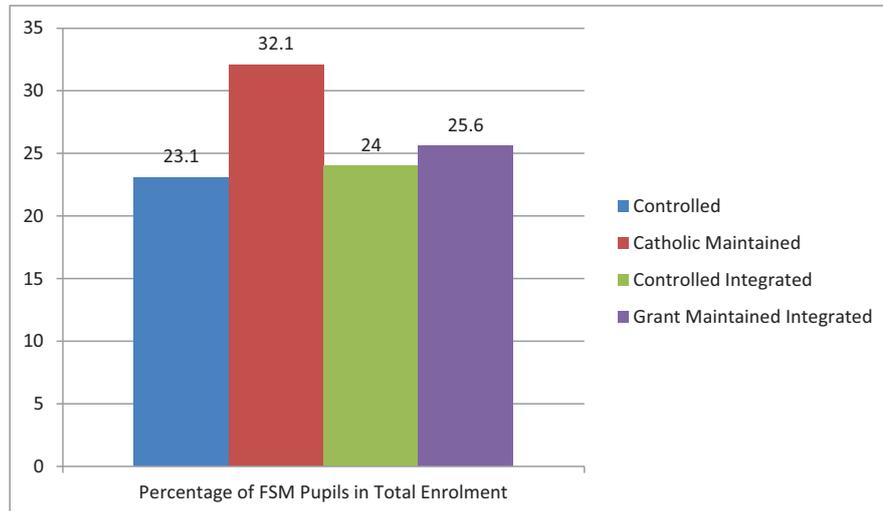

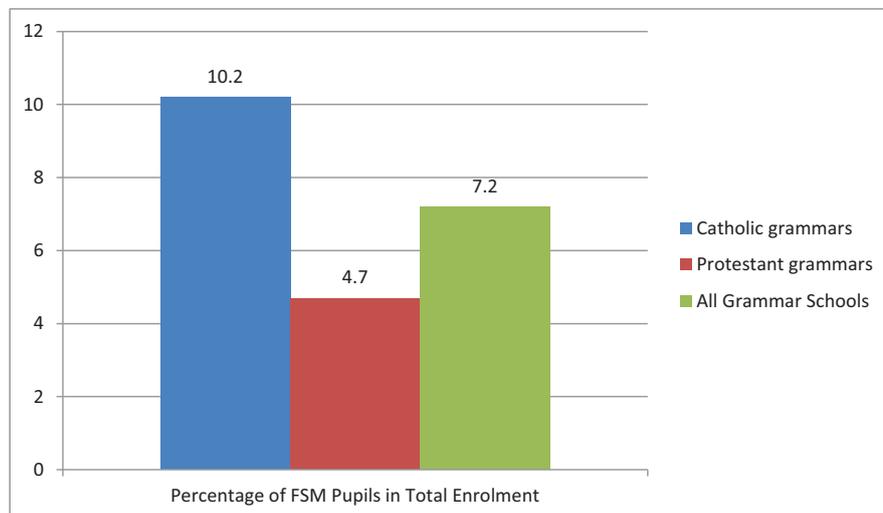

Figure 5: Percentage of FSM Pupils in Total Enrolment by Grammar School 2013

Contrary to the prior belief that in every school the performance of *FSM* pupils would not be as good as that of *NFSM* pupils, there were 22 (out of 204) post-primary schools in Northern Ireland in which the performance of *FSM* pupils, with respect to 5+ A*-C (E&M) GCSE passes, was *at least as good as* that of *NFSM* pupils. These 22 schools are identified in Table 3, below and, of these 22 schools, 18 were grammar schools (10 Protestant, eight Catholic); two were maintained; and two were grant maintained integrated. The 10 Protestant grammars had a substantially lower proportion of year 12 *FSM* pupils than the eight Catholic grammars (5.2% versus 10.5%).

Table 3: Schools in which NFSM pupils were outperformed by FSM pupils, 2013

School	Town	Type	% with 5+ A*-C (E&M)		Year 12 numbers	
			NFSM	FSM	FSM	Total
Strangford Integrated College	Carrowdore	GMI	32	45	11	91
Cambridge House Grammar School	Ballymena	Grammar (P)	90	100	10	158
Belfast High School	Newtownabbey	Grammar (P)	92	100	6	139
Rainey Endowed School	Magherafelt	Grammar (P)	94	100	6	101
The Royal School Dungannon	Dungannon	Grammar (P)	95	100	7	100
Malone Integrated College	Belfast	GMI	18	22	36	133
Lurgan College	Craigavon	Grammar (P)	95	100	8	119
Grosvenor Grammar School	Belfast	Grammar (P)	96	100	6	163
Portadown College	Craigavon	Grammar (P)	97	100	6	203
Mount Lourdes Grammar School	Enniskillen	Grammar (C)	90	92	13	91
St Dominic's High School	Belfast	Grammar (C)	98	100	15	142
St Joseph's College	Dungannon	Maintained	21	24	34	94
Banbridge Academy	Banbridge	Grammar (P)	98	100	7	194
Ballymena Academy	Ballymena	Grammar (P)	98	100	7	181
Collegiate Grammar School	Enniskillen	Grammar (P)	99	100	5	75
Loreto Grammar School	Omagh	Grammar (C)	99	100	16	123
St Mary's High School	Downpatrick	Maintained	57	58	12	73
St Louis Grammar School	Ballymena	Grammar (C)	99	100	8	146
Lumen Christi College	Londonderry	Grammar (C)	100	100	7	124
St Joseph's Grammar School	Dungannon	Grammar (C)	100	100	10	76
Our Lady's Grammar School	Newry	Grammar (C)	100	100	10	127
St Mary's Grammar School	Magherafelt	Grammar (C)	100	100	16	165

There were 23 post-primary schools in which the performance of *FSM* pupils, though worse than that of *NFSM* pupils with respect to 5+ A*-C (E&M) GCSE passes, was within 10% of the latter's performance. These are shown in Table 4 and they comprise 17 Catholic schools: 11 Catholic grammars and six Catholic maintained schools. Of the remaining six schools, 5 were Protestant grammars and one was a grant maintained integrated college.

Table 4: Schools in which FSM pupils' performance was less than 10% of NFSM performance, 2013

School	Town	Type	Yr 12 FSM	Yr 12 total	PGR

Parental choice and integrated education

Schools which improve their educational outcomes become more popular with parents. Using 2013 admissions data to post-primary schools² in which parents express their first preference when completing transfer forms, Borooah and Knox examined variations in popularity across schools. They examined variations in popularity across schools, as measured by the number of their first-preference applications, and asked, in particular, whether variations in popularity are associated with variations in schools' educational performance? In the analysis, educational performance is measured in two ways: (i) the proportion of pupils obtaining 5+ GCSE grades at A*-C and (ii) the proportion of pupils obtaining 5+ GCSE grades at A*-C, *including English and Mathematics*.

The results of our analysis (table 5 below) show that both types of GCSE performance significantly and positively affect the number of first preference applications expressed by parents for a school. Performance, including English and Mathematics, had a stronger effect than performance which does not include these subjects. In short, better performing schools influence parental choice for their children. This is hardly surprising but the strength of this relationship is compelling. The evidence shows the variation in parents' first preference choice for a post-primary school is explained by the school's education performance. Parents therefore 'vote with their feet' and choose schools largely based on educational performance rather than schools which might define their primary goal as reconciliation (integrated schools).

Table 5: Regression Estimates for Number of First Preference Applications to post primary schools

	Coefficient	Standard Error	T value	Prob>t
Proportion of 5+ A*-C including E&M	0.864	0.229	3.78	0.0
Proportion of 5+ A*-C	0.696	0.187	3.73	0.0

Shared Education

The focus of shared education is delivering core curriculum activities where teachers and pupils work together across schools to achieve higher quality educational experiences. The delivery model involves 4 basic stages (figure 6):

FIGURE 6: SHARED EDUCATION MODEL

Shared education recognises that schools have interdependent relationships and promotes positive collaboration to support the common good. Ultimately it is about creating interdependencies between schools and making boundaries porous – it isn't about threatening anyone's identity or the creation of a Catholic/Protestant hybrid.

Much of the theoretical and research underpinnings for collaborative learning draw on the extensive literature on how collaboration and networking between schools in Great Britain can enhance school effectiveness and improvement. Work by Lindsay *et al* (2005), Chapman and Allen (2005), and Chapman and Hadfield (2010) examine the potential for stronger schools being matched with weaker schools to help improve their performance. Muijs *et al* (2010) argue that networking is differentially effective in meeting different educational goals and set out the circumstances under which it is more likely to enhance school effectiveness and improvement:

Where improvements in pupil performance have been seen, this is often where more effective schools have paired with less effective schools to help them to improve, where leadership has been strong and supportive of networking, and where the number of schools involved has been limited. External support may also be helpful in cases where internal capacity or trust between schools may be lacking (Muijs *et al*: 2010: 24).

Chapman's research (2008; see also Chapman and Harris, 2004; and West, 2010) highlights key levers for improvement where networking takes place in a context of challenging circumstances which he argues should include: generating positive relationships; focusing

on teaching and learning; understanding, leading and managing changes; committing to continuous professional development; building community; and, drawing on external support.

In their latest research on using collaboration and networking as a means of school improvement Chapman and Muijs (2013) conducted a large quantitative study (122 federations and 264 comparator schools) which examined the relationships between school federations and student outcomes. They developed a typology of federations (used to describe the nature of collaborative relationships and structural arrangements between two or more schools). One category was described as 'performance federations' consisting of two or more schools, some of which were low and others high performing schools. The study concluded:

Federations can have a positive impact on student outcomes and federation impact is strongest where the aim of the federation is to raise educational standards by federating higher and lower attaining schools. Our study therefore primarily suggests that school improvement may result when a strong school works with a weaker school to improve the latter, and that it is this rather than a generic "collaboration effect" that may lead to improvement (Chapman and Muijs, 2013:35).

The shared education programme has so far primarily acted as a pilot for cross-community collaboration and trust building between schools. It has been able to take risks because it is externally funded, whereas the Department of Education would have been much more cautious fearing a potential sectarian backlash amongst some parents and pupils. Having demonstrated its potential for cross-community collaboration, there is now a real opportunity to adapt shared education as a mechanism for networking amongst schools in pursuit of raising education standards, tackling inequalities and contributing to a more inclusive society. The policy opportunity exists through two key commitments given by the Northern Ireland Executive in the *Programme for Government 2011-15* in which the Executive pledges to: ensure all children have the opportunity to participate in shared education programmes by 2015; and, substantially increase the number of schools sharing facilities by 2015 (Northern Ireland Executive, 2011).

In practical terms this approach offers a number of possibilities. The Education Minister's recent proposals for school improvement focus precisely on those issues which are seen to be important in the stronger/weaker collaborative approach, *inter alia*: enhanced teaching and learning; strong leadership and management of change; and, a commitment to continuous professional development. Maintaining a focus on raising educational outcomes, through 'partnerships for excellence', means that **all** schools, regardless of pupils' background have the opportunity to improve. There has been a review of the schools' funding formula in Northern Ireland which offered opportunities to incentivise collaboration (Salisbury, 2012). Although the review did not support this idea, the Ministerial advisory

group on shared education did. Since schools which are currently competing for the same pupils are unlikely to want to collaborate (because they are from the same managing authority) then, by default, the collaborative partnerships will be cross-community. This, in turn, will have significant reconciliation benefits for students and society in the medium term. In short, shared education can complement the Minister's agenda on improving education standards, addressing inequalities and contribute towards a more inclusive society.

What are the educational benefits of sharing?

Education benefits:

We may analyse the benefits from sharing education in the context of individual returns to education defined as the wage premium of someone who holds that qualification over someone who does not, holding all the other educational achievements and the control variables constant. The research puts a monetary value on the lifetime earnings of those holding:

- (a) 5+ GCSEs at A*- C
- (b) 3+ A-levels but not proceeding to university
- (c) University degree

Engagement in SEP will: increase the likelihood of getting good GCSEs; of going to University; and gaining fluency in foreign language – than would otherwise be the case.

We can estimate the education returns resulting from pupils participating in the Shared Education Programme. We investigate the education returns through four education partnerships in the SEP with the following lead schools: Lumen Christi Grammar School ([London]Derry); Belfast High School; Belfast Model School for Girls; and Shimna Integrated College (Newcastle).

Research evidence based on 4 selected primary and post-primary schools involved in the Shared Education Programme concluded that involvement in the initiative would increase the likelihood of: getting good GCSEs; gaining fluency in a foreign language; and going to University. Table below sets our estimates of the total economic benefits emanating from the four partnerships discussed above. These benefits are defined in terms of the increased earnings of pupils who have benefited from the shared education intervention. Aggregating these per-pupil benefits over the total number of pupil beneficiaries obtains the economic benefit of the four partnerships. Table 6 below suggests that the **total net benefit**, aggregated over the four partnerships, amounted to **over £23 million**. This figure was obtained as the annual increase in the working life earnings per pupil beneficiary of the SEP intervention × the number of beneficiary pupils × 40 years working life.

Table 6: Analysis of Benefits across the 4 SEP partnerships

	Primary	Post-Primary		Strand 1	Strand 2	
Benefit	Some students will get good GCSEs*	Likelihood of good GCSEs is increased	Some students will get good GCSEs ³	Some students will go to university using 70 UCAS points	Some students will achieve 1-4 A*-C GCSE grades	Some students will gain fluency and seek work in mainland Europe
Pupils benefitting	20 out of 214	Likelihood for all 29 pupils raised from 60% to 80%	45 out of 214	6 out of 32	20 out of 60	23 out of 231
Amount of benefit per pupil over 40 year working-life	£277,393	£55,478 rise in expected earnings	£277,393	£174,440	£96,000	£138,760
Total Benefit	£5.5 million	£1.6 million	£12.5 million	£1.1 million	£1.9 million	£3.2 million
Total Project Cost over life of project	£1.8 million		£67,926	£126,479	£34,440	£277,144
Total Net Benefit over 40 year working-life	£5.3 million		£12.4 million	£973,521	£1.87 million	£2.9 million

Although the cost-benefit calculation on education is based on investing funds to secure an education return, the suggestion is that, should Shared Education become mainstreamed, it would draw on the existing DE budget and savings made elsewhere. In other words, there will be a net educational benefit which will result in higher education performance. The case studies illustrate that all types of schools can benefit – primary and post primary; secondary and grammar.

How is shared education being taken forward?

The new Shared Education Signature Project was launched in September 2014. The overall aims of the programme are to scale up the level of sharing drawing on existing evidence (see spectrum of sharing: figure 7, developed by Duffy, Baker and Stewart, QUB); mainstream financial support for any additional costs and improve the educational and reconciliation outcomes in school working collaboratively. This will be a four year project

³ The assumption is that they will achieve 5+ GCSEs at A*-C after the SEP intervention, instead of 1-4 A*-C in its absence

commencing with implementation in schools expected to commence in the 2014/15 academic year.

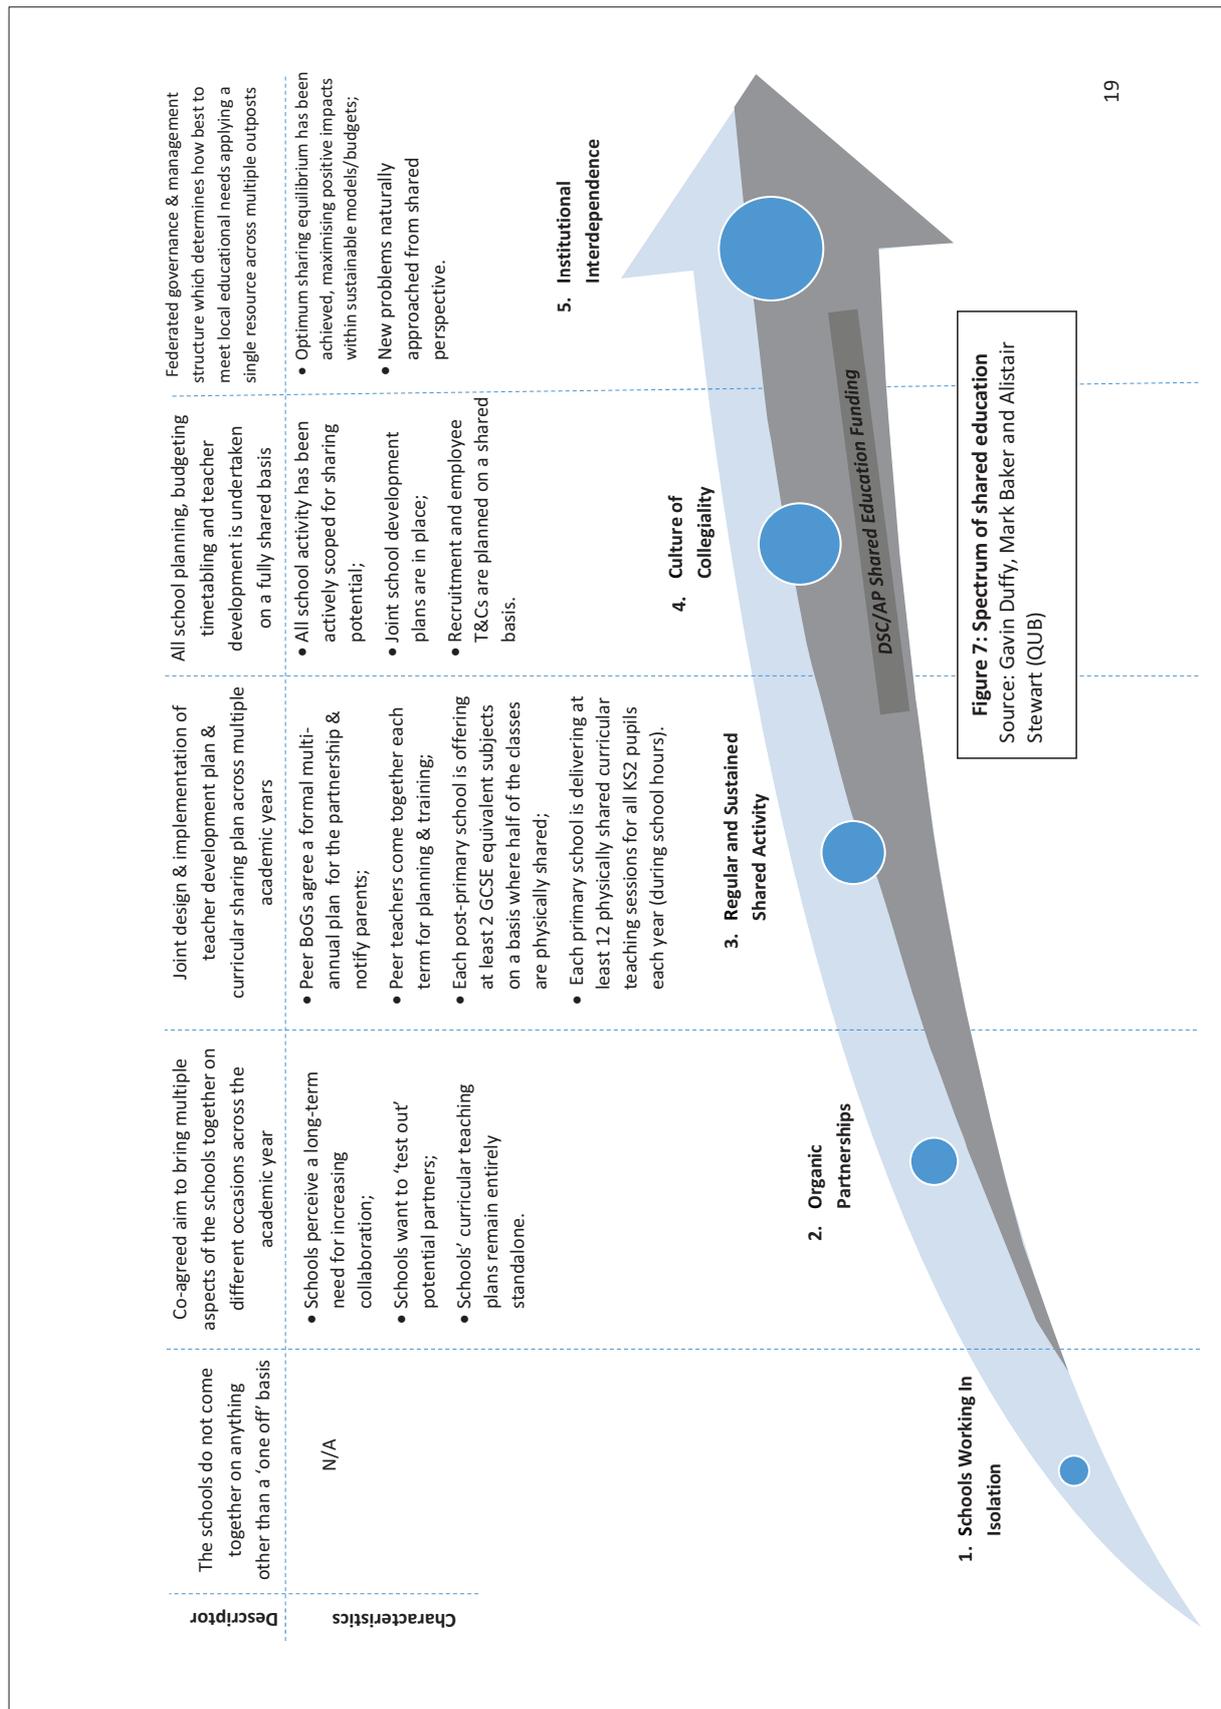

Agreement was reached with Ministers to establish a fund of up to £25m over the four year period, with contributions of up to £10m from the Atlantic Philanthropies, £10m from OFMDFM through central funds and up to £5m from the Department of Education. The availability of joint funding will be the incentive for schools to plan and have approved a shared education partnership at primary and post –primary level.

Atlantic funding in year 4 is subject to a commitment by DE (and/or Executive) to provide resources to mainstream shared education in the longer term.

Project objectives are:

- Improve education outcomes through schools working collaboratively
- Increase the number of schools participating in Shared Education
- Improve reconciliation outcomes through schools working collaboratively
- Increase the number of young people participating in Shared Education
- To work collaboratively to provide educators with professional development and develop their confidence and competence in using a range of learning strategies necessary for work in shared classes
- Enable schools to implement a progressive approach to shared education
- To ensure shared education becomes a core element of strategic planning within the Department of Education, Education and Library Boards/ Education & Skills Authority and schools.

Peace IV Funding – see details in Annex 2

Peace IV funding

The details of the PEACE IV Programme are currently under consultation but it will contribute towards the development of social and economic stability through the promotion of increased cohesion between communities. This is in line with relevant national policies including the 'Together: Building a United Community' (TBUC) strategy. In short, PEACE IV should complement the work of T:BUC.

Based on the results of a public consultation exercise and informed by the lessons of the Peace III Programme and additional research of the needs of programme area, the following strategic areas of investment have been prioritised for PEACE IV during the period 2014-2020:

- (i) **Shared Education:** The creation of a more cohesive society by increasing the level of sustained contact between school children from all backgrounds across the Programme area.

Actions to be supported:

- Joint development and planning of shared education initiatives;
- Joint delivery of the curriculum;
- Courses designed to increase good relations and respect for diversity among pupils, parents, and governors;
- Training and professional development courses designed to provide teachers with the necessary skills for curriculum planning and the delivery of lessons in relation to shared education.

- (ii) **Early Years & Young People:** The creation of a more cohesive community by equipping young people (through education, employment, training and initiatives that build respect) with a particular emphasis on NEETS from disadvantaged areas, with the tools to access opportunities in society.

Actions to be supported:

- Joint development and planning of youth work initiatives;
- Shared youth programmes focused on extracurricular sport, drama, cultural, language, entrepreneurial and volunteering activities;
- Cross-community and inter-cultural courses designed to increase good relations and respect for diversity among young people;
- Shared residential training programmes for young people, particularly those living adjacent to common interface areas;
- Peer mentoring initiatives;
- Youth leadership development initiatives;
- Cross-border professional development programmes to facilitate the transfer of knowledge, skills and experience;

- Training courses, including European placements, for NEETs to improve their employability.

(iii) Shared Spaces & Services: The creation of a more cohesive society through an increased provision of shared spaces and services.

Actions to be supported:

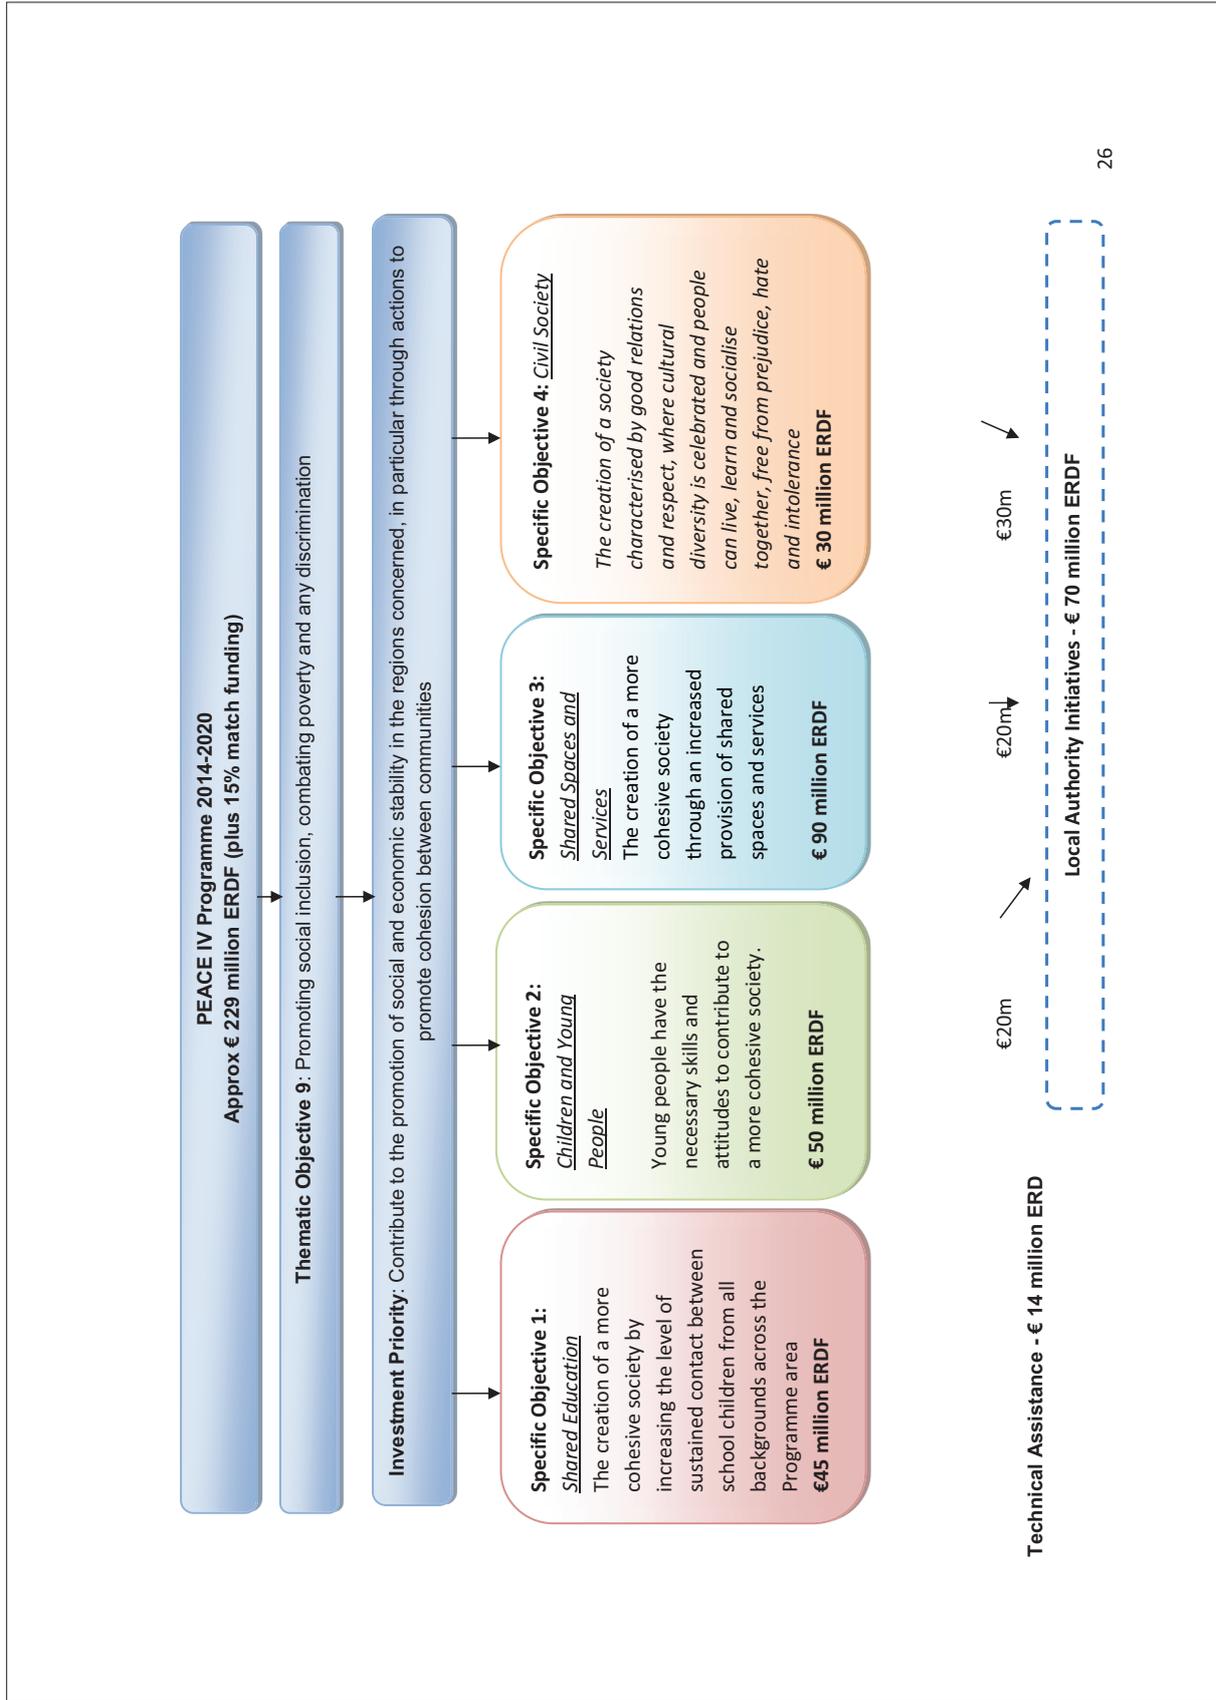

- Capital developments to create shared spaces - both urban and rural;
- Programming initiatives designed to facilitate maximum and sustained levels of shared usage within these shared spaces;
- Public/community partnerships and facilitation for programme activities for shared space;
- Protocol development programmes to facilitate greater collaboration between people and places;
- Regeneration activities to ensure that public spaces are welcoming to all and respectful of cultural identity;
- Shared services to address the trauma related needs of Victims and Survivors.

(iv) Civil Society: The creation of a society characterised by good relations and respect, where cultural diversity is celebrated and people can live, learn and socialise together, free from prejudice, hate and intolerance.

Actions to be supported:

- Structured programmes of activities involving groups from different backgrounds;
- Training and development programmes for inclusive civil leadership;
- Development of strong local partnerships aimed at addressing local problems of sectarianism and racism;
- Civil society development programmes focusing on areas such as: commemoration events; history; language; arts and culture; religion; leadership; community development; social enterprise; inclusion and equality; conflict resolution and mediation; entrepreneurial and economic activity; adult education; training and sport;
- Programmes aimed at engaging individuals and communities not previously involved in peacebuilding activities who wish to contribute to a shared society.

These 4 thematic areas have indicative allocated budgets as shown in the table below.

Knox and Borooah 2

Northern Ireland Assembly Education Committee Meeting
Fermanagh House: 18th June 2014
Briefing Paper: Shared Education Programme (SEP)

Introduction

The International Fund for Ireland (IFI) supported 19 projects within the Sharing in Education Programme (SiEP) which was evaluated by Education and Training Inspectorate (ETI). In addition to this programme, three other projects were funded by IFI and Atlantic Philanthropies. These 3 projects comprise the **Shared Education Programme (SEP)** which was implemented through the following organisations: Queen's University Belfast; the Fermanagh Trust; and, the North-Eastern Education and Library Board (Primary Integrating/Enriching Education Project or PIEE).

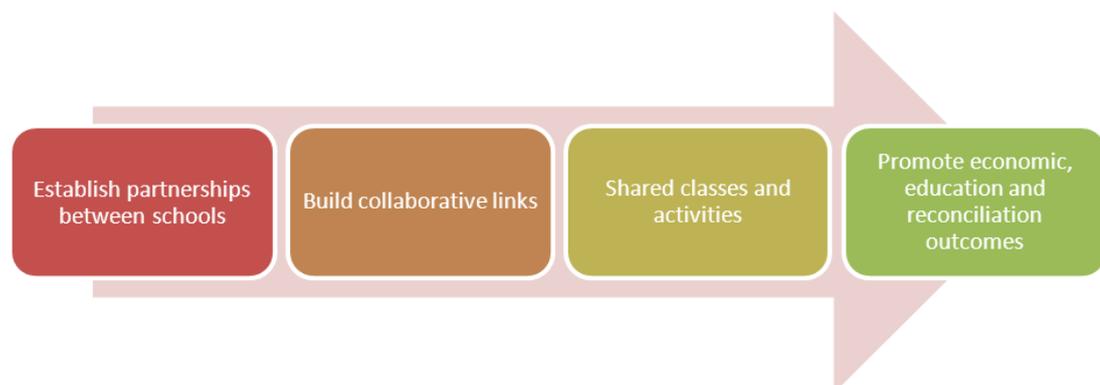

This briefing paper relates specifically to the **3 projects under the Shared Education Programme**. The Education Committee will receive a separate briefing form ETI in relation to IFI's 19 projects in SiEP.

What is Shared Education?

Shared Education refers to schools from different sectors working together in a sustained process ranging from two or more schools making shared use of specialist facilities, through to coordinated timetabling, and pupils taking classes across a network of schools. Shared education is distinct from Integrated Education which involves the removal of sectoral differentiation in favour of unitary common schools. Shared Education has the potential to contribute to: school improvement and access to opportunity; encourage more effective use of resources; and promote social cohesion through the achievement of a shared and better society.¹

How does it work?

The focus of Shared Education is delivering core curriculum activities where teachers and pupils work together across schools to achieve higher quality educational experiences. The delivery model involves 4 basic stages (see below).

Shared education recognises that schools have interdependent relationships and promotes positive collaboration to support the common good. Ultimately it is about creating interdependencies between schools and making boundaries porous – it isn't about threatening anyone's identity or the creation of a Catholic/Protestant hybrid.

In practical terms, the implementation of this model is best exemplified through the Shared Education Programme which started in 2007, is funded jointly by the International Fund for Ireland and Atlantic Philanthropies, and is managed by Queen's University School of Education, the Fermanagh Trust and PIEE (Primary Integrating/Enriching Education Project in North Eastern Education and Library Board). During the 3 Years of the SEP, its activities have encompassed the following over the duration of the programme:

- 158 schools, which formed 54 school partnerships;
- Approximately 35,800 pupils; and,
- Approximately 28,300 hours of shared activities.

Three short examples illustrate shared education in practice:

- (a) **Enhanced Qualifications Framework:** six schools in the Magherafelt area (two Maintained, two Controlled, one Integrated and one Special Education Needs (SEN) school) provide support for Year 13 pupils to prepare them for third level education by extending the post-16 curriculum provision. There are 29 different shared subjects/ courses offered to all Year 13 pupils on a weekly basis. Overall 390 pupils availed of the subjects on offer, resulting in 574 hours of shared classes being delivered. The delivery model implemented by the partnership involves the majority of subjects being taken as 'twilight' classes and the remaining subjects are embedded into the school timetable in a collaborative block.²
- (b) **Rural Primary Schools:** Two small adjoining rural primary schools (Controlled and Maintained) in Tempo, County Fermanagh came together to enhance the educational experience for pupils and teachers through collaborating with one another rather than working separately. Every pupil within the two schools (n=176) was given the opportunity to participate in shared classes in drama, dance, art & design, health related fitness, and science. All the subjects contributed to the pupils' development within the NI Curriculum. A joint shared education policy has been developed between the schools, and teachers have also collaborated for staff development (e.g. Child Protection and First Aid training) and curriculum planning. Parental endorsement has been hugely positive in an area where the legacy of the conflict is significant.³
- (c) **Shared Teacher Initiative:** Two primary schools (Controlled and Maintained) within the North Eastern Education and Library Board area whose future is at risk separately formed a education partnership and shared resources to deliver Key Stage 2 in areas such as literacy, personal development and mutual understanding (PDMU), music, art and sports, Such was the success of the collaboration that this partnership now employs a shared teacher appointed by a joint board of governors – an initiative which offers much wider potential for schools throughout Northern Ireland.⁴

What are the benefits of Shared Education?

There are at least three significant types of benefits arising from shared education: economic, education and reconciliation benefits.

Education benefits: research evidence based on 4 selected primary and post-primary schools involved in the Shared Education Programme concluded that involvement in the initiative would increase the likelihood of: getting good GCSEs; gaining fluency in a foreign language; and going to University. This translated into increased lifetime earnings for participants in study. For an investment of £2m across the four projects, the educational benefits for children involved in the 4 projects were calculated at £25m. In short, the **total net benefits** across 4 primary and post-primary schools involved in shared education amounted to £23m.⁵

Reconciliation benefits: There is a considerable body of research evidence to show the reconciliation benefits of sustained contact across school sectors in Northern Ireland.

In one study, for example, researchers examined social identity and intergroup attitudes amongst children attending a state controlled Protestant school and how they dealt with issues of diversity and difference. The findings suggest that separate schooling is more likely to contribute to ‘own’ group bias, stereotyping and prejudice.⁶ Researchers have also considered the impact of pupils’ participation in the Shared Education Programme on cross-group friendships and intergroup anxiety. The study confirms the value of contact as a mechanism for promoting more harmonious relationships that can help promote social cohesion in a society that remains deeply divided.⁷

Economic benefits: Some schools which are ‘stressed’ under three of the six criteria (education performance, school enrolments, and financial viability) from the Department of Education’s Sustainable Schools Policy can offer budgetary savings through shared education ‘solutions’. School closures achieve limited savings to the Department of Education because the Age Weighted Pupil Unit (AWPU) is a significant element of the school funding allocation (80%) which follows the pupil when his/her school closes. One study puts the savings to the Department of Education at 3.1% of their budget were they to close all primary and post-primary schools below the ‘sustainable schools’ enrolment thresholds. At the level of the school, shared teachers, classes and educational resources will provide schools with economies of scale.⁸

The reconciliation benefits described above have been costed for the Shared Education Programme. The study puts a monetary value on the reduction of sectarian hostility and suspicion towards the ‘other’ community using survey data on attitudinal and behaviour changes in SEP participants. In societal terms this would lead to: reduced police costs; increased foreign investment; and a reduction in the number of sectarian incidents. Savings are estimated at £80m per year.⁹ The reconciliation benefits of shared education can therefore contribute directly to the Government’s commitment to ‘building a united community’ (T:BUC).

Figure 1: Tempo Controlled Primary School

Sculpture: ‘From a distance we look the same, up close we are different’

Social Justice and Education

Beyond the direct and indirect education, economic and reconciliation benefits outlined above, the current education system is socially unjust. We know from research that post-primary pupils from deprived backgrounds face considerable difficulty accessing grammar

schools.¹⁰ There is a much greater problem for pupils accessing Protestant than Catholic grammar schools.¹¹ We also know that children in receipt of free school meals and those with special educational needs are disproportionately under-represented among grammar schools. The education performance of Maintained secondary and grammar schools is significantly better than their Controlled counterparts. Shared education offers a real opportunity to improve the education of those pupils from the Controlled sector and, in so doing, contribute to the wider societal reconciliation benefits associated with cross sectoral working.

Mainstreaming Shared Education

Mainstreaming shared education fits in with a number of the Department of Education's priorities. First, within DE's strategic objectives, the economics research above offers proposals which begin to 'close the performance gap and increase access and equity'. Second, within the Programme for Government (PfG) commitments, improving education performance at GCSE level with specific reference to those from disadvantaged backgrounds has been highlighted as a priority. In addition, there are 3 explicit commitments in the PfG to shared education (Lisanelly; all children should have the opportunity to participate in shared education by 2015; and to substantially increase the number of schools sharing facilities by 2015). Third, the Department's Community Relations, Equality and Diversity in Education (CRED) policy document makes a clear commitment to sharing and collaboration across and between all educational settings on a cross-community basis. Fourth, shared education is an integral part of the devolved government's commitments in Together Building a United Community (T:BUC) policy document.

Key features of shared education

- Offers local solutions to cross-sectoral working (as opposed to a 'one size fits all' area planning approach).
- Works best where schools are in close proximity to avoid transportation costs of sharing.
- Basis of sharing is sustained contact in the delivery of core curriculum activities.
- Clear education, economic, reconciliation and social justice effects.
- Maintains the identity of communities, threatening no-one's ethos.

Evidence informed policy making

So how might the above research inform education policy? There is an opportunity in the current review of the schools estate through the viability audits of primary and post primary schools and the associated area planning process to embed shared education. The following policy recommendations are set out for consideration:

1. Cross-sectoral options should be explored as the first step in the area planning process. Only after shared solutions have been thoroughly examined should area plans move to intra-sectoral proposals, giving reasons why shared solutions will not work.
2. The proposed outcomes of the area planning process should be the subject of an open and transparent public consultation which allows for a breadth of feedback. In addition, only three of six criteria for area planning have been included in the audit process. The remaining three criteria: strong leadership, accessibility, strong links with the community should feature in the final outcomes of the area planning process.
3. The common funding formula for schools is currently under review. The new formula should incentivise sharing as an integral part of the way schools are funded.

4. Any new capital provision or significant refurbishments should be 'share-proofed'. In other words, no new schools should be built without incorporating key principles of shared education (shared budgets, teachers, administrative and learning resources).
5. Shared education should feature as a key component in the implementation of T:BUC (over and above the commitment to 10 shared campuses). T:BUC notes: 'we believe that creating a full shared education system is a crucial part of breaking the cycle of inter-generational under-achievement, unemployment, and sectarianism, and improving good relations amongst young people'¹²
6. There pre-existing working models of shared education funded by external providers (Atlantic Philanthropies and International Fund for Ireland) need to feature prominently in the new Delivering Social Change Shared Education Signature Project (jointly funded by OFMDFM, DE and Atlantic Philanthropies). There is a risk that DE will see this initiative as little more than CRED-plus.
7. Area Learning Communities [ALCs] have been supported as a mechanism through which schools can broaden the range of curricular pathways for pupils in the run-up to implementing the entitlement framework which becomes an obligation for schools by 2014-15. In addition, it is claimed that ALCs are putting in place shared education. There is no evidence to support this assertion. DE claims that they do not gather information on the extent of sharing in the ALCs, their impact on educational outcomes, and the value for money of these collaborative arrangements.

Labour Party Northern Ireland

The Labour Party in Northern Ireland

Submission of the Northern Ireland Constituency of the Labour Party To the Education Committee of the Northern Ireland Assembly's Inquiry on Integrated Education and Shared Education

“Children are the living messages we send to a time we will not see”

(Postman, 1982).

The Party would like to put forward the following as its contribution to the inquiry on Integrated and Shared Education

“We live in a world that is prone to many expressions of prejudice, in which religious attitudes still play a disturbingly significant part. Sometimes these attitudes are deliberate and malicious; but perhaps more often they are due to a straightforward lack of awareness and understanding – the ignorance that creates the vacuums into which the prejudices may rush! Northern Ireland is just one of the places where the negative impulses of prejudice have damaged people’s humanity. “

If racial, cultural or religious prejudice is so easily learned then surely people can also learn skills in tolerance and respect for others. It may not be so easy, but it is surely important in order to counter those learned responses which all too quickly diminish, demonise and dehumanise others. This is surely a key value in education – to enhance people’s dignity and sense of humanity and their respect for others. It is clearly expressed in Article 29 of the Convention on the Rights of the Child:

“the education of the child shall be directed to ... the preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin”.

(Richardson, N, 2008)

Northern Ireland has moved massively forward in the years since the signing of the Belfast agreement in 1998. However, there is still a long way to go before we can claim to be a normal, democratic society. There are huge divisions that still exist in our society and the kind of educational system that exists perpetuates those divisions. However, education has a powerful role in transforming societies and not least those which are emerging from years of conflict. However, we have to ask of all our sectors of education - Are we truly focussed on fulfilling the needs and aspirations of our young people for the next 20 or 30 years or are we tinkering at the edges of what is for many students a failing system? Are our schools providing the vital foundations to prepare their pupils for living in the future or are we more concerned with defending our corner?

The Party recognises the work that the Shared Education Programme, and other similar programmes have done in schools and it recognises that for a number of schools this may be the only way forward at this stage in their development. However, using the definition given for shared education as *“Shared Education is broadly defined as any collaborative activity within or between schools or other educational institutions that can: contribute towards school*

improvement, provide access to opportunity, encourage more effective use of resources, and promote social cohesion” means that it is a “weak” form of programme compared to the “strong” form for ‘Integrated Education’. This also applies to the “Shared Campus” concept. Supporters of the shared campus model argue that *“they increase the number of academic offerings, develop appropriate school sizes and more effectively use the available school buildings.”* In both schemes educational outcomes are reported as positive though are often ill-defined and difficult to quantify, and have so far only affected a very small numbers of pupils. In Northern Ireland terms they would be classified as “integration light” compared to an integrated school whose ethos and curriculum is based on there being a united community with peace and reconciliation at its core in an all-inclusive and mutually respectful shared space and with educational outcomes that, given the selective nature of the post-11 system, are very good.

Both of the ‘weak’ schemes depend very much on the goodwill of all concerned, the governance of the scheme, and its funding. Can they survive in the long-term? The learning community partnerships, as presently constituted, are generally not working to their full potential and as funding is being reduced for their operation, it will be interesting to see how long they can last.

Our present system of provision of education is very costly because of the nature of the provision. However, the present system of Area Based Planning is flawed in that its decisions were being mainly made on a sectoral basis and without the full input from all sectors. So when proposals for a particular area are being set out, communities should always be given the option to consider cross-sector amalgamations and integration as a possibility.

The party would like to make the following recommendations:-

- (1) That the Northern Ireland Executive accept its responsibility “to facilitate and encourage ‘Integrated Education in the process of reconciliation and the creation of a culture of tolerance at every level of society”.
- (2) That the Department of Education be held accountable for the implementation of its statutory duty under Article 64 of the 1989 Education Reform (NI) Order ‘ to encourage and facilitate integrated education’.
- (3) That all pre-school and nursery education be designated as integrated and that in future planning for such provision that it be placed to enable children from all communities to access it.
- (4) That targets be set, in the area-planning process for both primary and post-primary schools such that at least one quarter be integrated schools.
- (5) At the post-16 stage there should be moves towards the provision of sixth-form colleges and/or the development of post-16 centres linked to FE Colleges. Most non-grammar schools and some grammar schools offer very restricted curricular packages at this level and most are uneconomic. Collaboration can work in some cases where the schools/FE are very close together, eg Limavady, but generally the costs of collaboration are quite significant and are based on the needs of the institutions rather than the students. An integrated regional approach to the provision of post-16 education based firmly on the needs of students rather than the individual institution is required.
- (6) That for “Shared Education” the Education Minister should bring forward, at the earliest possible opportunity, a statutory definition of shared education which makes explicit that it must involve meaningful cross-community interaction by pupils on a sustained basis.
 - (a) Using this definition, the Department of Education must make it a statutory obligation for schools to ensure that all their pupils are provided with the opportunity to participate in shared education on a regular basis.

- (b) The Department must also make available sufficient funding to ensure that all schools can ensure that their pupils have the opportunity to participate in meaningful cross-community shared education and CRED programmes on a regular basis.
 - (c) The Department must institute a robust system of monitoring which enables it to evaluate, on a regular basis, whether and how each individual school is implementing shared education and CRED, including the extent and quality of cross-community engagement which is offered by each school.
- (7) That the provision of teacher training be rationalised as a matter of urgency. There are presently too many providers and professionally it does not seem sensible to have, for the needs of the service, training at 3 different institutions. The establishment of an inclusive centre of excellence to train our young teachers would help to build a united and prosperous community.
- (8) That the new single authority, when undertaking planning provision on an area basis, should not only involve all the school providers on an equal basis, but should ensure that there is proper consultation with parents and students.

The Party is very willing to amplify its comments before the Select Committee.

Lagan College

Education Committee – Shared Education Response

This response is submitted on behalf of Lagan College. Lagan College is Northern Ireland's first integrated school. Lagan College is integrated, inclusive, co-educational, all ability and an 11-18 school.

Northern Ireland currently has 62 integrated schools whose agreed mission is to educate all children together irrespective of their faith background or none, ethnicity, nationality, ability or culture.

Lagan College was founded in 1981 by a small but committed group of parents who believed in a new integrated way of educating their children together - such was their conviction and passion that some even financed the project to enable the first integrated post primary school to open against a back drop of intense trouble and conflict.

Since then, the school has flourished. Our parents/ guardians believe that their children deserve the right to attend a good school, achieve their best, enjoy and have fun growing up and developing into young men and women. That belief system is also rooted in the knowledge that sending their children to an integrated school will more fully prepare them to live, travel and work anywhere in the world. Their belief is that university, further education or the workplace will not be the first time that their children have spent any meaningful time relating to, respecting and befriending children from different family backgrounds other than their own.

Within an integrated setting children learn, grow, develop, mature, laugh and cry together. Everything is shared over a meaningful period of time. Their entire educational experience is shared - not simply a part of it or for a part of the time. The whole time the child experiences being an important and valued part of an integrated school community that welcomes all children, celebrates diversity, addresses and discusses controversial issues and is committed to enabling children to grow and learn in harmony with each other.

We believe that integration should be the normal way of educating children in our society in order to build a meaningful and lasting peace.

Lagan College is a place where children and staff can confidently and proudly state their nationality, their faith tradition other or none and their cultural background, all the while, still showing respect, understanding and kindness towards each other.

As one school community, we do everything together, be that Remembrance Day, Ash Wednesday, celebrating Chinese New Year, enjoying a Ceili night, learning about the Irish and English languages or playing Gaelic or Rugby. We are committed to breaking down the walls, the divides, the pigeon holing the compartmentalising, the labelling, the second guessing and the assumption making that goes on in our society.

"Division", "conflict", "violence", "them and us" and "segregation" must be words from our past not our present or our future. We need clear leadership to make decisions that challenge the status quo and legacy of the past. We need political leaders who know in their hearts and minds what is right, just and fair for all children.

We ask the question, "What is preventing the Government from doing more to support and further integrated education in 2014?". It has been 16 years since the Good Friday Agreement. How do we make the peace process a reality on a day to day basis? In Lagan College we believe that educating children together is one step towards that goal.

World leaders, academics and visitors both locally and globally have visited Lagan College and held integrated education as exemplary practice for building peace. Many countries and academics have used Lagan College and integrated education as a model for their own societies in dealing with conflict. Years of research has demonstrated that integrated education is successful. We now have 33 years of integrated schooling at Lagan College and we know it makes a difference.

Shared education has its merits. Any sharing by children is a positive but in our opinion, it is not enough. We believe that all parents and children should have a right to integrated and inclusive education, if that is their choice and at present that is not possible for all families.

Lagan College students have enjoyed and benefitted from shared learning experiences through CRED, the Area Learning Community School events and shared learning courses. In recent years our students have also enjoyed and benefitted from the excellent Entwined Histories School Programme marking the centenary of anniversaries.

However, ask any child who has attended Lagan College or indeed speak to any adult associated to the school, be they a staff member or a parent/guardian and they will tell you that these shared opportunities have merit but do not go far enough in providing a meaningful opportunity or a long term solution for our children to get to know and understand one another better. We believe that integrated education will further the peace process more so than shared education.

Controlled, integrated or maintained schools, there is a place for all in society at present. Lagan College does not wish to be hypocritical or misquoted. Our school is founded on the premise of equality and everyone deserves the right to have their own opinion and their choice of education.

This is Lagan College's response to the issue of shared education. We believe that shared education is not an adequate step forward for children. If anything, some of what it offers, feels akin to the EMU programmes of the 1990s.

We are happy to speak to the academics and Government officials going forward to be of help in this matter. We welcome the debate and an opportunity to contribute to it.

We invite the Education Committee to visit Lagan College and speak to the important people who matter the most, namely the young people who will hopefully live, work and enjoy a more peaceful lifestyle than their parents and grandparents have in the past.

Lagan College

Mr P McCallion
 Clerk to the Committee
 Committee for Education
 Room 375, Parliament Buildings
 Ballymiscaw
 Stormont
 Belfast
 BT4 3XX

Dear Mr McCallion

Shared and Integrated Education Inquiry

As a school my Board of Governors welcomes the concept of pupils, of all cultural and religious backgrounds, being educated and working together.

Limavady Grammar School is a Controlled Grammar School under the auspices of Western Education and Library Board. The Board of Governors is made up of DE Representatives, WELB Representatives, Parent Representatives and Teacher Representatives. As with all other Controlled Grammar Schools, there is no church representation on the Board and consequently the school is not aligned with any Transferor group.

The school has a long history of providing 'integrated' education. Indeed the demographic make-up of the school, pupils and staff, would suggest that it is probably one of the most integrated schools in Northern Ireland. It has a greater 'mix' than many schools which bear the label 'integrated'. Whilst encouraging parents to take the main lead in religious upbringing of their children, the school upholds a strong Christian ethos and facilitate pupils, whose parents request, to attend religious services during the school day on Days of Holy Obligation.

The natural process of integration as has developed in Limavady Grammar School, meeting the needs of the whole community, is undoubtedly the way forward. Initiatives like Shared Education Campuses, which attract huge financial investment, have the potential to maintain community divisions with only a small number of pupils benefiting from the elements of sharing. In the meantime schools like Limavady Grammar School will not benefit financially for the long established work that is undertaken to educate together pupils from all faiths and none.

In relation of your committee's terms of reference, I would suggest that existing models of good practice, such as Limavady Grammar School should, be given due consideration and priority.

Yours sincerely

R Wilson

Mr Peter McCallion
Clerk to the Committee
Committee for Education
Room 375, Parliament Buildings
Ballymiscaw
Stormont
Belfast BT4 3XX

24th October 2014

Dear Mr McCallion

Please find below the response to your inquiry on Shared and Integrated Education on behalf of Lismore Comprehensive School.

- ***Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;***
 - In the interests of clarity, we think there needs to be clearly defined descriptors of both Shared and Integrated Education as we believe these educational terms have increasingly become more coupled together despite being, in our opinion very different educational concepts and practices. We would therefore recommend clearer definition and description and would also welcome an obligation in statute to facilitate and encourage Shared Education.
 - Shared Education may be defined as schools and other educational establishments working in partnership to meet the needs of learners. It helps schools to manage their budget more effectively by sharing resources across schools; meet the requirements of the Entitlement Framework; protect and promote minority subjects and curriculum areas and promote professional dialogue between schools across different sectors and school types.
 - Integrated Education may be defined as a type of school outside the Maintained, Controlled and Irish Medium sectors. As defined by NICIE, “Integrated Education brings children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school.” In Lismore, we are very proud of our Catholic ethos which is an open welcoming ethos developed in school to children of all faiths. We are concerned at a perceived political agenda which may suggest that Integrated Education is ‘better than’ other educational types or a ‘solution to’ the historic political and religious divisions in Northern Ireland. We believe that parental choice must continue to be a protected freedom and in that context, we believe in the right of faith-based schools to exist and co-exist with other sectors.

■ **Identify the key barriers and enablers for Shared Education and Integrated Education;**

● **Barriers and enablers: Shared Education**

Physical distance between school campuses, individual school self-interest and timetabling constraints can create potential barriers to the facilitation of Shared Education. However, many schools, including Lismore Comprehensive have worked with other schools and educational providers to overcome these barriers. With the establishment and development of Area Learning Communities with access to additional funding shared across the ALC, Shared Education is now a positive reality in many geographical areas with schools sharing their resources effectively to meet the needs of learners in their communities. Shared Education may also have a positive effect on community relations. Much work still needs to be done in some areas between the grammar sector sharing with their non-selective neighbouring schools where sharing has not yet been established or developed.

● **Barriers and enablers: Integrated Education**

Decreasing demand for school places, particularly in post primary education may be a barrier to developing integrated education further. We believe that without integrated housing, integrated education may well be a non-starter. Pupil outcomes in public examinations in some integrated schools are well below the NI average and therefore parent/pupil confidence in this system of education could also be perceived as a barrier. We believe that there exists positive discrimination for Integrated Education from a number of external and additional funding bodies that schools may access. Being able to demonstrate that planned work will involve working in or with integrated education providers certainly is a criteria box ticking exercise to enable successful draw down of some funding. As this appears to be the case, we believe it is an unfair practice to positively discriminate in favour of this sector over another sector to support a somewhat hidden agenda – this practice certainly does not appear to support a wider educational agenda.

■ **Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;**

- First of all, the uncoupling of Shared and Integrated Education as concepts needs to take place soon and each definition and concept developed separately. Many schools do not have any issues in theory as to benefits and practise of Shared Education – it makes sense economically and helps protect many areas of a wider curriculum menu and indeed delivery. Secondly, as educationalists, we would be very interested in any research that identifies good practice in Integrated Education as an educational approach to learning, particularly research which may suggest or conclude that Integrated Education as an ethos, pedagogy and identity, outperforms other educational approaches including that of a Catholic Maintained School.

■ **Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools;**

Recommended actions to be taken:

- The voice of parents, primary school partners, CCMS, ELBs, Youth Service and Churches should be part of this consultative process.
- Concepts should be more clearly defined in laymen's terms: 'Shared' and 'Integrated'.
- The political agenda that appears to be promoting and/or 'pushing' integrated education in Northern Ireland, needs to be defined and made open and transparent for educationalists and the wider electorate. We believe if this perceived political agenda is indeed the reality, then this manifesto should be supported by independent worldwide academic and educational research.

Should you wish for further clarity or discussion on any of these points noted above, please do not hesitate to contact me. As communicated previously, we are also happy to facilitate discussion with our Student Council should you wish to garner Pupil opinion.

Yours sincerely

Mrs Fiona Kane

Principal

Loughview Integrated Primary and Nursery School

Learning and growing together

October 20, 2014

Dear Mr McCallion

Thank you for this opportunity to provide a response to the Education Committee on the debate around the future in terms of shared/integrated education.

The request by the committee for information in regard to this issue is timely as there seems to be a growing misconception that integrated and shared education are one and the same thing and have the same potential benefits. They are not the same and it is my view that Shared Education as currently envisioned will fall far short of what integrated schooling regularly achieves.

Under the terms of the Good Friday Agreement our local administration is obliged to facilitate the growth of integrated/shared education, the inference being that it can help heal the breaches in what is still a deeply divided society and so help us build a shared future. The work of the integrated schools that have emerged over the last 30 years clearly evidences the vital contribution that schools can make to peace building and has had an influential 'ripple out' effect within education and wider society to the extent that most people now accept that greater sharing is a necessary and good thing. The challenge however is how to take this forward in a way that has a lasting and meaningful impact. Hence the debate on shared/integrated education!

For those of us who work within the integrated sector it seems that the 'Shared Education' model which enables schools to share sites, facilities and promotes some limited pupil and teacher contact is now regarded by DE as its preferred strategy. This is in contrast to the integrated model whereby children and staff from the two main traditions and from none are fully immersed together in a single school community. Indeed the DE's ambivalence to 'Integrated Education' can be evidenced by the fact that it required a recent judicial review (Drumragh IC) to remind it of its statutory obligation to facilitate integrated schools.

Why this strategy? Why is Shared Education being promoted as the way forward in terms of a more integrated model of schooling? I wish the answer was grounded in international research and case studies in N. Ireland which made a compelling case. Sadly it appears not to be and the reality may simply be political pragmatism.

Put simply 'Shared Education' is less threatening to the various vested interests in our education system and wider society including political parties, the Catholic Church, the Transferors lobby etc. It's the deal they can all do without really giving up anything that really matters to them.

While there may be those who believe that it can make a difference, promoting 'Shared Education' may simply create the illusion that our politicians and the educational establishment are doing their bit to promote a 'shared future', when in reality they are falling far short of what really needs to be done.

As a concept 'Shared Education' sounds fine but what does it mean in practice? The shared campus concept seems to represent the extent of the DE's ambitions in terms of shared education. My worry is that it will only serve to illustrate how different school communities can co-exist in some benign form of educational apartheid where separate uniforms, timetables and doors regulate the amount and quality of contact between the young people concerned. While for some this might be a step forward in terms of what has gone before, is it good enough?

By comparison within my own integrated school, which is diverse and inclusive in terms of race, religion, social class and ability, it is the sharing of a uniform and the time spent together in class, in the playground, on the sports-field or over lunch that helps our children grow their understanding and acceptance of one another. Moreover it is this regular and meaningful sharing which helps us grow a sense of common identity and community, whilst acknowledging the diversity intrinsic to our school.

To put my comments into context I should add that before working in the integrated sector I spent 14 years in the controlled sector including several years as a VP in a school on a loyalist housing estate where sectarian and racist attitudes were just a fact of life. While working in the controlled sector I was involved in a succession of EMU/CRED (community relations) projects between controlled and maintained schools and can report that although they did no harm that they achieved little of lasting value.

The final point worth making is an economic one. N. Ireland has an education system it can't really afford. A segregated school system has meant too many schools and an unnecessary replication of services, something clearly evidenced in the Common Funding Review led by Robert Salisbury several years ago. Area Based Planning raised the hope that a clear sighted economic appraisal would acknowledge the unsustainable cost of continued segregation and open minds to the difficult decisions that lay ahead i.e. closing non-viable schools and promoting real sharing.

Instead what initially emerged were sectoral solutions for rationalisation led by CCMS and the ELBs. Subsequently 'Shared Education' has emerged as a possible solution in some instances, but there is a lack of clarity around what is shared, with whom and to what degree. It would seem prudent that before more public money is spent on 'Shared Education' we have some agreed definition of what it is, how best it might work and what its potential is to help us build a shared future.

If we are serious about building more cohesive communities and a genuinely shared future, 'Shared Education' needs to aspire eventually to be what the best integrated educated schools already are. It is the best way forward and existing models of integrated schooling, together with the wealth of leading edge experience within our schools in how to successfully integrate school communities (children, teachers and parents) are there to be built upon. In addition to this, in other countries, including mainland UK, there are alternative models of effective shared/shared education that could be considered. A good example is the Emmaus School in Liverpool, a joint faith primary school which allows for representation on the school Board for both Catholic and Anglican clergy.

I am willing to concede that there will be no easy 'one size fits all' solution in terms of integrated education but promoting the tokenism and limited ambition of 'Shared Education' seems like a cop out.

In conclusion the narrative of many integrated schools is of how ordinary people desiring change for the better, for their children and their communities came together and worked sometimes against the odds to build a better future. It takes courage, commitment and a belief that real change is possible. The challenge for politicians and DE is to do the same!

Yours sincerely

Committee for Education

Report on the Inquiry into Shared and Integrated Education Volume 3

Together with the Minutes of Proceedings, Minutes of Evidence
and Written Submissions Relating to the Report

Ordered by the Committee for Education to be printed 1 July 2015

This report is the property of the Committee for Education. Neither the report nor its contents should be disclosed to any person unless such disclosure is authorised by the Committee.

**THE REPORT REMAINS EMBARGOED UNTIL
COMMENCEMENT OF THE DEBATE IN PLENARY**

Powers and Membership

Powers

The Committee for Education is a Statutory Departmental Committee of the Northern Ireland Assembly established in accordance with paragraphs 8 and 9 of the Belfast Agreement, section 29 of the Northern Ireland Act 1998 and under Standing Order 48 of the Northern Ireland Assembly.

The Committee has power to:

- Consider and advise on Departmental budgets and annual plans in the context of the overall budget allocation;
- Consider relevant secondary legislation and take the Committee stage of primary legislation;
- Call for persons and papers;
- Initiate inquiries and make reports; and
- Consider and advise on any matters brought to the Committee by the Minister of Education.

Membership

The Committee has 11 members including a Chairperson and Deputy Chairperson and a quorum of 5. The membership of the Committee is as follows:

Peter Weir (Chairperson) ^{2,6}

Sandra Overend (Deputy Chairperson) ⁷

Maeve McLaughlin

Jonathan Craig

Ross Hussey ^{1,8}

Nelson McCausland ³

Chris Hazzard

Trevor Lunn

Robin Newton

Pat Sheehan

Sean Rogers ^{4,5}

1 With effect from 04 July 2014 Mrs Sandra Overend replaced Mrs Jo-Anne Dobson
 2 With effect from 23 September 2014 Ms Michelle McIlveen replaced Mr Mervyn Storey as Chairperson
 3 With effect from 06 October 2014 Mr Nelson McCausland replaced Mr Stephen Moutray
 4 With effect from 17 November 2014 Mr Colum Eastwood replaced Mr Seán Rogers
 5 With effect from 08 December 2014 Mr Sean Rogers replaced Mr Colum Eastwood
 6 With effect from 11 May 2015 Mr Peter Weir replaced Miss Michelle McIlveen as Chairperson
 7 With effect from 15 June 2015 Mrs Sandra Overend replaced Mr Danny Kinahan as Deputy Chairperson
 8 With effect from 23 June 2015 Mr Ross Hussey replaced Mrs Sandra Overend

Macada- Moy Area Community and Development Association

C/o 45 Charlemont Street
Moy
Co. Tyrone
BT71 7SL

Wednesday April 2nd 2014

**Rathgael House
Balloo Road
Rathgill
Bangor
BT19 7PR**

Dear John

MACADA would like to offer support to the proposed shared campus for:

- Moy Regional Primary School
- St John's Primary School
- Moy Area Playgroup

MACADA would like to pay tribute to the efforts of the Principals and Board of Governors of Moy Regional Primary School, St John's Primary School and Moy Area Playgroup in progressing the shared school campus for the village. It is felt that it will be a fantastic resource for the whole community.

We recognise that the Education & Library Board and CCMS have outlined proposals which include excellent facilities and have already accommodated ideas for community use. MACADA will make every effort to secure **additional funds** to invest in facilities that will further enhance the educational experience of children and help attract greater numbers of children to enrol in the two new schools and cross community playgroup.

We have attempted to identify the facilities that could be shared by the community, the schools and the playgroup and detail the additional requirements that might be required to allow the facilities to be used by the community outside school hours. MACADA are grateful that the SELB has already agreed to accommodate community use of school facilities and we understand that we will have to source additional funds to contribute to the overall project.

We also understand that we have no role in the selection or purchase of the site for the shared campus but we would urge you to take our ideas and suggestions into account so that the site selected can accommodate the maximum shared facilities to ensure this exciting opportunity is fully exploited.

Yours sincerely

Shared Campus in Moy

The facilities listed below are essential for the two schools but if planned imaginatively could be fully utilised by the local community and reduce the long term running costs of the facility for the Department. The table below makes some suggestions of how the shared facilities might be used by different community groups after 5pm, at weekends and during school holidays.

Shared Facility	Specification for School Use	Suggested Community Use
Sports Hall	Gym and sports hall required as a sports facility for both schools. Storage room for school equipment.	Additional adult changing facilities and showers. Storage room for equipment of external users.
Assembly Hall	Meeting facility with a stage, lights and sound system for school meetings and performances	Community Meeting Space & Events, provide pull out tiered seating
Kitchen & Canteen	Shared lunch facilities for the two schools	Facility for evening cooking classes and community events
Arts & crafts Room	Shared arts and crafts room to work with a range of materials – screen printing / pottery etc	Community education classes at night
Library	Library for use by two schools	Potential for access by local community
Outdoor Sports area	Standard soccer and rugby pitch 3G or 4G for school games.	Training and activity areas for community sports clubs, football, Hockey, rugby. Need floodlights to facilitate community use. Outside seating to encourage viewing & community events and/or potential venue. (Tiered seating 100nr)
Playgroup	Purpose built playgroup with access to own outside play -area	Playground accessible via alternative entrance after school hours.
Day-care	Day-care facility within walking distance of the school will help increase enrolment figures for the schools and playgroup. With pre-school age playground facilities outside.	Community managed full day-care facility to wrap around the playgroup and school day. The business could employ 20 staff and generate funds to meet the running costs of the community facilities on the shared site. Playground accessible via alternative entrance after school hours.

Wednesday April 9th 2014

**Iain Frazer
Director of Development
Council Offices
Dungannon
BT71 6DT**

Dear Iain

Please find attached a copy of our letter that was sent to Dept of Education, SELB, CCMS, Office of OFMDFM & the following ministers: Michelle O'Neill, Caral NiChuilin, Stephen Farry, Arlene Foster, Simon Hamilton, Edwin Poots, Danny Kennedy and Nelson McCausland.

I hope the letter conveys to you the unanimous support that MACADA gives to the proposed Shared Campus scheme. I also hope that the table demonstrates to you what MACADA feels would fully compliment an all-inclusive local community facility.

MACADA are attempting to get involved with as many government departments in order to co-ordinate a joined-up approach to securing additional finance that would provide these reasonably modest additional facilities that will further enhance the educational experience of the children and also provide a cost effective and hugely beneficial resource for the local community.

MACADA derives its mandate from the outcome of our Village Plan that was presented and delivered to council last year. MACADA sees Moy Village becoming a model village in terms of shared education and shared facilities for everyone.

MACADA would urge local council to get behind our initiative and ensure that this exciting opportunity is fully exploited to meet the real needs of the local community and be created in such a way to be most economical in its cost of provision and more importantly, highly efficient in its long term running costs and sustainability.

MACADA look forward to council input, direction and guidance.

For and on behalf of MACADA

Eddie Toner, Chairperson

Moy Village Action Plan

Background**

Introduction & Background

Introduction

This integrated village plan has been devised by Moy Area Community and Development Association (MACADA) on behalf of the Moy community. It is a working document that will support MACADA on addressing the needs of the community and village infrastructure. This document highlights the issues and needs facing the community which were identified through community meetings, questionnaires to households and consultations with business owners and church leaders. The village plan will outline a range of actions needed to address those needs.

Purpose of the Village Plan

The purpose of the Plan is to provide a strategic framework in which MACADA can co-ordinate specific development actions with a set timeframe. This village plan, with its range of actions and initiatives, will also inform Moy Community, Statutory Authorities, Developers and other interested bodies of the policy framework proposals set out for Moy. A village plan allows Moy village to realise its potential in terms of economic, cultural, social and environmental resources. It will also be used for bidding into current and future funding programmes.

“This village action plan is the blueprint to help boost the business, economic, environmental and social well-being of all within the community and assist in the sustainability and further growth of Moy”.

Citizens need to be at the heart of decision-making on local services, this plan is the input of the inhabitants of Moy Village. It is intended to be a working document.

Introduction & Background

Background on MACADA

MACADA was originally known as Moy and Charlemont Area Development Association and dates back to the 1960's when it operated as Moy Citizens Association. It did lapse in activity until October 1992, which resulted in the formation of MACADA. Again after another period of inactivity it reformed in June 2012 and was renamed Moy Area Community and Development Association. MACADA reformed to represent the village of Moy with representatives from the local community, business owners and all the local churches forming the committee. It is a fully constituted group (Appendix 1) and holds regular committee meetings within the village.

MACADA has a long term vision of promoting the cultural, tourist and economic potential of the area. Current and/or completed activities include Cross Community Summer Schemes, a new Village Snooker Club recently opened as a Social Enterprise venture with the creation of one part time job, monthly village newsletter with all activities listed (Appendix 2), production of a Village Welcome Pack, support to a 3 day Arts & Craft Fair in June 2013, a project to Re-image the Village through the Arts is underway, directed an SIF application under 'Shared Space Concept' via SELB & Moy Regional School, Annual Village Christmas Lights & Village Consultation completed in January 2013. This village plan is the progression in achieving this vision. In the meantime MACADA have considered all local church halls and the role that they can play in providing a suitable resource for the community at large.

"MACADA's aims are to promote cross community interaction and to develop existing facilities within the village. We aim to assist with getting more village activities for the good of all its inhabitants".

Policy Context

Policy Context

Overview

MACADA are producing this Village Plan with the vision that they fit into the overall plan for the future of Northern Ireland. There are various government policies and strategies developed for Northern Ireland which are specifically aimed at the sustainable development in local communities. Some of the relevant documents are detailed further.

Government Departments

Each of the Government Departments in Northern Ireland are responsible for delivering their own corporate plans and will be important in the development of the Moy Village Plan and its Action Plan. It is MACADA's intention to create a relationship with the relevant departments to assist in the delivery of the actions.

DARD - Dept of Agriculture & Rural Development

Aims to promote sustainable economic growth and the development of the countryside in Northern Ireland. The Department assists the competitive development of the agri-food, fishing and forestry sectors of the Northern Ireland economy, having regard for the need of the consumers, the welfare of animals and the conservation and enhancement of the environment.

DECAL – Dept of Culture Arts & Leisure

Responsible for arts and creativity, museums, libraries, sport, inland waterways and inland fisheries, linguistic diversity, public records, and for advising on National Lottery distribution.

DENI – Dept of Education

Main areas of responsibility are in pre-school, primary, post-primary and special education; the youth service; the promotion of community relations within and between schools; and teacher education and salaries.

DEL – Dept of Employment & Learning

Objectives are to promote economic, social and personal development through high quality learning, research and skills training; and to help people into employment and promote good employment practices.

DETI – Dept of Enterprise Trade & Investment

Responsible for economic policy development, enterprise, innovation, energy, telecoms, tourism, health and safety at work, Insolvency Service, consumer affairs, and labour market and economic statistics services.

Policy Context

DOE – Dept of the Environment

Main responsibilities are to protect, conserve and enhance the natural and built environment, to provide land use planning which balances the development needs of the region with the protection of the environment, to improve and promote road safety and ensure the proper regulation of drivers, vehicles and operators and to support a system of local government which meets the needs of citizens and ratepayers.

DHSSPS – Dept of Health Social Services and Public Safety

Main responsibilities are Health and Social Care (HSC), which includes policy and legislation for hospitals, family practitioner services and community health and personal social services; Public Health, which covers policy, legislation and administrative action to promote and protect the health and well-being of the population; and Public Safety, which covers policy and legislation for fire and rescue services.

DFP - Department of Finance and Personnel

Aims to prioritise the use of resources available to Northern Ireland, ensure that these are used efficiently and secure the reform and modernisation of public services; and to deliver efficient and cost effective services to the public in the Department's areas of executive responsibility.

DOJ – Department of Justice

Has a range of devolved policing and justice functions.

DRD - Department for Regional Development

Main responsibilities include, regional strategic planning and development policy; transport strategy; public transport policy and performance; certain policy and support work for air and sea ports; policy on water and sewerage services and management of the Department's shareholder interest in Northern Ireland Water; and provision and maintenance of all public roads.

DSD - Department for Social Development

Responsibilities include urban regeneration, community and voluntary sector development, social legislation, housing, social security benefits, pensions and child support.

OFMDFM - Office of the First Minister and Deputy First Minister

The department's objectives include supporting Ministers and the institutions of government, building a programme for government, promoting better community relations, a culture of equality and rights, targeting social need and promoting social inclusion.

Policy Context

Sustainable Development Strategy for Northern Ireland

The aim of Government is to help create sustainable communities that embody the principles of sustainable development at the local level. This will involve working to give communities more power and influence in the decisions that affect them and working in partnership at the right level to get things done. It means ensuring that people have the skills and qualifications necessary to support and develop a thriving sustainable economy within their community and it means ensuring that they have an environment that promotes a healthy lifestyle. www.ofmdfmi.gov.uk

“The strategy recognises as a priority the need for regeneration and to build sustainable communities with objectives centred around economic well-being, attractive, healthy, high quality environments and greater community engagement and civic leadership. We will therefore strengthen the governance arrangements to ensure that sustainable development lies at the heart of mainstream Government policy making and is a central feature of the new local government arrangements to improve the quality of life for everyone and reduce the inequalities that exist across our society”.

Regional Development Strategy 2035

This document complements the Sustainable Development Strategy and sets out to ensure that all places benefit from economic growth.

It has 8 main aims: (Those of particular interest at Moy Community level are highlighted and expanded on).

- ***Support strong, sustainable growth for the benefit of all parts of Northern Ireland***

A growing regional economy will benefit from strong urban and rural areas. This needs a co-ordinated approach to the provision of services, jobs and infrastructure and a focus on co-operation between service providers. Balanced regional growth and tackling regional imbalance are critical issues for the region.

- Strengthen Belfast as the regional economic driver and Londonderry as the principal city of the North West
- ***Support our towns, villages and rural communities to maximise their potential***
Our rural areas including our towns and villages have a key role in supporting economic growth. They offer opportunities in terms of their potential for growth in new sectors, the provision of rural recreation and tourism, their attractiveness as places to invest, live and work, and their role as a reservoir of natural resources and highly valued landscapes.

Policy Context

- *Promote development which improves the health and well-being of Communities*

A healthy community is better able to take advantage of the economic, social and environmental opportunities which are open to it. Improved health and well-being is derived not only from easy access to appropriate services and facilities, although this is important, but also from the creation of a strong economy set within a safe and attractive environment. The provision of more social and affordable housing also helps to build strong balanced communities.

- Improve connectivity to enhance the movement of people, goods, energy and information between places
- *Protect and enhance the environment for its own sake*
Protecting the environment is essential for enhancing the quality of life of current and future generations. Northern Ireland's environment is one of its greatest assets, with its stunning landscapes, an outstanding coastline, a complex variety of wildlife and a rich built and cultural heritage for the ecosystem services it provides, and its sense of place and history for all.
- Take actions to reduce our carbon footprint and facilitate adaptation to climate change
- Strengthen links between north and south, east and west, with Europe and the rest of the world

It also means creating a network of well-connected sustainable communities with decent homes in places with clean, safe and green public spaces, where people are able to lead healthy lives, enjoy the environment around them and where people want to come to live and work.

Policy Context

Rural Development Programme 2007 - 2013

Northern Ireland's Department of Agriculture and Rural Development (DARD) adopted a Rural Development Programme (RDP) which *aims to protect and enhance our rural environment and contribute to the development of competitive and sustainable rural businesses and thriving rural communities*. This programme, which runs from 2007- 2013, is worth over £500million and represents one of the largest ever investments in rural communities in Northern Ireland.

The RDP is split into three main areas with the Axis 3 of the programme being dedicated to the quality of life in Rural Areas & Diversification of the Rural Economy. One of the measures under this Axis is:

Village Renewal and Development

In order to support integrated village initiatives which promote community development and regeneration, the RDP will support animation and capacity-building within and between villages and their surrounding rural areas. This will include the formulation of integrated action plans to define the role of the village and fully develop the potential of rural areas.

The closing applications for this RDP have been closed but DARD are finalising a new programme for 2014 – 2020. Having spoken to a representative from the RDP it was advised that the next programme will effectively have the same end objectives for rural communities.

Rural Development Programme 2014 - 2020

The Department of Agriculture and Rural Development (DARD) has a responsibility for preparing the new RDP, and will work with key stakeholders to create a programme that meets the needs of people who live and work in rural areas of Northern Ireland.

The Europe 2020 strategy aims to see growth that is competitive, sustainable and inclusive. These aims have three objectives: **smart growth, sustainable growth and inclusive growth**.

DARD have the challenge to develop a RDP based on these draft proposals. The EU draft proposals are subject to change and the budget for the new rural development programme has yet to be confirmed by the European Commission.

Policy Context

Dungannon & South Tyrone Borough Council Corporate Plan 2012 - 2015

As Moy village is part of the Dungannon & South Tyrone Borough Council it is important to understand what the Council's plans are for the Dungannon Area. The plan represents a commitment to deliver quality services and investment in the Borough and it is outlined under the four themes; Service Delivery, Economy, Environment and Community.

Theme: Service Delivery

Aim 1 - To deliver values for money services

- 1.1 Deliver quality, affordable cost effective services as local as possible
- 1.2 Communication with all our Stakeholders
- 1.3 Value Staff and be customer focused

Theme: Economy

Aim 2 - To build prosperity and economic growth

- 2.1 Develop the area as an economic investment location
- 2.2 Develop an environment that will contribute to job creation
- 2.3 Promote and develop the area as a visitor destination

Theme: Environment

Aim 3 – To create a sustainable environment

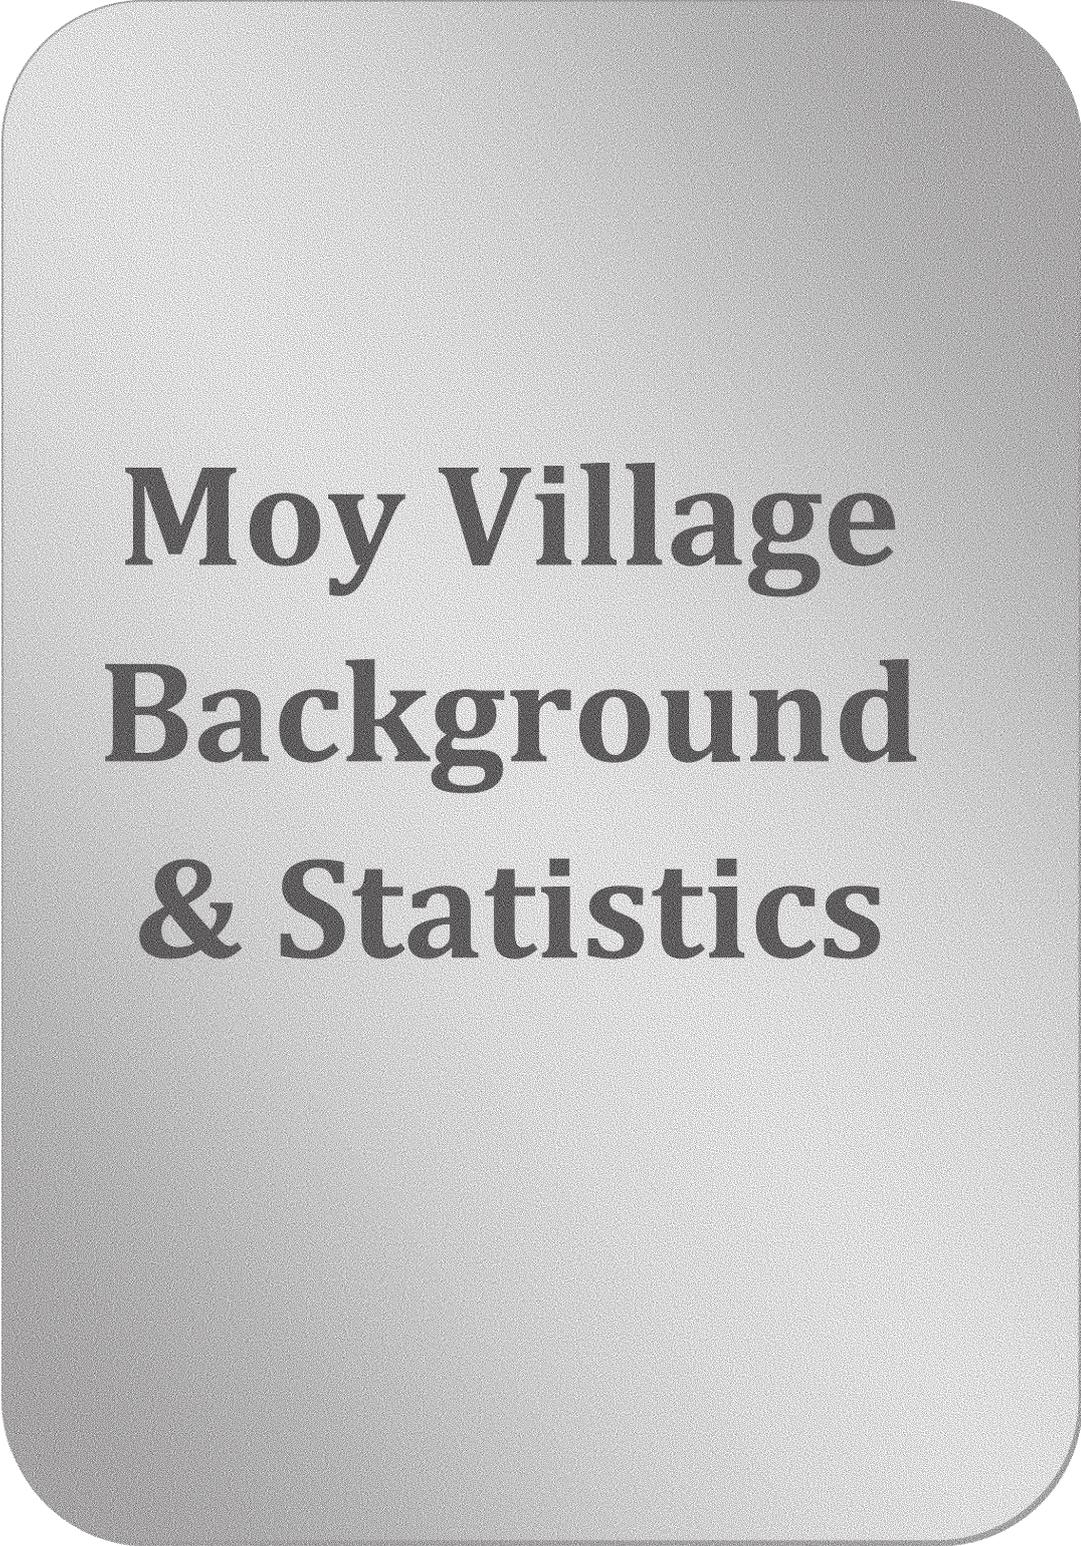

- 3.1 Develop and regenerate our towns, villages and settlements
- 3.2 Protect and develop the natural environment and resources
- 3.3 Provide quality public spaces that are clean, safe and accessible for all
- 3.4 Support good land use planning

Theme: Community

Aim 4 - To develop the wellbeing of diverse communities

- 4.1 Proactively target areas of disadvantage
- 4.2 Contribute to the wellbeing of residents through healthier lifestyles and safer communities
- 4.3 Contribute to the development of good relations and cultural diversity
- 4.4 Support community development and work in partnership to maximise local delivery of services

It will become evident throughout this report that the aims and values of Dungannon & South Tyrone Borough Council fit very closely with the objectives and action plans of Moy Village.

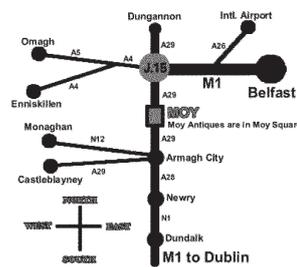

**Moy Village
Background
& Statistics**

Moy Village Background and Statistics

Setting & Location

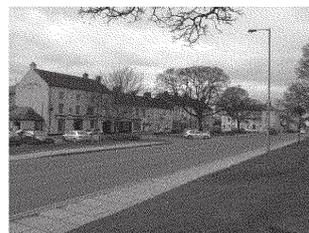

Moy is a Large Village and town land in County Tyrone, about 5 miles southeast of Dungannon. It is ideally located close to the M1 motorway and is the main route to Armagh making this an ideal place for both travel and tourism.

Moy is situated beside the smaller village of Charlemont. Charlemont is on the east bank of the River Blackwater and Moy on the west; the two are joined by Charlemont Bridge. The river is also the boundary between County Tyrone and County Armagh.

The settlement's core is located around the historic Square, and a wide range of local shops and services including two primary schools and a number of churches serve the village. In-depth housing development has taken place to the south of Dungannon Road and, to a lesser extent, to the north along Killyman Road.

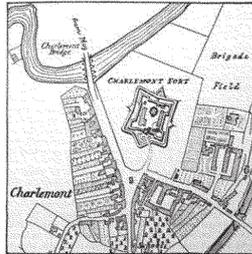

The core of the village has exceptional architectural character and was designated a Conservation Area in 1984. Development in and adjacent to the conservation area will have regard to the guidance contained in the Moy Conservation Area Booklet.

Moy Village Background and Statistics

Moy Heritage Background

Moy was laid out in the 1760s for the Volunteer Earl – the patriot and aesthete James Caulfield, 1st Earl of Charlemont (1728-1799) – opposite Charlemont Fort across the Blackwater. The formal rectangular market place, with lawns and horse-chestnut trees, was inspired by the square at Bosco Marengo in Lombardy, admired by the young earl during his grand tour of Europe. The houses lining the village square are mostly mid-18th century, though all four churches (Roman Catholic, Church of Ireland, Presbyterian and Methodist) are later.

The second and third Earl were responsible for rebuilding Roxborough Castle but after the third Earl died the castle was later demolished in 1920. The bridge over the Blackwater separating Co. Tyrone and Co. Armagh was erected by Lord Mountjoy and rebuilt by William Daragan. The Famous Soldier and Australian explorer John King was born in Moy and is famous around the world.

Moy today is probably one of the most picturesque heritage towns in Northern Ireland. It still has its basic Georgian structure and there is yet plenty of architectural evidence of its once glorious and exciting past. Moy used to hold a great horse fair, held once a month and lasting a whole week.

It has now survived the decline of the Charlemont dynasty, the death of the famous fair, the closure of the railway and canals and has once again re-established itself as a thriving community with huge future potential, not least as an attractive and important heritage town.

A further detailed history is included in Appendix 3.

Moy Village Background and Statistics

Socio Economic Profile

The following statistics are taken from the Census Report on 27th March 2011

Demographic

The population of Moy at the time of the Census 2011 was 3,009, which accounts for 0.17% of the NI total. There were 2,989 people (99.34% of the usually resident population) living in 1,046 households, giving an average household size of 2.86. Moy has a higher proportion aged under 16 years (25.59%) than aged 65 and over (10.93%). 49.58% of the population is male and 50.42% are female; and 33 years was the average (median) age of the population.

Religion

The Village of Moy has 62.31% of the population that belong to, or were brought up in the Catholic religion and 34.43% belong to, or were brought up in a 'Protestant and Other Christian (including Christian related)' religion.

Nationality

99.10% were from the white (including Irish Traveler) ethnic group.

32.00% indicated that they had a British national identity,

37.72% had an Irish national identity and

27.52% had a Northern Irish national identity.

Language

16.92% had some knowledge of Irish;

4.47% had some knowledge of Ulster-Scots; and

9.50% did not have English as their first language.

Health

Perhaps reflecting its age population, Moy had a relatively low percentage (16.48%) of people who had a long-term health problem or disability that limited their day-to-day activities; 85.44% of people stated their general health was either good or very good; and 11.10% of people stated that they provided unpaid care to family, friends, neighbours or others.

Moy Village Background and Statistics

Housing & Accommodation

73.90% of households were owner occupied and 22.75% were rented;

39.77% of households were owned outright;

9.46% of households were comprised of a single person aged 65+ years;

6.60% were lone parent households with dependent children; and

11.09% of households did not have access to a car or van.

Qualifications & Labour

Considering the population aged 16 years old and over;

27.02% had a degree or higher qualification

36.44% had no or low Level 1 qualifications

And with the same population in mind when asked about employment;

73.05% were economically active

26.95% were economically inactive

66.09% were in paid employment, and

4.06% were unemployed. (This figure could be considerably higher today due to this economic climate).

Consultation & Findings

Consultation & Findings

Consultation

From the outset, MACADA realised that the success of this Village Action Plan would be based on the community involvement regarding the vision of Moy and delivery of services and activities. The planning process used to develop this Action Plan took the form of a bottom-up consultative style approach to ensure the Plan was based firmly on the opinions of the people of Moy for the people of Moy. MACADA undertook a series of consultations that led to the development of this Village Plan. In addition to these consultations with the local community, a range of statutory agencies and other bodies were engaged. The series of events which led to the formulation of the plan were as follows:

1. A community audit in January 2013 which was delivered to all households in Moy Village
2. Invitation to local key people and businesses to input by means of phone calls or in writing
3. Contact with local authorities and agencies
4. Background analysis
5. Presentation of final draft Action Plan on 28th October 2013

Summary of Community Audit

It is worth noting that the over 80% of the respondents questioned have been living in Moy for 15 years or over. This is encouraging as it suggests that they really know how their community has changed over the years and how it needs to change in the future.

- Half of the respondents said that Moy area was not really changing whilst ¼ said it was changing for the better and ¼ said it was changing for the worse.

Opportunity for change for Moy Area

- Over half of the community do not have a problem getting involved in community activities whilst nearly 30% have a minor or major problem with getting involved

Community involvement good but opportunity for improvement

- When asked about their opinion on alcohol abuse by people under the age of 18 there was a staggering 70% who thought there was a problem in Moy, whether it was minor or major. 12% thought there was no problem and the remainder not having an opinion.

Key issue of youth behaviour is a concern

Consultation & Findings

- The above point is also backed up as the audit has identified the lack of youth provision in the Moy community with over 60% of the people dissatisfied and only 18% of the community satisfied with what is provided for the youth in the Village.

Provision of Youth services in the community needs examined

- The majority (70%) of Moy community identified that there was a problem regarding the lack of open spaces/parks available in Moy.

Issue of open spaces/parks needs addressed

- The audit highlighted the satisfaction of the Churches service to the community with nearly 90% of the people satisfied with their churches.

Positive community service from the Churches

- On the other hand there was a very mixed opinion on the service of community centres in Moy village. Over half (55%) were dissatisfied with the community centres and only 20% being satisfied. The remaining 25% were unsure.

Knowledge and service of community centres needs consideration

- The opinion of the provision of shops in Moy is a very positive one with 91% of people either satisfied or very satisfied.

Excellent provision of shops

- There seems to be either a lack of knowledge or provision of Education and Training services as over half of the respondents answered 'don't know' when asked about these services.

Appraisal of education and training services needed

- The same thing applies for the facilities available to Senior Citizens. Over 60% did not know if there were any available.

Review of facilities and promotion of activities for Senior Citizens

- 63% of the respondents were very dissatisfied or dissatisfied with the leisure and sports facilities in Moy and only 18% being satisfied. These results mirror the question about play area provision in Moy. Both highlight dissatisfaction.

Lack of leisure/sports facilities a real concern

- The schools provision in Moy both Primary and Pre-School was given a very good result with 83% of people satisfied with the Primary Schools and 60% satisfied with the Pre-School. 33% were unsure of Pre-schools which may suggest that they have had no need for their use i.e.no young children.

Positive schools provision in Moy

Consultation & Findings

Key Priorities

The consultation also facilitated the community to raise their concerns and to highlight the key issues that needed to be address in Moy Village. Many opinions and issues emerged and they are analysed under the following priorities:

- **Leisure**
Parks/Open Space/Leisure Facilities
- **Community**
Community Centre/Events/Youth/Older People/Social Issues
- **Infrastructure**
Property/Business/ Buildings/Roads/Transport
- **Economic**
Tourism/Education & Training/Employment

These key priorities will become the framework for the vision and plan for the Moy Village Plan.

Leisure

Parks/ Open Space

As previously mentioned, Moy village is situated around the square with shops, schools and churches being the main focus within the community. There is no open green space which residents can walk around or meet in. This has been highlighted as a major focus for MACADA to address. For the population of Moy there is one small play park which is on the outskirts of Moy. The general feeling is that the area badly needs a park area that is easily accessed by all.

We need a purpose built park with walks, playing fields, playground etc areas for young children and families

Need for a focal point for all sectors of the community to come together

I would like to see a park for families etc. to walk safely around, without the need to walk on the roads

Consultation & Findings

Leisure facilities

Moy GAA has two excellent outdoor pitches. These are the only sporting facilities which Moy currently have on offer. These facilities are limited in terms of servicing the needs of the whole community in terms of numbers and variety of sports. What has been identified as a need is a multipurpose sports facility, namely, a multi-purpose hall and an outdoor 4g covered surface for multi sports.

It would be good to have some form of sports hall for activities such as indoor soccer, early year's group, badminton where exercise can take place for larger numbers.

Provide facilities for games/basketball/netball/handball/badminton,etc

Apart from the Moy GAA field and facilities, there are no parks and open spaces that I am aware of in the Moy area for recreational purposes

Community

Community Centre

It was identified that Moy lacks a general Community Centre, one which is for purpose and facilitates all of the community. There are several churches in the village with varying levels of community facilities for their parishioners, the majority of halls however are not equipped to offer a range of activities. It was felt that the Church halls and spaces could still offer general uses as provided today. Whilst a Community Multi-purpose Hall would be a welcome addition to the Moy as people of all ages have to travel to either Dungannon or Armagh for up to date facilities. However MACADA recognise that one centre that can combine both a community centre hall and multi sports facility is the most economical solution and one which addresses the needs of the whole community. MACADA also strongly support the need for keeping and updating existing church halls to function as a support to the main community/multi sports hall.

Consultation & Findings

I would love to see a new community centre as the Moy badly needs one that is open to all and used by all and provides all the services that other community centres provide in other areas

Modern community centre would be major asset for the community. It could encompass a lot of the issues where Moy has been left behind in comparison to other local towns and villages

Moy could be an even more welcoming village if all the different community organisations were facilitated under the one roof

Given the rising population and size of the area, it is a real shame that there is no local centre or hall that is suitable to host community or sports events. The Moy badly needs a centre or hall that can cater for plays, musicals, dances, exercise, sporting events etc

Big enough to facilitate drama, musical productions

Community Events

Community involvement was recognised as being good but with room for improvement. In previous years Moy have organised the Christmas Lights switch on organised by local businesses. This has been a success and building on this success is crucial to improving community relations and spirit. More community events being organised was a key finding in the audit.

Christmas Lights

Fun day in the square/craft stalls

Christmas event with festival, stalls and Santa!!

Bring Back Santa!!

Consultation & Findings

Youth

With over ¼ of the population in Moy being under the age of 16 there is clearly a need to cater for this sector. The issue of young people having nowhere to go in the evenings is a growing concern amongst many of the community. Underage drinking, anti-social behaviour and youth loitering in the streets therefore stems from this. The need for a purposeful youth activity provision is clear in Moy and this could take the form of youth clubs /drama /music / sports. The youth can be provided for using the existing church halls and proposed new community/multi-purpose hall. There is also a strong case for introducing youth volunteering programmes to increase their involvement in the community and to prepare them for employment.

Facilities for youth. Places for young to socialise instead of local graveyard

Somewhere for young people to go at weekend nights

More facilities for teenagers e.g. canoeing club using our river in Moy

Place for young teenagers to meet and do something constructive

Older People

It was highlighted that the older population of Moy was not catered for well in the community and often forgotten about. Many older people do not socialise in the pubs and they are not aware of any clubs or societies that they can meet socially. It was also noted that the many of the current facilities are not suitable in terms of accessibility and safety. These issues can be addressed, similar to the youth programme, by providing organised classes through the proposed new community hall and by looking at upgrading the current facilities on offer. The area of community transport is also a major issue for the elderly in Moy Village particularly those living on the outskirts of Moy. It will be important to give this consideration so that the elderly can access community facilities.

Create a safe place for elderly so we can meet up, have fun, have something to look forward to

Facilities for older people to socialise who don't like pubs e.g. bingo/social evenings

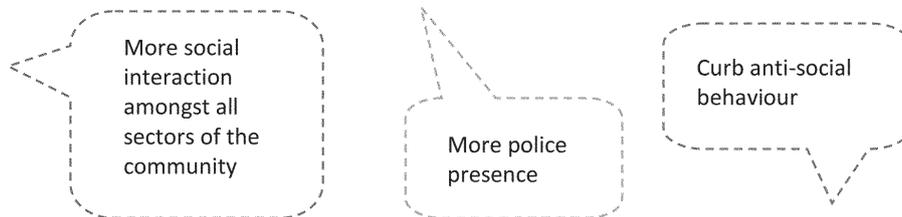

Pensioner awareness/help/visiting/ respect to elderly

Socials e.g. whist, bridge, tea dances

Consultation & Findings

Social Issues

The major social issue which was raised was the anti-social behaviour and alcohol use by the youth in the Village. How to address this issue has been covered under the youth section. The community at large felt that Moy was a safe place to live but there is still an element of vandalism and local crime that needs to be tackled. The need to further develop links with community police in the area was highlighted.

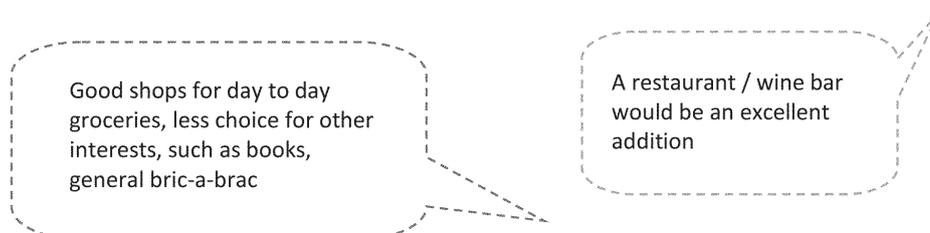

Infrastructure

Property/Business

Moy Village has a number of retail outlets which service the community for most of their needs. These include supermarkets, post office, butchers, pharmacies, hairdressers, beauty salons, gift shop, ladies clothing, lighting/electrical shops, furniture shops, builders merchants, hardware store, insurance agents, office supplies shop, antiques shop, coffee shop, a pizzeria, fast-food outlets and public houses.

In addition to the retail outlets Moy village has a guest house and family owned hotel which boasts excellent entertainment drawing big names to the Village. What has been identified as 'missing' in Moy is future use for the numerous redundant village properties located in all areas including The Square, Charlemont Street and especially Killyman Street. The need for local businesses to promote economic development is also paramount to the continued retail success in Moy. After many campaigns the village recently lost its library facilities, this building is now used for Dungannon Councils offices.

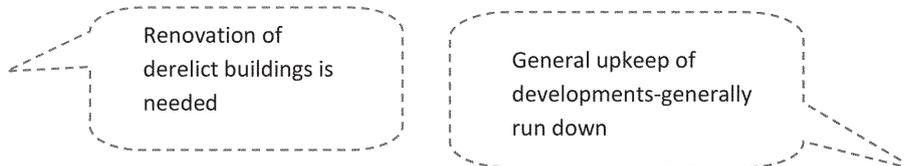

Consultation & Findings

Buildings

There are a number of buildings in Moy Village which lie vacant and several of these are verging on dereliction. It would be ideal if these properties could be brought back to commercial use, not only promoting economic development but also addressing the unsightly appearance of some of these buildings. There are a number of properties in The Square and in Killyman Street. There is a clear need to bring these buildings back into meaningful and sustainable use which will in turn improve their attractiveness for visitors coming into Moy Village, especially if we promote Moy on its heritage values.

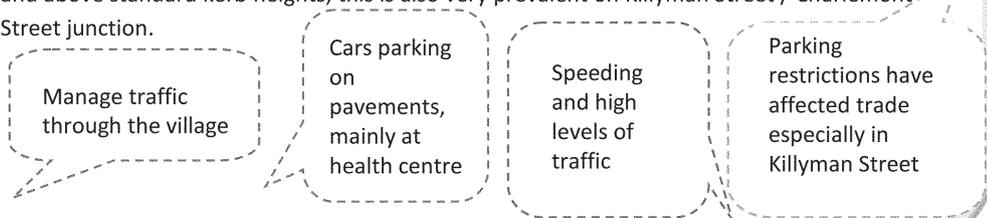

Many areas within Moy are in the conservation area and therefore any developments need to be considered carefully that they fall within the conservation guidelines.

There is a major economic need to consider Killyman Street as a project of regeneration and many suggestions of having restaurants, craft shops and shops of interest that would encourage people to stroll along, making it a social gathering for locals and visitors. There is an opportunity to open up the old court yards to provide parking. There is also an opportunity to provide awnings to the elevations of the buildings, to offer some protection from inclement weather and encouraging more and sustained social interaction.

Roads/Transport

Moy is the main route from Dungannon to Armagh and therefore has extremely heavy traffic especially at peak times. This often causes traffic congestion at the top of Charlemont Street and its junction with Killyman Street. Large HGVs do have difficulty turning from Killyman Street towards Charlemont Street and vice versa, this can cause congestion. Also parking towards the top of Charlemont Street can also be the cause of the traffic build up, this is a result of a lack of adequate parking and therefore people parking in spots where it has an effect on the flow of traffic. It is felt that there are not enough parking spaces in the village. The footpaths are also a major concern with uneven surfaces, holes and above standard kerb heights; this is also very prevalent on Killyman Street / Charlemont Street junction.

Consultation & Findings

Economic

Tourism

Moy Village is steeped in history and culture and is a designated conservation area (Appendix 5). Moy currently do not promote any landmarks or sites and are not utilising the potential the Village has. There are many opportunities for bringing tourism to Moy and its surrounding area which will increase visitor numbers and economic development.

The River Blackwater runs through the village of Moy and its neighbouring settlement of Charlemont and represents the divide of Co. Tyrone and Co. Armagh. There is huge potential to use the River Blackwater as a tourist opportunity. There is currently a Blackwater Project running which plans to reinvest in the rivers. MACADA are certain that there is potential for many projects; namely a river walkway as far as The Argory, picnic areas, safe purposeful areas for fishing and canoeing.

There is an opportunity to tap further into The Argory itself and link it better to Moy and attract some of its annual visitors. (1998 Argory had 25,261 visitors; by 2007 visitor numbers were still 22,700 per annum). Walkways (horse trails and footpaths) from Charlemont Bridge along river to The Argory, summer season boat trips with licenced operator. This should help The Argory also.

John King, the Australian explorer, who was born in Moy, is probably one of the village's biggest tourism opportunities that Moy could develop.

Moy is twinned with Bosco Marengo which does not appear to be utilised to its full potential.

Selling our wonderful history to many visitors to Moy

The River Blackwater could be promoted for tourism / sporting activities, paths developed etc

Local Tourism Information Centre

Restore areas of cultural importance-encourage tourism

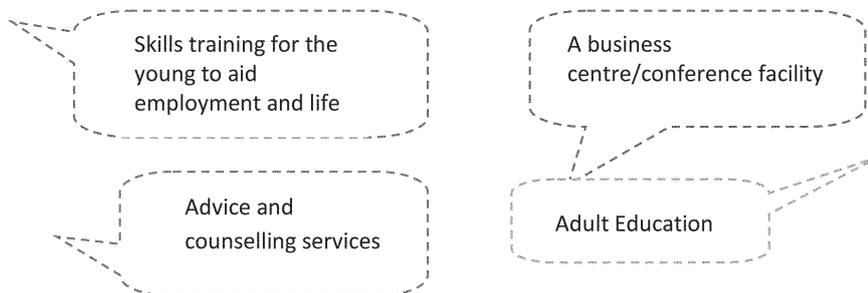

Consultation & Findings

Education & Training

The schools provision in Moy Village is well catered for with a cross community play group, St John’s Primary School and Moy Regional Primary School. Although the provision of services from each of these schools is excellent, it is thought the schools facilities could be improved in terms of modern well equipped schools.

There is currently a proposal for a new shared school site in Moy. This could incorporate a school hall facility which would cater for the community also. This would be considered the perfect solution for a multi-purpose community hall.

There are currently no training centres or educational services available in Moy which, if available, could boost skills in the youth to prepare them for employment and also could be used for adult education and enterprise initiatives. There is a potential for providing young people with volunteering opportunities and subsequent qualification recognition that goes with that to prepare them for employment. Moy was also identified as lacking in advice/counselling services.

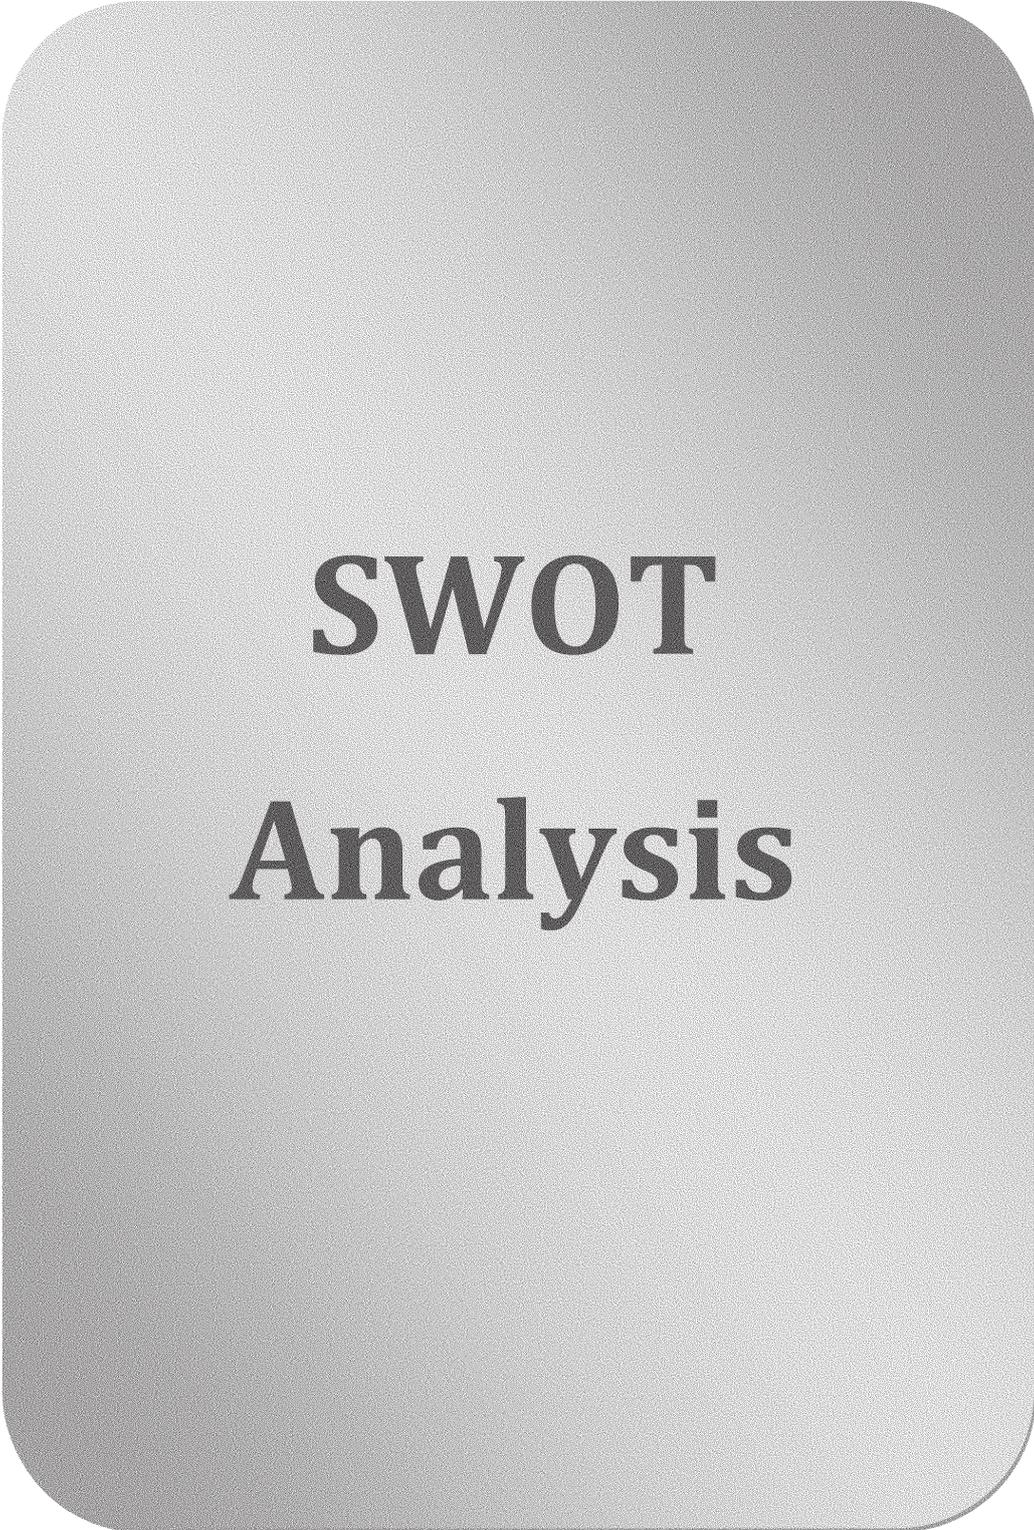

Employment

An opportunity exists to provide incubation services for start-up business ideas, which could be linked to training/educational services.

An area should be set aside for feeder business start-up units to support larger industries in the area and make Moy a destination for business to locate.

Summer season licensed boat operator and knock on tourism business spend.

SWOT Analysis

SWOT Analysis

The key priorities have been consolidated to form a SWOT analysis of the village.

Strengths	Weaknesses
<ul style="list-style-type: none"> • Strong community spirit • Good community involvement • Safe community to live in • Clean, tidy and well kept village • Positive community services from the churches • Excellent schools both pre-school and primary • Strong heritage and conservation village with general attractiveness • Well provided GAA grounds • Presence of vast number of Historical sights, monuments, locations • Location on A29 – major arterial route 	<ul style="list-style-type: none"> • Low level Anti-social behaviour in public places (alcohol abuse) • Lack of open spaces • Nowhere to freely meet socially at any time • Poor maintenance of streetscape features & attractions • Absence of a Business Park • Small play park on outskirts of village not conducive for use by whole community • Lack of leisure/sports facilities especially for youth • Litter problem on Moy Square • Church halls not able to cater for all the needs of the community • Little or no provisions for older people socially or otherwise • No training or education services provided in the village • No safe access to the river for walks or sporting • No clearly signed or safe walking routes around the village

SWOT Analysis

Opportunities	Threats
<ul style="list-style-type: none"> • There is a need and desire for change within the community • Community can therefore become more involved • Multi-purpose hall/community centre linked with Schools Shared Site Project • Promote greater inter-group/body collaboration • Opportunity to provide youth/older people services in the community • Promote community hall events • Develop an outdoor focal point for community to come together • Regeneration of Killyman Street to encourage economic development • Opportunity for more parking by opening up courtyards • Develop major community events to promote social inclusion • Further links with PSNI to protect village and reduce antisocial behaviour • Tourism opportunities promoting heritage sites and people of the past • Develop Tourism around River Blackwater and enhance local use • Need closer collaboration with Charlemont side of cluster to form a more strategic alliance 	<ul style="list-style-type: none"> • Derelict/vacant properties • Traffic congestion and lack of parking discourages visitors to stop • Deterioration of existing community halls. Inaccessible/safety issues • Absence of rural transport to Village • People travelling to Dungannon or Armagh for other services • MACADA members all voluntary and the need to retain position and encourage new members, manpower to consider all opportunities • Sustainability of Controlled School without Shared Campus proposal

Developments to Date

Developments to Date

Since the time that the consultation process was conducted (January 2013) until the writing of this report (November 2013), MACADA have made some progress in addressing a number of the issues.

Key Issues Addressed

- It was suggested that the community start to utilise current community halls that were available for use. Moy have in use, 4 Church halls and 2 schools halls 7 days a week for activities for the whole community.
- A very successful Cross Community Summer Scheme was supported by MACADA and occurred on both primary school sites at different times.
- An old and unused snooker club has now been refurbished and reopened and in its first month of opening have 40 members and creating one part time job.
- A youth club "Fusion" is now fully subscribed, providing a place for 11 year olds and up to go on Friday evenings instead of 'hanging about' the village. This has been a success attracting youth from both sides of the community.
- A monthly "What's On" newsletter is being produced by MACADA which highlights all of the activities available in Moy each night and also what special things are featuring that month. (Appendix 2)
- MACADA established networks with the local police (PSNI) to look at matters of alcohol and drugs within the community and to set out targets of addressing this. A CHOICE programme was offered to the youth of Moy.
- A project to create further dialogue on our past, the outcome of which is intended to Re-image the village through the Arts, is also underway at Phase I.
- Annual Christmas lights are delivered each and every year.
- Production of a Village Welcome Pack for all new comers to the village is underway.
- Early feasibility into the production of a paper-back book of approximately 200 pages defining the history of Moy and Charlemont.

This would serve as a great educator to all that live in the village as to our longer term history and it is hoped that by educating our inhabitants, that this will encourage us to uniformly promote and protect our own history

Developments to Date

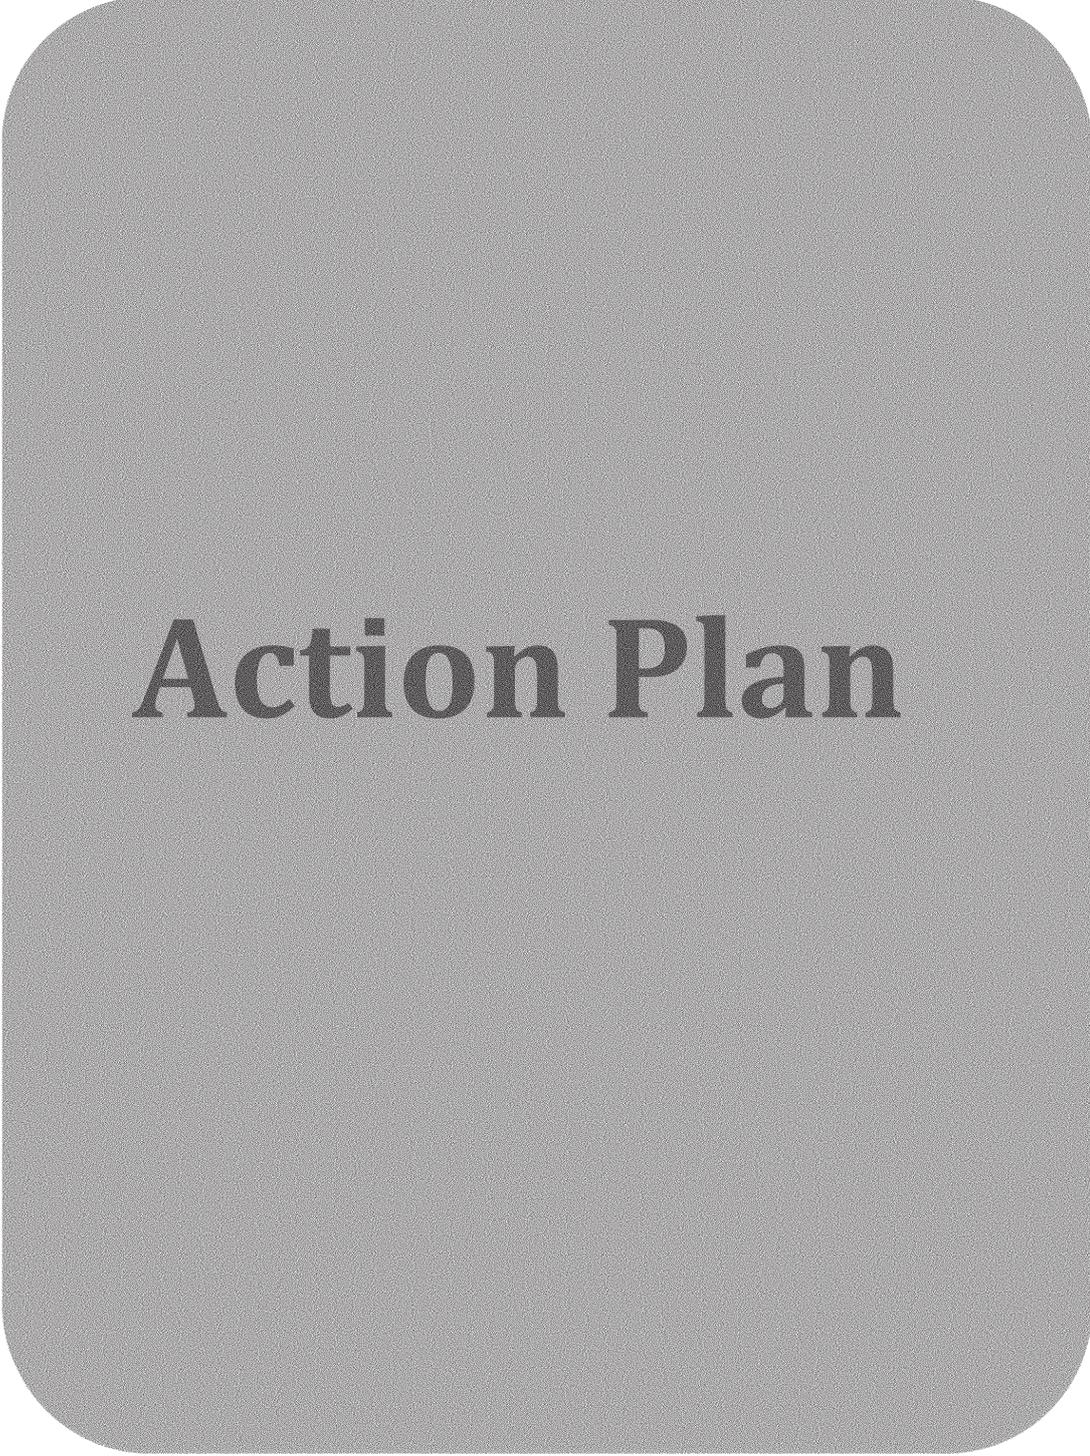

Shared Sports Facilities

Moy Regional Primary School and St. Johns primary school have produced and submitted a plan to the education board regarding Shared Schools Facilities. This is now a project which will have a huge impact on the Moy Community. The element of this plan in which the wider community have vested interest in, would be the potential shared use of the hall facilities which could encompass all of the key sporting and social priorities suggested. This could potentially double up as a community centre which could host all of the additional community activities, when the local church halls are deemed unsuitable for a particular use/event.

Government/Statutory Bodies Contact

MACADA have already contacted numerous bodies to establish whether any plans for Moy are in the pipeline and also to develop the first step in creating a partnership for the future regeneration of Moy. The bodies contacted were:

Dungannon Council
Blackwater Regional Partnership
DRD
Water Service
DARD
SWARD
Rivers Agency
Historic Buildings Council
PSNI
NIHE

Action Plan

Action Plan

The tables below provide a summary of the agreed actions to be taken forward under the Integrated Village Action Plan for Moy. The time frame is split into 3 categories; short term (up to 1 year); medium term (1-3 years); long term (over 3 years)

Moy Action Plan							
Priority: Leisure							
Parks / Open Spaces / Leisure Facilities							
Initiative	Action	Current Position	Delivery Partners	Potential Cost	Funding Sources	Time Frame	Priority Level
Open Space	Create a green area with seating, kids facilities, walks, natural features, coffee kiosk (Appendix 5)	No zones, Potential site	Dgn & Sth Tyrone Borough Council	£1.5m	HLF – Parks for People up to 90% over £1m	Medium Term	High
Sports Facilities & Community Hall	Enhance offering of Shared Schools site to provide 4g covered surface outside & community hall with sports/stage/changing rooms	Awaiting announcement form D.O.E. & £300k SIF application made by SELB	DARD, SELB, DOE, Dgn & Sth Tyrone Borough Council	variable	DARD, SIF, DOE, Dgn & Sth Tyrone Borough Council	Long Term	High
Commercial Enterprise - Snooker Club	Provide recreation resource to the village	Delivered & created 1nr part time job	NIHE, MACADA	£5.8k	Shared Community Programme, MACADA	Delivered	High
Village Walks	Provide a safe and interesting loop for pedestrians (Option I & II) Option III would be to link with Charlemont Village to provide a larger more interesting walk (Appendix 6)	Proposed Route identified (Appendix 6)	DRD, Dgn & Sth Tyrone Borough Council, MACADA SOAR, Armagh Council, CCDA	£50k - £250k	SWARD, DSTBC, DRD, NIEA (Countryside access £120k as 75% of total) Central Good Relations Funding Programme	Short Term	High

Action Plan

Moy Action Plan							
Priority: Leisure Parks / Open Spaces / Leisure Facilities							
Initiative	Action	Current Position	Delivery Partners	Potential Cost	Funding Sources	Time Frame	Priority Level
River Walk to Argory	Propose a walkway along River Blackwater from Moy/Charlemont to The Argory (2miles) (Appendix 7)	Route Identified (Appendix 6)	DSTBC, Armagh Council, Blackwater Project, Ulster Canal Linear Developments Project, SOAR, SWARD National Trust, CCDA	£500k	DSTBC, Armagh Council, Blackwater Project, Ulster Canal Linear Developments Project, SOAR, SWARD, national Trust	Long Term	Low

Action Plan

Moy Action Plan							
Priority: Community Community Centre/Events/Youth/Older People/Social Issues							
Initiative	Action	Current Position	Delivery/Partners	Potential Cost	Funding Sources	Time Frame	Priority Level
St James Parish Hall - community use	Upgrade facility to fit for purpose	Design stage	Church of Ireland	£500k	HLF	Medium Term	High
Moy Presbyterian Church - community use	Maintain current approach	New build serving all of the community at different events	Moy Presbyterian Hall Committee & various at events	n/a	Private	Delivered	Medium
Moy Methodist Hall - community use	Maintain current approach	Fit for day to day use for meetings & small groups	Moy Methodist Church Committee, Dgn & Sth Tyrone Borough Council	n/a	Dgn & Sth Tyrone Borough Council	Current	Medium
Annual events	Re-establish an annual Christmas Lights Ceremony	Plan to establish a sub-committee in early 2014 to deliver for 2014	Dgn & Sth Tyrone Borough Council, Shared Communities Programme & MACADA	£15,000	Community Festival Grant, Shared Communities Programme & MACADA	Short Term	High
Annual Event/Tourism	Re-establish an annual horse related event for Moy, as 1-2 day event	Plan to establish a sub-committee to lead a workable scheme	Dgn & Sth Tyrone Borough Council, NIHE, MACADA	£25,000	Shared Communities Programme, Good Relations	Medium Term	Low

Action Plan

Moy Action Plan							
Priority: Community Community Centre/Events/Youth/Older People/Social Issues							
Initiative	Action	Current Position	Delivery/Partners	Potential Cost	Funding Sources	Time Frame	Priority Level
Youth Activity Programme	Develop a youth volunteering & Leadership Programme	For Consideration	Consideration	Not known	Not known	Long Term	Medium

River Blackwater	Provide walkway along the river & uses along the river e.g. seating	Concept Design	Blackwater Project, SWARD, NIEA, Planning Service.	£150k	SWARD, Space & Place.	Short Term	High
Tourism enhancement	Explore & promote the link with John B King, or other shared history ideas	Currently underway	Arts Council, NIEA, DSTBC, MACADA, Planning Service, DRD	£50k	Arts Council	Active	Medium
History	Production of 200page book on history c/w illustrations & photos	Research to commence	Historical society, NIHE, MACADA, CCDA	£11.5k	Shared Communities programme, Awards for All, HLF sharing Heritage	Active	High

Conclusion

Conclusion

Conclusion

This Action Plan steers a clear way forward for the delivery of comprehensive and appropriate regeneration actions/initiatives for the advancement of Moy Village. This Action Plan should bring a focus to our local priorities and should encourage engagement between different players in the Community Development Sector and interaction between different sectors e.g. local business and community groups.

As in the SWOT analysis, the strong community spirit and energy within Moy is apparent and this will be invaluable in leading the delivery of this Action Plan. The constituent members of the Group will have the capacity to lead, implement and deliver the actions within the Plan and will also have the capability to identify, apply for and manage funding streams. The actions identified clearly reflect a broad and inclusive consultation with local community, businesses and service providers. The actions emphasised are those which have been identified and brought forward from the local community, as opposed to any that could be identified on any statutory 'wish-list'. It is considered that the local community have an excellent chance of achieving the Action Plans they have identified.

The Group plan to create sub committees/task forces to individually lead and drive certain projects. Each sub group should meet once a month and feed into the larger group on a quarterly basis to update on actions/initiatives. MACADA are very committed to the future of Moy and will carry out a review on the overall progress and report on the Village Action Plan on an annual basis.

MACADA also recognise the importance of their neighbouring association for Charlemont & Collegelands Development Association (CCDA) and the value of a more collaborative approach with them, in order to enhance our collective offering. Several projects listed will require a joint approach.

MACADA at this juncture, also recognise the need to become more formal in their engagement with local council and statutory bodies. MACADA want to establish a forum for receiving information from all state bodies, so that it can consider all matters in the pipeline and hence input to these decision-making processes, so that the end result can better assist the whole of Moy Community.

MACADA want to create an interactive vibrant village community in social and economic terms, in order to protect its future and lead the way to a positive, sustainable and all inclusive village community of the 21st century and setting the new benchmark in Northern Ireland.

Conclusion

MACADA want their lead partner to be Dungannon & South Tyrone Council, especially to share their vision for their borough and to assist each other in achieving Economic Development & Tourism, rural regeneration and environmental sustainability. There will be a sincere focus on provision of community space, building good relations and cultural development.

MACADA would also welcome more formal arrangements with NIEA, DRD, DARD, DECAL, DEL, DOE, DSD, NIHE, PSNI, Southern Trust and local church bodies to help MACADA and Moy community to deliver our VISION.

MACADA feel that the perception of Moy Village is better than the reality and we want to be partners in improving the reality..... And to make Moy a better place to live.

Appendix 1

MACADA CONSTITUTION

MOY AREA COMMUNITY AND DEVELOPMENT ASSOCIATION

CONSTITUTION

1. NAME

The name of the Association shall be the Moy Area Community and Development Association (hereinafter called the 'Development Association').

2. OBJECTS

The Development Association is established to -:

- 2.1** Relieve the sick and the aged and to promote the benefit of inhabitants of Moy, Charlemont and surrounding district areas of Co Tyrone and Co Armagh (hereinafter described as 'the area of benefit') without distinction of age, sex, race, political, religious or other opinion, by associating the statutory authorities, voluntary organisations and inhabitants in a common effort to advance education and to provide facilities in the interests of social welfare for recreation or other leisure-time occupation, with the object of improving the conditions of life for the said inhabitants;
- 2.2** To establish or to secure the establishment of a Community Centre (hereinafter called 'the Centre') and to maintain and manage, or to co-operate with any local statutory authority in the maintenance and management of such a Centre for activities promoted by the Development Association and its constituent bodies in furtherance of the above objects.
- 2.3** In furtherance of the above objects, but not further otherwise, the Development association may:-
- 2.3.1** provide or secure the provision of social services, recreational facilities and practical assistance for elderly and disabled people within the area of benefit;
- 2.3.2** provide, maintain and equip or assist in the

provision, maintenance and equipment of premises and facilities designed to carry out the objects of the Development Association;

- 2.3.3** promote and carry out, or assist in promoting and carrying out research, surveys and investigations and publishing the useful results thereof;
- 2.3.4** organise or assist in organising meetings, lectures, classes and exhibitions, and publish or assist in publishing reports, periodicals, recordings, books or other documents or information;
- 2.3.5** obtain, collect and receive money by way of grants, donations, bequests, legacies or other lawful method, provided that the Development Association may not engage in any form of permanent trading;
- 2.3.6** purchase take on lease or in exchange, hire or otherwise acquire any real or personal property and any rights and privileges necessary for the promotion of the above objects and construct, maintain and alter any buildings or erections which the Development Association may think necessary for the promotion of its objects;
- 2.3.7** make any regulations for any property which may be so acquired;
- 2.3.8** subject to any consents as may be required by law, sell, let, mortgage, dispose of or turn to account all or any of the property or assets of the Development Association with a view to the furtherance of its objects;
- 2.3.9** receive money on deposit or loan and borrow or raise money in such a manner as the Development Association shall think fit subject to such consents as may be required by law;
- 2.3.10** invest the monies of the Development Association not immediately required for furtherance of the said objects in or upon such investments, securities or property as may be thought

fit, subject nevertheless to such conditions (if any) as may for the time being be imposed or required by law;

- 2.3.11** recruit and train volunteers with relevant skills to carry out the objects of the Development Association;
- 2.3.12** employ and pay person or persons, not being a member of the Management Committee referred to below ('the Committee') to supervise, organise and carry on the work of the Development Association and make all reasonable and necessary provision for the payment of remuneration to employees;
- 2.3.13** to promote and organise co-operation in the achievement of the above objects and to that end to work in association with local authorities and voluntary organisations engaged in the furtherance of the above objects in the area of benefit;
- 2.3.14** do all such other lawful things as may be necessary for the attainment of the above objects or any of them;

3. MEMBERSHIP

- 3.1** Membership of the Development Association shall be open, irrespective of political party, nationality, religion or political opinion to residents of the villages of Moy and Charlemont and their surrounding districts who shall be over the age of sixteen years. Candidates for membership of the Development Association shall be proposed by a member of the Development Association and seconded by another and their name handed to the Honorary Secretary. Membership shall be granted by a two-thirds majority of the Committee present at the Committee meeting voting on the nomination.

4. MANAGEMENT COMMITTEE

- 4.1** Except as provided otherwise in this constitution the policy and General management of the affairs of the Development Association shall be directed by the Committee which shall meet not less than 10 times in a year

and shall consist of not less than 10 members of the Development Association, elected at an Annual General Meeting.

- 4.2** Nominations from full members of the Development Association for members of the Committee must be in writing, and must be in the hands of the Honorary Secretary of the Development Association at least 7 days before the Annual General Meeting hereinafter mentioned.
- 4.3** Should the number of nominations exceed the number of vacancies, election shall be by secret ballot of the members of the Development Association present and voting at an Annual General Meeting.
- 4.4** Should the number of nominations be less than the number of vacancies, further oral nominations may, with the approval of the Annual General Meeting be invited from members present and voting at the said Annual General Meeting.
- 4.5** The Committee elected at an Annual General Meeting shall have the power to co-opt further members of the Development Association who shall serve until the conclusion of the next following Annual General Meeting provided that the number of co-opted members shall not exceed one-third of the total membership of the Committee.
- 4.6** The Chairman, Vice-Chairperson, Honorary Secretary, Minutes Secretary and Honorary Treasurer, who shall be the Honorary Officers of the Development Association, and shall be elected annually by and from the members of the Committee at the Annual General Meeting. The office of Chairperson shall not be held by any one person for more than 3 consecutive years and may be rotated with the consent of all the Committee on a six-monthly basis between each Annual General Meeting.
- 4.7** Any member of the Committee who commits a breach of the Development Association rules, becomes bankrupt, insolvent or compounds with his/her creditors or becomes of unsound mind or fails to attend 6 consecutive Committee meetings without reasonable excuse shall lose his/her place on the Committee which may be filled by co-option in accordance with Clause 4.6 above.

5. FUNCTIONS OF THE COMMITTEE

- 5.1 The Committee may make such regulations as they consider appropriate for the efficient conduct of the business of the Committee and the Development Association.
- 5.2 The Committee may appoint such staff as they consider necessary on such terms and conditions as they may determine.
- 5.3 The Committee may appoint such sub-committees, advisory groups or working parties of their own members and other persons as they may from time to time decide necessary for the carrying out of their work and may determine their terms of reference, duration and composition. All such sub-committees shall make regular reports on their work to the Committee.
- 5.4 The Chairman, Honorary Minutes Secretary and Honorary Treasurer shall be ex-officio members of all sub-committees.
- 5.5 The proceedings of the Committee shall not be invalidated by any failure to elect or any defect in the election, appointment, co-options or qualifications of any member.
6. **CHAIRING MEETINGS**
All meetings of the Development Association or of the Committee or of any of its sub-committees shall be presided over its Chairperson failing whom its Vice-Chairperson, if one has been appointed. If neither the Chairperson or Vice-Chairperson are present, those present may elect one of their number to take the Chair. The Chairperson of any meeting shall have a second or casting vote.
7. **FINANCE**
- 7.1 All monies raised by or on behalf of the Development Association shall be applied to further the objects of the Development Association and for no other purpose provided that nothing herein contained shall prevent the payment of legitimate out-of-pocket expenses to members of the Development Association engaged upon the approved business of the Development Association.
- 7.2 The Honorary Treasurer shall keep accounts of the finances of

the Development Association.

- 7.3** The financial year of the Development Association shall run from 1 April to 31 March.
- 7.4** The accounts shall be audited at least once a year by an auditor who shall be appointed at the Annual General Meeting.
- 7.5** An audited statements accounts for the last financial year shall be submitted by the Committee to the Annual General Meeting.
- 7.6** Bank accounts shall and may be opened in the name of the Development Association with Ulster Bank Limited, The Square, Moy or with such other bank as the Committee shall from time to time decide. The Committee shall authorise the Chairman, the Honorary Treasurer and one other member of this Committee to sign cheques on behalf of the Development Association. All cheques must be signed by 2 of the 3 authorised signatories.

8. TRUST PROPERTY

- 8.1** All the real and personal property of the Development Association shall be vested in not less than three Trustees who shall hold such property in trust for the Development Association.
- 8.2** The Trustee shall hold office for life unless by not less than 28 days notice in writing they resign or unless they are removed from office by the Committee.
- 8.3** A Trustee shall be removed from office if he/she:-
- 8.3.1** commits any wilful breach of the rules of the
Development Association or regulations made
there under;
- 8.3.2** becomes convicted of any criminal offence not
being an offence under the Road Traffic Act (NI)
1970 or any re-enactment thereof or an offence
under the Roads and Road Traffic (NI) Order 1981;

- 8.3.3** becomes bankrupt or compounds with her/his creditors or seeks protection of the Court with a view to making an arrangement with her/his creditors;
- 8.3.4** becomes of unsound mind;
- 8.3.5** fails to perform any function properly required of her/him by the Committee;
- 8.3.6** the Committee by a two-thirds majority decide in its discretion that she/he should be removed;

8.4 Trustees shall be ex-officio members of the Committee without

the power to vote.

8.5 Any vacancy in the office of Trustees shall be filled by the remaining Trustees.

9 ANNUAL GENERAL MEETING

- 9.1** An Annual General Meeting of the Development Association shall be held at such place and time (not being more than 15 months after holding of the preceding Annual General Meeting) as the Committee shall determine. The Annual General Meeting shall if possible, be held on the third Thursday in January of each year, or as near as possible thereto.
- 9.2** The Committee shall stand down at the Annual General Meeting; all retiring Officers and members of the Committee shall be eligible for re-election except those who have attended less than 75% of Committee Meetings held during the previous year.
- 9.3** At such Annual General Meeting the business shall include the following:-
 - 9.3.1** the election of the Honorary Officers to serve on the Committee;
 - 9.3.2** the appointment of an auditor or auditors;
 - 9.3.3** the consideration of an Annual Report of the work done by or under the auspices of the Committee;
 - 9.3.4** the consideration of the audited accounts;

9.3.5 the transaction of such other matters as may from time to time be considered necessary.

10 SPECIAL GENERAL MEETINGS

10.1 The Committee may at any time at its discretion and shall upon a requisition signed by not less than 10 members having the power to vote and giving reasons for the request, call a special General Meeting of the Development

Association for the purpose of altering the constitution in accordance with Clause 12 hereof or of considering any matter which may be referred to them by the Committee or of any other purpose.

10.2 The Honorary Secretary may require from the persons requisitioning a Special General Meeting such sums as may be necessary to cover the expense of calling a meeting provided that the meeting shall not hereby be precluded from considering a resolution that expenses of the meeting be met by the Development Association.

11 RULES OF PROCEDURE AT ALL MEETINGS

Voting

11.1 Subject to the provisions of Clause 12 and 13 hereof all questions arising at any meeting shall be decided by a simple majority of those present and entitled to vote thereat. In case of an equality of votes the Chairman shall have a second or casting vote.

Minutes

11.2 Minute books shall be kept by the Committee and all the other sub-committees and the appropriate Honorary Secretary shall enter therein a record of all proceedings be 6 or such other numbers as the committee may from time to time determine.

Quorum

- 11.3** The quorum at the annual General Meeting and any Special Meetings of the Development Association shall be 10 and at meetings of the Committee shall be 6 or such other numbers as the Committee may from time to time determine.

Standing Order

- 11.4** The Committee shall have the power to adopt and issue Standing Orders and/or Rules for the Development Association. Such Standing Orders and/or Rules shall come into operation immediately provided that they shall be subject to review by the Development Association in General Meeting and shall not be inconsistent with their constitution.

Notices

- 11.5** Notice of the Annual General Meeting and any Special General Meeting specifying the business to be conducted thereat shall be given in writing by the Honorary Secretary to each member of the Development Association at his/her last known address not less than 7 days prior to the date fixed for the meeting or, if the Committee so decides, notice shall be duly given if advertised twice in a newspaper circulating throughout Northern Ireland not less than 10 days prior to the meeting. Notices sent by post shall be deemed to have been served 2 days after posting and in proving such service it shall be necessary only for it to be proved that such notice was properly addressed, that postage was prepaid and that the envelope was delivered to the Post Office.

12. ALTERATIONS TO THE CONSTITUTION

- 12.1** Any alterations to this constitution shall receive the assent of not less than two-thirds of the members of the Development Association present and voting at the Annual General Meeting or a meeting specially called for the purpose provided that notice of any such alteration shall have been received by the Honorary Secretary in writing not less than 21 clear days before the meeting at which the alteration is to be brought forward.
- 12.2** At least 14 clear days notice in writing of the meeting setting forth

the terms of the alteration to be proposed shall be sent by the Honorary Secretary to each member of the Development Association provided further that no alteration shall be made which would cause the Development Association to cease to be a charity at law.

13. DISSOLUTION

13.1 If the Committee by a simple majority decide at any time that on the grounds of expenses or otherwise it is necessary or advisable to dissolve the Development Association they shall call a meeting of all members of the Development Association who have the power to vote of which meeting not less than 21 days notice (stating the terms of the Resolution to be proposed thereat) shall be given.

13.2 If such decision shall be confirmed by a two-thirds majority of those present and voting at such meeting the Committee shall have the power to dispose of any assets held by or in the name of the Development Association.

13.3 Any assets remaining after the satisfaction of any proper debts and liabilities shall be given or transferred to such other charitable institution or institutions having objects similar to the objects of the Development Association as the Committee may decide.

14. INDEMNITY

The Development Association shall indemnify and keep indemnified every officer, member, volunteer and employee of the Development Association from and against all claims, demands, actions and proceedings (and all costs and expenses in connection therewith on arising there from) made or brought against the Development Association in connection with its activities, the actions of its officers, members, volunteers or employees, or in connection with its property and equipment. The Honorary Treasurer shall effect a policy of insurance in respect of this indemnity.

Appendix 3

BACKGROUND HISTORY OF MOY

A Short History of the Moy

In the mid-18th century the area where the Moy village now stands and all the surrounding lands was owned by James Caulfield 4th Viscount Charlemont, later first Earl, known in history as the Volunteer Earl. He was a direct descendant of Toby Caulfield, first Baron Caulfield, the original Governor of Charlemont fort and an important Captain in the service of Elizabeth 1 and King James 1. In 1755 Thomas Adderley an Irish Squire who had married Lord Charlemont's widowed mother and who acted as his advisor informed him that limestone deposits had been discovered across the river Blackwater and suggested he build a new town there. The building of new planned towns or the redesign of older towns was very fashionable with the wealthy landowning ascendancy at that time.

In 1764 the new town was built on formal lines with a central tree lined square or diamond.

The buildings had a distinctive Georgian appearance but the square was different from other new towns of the period with a distinctly continental appearance. It is said to be modelled on the Lombardy village of Bosco Marengo which the young Viscount had visited during his then fashionable grand tour.

The geographic location of the new town was an important feature in its future development. It was located on the main coach road between the important towns of Armagh and Dungannon and crossed a substantial bridge over the river Blackwater. The bridge had first been erected by Lord Mountjoy in 1602 to open a new route to Dungannon. The wooden structure had been replaced by this time, 1766, by a five arch stone structure. This was rebuilt in 1854 by William Dargan the famous railway and canal engineer as a three arch bridge which is still in use today. The new town provided coaching stops and accommodation for travellers and an important postal service. In 1744 the Newry (at that time the most important sea port in the North of Ireland, much bigger than Belfast) to Portadown canal opened and this was linked to Lough Neagh which was then linked to Charlemont and Moy by the navigable section of the Blackwater River. This accessibility greatly enhanced the commercial development of the new Town.

The Volunteer Earl who never lived or spent much time in Moy, as he was very involved in national politics, did two additional things which would have long term consequences for the Town. In 1761 he instructed a member of the gentry, James Verner who lived in an estate at Church Hill near Moy, to organise a monthly sale of horses from Lord Charlemont's large stocks. This was undoubtedly the beginning of the Moy horse fair which grew into one of the biggest in Europe and for which the Moy became internationally famous. For example, according to war office records, many of the officers' chargers and trooper mounts for the Inniskillen dragoons which took place in the famous Union

Brigade charge at Waterloo were purchased in the Moy and the same applies to some of the chargers used in the charge of the immortal 600. The Moy fair continued to grow and produce prosperity for the town right into the early twentieth century when the horse dealing business of the Laverty brothers dominated the commercial activity of the Moy. After the Great War the use of horses began to reduce due to rapid developments in the internal combustion engine but Laverty Bros took on a massive contract with the Greek government in 1922 when they became involved in the Greek / Turkish war. The Greeks defaulted on their contract and left Laverty Bros holding huge stocks of horses in Moy which they had to feed and look after. This eventually caused them to become bankrupt and it devastated the once prosperous village for years to come. The Moy fair and market continued right up to the early 1950's but it was a steadily declining event, a mere shadow of its glorious past.

The second thing which the first Earl caused to happen was the building in the 1770's of a substantial house just outside the town called, Roxborough. This was originally for his brother the Honourable Captain Francis Caulfield M.P. for Charlemont. Unfortunately tragedy struck shortly after the Building was completed. Captain Francis, his wife and children were lost at sea when the ship they had chartered to carry furniture which they had bought in London for the new house sank during a storm in the Irish Sea.

The volunteer Earl died in 1799 just before the Act of Union and was succeeded by Francis William, the second Earl. He was not as involved in politics and spent substantially more time on his Northern estates. It was he who promoted a spate of buildings and improvements in the Moy. These included St James Episcopalian church built in the Gothic style in 1819, the market house (destroyed by a bomb in the early 1970's) which served as a public reading rooms and court house and to the rear of it a shambles market which developed substantially in the latter half of the 19th century under the direction of a Moy market committee. Francis William was a liberal minded landlord and after the act of Catholic Emancipation in 1828 he encouraged the building of St John's Catholic Church in 1833. Incidentally the front and the tower is now clad with stone from Roxborough Castle after it was eventually demolished in 1920. He also supported the building of a new Presbyterian church a little later in 1855.

The potato famine in Ireland caused poverty and deprivation in the Moy as elsewhere although the Earl was one of the more supportive of the Irish landlords. It was however one of the factors which caused a young Moy man called John King to leave the village and follow his father into the army. After serving in India, he left the army shortly after the Indian mutiny to bring a team of camels to Australia and join the Burke Wills exploration expedition in Melbourne.

He was the only survivor of that fateful expedition which crossed Australia from Melbourne on the South coast to the North coast across the uncharted outback to the Gulf of

Carpentaria, a trek of some 3000 miles. John King is probably the most famous Moy man in the world today, although relatively unknown in his native town.

In the early 1840's before the famine, the second Earl became absorbed with remodelling Roxborough and creating a landscaped estate suitable for a man of his status. Stables, kitchens, servants' quarters and out offices were added. From the 1850's a lot of rebuilding and additions were made to Roxborough "Castle" in a variety of classical and continental styles. He was also responsible for promoting the new railway line from Portadown to Dungannon with a convenient station stop at Trew and Moy outside the town. This was to have beneficial results in the future for Moy fair and the general commercial life of the town. On the death of the second Earl in 1861, the third Earl continued to develop the "Castle" and estate as was fashionable among late Victorian gentry. He built a number of stone gate houses at the various entrances, a magnificent cast iron entrance which is still intact today, a iron railed deer park, beautiful gardens and green houses, 700 acres of landscaped parkland laid out with walks, fountains, statues, artificial ponds etc and of course a tall tower or folly which today is the only building remaining on the once opulent and splendid site. During that period the Earl promoted a major extension and alteration to St James church in the popular gothic style and sometime later the clock tower with its famous three faces were added. One of his prime objectives was to improve the appearance of his town of Moy and in this he was successful.

The new political dispensation in relation to land ownership and land rentals in the last part of the 19th and the first years of the twentieth century spelt the eventual end of the big ascendancy estates and the Charlemont family like many of their peers were in huge financial difficulty. The death of the third Earl in 1894 caused the closure of Roxborough Castle and the breaking up and eventual sale of the estate and other assets in the early 20th century. Roxborough was demolished in 1920 and the noble Charlemont dynasty lost its connection with the town it had founded.

Shared Education

I am making this submission in a private capacity. I have been a teacher since 1967, in both England and in Northern Ireland, in both faith and 'state' schools.

I was cautiously optimistic in 2010 when the First Minister of Northern Ireland, Peter Robinson, stated very strongly that he saw Integrated schooling as the way forward for our society. I hoped that the day when the present 93/7% State/Integrated breakdown might finally dawn, with goodwill from all interested parties.

Then, when the 'Shared' Education model began to be mooted, my concerns grew that powerful interest groups must be influencing policy. All leaders seem to pay lip-service to the desirability of Integration but not to the extent of significantly furthering it.

Baroness Blood has called for a root and branch Enquiry into Education in Northern Ireland. Perhaps with such a thoroughgoing survey as this informing policy, the fundamental question of parental choice can be adequately aired and addressed. Faith lobbies, in particular, can be relied on to continue to emphasise the sectarian argument of parental choice, and the preservation of what they call 'ethos', ignoring the wider ramifications of the costs to society of their 'rights' being met. ('Ethos', it should be remembered, is not the preserve of any one sector. On listening to some commentators, however, it is quite clear that some 'ethoses' are more desirable than others!). While such standpoints must be heard, so too must the concerns of those – the vast majority in my view - who believe society should be aiming in the much shorter term for the establishment of a school system which integrates children, of all abilities, backgrounds, ethnicities and religions.

I have no doubt but that submissions to this Enquiry will quote the compelling international evidence in favour of educating children under one roof. (And in talking about 'rooves' I am not referring to experiments like that in the Moy which has all the hallmarks of an educational oxymoron). My reason for offering my perspective is based on my personal experiences in over 40 years of teaching in a wide variety of schools, faith and state, in both England and Northern Ireland. I was educated in Tipperary by the Christian Brothers, and am a graduate of UCD.

I was involved in the seminal educational debate in England in the '60s and onwards, which witnessed the incorporation of pupils from a wide array of origins and backgrounds. Such transformations necessitated the re-examining of curricula, overt and covert, in ensuring that schools did much more than pay lip-service to multi-ethnicity, but actually fashioned-out an ethos in which all pupils could flourish. This necessitated us as teachers confronting our own deeply held beliefs and prejudices. We who hail from the indigenous cultures of these islands have absorbed attitudes which run deep, and only a certain kind of accommodating educational environment can address the types of questions and issues which true integration throws up.

Those who demand segregated schooling speak a lot about the need to respect 'difference'. But the 'difference' that they are overly and disproportionately preoccupied with, happens to be probably, ultimately the least important, but potentially the most incendiary, of all human differences, which is that of religion. This religious segregating of children may have had a certain contested causality in the past, but in this era of multi-culturalism, it's becoming a privilege which is unsustainable. I taught in multi-ethnic schools in England, integrated schools, (though not in name), but, because of the insistence of Catholics, Anglicans and Jews on having their 'own' schools, Muslims, Hindus, Sikhs, and other religious minorities began to demand this selfsame privilege. And thus was precipitated the further disintegration of the education service, and the growth of arguments for religion to be taken out of schools.

A faith school is too two-dimensional – it operates in an intellectually ‘safe’ context, which is the antithesis of true learning. A mixture of backgrounds and cultures provides the missing dimensions. With Northern Ireland’s fractious history, it is essential for schools to work towards that synthesis which is only possible with proper integration. ‘Half-way houses’ like those proposed by the Shared model, are exactly what Northern Ireland does not need. ‘Shared Education’ represents a failure to confront society’s most glaring needs.

While faith/segregated/sectarian schools can and indeed do, emphasise certain desirable values, they cannot, by their very nature, draw from that nurturing well which is generated by a cross-community, ethnically-mixed, religiously-diverse catchment of children. There is little possibility of true, lasting friendships developing until children, working at the same tables, eating at the same tables, playing in the same teams, acting in the same plays, playing in the same orchestras, visiting each others’ houses, (visiting each others’ places of worship?), see each other as nothing other, than merely other young label-less people.

In all my years in schools, I never once came across a teacher who expressed a preference for teaching ‘Catholic’, or ‘Protestant’, or ‘Muslim’, or ‘Jewish’, black or white, etc. ... children. Teachers prefer to teach the child who is before them and not one of a particular racial, religious, sexual, or any other label. In fact, if a teacher were to have strong preferences for such a sectarian catchment of children, I believe they would in so doing, be disqualifying themselves from the noble profession of teaching. And yet, teachers in Northern Ireland are trained in segregated training institutions, a medieval practice which should have no place in a modern society. Those with the power to effect and perpetuate such ghettoisation should be challenged. If there were a proposal to train doctors, lawyers, etc., along sectarian lines, questions would rightly be asked.

In the days when schools were well-subscribed, there was no urgency to change structures, except among the high-minded pioneers of the

Integrated Education movement. Now that numbers are dwindling, it would take a very uncynical person not to wonder if perhaps current preparedness to share resources had to do with such paucity of children. A figure that could run into the forties of millions of pounds, maybe more, while thousands of teachers and other staff lose their jobs, while children continue to be failed, has been suggested for this lurch into the worst of all possible carve-ups.

I would appeal to all power-brokers in the education world of Northern Ireland, particularly the CCMS, one of whose spokespersons has stated that the CCMS ‘neither supports nor opposes integrated education’, to re-consider the false path we are placing our children on with this ‘Shared’ trade-off. Why? Because it is not really ‘shared’ at all – not in the true meaning of that word. But it most assuredly looks like a trade-off to those of us looking-on powerlessly from the sidelines. If someone in Birmingham - England or Alabama - suggested a ‘shared’ campus, a la Northern Ireland, between Muslim and Jewish, or black and white children, in either place, the idea would be derided, and rightly so. We must ask ourselves what the essential difference is between such a disingenuous proposal as this, in those places, and that planned for the Moy, and other places in Northern Ireland. Shared education is segregation with a smiley mask on.

Because of the ‘parental choice’ millstone, politicians are afraid of rocking the educational/electoral boat and will opt for the line of least resistance. I believe that an Enquiry among the people of Northern Ireland, proposing universal Integrated education would command the support of the vast majority of people of good-will. The tail has wagged the dog for long enough and it is time people were given the choice of declaring what kind of society Northern Ireland should be. Intransigent rumps have held sway for far too long and it is time that the voice of the people, free from the browbeating of prelate, politician or propagandist, was heard and acted upon.

Paddy McEvoy

Methodist College - Briefing paper

Methodist College Belfast Briefing for Education Committee on the Diversity of the College

Areas to cover:

The Principal and representative of the Board of Governors thank the Education Committee for the opportunity to host their meeting and to present on the ethos of the College and the level of “mixing” in the school

1. Ethos

- a. opportunity diversity and excellence
- b. a values based educational experience (tolerance, respect, integrity, equality)
- c. pupils encouraged to develop compassion, self-awareness and independence of thought and spirit
- d. provide an education that is exciting, exacting, enriching and ennobling.

2. Extent of mixing

- a. Members of 23 different religious groupings
- b. Diverse ethnic mix, 87.6% white
- c. Diverse geographic mix – 43 postcodes – town and country

3. Reasons

- a. Aims and values lived out
- b. Opportunities to share experiences
- c. Commitment to making a difference: community involvement (local and global)
 - i. Salter Sterling Outreach Project
 - ii. Belfast Inter-Schools Creative Writing Forum
 - iii. University of Cambridge Higher Education Plus Programme
 - iv. Input into the Community Relations Council, the Sharing in Education Programme and the work of OFMDFM on developing a United Youth Policy
 - v. contributor to the Commission on Religion and Belief in British Public Life: community, diversity and the common good
 - vi. Community voluntary work
 - vii. Romania Society
 - viii. India Society
 - ix. Languages – French, German, Spanish, Russian, Mandarin, Chinese
 - x. Multi-cultural evening
- d. Experiences of current and past pupils and families.

4. Conclusion

Methodist College provides a naturally integrated, cosmopolitan environment where pupils from all backgrounds and faiths learn together, play together and grow together; a school where pupils have memorable and life changing opportunities.

13 October 2014

Dear Mr McCallion

I am writing in response to your request for written evidence with regard to Shared and Integrated Education.

- Shared and Integrated Education are completely different. In recent years politicians have sought to sell shared education as a viable alternative to integrated education. It is not. Shared Education at its worst is apartheid education with Catholics going in one door, Protestants another. At best it allows pupils to share some time together but in essence, while better than nothing, it is similar to most CRED work. While there are some examples of good work, it is largely ineffective. Having worked in the controlled sector for twenty years and having been involved in supporting and running CRED activities for almost thirty years I know from personal experience and from the views of professional colleagues that while providing some 'nice' opportunities it has limited long term effect. The good work evident in CRED happens every second of every minute of every day in Integrated schools. More importantly, as the interaction is ongoing and a natural part of daily life, rather than artificial and forced, it IS effective in that the friendships and bonds created are long lasting and meaningful. An analogy would be to describe Rangers playing Celtic as 'Shared Education'. Different shirts, different managers, different clubs, different tactics, different changing rooms, different teams... allowed to play together and interact for periods on a shared pitch before dividing again. Integrated Education would be to describe playing for Scotland. Different views, different clubs, same team, same shirt, shared goals.
- We have been made aware that a definition of shared education as opposed to integrated education was provided to Mr Justice Treacy as part of the court proceedings surrounding Drumragh. Why seek a legal obligation to facilitate Shared Education when our assembly, MLAs and educational bodies have ignored and avoided a legal obligation to develop Integrated Education. In fact, since, the Good Friday Agreement Integrated Education has been capped and suppressed. Seeking a legal obligation to promote 'Shared Education' is just another excuse to continue to avoid an existing legal obligation to promote **Integrated Education**. Any legislation underpinning Shared Education must not be to the detriment of integrated education which is more effective and financially efficient at achieving the shared aims. Rather it should demand 'shared practice' within the segregated sectors where they exist.

respect harmony trust teamwork integration balance sharing friendship

- The key barrier for Integrated Education is the ‘what we have we hold/no change’ mentality of those in power and those working within the segregated sectors of education. Integrated schools have been actively prevented from growing so as not to negatively impact on neighbouring segregated schools. I have been at meetings with local and national politicians who have described integrated education as ‘artificial, false and forced’. They have no knowledge of integrated education, no understanding of it and no desire to either. They fear it because Integrated Education is the only effective means of bringing about real positive change. With thirty years of experience the established integrated sector inc NICIE & IEF and existing Integrated schools is the only body capable of facilitating it. The biggest barrier to Integrated Education is the existing divided political and educational system that needs a divided society to survive. Integrated Education would heal that division.
- **Other jurisdictions have come to the Integrated Sector to learn from the model of existing good practice in Northern Ireland.** It speaks volumes that our politicians ignore the obvious answer on their doorstep to seek something else. Why on earth would you look at practice elsewhere and ignore the established practice within our own integrated sector that is seen as a benchmark of good practice? Does the education committee at Stormont have a reason for failing to recognise the integrated sector’s thirty years of knowledge and expertise? It is beyond belief that the ELBs, are tasked with CRED when they have sought to maintain their status as a single ELB rather than potentially dilute their identity within ESA while the bodies with real knowledge and expertise are sidelined (eg NICIE)
- CRED is an elastoplast for a compound fracture. Having attended a dissemination of ‘outstanding’ practice for CRED last year it is no wonder why Northern Ireland is and will remain a divided society. The best facilitators had extensive work experience with NICIE yet NICIE was not part of the process. The outcomes of best practice were minimal and those identified happen every second of every minute of every day in integrated schools. We are more likely to have argument and fall out over football in Mill Strand Integrated School than religion or politics (maybe it would be more logical to have different schools for pupils supporting different football teams). Even those disagreements are dealt with easily as we celebrate difference/tolerate nothing.
- As a school, Mill Strand Integrated Primary School is more than the sum of its parts. The rich ethos of the school, practice in meaningful integration is embedded in the culture of the school. It is something that is unique to this area but then it is something that IS unique to integrated schools. There is an old saying “If you always do what you’ve always done, you’ll always get what you’ve always got.” The only way to heal a divided society is to heal the division. Education from the earliest age in an integrated setting is the best way to heal the division. This is not an opinion. It is a fact, supported by countless years of research and in Northern Ireland there already exists a model of best practice. It is ironic that we have the means to create a truly inclusive society building a shared future at a time when schools in the mainland may be moving in a direction that will see the creation of a divided society. There are examples of integration in action on the doorstep of every MLA in the province. I would urge every one of them to spend a week in an integrated school.
- You cannot make a school integrated by simply changing its title/name and artificially forcing pupils together. Integrated schools have a unique ethos and practice.

I spoke at Stormont about Creative Change. The work of Derek Wilson from the University of Ulster, a fantastic and real cross community initiative that really did engage stakeholders and make a difference. Despite our presentations funding ended when the work should have been extended. It was disheartening to realise afterwards that few MLAs actually attended and those that did, did so fleetingly. With £23m recently donated it should be wisely spent on Integrated Education and the Creative Change project. It will more likely be wasted on shared

initiatives that are less efficient, effective and that will leave no long term legacy for the better.

It is completely appropriate that you seek the views of all sectors. It is vital that you engage with the segregated sectors to ascertain the barriers to shared education, the effectiveness of any shared practice and the limits within the current structures.

If you ask a question you must be prepared to listen to the answer. If you want to be informed about Integrated Education you must talk to the integrated sector. If you want to bring about change you need to listen to the integrated sector. If you want to continue to promote division, continue to ignore it, sideline it and suppress it.

If this inquiry genuinely wishes to move Northern Ireland forward I will gladly travel to Stormont, I will gladly give up my time, I will willingly engage with MLAs for as many days as it takes. I am sure my colleagues from other integrated schools and NICIE would do the same. Equally, I would welcome any MLA to spend time at Mill Strand Integrated School & Nursery. Should they wish to spend a week here they will walk away informed, enriched and enabled to think about integration.

Yours sincerely

Millennium Integrated Primary School

Millennium Integrated Primary School

139 Belfast Road
Saintfield
BT24 7HF

22nd October 2014

Dear Mr Mc Callion,

Thank you for the opportunity to respond to the Shared/Integrated Education Inquiry. If there is any intention to meet with interested parties, I would be very happy to do so and also for some of our children to take part in the consultation process.

I am writing to you as the founding principal of Millennium Integrated Primary School and as a teacher who has worked in the controlled sector, is Chair of Governors of a CCMS Community Nursery and in the earlier part of my career worked in an international school and also at the Rudolf Steiner School in Holywood. In addition I have a long track record in innovative cross- community work. All of these enriching experiences have contributed massively to my understanding of the importance and richness of experience which is a real added bonus when there is diversity within a school community. By diversity I am talking about integration and inclusion in the widest possible sense, so that all are valued. A community which truly, actively and proactively welcomes all and ensures that this is alive within the school.

Millennium has had an incredible journey and owes everything to the parents in the Carryduff community who wanted integrated education for their children. I could write pages about the many hurdles and obstacles the founding parents and I had to overcome at every stage of the school's development, but I am fortunate to also be able to celebrate the achievements of our community and our integrated school.

If we analyse why Millennium exists, it is my firm belief that it exists in spite of the very organisations one might have expected to show support or even equity of treatment, and the politicians who did their very best to block the opening, building and development of the school particularly, in the first 12 years.

Why does Millennium exist?

- Parent Power- sheer hard work, perseverance and determination no matter what the setbacks were
- The demographics of this area which has possibly the highest percentage of mixed marriages in Northern Ireland
- The changing face of Northern Ireland – many of our younger parents really want integrated education and are voting with their feet. Unfortunately the big decisions are being made by an older generation who still carry the scars, hurt and baggage of the troubles (Only today I received notification of a Development Proposal from another integrated primary school – the statistics enclosed from DE are interesting and speak for themselves –enrolment patterns of 8 integrated primary schools for 2013/2014 intake are that there were 422 first preference applications for 347 places. In the controlled sector across the 7 schools listed there were 996 unfilled places and in the maintained sector 2 schools were listed with 196 unfilled places)
- Parents are voting with their feet and they do not send their children to integrated schools just because they are integrated – like all parents they want the very best, rounded and balanced educational outcomes for their children
- Support given to the school by voluntary organisations and philanthropic donors from around the world – without their assistance the school may never have started

- The outcome of the recent judicial review has already begun to make a difference – a greater sense of being treated more equally with the other sectors although there are still some procedural and legislative issues which have the potential to continue to stifle rather than facilitate integrated education

What hurdles/barriers has Millennium had to overcome?

- No government funding in the first year
- Not being allowed on site because of traffic concerns despite the fact that there had been a furniture showroom and a car showroom, as well as a private dwelling – far more traffic than 1 teacher, 1 assistant and 10 children in that first year!
- Delaying tactics in relation to the planning application in the early years
- Even when our temporary school had been built and we had 7 new classrooms our growth was being controlled to protect other sectors
- Having to fundraise and apply for grants and look for donors to establish pre-school education
- Having to source funding for basic accommodation which would have been provided to other sectors – accommodation for the Nursery, for classrooms, for special needs provision
- Operating in a relatively new building which had 30% less accommodation than stipulated in the DENI handbook
- Turning away children and their families, particularly poignant when the family is from a mixed marriage

In the opening paragraph of this letter I gave an outline of my varied educational posts. I have seen and experienced at first hand the reality of the wonderful things which happen in a good integrated school when the children have the opportunity to be together all day, every day, sharing experiences, exploring diversity, understanding fully what is important to all of the religions and cultures which are part of our school community. Celebrating together special events which in the context of Northern Ireland are perceived to belong to one tradition or another. Developing mutually respectful values on a day by day, moment by moment, practical and meaningful basis. Total immersion is the key for the best possible outcomes, just as it is, if you really want to learn a second language proficiently. Not only is there an impact on the children and the staff but also on many of our parents who have made friendships with the 'other side'

It is so much more difficult to achieve a tolerant and open society when children are kept apart throughout their educational lives and also through the lack of mixed housing and as a result their contact with each other is minimal.

Good quality shared education is, I believe, an important first step on the journey but not if it's just about the occasional time together, making the effort because there is funding available or a lovely state of the art campus, and not if it is developed at the expense or exclusion of integrated education.

If shared education is not, in the long term, to repeat the limited outcomes of the old EMU, then much work needs to be done to upskill the staff, change mindsets and develop meaningful, regular opportunities through the curriculum for children to engage in learning about each other and the country and world which they live in and are part of.

Shared education is not the same as integrated education. A mixed school is not the same as an integrated school. The ethos, the hidden curriculum, the vision, the day to day values, are the things which define any school. So many of the decision makers have no experience or understanding of integrated education as the majority will have come through the controlled or maintained sector and understandably this is what is familiar to them.

I believe that parental choice should be facilitated as much as possible so the choice to send a child to a maintained, controlled or Irish Medium should also be available.

However we will know when there is a real commitment to integrated education by the powers that be, when the first integrated school is proposed and planned for by DE without the parents, the founding principal and staff having to jump over so many hurdles. Much is made of the recent lack of growth within the integrated sector. I know that this has been due to the lack of will to facilitate the growth of integrated education and the continuing situation that CCMS and the ELBs hold all the power. Just because the integrated sector and the Irish medium sector are smaller should not mean that they should be virtually excluded from the decision making processes. These two sectors should have as much right to be present from start to finish throughout all decision making processes. Respect needs to be developed for all sectors from within the sectors themselves as well as from the decision makers.

Does Northern Ireland want a unified, diverse and peaceful society or not?

Why are the decision makers so reluctant to make the decisions which have the potential to allow Northern Ireland to move away from many of the entrenched views and to embrace a better future for the generations to come?

In ten years' time will this period be viewed as a time of missed opportunities?

Will there be disappointment that shared education hasn't managed to deliver all that is hoped for?

I would like to see equity for all four sectors, a willingness to listen to the voices of our families, a true facilitation of integrated education, the development of skilled and meaningful shared education so that the children of the future do not carry the baggage and burden of Northern Ireland's sectarian past.

Thank you for the opportunity to make this submission.

Yours sincerely

Mary Roulston

Moy Area Playgroup Moy Regional PS and St Johns PS

On 1st July 2014 the Minister for Education announced the Shared Education Campus proposals selected to be advanced to the production of a full business case. We were delighted that the proposal submitted for the Moy Shared Campus was selected as one of the three projects approved by the Minister.

We therefore decided it was important that our joint management committee of (Moy Area Playgroup, Moy Regional Primary School and St. John's Primary School) should make a response to the request for written evidence for the Shared/Integrated Education Inquiry. This response has been formulated and agreed by all members of our joint management committee.

Shared/Integrated Education Enquiry

Joint Response from Moy Area Playgroup, Moy Regional PS and St. John's PS.

1. Nature and definition of Shared Education.

- 1.1 We fully agree with the definition for Shared Education provided by the Ministerial Advisory Group. "Shared education involves two or more schools or other educational sectors working in collaboration with the aim of delivering educational benefits to learners, promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion."

In the Protocol Document for the second call for expression of interest in the Shared Campuses programme, section 2.3 states 'Shared Education' means the provision of opportunities for children and young people from different community backgrounds to learn together." We agree with this statement but would more inclusive by adding "and adults" after children and young people. Our aim is to have a shared campus open to all ages.

2. Identification of the key enablers and barriers for Shared education in no significant order.

Enablers:

2.1 Parental and pupil Support

We believed that throughout all our discussions on "a shared campus" it was important that all stakeholders (Parents, pupils, staff, governors, trustees and the wider community) were kept informed.

2.2 Protection of Ethos and identity

The management bodies of all three institutions decided from the early stages that the retention of our own distinct ethos was essential. Also it was of paramount importance that we respected difference and promoted a culture of inclusion, tolerance and diversity.

2.3 Leadership and Management

We ensured that key personnel in the management of all institutions involved, had a clear vision and the absolute determination to ensure our proposal for a shared education facility became a reality.

2.4 Economic rationale

Detailed research carried out in Scotland has clearly shown that a shared facility would reduce the overall per-pupil cost of new schools, while providing extensive facilities for pupils and the wider community. This research quoted a "savings of around 25 percent in capital

costs are made compared to two free standing schools” (quoted from Education and a shared future).

2.5 Church/Education authority support

It is essential that the trustees and governing authorities of all institutions involved give their full support to any shared education projects. In our case the CCMS/relevant trustees and transferors/ SELB/PEAGS have now given our project full support despite reservations in the initial stages. This was very important as the project would not be able to proceed without their agreement and acceptance of our vision of a Shared Campus in Moy.

2.6 Cross community/Cross party political support

Since 2007 our project has continually consulted/informed and enlisted the widespread support and agreement of the local community. We have met and presented our vision for a shared campus on numerous occasions to politicians, education ministers, education committees, bishops, church representatives, teaching unions and other community groups. On each occasion we received unanimous support for our vision of a shared campus.

2.7 Availability/provision of effective cross community education programmes

For this past twenty years St. John’s PS and Moy Regional have jointly taken part in a range of educational activities and programmes.

As both schools are geographically very closely located there has historically been links between the Moy Regional and St. John’s. These links became more structured/formal with the introduction of the EMU (Education for Mutual Understanding) programme funded by DENI. This programme enabled all classes in both schools meeting together on at least three occasions at a neutral venue to undertake a variety of curriculum based lessons.

These lessons included the areas of Drama, Art, Environmental Studies, Sport, History/ Geography and Community Relations.

EMU was then replaced by the SCRCP (Schools Community Relations Programme) and this involved classes being taught lessons in each other’s schools by external service providers. Again these lessons were similar to the areas listed above but there was a greater emphasis on teaching Community Relations topics.

With these closer links now having been developed we then undertook joint parent information, Parent and staff training activities, joint celebrations for Christmas and joint after school/summer activities in the areas of music, sport, drama and dance. SCRCP has now been replaced by CRED (Community Relations Equality Diversity) and both schools continue to be involved in cross community projects.

The schools then undertook, with the support of the Governors of both schools, PCPP (Primary Curriculum Partnership Programme) which was funded by the SELB and International Fund for Ireland. This programme involved children visiting each other’s schools and being team taught Mutual Understanding from PDMU by the teachers. Staff and governors from both schools also attended training together in community relations (looking at respecting differences and flags and emblems). This very creative programme began in 2011 and ended in 2013 and greatly enhanced the quality of community relations activities which have been ongoing in both schools.

2.8 Government Policy/Right time for change

With the publication of the Bain Report and the impending closure of small schools a subcommittee of the Governors of Moy Regional and St. John’s began to meet regularly to try and prevent closure of the Moy Regional and the possible negative impact this would have on our community. As St. John’s had been assessed by CCMS as being a viable school but requiring a complete new building, the idea of a single site campus for all educational providers in the area became a vision for this subcommittee of governors. At this time the

Moy Area Playgroup became part of this vision as they had recently taken up temporary accommodation in St. John's due to flooding of their premises (at the GAA grounds) and were in need of permanent accommodation.

As a result of discussions by the subcommittee of governors in 2008/09 we agreed the following series of aims/objectives to achieve our shared vision.

- Increase shared resources to provide better educational experiences for all the children.
- Enhance Playgroup facilities and provision for the whole community.
- Enhance community relations
- To secure excellent educational and sports/recreational facilities and the creation of a community resource space for all age groups.
- Explore the possibility of developing a single site educational centre which enhances and maintains the respective cultural identities/Ethos within our community.

On 9th May 2013 'Together: Building a United Community' was announced by the First and deputy First Ministers. This contained a range of proposals including details on Shared Education Campuses. This was a watershed in that this was exactly what the community in Moy was aiming for and gave our vision the credibility it needed to keep striving towards our goal of a shared campus.

Barriers:

2.9 Fear of change

This undoubtedly will be a factor. In Moy all of the education providers hope to move to a new purpose built building on a neutral site. This will be a completely new experience for us all. Most people are afraid/wary of change as it can disturb their routines and involves adapting to new systems and ways of working.

2.10 Governance

Issues of ownership, management and community use of the building will need to be carefully organised and agreed by the three management bodies involved.

2.11 Availability of funding for capital build and site procurement.

Where is the funding coming from? It needs to be made available as soon as projects are identified and are given approval to proceed to the building stage. A suitable site needs to be identified quickly and agreed upon by the education authorities and management of the three institutions involved.

3. Our analysis of models of good practice in other jurisdictions.

3.1 Benview Shared Campus visit (3rd June 2013)

Eight members of our joint management committees and a member of the Fermanagh Trust travelled to Benview Shared Campus in Glasgow. During our time there we toured the schools, interviewed the principals, teachers and members of the joint parent support. We were all very impressed and realised this could be replicated in N. Ireland. We are also very aware of research (Education and a shared future) regarding other shared campuses in Scotland and that these are also working very successfully together.

4. Priorities and actions needed to improve sharing/Shared Education

4.1 Shared Education Projects identified should be prioritised and completed much more quickly.

4.2 A wide variety of projects developed to enable greater opportunities for children, young people and adults to meet within communities (including cross community programmes).

NASUWT

NASUWT
The Teachers' Union
NORTHERN IRELAND

EVIDENCE

**Northern Ireland Assembly Committee for Education
Inquiry into Shared and Integrated Education**

The NASUWT's submission sets out the Union's views on the key issues identified by the Committee in respect of shared and integrated education in Northern Ireland.

The NASUWT is the largest teachers' union in Northern Ireland representing teachers and school leaders.

For further information, Assembly Members may contact:

Ms Chris Keates
General Secretary

chris.keates@mail.nasuwt.org.uk
www.nasuwt.org.uk

Executive Summary

- The NASUWT believes that the education system has a critical role to play in the promotion of social cohesion and the development of safe, just, inclusive and tolerant communities.
- The NASUWT acknowledges and respects the right of the Minister of Education to identify shared education as a policy priority and recognises, in this context, that advancing shared education was highlighted as a key objective in the Northern Ireland Executive's Programme for Government.
- The definition of shared education in the remit given by the Department of Education to the Ministerial Advisory Group on Advancing Shared Education represents a viable and potentially helpful starting point from which to evaluate the nature of shared education and its implications for the education system.
- The NASUWT endorses the view of the Ministerial Advisory Group that integrated education represents a distinct and important sector within the education system, rather than a model upon which the development of shared education should be based.
- In evaluating the proposals set out for inter-school collaboration within the context of the shared education agenda, the Committee should recognise the benefits of an education system organised on the principles of partnership and co-operation and work to ensure that the stated commitment of the Minister of Education to develop policy on this basis is realised in practice.
- The NASUWT welcomes the recommendation of the Ministerial Advisory Group that the Department of Education should undertake a review of how shared education and enhanced collaboration between mainstream schools, special schools and educational support centres might most effectively meet the needs of children and young people

with disabilities, those with emotional and behavioural difficulties and those with special educational needs.

- Without clarity of definition, potential policy options for shared education cannot be developed or evaluated on a meaningful basis.
- The Department of Education should work with the NASUWT and other relevant stakeholders to identify potential barriers to the involvement of academically selective schools in inter-school partnership arrangements and to develop any necessary policy actions required to facilitate purposeful collaboration between these schools and other schools within their localities.
- The current school accountability system should be reformed to ensure that it encourages and celebrates collaborative working between schools and other educational providers more effectively.
- More attention would need to be given, within the context of a shared education agenda, to developing the capacity of institutions to establish collaborative arrangements in areas where there is no history of partnership working.
- Inter-school partnership arrangements must be properly assessed in terms of their impact on teacher and school leader workload and evaluated against criteria agreed with the workforce, including the NASUWT and other recognised trade unions, with the results of these evaluations being taken into effective account in the development and implementation of policy.
- The NASUWT is concerned that the implications of the introduction of a shared education premium for other areas of education-related funding and what, if any, conditions would be attached to its use, have not been identified by the Department of Education.
- It is essential that any proposals for the development of local shared education arrangements are not used as a pretext either to seek to reduce overall levels of investment in schools or to undermine the job security of the school workforce through the adoption of inappropriate approaches to school rationalisation.
- Before schools are designated as public authorities for the purposes of the provisions of Section 75 of the 1998 Northern Ireland Act, a thorough review should be undertaken of the potential implications of implementation of this proposal for learners and members of the school workforce.

Introduction

1. The NASUWT welcomes the opportunity to submit evidence to the Northern Ireland Assembly Committee for Education Inquiry into Shared and Integrated Education.
2. The Union's evidence addresses the specific issues identified by the Committee in its call for evidence by:
 - considering the nature and definition of shared education and integrated education, including consideration of the need for a formal statutory definition and the introduction of a legal obligation in statute on the Department of Education to facilitate and encourage shared education;
 - assessing the key barriers to shared education, with specific reference to the Community Relations Equality and Diversity (CRED) policy, parental and carer engagement and the role of Special Schools; and
 - where appropriate, identifying experiences from other jurisdictions that might guide the development of future policy in Northern Ireland.
3. The NASUWT's response therefore:
 - places issues related to shared and integrated education into their appropriate current policy context (p.4);
 - considers the definition, nature and promotion of shared education (p.8);
 - examines policy lessons from other jurisdictions (p.10);
 - sets out key issues related to the operation of academic selection in systems that seek to promote inter-school collaboration (p.16);
 - describes approaches to school accountability that promote inter-school collaboration (p. 17);
 - evaluates resource, governance and workforce considerations that should guide the development of policies focused on the promotion of inter-school collaboration (p.X); and
 - assesses the Community Relations Equality and Diversity (CRED) dimensions of any shared education agenda and the role of special schools in this context (p.X).

Background and context

4. The NASUWT believes that the education system has a critical role to play in the promotion of social cohesion and the development of safe, just, inclusive and tolerant communities.
5. Alongside the important contribution made to building social cohesion by other key public and social services and institutions, the work of schools in creating high quality educational opportunities for children and young people, celebrating diversity and difference and tackling inequality, discrimination, prejudice and bigotry must be recognised in the development and implementation of public policy in these key areas.
6. The Committee will recognise that public discourse on approaches to the achievement of these objectives has continued to focus on the potential contribution of shared and integrated education. The NASUWT notes in this regard that the Report of the Ministerial Advisory Group on Advancing Shared Education, published in March 2013, identified shared education as the core mechanism by which educational quality and equality could continue to be sustained and further progressed in Northern Ireland and advocated its continued emphasis in the development of policy.¹ Critically, the Ministerial Advisory Group assessed the potential value of shared education not only in terms of the religious beliefs of pupils, parents and wider communities but also in respect of their socioeconomic status, the extent

1 Connolly, P; Purvis, D. and O'Grady, P.J. (2013). Advancing Shared education: The Report of the Ministerial Advisory Group. Available at: <http://www.qub.ac.uk/schools/SchoolofEducation/MinisterialAdvisoryGroup/Filestore/Filetoupload,382123,en.pdf>; accessed on 17/10/14.

to which they encounter social exclusion or marginalisation and the special and additional learning needs of children and young people .

7. The NASUWT further notes that in October 2013 the Minister for Education, after a period of reflection, accepted the recommendations set out in the Report and sought to encourage a public debate on how best to advance shared education.² The Union welcomes the Committee's Inquiry as an important means by which this debate can be progressed on a purposeful and appropriately informed basis.
8. The NASUWT acknowledges and respects the right of the Minister to identify shared education as a policy priority in light of the recommendations of the Ministerial Advisory Group and recognises that advancing shared education was highlighted as key objective in the Northern Ireland Executive's Programme for Government.³
9. As a trade union committed to organising teachers and school leaders on a non-sectarian basis and to maintaining a genuinely inclusive and world class education system that meets the needs and interests of all children and young people, the NASUWT takes a particular interest in those areas of the Executive's work related to the promotion of equity, diversity and high standards of provision in all schools.
10. Having set out its position on the value of promoting shared education, it is incumbent on the Department for Education to ensure that it develops a coherent and credible strategy that recognises the particular economic and social context within which Northern Ireland is located. This submission therefore seeks to engage with the key themes identified as significant by the Committee with reference to the policy challenges that the Department for Education and the wider Executive will need to address if the Minister's aspirations for shared education are to be realised.

The definition, nature and promotion of shared and integrated Education

11. The NASUWT is concerned that, too frequently, consideration of the merits or otherwise of shared education has been attempted without a commonly recognised working definition. Without clarity of definition, potential policy options cannot be developed or evaluated on a meaningful basis.
12. The Union notes the support given by the Ministerial Advisory Group to the definition of shared education in the remit given to it by the Department for Education:

*'Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.'*⁴
13. While debates about the nature of shared education are likely to remain contested, the NASUWT believes that this definition represents a viable and potentially helpful starting point from which to evaluate the nature of shared education and its implications for the education system in Northern Ireland. It should, therefore, be adopted as the basis for the development of future policy in this area.
14. This invites further reflection on the important distinctions that should be drawn between shared and integrated education. The NASUWT notes the view of the Ministerial Advisory

2 Department of Education (2013). Advancing Shared Education: Ministerial Statement. Available at: http://www.deni.gov.uk/advancing_shared_education_-_22_october_2013_docx.pdf; accessed on 18/10/14.

3 Northern Ireland Executive (2011). Programme for Government 2011-15. Available at: <http://www.northernireland.gov.uk/pfg-2011-2015-final-report.pdf>; accessed on 17/10/14.

4 Connelly et.al. (2013). op.cit.

Group that integrated education represents a distinct sector rather than a model upon which the development of shared education should be based.

15. The NASUWT endorses this analysis. It is clear that integrated schools have had an important and legitimate role to play in the education system in Northern Ireland and will continue to do so for the foreseeable future. The Union notes ongoing perceived concern that the Department of Education has failed to discharge its statutory responsibility to encourage and facilitate integrated education. Given the nature of this requirement, it is important that the Committee and other relevant stakeholders should seek to examine and, if necessary, address these concerns.
16. However, integrated schools are settings with an intentionally multi-denominational but unambiguously Christian character. Consequently, the Ministerial Advisory Committee has recognised correctly that the privileging of integrated education in its current form cannot be regarded as a cohesive or credible approach to the development of shared education. Given the increasingly diverse nature of society in Northern Ireland, it must be recognised that many parents would hold legitimate and understandable objections to their children's education being undertaken wholly within institutions founded on a multi-denominational Christian ethos. Such an approach would be inconsistent with the definition of shared education advocated by the Ministerial Advisory Group.
17. Therefore, while integrated schools would have a distinctive and potentially powerful contribution to make to the development of shared education, the likelihood that parents will continue to prefer an education system that reflects the diversity of religious, cultural and philosophical beliefs across Northern Ireland suggests that the establishment of alternative approaches to shared education would be necessary in order to secure and maintain a reasonable degree of policy sustainability.
18. The NASUWT notes the interest in debates on shared education in the desirability of establishing a statutory definition of shared education. The Union recognises that the acceptance by the Minister of the recommendation of the Ministerial Advisory Group that a legal requirement should be placed on the Department of Education to advance shared education would require the introduction of a statutory definition.
19. However, the NASUWT is concerned that the introduction of a statutory duty in respect of the promotion of shared education prior to the development of a clear, coherent and practical implementation framework would lead to the imposition of a duty on the Department of Education that it would not be able to discharge effectively. The Union is clear that significant barriers to the development of shared education exist within the education system and that until these barriers are addressed, it would be inappropriate to introduce a statutory duty on the basis proposed by the Ministerial Advisory Group. These impediments to the advancement of shared education are set out elsewhere in this submission.

Policy lessons from other jurisdictions

20. The NASUWT notes the interest of the Committee in evidence from other jurisdictions that could support the development of shared education. The Union's views in this regard are shaped by its extensive experience of organising across jurisdictions and its active role in the global education trade union federation, Education International.
21. The NASUWT is clear that education systems benefit from approaches to school organisation that promote collaboration and partnership not only between schools but also between the school sector and other services that support children and young people. The Union therefore welcomes the commitment of the Minister in his statement to the Assembly on shared education to ensure that policy is guided by a determination to promote inter-school

- collaboration and the provision of education for all learners through the securing of effective partnership arrangements.⁵
22. The NASUWT recognises that the development of education policy in Northern Ireland must acknowledge the unique post-conflict context within which its education system operates. Policymakers must therefore resist simplistic attempts to transplant approaches to the development of enhanced inter-school collaboration from other jurisdictions that do not take the particular circumstances pertaining in Northern Ireland into effective account. However, the NASUWT is clear that it is possible to identify some broad policy lessons from other jurisdictions that are relevant to the development of shared education strategies in Northern Ireland.
 23. The direct experience gained by the NASUWT from its work across jurisdictions confirms its understanding of the importance of collaboration and partnership within education systems. This derives from the Union's recognition of the fundamental status of education as a public good and a universal human right.
 24. The status of education as a public good means that policy and practice should not only seek to secure benefits for individual pupils and learners but should also recognise the importance of education to the economic, cultural, civic and democratic wellbeing of wider society.
 25. These inherent characteristics of education have profound implications for the principles upon which education systems are organised. In particular, they confirm that notions of education as a commodity to be consumed by individuals and provided for in a competitive and marketised context are wholly inconsistent with an understanding of education as a public good and a human right.
 26. In its Report to its 2013 Annual Conference, *Maintaining World Class Schools*, the NASUWT described the profoundly negative consequences of attempts to use market mechanisms, including competition between providers, as a guiding principle for the organisation of provision in the education system.⁶
 27. In particular, the NASUWT's report draws attention to the fact that there is no credible international evidence that the development of education systems on the basis of conceptualising pupils and parents as consumers of education in a marketised context, with the promotion of competition between providers as a means of raising standards of provision, generates improved educational outcomes.⁷ Instead, the use of such mechanisms has been associated with high rates of variation in levels of pupil performance⁸ and increased social and economic segregation.⁹
 28. In such a context, it is also apparent that collaboration between schools and providers of wider services for children and young people to promote and improve children's wider wellbeing is also likely to be emphasised insufficiently where inter-school competition is a prevalent characteristic of the education system.
 29. The impediments to institutional collaboration generated by marketised approaches to the operation of the education system also have important implications for its productive and allocative efficiency by undermining the ability of schools to generate economies of scale

through effective partnership working and impeding the distribution of finite resources across the school system on a strategic basis.¹⁰

30. It is therefore clear that models of educational provision based on collaboration work to create circumstances within which significant educational, organisational and economic benefits can be secured. This has been recognised by the Organisation for Economic Co-operation and Development and was an unequivocal message of the recent independent investigation of the academies programme in England undertaken by the independent Academies Commission.¹¹
31. Evidence gained by the NASUWT from England is particularly instructive in this respect.
32. It is important to recognise that, notwithstanding the compelling evidence of the importance of institutional collaboration in securing positive outcomes for individuals and for wider society, policy development in England has long sought to embed quasi-markets and competition between schools as key features of the state education system.
33. This approach was initiated by the 1979-1997 Conservative Government and was based to a significant extent on the introduction of performance league tables and punitive individual school inspection, a fundamental purpose of both policies was to provide 'market' information to parents in order to allow them to exercise consumer choice in relation to the schools attended by their children.¹²
34. These reforms were supported by the granting of significant degrees of financial autonomy and control over key personnel-related functions to individual schools, reflecting the view of proponents of marketisation in the education system that such autonomy is a necessary condition of the efficient operation of quasi-markets as, in theory, it permits schools to respond more effectively to prevailing market conditions.¹³ The necessary corollary of the re-location of financial authority and control of resources at school level was a weakening of the strategic role of local authorities in supporting and maintaining effective collaborative arrangements between schools.¹⁴
35. While the Labour Government of 1997-2010 retained many of the features of a quasi-marketised education system, it is important to note that the value of collaboration was recognised to an increasing extent in the development of policy during this period.¹⁵ This revised approach was reflected in, for example, the introduction of school behaviour and attendance partnerships, 14-19 curriculum and qualification consortia and the co-ordination of admissions arrangements through Admissions Forums. In relation to school accountability, considered in more detail elsewhere in this submission, the previous administration's School Report Card proposal, subsequently discarded by the Coalition Government, sought to examine ways in which systems of accountability might be recast to emphasise more effectively the importance of collaboration between schools.¹⁶
36. More broadly, the critical importance of cooperation and partnership working between schools and other agencies and organisations within the wider children's services sector was

recognised in the development of statutory local authority-led Children and Young People's Trusts. These bodies were established not only to enhance the educational opportunities available to children and young people but also to promote their wider wellbeing through the adoption of strategic local approaches to inter-agency collaboration.

37. However, since taking office, the Coalition Government in Westminster has removed many of the remaining key drivers of cooperation within the education system, through its abolition of previous requirements on schools to collaborate with others and by undermining local-level structures through which effective inter-school partnership arrangements, as well as those between schools and other children and young people-focused public services, could be secured in practice.
38. The undermining of support for effective collaboration within the education and wider children and young people's services sectors has been driven by a clear commitment on the part of Coalition Government Ministers to the use of competition and quasi-market structures as the principal drivers of system improvement, despite an asserted recognition by the Department for Education of the value of inter-school and inter-sectoral collaboration.¹⁷ This approach to policy has been characterised particularly clearly by the emphasis placed by the current Westminster Government on its academies and free schools agendas.
39. In evaluating the proposals advanced for inter-school collaboration advanced through an agenda for shared education, the NASUWT therefore invites the Committee to take note of the considerations set out above. In particular, the Committee should emphasise that the commitment of the Minister to promote collaboration will only be secured in practice through a continuing rejection of policies based on the establishment of quasi-markets and fragmentation of the school system.

Academic selection and inter-school collaboration

40. The Minister's commitment to the promotion of inter-school collaboration draws attention to the ways in which academically selective schools within a shared education context might contribute effectively to the learning of all children and young people present in the communities within which they are located. The Union welcomes the particular attention given to this issue by the Ministerial Advisory Group.¹⁸
41. Development of policy in this area would need to consider how the approach to shared education advocated by the Minister will require active consideration of the ways in which settings currently operating systems of academic selection might need to amend their current practices to enable them to play a meaningful role in collaborative arrangements at a local level.
42. In this context, the Union notes the Minister's acceptance of the recommendation of the Ministerial Advisory Group that effective use should be made of area-based planning to promote the development of schools with all-ability intakes. However, given the fact that the Assembly has to date declined to take steps to end academic selection, it is likely that selective schools will remain a significant feature of the education system in Northern Ireland for the foreseeable future, regardless of the powers available to the Minister through the area-based planning process referenced above.
43. As a result, prior to the introduction of any formal requirement on the Department of Education to promote shared education, the Assembly will need to give consideration to the ways in which academically selective schools can be integrated into genuinely collaborative arrangements with non-selective schools. This collaboration, if it is to be meaningful, would need to include provision, where appropriate, for selective schools to take an active and direct role in the education of pupils enrolled formally in other schools as part of their contribution to the local learning partnerships advocated by the Ministerial Advisory Group.

17 Institute for Government (2012). *op. cit.*; The Academies Commission (2013). *op. cit.*

18 Connelly et.al. (2013). *op.cit.*

44. The Committee should, therefore, recommend that the Department of Education should work with the NASUWT and other relevant stakeholders to identify the potential barriers to the involvement of academically selective schools in local education partnerships and to identify any necessary policy actions required to facilitate purposeful collaboration between these schools and others within their localities.

Approaches to school accountability that promote inter-school collaboration

45. The NASUWT is clear that a fit for purpose framework of accountability is critical to ensuring that public trust and confidence in the state education system can continue to be secured.
46. However, it is not only critical that the school accountability system reflects accurately the quality of education made available to pupils, it is essential that it does not operate in ways that contradict or undermine other important system-wide education policy priorities.
47. In the context of the commitment of the Minister to shared education and increasing levels of inter-school collaboration, it is important that consideration is given to the extent to which the current school accountability system in Northern Ireland operates in ways that are consistent with these policy objectives.
48. It is evident that, at present, the current framework for holding schools to account in Northern Ireland works against the establishment of effective collaborative arrangements between schools and other learning providers. In particular, the increasingly high-stakes nature of the Education and Training Inspectorate (ETI) establishes powerful incentives for schools and other learning providers to focus on their own pupil performance indicators rather than on addressing, through collaboration, the needs of all learners within the communities they serve.
49. In a context where greater emphasis is placed on shared education, pupils would be likely to be educated in more than one institution. In such circumstances, it would be highly anomalous to continue to attempt to hold schools and colleges to account solely on the basis of the progress and attainment of their formally enrolled pupils.
50. It is therefore evident that effective collaboration between institutions would necessitate a fundamental review of the way in which schools and colleges are held to account for the work they undertake with learners. The introduction of effective approaches to shared education would depend upon the establishment of an approach to accountability that incentivises schools and colleges to focus to a greater extent on the work they undertake in collaboration with other institutions.
51. In *Maintaining World Class Schools*, the NASUWT set out clearly the extent to which models of school accountability based on the use of a narrow range of pupil performance indicators and punitive, data-driven school inspection, such as that in place currently in Northern Ireland, result in their failure to capture the totality of the work that institutions, individually and collectively, undertake with pupils and the benefits that derive from this work for individual learners as well for wider social and economic wellbeing.¹⁹
52. The commitment of the Minister and the Executive to promote shared education therefore creates an important opportunity to consider future policy options for school accountability in Northern Ireland.
53. In particular, effective note should be taken of the fact that many of the education systems in other administrations regarded as high performing or fast improving, are able to establish and sustain accountability-related processes that maintain high levels of public confidence and also support system development and improvement without use of the high-stakes approaches to school accountability that characterise arrangements in Northern Ireland to an increasing extent.²⁰

19 NASUWT (2013). op.cit

20 Eurydice (2007). *School Autonomy in Europe: Policies and Measures*. Eurydice European Unit; Brussels.

-
54. The NASUWT therefore advocates an objective and detailed review of the models of school accountability used in other education systems as a starting point for debate about the future of the school accountability framework.
55. This review should include consideration of the ways in which accountability frameworks in operation elsewhere work to engender enhanced levels of parental involvement in the education system, given evidence that the system in place in Northern Ireland, which is justified to a significant extent on the basis that it provides information about school performance to allow parents to make informed decisions about their children's education, does not serve to secure this important policy objective in practice.²¹ This consideration should be regarded as particularly critical given the identification by the Ministerial Advisory Group of effective parental engagement as a necessary condition for the development of sustainable approaches to shared education.²²
56. The concern of the NASUWT with current levels of parental engagement and commitment to the state education system reflects its understanding of education as a public good, underpinned by a culture of collaboration rather than contestability, and not as a commodity to be consumed by individual children and their families. As a result, the Committee should seek to promote a debate about the future of the school accountability system that explores ways in which a more effective balance can be struck between accountability at school, local and system levels. Critically, the recasting of public discourses on school accountability on this basis would serve to promote the public valuing and celebration of the education system evident within high performing jurisdictions such as South Korea and Finland.²³

Inter-school collaboration: resource considerations

57. The NASUWT welcomes the recognition by the Ministerial Advisory Group that collaborative arrangements between schools need to take account of and reflect their local contexts and that partnerships also need time to develop levels of trust and thereby establish appropriate and effective arrangements.
58. It is important that the Department of Education acknowledges that collaborative arrangements should encourage co-operation, facilitate and support networking and enable teachers and school leaders to concentrate on their core responsibilities for teaching and leading teaching and learning. In the establishment of such arrangements, the NASUWT and other recognised trade unions and members of the school and college workforce should be involved actively in decision-making processes.
59. As the report of the Ministerial Advisory Group acknowledges, positive examples of effective collaboration between providers across all sectors of the education system are emerging. However, it is evident that more attention would need to be paid within the context of a shared education agenda to developing the capacity of institutions to develop collaborative arrangements in areas where there is no history of partnership working.
60. Schools and colleges need time and additional resources and support, to be able to develop and implement effective partnerships.
61. Issues related to the training and development of teachers and school leaders working within a shared education context, highlighted as particularly important by the Ministerial Advisory Group, would also need to be considered carefully.
62. With specific regard to the funding of shared education, the NASUWT notes the acceptance by the Minister of the recommendation of the Ministerial Advisory Group that provision would need to be made to address the additional cost to schools engaging in shared education and

21 NASUWT (2013). op.cit.

22 Connelly et.al. (2013). op.cit.

23 NASUWT (2013). op.cit.

that the intention of the Department for Education is to mainstream this funding in the longer term.

63. The Union further notes that the Minister has reserved his position on taking forward the Ministerial Advisory Group's recommendation that a shared education premium within the common funding formula would represent the most effective means by which shared education could be funded.
64. It is critical that clarity is provided on these issues as a matter of urgency and before any attempt is made to implement the recommendations of the Ministerial Advisory Group. In particular, the NASUWT is concerned that the implications of the introduction of a shared education premium for other areas of education-related funding and what, if any, conditions would be attached to its use have not been identified by the Department of Education. The ongoing uncertainty over the Northern Ireland Executive's budget serves only to amplify these concerns.
65. As referenced elsewhere in this submission, area planning arrangements would have a central role to play in the development of a coherent shared education agenda and already are subject to terms of reference and guidance that seek to promote the development of shared education options.
66. The NASUWT believes that the current requirements that proposals for shared education models must have the support of the local community, be sustainable and be capable of delivering high-quality education are appropriate.
67. The Union is also clear that collaborative arrangements between schools can secure the more effective use of finite resources through the generation of economies of scale and minimising unnecessary duplication. However, it is essential that any proposals for the development of local shared education arrangements are not used as a pretext to seek to reduce overall levels of investment in schools or to undermine the job security of members of the school workforce through the imposition of inappropriate approaches to school rationalisation.
68. The Department of Education should seek to take forward greater inter-school collaboration on the basis that it provides an opportunity to make more effective use of the talents and expertise of the existing school workforce and to thereby enhance the quality of educational provision for learners. This important principle should therefore be incorporated into terms of reference and guidance on the development of local proposals for shared education.

Inter-school collaboration: workforce considerations

69. It is important that the risks to the workforce of poorly managed collaborative arrangements are recognised by those with responsibility for the development of policy in this area. Policy should be progressed on the basis of a clear understanding of the centrality of the school workforce to maintaining and further enhancing standards of educational achievement.
70. Specifically, inter-school partnership arrangements must be properly assessed in terms of their impact on teacher and school leader workload. They must be evaluated against criteria agreed with the workforce, including the NASUWT and other recognised trade unions, and the results of these evaluations must be taken into effective account prior to the implementation of policy. This evaluation must examine the capacity for institutions to cope with the changes and the capacity of the workforce in terms of time, knowledge and skills. This is particularly important in relation to the increased demands that may be made of teachers and school leaders in the future development of shared education campuses.
71. The Committee should also note the significant levels of workload pressure to which teachers and school leaders are currently subject. The NASUWT's Big Question survey found that 84% of teachers and school leaders in Northern Ireland cite excessive workload as their main work-related concern. Attempts therefore to progress a shared education agenda in ways that do not take effective account of these pressures and that would intensify further the workload demands on teachers and school leaders would be entirely unacceptable.

Inter-school collaboration: governance considerations

72. The considerations set out above draw attention to issues related to the funding, management and governance of inter-school partnerships and collaboration. It is important to note that a significant proportion of the Ministerial Advisory Group's recommendations, and the Minister's acceptance of them, rested on the assumption that the Education and Skills Authority (ESA) would be established prior to their implementation. The decision not to proceed with the ESA therefore casts doubt on the extent to which a consistent approach to shared education can be secured in the absence of ESA or a comparable system-wide body.
73. The Union notes the intention of the Department of Education to review all the recommendations of the Ministerial Advisory Group in light of the Minister's proposal to replace the current five Education and Library Boards (ELBs) with a single board from April 2015.
74. However, in the absence of any meaningful detail about how a single board would operate in practice, it is not possible to determine with any reasonable degree of certainty the extent to which this body would be able to undertake functions in respect of shared education for which ESA was intended originally to have responsibility. It would therefore not be appropriate for the Department of Education to seek to take forward its shared education agenda until the functions and remit of the single board have been determined. Any attempt to take forward shared education through existing ELB structures would not be appropriate given the risks of unacceptable variation in the approaches adopted across different areas that may result.

Community Relations Equality and Diversity policy and the role of special schools

75. The NASUWT welcomes the recognition given by the Ministerial Advisory Group to the important role played by special and alternative education settings in the provision of a genuinely inclusive education system. It is clear that any meaningful commitment to the development of an effective shared education strategy must include consideration of the ways in which such settings can contribute to purposeful inter-school partnerships that seek to meet the educational needs and interests of all children and young people.
76. As the Ministerial Advisory Group acknowledges, highly skilled and experienced staff in special schools and alternative settings are particularly well-placed to support provision for pupils with special and additional educational needs in mainstream settings, while staff across both sectors can benefit from the sharing of expertise and experience in all areas of pedagogy and professional practice.
77. The NASUWT therefore endorses the recommendation of the Ministerial Advisory Group that the Department of Education should undertake a review of how shared education and enhanced collaboration between mainstream schools, special schools and educational support centres can most effectively meet the needs of children and young people with disabilities, those with emotional and behavioural difficulties and those with special educational needs. The Union looks forward to working closely with the Department of Education on the development of the terms of reference of this review, its methodology and the evaluation of its outcomes.
78. Specifically, the Union will seek early clarification from the Department of Education that the view of the Ministerial Advisory Group that, wherever possible, pupils with special and additional needs are taught in mainstream settings will not be interpreted in a way that undermines the importance of ensuring that decisions about where such pupils are educated should continue to be guided by objective and professional assessments of the kinds of settings where these needs can best be met.
79. In relation to the Committee's specific interest in the relationship between the shared education agenda and the Community Relations, Equality and Diversity (CRED) policy, the NASUWT remains clear that a meaningful approach to shared education in the context of broader equality and diversity policy must seek to address the needs of pupils across all

categories specified in the provisions of Section 75 of the Northern Ireland Act 1998 and those living in materially deprived households.

80. In this regard, the Union takes particular note of the recommendation of the Ministerial Advisory Group that legislation should be brought forward for schools and other educational institutions to be designated as 'public authorities' under Section 75 and thereby required to comply with the statutory duties to promote equality of opportunity and good relations.
81. In principle, the Union has no objections to schools being designated as public authorities for this specific purpose. However, before any such proposal could be progressed, it would be necessary to undertake a thorough evaluation of the possible wider implications for schools of their designation as public authorities in order to prevent such a decision creating unforeseen and unwanted consequences. This evaluation would secure the confidence of the school workforce and the wider public that the sole implication of designation would be to introduce a statutory duty to promote equality of opportunity and good relations.
82. In addition, as the report of the Ministerial Advisory Group implies, designation of individual schools as public authorities could impose responsibilities on schools that they may require additional support and resources to discharge effectively and manageably. Before any steps were taken to implement this proposal, it would also be important to ensure that provisions are put in place to prevent responsibilities under Section 75 that should continue to remain within the remit of other public authorities being transferred inappropriately to schools.
83. The NASUWT recognises that responsibility for the introduction of legislation to designate schools and other educational institutions as public authorities falls within the remit of the Office of the First Minister and Deputy First Minister (OFMDFM). The Union notes from evidence given to the Committee by the Department of Education that the Minister intends to write to the First Minister and Deputy First Minister to communicate the detail of the Ministerial Advisory Group's recommendations and to seek their views on the practicalities of designating schools as public authorities for Section 75 purposes.
84. The NASUWT further notes that to assist the Minister in this process, the Department of Education is undertaking a review of approaches to equality legislation for education settings in other jurisdictions. Given the potential significance of any decision to designate schools as public authorities for the school workforce, the NASUWT is clear that it should be consulted fully over the terms of this review in particular and on the development of this strand of policy more broadly.

NEELB

Appendix 8

Shared / Integrated Education Inquiry

Submission from the North Eastern Education and Library Board

October 2014

Introduction

The North Eastern Education and Library Board has, since its inception, been at the forefront of educational innovation and development. Among the responsibilities which it discharges have been those in respect of promoting Community Relations and indeed contributing to the reconciliation process both during and after decades of inter-communal conflict in Northern Ireland.

As a learning organisation, it has remained aware of and involved in many of the significant initiatives which have sought to further these societal purposes and indeed have had significant implications and benefits for our schools. Some of these are as follows;

- i. The Cross Community Contact Scheme (CCCS), initiated by DE in 1987 and the re-launching of the above scheme as the Schools Community Relations Programme (SCRCP) in 1996 and continuing in this form until 2010
- ii. The DE working group paper on the strategic promotion of EMU, entitled 'Towards a Culture of Tolerance: Education for Diversity', 1999
- iii. The NEELB Policy and Action Plan on 'Promoting a Culture of Tolerance', 2001
- iv. The NEELB Action Plan to Promote Cultural Diversity, 2006
- v. The Dunclug Initiative 2006 – 2010. This initiative provided funding for the two main post primary schools in the locality to extend and deepen their collaborative work and thus provide an initial template for 'Shared Education' between post primary schools.
- vi. The implementation of a new Northern Ireland Curriculum in 2007, including as it did for the first time, discrete areas of study which pertained to this field, notably Personal Development and Mutual Understanding at Primary age (4-11) and Local and Global Citizenship at Post Primary age (11-16)
- vii. The development of Integrated Education, and more specifically Controlled Integrated provision in the NEELB area, in conjunction with our educational partners
- viii. The PIEE (Primary Integrating and Enriching Education) Project, 2009 – 2013 which was operational in the NEELB area. This project represents an established model for Shared Education at primary level which has been validated by external evaluation. As such it has provided much evidence which is relevant to this inquiry
- ix. The PIRCH (Partnership, Inclusion, Reconciliation, Citizenship and History) Project, 2011 – 2013 which was operational in the NEELB area. This project represents an established model for Shared Education at post-primary level which has been validated by the Education and Training Inspectorate. As such it has provided much evidence which is relevant to this inquiry
- x. From 2008 to 2010, DE initiated and facilitated a working group which led to the formulation and publication of the DE Policy on 'Community Relations, Equality and

Diversity' (CRED) in 2011. The NEELB has been at the forefront of the implementation of the policy in schools and youth facilities since that time.

Based on the experience and learning which have accrued from involvement in and the management and delivery of the above, we would therefore propose to submit evidence to the Committee premised upon the bullet points which have been set out in the terms of reference of the request.

Summary

The North Eastern Education and Library Board has a long history of participation in programmes that have involved young people and schools engaging in shared education.

As a consequence of this extensive experience the Board has learned a great deal about the key factors that contribute to the success of shared education programmes. In recent times the Board has been engaged in innovative work involving sharing at a local community level which, based on rigorous evaluation, has proven to have a significant impact on communities.

Experience of this work has emphasised the need for engagement to be carefully planned and set very firmly in the context of the history and culture of the local area. The importance of providing support to assist school partners to address the issues that present in such work has been pivotal in ensuring success.

The Board believes there is a need to bring clarity, through definition, of Shared Education and for such definition to support the local contextualisation of shared working. Evaluation of Board projects has identified the benefits for learners and communities of shared education. The key enablers outlined in the submission have been identified through experience and practice.

Contents

This paper will collate and outline evidence sequentially based on issues 1-4 of the Terms of Reference as set out in the request from the inquiry as follows;

- *Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;*
- *Identify the key barriers and enablers for Shared Education and Integrated Education;*
 - (a) Barriers and enablers for Shared Education in the Primary context in terms of learning from the PIEE Project
 - (b) Barriers and enablers for Shared Education in the Post Primary context in terms of learning from the PIRCH Project
- *Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;*
- *Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools*

Terms of Reference issue 1.

- *Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;*

1. The PIEE Project at primary phase, and the PIRCH Project at post-primary phase, were direct examples of models of 'Shared Education' and as such offer the clearest opportunity for providing evidence in relation to the purpose of this paper.

Both of these 'Shared Education' projects were heavily influenced by potential benefits which they would bring to stakeholders. Three benefits of Shared Education in particular were identified in the devising of the two projects which may be summarised thus;

- (i) **Educational Benefits;** To provide an enhanced quality of educational provision and experience to the schools and young people involved
- (ii) **Societal benefits;** To improve community relations, reconciliation and community cohesion in light of a divided and troubled past
- (ii) **Economic benefits;** To maximise educational provision and resourcing in light of a diverse and often rural schools estate which has experienced pressures, particularly in times of economic downturn

These benefits as concepts may well serve to focus the direction of Shared Education and to influence the decision making of those who are seeking to establish the efficacy of Shared Education.

2. In working toward a definition of Shared Education the PIEE Project upon inception in 2009 termed it to be **"regular and sustained engagement between pupils and teachers from two or more schools of different management types"**. ('How to Create and Maintain a Primary Partnership', NEELB, 2013)
3. The Project Vision, Project Aim and Project Objectives for PIEE were as follows;
 - **Project Vision:**
To establish sustainable, partnering relationships at primary level to enhance the quality of the educational experience and contribute to community cohesion.
 - **Project Aim:**
To provide support to small schools of different management types within a geographical area by developing cross community clusters of primary schools.
 - **Project Objectives:**
 - (i) To enhance the quality of the cross community educational experience;
 - (ii) To encourage schools from different sectors to participate in a partnership model of Shared Education
 - (iii) To ensure the sharing of resources and facilities for mutual benefit.
4. The PIRCH Project which was developed somewhat later and implemented from 2011 onward, consistently referred to Shared Education as being **"a collaborative working relationship between two or more schools, whereby each retains its own identity and ethos, but that provision, practice, expertise and resources are managed in a shared and mutually beneficial way"**. (Various related documents, NEELB, 2013)
5. The strategic aims for the PIRCH Project were as follows;
 - To enhance and improve reconciliation and community relations in areas where large numbers of the two main traditions are living in close proximity using education as the primary agent of change
 - To enhance and improve community cohesion in areas where large numbers of the two main traditions are living in close proximity using education as the primary agent of change

- To improve educational opportunities for children who are socio-economically disadvantaged and who are at risk of marginalisation or exclusion using a cross community and partnering approach to inclusion and education
- To build practical, sustainable partnerships between pairs of Post Primary schools of differing religious traditions whose relationships bring about improved educational experiences and life chances for the young people concerned
- To promote and facilitate shared education on the themes of peace building and reconciliation in the post primary setting

Statutory Definition

6. Based on experience the Board considers that a formal statutory definition of Shared Education is required. This is fundamental to accountability in respect of resources allocated to achieve the Programme for Government commitments in respect of Shared Education. It is also essential that there is clarification in respect of the distinction between Shared Education and Integrated Education and a definition will contribute to this understanding.

The Board acknowledges the work of the Ministerial Advisory Group and would endorse the definition provided in the Minister's terms of reference:

Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

The Board's experience has demonstrated that Shared Education can contribute to the aim of improving educational outcomes for learners. A statutory obligation to facilitate and encourage Shared Education would acknowledge this contribution, place value on it and ensure its potential is fully utilized.

In addition our experience has demonstrated how Shared Education contributes to the improvement of community relations. The Board has worked closely with the Northern Ireland Council for Integrated Education in the development of controlled integrated schools within its area and also recognizes the contribution that Integrated Education has made. However, our evidence has shown that a fully integrated system of schooling is not achievable province wide and there is much to be gained from supporting and developing collaboration within existing structures.

Terms of Reference Issue 2

Identify the key barriers and enablers for Shared Education and Integrated Education;

(a) Barriers and enablers for Shared Education in the Primary context in terms of learning from the PíEE Project

7. Unlike many previous initiatives, which focused on pupils alone, PíEE's intention was to impact at all levels within the school communities, i.e. pupils, staff, parents and governors as part of what may be termed a 'whole school' sharing model.
8. Ultimately the PíEE project aimed to influence a move away from competition between small primary schools towards collaboration. In the context of partnerships between schools of different management type this process supported enhanced community cohesion without compromising the existing ethos of any school.
9. As a result of the project partnerships collaborated on planning and professional development for staff and provided opportunities for pupils to experience a broader

-
- curriculum through shared classes, both within school hours and during after school and summer school activities.
10. Building capacity amongst principals to manage sharing within schools and partnerships was recognised as being critical to the successful delivery of PíEE
 11. Similarly, shared staff development for the wider group of teachers from the partner schools was viewed as crucial to the underpinning of relationships and thus the project as a whole.
 12. The appointment of a 'Shared Teacher' to each partnership in the PíEE Project was both ground breaking and successful. This demonstrated that a joint appointment could be managed effectively across a number of schools and that there were clear educational and social benefits to having a shared teacher.
 13. As sharing between partnerships evolve, this growing formality could be represented by a Partnership Agreement. The Partnership Agreement represented schools' individual and collective commitment to long term collaboration. These were prefaced by an agreed vision and outlined the aims and objectives of the partnership. An exemplar Partnership Agreement is included in 'How to Create and Maintain a Primary Partnership – A Handbook for Schools'.
 14. Many unexpected or external factors can also affect shared arrangements between schools, for example, the appointment of a new principal, staff illness, new education initiatives and the impact of wider education policy. During the course of the project two PíEE schools closed and the introduction of area based planning had an impact on schools as issues of viability and sustainability came to the fore.
 15. The PíEE Project Steering Group embraced representatives from the other education sectors, namely CCMS, NICIE and CnaG. This lent credibility to the project and ensured that there was full cross-sectoral support for project activities.
 16. From the outset the PíEE schools were acutely aware of the need to secure parental and governor support for PíEE processes and activities.
 17. PíEE's experience shows that those partnerships comprising a controlled and maintained school of similar enrolment size and in close proximity to each other were able to maximise sharing opportunities across all levels of the school.
 18. Data relating to pupil contact time demonstrated a significant number of hours spent in shared classes across the four years of the project. Without PíEE, this sharing, with pupils, side by side in a classroom, would not have taken place. The data for shared hours in Year 4 illustrate that for some partnerships the shared teacher was utilised in a way that lead to very significant increases in shared classes. This was particularly true of partnerships which were closest in terms of geographical distance between schools.
 19. Planning for pupil 'team building' activities is important before embarking on regular shared classes. Like staff, pupils need time to get to know each other and schools need to consider what is manageable in terms of shared classes. Residential visits often helped to accelerate the relationship-building process. Having built relationships between pupils it is important to maintain these as any prolonged gaps between visits can have a detrimental effect on fledgling friendships.
 20. The sharing of resources and facilities was one of the most immediate benefits identified from the PíEE project. Data collected from schools showed clearly that schools quickly took advantage of being able to share physical resources with their partners.
 21. The PíEE project offered a unique approach to promoting cross community links between schools by encouraging schools to develop whole school connections. Through this process many schools reached the conclusion that interdependency provided an essential platform for enhanced educational practice.
-

22. It should be noted that entry to the PIEE Project for schools was premised upon various criteria, one of which was that each school should have no more than 105 pupils. This was particularly advantageous in promoting 'sharing' between small rural schools for whom that was often the case. Indeed, this model lent itself well to bringing about 'sharing' on a whole school level. This does however raise the issue of how similar arrangements might be brought about for medium or large sized Primary schools for whom whole school 'sharing' may well be more complex and indeed difficult to achieve.
23. The collaborative work of the partnerships and the individual schools was both successful and commendable. However it should not be underestimated the role that was played both by the host body of the project, namely the NEELB and indeed the project Steering Group which included members from different employing authorities e.g. NEELB, CCMS, CnaG and NICIE. The conclusion to be drawn from this is that in initiating and sustaining such work, the role of local educational authorities in providing strategic direction, governance and support is of key importance.
- (b) Barriers and enablers for Shared Education in the Post Primary context in terms of learning from the PIRCH Project
24. Entry into the PIRCH Project for schools was through application which required them to meet a number of criteria. This process required them to apply in pairs. Hence at the outset, the impetus to be part of this undertaking had to come from the schools themselves. Moreover, the onus was on them to assess the situation in their local community and to identify a 'sharing partner' with whom they were keen to collaborate and work with. This aspect of the process thereby allowed them to work with the issues of local 'politics' and to come forward with their own solutions. This was crucial to ownership, self-determined commitment and future success of the partnership.
25. Proximity between partner schools, based on knowledge of previous projects and initiatives, is very likely to have a significant impact on the quality and practicalities of the work. A criterion for entry was therefore that partner schools were no more than six miles apart. As well as relating to issues of practicality in implementing the project e.g. the transportation of children, it was also intended to insure that the children attending the schools were almost certainly living in the same or nearby neighbourhoods. Relationships formed were therefore likely to continue outside of school in the other significant aspects of the lives of both the young people and their parents and families.
26. For a project such as this which involved large post-primary schools, with understandable limitations on finance, manpower at school level and support, it was not possible to bring about 'sharing' on a completely whole school level. However, structures and practices were established between partner schools which provided both a working model and a template for future development and expansion toward 'whole school' involvement, should conditions allow for this in the future.
27. A key feature of the initiative between each pair of schools were the relationships which were built between staff members at various levels. These were developed firstly between the Principals of the two schools and next, as far as possible, between the two teams of Senior Managements. It was also desirable, as will become evident below, for the two Heads of Pastoral Care to form a close working relationship. Ever broadening the staffing base, Heads of Department from various subjects also worked together intensively and indeed in time brought subject teachers from their Departments into the equation. The result of this process over a near three year period, was that a staffing spine of mutuality was formed between the two schools. By the end of the project, a considerable number of staff from each partner school had worked closely with their counterparts and lasting sustainable relationships had been formed. In short, capacity had been built for future sustainable 'sharing'. Such a process by whatever means may be viewed as fundamental to promoting 'sharing' between Post Primary Schools.

-
28. It perhaps goes without saying that staff development in various aspects of the project was implemented on a joint basis. The majority of the large numbers of teachers involved were new to this kind of work. However, it is therefore even more notable, that there were few problems or issues in facilitating teachers to become operational in both the practical and educational aspects of the project. This facilitation and staff development was provided by the NEELB. A key lesson from this process was therefore that it need not be onerous or overly time consuming to initiate and develop teachers in this area if the support and facilitation is of sufficient quality and focus.
 29. A main feature of the project activities between partner schools were curriculum / subject based programmes. This typically involved a class of children from each of two partner schools using an area of the curriculum from their subject studies which they then studied together using a variety of learning contexts. Some of these were classroom based while others were workshops or visits to educational locations. Fifty four such projects were implemented during the three years of the overall initiative. The PIRCH Project compelled schools to use History and Citizenship as the two main subject areas, promoting as they did, the best opportunities for young people to deepen their understanding of issues in relation to the past, culture, identity, conflict and reconciliation. However it also allowed schools to choose their own subject areas for these purposes. Among these were Drama, Music, Art and Physical Education. This 'shared' use of the curriculum to promote reconciliation proved to be a major success. Moreover it is in keeping with a key recommendation of DE's CRED Policy which cites the curriculum as being a major driver in educating children about these issues. The nature, quality and variety of the curriculum based projects were favourably commented upon by ETI as part of their overall inspection of the project.
 30. While the implementation of the projects outlined above was highly successful, it should be noted that this was possible in certain subject areas due to the external funding which the project was receiving through the International Fund for Ireland. Such programmes have a cost implication which would not be inconsiderable. Similarly this meant that only certain subject areas were able to be utilised for these purposes. While not all subject areas between two post primary schools would lend themselves to such a shared approach, linking those all of those which would benefit would be a major undertaking.
 31. For each of the 12 Post Primary schools involved in the PIRCH Project, funding allowed the appointment of an 'Inclusion Teacher' for two school years. This teacher fulfilled a variety of roles, both pastoral and academic. In the first instance, in collaboration with senior staff, they served to promote Inclusion in the sense of insuring that potentially marginalised children or those facing specific challenges, were supported significantly to be in school and fully engaged in meaningful academic study. However they also worked intensively with their counterpart in their partner school to make sure that much of the work was undertaken on a shared basis. Often working with support agencies and community groups, they sought to meet the needs of some of the most vulnerable children in the community. Bringing those children together, often to look at issues of personal and social significance, e.g. drugs education or community safety also formed a key part of the shared relationship and reconciliation process. The Inclusion Teachers also played a pivotal role in co-ordinating shared activities between the partner schools, further augmenting community cohesion. Such appointments were radical in the sense that they moved away from the traditional post-primary appointment process of appointing on the basis of subject specialism. Again this 'Inclusion' work was favourably commented upon by the Education and Training Inspectorate.
 32. In concluding evidence in relation to Shared Education which has accrued from the PIRCH Project, it is timely to again reinforce the significance of the role played by the local education authority, in this case the NEELB, in driving, co-ordinating and supporting the advances made by the schools. Curriculum and management support was crucial in providing direction into what is almost always new territory for schools who are willing to make such a commitment.

33. **Summary of Key Enablers**

- Involvement of all key stakeholders – pupils, parents, staff and Governors
- A culture of openness and collaboration
- Capacity building
- Building relationships
- Understanding and taking account of the community context
- Trust, equality, mutual understanding and shared responsibility
- Effective planning
- Effective facilitation and support
- The provision of time and funding for substitute cover to enable teachers to plan together
- Funding to support shared education development
- Effective use of technology
- A focus on enhancing the education experience

Terms of Reference Issue 3

- *Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;*

34. The NEELB would not wish to offer specific evidence in terms of this issue, having not had direct experience of ethos and practicalities in this regard from other jurisdictions. However it would wish to suggest that comparable evidence is sought from experts on jurisdictions which could provide valuable relevant evidence to the local context, namely;

- (i) Scotland, where issues of religious division and sectarianism have impacted upon the education system and which has a similar socio-economic demographic to our own exists
- (ii) Macedonia, with whom a number of comparison studies have been made and indeed is a place where a healthy accommodation in education seems to have been approached while working within the context of a divided society

Terms of Reference Issue 4

- *Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools*

35. Terminology such as Community Relations Education, Integrated Education and Shared Education do not enjoy a great level of understanding by the public in general. Consideration may well therefore be given as to how a better level of understanding might be brought about, particularly in relation to parents, carers and others with a direct interest or involvement in school aged education.

36. However, even within the structures of the formal educational community itself, the third of these concepts, 'Shared Education' has a low level of appreciation. It is both a relatively new concept and one in which formal definitions and structures have yet to be established. Above has been evidence accrued from projects whereby a small number of schools were involved in Shared Education initiatives. However, apart from schools such as these, it would seem that a considerable job of education and familiarisation needs to be undertaken in order for the greater number of schools to gain a basic awareness of the nature of Shared Education and the potentialities it may hold for them. In-service training and development for Governors, Principals, Senior Managers and Teachers at the various levels would therefore be required.

37. Assuming that understanding of Shared Education did increase to a level whereby schools were coming forward (preferably by self-selecting) and an established need had therefore arisen, the following would then need to be in place to allow for meaningful implementation;
- (i) A clear definition of Shared Education and indeed accompanying categories and parameters of clarification as to what does and does not meet the definition
 - (ii) Structures and staffing within the statutory educational bodies which would advise, co-ordinate, support and part manage at least the initial phases of schools wishing to enter in to Shared Education arrangements.
 - (iii) Significant resourcing of at least the initial phases of transforming the culture of local education to one of Shared Education. (This refers to educational processes and staffing and does not refer to the cost of capital builds or other 'bricks and mortar' elements of progression). As a result, funding would need to be available to schools through the statutory bodies to allow for uptake and engagement.
38. The current DE Policy on CRED (2011) alludes to much of the philosophy and many of the principles and concepts of Shared Education. It is worth considering as to whether any substantive developments in relation to Shared Education can be accommodated within this existing policy or indeed a new and separate policy for Shared Education is necessitated in itself.
39. The CRED Policy advocates use of the curriculum as a key vehicle in achieving reconciliation and education in relation to other concepts such as Equality and Diversity. This has shown to be appropriate and successful in both the PIEE and PIRCH projects outlined above. In this respect, use of Personal Development and Mutual Understanding at Primary age was particularly relevant and more so in the context of 'shared classes'. At Post Primary age, the subject areas of History and Citizenship offer an excellent opportunity to allow students to study issues relating to a contentious past and indeed ways of dealing with an ever evolving present, with 'shared classes' again having the greatest potential for impact. Other subject areas at both Primary and Post Primary can also contribute significantly in this respect.
- However, a much more widespread understanding of the ethos and practicalities of how this might be done needs to be achieved if it is to become common practice both in individual schools and in the context of Shared Education. Aware as ever of resource limitations, it is nonetheless probable that a major training process would be required to initiate teachers into the philosophy and practicalities of shared curriculum delivery and shared classes
- The out workings of this suggestion are alluded to in (34) (ii) above.
40. Shared classes, while high on the scale of positive outcomes of Shared Education, obviously require a degree of organisation. This entails a workload for those concerned, most specifically at Post Primary where elements of shared timetabling have been in evidence. Practicalities are also a significant issue. Where schools are in extremely close proximity, pupils can move easily from campus to campus. Such a situation is often where we find Shared Education working at its best. However where schools are not in close proximity, even when only one or two miles apart, a transportation cost will be involved from a source which is yet to be established. Some of the proposals for resourcing / funding in this paper could be structured to allow for this ongoing expense.
41. The CRED Policy advocates meaningful interaction between different groups of children in achieving reconciliation and education in relation to other concepts such as Equality and Diversity. This has been recognised over time in recent projects such as PIEE and PIRCH as well as through statutory funding streams such as the Schools Community Relations Programme and the CRED Enhancement Scheme. While we are not at the stage of fine detail on Shared Education practice, programmes such as this would almost certainly play a role in future arrangements.

The resourcing of such 'meaningful interactions' though would not be insignificant. It may be suggested that such resourcing should be available to all of those who wish to use it as one of the elements of establishing and continuing Shared Education arrangements. As such it may require a considerable level of funding which encourages those who may wish to undertake such a process and thus could assume large scale proportions.

Again the out workings of this suggestion may be entailed in (34), (ii) and (iii) above.

42. Special Schools provide a unique form of educational provision for our children. Involvement by many of them in initiatives such as the Schools Community Relations Programme (1996-2010) show that they have much to offer in terms of peer education and that their participation in such schemes need not be hindered by philosophical or practical barriers. There is therefore every reason to hold to the conviction that Special Schools are just as well placed to be part of any future Shared Education arrangements as any other type of school. This may serve as a guiding principle when undertaking strategic consideration of possible developments.
43. Some elements of 'sharing', while not overtly aimed at reconciliation, have emerged over the years, arising out of a variety of educational and practical necessities. One example of this has been the work undertaken in relation to the Entitlement Framework and the Area Learning Communities. One proposal therefore which may be useful is that an audit of current 'sharing' could be undertaken at local level so that existing good practice can be recognised and built upon.
44. Whatever decisions are made as to how this issue is approached, experience and learning from initiatives outlined above would suggest that any path of development will require a long term commitment. In the sense that any strategic objectives would undertake to change the whole culture of an educational system toward collaboration and interdependency rather than separateness, this may indeed necessitate support, resourcing and external part-management for the best part of a generation.

NI Commission for Catholic Education

Northern Ireland Commission for Catholic Education.

Shared Education Inquiry.

Submission of Written Evidence to the Northern Ireland Assembly – Committee for Education.

October 2014

1. This evidence is being submitted on behalf of the Northern Ireland Commission for Catholic Education (NICCE).

NICCE represents the Catholic Bishops and leaders of Religious Congregations in their role as Trustees of the family of 500+ Catholic Voluntary Maintained and Grammar Schools in Northern Ireland. These schools have been chosen by parents of almost half of the school-going population, of varied religious and ethnic backgrounds, as the preferred option for their children.
2. NICCE welcomes the opportunity to submit evidence to the Committee for Education with a view to assisting its inquiry into Shared Education and requests the opportunity to supplement this written submission with an oral presentation to the Committee.
3. The founding purpose and aim of all Catholic Schools in Northern Ireland is the same as for Catholic Schools throughout the world. They offer to parents the choice of a school inspired and directed in all of its activities by the message and spirit of Jesus Christ, a message that has at its very heart the commandment to love God, to love our neighbor and to live and celebrate a constructive and healthy love of self. Catholic schools throughout the world are therefore defined by a commitment to forming young people as active citizens who contribute constructively to the good of the society in which they live, as well as to the global community of the human family. This includes, as a founding and guiding principle, seeking to form young people into those values that are the very bedrock of a peaceful, reconciled, diverse and flourishing human society such as respect for the inherent dignity of every person and working with all for the common good.
4. The Catholic Church provides schools that are welcomed and recognized for their educational excellence and positive contribution to peace and the common good in every imaginable social and political environment in the world. Even where Catholic schools do not have a majority of Catholic pupils attending, their distinctive ethos and capacity for forming pupils who make a positive contribution to the well-being of the society in which they live is acknowledged across the world.
5. In Ireland, Britain, Scotland and other European democracies, the long-standing right of parents to a faith based education for their children is formally recognised in legislation, including in the European Convention on Human Rights, and in various national policies. Indeed, diversity of school provision has long been one of the hallmarks of a truly diverse and pluralist society which respects the rights of individuals, of communities and, in the case of education in particular, of parents. This in turn is closely related to another hallmark of a truly free, diverse and pluralist society, respect for the fundamental human right to freedom of conscience and religion.

6. In this submission to the Education Committee, therefore, NICCE wishes to emphasise the following point: the diverse provision of schools in Northern Ireland, as elsewhere on these islands, is a matter of respect for the human rights of citizens. It not a matter of one policy choice among others, much less a regrettable remnant of historic ethno-political divisions in our society. Diversity of provision in education is the hallmark of, not an obstacle to a normal, diverse, pluralist society. NICCE calls on the Education Committee to publicly recognize this vital point and to affirm the right of parents to have access to a faith-based education for their children, where possible, as enshrined in the European Convention on Human Rights and elsewhere. NICCE calls on the Education Committee to acknowledge that diversity of provision in schools, in response to this right, is the mark of, and not the obstacle to, a diverse, tolerant and pluralist society. The Education Committee needs to decide if the Northern Ireland education system is appropriately diverse and pluralist, rooted in the human rights of citizens, as in other parts of these islands, or somehow uniquely and inappropriately ‘segregated’, a term which NICCE rejects as both offensive to those schools which uphold the right to a particular religious, cultural or linguistic ethos and inaccurate. In fact, as the Council for Catholic Maintained Schools (CCMS) pointed out in their submission, the term segregation to describe the education system in Northern Ireland is incorrect given that segregation, according to the Oxford English Dictionary means;

“enforced separation of racial groups in a community.”

The principle of parental preference in the Northern Ireland Education system in no way implies and should not be understood as “enforced separation”.

7. Great care needs to be taken to avoid giving the impression that a peaceful, normalized future in Northern Ireland has to be built on the erosion of fundamental rights enjoyed by citizens and respected by government in other parts of these islands. The necessity to highlight this point is demonstrated by the not uncommon presumption that only one type of school and only one approach to sharing within educational structures can contribute effectively to a peaceful and reconciled society. It is unjust and inaccurate to perpetuate the impression that schools in the formally ‘integrated’ sector represent the best or even the most achievable, effective and appropriate way for schools to contribute to peace, tolerance and understanding in Northern Ireland. Research has consistently and repeatedly demonstrated that various other forms of sharing, from inter-school activities to appropriately negotiated shared campuses, provide meaningful and measurable outcomes in terms of extending the already positive contribution all school types make to the promotion of tolerant and welcoming attitudes to diversity. Catholic schools, and Catholic Trustees, have not only actively encouraged engagement in this full range of sharing opportunities in Northern Ireland, in many cases Catholic schools have actively led such initiatives. NICCE will continue to encourage such leadership in sharing by Catholic schools including, where appropriate, and where the rights of Trustees to ensure ethos is adequately respected, participation in shared campus arrangements.
8. This is to confirm a key finding of the Bain Report in 2006, when Sir George Bain observed that “all schools and, indeed, all educational interests need to, and wish to, play their part in the journey towards the goal of a shared future.” He then concluded: “We advocate, therefore, not a single approach to integration, but a more pervasive and inclusive strategy, focused on the dynamic process of integrating education across the school system”. NICCE supports the general principle underpinning this approach.
9. The value and realism of such an approach was also reflected in the findings and recommendations of the more recent report of the Ministerial Advisory Group on “Advancing Shared Education” (March 2013). Having considered the wide range of research available on the effectiveness of formally ‘integrated’ schools in promoting good relations, the Advisory Group concluded: “the vast majority of the evidence reported has not been able to demonstrate clearly that it is specifically because of the child or young person attending an integrated or mixed school that their attitudes are more positive. It could be that the reason

why there is a relationship between school attended and attitudes is that integrated or mixed schools tend to attract parents, and thus children and young people, with more positive attitudes in the first place” (cf. ps.55-56).

10. The Advisory Group went on to say: “the Group does not agree that integrated schools should be viewed and actively promoted as the ‘preferred option’ in relation to plans to advance shared education. Parents and children have the right to their religious, cultural and philosophical beliefs being respected.... promoting one particular school sector runs counter to the vision of a diverse and plural system outlined above and is not a model for advancing shared education. By definition, shared education involves schools and other educational institutions of different types and from different sectors collaborating together. Actively promoting one sector over other sectors will not only be divisive but it will not, in itself, lead to the educational benefits that accrue from schools sharing good practice and collaborating together; nor will it necessarily ensure that children and young people from a wider range of backgrounds learn together” (cf. ps. xx-xxi). NICCE fully supports this analysis and conclusion.

11. It also follows that the Education Committee should recommend an end to the long-standing statutory duty on the Department of Education to encourage and facilitate the development of formally Integrated education. This duty is not only unjust it also undermines the fundamental principles of equality, respect for difference and for the rights of others upon which a truly diverse, peaceful and tolerant society is based. It is also appropriate to question the effectiveness of this policy after such a prolonged period of time. Across Northern Ireland last year, for example, the formally integrated post-primary schools filled to only 85% of their potential intakes. Only seven integrated post-primary schools oversubscribed at first preference. At the same time increasing numbers of pupils from across the community spectrum are opting in to the Catholic sector. In towns like Bangor, Lisburn and Coleraine/Portstewart, pupils are passing the local “integrated” schools and choosing Catholic schools as the preferred schools for both academic standards and for integrating local populations. In this regard NICCE fully supports the position of CCMS when it states in its submission that: “If after 30 years the sector has grown to the point where it commands only 6.89% of the school age population in Northern Ireland, the Department should evaluate the public appetite for ‘Integrated Education’ as a sectoral entity, reconsider the ‘statutory duty’ and look to the promotion of other “initiatives” which have a greater chance of making more effective use of limited resources, promoting social cohesion and delivering on the general principles of TACOT:IT as outlined below;
 - a. *It is a seminal purpose of the Northern Ireland Education Service to promote a culture of tolerance and reconciliation and, for schools, to do so in keeping with the particular ethos and circumstances within which they operate. These different approaches should be valued and all schools encouraged to provide further opportunities to promote a culture of tolerance.*
 - b. *There should continue to be a pluralist approach to education, expressed in a plurality of structures (i.e. different types of school) and ethos.*
 - c. *All schools should provide a pluralist curriculum promoting tolerance and mutual understanding.*
 - d. *The present structure for schooling has been determined by parental wishes and, subject to the provision of efficient instruction and training and the avoidance of unreasonable public expenditure, pupils should continue to be educated in accordance with the wishes of their parents.*
 - e. *education policy, administration, school funding and school support should be fair and equitable to all grant-aided schools, i.e. controlled, voluntary, integrated, Irish-medium maintained, denominational, non-denominational, etc. (TACOT:IT June 1998)”.*

12. To this end, NICCE supports the view of the Ministerial Advisory Group when it suggests that: “while the vision of a plurality of different schools is respected and encouraged, this must be within the context where strong efforts are made to ensure that these different types of school collaborate together in a sustained and meaningful manner to ensure that educational standards are enhanced for all children and young people and good relations are promoted.” The Trustees of Catholic Schools have consistently demonstrated their willingness to be part of such a shared and collaborative education system. From as far back as 2001, the Catholic Bishops of Northern Ireland (*in Building Peace Shaping the Future*) were actively promoting the message that Catholic schools, in living out their particular philosophy and ethos, are obliged to;
- Provide friendly contacts between pupils of different characters and backgrounds in order to encourage mutual understanding;
 - Assist society to move beyond its deeply-ingrained divisions into a new coherence and openness to the world at large;
 - Promote reconciliation and the common good;
 - Recognize that the attendance at our schools of children from other denominations and none is an enrichment of the education experience offered by the school and is seen as a practical expression of the commitment to inclusivity.
13. NICCE remains fully committed to these principles and to their practical promotion in all Catholic schools in Northern Ireland. As in Britain, Catholic schools in Northern Ireland are among the most racially, ethnically and linguistically integrated. We are a much more diverse society than we were 20 years ago. This makes use of the hackneyed denominational language of the ‘Protestant vs. Catholic’ caricature to describe the fundamental fault lines of social division in Northern Ireland increasingly hackneyed and inappropriate. Some 15 years ago, the Good Friday Agreement showed that the core problem in Northern Ireland was political, not religious. It is also interesting to ask a more fundamental sociological question of those who point to the practical effectiveness of formally integrated schools in increasing community tolerance: “Have any pupils or parents of pupils from integrated schools been involved in interface rioting or other forms of sectarian civil disturbance over recent years?” In the interests of respect for the efforts and contribution to peace, reconciliation and stability made by all schools in Northern Ireland, NICCE encourages the Education Committee to recommend that when major international figures hosted by Government in Northern Ireland are invited to witness the important work of schools in the area of peace and reconciliation, this should always include visiting the excellent initiatives being carried out by many controlled and Catholic maintained schools, as well as by those in the integrated sector.
14. An important point also needs to be made here about the popular misconception that pluralism in the provision of schooling in Northern Ireland involves huge extra costs and inefficiencies in public spending. This is simply not borne out by the evidence. The school system in Northern Ireland is very similar in its overall pro-rata cost to the school system in Wales. Both are slightly more expensive than in Britain and Scotland, largely because of the lower density and wider geographical spread of the population, not because of plurality of provision. The 2007 Deloitte ‘*Research into the financial cost of the Northern Ireland divide*’ famously determined that £1.5 billion per annum ‘could be considered to be the upper limit of the cost of the divide in NI’ (para. 16.1). However, in terms of the proportion of this maximal figure that related to education, the research concluded that: ‘quantification of conflict related costs within the education sector was particularly problematic. Those identified related to RPA related structural reorganisation which, together with community relations spend, totalled approximately £10 million’ (para. 16.2). This represents approximately 0.6% of the maximum additional costs associated with community divisions in Northern Ireland, with security, health and lost business opportunities constituting by the far the largest proportion of the £1.5 billion figure. NICCE would encourage the Education Committee to publicly challenge the perception that pluralism in school provision in Northern

Ireland involves substantially higher costs to the public purse than is the case in comparative parts of these islands.

15. NICCE also encourages the Education Committee, if it is to take the issue of schools and social division seriously, to prioritise addressing what actually causes most damage and division in the NI education system, namely, academic selection in post-primary transfer. Ensuring equality of access for all on the basis of agreed and enforceable criteria would go a long way to ensuring greater social balance and integration within and between all schools, for the greater good of all pupils and the whole educational enterprise.
16. Across modern diverse societies, the State has the duty to facilitate the citizen's right to choice in education. Those taxpayers and others who prefer Catholic education – whatever their religious belief, or non-belief – are entitled to have that choice respected, facilitated and held to account for the standards achieved. NICCE recognizes that there is also a corresponding duty on every citizen, and community of citizens, to actively contribute to the common good of our society, including to the search for greater understanding, tolerance and respect for difference and diversity. NICCE remains committed to supporting all Catholic schools in living up to this responsibility in a meaningful and appropriate way, and to working with representatives of other school sectors to continue to explore opportunities for greater collaboration.

ENDS.

NI Committee of the Association for Science Education

Response from the NI Committee of the Association for Science Education (ASE) on Shared and Integrated Education in Northern Ireland

The ASE has three main aims to promote education by:

- improving the teaching of science.
- providing an authoritative medium through which opinions of teachers of science may be expressed on educational matters.
- affording a means of communication among all persons and bodies of persons concerned with the teaching of science in particular and with education in general.

The NI Committee for the ASE are committed to promoting excellence in science education whatever the context. The ASE welcomes members from all cultural and religious backgrounds and strives to meet the professional development needs of the whole science teaching community (primary, post-primary and technicians). The committee would strongly recommend that, in the planning phase for any restructuring of education or amalgamation of schools in Northern Ireland, appropriate structures and funding should be in place to facilitate the delivery of the highest quality science education.

Kind regards,

Elaine

NICCY 1

Shared Education and Integrated Education Inquiry

NI Assembly Education Committee

Evidence from the Northern Ireland Commissioner for Children and Young People (NICCY)

Introduction

Shared Education constituted a significant commitment in the Northern Ireland Executive's Programme for Government (2011-15). This was detailed through a series of key objectives, including the establishment of a ministerial advisory group to bring forward recommendations to the Minister to advance shared education. Two objectives also stated, that by 2015, all children would have the opportunity to participate in shared education and the number of schools sharing facilities would have substantially increased. A further priority was that there would be significant progress on plans for the Lisanelly shared education campus. There was no reference to integrated education within the Programme for Government.

The Department of Education (DE) asserts that the provision of opportunities for children and young people from different types of schools to learn together through shared education has the potential to deliver a range of educational benefits to learners, to promote good relations, respect for diversity and social cohesion and to promote the efficient use of facilities and resources.¹ However, while shared education has been recognised as a step in the right direction, concerns have been expressed that it will not achieve a fully inclusive and integrated system which brings together children of all abilities and religions and none². Reviews of current DE policies have suggested that integrated education has been 'superceded' by shared education and that the wider political focus is now on education policies which plan for separate schools development rather than 'structural change and a unified system of common schools'.³

This paper by the Northern Ireland Commissioner for Children and Young People (NICCY) will highlight key findings emerging from a consultation conducted by her Office with children and young people concerning their views and experiences of shared education. The focus of the consultation was very much on shared education however pupils and teachers from integrated schools participated therefore some reference is made to integrated education too.

The Northern Ireland Commissioner for Children and Young People

The Office of the Commissioner for Children and Young People (NICCY) was created in accordance with 'The Commissioner for Children and Young People (Northern Ireland) Order' (2003) to safeguard and promote the rights and best interests of children and young people in Northern Ireland. Under Articles 7(2)(3) of this legislation, NICCY has a mandate to keep under review the adequacy and effectiveness of law, practice and services relating to the rights and best interests of children and young people by relevant authorities. The remit of the Office is children and young people from birth up to 18 years, or 21 years, if the young person is disabled or in the care of social services.

In determining how to carry out her functions, the Commissioner's paramount consideration is the rights of the child and NICCY is required to base all its work on the United Nations Convention on the Rights of the Child (UNCRC)⁴. The UNCRC is a comprehensive, international human rights treaty which enshrines specific children's rights and defines universal principles and standards for the treatment and status of children around the world.

The UNCRC and the Committee on the Rights of the Child

Articles 28 and 29 of the UNCRC contain key provisions which detail a rights-based approach to education. Article 28 is primarily concerned with the right of access to education, on the basis of equality of opportunity. Article 29 of the UNCRC addresses the aims of education and the benefits that every child should be able to enjoy as a consequence of their right of access to education. This is of particular relevance to the provision of shared education, as it states that the education of children and young people should be directed towards preparing them for responsible life in a free society, in a spirit of understanding, peace, tolerance, equality of gender, and friendship. Article 29 also requires that Government directs education towards the development of children's personalities, talents and mental and physical abilities. In parallel to this, it also states that children and young people's education should be directed towards respect for their parents, their cultural identity, and the cultural identity of others. The aims of shared education which are associated with the promotion of equality of identity, respect of diversity and community cohesion may be perceived as supporting the realisation of the rights enshrined in Article 29.

In its Concluding Observations in 2002, the Committee on the Rights of the Child (CRC), which oversees the implementation of the UNCRC, welcomed the development of integrated schools in Northern Ireland, but recorded its concerns that, at that time, only approximately 4% of schools were integrated and education remained largely segregated. It recommended that the Government increase the budget for, and take appropriate measures to facilitate the establishment of additional integrated schools in Northern Ireland. In its next report in 2008, the Committee reiterated its concerns that 'segregated education was still in place' and recommended that the Government take measures to address this situation.

Since that Report, the proportion of integrated schools in Northern Ireland has risen slightly to 7% with an estimated pupil population of 22,000.⁵ Recent commentaries suggest that demand currently outstrips provision and a number of integrated schools have applied to increase their intakes⁶. A variety of stakeholders have also called upon DE to meet its statutory responsibility to promote integrated education, as laid out in the 1989 Education Reform Order, and to respond positively to calls to expand places in integrated schools.

Shared Education: NICCY's Report of the Views of Children and Young People

NICCY conducted its consultation with pupils between October 2012 and January 2013). The Consultation provided interesting and reflective insights into pupils' experiences, and their ideas about how shared education might be most effectively taken forward.

Decisions regarding the further planning and development of shared education provision should be informed by the views and experiences of those who will be most directly impacted. NICCY would therefore strongly advocate that pupils of all ages, from every type of school in Northern Ireland are consulted in a meaningful way and that their feedback contributes to the further development and implementation of shared education. NICCY is aware that the Department of Education plans to seek feedback from pupils on a biennial basis. It will be

important that pupils of all ages are enabled through effective mechanisms to share their experiences and provide advice regarding how provision should be reviewed or changed.

Background

As highlighted above, the Department of Education established a Ministerial Advisory Group to explore and bring forward recommendations to the Minister of Education to advance shared education in Northern Ireland. In line with her statutory duty to 'keep under review, the adequacy and effectiveness of services provided for children and young persons by relevant authorities,' the Commissioner offered to assist the Minister by consulting with children and young people to explore their views and experiences of shared education, with the intention of ensuring that these were effectively incorporated into the Ministerial Advisory Group's report. An interim report was duly forwarded to the Advisory Group in February 2013 and a final Report of the Consultation findings was published in April 2013.

Approach to the Consultation

NICCY wished to ensure that as many children and young people as possible were able to participate, therefore the consultation involved two strands:

- Workshops with primary age pupils (8-10 years) and post-primary age pupils (14-17 years) and;
- Surveys completed by children aged 10-11 years and young people aged 16 years.

For the surveys, two modules of questions relating to pupils' attitudes and experiences of shared education, were commissioned from ARK, a joint initiative between The Queen's University, Belfast and the University of Ulster.⁷ ARK conducts annual surveys of P7-age pupils through the Kids' Life and Times (KLT) survey⁸ and 16 year olds, through the Young Life and Times (YLT) survey⁹. The questions included in the KLT and YLT surveys on shared education and area-based planning were devised by NICCY in partnership with members of the ARK team. The module of questions was very similar in both surveys in order to facilitate comparisons between the different age groups of respondents.

Alongside the surveys, 38 workshops were conducted in 21 schools across Northern Ireland involving more than 750 primary, post-primary and special school pupils. During the school visits, interviews were also conducted with principals and/or members of staff in order to contextualise pupils' responses and where necessary to clarify factual information reported. The interviews also enhanced the research team's understanding of any relevant issues facing a school and the community context in which it was located. A key objective was to ensure that pupils from as many school types as possible were able to participate, and care was taken to ensure that the sample of schools recruited, was as representative of the various school types in Northern Ireland as possible. Eight of the ten post-primary schools selected, were involved in shared education initiatives through their membership of area learning communities or involvement in the Sharing Education Programme (The Queen's University, Belfast) or Shared Education Programme (The Fermanagh Trust)¹⁰.

The workshops explored pupils' awareness, understanding and experiences of shared education and their views regarding how it should be progressed. They were encouraged to identify opportunities and activities which they believed would be enjoyable and beneficial and to highlight any barriers which they felt might dissuade pupils from taking part. Pupils' perceptions of the importance of children and young people from different schools and backgrounds learning together were explored and to conclude, pupils were invited to identify

7 <http://www.ark.ac.uk/>

8 <http://www.ark.ac.uk/klt/>

9 <http://www.ark.ac.uk/ylt/>

10 It is important to note however that pupils from these schools who participated in the workshops were not necessarily involved in shared education.

any issues which they believed Government should consider in taking shared education forward. Recognising the relevance of area-based planning to shared education and potential impact of the proposals on schools and pupils, the sample cohort was also asked to share their views on this issue¹¹. Quotes from pupils who participated in the workshops are presented in the findings below.

Findings

Recognition of the term ‘shared education’

When asked if they recognised the term ‘shared education’; less than 50% of post-primary pupils indicated that it was familiar to them. For those who did recognise it, this was usually due to their knowledge of, or participation in shared classes. Very few primary pupils were aware of the concept, although after further explanation, they identified a range of activities, including projects and trips, which they believed constituted shared education. This was not unexpected, given the age range of pupils, the fact that the term may not have been widely used in schools and that a significant proportion of primary pupils consulted, indicated that they had not participated in shared education. Post-primary pupils’ experiences were in many cases linked to their participation in shared classes, although other forms of ‘shared’ activities were also identified, such as joint residential or day trips and shared sports facilities or transport. The potential for pupils to participate in shared activities appeared to be influenced by a number of factors, including the subjects they studied, their class or year group and their involvement in extra-curricular activities.

Experiences of shared education

Children and young people who had taken part in shared classes or activities expressed a diverse range of opinions regarding their experiences. Both primary and post-primary pupils welcomed the opportunity to interact and make friends with pupils from other schools, experience different learning approaches and to gain insights into other schools, although as noted earlier, primary pupils had significantly fewer experiences of shared education;

“I think it’s a good way to mix with pupils from other schools, make new friends with people who have a different background or religion to us” [post-primary pupil]

“It was more fun and you got to talk to different people” [primary pupil]

“It’s interesting to see other schools” [special school pupil]

“It gives you a less biased view of what they [other schools] are like” [post-primary pupil].

A clear benefit of shared classes identified by post-primary pupils was the expanded choice of subjects available to them at Key Stage 4 and ‘A’ Level.

“Gives people more subject options – unique opportunity” [post-primary pupil]

“Without [School X] I wouldn’t be able to do my...course...but I would rather do it in a school of the same religion” [post-primary pupil].

Less positive experiences of shared education were also reported by some pupils. These had arisen through pupils having only limited or negative interactions with young people from other schools, from a sense of being in the minority or of feeling ‘out of place’ when attending classes in other schools;

“Joint classes are a bit awkward. We all sit at one table – don’t really mix with pupils from [the other school]” [post-primary pupil]

11 For the sake of brevity, this issue is not explored in the current paper, however details of pupils’ responses may be found at http://www.niccy.org/downloads/2013/publications/Adult_Report.pdf (p.59).

“Children from the other school mustn’t like us. They swear and put their fingers up” [primary pupil]

“I felt really crap and just sat there...I didn’t talk to anyone in the class for two years” [post-primary pupil]

“You feel like outcasts if you’re going to class and walking through [the school] and they look at you in a different uniform” [post-primary pupil].

A number of logistical issues, including transport and timetabling also impacted on pupils’ experiences;

“It’s awkward because of the timetables. You have to get taxis to [School X] so we have to cut short classes here as they are a different length to classes there...” [post-primary pupil]

Therefore, while a majority of pupils spoke positively about shared education, a significant minority gave quite negative accounts of their engagement with other schools.

Taking Shared Education Forward...Identifying Effective Practice

During the consultation, children and young people were asked to think about the kind of approaches and activities which they believed would be effective in undertaking shared education. Pupils shared a wide range of ideas whilst also identifying a number of challenges which they felt should be addressed. A significant majority of respondents in the KLT and YLT surveys agreed that shared projects, classes and facilities were a good idea. Eighty-six percent of sixteen year olds completing the YLT survey agreed that joint projects were a good idea while 72% noted that joint classes were a positive initiative. Fifty-nine percent of P7 pupils thought joint classes were a good idea and 73% felt similarly about joint projects.

Pupils participating in the consultation workshops called for more collaborative learning approaches to be employed, and for additional subjects and activities to be included;

“Group work and more mixing activities...would make it more enjoyable” [post-primary pupil]

“Find out about them...find out about their thoughts...get to know them” [primary pupil]

“Technology, Art, PE, Science and Music – you could do them with other people better” [post-primary pupil]

“We could link up with pupils studying ‘A’ level Irish in English medium schools” [Irish Medium School pupil].

They also highlighted the importance of introducing shared education at an early stage in a child’s schooling, undertaking preparation in advance of shared learning activities and consulting with pupils about their experiences.

“Mixing at primary school would be better than at secondary as by that stage people have framed opinions and been influenced by parents” [post-primary pupil]

“Team bonding should be essential beforehand” [post-primary pupil]

“You need to talk it through before you start” [special school pupil].

A number of pupils in schools who had limited or no experience of shared education argued that classes or activities involving similar types of school to the one they attended, would be more appropriate. Most pupils however advocated for pupils from all kinds of schools and backgrounds to join together in shared education activities. One primary pupil suggested; “We should join with people not as fortunate as us and people who have special needs”.

Taking Shared Education forward...potential barriers and challenges

As well as highlighting opportunities for shared education, pupils were asked if they thought there were any barriers which might dissuade young people from participating in shared education activities. In response, some students, mostly at post-primary level, acknowledged that they held particular views about other schools and pupils, relating to academic ability, cross-community issues, standards of behaviour, and the increased potential for bullying. In the KLT and YLT surveys, by far the most common concern expressed by respondents was the possibility of having to share their education with children or young people who were considered to be 'nasty', 'disruptive' or 'annoying'. Sixty-eight percent of respondents to the KLT survey highlighted this as did 75% of YLT respondents. Similarly, workshop participants referenced this concern alongside a number of other issues;

"I don't like the fact that if another school joins with us...we will have bullies...the bullies will spread when we do shared education" [primary pupil]

"I don't want to sound stuck-up but they don't push you there. We get better grades" [post-primary grammar pupil]

"Think about the complexities between Protestants and Catholics – it's ok at certain schools but not all" [post-primary integrated pupil]

"Some people mightn't like other schools and just want to be friends with ones in their own school" [primary pupil].

Logistical issues, including travel arrangements, timetabling and different school rules were cited by many post-primary pupils (as well as principals and teachers), as a significant barrier;

"It would just take forever to get there" [post-primary pupil]

"You would have to set consequences for anyone from a different school if they did anything bad" [primary pupil].

The consultation with participants clearly identified opportunities for and barriers to shared education. Pupils provided candid feedback but also sought, where possible, to suggest measures which might address some perceived or actual difficulties.

Sharing with Pupils from different types of School

During the consultation, pupils were asked if they thought it was important for pupils from different schools and backgrounds to have an opportunity to learn together. A majority of pupils from all school types generally concurred with this proposal. Indeed in a number of workshops, pupils contended that the aim of shared education should not be restricted to bringing pupils from the two dominant religious traditions together but rather, involve pupils from all different types of schools. However pupils also acknowledged the challenges of promoting shared education between particular school types. In every workshop conducted in a grammar school, pupils expressed reservations about collaborative learning with pupils from non-selective schools. These reservations concerned the academic ability and behaviour of pupils in non-selective schools and the standard of teaching; "I want to be sure I pick subjects where the standard of teaching is good...too risky to move [to another school]" [grammar school pupil]. Similarly some pupils attending non-selective schools felt that grammar pupils would regard them as being "less able" and therefore be reluctant to become learning partners; "It's how they view us. Because we're not grammar, we're not as smart" [non-selective school pupil].

Pupils attending special schools were generally very keen to engage with pupils from other schools. While sometimes acknowledging they were "a little nervous going somewhere new", pupils were "happy to meet pupils from other schools...anywhere, any age..." When asked about shared education opportunities with pupils from special schools, mainstream primary and post-primary school pupils generally welcomed the opportunity. Respondents did however

highlight a number of issues which they felt needed to be considered in advance of any shared activities, including the potential for bullying and accidents, logistical difficulties, and the challenge to teachers to effectively teach all pupils together.

Irish medium school pupils reflected on the challenges they would encounter through collaborative learning with English medium schools where there would be limited opportunities for them to speak Irish. Some said they would be happy to learn in English while others were not; "It'd be pointless to learn a subject in English if you are doing all the rest of your education in Irish" [Irish-medium school pupil]. Integrated school pupils expressed a willingness to engage with pupils from all types of schools although some felt that pupils from other schools did not "fully understand" integrated schools. They believed however, that their experiences and the modus operandi in integrated schools could helpfully support other pupils to participate effectively in shared education. As one integrated school pupil proposed; "...if we met with other schools we could set an example".

Principals' and teachers' responses echoed some of the views expressed by pupils, particularly in terms of the opportunities to build relationships and the logistical challenges associated with arranging shared education activities including timetabling constraints and requirements regarding curriculum delivery. Additional challenges included the availability of funding, promoting shared education through cross-community links and for a minority of teachers, the management of staff and parents' concerns.

Further comments from pupils about these issues and area-based planning are documented in the Report. Copies were forwarded to members of the NI Assembly Education Committee last year. It may also be accessed at http://www.niccy.org/downloads/2013/publications/Adult_Report.pdf

Reviewing the Findings

From the consultation, it was evident that shared education in post-primary schools was often associated with enhanced curriculum provision at GCSE and 'A' level and the opportunity then for pupils in Years 11-14 to participate in joint classes with other schools. A few post-primary pupils also referred to shared school facilities or taking part in shared activities, such as sports or drama. In primary schools, pupils' experiences of shared education were generally through joint projects or trips with other schools. In some of the primary school workshops, pupils indicated that participation in shared activities had only been available to pupils in other year groups. The objective of shared activities in many primary schools, was to encourage cross-community contact, and where it occurred, the impetus arose from a principal's or teacher's desire to actively engage with other primary schools through new or existing collaborative working relationships.

Given the commitment in the Programme for Government for all children to have the opportunity to participate in shared education by 2015, significant efforts will be required to expand provision across all year groups in primary, post-primary and special schools if this is to be realised.

The consultation with pupils through the workshops and surveys, demonstrated that many pupils recognised the value of shared education and potential benefits it afforded in relation to learning and social integration. Many of those who had experienced shared education gave positive accounts of their participation in joint classes and activities, however a significant minority professed to having more mixed experiences. Some pupils described collaborative activities and joint classes as being 'shared' but 'separate' due to the fact that pupils had remained within their own school or friendship groups and interaction with pupils from other schools had been limited. Others referred to the uncomfortable experience of being in a minority when attending classes in another school and to the logistical challenges associated with the delivery of shared educational provision.

It will be important that the objectives of 'shared education' are sufficiently clarified and that pupils are encouraged and supported to be genuine and equal collaborators. As shared education is taken forward, there should be a focus on ensuring that quality learning experiences are available to all pupils. Where they have concerns and where difficulties arise, appropriate mechanisms should be put in place (e.g. school councils, buddy systems), so that pupils can be facilitated to raise issues and be confident that they will be dealt with sensitively and effectively.

From the findings, it was evident that some post-primary pupils' attitudes to shared education, particularly those who had less experience, were strongly influenced by their perceptions of other schools and pupils. Perceived differences in pupils' ability and religion influenced their views and desire to engage in shared learning initiatives. In some cases, these views had been strongly influenced by the views of parents and teachers. If shared education is to be regarded as a positive learning opportunity, there is a clear need to confront and challenge such preconceptions. Evidently, one of the most effective ways to do this is to involve pupils in positive shared learning initiatives, however it will also be important to consider other measures which may alleviate pupils' concerns and challenge negative perceptions, prior to their participation.

The consultation clarified issues pertaining to specific school types which should be considered more closely. Irish-medium school pupils were keen to engage in shared initiatives however the challenge of providing dual medium activities or classes have, thus far, served as a barrier to their inclusion. Principals of Irish medium schools were keen that the Department of Education consider how their schools could be included in shared education initiatives as it moves forward. The inclusion of special schools in shared learning initiatives was evidently regarded as more challenging by some pupils and teachers. Therefore, it will also be important to consider how mainstream schools can collaborate most effectively with special schools and manage any logistical and practical issues which may arise. As also noted, pupils and teachers in grammar schools expressed reservations about the benefits of joint learning initiatives with pupils attending non-selective schools, due to perceived differences in academic ability and behaviour standards. The perspectives of pupils and staff in integrated schools were quite distinctive. While many welcomed opportunities to engage in collaborative learning with other schools, they emphasised that pupils and staff were already part of an effective shared learning environment. Pupils felt that their experiences of being part of an integrated school could helpfully support other schools engaged in shared education initiatives.

If schools are to provide shared education in line with the broad and diverse remit outlined in the Department of Education's definition, this will create significant and specific challenges for some. Careful consideration should be given to ensuring that all schools are supported appropriately and effectively in their efforts to provide positive and meaningful shared experiences which are also educationally and socially valuable.

NICCY would like to thank the Northern Ireland Assembly Education Committee for the invitation to submit a written response to its inquiry into Shared Education and Integrated Education.

Should you require any further information concerning this submission, please contact Dr. Alison Montgomery at Alison@niccy.org or 02890 316185.

Shared Education and Integrated Education Inquiry

NI Assembly Education Committee

Oral Evidence Paper

Introduction

I would like to thank the Committee for inviting us here today to give evidence to its inquiry into shared education and integrated education. I welcome the Committee's decision to initiate an inquiry into these two important aspects of education in Northern Ireland and to garner the views of stakeholders.

As you may be aware, the principal aim of my office, as set out in legislation, is to safeguard and promote the rights and best interests of children and young people. As part of my remit, I have a mandate to keep under review the adequacy and effectiveness of law, practice and services relating to the rights and best interests of children. Furthermore, my office bases all of its work on the United Nations Convention on the Rights of the Child – the UNCRC.

My presentation this morning will highlight the key findings emerging from a consultation which my Office undertook with children and young people, to explore their views and experiences of shared education. The Inquiry's Terms of Reference address the nature and definition of shared education, key barriers and enablers for shared education and what priorities and actions need to be taken to improve sharing. Children and young people discussed these issues during the consultation and I will make reference to their responses throughout the presentation.

Consultation with Children and Young People on Shared Education

As you will know, the Department of Education established a Ministerial Advisory Group to explore and bring forward recommendations to the Minister to advance shared education in Northern Ireland. In line with my remit, which I have just described, I offered to assist the Minister by consulting children and young people about shared education with the intention of ensuring that their views were incorporated into the Ministerial Advisory Group's report. The focus of the consultation was on shared education however pupils and teachers from integrated schools participated therefore reference is also made to integrated education.

Although the Consultation was completed within a very short timeframe, NICCY was eager to ensure that as many children and young people as possible were able to participate. So, there were two strands. Firstly, workshops were conducted with primary school pupils (aged 8 to 10 years) and post-primary age pupils (aged 14 to 17 years) and secondly, surveys were completed by children aged 10-11 years and young people aged 16 years.

The surveys were commissioned from ARK, a joint initiative between The Queen's University, Belfast and the University of Ulster which devises the Kids' and Young Life and Times surveys. Two modules of questions relating to pupils' attitudes and experiences of shared education were included in each survey.¹

Thirty-eight workshops were conducted in 21 schools across Northern Ireland involving more than 750 primary, post-primary and special school pupils. A key objective was to ensure that pupils from as many school types as possible were able to participate, and care was taken to ensure that the sample of schools recruited, was as representative as possible.

1 <http://www.ark.ac.uk/klt/>

The workshops explored pupils' awareness, understanding and experiences of shared education and their views about how it should be taken forward. They were also encouraged to identify opportunities and activities which they believed would be enjoyable and beneficial and to highlight any barriers which they felt might dissuade pupils from participating. Interviews were also conducted with principals or members of staff in order to contextualise pupils' responses or to clarify factual information provided.

Findings from the Consultation

Less than 50% of post-primary pupils indicated that the term, 'shared education' was familiar to them. Where they did recognise it, this was usually due to their knowledge of, or participation in shared classes at GCSE or 'A' level. Very few primary pupils were aware of the concept, although after it was explained, some suggested it referred to activities, such as joint projects or trips with other schools in which they or other pupils had been involved. This lack of awareness was not entirely unexpected, as the term may not have been widely used in schools and a significant proportion of primary pupils indicated that they had not had any experience of shared activities.

Post-primary pupils' experiences of shared education, were in many cases linked to their participation in shared classes, although other 'shared' activities were also identified, such as joint residentials, drama productions or sports events with other schools. Pupils also talked about sharing sports facilities or transport. The potential for pupils to participate in shared activities appeared to be influenced by a number of factors, including the subjects they studied, the class or year group they were in and their involvement in extra-curricular activities.

Children and young people who had taken part in shared classes or activities expressed a range of opinions with regard to their experiences. Both primary and post-primary pupils welcomed the opportunity to interact and make new friends with pupils from other schools. They also enjoyed the experience of different learning approaches and gaining insights into other schools. One post-primary pupil summarised many pupils' responses by saying;

"I think it's a good way to mix with pupils from other schools, [and to] make new friends with people who have a different background or religion to us."

A clear benefit of shared classes for post-primary pupils was the expanded choice of subjects available at Key Stage 4 and 'A' Level. One pupil commented, that it

"gives people more subject options...[it's a] unique opportunity."

Some pupils reported having less positive experiences. These often occurred where they had limited or negative contact with pupils from other schools. They talked about feeling uncomfortable if they were in a minority or feeling 'out of place' when they attended classes in another school. As one post-primary pupil said;

"Joint classes are a bit awkward. We all sit at one table – don't really mix with pupils from [the other school]."

Another pupil said;

"You feel like outcasts if you're going to class and walking through [the school] and they look at you in a different uniform."

A number of logistical issues, including transport arrangements and timetabling variations between schools, also impacted on pupils' experiences.

During the consultation, children and young people were asked to think about the kind of approaches and activities which they believed would be effective in the development of shared education. A significant majority of respondents to the KLT and YLT surveys agreed that shared projects, classes and facilities would be a good idea. Pupils in the workshops

explored this question in more detail, calling for more collaborative learning approaches to be employed, and for additional subjects and activities to be included. Pupils said; “Group work and more mixing activities...would make it more enjoyable” and “[Subjects like] Technology, Art, PE, Science and Music – you could do them with other people better.”

Pupils also highlighted the importance of introducing shared education at an early stage in a child’s schooling, of undertaking preparation in advance of shared learning activities and providing opportunities for pupils to feedback on their experiences.

As well as highlighting opportunities for shared education, pupils were asked if they thought there were any barriers which might dissuade young people from taking part. In response, some students, mostly at post-primary schools, acknowledged that they would be concerned about sharing their education with pupils from particular schools. Their concerns related to academic ability, cross-community issues, standards of behaviour, and the increased potential for bullying. To illustrate these concerns, a grammar school pupil commenting on a non-selective school said;

“I don’t want to sound stuck-up but they don’t push you there. We get better grades.”

And a primary pupil admitted;

“I don’t like the fact that if another school joins with us...we will have bullies...the bullies will spread when we do shared education.”

Logistical issues, including travel arrangements, timetabling and different school rules were again cited by many post-primary pupils (as well as principals and teachers), as significant barriers.

A majority of pupils thought it was important for pupils from different schools and backgrounds to have an opportunity to learn together. Indeed in a number of workshops, pupils contended that the aim of shared education should not be restricted to bringing pupils from the two dominant religious traditions together but instead, involve pupils from **all** types of schools. However, pupils acknowledged concerns about shared education occurring between particular school types. Reservations expressed by pupils at grammar schools have been mentioned. In response, some pupils attending non-selective schools felt that grammar pupils would regard them as “less able” and therefore be reluctant to become learning partners.

Pupils attending special schools were very keen to engage with their peers in other schools although a few did admit to being “a little nervous going somewhere new”. In response, pupils from mainstream schools highlighted a number of issues which they felt needed to be considered in advance of any shared activities with pupils at special schools, including the potential for bullying, accidents, logistical difficulties, and the challenge for teachers to effectively teach all pupils together. A special school teacher also welcomed the educational opportunities for pupils through her school’s membership of an area learning community, although she noted there was also resistance on the part of some mainstream schools to engage with special schools.

Irish medium school pupils reflected on the challenges they would encounter through collaborative learning with English medium schools where there would be limited opportunities for them to speak Irish. Integrated school pupils expressed a willingness to engage with pupils from all schools, suggesting that their experiences and the *modus operandi* in integrated schools could support other schools to effectively participate in shared education.

Principals’ and teachers’ responses echoed some of the views expressed by pupils, particularly in terms of the opportunities to build relationships and the logistical issues associated with arranging shared education activities. Additional challenges included funding, promoting shared education through cross-community links and for a minority of teachers, managing staff or parents’ concerns.

To conclude, I would like to briefly reflect on the findings.

Reflection on Consultation Findings

It was evident that shared education in most post-primary schools was associated with enhanced curriculum provision and the opportunity for pupils in Years 11 to 14 to participate in joint classes with other schools. In primary schools, pupils' experiences were generally through joint projects or trips with other schools. In some workshops, pupils indicated that participation in shared activities had only been available to other year groups. Given the commitment in the Programme for Government for all children to have the opportunity to participate in shared education by 2015, significant efforts will be required to expand provision across all year groups in primary, post-primary and special schools, if this is to be realised.

Many pupils recognised the value of shared education through the potential benefits for their learning and opportunities to develop relationships with pupils at other schools. While many recounted positive experiences, a significant minority offered less positive feedback. Some described collaborative activities and joint classes as '**shared**' but '**separate**', because pupils remained within their own school or friendship groups and interaction with pupils from other schools had been limited. Other young people talked about feeling uncomfortable when attending classes in another school, particularly where they were in a minority.

In taking shared education forward, it will be important that the objectives are very clearly communicated to all involved, and that pupils are encouraged and supported by all stakeholders to be **equal** and '**effective**' collaborators. The provision of quality learning experiences must be a priority for **all** pupils. Appropriate mechanisms such as school councils or 'buddy' systems should be put in place, so that where pupils have concerns, these can be dealt with sensitively and appropriately.

The attitudes of some post-primary pupils, particularly those who had less experience shared education, were strongly influenced by their perceptions of other schools and pupils. Perceived differences in ability, social background and religion influenced their desire to engage in shared learning initiatives. In some cases, pupils' views had been influenced by their parents or teachers. If shared education is to be regarded as a positive learning opportunity, there is a need to confront and challenge such preconceptions. Evidently, one of the most effective ways to do this is to involve pupils in positive shared learning initiatives, however it will also be important to consider other ways to address pupils' concerns prior to their participation. As one principal commented, "It's important to make people comfortable and get them in a position to embrace challenges".

The consultation highlighted a range of issues relating to specific school types which should be considered by the Department of Education. Pupils and principals in Irish medium schools were keen that the Department consider how their schools could be included in shared education as it is taken forward. It will also be important to consider how mainstream schools can collaborate most effectively with special schools and be supported to address any attitudinal or practical issues arising. And, as already highlighted, pupils and teachers in grammar schools expressed reservations about the benefits of collaborative learning with pupils attending non-selective schools.

The perspectives of pupils and staff in integrated schools were quite distinctive. While many welcomed opportunities to engage in collaborative learning with other schools, they pointed out that they were already part of an effective shared learning environment. One principal reflected, "Shared education is fine as a starting point, but it needs more work".

The consultation with pupils referenced the definition of shared education outlined in the Terms of Reference for the Ministerial Advisory Group and which is now displayed on the Department of Education's website. This definition references the need for shared education to provide for 'learners from all Section 75 categories and socio-economic status' and to '...

promote equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion'. Findings from the consultation indicated that some shared education activities fulfilled these requirements more successfully than others. In some cases, the main objective appeared to be supporting the provision of the entitlement framework in the post-14 curriculum and pupils' access to a wide range of courses. In others, collaboration was occurring between schools of a similar management type or ethos. If pupils are to experience shared education, as defined by the Department, clear aims and objectives need to be outlined at the beginning of any shared initiative, to which all stakeholders can subscribe. Ongoing monitoring and evaluation of activities, which also involves pupils, should be undertaken to ensure all objectives are being met.

The 2002 and 2008 concluding observations of the UN Committee on the Rights of the Child, recorded the Committee's concerns that education in Northern Ireland remained largely segregated. In 2002, it recommended that the Government take measures to establish more integrated schools and in 2008, it called on Government to take steps to address segregated education.

I welcome all genuine efforts to address separation in the education system in Northern Ireland and the introduction of measures which encourage greater collaboration and understanding, and which promote equality and respect for diversity. If shared education is to be implemented as envisaged by the Department, this will create both opportunities and challenges for schools. Therefore, it is vital that all those involved in the delivery of shared education are effectively supported in their efforts to provide positive and meaningful shared experiences which are educationally and socially valuable for all pupils.

Northern Ireland Human Rights Commission

NORTHERN
IRELAND
HUMAN
RIGHTS
COMMISSION

Submission of the Northern Ireland Human Rights Commission to the Committee for Education Inquiry into Shared and Integrated Education

Summary

The NIHRC recommends that the Committee give due consideration to the purpose of education in the context of its inquiry and that it examines the relevant human rights standards directly related to shared and integrated education as set out in paragraphs 2.1 – 2.11. (Par. 2.12)

The NIHRC further suggests that the Committee considers the application of domestic equality and good relations duties within schools and in particular recommends that they be designated as public authorities for the purpose of Section 75 of the Northern Ireland Act. (Par. 2.13)

The decision of the High Court in the application by Drumragh Integrated College is that the definition of integrated education requires a particular constitution and governance structure within schools and that the pupils of that school are both catholic and protestant. The NIHRC therefore advises that shared education programmes between schools that are not integrated would be unlikely to fall within the definition of integrated education for the purposes of Art 64 of the Education Reform (Northern Ireland) Order 1989. (Par. 3.5)

The NIHRC recommends that the Committee seeks the opinion of the DE on their understanding of the definition and scope of integrated education in accordance with the Drumragh judgment. It further suggests that the Committee examines whether

integrated schools in Northern Ireland, in the opinion of the DE, fall within the ambit of a philosophical conviction under Prot 1 Art 2 of the ECHR. In undertaking this examination, the NIHRC recommends that there should be a strong presumption of non-retrogression in the enjoyment of the right to parental choice. (Par. 3.9)

The NIHRC recommends that the Committee examines the role of the ETI and satisfies itself that the function of the inspecting body is robust in monitoring the protection and promotion of the human rights standards in education with particular attention to the duty to promote inclusion, tolerance and mutual understanding. (Par. 4.14)

The NIHRC recommends that the Committee seek further information from the DE on the measures it has introduced to implement Recommendation 10 of the Ministerial Advisory Group. It further recommends that the Committee considers the outcome of the survey to be undertaken by the Chief Inspector. (Par. 4.16)

Submission of the Northern Ireland Human Rights Commission to the Committee for Education Inquiry into Shared and Integrated Education

1. Introduction

- 1.1 The Northern Ireland Human Rights Commission (NIHRC) pursuant to Section 69 (1) of the Northern Ireland Act 1998, reviews the adequacy and effectiveness of law and practice relating to the protection of Human Rights.¹ In accordance with this function the following statutory advice is submitted to Committee for the Office of the First Minister and deputy First Minister (OFMdfM) on its inquiry into integrated and shared education.
- 1.2 The NIHRC bases its advice on the full range of internationally accepted human rights standards, including the European Convention on Human Rights as incorporated by the Human Rights Act 1998 and the treaty obligations of the Council of Europe (CoE) and United Nations (UN) systems. The relevant international treaties in this context include:
- the CoE European Convention on Human Rights, 1950 (ECHR)²;
 - the CoE Framework Convention for the Protection of National Minorities (FCNM)³;
 - the International Covenant on Civil and Political Rights (ICCPR)⁴;
 - the International Convention on the Elimination of All Forms of Racial Discrimination (ICERD)⁵;
 - The International Covenant on Economic, Social and Cultural Rights (ICESCR)⁶;
 - the UN Convention on the Rights of the Child (CRC)⁷;
 - the UN Convention on the Rights of Persons with Disabilities (CRPD)⁸
 - the UN Educational, Scientific and Cultural Organisation (UNESCO) Convention on the Protection and Promotion of the Diversity of Cultural Expressions.⁹
- 1.3 The Northern Ireland Executive (NI Executive) is subject to the obligations contained within these international treaties by virtue of the United Kingdom (UK) Government's ratification. In addition, the Northern Ireland Act 1998, section 26 (1) provides that 'if the Secretary of State considers that any action proposed to be taken by a Minister or Northern Ireland department would be incompatible with any international obligations... [s]he may by order direct that the proposed action shall not be taken.'
- 1.4 The NIHRC further recalls that the Northern Ireland Act 1998, section 24(1) states that 'a Minister or Northern Ireland department has no power to make, confirm or approve any subordinate legislation, or to do any act, so far as the legislation or act – (a) is incompatible with any of the Convention rights'.
- 1.5 In addition to these treaty standards there exists a body of 'soft law' developed by the human rights bodies of the UN and CoE. These declarations and principles are non-binding but provide further guidance in respect of specific areas. The relevant standards in this context are:

1 Northern Ireland Act 1998, Section 69(1).

2 Ratified by the UK in 1951.

3 Ratified by the UK in 1998.

4 Ratified by the UK in 1976.

5 Ratified by the UK in 1969.

6 Ratified by the UK in 1976.

7 Ratified by the UK in 1991.

8 Ratified by the UK in 2009.

9 Ratified by the UK in 2007.

- UN Human Rights Council Resolution 6/37 on the elimination of intolerance and of discrimination based on religion or belief;
- UN Declaration on a Culture of Peace;
- Faro Declaration on the Council of Europe's Strategy for Developing Intercultural Dialogue;
- Yogyakarta Principles on the application of international human rights law in relation to sexual orientation and gender identity;
- UN Declaration on the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities;
- UN Durban Declaration and Programme of Action;
- CoE European Commission against Racism and Intolerance (ECRI) General Policy Recommendation 10 on Combatting racism and racial discrimination in and through school

1.6 With reference to the terms of reference of the inquiry, the NIHRC's submission focuses on the following aims:

- Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;
- Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy, the need to engage more effectively with parents/carers, and the role of Special Schools.

2. Purpose of Education

- 2.1 Human rights law and standards place a duty on the NI Executive to promote inclusion, tolerance and respect for diversity in and through education. As one of the purposes of education, there is considerable direction in a number of human rights instruments as to how this can be achieved.
- 2.2 The ICESCR Article 13(1) states that education should enable all persons to 'participate effectively in a free society, [and] promote understanding, tolerance and friendship among all nations and all racial, ethnic or religious groups'.¹⁰
- 2.3 The UNCRC Article 29 requires that the education of the child should be directed to the development of respect for the child's parents, cultural identity, language, the country in which the child is living and from where he/she originates, as well as for 'civilisations different from his or her own'.¹¹
- 2.4 The UN Committee on the Rights of the Child has highlighted the links between Article 29(1) and the struggle against racism, racial discrimination, xenophobia and related intolerance. It notes that racism 'thrives where there is ignorance, unfounded fears of racial, ethnic, religious, cultural and linguistic or other forms of difference, the exploitation of prejudices, or the teaching or dissemination of distorted values'.¹²
- 2.5 Further it recognises that approaches to promoting tolerance and friendship among all peoples, might appear to sit in tension with policies designed to develop respect for the child's own cultural identity, language and values.¹³ However the Committee 'recognises the need for a 'balanced approach to education...which succeeds in reconciling diverse values

10 International Covenant on Economic, Social and Cultural Rights 1966, Article 13

11 United Nations Convention on the Rights of the Child 1989, Article 28

12 United Nations, Committee on the Rights of the Child (2001) General Comment No.1: Aims of Education (par 11)

13 United Nations Convention on the Rights of the Child 1989 Article 29 (1c)

through dialogue and respect for difference'. Moreover it advises that children are 'capable of playing a unique role in bridging many of the differences that have historically separated groups of people from one another'.¹⁴

- 2.6 The ICERD, Article 7, requires the adoption of 'immediate and effective measures, particularly in the fields of teaching, education, culture and information, with a view to combating prejudices which lead to racial discrimination and to promoting understanding, tolerance and friendship among nations and racial or ethnical groups.'¹⁵ The UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions, Article 10, has similarly recommended that governments educate the population at large by requiring that they 'encourage and promote understanding of the importance of the protection and promotion of the diversity of cultural expressions, inter alia, through educational and greater public awareness programmes.'¹⁶
- 2.7 The FCNM Article 6 also requires States Parties take 'effective measures to promote mutual respect and understanding and co-operation among all persons living on their territory.'¹⁷ The NIHRC notes that Section 75(2) of the Northern Ireland Act 1998 gives partial domestic force to the duty contained in the FCNM, Article 6. The NIHRC also notes that sectarianism falls within the ambit of the definition of racism in international human rights law.¹⁸
- 2.8 In accordance with the CEDAW Article 5 the Northern Ireland Executive has a positive obligation to take appropriate measures to 'modify the social and cultural patterns of conduct of men and women, with a view to achieving the elimination of prejudices and customary and all other practices which are based on the idea of the inferiority or the superiority of either of the sexes or on stereotyped roles for men and women.'
- 2.9 The CRPD Article 8 contains a similar duty to 'raise awareness...and to foster respect for the rights and dignity of persons with disabilities' which includes an obligation to 'combat stereotypes'. One of the measures required is to foster 'at all levels of the education system, including in all children from an early age, an attitude of respect for the rights of persons with disabilities'.
- 2.10 The Yogyakarta Principles set out the application of the right to education in relation to sexual orientation and gender identity in Principle 16. It requires that education 'responds to the needs of students of all sexual orientations and gender identities' and '[e]nsure that education methods, curricula and resources serve to enhance understanding of and respect for, inter alia, diverse sexual orientations and gender identities'. It also sets out the duty to '[e]nsure that laws and policies provide adequate protection for students, staff and teachers of different sexual orientations and gender identities against all forms of social exclusion and violence within the school environment, including bullying and harassment'.
- 2.11 The NIHRC notes that whilst schools are not designated as public authorities for the purpose of the good relations duty found in Section 75 of the Northern Ireland Act, a similar duty does apply to schools in England and Wales. Under the Equality Act 2010 the public authority duty created in Section 149(1) is applicable to 'the governing bodies of schools' as set out in Schedule 19.

See also, 'Racism, Discrimination and Xenophobia', a publication prepared by: International Labour Office (ILO), International Organization for Migration (IOM), OHCHR, in consultation with Office of the United Nations High Commissioner for Refugees (UNHCR), (2001), p 2.

2.12 **The NIHRC recommends that the Committee give due consideration to the purpose of education in the context of its inquiry and that it examines the relevant human rights standards directly related to shared and integrated education as set out in paragraphs 2.1 – 2.11.**

2.13 **The NIHRC further suggests that the Committee considers the application of domestic equality and good relations duties within schools and in particular recommends that they be designated as public authorities for the purpose of Section 75 of the Northern Ireland Act.**

3. The Right to Parental Choice in Education

3.1 The ECHR, Article 2 of the first protocol outlines the State duty to ‘respect the right of parents to ensure such education and teaching in conformity with their own religious and philosophical convictions’¹⁹. The Commission notes the UK’s reservation to this article of the ECHR stating that it will adhere to the principle of educating pupils in accordance with parents’ wishes ‘only so far as it is compatible with the provision of efficient instruction and training, and the avoidance of unreasonable public expenditure’²⁰.

3.2 The Department of Education (DE) facilitates a variety of choices in education in Northern Ireland by providing funding for different types of school. The NIHRC notes that there is a statutory duty to ‘encourage and facilitate the development of’ both integrated and Irish medium education.²¹ In the context of the current discussion, the NIHRC notes that integrated education is defined as ‘education together at school of Protestant and Roman Catholic pupils’²² and has traditionally meant education in a particular type of school that adheres to the criteria set out in the Core Principles of Integrated Education.²³

3.3 The NIHRC notes that the recent judgment in the judicial review application by Drumragh Integrated College examined the definition of integrated education. In addressing whether or not the ‘Article 64 duty is capable of being owed to any school in which Protestant and Roman Catholic children are educated together’ the judgment considered the potential that the definition might extend to schools providing shared education programmes. The conclusion of Treacy J was that ‘Integrated Education is a standalone concept’ and ‘[t]he provision plainly envisages education together at the same school.’²⁴

3.4 The judgment goes on to emphasise that a constitution and governance structure that reflects integration must be present in order for a school to be defined as integrated:

As against this, an integrated school strives to achieve an equal balance in relation to worship, celebration and exposure to both faiths. This is reflected in its constitution and the board must strive in its ethos to achieve this. For these reasons it must be the case that the integrated education referred to in the article is education that is integrated throughout and not education that is delivered by a partisan board.²⁵

3.5 **The decision of the High Court in the application by Drumragh Integrated College is that the definition of integrated education requires a particular constitution and governance structure within schools and that the pupils of that school are both catholic and protestant. The NIHRC therefore advises that shared education programmes between schools that are**

23 Northern Ireland Council for Integrated Education Statement of Principles See <http://www.nicie.org/wp-content/uploads/2012/08/Statement-of-Principles1.pdf>

24 Re: Drumragh Integrated College (citation no. [2014] NIQB) (2014) par. 50

25 Ibid. par. 53

not integrated would be unlikely to fall within the definition of integrated education for the purposes of Art 64 of the Education Reform (Northern Ireland) Order 1989.

- 3.6 The NIHRC view is that the question of whether or not integrated education constitutes a philosophical conviction for the purposes of Prot 1 Art 2 of the ECHR remains to be tested in the domestic courts. Whilst it was argued in Drumragh Integrated College's 2013 application for judicial review, it was not dealt with in the judgment as the application did not present a victim and therefore the argument could not be evaluated.
- 3.7 Early judgments of the European Court of Human Rights (ECtHR) did not uphold the argument that integrated education is a philosophical conviction that should be protected under the parental right to choice.²⁶ However the ECHR is a living instrument and subsequent cases at the ECtHR have demonstrated a broadening of the interpretation to protect beliefs that are 'worthy of respect in a democratic society'²⁷ and 'attain a certain level of cogency, seriousness, cohesion and importance'²⁸.
- 3.8 The NIHRC notes that the statutory duty to encourage and facilitate integrated education in Article 64(1) of the Education Reform (Northern Ireland) Order 1989 demonstrates the respect and importance attached to this choice of education in domestic law and policy. It further recognises the current level of State commitment to integrated schools through the support of an arms-length body, the Northern Ireland Council for Integrated Education, and the provision of funding to 62 schools providing places for 21,745 pupils.²⁹
- 3.9 **The NIHRC recommends that the Committee seeks the opinion of the DE on their understanding of the definition and scope of integrated education in accordance with the Drumragh judgment. It further suggests that the Committee examines whether integrated schools in Northern Ireland, in the opinion of the DE, fall within the ambit of a philosophical conviction under Prot 1 Art 2 of the ECHR. In undertaking this examination, the NIHRC recommends that there should be a strong presumption of non-retrogression in the enjoyment of the right to parental choice.**
- 3.10 The NIHRC notes that while human rights standards are clear about the duty to promote inclusion, tolerance and respect for diversity through education, there is no requirement to support any particular school structure in order to achieve this. Both integrated schools and shared education programmes may be considered methods supported by the state to fulfil its obligations in this regard.
- 3.11 The NIHRC notes the commitment of the DE to advance shared education through the Shared Education Campuses Programme. This programme, alongside the financial support provided through the Office of the First and Deputy First Minister, is intended to implement the commitment in the Together Building a United Community Strategy to '[e]nhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience'³⁰ and to '[c]reate ten Shared Educational Campuses'³¹ within the next 5 years. The strategy includes this commitment as an action that will 'lead to sustainable improvements in good relations'.³²
- 3.12 The NIHRC is also aware that the UN Committee on the Rights of the Child has expressed concern that 'education continues to be heavily segregated' and has recommended that the Northern Ireland Executive 'increase [the] budget and take appropriate measures and

32 Ibid.

incentives to facilitate the establishment of additional integrated schools in Northern Ireland to meet the demand of a significant number of parents.¹³³

4. Curriculum content

4.1 The obligation contained in the ICESCR Art 13 and in the UNCRC Art 29 protects the right of children to an education that is directed towards,

- (a) the development of the child's personality, talents and mental and physical abilities to their fullest potential;
- (b) the development of respect for human rights and fundamental freedoms, and for the principles enshrined in the Charter of the United Nations;
- (c) the development of respect for the child's parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may originate, and for civilizations different from his or her own;
- (d) the preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin;
- (e) the development of respect for the natural environment.³⁴

4.2 The NIHRRC notes that in order to fulfil this obligation of the UNCRC and the ICESCR the DE are required to consider the content and delivery of the curriculum paying due regard to mutual respect and understanding.

4.3 The UN Human Rights Council Resolution 6/37 emphasises that:

- promoting tolerance and acceptance by the public of and its respect for diversity and combating all forms of intolerance and of discrimination based on religion and belief are substantial elements in creating an environment conducive to the full enjoyment by all of the right to freedom of thought, conscience and religion, as enshrined in article 18 of the International Covenant on Civil and Political Rights.³⁵

4.4 The CoE Faro Declaration encourages:

- intercultural dialogue on the basis of universal human rights, as a means of promoting awareness, understanding, reconciliation, tolerance and respect for the other, of preventing conflicts and of ensuring an integrated and cohesive society.³⁶

4.5 The UN Declaration on a Culture of Peace recognises peace as being:

- a positive, dynamic participatory process where dialogue is encouraged and conflicts are solved in a spirit of mutual understanding and cooperation.³⁷

4.6 Creating a culture of peace, therefore, requires:

33 UN Committee on the Rights of the Child, Concluding Observations: The United Kingdom of Great Britain and Northern Ireland (2002) para 45

34 United Nations Convention on the Rights of the Child 1989 Article 29 (1), See also International Covenant on Economic, Social and Cultural Rights 1966 Article 13 (1)

35 UN Human Rights Council, Resolution 6/37: Elimination of all forms of intolerance and of discrimination based on religion or belief (2007), para 8

36 Faro Declaration on the council of Europe's Strategy for Developing Intercultural Dialogue (2005) DGIV/DC-FARO

37 UN Declaration on a Culture of Peace (1999), preamble

- Adherence to the principles of freedom, justice, democracy, tolerance, solidarity, cooperation, pluralism, cultural diversity, dialogue and understanding at all levels of society and among nations.³⁸
- 4.7 ECRI General Policy Recommendation 10 on Combatting racism and racial discrimination in and through school outlines measures that should be applied to ensure equal access to education, to combat racism and racial discrimination at school and to support teachers to work in a multi-cultural environment. This includes ‘by ensuring that human rights education is an integral part of the school curriculum at all levels and across all disciplines, from nursery school onwards’.³⁹
- 4.8 The statutory curriculum in Northern Ireland makes a general provision for teaching and learning in relation to tolerance and respect for diversity through the inclusion of ‘mutual understanding’ and ‘cultural understanding’ as key elements of the curriculum to be addressed by all learning areas/subject strands. In addition, specific provision is made within PDMU (primary) and Local and Global Citizenship (post primary).
- 4.9 Extensive support materials and non-statutory guidelines have been produced to support the delivery of these aspects of the curriculum; however, schools have discretion in terms of the way in which this is delivered. The need for continued professional development of teachers in relation to community/good relations has been identified by the Community Relations Equality and Diversity (CRED) policy which makes a commitment to provide funding to facilitate a move away from dependency on external organisations in delivering this type of work in schools to ‘firmly embedding’ CRED activities in educational settings by ‘providing a strong skills base for educators’.⁴⁰
- 4.10 The Ministerial Advisory Group on Advancing Shared Education made a recommendation on this in its 2013 report suggesting that,
- An independent review should be undertaken of current practice in relation to the delivery of:
- Personal, Social and Emotional Development (Pre-School Education);
 - Personal Development and Mutual Understanding (Foundation Stage and Key Stages 1 and 2);
 - Local and Global Citizenship (Key Stages 3 and 4); and
 - The Curriculum Framework for Youth Work (Youth Service).
- The review should consider the effectiveness of the current Community Relations Equality and Diversity (CRED) policy and also include consideration of the opportunities that are provided for children and young people to discuss and explore issues associated with divisions, conflict and inequalities in Northern Ireland. The review should make recommendations regarding the content of these areas of learning and also how teachers can best be supported to deliver these.⁴¹
- 4.11 General Comment 29 of the UN Committee on the Rights of the Child outlines the requirement to monitor progress in the fulfilment of the aims of education:
- The Committee calls upon States parties to devote more attention to education as a dynamic process and to devising means by which to measure changes over time in relation to article 29 (1). Every child has the right to receive an education of good quality which in turn requires a focus on the quality of the learning environment, of teaching and learning processes and

materials, and of learning outputs. The Committee notes the importance of surveys that may provide an opportunity to assess the progress made, based upon consideration of the views of all actors involved in the process, including children currently in or out of school, teachers and youth leaders, parents, and educational administrators and supervisors. In this respect, the Committee emphasizes the role of national-level monitoring which seeks to ensure that children, parents and teachers can have an input in decisions relevant to education.⁴²

- 4.12 The NIHRC recognises the role of the Education Training Inspectorate (ETI) in providing 'inspection services and information about the quality of education' with a view to promoting 'the highest possible standards of learning, teaching and achievement'.⁴³
- 4.13 The NIHRC recommends that the Committee examines the role of the ETI and satisfies itself that the function of the inspecting body is robust in monitoring the protection and promotion of the human rights standards in education with particular attention to the duty to promote inclusion, tolerance and mutual understanding.
- 4.14 The Minister of Education in his response to the recommendations of the Ministerial Advisory Group stated that he welcomed this recommendation 'in principle' and as a 'first step' had 'asked the Chief Inspector to carry out a survey of current practice, with a particular focus on what additional support and development teachers need.'⁴⁴
- 4.15 The NIHRC recommends that the Committee seek further information from the DE on the measures it has introduced to implement Recommendation 10 of the Ministerial Advisory Group. It further recommends that the Committee considers the outcome of the survey to be undertaken by the Chief Inspector.

NIPSA

Response to Education Committee Inquiry into Shared and Integrated Education

October 2014

1. NIPSA is the largest locally based public sector trade union and also the biggest union representing non-teaching and academic support staff with well in excess of 8000 members in the Education Sector. NIPSA represents the full range of workers in education across administrative and managerial grades and professional support staff as well as every category of school based staff.
2. NIPSA welcomes the opportunity to provide some thoughts in respect of this Inquiry and would welcome participation in the broader debate about the future provision of education for children and young people. The Union apologises for the slight delay in submitting this response and hope that this submission can be considered by the Committee along with the others.
3. It is not totally clear whether this Inquiry into Shared and Integrated Education is a follow on from the Ministerial Advisory Group which considered the issue last Autumn, or whether it is meant to compliment that piece of work, or indeed whether it is totally separate. It would of course be somewhat ironic if it was the later.
4. Consideration of this topic has to be seen in the context of the reality of how we live our lives beyond the school gates. In a society where many of us live separately, have different medical practitioners, worship at different churches (if at all) socialise separately, watch, play and support different sports and teams, remember the same historical events differently and have different moral compasses when considering those events it is not difficult to understand that the subject of education is a complex one. There is clearly a wider community integration issue which goes far beyond education. We should therefore tackle the issue in the context of it being only one, albeit critical, piece of a much bigger jigsaw.
5. If we are serious as a society in wanting to break down barriers, tackle divisions and prejudices and develop a new shared future for all citizens it would seem sensible to suggest that the way to advance that vision is to take the matter out of the stuffy rooms of Stormont and engage directly with the community. Ten or twenty responses on a topic as important as this is insufficient to form a definitive view.
6. During the Patton Review of Policing a number of years ago the debate was brought into the heart of the community. There were also written submissions to compliment the community consultation. It would send a powerful message to the general public if the Education Committee, in partnership (or in collaboration/with the Minister and the Department) was to initiate a consultation programme across the whole community.
7. This generation has failed children and young people. Perhaps it is time that the next generation should be given a more significant say in what shape the future provision of education should take.
8. A project could be initiated, whereby all 1200 schools in the education sector are asked to participate, though internal debates or joint projects/submissions with nearby schools from a different sector. It would be an exciting and invigorating exercise to view young people themselves actively engaged on this issue.
9. It is important to consider the impact of the current Area Planning process which continues unabated at present, where each sectorial interest, in the main, addresses its own issues. Should that process proceed to conclusion the benefits, or otherwise of shared education or

integrated education will be but an academic debate as the education infrastructure will have been determined for another generation.

10. In the FE Sector young people from the age of 16 have come together successfully to continue study or learn new skills. The earth has not stopped spinning for those students, or indeed their families. A model therefore already exists which clearly demonstrates that it is possible to retain a certain identity, which is not necessarily diluted or damaged when exposed to those who are different.
11. There are many examples of schools who have embraced newcomers to these shores into their school community with significant success. Again that success has been achieved without any negative diminution of rights or identities.
12. Phrases, often glibly used such as 'parental choice' have to be considered in the wider context of a long term vision for the whole of society of a shared future. That future can no longer be put on hold until the child and young person reaches the age of 18.
13. There are many legacy issues of our most recent conflict. Fixing this particular legacy issue will require significant injection and long term commitment of additional financial resources. This cannot be achieved by salami slicing existing budget allocations. Addressing divisions in communities and division in our education system can only be achieved through a united Assembly speaking with one voice seeking ring fenced additional resources from the British Government to tackle the issue. The UK government has to take responsibility for the failure over several generations to encourage the development of a society at peace with itself and being comfortable in embracing its differences, without fear of undermining the growth of a community where differences are respected and celebrated. Their actions and inactions over the years have contributed to the difficulties which the community is now trying to deal with . They have a responsibility as a result to make a separate financial contribution to build that shared future.
14. For completeness the NIPSA response dated November 2012 to the Ministerial Advisory Group on the Advancement of Shared Education is attached along with this submission.

**MINISTERIAL ADVISORY GROUP ON THE ADVANCEMENT
OF SHARED EDUCATION IN NORTHERN IRELAND**

Response Form for Written Submissions

**Closing date for the receipt of responses is
5:00pm on Friday 9 November 2012**

Submissions made after this date will not be considered

If you require the form in another format (such as large print, Braille, on audio cassette, easy read or on computer disk) and/or other languages please contact:

Catherine Bell at mag@gub.ac.uk
Tel: (028) 9097 5913
Fax: (028) 9097 5066

Ministerial Advisory Group on Shared Education
School of Education
Queen's University Belfast
69/71 University Street
BELFAST
BT7 1HL

Please note that all written submissions will be made publicly available on the Ministerial Advisory Group website. By submitting a completed form you are giving your permission for the form to be made available in this way.

The Ministerial Advisory Group will conduct face to face interviews with a sample of individuals and organisations selected to represent as wide a range of stakeholder perspectives as possible in November and December. If you would be interested in being considered for interview, please tick the box below.

I would be interested in meeting the Ministerial Advisory Group yes

1. RESPONDENT DETAILS

Name: Paddy Mackel
Organisation (if applicable): Northern Ireland Public Service Alliance
Address: 54 Wellington Park
Belfast BT9 6DP
Telephone Number: 028 9066 1831
Fax Number:
E-mail: Paddy.mackel@nipsa.org.uk

I am responding: As an individual
On behalf of an organisation yes
(Please tick one box)

2. DEFINITIONS

The following definitions have been provided as part of the terms of reference for this review:

Education: includes pre-school education, early years services, primary schools (including nursery schools), post-primary schools, special education provision and youth services.

Shared education: means the organisation and delivery of education so that it:

- meets the needs of, and provides for the education together of learners from all Section 75 categories and socio-economic status;
- involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

Section 75 categories: Section 75 and Schedule 9 to the Northern Ireland Act 1998 places a statutory obligation on public authorities to have due regard to the need to promote equality of opportunity:

- between persons of different religious belief, political opinion, racial group, age, marital status or sexual orientation;
- between men and women generally;
- between persons with a disability and persons without; and
- between persons with dependants and persons without.

3. QUESTIONS

Question 1

Given the definition of shared education outlined above, what are your views on the best way to advance shared education in Northern Ireland?

The Assembly should co-ordinate an open, inclusive and non-judgemental dialogue, initiated at political level but also involving wider civic society in promoting the advantages of shared education, not just from an educational perspective but more importantly from a shared future perspective. To do so will require agreement to promote sharing as a positive experience rather than being imposed on communities by those who “know better.”

Engagement at local community level to listen to concerns or potential obstacles should be commenced to ensure that whatever apprehensions or concerns which may exist (real or perceived) are addressed in a comprehensive and transparent manner.

The move to a shared education environment should not be predicated or justified on grounds of budgetary constraints. Whilst this may seem attractive to politicians it is less likely to obtain community buy-in. Generations of young people, now adults, have been educated in a separate, isolated and often wrongly justified system. The difficult and sensitive process of obtaining society approval for something which hasn't been sought before at political level should not be underestimated. Most people recognise that a normal society does not or should not segregate its children at 3 years of age. However the reality due to political opinion, religious views, security concerns, demographics and a tendency to live as adults within the community of childhood has made it easy to justify perpetuating the status quo of segregation

Society needs to accept that housing, schools and workplaces benefit from diversity, tolerance and embracing difference.

An open Forum, involving the political parties, the trade union movement and the wider community, to bring together those with a similar view would be a good place to start

Question 2

What do you feel are the barriers to advancing shared education in Northern Ireland?

History, laziness, comfort zones, continuing sectarian viewpoints which are not tackled openly, religious preferences and a fear of change all contribute to the view that it's best not to take this issue on. In some ways it is the one major last hurdle to get over before the eventual realisation that it is ok to be different without having to be separated.

Separately if the Assembly is serious about advancing shared education it actually needs to seek additional funding from Westminster to pay for the changes required to make this a reality. Otherwise we will only scratch around at the surface, similar to the proposals contained in the ELBs' Area Plans. With a distinct lack of resources or a lack of commitment to obtain the necessary resources this agenda will not be advanced. Furthermore it may make society suspicious about whether there actually really is a genuine attempt to promote shared education

Question 3

How should the advancement of shared education meet the needs of, and provide for the education together, of learners from all Section 75 categories (outlined above) and all socio-economic backgrounds? Have you any particular experiences or advice to share in relation to any of these groups?

If children and young people were educated together and had equal access to education and educational outcomes then the elitist system which currently exists would not be able to flourish. Whilst the current system continues, which favours those from more affluent backgrounds and consequently discriminates against those young people from either less privileged backgrounds or disadvantaged communities those Section 75 categories will continue to be irrelevant as far as education is concerned. It is no accident that the proponents of maintaining some form of academic selection at such a young age are quite often from a very similar economic background. They also have the means or access to the means to move their children or their home to accommodate those preferences. The current system, non-shared as well as the voluntary grammar system perpetuates division not just along community background lines, but also along class lines.

Question 4

How do you think the advancement of shared education might address issues such as ethos and identity? Please comment specifically on how such issues can best address the right of learners to participation, safety and welfare, and dignity and respect in educational settings.

Sometimes this community appears to think that nowhere else in the world do people exist beside or near each other who do not share the same religious beliefs (or none) or the same politics. There are many examples in other European countries where a shared (or inclusive) education system caters perfectly well for diverse ethos and identities. If the wider community can accept that issues such as safety, identity and culture are not under threat by moving to shared education then they are more likely to embrace the concept. What is needed are “champions” for the cause who can act as advocates for the vision, without being seen as part of a wider conspiracy to force people down a road which they haven’t yet bought into

The Irish medium secondary school Coláiste Feirste provides a non-selective educational experience but consistently demonstrates very good academic results by children and young people, many of whom (but not all) live in areas of multiple deprivation and lower socio economic income ratio than many other similar performing schools. The children often also come from a bi-lingual family background or have parents who have little or limited Irish language, which adds an additional strain or layer of complexity when trying to develop a holistic family contribution to the education of those young people. However these facts do not negatively impact on their educational experiences or outcomes. Whilst the issue of shared education is clearly a different challenge to that facing Irish medium education, the point is that hurdles can be faced and overcome and children can still manage to thrive, both personally and educationally.

Question 5

What are the implications of advancing shared education for the curriculum and the types of knowledge and skills that are taught in educational settings? Please comment specifically on how the right of learners to develop a broad range of essential life skills should be met.

There is no doubt that the curriculum would need to be developed to take account of a shared educational system, which would by necessity also take into account mixed abilities in terms of academic or more vocational interests/talents of the young people. The balance also needs to be achieved between what employability skills are required, but also, equally importantly, what life skills and interest topics are also covered to ensure that young people obtain a more rounded and "adult ready" experience

Question 6

How do you think shared education can be advanced in ways that ensure equality of opportunity and access to education for all learners?

This is a much wider question that just about shared education. This directly relates to political decisions which are taken which perpetuate class division in education, access to support mechanisms and encouragement to move to 3rd level education. So, issues such as reducing EMAs or entitlement to EMAs, oppressive university fees and student loans all play a part in discouraging certain groups of young people from advancing in education, regardless of their ability. The income of a family also contributes to decisions of young people. The changing economic fortunes of certain communities and a historically different perspective by some sections of the community of the requirements of achieving academically also have to be tackled.

In many areas, certain groups of young people perform less well. A recent report into the educational under achievement of working class protestant males in Belfast clearly demonstrated that there is a wider structural problem to be tackled to ensure that young people aren't ignored or left behind, just because of their background. Whilst this may not be a problem exclusive to that particular category of young people it does nonetheless demonstrate that a problem clearly exists and is one that needs to be resolved. Shared education in itself may not address or resolve this issue; it does however have the potential to assist in breaking a cycle of underachievement.

Question 7

Is there any particular research evidence on shared education that you believe should be considered? If so, please provide full references below and, where possible, attach a copy with your submission (preferably in electronic format).

I have no further evidence to share at this time in relation to Question 7

Thank you for your time. Your views are important and will be considered carefully by the Ministerial Advisory Group.

Updates on the work of the Ministerial Advisory Group can be found on the website: <http://www.qub.ac.uk/mag>

END.

Northern Ireland Council for Integrated Education

Northern Ireland Council for Integrated Education Submission

To the Inquiry into Shared and Integrated Education

October 2014

The Northern Ireland Council for Integrated Education welcomes the opportunity to contribute to the inquiry into shared and integrated education.

At the outset we remind the committee of the unequivocal declaration given to integrated education in the Education Reform Order (NI) 1989 and the Good Friday Agreement 1998, both of which require that it is for the government to 'encourage and facilitate the development of integrated education'. It is important also to note that the Good Friday Agreement was supported by over 75% of the population in its entirety and although many difficult and controversial elements involving change were contained within, and despite later attempts by dissident voices to 'cherry-pick' at the agreement, it remains intact today, a basis on which to build a more equal, more peaceful and more forward looking Northern Ireland.

The statutory duty of government was also recently affirmed by Lord Justice Treacy in May 2014 in a judicial review initiated by Drumragh Integrated College. Referring to Article 64 of the ERO(NI) 1989 he made it clear that integrated education 'is a stand alone concept, that is to say the education together at school of protestant and roman catholic pupils... as opposed to integration within school of any other distinct sets of pupils... integrated education must be the service of imparting knowledge to young people from all backgrounds as equals'. And he continued: 'a school which has a predominantly catholic or predominantly protestant ethos... cannot be said to be delivering integrated education... because as part of its constitution as an institution it is fundamentally oriented to one religious cannon over another... The integrated education referred to in the article is education that is integrated throughout and not education that is delivered by a partisan board... The Department needs to be alive to the A64 duty at all levels.'

It is generally acknowledged that our present segregated system of education is not sustainable. It does not promote social cohesion, it reinforces the notion of the 'other' and separation, it increases social segregation and it fails a significant number of children. It is not preparing our young people for a rapidly changing and uncertain future. The duplication

and triplicating of resources is expensive; in this era of austerity we cannot justify the use of constrained resources to prioritise the maintenance of vested interests over the educational needs of our young people. The status quo is not tenable. This inquiry provides an opportunity to advance solutions which will support the reform of this system.

NICIE identifies below solutions and innovative approaches which would contribute to such a reform and which would enable Northern Ireland to move beyond a segregated education system to a cohesive system of education which will reflect and shape our changing society.

Recommendations for change

- We call on DE to actively implement Article 64 to encourage and facilitate integrated education and to show public commitment to doing so by including representation for integrated education on the proposed single board.
- We call on DE to guarantee equality of planning for integrated education. There is no central mechanism for either testing parental demand for integrated education or for planning for it. This failure in planning discriminates against parents seeking an integrated school since it is they who must prove sufficient demand before a school may be established.
- The duties of the new single board should clarify both its obligation to encourage and facilitate integrated education and its responsibility to plan for such education.
- Through area based planning and meaningful consultation with parents, DE must ensure there is equality of choice in every area, including the choice of integrated schooling.
- We call for the decoupling of pre-school provision from sectoral management and an end to the segregation of children in their formative years.
- The role of special schools in providing an inclusive and fully integrated education should be recognised.
- NICIE calls on the committee to endorse its initiative Positive Partnerships for Integration, an initiative which will allow all schools to recognise the diversity which exists in each classroom.
- NICIE calls on courageous decisive action to follow the recommendations in the International Review Panel on Teacher Education in Northern Ireland among which is the recommendation to establish one inclusive centre of excellence to train our young teachers to help build a united and prosperous community.
- NICIE calls for a clear and unambiguous definition of shared education. The model of integrated education should be explicitly referred to in any reference to and definition of shared education, consistent with DE policy which views shared education as a journey to an integrated system of education. All funding and resourcing of shared education should be equally open to integrated education and its schools.
- NICIE calls for the establishment of a Patten style inquiry into education in Northern Ireland.

Support for integrated education

The duty to encourage and facilitate integrated education was written into the Education Order 1989 and was copper-fastened in the Good Friday Agreement in recognition of the positive role this model of education could play in inoculating against sectarianism, supporting peace and building a cohesive society.

Over thirty years, forty integrated schools were founded by groups of pioneering parents who wished that their children be educated together irrespective of faith, background, ethnicity, or ability level. Another twenty two schools transformed to integrated status. The founders of integrated education believed that the divisions which had ignited the ‘troubles’ could only be removed by giving young people from different backgrounds and cultures opportunities

to learn together on a daily basis, in a safe environment, where difference is recognised, understood and valued.

In integrated schools each child is nurtured in the values of their own ethnic, religious and cultural background in such a way that their own faith is not diminished and their understanding of other beliefs is enhanced. In a planned way children are encouraged to take pride in and celebrate their own cultural and religious identities and to learn about and respect the diverse identities of their classmates. Staff facilitate programmes and learning experiences that give young people opportunities to confront contentious issues; events and dates that are important for all members of the school community are explored and respected. Each school provides cultural experiences according to the diversity of the school community. The planned integrated experience ensures that every child is equipped to live and work in an increasingly diverse world.

In 2014, almost 22,000 young people attend sixty two integrated nursery, primary and post-primary schools and colleges, while a further 700 children who apply are turned away annually because of insufficient places.

The continuing highly segregated nature of housing and education is well documented and its symbolic continuance, a sign of lack of progress towards a more confident and outward-looking society, commented on. Over ninety per cent of our children continue to be educated at single identity schools, often returning to equally divided residential areas. The gap in achievement levels involving our students has increased while evidence mounts of the correlation between social deprivation and underachievement. (Four in ten of our children are leaving school without the minimum five GCSE passes at grade A–C, a key employability qualification.) Factors of gender and religion also contribute to disparate outcomes among pupils. The selection issue remains unresolved and in that vacuum has emerged a ‘catholic’ and a ‘protestant’ selection test. Racist incidents against our newcomer community are an almost daily occurrence. All this is set against a backdrop of political stalemate and economic austerity.

The case and need for integrated education remains.

NICIE argues that active implementation of Article 64 would disseminate more widely awareness of and demand for integrated education. This implementation should find expression at the operational level as identified in the recent judicial review where the weakness of area based planning was highlighted as a potential blocker to the expansion of integrated education. Inclusion of representation for integrated education on this new board is central to demonstrating strategic commitment to Article 64.

Planning for integrated provision

The greatest barrier to the expansion of integrated education lies in the discriminatory and unequal approach to planning. CCMS has a statutory duty to plan for the provision of catholic schools. The ELBs, under the 1986 Education Order, have a duty to plan for sufficient schools of different character in their areas. They choose to interpret this as planning for controlled schools and do not accept that they have a role in planning for integrated education. Parents seeking a catholic or controlled school will have a choice from a number of such schools in any area. Parents seeking an integrated school are expected to plan this provision themselves and to provide evidence of need. NICIE has an important function in supporting such parents but has no statutory planning remit. Furthermore, the funding mechanism which existed in the past to support the development of integrated schools has been discontinued.

The process of area based planning has exacerbated the situation, with ELBs and CCMS planning for their own sectors. No consideration is given to whether or not an integrated choice should be considered and parents are not consulted on such a possibility. This is despite the evidence of all polls which show strong parental preference for integrated education. According to polls, support for integrated education remains consistently high.

Seventy seven per cent of parents in the most recent Millard and Brown survey indicated they would support a request for their child's school to become integrated.

A new single ELB is now being legislated for. It is critical that the new education bill clarifies the responsibility of this board in relation to how at an operational level Article 64 is implemented and that a clear responsibility is imposed on the single board to plan for integrated education.

Pre-school provision

Prof Paul Connolly, in his seminal research evidence, confirms how children from the age of three can demonstrate awareness of 'communal symbols' and prejudicial attitudes. DE policy insists that pre-school provision is non-sectoral but this is not reflected in reality. Nursery units are linked to single identity primary school and so children are channeled into our divided system from this early age. The time has come to change this. DE can do so simply by ensuring that funding for pre-school provision goes only to those settings which are welcoming to all and clearly non denominational (and can show evidence of being such). Such an easily attained and non controversial step would play a significant role in the desegregation of our educational system.

Special schools

The role of special schools in providing an inclusive and fully integrated education is rarely recognised. Special schools are open to children from all backgrounds irrespective of religious affiliation, socio-economic status, ethnicity, etc. and are undoubtedly examples of integrated education in practice. It can be argued that the failure to recognise the integrated nature of special schools further marginalises these schools. NICIE argues that special schools should be allowed to be officially recognised as integrated and we call for the legal barrier preventing this to be rescinded. In doing so we endorse the stance taken by Tor Bank Special school in its submission to this inquiry.

Moving beyond segregation to a cohesive system of education:

Positive Partnerships for Integration

NICIE is fully appreciative of the quality education offered in all types of schools. We are also sensitive to the historic reasons for our divided educational system and to the emotional connection between schools and the communities they serve. NICIE is committed to meaningful parental choice.

We note that real choice for many parents is often constrained by such factors as finance or geographical location, and that parents choose a school for a variety of reasons including reputation, family ties or tradition. We acknowledge the principle of parental choice and, in so doing, acknowledge the right of parents to seek faith-based provision. This range of choice should be accommodated in a cohesive system of education, rather than being used as a prop to maintain a segregated system. Such a cohesive system would include single identity and faith schools, and schools integrated both by legal status and by being recognised as having an integrated ethos. All schools would be committed to inclusive and shared education, with children in single identity schools guaranteed sustained and meaningful shared learning.

Moreover, we argue that our traditional sectors do not reflect our changing society. We argue that despite the badges of school type, every school includes a diversity of children and young people: children from mixed marriages; children from different faiths and ethnicities; children from secular backgrounds as well as those from the main traditions; children of different abilities and with different talents. We contend that we do a disservice to all children if we assume they are the same because of the type of school attended. We argue that children learn best when they feel fully accepted.

For that reason NICIE calls on the committee to endorse our initiative, *Positive Partnerships for Integration*, an initiative which will allow all schools to accept difference, to challenge division and to celebrate the diversity which exists in each classroom. This school-driven process will allow schools, through partnerships, to move from a dominant or partisan ethos to one of equality of respect for all, and will facilitate change in the lived experience of the children without necessitating a change in managing authority. This process has been developed after many months of careful consultation with stakeholders. PPInt hopes to deliver benefits to all schools involved by enabling an audit of current provision for diversity and inclusion and identify opportunities for future development. NICIE calls on this inquiry to recommend that DE supports this initiative.

NICIE emphasises the importance of preparation of teachers to support such diverse and inclusive learning environments and calls for the implementation of the recommendations of the panel on initial teacher education.

Shared education

NICIE recognises the positive involvement of many schools in the various shared education initiatives and the benefits that accrue from this. All integrated colleges play a positive role in their local area learning communities. Three integrated colleges submitted proposals for shared campuses and were disappointed when these bids were not successful. Other colleges have taken a lead in shared education partnerships. NICIE, funded by IFI, trained more than 600 teachers to maximise outcomes in shared classrooms through our *Shared Classrooms: Deepening Learning* project.

NICIE supports the concept of shared education where it is based on the imperative of building community relations through connecting children and young people and, through them, families and communities.

Integrated schools from their formation have involved the coming together of parents, carers and local communities and they continue to offer strong effective channels for their participation in the running of the schools. The sixty two integrated schools across Northern Ireland offer a powerful model of daily sharing in practice. The model of integrated education therefore should be explicitly referred to in any reference to shared education, consistent with DE policy which views shared education as a journey to an integrated system of education. Such a move would ensure a fairer allocation of funding and resourcing.

Integrated education by its very title implies sharing. However, we are concerned that the lack of clarity surrounding the concept 'shared education' allows for partisan use of the term and potentially undermines the good intention of its origin.

We are concerned that this developing concept involves an acceptance of a religiously divided system which 'tries to make the walls more porous' (PMR 1 2012). Such an approach to diversity and pluralism is at odds with European thinking and social science research on how to progress intercultural dialogue.

NICIE's concern is that shared education is used as an alternative to rather than a tool for change. A clarity of definition is urgently required, not least because of the £70 million funding which is going to be made available to shared education projects over the next five years.

A recent survey published in the Belfast Telegraph found a clear understanding and support for integrated education with shared education understood as a completely different concept. DE in a recent submission to the education committee was very clear that integrated education was at the upper end of the continuum of sharing. This should be made explicit in the definitive definition of shared education.

This definition of shared education should focus on its role as a tool for reconciliation. A poorly defined and poorly understood concept may simply provide a fig leaf of respectability

to our segregated system. Properly defined and with bench marks for assuring high quality outcomes, shared education will permit single identity/faith schools to play their part in building reconciliation and will support the creation of a cohesive system of education.

Conclusion

The Peace Monitoring report of 2014 (P137) referred to the current 'backsliding', 'where peace often fails to bring the prosperity that might give it lasting value to all sides... where integration is postponed indefinitely... and when constant work and constant compromise is required'. To wait until more wider societal change occurs before tackling the issue of desegregating our system of education is to deny yet another generation of the proven outcomes of a more cohesive community. It required courage and commitment to deliver change in reform of policing and the prison service as laid down in the Good Friday agreement. That same courage and commitment is now demanded to deliver on other aspects of that same agreement, not least on integrated education. For this reason NICIE argues that our educational system should not be ring fenced from change but should be the subject of an independent review to guide reform.

Integrated education is premised on the belief that education is capable of transforming society, capable of shaping and leading rather than simply reflecting and maintaining the legacy of division; this is a view widely shared throughout the globe. In its opening paragraphs the most recent Peace Monitoring Report (2014) states: 'The peace process in Northern Ireland has lost the power to inspire... without a vision of shared society to sustain it.'

To many international observers a major key towards effecting change is the desegregation of our schools. In September this year Nancy Soderberg, former senior aide to President Clinton, commented: 'good leaders in Northern Ireland would... build the best schools which are no longer segregated', while President Obama on his last visit to Belfast commented: 'issues like segregated schools and housing... symbols of history that are a source of pride for some and pain for others... these are not tangential to peace, they are essential to it... if catholics and protestants have their schools... if we can't see ourselves in one another, if fear and resentment are allowed to harden, that encourages division, it discourages cooperation.'

The NICIE vision sees education leading society into a new era rather than simply reflecting an unchanging legacy. Our model of integrated schools is much admired abroad and has been instrumental in the creation of new systems of schooling in other post-conflict and ethnically divided societies such as Bosnia, Macedonia, and Turkey. There is a significant body of research highlighting the positive impacts of integrated education on those who come through these schools.

We look towards other systems of high standard, all embracing education such as that of Finland and we welcome the progress of organisations such as Education Together as it establishes an alternative system of schooling in the Republic of Ireland responding to the demands of a more diverse and plural society.

NICIE welcomes this inquiry into our approaches to integration and sharing and applauds the committee for undertaking this important piece of work.

Northern Ireland Council for Integrated Education 2

SHARED AND INTEGRATED EDUCATION INQUIRY

NORTHERN IRELAND COUNCIL FOR INTEGRATED EDUCATION

Prior to the presentation by NICIE to the education committee on November 19, we wish to submit the following additional evidence:

- response to issues raised in submissions of CCMS and NICCE;
- moving beyond segregation to an integrated or unified system of education.

Definitions of integrated education

Integrated education is a model of education developed by parents in response to the divisive system of education that existed in the 1970s. At a time of serious conflict, these parents wished to see their children educated together. They believed that, by this simple process, hostility and fear would be reduced, mutual respect and understanding would be increased and the seeds of a more peaceful society would be sown. They sought to model within the school walls the type of society they wished to see: one characterised by respect for difference, by celebration of diversity, by democratic engagement with division. To this end, it was important to ensure a balance of both traditions at all levels of school life, from governors, through to staff and students. It was important to ensure that the culture of both major traditions and others were celebrated openly. It was important that the individual child felt accepted and cherished for who she was, and was not labelled with a single unchanging identity. Integrated education is method of education which is inclusive, it is sharing as the norm on a daily basis.

Shared education is a concept which has developed as a means of connecting children across the divide. It has a number of different definitions, ranging from educational through economic to cross community building. It is critical that an agreed definition, based on the promotion of good relations is settled upon.

Parental choice

NICIE fully accepts the principle of parental choice.

We argue that choice of parents for a particular type of school in Northern Ireland is limited by our historical and traditional differences and divisions; our parallel system of education is indeed a 'regrettable remnant of historic ethno-political divisions in our society'. Choice is often determined by the geography and the demographic mix in an area. Managing authorities work on the presumption that parents choose schools on the basis of their religious background and plan accordingly. The evidence from integrated education suggests otherwise. A recent public opinion survey by NICIE in the BELB area found that faith-based ethos was important for only 27% of primary school parents.

We also note that, where schools are oversubscribed, parental choice is denied.

Segregation or an integrated system?

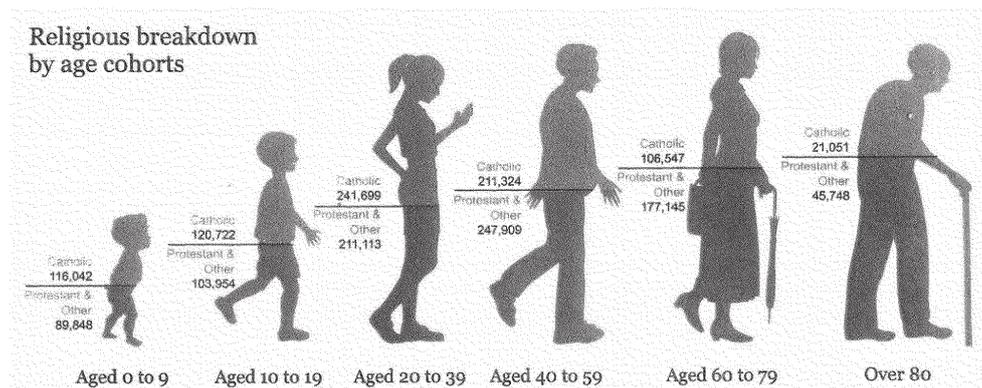

We accept that 'diversity of provision in education is the hallmark of, not an obstacle to a normal, diverse, pluralist society'. However, Northern Ireland is not yet a normal, diverse and pluralist society. The submission from CCMS provides compelling evidence of continuing division. NICIE argues that our educational system has a key role to play in shaping such a diverse and pluralist society, moving us beyond a 'shared out' society to one which is shared. We argue that no one

sector can be a barrier to change. We argue that an independent analysis should be held into the impact our segregated system has on perpetuating divisions and the concept of the ‘other’. For this reason we have called for a Patten-style inquiry into education.

We chose the word ‘segregated’ to describe our system, based on the main definition of the Oxford English dictionary: *the action or state of setting someone or something apart from others*. Where 92% of children are educated separately on the basis of perceived religious background, such a use of the word is measured. We further note that the wider world, including politicians and academics, characterise our education system as segregated, as indeed do the general public. That is why leading international visitors choose to visit integrated schools rather than those they see as segregated.

In no way does NICIE call for the erosion of fundamental rights, but we do draw attention to the dangers of maintaining a system based on sectors.

We include below a diagram from the most recent peace monitoring report which clearly illustrates the demographic drift: a protestant majority is evident in the population aged forty and over. Under this age the majority of the population is catholic with the trend more pronounced at younger ages.

If we maintain the status quo of our system of education then we can predict a shift from the present share out of schools where there is already a majority of catholic schools to a situation where that majority becomes more pronounced.

Such a situation is not a recipe for a peaceful and cohesive future and must be addressed.

NICIE respects the steps taken by the catholic church in its commitment to social justice through its opposition to social selection; we call on it to show the same moral leadership in moving education towards a system which is genuinely diverse.

A blueprint for change

NICIE believes we can move beyond segregation without changing the management type of the school or its ownership, through moving from the 'dominant' ethos, as described by Judge Treacy in the recent judicial review, to the development of an ethos of equality for all, which is the key characteristic of an integrated school.

NICIE is offering support for schools who wish to move from a dominant ethos to one of equality through our initiative *Positive Partnerships for Integration*. Such an ethos recognises the diversity which exists in every classroom today and does not cloak individual and multiple identities under historical labels. Each individual child is entitled to be recognised as an individual first and foremost, not as an inherited identity, be that of religion or nationality.

It is for this reason that NICIE supports the recommendation of the Bain report: 'We advocate, therefore, not a single approach to integration, but a more pervasive and inclusive strategy, focused on the dynamic process of integrating education across the school system.' In such an integrated system of education, there would continue to be single identity schools, including catholic faith-based schools. These schools would be obliged to engage with shared education to

ensure their children and young people had opportunities to learn together. There would be shared campuses where the emphasis would be on sustained, daily sharing of learning. There would be schools integrated in law, and schools which might be of different management types but which would be integrated in ethos, as defined by Judge Treacy. Such an integrated system of education would remove our schools from their historical positions as serving only one community and allow for a system of education where one side does not dominate and where pluralism becomes a reality.

Levers for change

NICIE suggests that there are a number of structural changes which, if addressed, would facilitate the reform of our educational system.

Governance

We have a complicated and varied system of school governance. A common structure of governance for all schools would support movement towards an integrated and unified system of education.

Ownership

For historical reasons we have an equally complex system of ownership of schools. While recognising the historic financial contribution to the catholic school sector, all publicly funded schools should be owned by the state. NICIE recognises that significant negotiation would be needed to advance this; an independent commission would be best placed to advance it.

Planning

There is no provision for the planning of integrated schools. This is discriminatory and unequal and must be addressed.

Teacher education

We do not prepare our teachers to teach in either integrated schools or in shared classrooms. The recent independent enquiry into initial teacher education argued that the status quo in teacher education is not implemented and offered a range of options for reform, all of which protected specific catholic teacher training within a pluralist model. We urge the necessary changes in teacher training to provide teachers with the skills and attributes to educate the diversity of our classrooms.

Human rights

Article 29 of the Convention on the Rights of the Child states: 'the education of the child shall be directed to ... the preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origins.'

NICIE argues that our schools must create the conditions that allow this to happen; under CRED policy they are obliged to do so. We insist that this happens most effectively in the classroom where there is an acknowledged diversity and the openness which allows difference to be acknowledged and division challenged. Research over thirty years shows that children in integrated schools have many cross community friendships, that these friendships sustain into adulthood, and that, as young people, those who have been to integrated schools are more positive about the future and about good community relations.

Shared education

NICIE welcomes shared education where it has the focus of deepening learning between, about and with others, and we have led a successful training programme for teachers to support this. Our fear is that shared education becomes a means of preserving the status quo rather than a way to move beyond it. The minister for education clearly put the needs of areas and individuals before sectors and institutions when he introduced area based planning. The need of the shared campus or shared partnership should be based on the needs of the young people, not on the protection of particular forms of management.

The statutory duty to encourage and facilitate integrated education

In their submissions, both CCMS and NICCE call on the education committee to recommend an end to the long-standing statutory duty on the department of education to encourage and facilitate the development of formally integrated education. They argue: ‘this duty is not only unjust, it also undermines the fundamental principles of equality, respect for difference and for the rights of others upon which a truly diverse, peaceful and tolerant society is based.’

NICIE expresses its dismay at this attack on integrated education. We draw attention to the underwriting of article 64 in the Good Friday Agreement. Are CCMS and NICCE also calling for a rewriting of this agreement? We note that an obligation to encourage and facilitate integrated education had to be written into law because of implacable opposition to this type of schooling from the catholic church as well as from politicians. The position of most politicians has changed in the last thirty years. We note that the reason for a statutory obligation to support integrated education is still valid — that is, that the segregated system still exists. We repeat our concern, heightened by this latest demand from CCMS and NICCE, that the concept of shared education is in danger of becoming a partisan means of protecting the status quo.

The need for article 64

NICIE reflects on the irony of the demand to remove article 64 when it is clear that there has not been a proactive implementation of this duty. The failure to carry out this duty has severely constrained the growth and expansion of integration. This is most evident in the area of planning. There is no mechanism for planning for integrated schools. CCMS plans provision for catholic schools and ELBs plan provision for controlled schools, but parents seeking an integrated school must achieve this by their own efforts, either by establishing a new school or through a process of transformation, a process which has not been supported by NICCE, resulting in only controlled schools using this process. This is discriminatory and unequal.

NICIE had hoped that area based planning would rectify this inequity. Instead the managing authorities have planned for their own sectors and have not sought the innovative shared solutions the minister asked for. Parents are consulted in relation to change within sectors, not about the type of school they might prefer. Parental choice becomes a hollow concept indeed when the vast majority of integrated schools are already oversubscribed and when there are many areas which have no integrated schools. Add in the scandal of attaching what should be non-sectoral nursery units to single identity schools and the denial of parental choice is complete.

The recent judicial review was sought because of the failure to approve growth in an oversubscribed integrated school. The ruling noted that the 'needs model', which fixes children in the designations of catholic, protestant or integrated, could be seen to hinder integration. NICIE's opposition to this model of planing is well documented. Parents should not be deprived of their choice of an integrated education because it will impact on numbers in other schools, schools which are protected and planned for by their managing authority. We highlight further the danger of pigeon holing children by presumed religion and argue this is no way to plan for an education fit for a 21st century society. This use of the shorthand 'catholic' or 'protestant' underlines the acceptance of division which is embedded in official thinking and which contributes to a culture of division.

The achievements of integrated education

Despite the failure to plan for integrated education, its success is unquestioned. Since 2000, against a background of a significant drop in the number of school goers, student numbers in integrated education increased by 53%. At the same time the numbers attending catholic schools plummeted by 7.7%.

NICCE notes that ‘increasing numbers of pupils from across the community spectrum are opting in to the Catholic sector. In towns like Bangor, Lisburn and Coleraine/Portstewart, pupils are passing the local “integrated” schools and choosing Catholic schools...’ It is significant that NICCE references the four catholic schools which have a mixed intake. Overall, only 0.9% of children in catholic maintained schools are protestant. This is not surprising when in its CCMS submission we are reminded that, despite being welcoming to all, ‘the schools are nevertheless quite clearly and unapologetically Catholic in ethos and daily practice’.

This focus on catholic ethos illustrates Judge Treacy's reference to dominant ethos and partisan boards and encapsulates the critical difference between catholic and integrated schools where an equality of respect is evident for all.

Conclusion

We welcome NICCE's reiteration of CCMS's call for the minister to evaluate the public appetite for ‘Integrated Education’. All public opinion surveys show significant and consistent support for integrated education. NICIE wishes to see this support tested at local level when educational change is proposed. We ask for parents to be given a voice in shaping the type of school they wish to see. We ask for parents to be consulted on the full range of choice instead of the presumption in favour of preserving sectors.

We further recognise that our call to move beyond a segregated system of education has implications for integration also. NICIE has no desire to create an integrated sector — our aim is to ensure children and young people can learn together on a daily basis; our aim is to move education beyond its alignment with the divisions of the past. All schools can and should play their part in this process. Both main sectors should encourage their schools to engage with *Positive Partnerships* to enable this to happen.

If such change from within is not possible then an independent commission should be tasked with desegregating our system.

NICIE contends that our education system is part of the problem of our divided society; it allows for the perpetuation of the catholic/protestant divide and maintains the notion of ‘other’. NICCE argues that there is no connection between our education system and our divided society. An independent commission could test the veracity of both views and make recommendations, binding on all publicly-funded education for the future.

We note the NICCE sociological query: ‘Have any pupils or parents of pupils from integrated schools been involved in interface rioting or other forms of sectarian civil disturbance over recent years?’ This would be interesting to pursue, set in the context of the violence of the ‘troubles’ and the educational backgrounds of those involved. What we do know is that controversial issues, including the issue of rioting, are addressed openly in integrated schools, with an exchange of views that allows for challenge, reflection and learning.

Finally, on the issue of economics, it has been estimated that £80 million a year would be saved if we did not have duplication and triplication of schools, but even that figure is an underestimation, since the longer term reduction in policing costs as the impact of an integrated system of education supported a more cohesive society has not been factored into the calculation.

HAVE YOUR SAY! #EducateUsTogether

**Report from Integrated Schools Youth Parliament
Stormont Hotel
3rd December 2014**

On Wednesday 3rd December 2014, over 90 students from 30 integrated schools came together in the Stormont Hotel, to discuss integrated and shared education in the light of the Education Committee inquiry. Young people, ranging from years 6,7,10 and post 16 mixed in groups to explore the various elements in the consultation. This was a dynamic event that enabled the young people to think critically about integrated education and discuss and debate the key issues. Through discussion and drama they explored the various themes of the inquiry and presented them as drama tableaux. They also captured their thoughts and discussions on flip charts. Below is a report, drawing on these workshops, of what young people in integrated schools think about integrated and shared education,

The following comments were gathered in response to several questions posed to the young people.

- 1) What do you think are the main differences between integrated and shared education?
- 2) What things make it difficult to have more integrated education?
- 3) What things would make it easier to have more integrated education?
- 4) What things would make it difficult to have shared education?
- 5) What things would make it easier to have more shared education?
- 6) What three things do you think the government should know so that more young people can have integrated education?

The thoughts that were drawn out from these discussions about integrated education (IE) are:

Characteristics:

- IE is about co-operation and joining young people together. It promotes understanding, equality, respect and strength and helps to break down walls and therefore helps to promote young people's rights. The voice of young people is not only heard in IE but others also listen and it matters what is said.
- IE is non-judgmental, fair, comforting, diverse, innovative, accepting, inclusive, welcoming, educational, valued, offers religious understanding and promotes freedom.
- IE is good because although everyone is different everyone is included and learning happens about the different religions automatically and in a friendly and safe environment. Also there are more opportunities to learn other languages, play other sports and experience different types of music.
- IE celebrates both differences and similarities.
- IE promotes acceptance of other minority cultures both in and out of school. Children and young people have the opportunity and feel comfortable to develop lasting friendships outside of school and embrace cultural traditions eg foods, customs, festivals etc. Also the young people can feel comfortable expressing their culture and learn to accept others for who they are and not by their religion.
- Some young people also felt that IE was confidence building as they felt cared for and welcomed in a non-judgmental environment.

Employment:

- IE is the only way to prepare young people for the reality of employment and working with all kinds of different people. If you do not teach young people and children together how do you expect them to work together as adults.
- Young people will be able to accept and respect other employees of different backgrounds and work alongside them with no issues.

Political:

- Children and young people from the IE sector are more likely to have a positive impact as potential politicians of the future.
- IE is important as the young people involved can help to abolish the negative view of IE schools.

Barriers to IE:

- It should not just rest on the shoulders' of young people to promote integrated education - parents and others should also be involved.
- It was mentioned that adults need to take the lead from children and young people in relation to IE.
- Although some adults may not be aware of the need of IE children and young people are very comfortable with IE and feel that we need to use education as a tool to move Northern Ireland on from the past rather than live in the past.
- Other difficulties mentioned were language barriers, opinions of parents, not enough funding, and location of schools.

Shared Education:

The main points about shared education were:

- One group felt that it was a mistake to think that shared education was a permanent solution
- The sharing of facilities on a single campus only entrenches sectarianism in a form of benign apartheid
- Shared education is still segregated as pupils are still separated and only come together sometimes
- Some pupils described negative experiences of shared education and felt that education should not be competitive.
- It was felt that Shared Education does not embrace other cultures and that sharing lessons a predominately single identity school makes students feel like a visitor. IE welcome a wide range of opinions and viewpoints.
- Proper planning needs to take place to enable shared programmes to be beneficial and effective.
- Some felt that Shared Education was limited, ordinary, unfair, subdivided, secluded, boring, usual, and dreary.

Advice to Government:

The young people wanted to tell the MLAs:

- To listen to their opinions and give them more opportunities to speak to them.
- To recognise the work of Integrated Education and the work that is done in their schools.

NICIE would like to thank Peter McCallion for all his support and advice in the preparation of the event. We would also like to thank Michelle McIlveen, Sandra Overend and Robin Newton for taking time out of their busy schedules to spend some time with the young people and to listen to what they had to say.

Northern Ireland Youth Forum - Champions for Change

Response to Consultation:

The Committee for Education: Inquiry into Shared and Integrated Education

Northern Ireland Youth Forum
October 2014

Introduction

The Northern Ireland Youth Forum (NIYF) welcomes the opportunity to respond to the Committee for Education's inquiry into shared and integrated education.

The NIYF aspires to supporting young people to affect change in their communities and we are strong advocates of young people as emerging leaders. The NIYF prides itself in involving young people in the policy making process and supporting young people to engage directly with decision makers at the very highest levels. Young people make up one third of the population of the North of Ireland and have a vital role to play in effecting social change.

We aim to support young people and to help build their self-confidence and belief in themselves, so that they can raise and discuss issues of importance to them. The NIYF's work is cross community in nature and focuses on social issues. We place equality, diversity, independence and interdependence central to our ethos. We believe that all young people should be listened to and respected and we place understanding and acceptance of cultural and political diversity at the forefront of our work. We work to achieve a situation of empowerment – where young people are proactive in the decision making process.

The NIYF, in partnership with BYTES manages a Big Lottery funded project entitled 'Champions 4 Change' (C4C). The C4C project encapsulates the youth model of the NIYF:

- 1/ Personal Change – The belief in young people to affect personal change.
- 2/ Peer Change – The belief in young people to assist and support their peers

- 3/ Community Change – The belief in young people collectively to affect change at a community level.
- 4/ Societal Change – The belief in young people to bring about change in wider society; at local, national and international levels.

Methodology

The C4C programme seeks to engage young people aged 16-20, who are in Need of Employment, Education or Training. It aims to develop their ability to make personal change and influence peer, community and societal change. As part of this process, C4C staff engaged with sixty-two young people from a diverse range of religious, political, academic and economic backgrounds - to discuss their views on shared/integrated education.

To facilitate discussion the young people were provided with the following information:

Inquiry into Shared / Integrated Education

The Committee for Education is part of the Northern Ireland Assembly. Its job is to think about schools and youth services in Northern Ireland. It is currently reviewing the nature and definition of Shared Education and Integrated Education.

What is the Inquiry about?

The Committee wants to know what you think about the different types of education.

Options

- What is good about Shared Education?
- What is good about Integrated Education?
- What is good about Separated Education?
- Should more Shared Education be encouraged?
- Should more Integrated Education be encouraged?
- Should more Separate Education be encouraged?
- What should be done to promote your option in schools?
- What part should pupils or parents play in supporting this option

Essentially, you are being asked to give your view on what type of education system we should have in the future, these are the main options;

Integrated – Young people are taught in the same school irrespective of their religious and indeed, non-religious beliefs.

Shared - Young People come together for some subjects and then return to their own school.

Separated - Young people attend a school that reflects their own faith.

Free Choice – The Department of Education should support the choice of the board of governor's or governing body of each school to decide for themselves what way their school operates.

Some background information

At the heart of this inquiry is whether or not we can and should live together i.e. shared housing, recreational facilities, education etc... However, this does not mean that to achieve one you must agree with the other. Most venues within the city centre would be seen as shared spaces; pubs, shops, restaurants, cinema etc...however these can be maintained and

indeed developed further without people having to be educated together or living next to each other.

Summary of Group discussions

In general the vast majority of young people (59) expressed the view that integrated education should be supported. They were mindful of the dangers that this may pose to some young people in certain areas. In these circumstances they were of the view that shared education could be safely supported.

Whilst being overwhelmingly supportive of Shared/Integrated Education, there was a marginal separation as to how this should be progressed:

32 x believed that the government should encourage shared/integrated education, but they shouldn't legislate for it.

27 x of those who responded indicated that they felt shared/integrated education improves community relations and the government should legislate for it.

NOTE: Although the numbers of young people who had actually attended an integrated school was very small (6) they all agreed it was extremely beneficial to them in establishing links with the other community and understanding their religious counterparts. These six participants came from areas that they described as integrated.

The prevailing view of the other participants was; shared education improves young people's understanding of the other community, however it does not equate to an increase in the maintenance of relationships beyond the school environment.

Many of the respondents felt that sectarianism was more of an issue for older people than them.

They felt that many politicians reinforce sectarian attitudes.

Group Discussions

Participants were invited to give an overview of the type of education they received and to discuss the merits of this. This was an ice breaking activity, to get the young people to think about the issues surrounding education. They focused on the specific issues of shared and integrated education, via a number of preset questions. This is a selection of their views to each question;

Should there be Integrated Education?

"Yes!, It provides you with the opportunity to meet new friends"

"I think so, it helps break down barriers between people who live in different area's"

"Yeah! You're able to get other people's opinions about things"

"Schools should not only be mixed in relation to Catholic's and Protestants, but boys and girls" (This view was widely supported).

"I would support integrated education but others wouldn't"

"I would like it, but there are things about it I would need to think about"

How should Integrated Education be introduced?

"In our school the teachers made sure the class was even" (equal numbers of Catholic and Protestant pupils).

"It needs to start from primary school up"

“Parents should be given the chance to visit integrated schools to see if that’s what they want”

Should there be Shared Education?

“Shared education should be supported especially in rural areas”

“In areas where integrated education wouldn’t work, because of people’s safety, they should be encouraged to share classes, they (pupils) could go into the other school in buses”

“In those schools that have too many people in their area wanting to go to the school, they could do shared education. They might be able to get people from the other side to come and live in their area to go to their school”

What are the benefits of Shared or integrated education?

“It enabled us to meet up at shared spaces” (city centre shopping centres)

“You get the chance to hear what they think of living in their area”

“I went to house parties in their area, it didn’t bother me. Before I went to school with them, I wouldn’t have walked through their area”.

“Integrated education may eventually lead to integrated housing”

Blockages to Integrated/Shared Education

“Our parents have the issues not us, sectarianism starts at home. Go in to school with people from the other side isn’t going to make much difference in what you think if you go home to sectarian attitudes.”

“Politicians reinforce segregation”

“Communities reinforce segregation”

“Some area’s given their local history with the other side may not want to mix”

“In some areas it would be dangerous for you to walk through their area to get to your own house after school”

“Students should be asked to vote on it, in each school and if they want to remain on their own then they should”

“The government should be left out of any decision about it (shared/integrated education) they should take the views of parents, pupils, teachers and those running the school and then do what they want”

“The government should have a say as they fund the school, but they shouldn’t have the final say”

“Some schools are already over subscribed to by people from the local area, how could they be integrated?”

“I was bullied in my School (shared education) my name clearly identified me as a ...”

“Schools should remain segregated”

Other Comments

“It shouldn’t matter where you go to school”

“There should be a mixture of schools, that suit the needs of local communities”

“There should be another Irish language secondary school” (This view was widely supported)

“There should be youth drop-in centres in neutral areas that would support integration in education”

“Teachers need trained to assist integration”

“The quality of education is more important than the type”

Religious Education should be left to the home”

The C4C project welcomes the opportunity to respond to the aforementioned inquiry and to ensure that the views of young people are heard at the highest levels of political governance. During this process, it was inspiring to hear that young people were moving away from sectarian views of each other irrespective of the school that they had attended. It is also noteworthy that despite their own personal views on integrated/shared education they recognised it wasn't for everyone and shouldn't be forced upon them.

NUS-USI

Submission from NUS-USI to the Committee for Education's Inquiry into Shared and Integrated Education

Opening comments

NUS-USI wishes to express gratitude for the opportunity to be able to provide this submission to this Inquiry. We believe that the subject of addressing division in the education system in Northern Ireland is a vitally important issue. NUS-USI does not wish to be considered to provide oral evidence to the Committee on this Inquiry and our submission covers our key thoughts on this matter.

Integrated Education

NUS-USI believes that children in Northern Ireland should ideally be educated together within an Integrated Education system. Why should division in our education system be allowed to exist?

NUS-USI believes that if government is aiming to create Shared Education campuses, why can it not simply instead make these Integrated Education campuses?

While Shared Education might be a step along the road to Integrated Education, as much progress as possible should be made, and Integrated Education should be the key priority.

NUS-USI believes that government must demonstrate the utmost ambition possible around tackling societal division in Northern Ireland.

If societal division is addressed and an integrated approach to the provision of public services is applied, this could address many very significant problems and could help build a shared future.

Delivering a shared future

The cost of segregation in Northern Ireland can potentially have a very significant impact upon public finances. NUS-USI believes that government should work to address the cost of division as a key priority, to help build a shared future.

Government should make delivering more Integrated Education places one of their top priorities and we believe that the government should publicly support Integrated Education ahead of Shared Education.

NUS-USI thinks that Integrated Education could potentially be the most important aspect of building a shared future. Building a shared future could cement peace and stability in Northern Ireland and could have an extremely positive impact on society. We also believe that tackling societal division could also help grow our economy and could help attract investment to Northern Ireland by potentially demonstrating that society here is moving forward together.

Integrated Education could also help in addressing societal division by potentially building the good relations landscape which could help facilitate the removal of peace walls in interface areas. If children are educated together it could change their whole perspective on life, and could help them understand and celebrate diversity at an early stage.

NUS-USI would strongly encourage the Committee to support Integrated Education over Shared Education.

Oakgrove Integrated College

Submission on Shared/ Integrated Education

Prepared by Oakgrove Integrated College Derry-Londonderry for the NI Assembly Committee on Education

October 24th, 2014

This submission is prepared by the school's Vice Principal who is also responsible for Integration within the school and into the wider community, locally, nationally and globally. It is based on interviews and surveys with staff, students, past students and reflective discussions with some of parent representatives of the Board of Governors.

Established in 1992, Oakgrove Integrated College sees its role as being one of facilitating reconciliation by creating a safe but challenging place where people from different backgrounds can work, play and learn together. Central to what we do is a consideration of how we can advance efforts to create a more peaceful society, whilst also meeting the statutory demands of the Department of Education. In balancing many demands, we emphasise our founding duty to promote integration by developing in young minds an ability to think beyond/below/above/ around the barriers created in society.

The Committee must recognise that each sector responding will speak from its own experience. In our case, our reflections are focused on how our contribution can help to advance a change in provision so that there can be greater reconciliation through education across our society. It should be recognised that the integrated schools alone were set up as a model of how to achieve reconciliation, modelling a way of living together in community with those who are different, and celebrating the diversity. While there are flaws in every model, we humbly suggest that when an integrated school returns to its core value of trying to heal and to reconcile, there is a great deal of opportunity to engage young people creatively for diversity which it is hard to replicate in any other setting.

It has been suggested that the voice from the integrated sector is too small to be given equal weight to that of others; we contend that the small voices of other groups have provided crucial guidance at previously important times in our conflict-resolution journey. We hope that the experience we have learned about sharing throughout our twenty-two years in this school will provide insights to share more widely. Small political parties made great contributions, and small religious groups such as the Religious Society of Friends created important opportunities to foster seeds of peace. Small gestures by the many who suffered in our history pointed others towards a better way; wisdom in the smaller voice should not be ignored.

If each sector is seen simply to speak for itself, then the over-arching aim of the inquiry will be forgotten. In presenting our thoughts, we have focused on those aspects of our journey which we feel point most helpfully a way to bringing young people together for meaningful exchange which will result in a more normal society. The Committee should see through the mists of our clouded multi-layered system and distil what is essential for a better future. Many projects are worthwhile, but those which bring lasting change are the essential ones, and those which should receive support. The US began the end of its segregated society by making changes which people did not want. It may be that our society needs to be told by leaders of courage that a different way must be found, which will foster truer reconciliation.

Our school was designed as a child-centred institution, and we routinely solicit the views of young people, especially around issues of segregation, integration and sharing in society. A small selection of student views are given at the end of this document; should the committee wish to see further evidence of attitudes towards integration, bi-annual Holocaust Day surveys and other school-based data dating back to 2004 will provide this.

Students suggest that The Committee should focus closely on what shared or integrated education is about. It aims to promote reconciliation, and so we must look with honesty to those things which have brought this about. In our experience, the opportunity of students working together through issues which divide or unite provides a model of use in wider society and for later life. Students learn most of these lessons not through formal interactions in the classroom, but in the informal contacts where friendships are developed, issues explored and trust built.

We strongly believe that attitudinal change comes **not** through intellectual but through emotional responses. Opportunity for this type of emotional growth are limited in any experience which does not have young people continually working with those whose experiences are different. In segregated settings, learning such as that envisaged by CRED or LLW provisions is bound to be limited to learning about, rather than from “the other”. We believe that only in fairly constantly mixed settings, where there is a constant encounter with “otherness” will the opportunities exist to grow, learn and develop understanding of what a reconciled, shared community can look like.

It is our hope that The Committee will allow us to present orally, and to hear from student voices. If doing so, we would speak not only of the experience of an integrated school, but also of those projects which have enabled us to reach out to others, most significantly:

- The work of the Spirit of Enniskillen Trust (and how a way must be found to preserve that work);
- The work of a schools UNITY Project to challenge prejudice, based on the model given by Steve Wessler, founder of the Maine Centre for the Prevention of Hate Violence;
- The shared learning about the first world war and its lessons for a modern, divided society made possible by the work of the International School for Peace Studies.
- Theatre of Witness and its ability to reach beyond segments of a divided society and show how friendships can exist which defy the stereotypes often encountered in a more limited, less emotional understanding of history.
- Hands For A Bridge, an after school project linking our students with those in South Africa and Seattle, to explore issues of identity in a community of division, and which has brought our young people to a deeper awareness of themselves and our community.

We have felt that these models have proved to be effective, at low cost, and involving genuine sharing, rather than the sometimes superficial contacts which have sometimes arisen from funding opportunities rather than a genuine desire to build community.

It is in our nature to respond positively to every invitation to engage with others. Alongside many positive experiences, there have been others which did nothing to further trust, and indeed have seemed more about achieving balance for political/ financial or other purposes than about furthering the stated ideals of reconciliation, peace-building or connecting young people.

The Committee could give thought to the reasons why people involved themselves in shared education, and examine closely the possibility that work is driven by less noble motives than those stated; in a divided, underfunded educational system where schools compete, it must be recognised that less than the best practice can take place yet be presented in ways which look attractive. In our society emerging from conflict, few are willing to be critical of any initiative purporting to further peace, yet in making decisions about the future, we must be critical since only genuine reconciliation will prevent those darker and more sinister forces in society taking hold in ripe young minds.

Our experience is that for genuine trust to be built, there should be space to make mistakes, to speak honestly. This is hard to do when funding is involved, and where the value is judged in numbers touched, rather than changes recorded in attitudes towards others. The showcasing of projects which have been heavily funded does not inspire confidence that

change has come about. It simply shows that targets have been met for funding purposes, without critically examining at a grassroots level whether those were the targets which ever ought to have been set.

As individuals on the Committee, members could give thought to what they themselves have found to work. All MLAs must have experienced progress on an individual level with others which they may once have thought impossible. What is it that allows individuals to form working friendships with those with whom they may remain opponents on many areas relating to politics, for example? The answer which we have found is the sustained opportunity to look for common ground, which is found when people are beside each other on a sustained basis and which is not possible in other settings.

Students in our school have trained staff; some staff now report that they think differently because of what they have learned from students. There is a place for young people from different backgrounds to work with politicians, not to learn from them about politics, but for politicians to learn from them about reconciliation, building bridges and not being afraid to learn from their mistakes.

In conclusion, we would ask The Committee to reflect on the question: what is shared about? We suggest it is about building a society which will foster reconciliation between individuals and across communities. If societies are reconciled when individuals have this experience, then there are individual examples to help us as we struggle to understand. Recently, the family of murdered journalist James Foley spoke of how he believed in changing the world, person by person, act of love by act of love. Amid the rubble of Enniskillen, as his daughter's life ebbed from her, Gordon Wilson said that the "bottom line was love", "I bear no ill-will, I bear no grudge". As he left us in our hope of a better future, Senator George Mitchell reminded us two friends from different traditions, buried side by side as a reminder of our brokenness, and where our failure to engage would lead us back, if we chose that route. And in what he said at the funeral of Elizabeth O'Neill, the Minister's words should remind us still: "Sectarianism lives in all of us."

None of those voices who urged us to move our way to peace pointed to their own success, but rather encouraged others to give their best for peace. The church leaders and individuals who so much ground work for peace did not celebrate their success – they facilitated the dialogue. In looking to see how our future can be better, we would urge The Committee to be careful to support and encourage what is genuine, not what makes the soundbite. The voice of children is clear when it is heard - they want to be together, to have opportunities to learn together, to develop understanding of the other, to learn about the past, and to share stories wherein the healing will be found.

We commend our thoughts to The Committee and will be happy to share further information which may help.

We wish you well in this difficult, life-changing and critical task.

John Harkin

October 24th, 2014

A sample of thoughts on integrated education selected from reflections by current/ recent past pupils of Oakgrove Integrated College, Derry-Londonderry

- I can't imagine my schooling years in a non-integrated school. Why? Because it just makes life in this world feel a bit more "right" when you're in an environment that promotes interest in everyone around you. No matter what gender, background, or nationality. I really appreciated this, being a Jehovah's Witness - I felt respected, and that I had a voice within the school. The good attitude that the school promotes really rubs off on its students, as I always felt respected by my peers, especially in a-level years, and many were interested to find out more about me and my faith, which was really encouraging to me. A synonym

of “integration” is “blending”. We generally blend food because different foods together taste nice, or sometimes even nicer than when eaten on their own. I think the blending that integration does for young people makes their attitudes and personalities much more tasteful to the figurative palette of society. I like to think this contributes to communities of happier and more peaceful people. - Jay

- You must become the change you wish to see in the world - Mahatma Ghandi - Jason
- I feel that moving from an all Catholic school to an integrated school completely changed my personality and my own thoughts on the world. . If I hadn't moved to Oakgrove and experienced the integrated education I wouldn't have been able to look at each individual for their own self and their own qualities. I learnt that we shouldn't look at people as Catholics or Protestants or Muslims etc and that we shouldn't judge people based on what religion they are, what they look like how they talk etc. I feel that being in integrated education has helped me a lot with my journey to university and has helped me meet and respect the new people here in Manchester from various different backgrounds etc. - Caitlin
- Being able to share my education with people from all races and religions is something I've always been grateful for. When I watch the news and see the conflict and tragedy happening around the world because of race, religion and culture its an eye opener. Although we have problems with in our school, it is a sanctuary for me and many other students... somewhere where each and every one of us are judged not by our race, religion or culture but the content of our character. - Rachel
- Shared/Integrated education, holds the key to peace through breakdown of bias and grudges that have been passed down from family members. This is achieved through allowing children to make decisons for themselves with an open mind removing a wall between the concept of “us and them”. Learning playing and developing in an integrated environment that prepares children for work life. As segregation in the work place is not allowed, why should it be allowed in schools? - Orla
- I count myself very lucky to have gone to Oakgrove. Not only did I receive a brilliant education but my entire time there has undoubtedly shaped who I am today. I met people and experienced things I know I would never have gotten the opportunity to do, had I not gone to an integrated school. I have also had some experience of shared education as in 6th year I travelled to another school for one of my subjects. Although this was a good experience it was different from my normal classes. I think this was because even though we were brought together for class, there was not much of an opportunity to really mix with the pupils from the other school and it seemed that our differences ran deeper than our notably different uniforms. Integrated education goes far beyond simply bringing people together. It is about giving young people the knowledge and power to better understand themselves and others, and use this to make changes to how they live their lives, by moving beyond their differences and focusing on shared experiences. - Geraldine
- Hands For A Bridge (A project based within Oakgrove Integrated College) helped me so much through my high school years. Being in Hands For A Bridge as well as an Integrated School meant I could put the discussions we had in group meetings into action. Making sure to look after the younger ones, trying not to exclude people, not judging someone on their appearance and never joking to someone about their race or culture. I learned not to do these things because I had the opportunity to talk to fellow students in Hands For A Bridge and find a common thread was at one point or time we felt excluded, isolated and alone because of who we are and what we believe. Hands For A Bridge gave me empowerment. I became much more confident and it helped me believe I could truly make a change in the world. ‘If you cannot do great things, do small things in a great way’, sums up who I've been. I have the confidence and self belief to know you can change the world one person at a time. Being there for the other students, taught me compassion. Knowing when to be quiet, to let someone else speak and let out what's on their mind is a vital lesson in life. I really don't think I'd be the same person I am today if it wasn't for my

integrated school and for Hands For A Bridge, even now, 2 years after leaving school I still feel a sense of belonging to a community, one that I am proud to support. - Bethany

Odling-Smee, A

Education Committee Enquiry on Shared and Integrated Education. October 2014

Personal Submission. Anne Odling-Smee

My professional life has been in education at primary and third level as well as for the glass industry. Social policy underpins this work and because of this the educational system in Northern Ireland has been of particular interest.

Since 1974 I have been involved particularly in the development of schools in which pupils from the main Christian traditions and others could be educated together. Northern Ireland is a relatively small place and the potential for the people to join in a common purpose for the health of the economy and cultural life is severely weakened by the often fatal fissures of political and religious division.

Succeeding generations have inherited and suffered from separation in education, in where they live and in their different views of the world. They have grown up without knowledge of 'the other'. Ignorance breeds suspicion, fear and often antagonism.

Despite this distance growing numbers have come together, shared their working and social lives and formed relationships. So why do the structures stay rigid? Why cannot those who wish to do so be able educate their children together? Why always the religious labels dominating choice?

It was a desperate group of parents who in 1981 decided to tempt fate and open Lagan College. A school for all children of all abilities and social class. The parents were embarking on a personal journey of discovery about their own feelings and those of their fellow travellers, What were the essentials of their faith, their philosophy and their culture.? How would all these factors be melded into a secure environment in which their children could share but not flaunt all that mattered to them.

There was nothing easy about the task either physically or mentally. There was a common purpose and determination with which to counter the problems and some hostility. The community that grew around the school, parents and staff, pupils and wider family circles were and are an example of how a shared Northern Ireland could be if that phrase was a sincere aspiration.

Forty Integrated schools have been started by parents since then. Lagan College has grown from 28 to 1200+pupils and heavily oversubscribed, as are many of the forty. This year, 2014, the Integrated Primary school that grew nearby to Lagan had to turn away 19 pupils who applied as their first preference. Forge IPS not far away had no room for 24 similar applicants. A few years ago a local controlled PS applied to transform to Integrated status but it was discouraged by the two Education and Library Boards and turned down by DENI. That PS could have absorbed the demand.

We have been grateful for the courage of the controlled schools who have transformed and the Transferors who have seen the possibilities therein. A Transforming school has a challenging task as it is not starting from scratch. They do have a building but they have to go the journeys and carry the existing staff and parents while reaching out as they incorporate 'the other'. Often they are judged by their original capacity notwithstanding demographic changes and the need for a transformed integrated school to grow organically as it changes character is little appreciated.

Throughout the years since 1981 Government policy has changed regularly and the development of more Integrated places has been chequered. There was considerable growth during the 1900-2000 period but from then increasing blocks have been inserted, in particular that saying no new school should affect an existing one.

During the period 1970 to the present time my impressions and experiences of the education system has been shaped by various roles. I was a Lecturer in the Social Work at QUB and learnt at first hand the experiences of the students I was privileged to tutor. At one time seven of my tutorial group of twelve had honours degrees but had failed the 11+. Integrated colleges are All Ability .I also served as a Lay Magistrate on the Juvenile Panel. Young people from most of the Belfast schools came before us over the 25 years. The effect of disadvantage was reinforced by the lack of parity of esteem between selective and non- selective schools. Underlying was the sectarianism of ignorance. The disturbances surrounding many of the community rituals and the time of year dictated the affiliations of those before us. And gave too many a criminal record.

For 12 years I was a member of the Belfast Education and Library Board, with the last 4 years as Chair. During that time I got to know many of the schools from all sectors and appreciated the difficulties of running a system segregated 4 ways, by religion and ability and with the concentration of 14 Voluntary grammar schools in the city.

Bringing children together can only be done with great care and sensitivity. Ancestral voices are quickly summoned. Throughout all these years teachers have been very honest that to engage in discussion of sensitive issues whether religious or historically political, requires that they are trained and supported. The submission from the North East Education and Library Board describes well the groundwork needed for Shared Education.

After so many years of turbulence it is surely incumbent upon us to seize the initiatives that have been shown in education, the arts, sports and community action to enhance the potential for development of a functional and progressive society with a common purpose.

The community action that has prospered against all the odds are the schools founded by parents so that their children can learn together and know each other. Across the divides of ability, class, religion and politics they offer a choice for those who wish to share their futures.

To this end it seems imperative that the concept of Community Audit be instated in a robust and non-partisan fashion so that planning for the future of education in any area is decided by the people of that area. In this way, if supported by politicians and stakeholders, there might be a possibility that the aspirations of parents and the different educational interests could converge.

Dear Peter

**RE: MINDFULNESS, WELLBEING AND EDUCATION IN POST-CONFLICT NORTHERN IRELAND:
SUPPORTING MINDFUL SCHOOL COMMUNITIES AS A CONTRIBUTION TO PEACE BUILDING**

**A submission to the Northern Ireland Assembly Committee for Education Inquiry into
Shared/Integrated Education**

On behalf of my colleague, Niamh O'Reilly, and myself I am attaching a submission to your Inquiry into Integrated Education and Shared Education. We'd be grateful if you could bring this to the attention of your Chair, Deputy Chair and membership.

Our submission responds, in particular, to the following terms of reference:

- Identification of key barriers and enablers for Shared Education and Integrated Education;
- Identification and analysis of alternative approaches and models of good practice; and
- Consideration of priorities and actions needed to be taken to improve sharing and integration.

Thank you for your attention,

Dr Peter Doran

PP Niamh O'Reilly

Mindfulness, Wellbeing and Education in
Postconflict Northern Ireland:

**Supporting Mindful School Communities
As A Contribution To Peace Building**

A Submission

Mindfulness is the energy of being aware and awake to the present moment. It is the continuous practice of touching life deeply in every moment of daily life. To be mindful is to be truly alive, present and at one with those around you and with what you are doing.

(Wake Up Schools European Network)

<http://wakeupschools.org/>

Mindfulness training for doctors and teachers: Mental health problems cost the UK economy an estimated £70bn annually. Training new medical and teaching staff in mindfulness techniques would embed a culture of wellbeing in health and education, and reduce a later burden on the NHS by improving the availability of mindfulness-based therapies.

(All Party Parliamentary Group on Wellbeing, September, 2014)

<http://parliamentarywellbeinggroup.org.uk/>

Acknowledgements

We offer our thanks to the Community Foundation Northern Ireland and Kat Healy for the financial support for this research and enabling this submission. We also thank all those who gave of their time for a series of interviews that form an important part of this submission. Clearly, mindfulness in the context of our education system and our journey towards united communities is an idea ripe for further exploration and support.

Interviewees:

- Michael Mc Knight, Principal, Lough View Integrated Primary School
- Anna Johnston, SENCO, Lough View Integrated Primary School
- Monique Harte, Occupational Therapy Lecturer, University of Ulster
- Mary McNulty, Amal Project, Mediation Northern Ireland
- Clíodhna Scott-Wills, Senior Development Officer, Northern Ireland Council for Integrated Education
- Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies
- Phap Lai, Wake Up Schools European Network
- Clare Kelly, Mindful Schools (UK)
- Diarmuid Moran, Holy Child Primary School, Belfast
- Caren McDonald, Mindfulness Educator and Secondary School Teacher, San Francisco
- Dr Siobhan Hugh Jones, Faculty of Medicine and Health, Leeds University
- Valerie York-Zimmerman, President of Mindful Kids Miami
- Patricia McIlhone, Steiner School Holywood

Witnesses who may be available to address the Inquiry:

- Dr Peter Doran, School of Law, Queens University Belfast
- Niamh O'Reilly BCL, LLM, PGCE, Lead Author of this Submission
- Niamh Bruce, The Sanctuary, Dublin
- Professor Katherine Weare, University of Exeter/Contributor, All Party
- Parliamentary Group on Wellbeing & Economics (2014)
- Phap Lai, Wake Up Schools European Network

Key Findings of research undertaken and collated for the Inquiry

1. Mindfulness as a secular practice – as endorsed by the NHS, the Mental Health Foundation, and the National Institute for Clinical Excellence (NICE) - has been defined as “paying attention in a particular way: on purpose, in the present moment, and non-judgmentally” (Kabat-Zinn, 1994, p.4). In addition it is seeing things in new ways and staying in the present. Mindfulness is associated with enhanced capacities for awareness and emotional regulation.
2. Mindfulness practices have already been the subject of a number of pilot projects in Northern Ireland schools. One school-based intervention has been the subject of a research project, which demonstrated a positive impact on teachers and pupils.¹
3. Emerging research demonstrates that mindfulness can be part of schools’ response to a pressing need around the stress and emotional difficulties reported by increasing numbers of children. The practice can therefore contribute to educational performance. This is best realised if mindfulness can be incorporated into a whole school culture.
4. One of the primary benefits of mindfulness in schools is the cultivation of enhanced capacity for attention as a support for qualities of mind and behaviour that can make a significant contribution to ‘Building a United Community’. These qualities of mind include:
 5. Compassion for self and other
 6. Non-judgement
 7. Open-minded curiosity
 8. A capacity for contemplative inquiry
 9. Tolerance and respect for otherness
 10. Self-awareness and a deeper understanding of one’s own limits
 11. Practices of gratitude and establishing a culture of gratefulness
 12. Acceptance alongside resilience and creativity
 13. These qualities of mind can enhance individual and collective capacity for early identification of crises and challenges and encourage early intervention and a preventive approach. Mindfulness based work is associated with interrupting emerging patterns that might prove harmful to mental and physical wellbeing.
 14. Mindfulness practices for students are best cultivated in school environments where teaching staff have already embraced the practice and begun to apply it to their roles in the school

1 See MSc in Applied Psychology (w/ Clinical Specialism) Dissertation Paper – “An evaluation of a mindfulness-based stress reduction programme for children in a whole-class primary school setting.” 2014

and integrated the practice into their own self-care and wellbeing.² Ideally the committed staff would include a Principal or other senior figure. It is advised that the best and most sustainable results for children and young people in our schools will be founded on initial support and training for school staff where staff have expressed an interest. In this way mindfulness can be embedded as a voluntary and bottom-up whole-school practice and contribution to good relations.

15. Mindfulness can re-awaken teaching staff's original animus for entering the profession and help them recover a passion for accompanying their pupils and students and make a difference in their lives.
16. Distinctive approaches to mindfulness should be encouraged for primary and secondary schools. Mindfulness practices differ and needs vary when it comes to supporting younger children and older students e.g. teenagers.
17. Mindfulness practices can complement school-based strategies to promote positive mental health and wellbeing.
18. Mindfulness based practices can complement school approaches to counter bullying and the cultivation of respectful relationships.

Recommendations:

1. As a contribution to peace building and cultivating united communities, the Department of Education to work with education providers (all sectors) on identifying the support infrastructure and training required to introduce mindfulness to schools and identify resources. Specifically, this would involve:
 - a. A further study of international best practice in terms of the support and training resources required to embed mindfulness as an option for teachers and school administrators;
 - b. Steps to engage teacher training colleges on training and practice requirements, including measures to 'train the trainers';
 - c. Resources to establish a 'community of practice' for those engaged in mindfulness training, practice and research in our schools;
2. The Department to take steps to promote and become an advocate for a better understanding of mindfulness as a low cost intervention and its potential in a range of public services (e.g. mental and physical health, wellbeing, education outcomes).
3. Initiate a programme of support and training in mindfulness within the teacher training institutions at Stranmillis and St Mary's College, with an initial focus on extending support to trainee teachers in taking care of their own wellbeing and managing stress. This to be based on further pilot studies in our local education system.
4. Invite Katherine Weare, University of Exeter, to facilitate the extension of her 'Mindfulness in Education' work to Northern Ireland teacher training colleges and schools interested in taking mindfulness into local schools.³
5. Other sources of training and support available to Northern Ireland schools include:

2 Wellbeing of teachers is a concern with 50 per cent of teachers exiting the profession in the UK within the first five years of their employment.

3 Other ongoing research work that would support capacity building in NI is currently being conducted by Mark Williams at Oxford and by Siobhan Hugh Jones at University of Leeds.

- a. The European Wake Up Schools network.⁴ This network offers year round support, including in-school workshops and immersive experience for school staff and is already active in the UK and the Republic of Ireland.
 - b. The Sanctuary Meditation and Mindfulness Centre, Dublin.
6. Adopt the recommendations of the All Party Group on Economics and Wellbeing set out in their report, *Wellbeing in Four Policy Areas* (September, 2014), including mindfulness in schools:
- i. “Well-being must be seen as integral to core policy objectives in health and education, and not separate from them: mental health is inseparable from physical health, and children’s mental health and well-being is inseparable from their capacity to learn and achieve. A more holistic approach is needed.”
 - ii. In both health and education, a key challenge for scaling up mindfulness programmes is building the stock of trained mindfulness teachers whilst maintaining standards. It was suggested that mindfulness should be included in teacher training and in medical students’ training as a matter of course – bearing in mind that mindfulness can benefit doctors and teachers as much as it can patients and pupils.
7. To introduce mindfulness into a school community it will be important to work alongside school principals, administrators, teaching colleges and curriculum advisory bodies. This initiative should, at all times, be voluntary and based on outreach and engagement with a growing number of interested teachers and practitioners within and beyond the education profession.
8. Mindfulness and the accompanying practices can help staff and pupils deepen a sense of community and provide a model of good relations and wellbeing based on harmonious relationships for the wider community.
9. Identify “Beacons of Mindfulness” in local schools for the purposes of collecting evidence and providing local demonstrations of best practice and evident impacts.
10. Information to be made available to teachers on mindfulness and benefits of bringing it into the school. Highlighting benefits for: a. pupils; b. staff; c. parents and wider school community. This could take the form of information evenings and workshops.

Mindfulness, Wellbeing and Education in Post-Conflict Northern Ireland: Supporting Mindful School Communities as a Contribution to Peace Building

1.0 Introduction

There is significant evidence that children and adolescents today are experiencing unprecedented levels of stress (Mendelson et al., 2010⁵ in mindfulness for children and youth articles). Reports and diagnosis of anxiety, depression, ADD, ADHD, to name but a few, among children and young people are increasing (Farrell & Barrett, 2007⁶) and it is believed that the number of cases reported represent a small fraction of those that go unreported. Today’s world is fast, digitally focused, stress filled and disconnected.

4 The Plum Village training may be accredited in the near future and would tap into a significant source of expertise and a significant level of commitment to Northern Ireland.

5 Mendelson, T., Greenberg, M., Dariotis, J., Gould, L., Rhoades, B., & Leaf, P. (2010). Feasibility and preliminary outcomes of a school-based mindfulness intervention for urban youth. *Journal of Abnormal Child Psychology*, 38(7), 985-994.

6 Farrell, L., & Barrett, P. (2007). Prevention of childhood emotional disorders: Reducing the burden of suffering associated with anxiety and depression. *Child and Adolescent Mental Health*, 12(2), 58-65.

The context of a post-conflict society brings additional challenges for our children and young people many of whom suffer the ills of trans-generational trauma and experience the impact of living within a deeply segregated and sectarian communities.

Violence, poverty, discrimination, underachievement and poor mental health are daily experiences for many within communities struggling to emerge from the legacy of the conflict. At the other end of the spectrum, we see “high achievers” emerging from 14 years of a highly segregated (religion, gender and often class based⁷), largely exam/assessment focused educational system. They have had very little exposure to, and thus lack, understanding of the views or experiences of children and young people from other communities. Academic achievement is given priority, with support for their short- or long-term mental health often limited. An education system which genuinely recognizes and nourishes the wellbeing of the whole child is something to strive for. Integral to this, should be the recognition and support for the wellbeing of teachers, educators and parents. Schools must be recognized as places where children, teachers and parents can flourish and grow together.

Positively, the role and importance of Social and Emotional learning has gained increasing acceptance within many schools, especially at primary level. Fostering and promoting mental wellbeing ought to feature prominently at every education level especially when we consider such that during the period 1999 to 2009, 2,258 deaths were registered as suicide in Northern Ireland⁸ In addition bullying and peer pressure continue to feature as major concerns within our schools⁹. It has been highlighted that the elements of health education that relate to mental health and wellbeing within many schools are underdeveloped¹⁰ (p.21).

Against this backdrop, this paper posits that the introduction of mindfulness based practices into schools across Northern Ireland in general – and within the context of integrated and shared campuses in particular - could potentially support teachers, pupils, staff and parents with regard to nourishing their mental health and wellbeing. Through so doing, we suggest that the introduction of mindfulness practices would foster a greater sense of connection to self and others. It would help to nurture a certain ‘quality of mind’ which would be more open to peace, compassion and acceptance of self and others in a sustainable and lasting way.¹¹ We suggest that the successful introduction of mindfulness practices into schools could create a model of a mindful community based on respect, understanding, non-judgment and compassion which could act as a powerful example to the wider community in Northern Ireland of the transformational impact which mindfulness could bring to our relationship to ourselves, others and the wider community.

Our society is one which continues to struggle with our roots in the past. Our aim, while not belittling the pain of the past, should be one of focusing on the beauty and wonder of the present moment with an open and curious mind and heart with regard to the future from a place of healing, self-care and resilience.

It is the role of this paper to highlight the evidence to date supporting the introduction of mindfulness practices into schools and make suggestions regarding how the practices could most effectively be introduced in Northern Ireland. This is an area that is rapidly growing with regards to accessibility, receptivity and research.

2.0 Views and experiences within Northern Ireland and further afield

The focus of this research was to identify and understand the benefits that the introduction of mindfulness into schools could bring to children and young people in Northern Ireland. We considered the benefits as falling within two specific areas; that of enhancing the mental health and wellbeing of children and young people and that of contributing to the peace process in Northern Ireland. We thus considered how mindfulness could affect the present and future experience and context of our children and young people and indeed how it could offer them the opportunity to view the past from a different perspective. In order to facilitate the research and to receive guidance regarding the effective introduction a number of interviews were carried out with people in Northern Ireland who had direct experience of working with children, adolescents and adults in the context of mindfulness in various fields. A further set of interviews were carried out via telephone, email or Skype with experts in the field of mindfulness in England, Scotland, France and the United States. Nearly all interviews were recorded. For those which were not recorded, detailed notes were taken. To ensure clarity, the key points and guidance which were gained from the interviews has been recorded below divided under the headings of 'Mindfulness to support peace building', 'Mindfulness to promote wellbeing/mental health' and 'Practical advice for the effective introduction of mindfulness into schools'.

2.1 Mindfulness (in schools) to support peace building

As referred to above, the education system in Northern Ireland is highly segregated. Schools have attempted to take account of the conflict/post conflict situation in a wider community sense through intervention in the process of education (curriculum reforms and increased contact between 2 communities) and the structure of education (equity issues and formation of integrated schools). The Northern Ireland Curriculum underwent intense revision in 2008 adding new segments on Local and Global Citizenship and Mutual Understanding (NIC 2008d). For younger children the curriculum focuses on approaches to conflict, understanding different people and cultures and being members of a community (2008a). For older children, the curriculum focuses more upon citizenship encapsulating four main areas; diversity and inclusion; human rights and social responsibility; equality and social justice; and democracy and active participation (2008c).

This report recommends that mindfulness would complement and allow greater access to this area of the curriculum. In so doing, it could contribute greatly to children and young people's sense of peace within themselves and with other people. It would also nurture qualities such as positive acceptance, selfawareness and awareness of others, respect and tolerance which are necessary on our path of peace building.

Key points from interviews

- Schools could work to be exemplar models of a community within a community demonstrating how mindfulness can nurture and nourish respect, empathy, compassion, non-judgment, self-confidence and acceptance of oneself and others (for the past and the present). (Phap Lai, Wake Up Schools Network, Plum Village, France).
- Mindful listening and mindful speech must be cultivated within the school environment - between staff, staff and students, parents and the wider school community. This enables people to understand the needs of others and to celebrate and express appreciation for others (Phap Lai, Wake Up Schools Network). In this way, teachers will also enjoy a greater sense of support which can contribute to building resilience. If teachers are in harmony with each other, they will provide a powerful model for their students. Linked into the concept of mindful listening and speech is the role of the 'mediative presence'. This allows for deep listening and can be aided by the practice mindfulness meditation and can be invaluable in the context of conflict resolution. (Mary McNulty, Coordinator for Amal, Mediation, N.I.).

- Elements of mindfulness including kindness practice (thinking about oneself and others with compassion) and gratitude practice (being grateful for what we have) can have a powerful effect on the classroom environment which can be brought into the wider community. (Valerie York-Zimmerman, President of Mindful Kids Miami)
- Mindfulness helps with identifying emotions and regulating emotions. It helps us to respond more skilfully to situations or stimuli that we may find displeasing or distressing (Clare Kelly, Mindful Schools). A possible point of research would be to investigate how people respond to a difficult situation (possibly conflict related) with mindfulness practice and without (Siobhan Hugh Jones).
- Mindfulness aids conflict resolution by helping us to regularly tune in to our emotions and pause before responding. Mindfulness can help to temper emotions and in this way acts as a preventative tool (Michael Mc Knight, Principal, Lough View Integrated Primary School).
- Mindfulness helps children to accept themselves, others and situations. (Anna Johnston, SENCO, Lough View Integrated Primary School).
- Coming into the present helps to nurture a sense of peace and relief for children in Northern Ireland many of whom will be carrying the burdens of the past and struggling with concerns about the future. (Michael Mc Knight, Principal, Lough View Integrated Primary School)
- Mindfulness plays an important role in aiding positive, peaceful relations within a school and helping to engender compassion and prevent bullying. (Monique Harte, Occupational Therapy Lecturer, University of Ulster)
- Mindfulness helps us to bring our attention to and notice our thoughts, opinions, mindsets. By so doing, we can bring awareness to our prejudices and concerns, realizing that that is what they are. They do not have to define us. This is more relevant for older children. (Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies)
- Mindfulness ties in with many social and emotional learning programmes. It helps children to understand, accept and appreciate who they are. (Clíodhna Scott-Wills, Senior Development Officer, Northern Ireland Council for Integrated Education)

2.2 Mindfulness to promote Mental Health

'The evidence that the mind and the nervous system are deeply connected is irrefutable...'¹²

As evidenced above, research suggests that mindfulness practice promotes positive mental health by, for example, reducing anxiety and recurrence of depression. With schools reporting increasing incidences of poor mental health, in addition to increasing number of diagnoses of conditions such as ADD and ADHD, there seems to be an increasingly significant need for support. Such support tends to take the form of interventions and preventative measures.

Mindfulness is a skill which children and young people can learn, with practice. It can be a relief to many teachers and parents to know that children and young people can learn skills that will promote their wellbeing and protect their mental health.

Below are the key points that emerged from the interviews with regard to mindfulness and mental health.

Key points

- Children are very responsive, in a ready place to practice mindfulness. (Diarmuid Moran, Holy Child Primary School, Belfast)

-
- Developing good habits of mind early on in childhood in terms of building self-awareness and being able to recognize and identify emotions and how to deal with them is very important for future mental health. Mindfulness can help with these skills. The benefits of attention building, emotional regulation and executive function which it is reported are gained from mindfulness practice are linked to enjoying positive mental health. There is a gap in provision, at second level in particular, of education programmes that deal with mental health. Mindfulness could help to bridge that gap though more research is required. 75% of all mental health disorders are diagnosed before the age of 15. (Dr Siobhan Hugh-Jones, Associate Professor, School of Psychology, University of Leeds)
 - While mindfulness can have a calming effect on the body and mind, the practice may have quite a different effect, initially, especially with regard to adolescents. While it raises awareness, it may bring to the fore some difficult emotions and experiences. (Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies, Caren McDonald, Mindfulness Educator and Secondary School Teacher, San Francisco)
 - Mindfulness helps children to realize that thoughts create a feeling or response in the body. (Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies)
 - Mindfulness can be beneficial for extreme anxiety. Mindfulness could be used to de-escalate strong emotions/responses (Dr Siobhan Hugh-Jones, Associate Professor, School of Psychology, University of Leeds)
 - Mindfulness can help children in their interactions with others to be more mindful of others' feelings. In this way, it can help with relationship building. Strong peer support is important with regard to positive wellbeing and mental health. (Diarmuid Moran, Holy Child Primary School, Belfast)
 - We are learning that the adolescent brain develops quite differently from the childhood brain (Dan Siegel's, Brainstorm), therefore teenagers who are learning mindfulness techniques need to be monitored closely and taught by an experienced teacher. If some are dealing with trauma or some hidden mental illness then there can be some negative side effects to mindfulness meditation. Additionally, teenagers are dealing with a different level of stressors, socially, sexually, familial, (possibly) experimentation of drugs, which impacts their brain. Thus caution is required in this area. (Caren McDonald, Mindfulness Educator and secondary School teacher, San Francisco).
 - Once a 'mindful community' has been established within a school, children can experience the place as somewhere where they are secure and safe. (Phap Lai, Wake Up Schools Network) Mindfulness helps children and young people to develop compassion for themselves. (Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies)
 - The focus of non-judgment in mindfulness helps to relieve adolescents of the judging which they can feel and which they place on themselves (Lorraine Murray, Calm Kids, Connected Kids, Founder and Director of Feel Good Therapies)
 - If children have experience of mindfulness at an early age, they are being offered a lifelong tool to help them to manage emotions and stress (Phap Lai, Wake Up Schools Network, Michael Mc Knight, Principal, Lough View Integrated Primary School)
 - Mindfulness, by helping a child or young person to understand themselves, is helping them to understand their limits. (Michael McKnight, Principal, Lough View Integrated Primary School) Mindfulness helps children to accept themselves and accept difference.
 - Mindfulness must be practiced regularly to effectively act as a preventative and protective measure regarding mental health (Anna Johnston, SENCO, Lough View Integrated Primary School)
 - Children and young people are constantly exposed to many stimuli, partly due to advances in technology, social networking etc. with little time for quiet. Mindfulness provides a

break from the endless ‘doing’ mode and allows time for simply ‘being’. (Valerie York Zimmerman, Mindful Kids Miami, Anna Johnston, SENCO, Lough View Integrated Primary School) It can offer children and young people a mental break. This could help to engender a sense of connection with ourselves that is often felt to be lacking in the modern world. A lack of connection with ourselves and others will inevitably impact upon our wellbeing.

- Mindfulness can be a powerful, stress reducing, tool for children and young people who have special needs and their families. (Monique Harte, University of Ulster)

2.3 Practical advice for the effective introduction of mindfulness into schools

Before mindfulness can be introduced effectively into schools, there is a number of important, practical steps which should be considered and encouraged. Below are the key points of advice that emerged from the interviews.

3.0 Evidence base supporting the introduction of mindfulness practice with children and adolescents

Mindfulness is increasingly recognized as an essential education tool. It develops attention, emotional and cognitive understanding, and bodily awareness and coordination, as well as interpersonal awareness and skills. Most importantly, by diminishing stress, anxiety and hostility, mindfulness enhances our total wellbeing, peace, confidence and joy...Mindfulness is a powerful tool to help children develop the skills to promote peace in themselves and in the world around them.”¹³

Documented research into the effects of mindfulness upon children and young people is still at a relatively infantile stage though the area is growing rapidly. There has been extensive research, however, into the effects of mindfulness practices upon adults and results have been overwhelmingly positive showing that mindfulness can prevent the recurrence of depression, reduce anxiety, help people to manage chronic pain, facilitate improved sleep and self-esteem and promote emotional regulation¹⁴ (Biegel, Brown, Shapiro and Schubert, 2009). Such results suggest that there is ‘significant potential benefits for teachers and pupils’¹⁵ (Meikljohn J et al. 2012)

This section will highlight the evidence and research to date into the effects of mindfulness practice with young people.

Children, it is evidenced, are in a ready position to respond to mindfulness. They are more focused on the present moment¹⁶ (Hooker & Fodor, 2008). Their hearts and minds are more naturally open and have a natural capacity to approach matters with a ‘beginners mind’¹⁷ (Jon Kabat-Zinn, 1990). Partly due to the challenges associated with their developmental stage, the structure of the learning environment and differing external and internal pressures which they experience, the approach to introducing mindfulness to children and adolescents and young people must differ.

Given the proportion of time which children and young people spend in school, it seems the logical place to introduce the practice. (This paper is also open to the potential to disseminate the practice to parents and carers of children. Positive evidence of the benefits

can be found in Singh et al., 2009¹⁸.) The hope is that the practice will act as a lifelong tool to help children and young people manage stress, build resilience, regulate their emotions and enjoy positive relationships with others from their own and other communities.

Central to this paper, akin to the approach of Kabat-Zinn with regard to his clients (Kabat-Zinn et al., 1992¹⁹) is the belief that mindfulness practice will provide an empowering tool for children and adolescents to play an active role (as far as possible) in their present and future life.

The following research reports on the effects of mindfulness programmes that have been researched with primary and secondary children in both school and clinical settings. Generally, programmes draw largely on the Mindfulness Based Stress Reduction (MBSR) or Mindfulness Based Cognitive Therapy (MBCT) approaches and refer to programmes delivered in an educational or clinical setting. The studies range from evaluations of universal programmes, for example .b to small scale interventions. Studies have been separated based on age and have been chosen based on relevance to introducing mindfulness to the education system.

3.1 Mindfulness defined

Mindfulness has been most commonly defined in literature as ‘paying attention in a particular way: on purpose, in the present moment, and nonjudgmentally’²⁰ (Kabat-Zinn, 1994) Adding to this Langer and Moldoveanu (2000)²¹ proffer that by seeing things in new ways we stay in the present moment. Katherine Weare of Exeter University explains that learning to be mindful enables us to ‘be aware and pay close attention to inner states such as thoughts, emotions and physical sensations, as well as to what is happening to the outside’²². A common thread among all of these definitions is the focus upon attention. What is actually happening right now? By staying with the present moment, we reduce the amount of time that we spend ruminating about the past or worrying about the future. Mindfulness encourages us to accept experiences as they unfold, viewing them with kindness and curiosity in a non-judgmental way. The practice of mindfulness, it is reported, lessens reactivity and impulsiveness and generally helps to foster a greater sense of ‘mental stability, calm, acceptance and appreciation for what is.’²³ At root, mindfulness cultivates a healthy capacity to separate out thoughts and emotions from the construction of our identity, and enables a spirit of on-going life inquiry.

It must be emphasized that a focus on the present moment does not denigrate the importance of the past or the future but rather puts us in a different relationship to them. Zajonc elucidates this clearly through his definition of contemplative practice which draws greatly upon mindfulness. Contemplative practice, he suggests, means ‘a special form of recollection of the past, mindfulness for the present, and envisioning of the future in a manner that is enlivening, clear and insightful’²⁴ (Zajonc, 2009). Within the context of post conflict Northern Ireland 2014, this definition seems particularly relevant. Mindfulness, as examined and presented in this paper refers solely to the secular practice which has evolved in the West over the past four decades since Jon Kabat-Zinn first developed the Mindfulness Based Stress Reduction programme at the Medical Centre at the University of

Massachusetts. While key features of mindfulness can be identified, for example, a focus on the breath, mindful movement, paying attention to our mind and body, becoming aware of one's experience, it must be recognized that mindfulness can ultimately be brought to all activities. Our goal indeed with introducing the practice would be to introduce people to the possibility of leading more mindful lives, to reach a mindful way of being (Kabat-Zinn). Through so doing, a person is better equipped to make decisions and respond more skilfully to the events of everyday living as they unfold.

3.2 Local Research and Experience

Local research into the effects of school based mindfulness practices is also growing and showing positive results. A Masters level study, (carried out by Emmet Kinsella and supervised by Queens University Belfast and the Children's Interdisciplinary Schools Team, BELB) was carried out in a year 3 class in Lough View Integrated Primary School, Belfast in 2014. The study evaluated an 8 week, MBSR based, child friendly programme. Reports from the children, class teacher, school SENCO and parents were considered. Results showed 'statistically significant improvements on ratings of psychological wellbeing and emotional regulatory ability' among the children who partook in the programme.

3.3 Post primary age interventions

Beauchemin et al. (2008)²⁵ reported on 32 adolescents with learning difficulties attending a private residential school. Students experienced led mindfulness meditation sessions for 5-10minutes at the start of each class, 5 days a week for 5 weeks. The students reported reduced anxiety and teachers reported improvements in students' social skills, problem behaviors and academics.

Zylowska et al. (2008)²⁶ researched the effects of mindfulness meditation on symptoms of ADHD with 30 participants (adults and adolescents). After the study, participants reported improvements in ADHD symptoms, anxiety, depressive symptoms and working memory. Bogels et al. (2008)²⁷ carried out a study involving 14 adolescents (aged 11-18) with ADHD, ADD or ASD partaking in an 8 week MBCT programme. The participants and their parents reported improvements in attention, behaviours, subjective happiness and mindful awareness.

Biegel et al. (2009)²⁸ studied the effects of a modified MBSR programme delivered to 102 4-18 year olds with various diagnoses. Those who participated in the programme reported significantly reduced symptoms of anxiety, depression and somatic distress, increased self-esteem and sleep functioning. A three month follow up assessment was carried out which showed that those who continued to practice showed improved clinicians' ratings of anxiety and depression.

Broderick and Metz (2009)²⁹ evaluated the universal 'Learning to Breathe' curriculum using a group of 137 girls aged 17-19 at an independent girls school who participated in the six session programme. Participants reported a reduction in negative affect, tiredness, aches

-

and pains and an increase in emotional regulation, feelings of calmness, relaxation and self-acceptance.

Kuyken et al. (2014)³⁰ have carried out an evaluation of the nine-week UK based Mindfulness in Schools Project '.b'. The non-randomized control trial included over 500 students in 9 schools and was carried out by University of Exeter. After the programme, the participants reported fewer depressive symptoms, less stress and higher rates of wellbeing. A greater commitment to practice outside of the dedicated sessions was associated with higher rates of wellbeing.

Sibinga et al. (2011)³¹ evaluated an 8 week MBSR programme for 33 urban youth aged 13-21 with a range of medical and psychological issues. Those participating in the MBSR programme reported reduced levels of emotional discomfort and hostility, and perceived improvements in school achievement, health, relationship and levels of stress.

Twemlow, Sacco and Fonagy (2008)³² researched potential to use mind body techniques to reduce aggression - research suggests that physical movement is a vital element to reaching youth who are reluctant to engage with talk therapy.

Joyce et al (2010)³³ studied behavior problems and depression with a group of 10-13 year old children participating in a 10 week mindfulness programme which was delivered by teachers. The participants reported a significant reduction in behavior problems and depression after the programme particularly with pupils who had significantly high levels of behavioral problems and depression before the intervention.

The evidence above all supports the proposition that bringing mindfulness into schools is likely to bring significant benefits for the pupils especially with regard to key areas such as attention, depression, anxiety, stress, wellbeing, emotional regulation, behavioral regulation, self-esteem and executive function. A natural inference to draw from the evidence is that if stress, anxiety and depression decrease through mindfulness practice while wellbeing, attention and emotional regulation increase, it is likely that academic performance will also improve. Underdeveloped attention skills, Kaiser Greenland argues, can pose a considerable impediment to success in the school system³⁴. The research also underlines the importance of practice showing that the more consistent and regular the practice, the greater the benefits accrued.

3.4 Mindfulness and teacher training

As mentioned in the introduction, this paper posits that before children experience mindfulness, it is important that teachers develop their own practice. This proposition is based on two main tenets.

Firstly, teaching is a 'high stress', 'high burnout rate' profession. In the UK, 50% of teachers leave the profession before they have completed their first five years. Stress is cited as one of the main contributory factors. There is clearly a need, therefore, to provide a means to support teachers in the profession, to build resilience. Linda Laniteri who has been responsible for writing and delivering programmes for teachers and children who suffered severe trauma following 9/11 bombings in New York argues that Mindfulness can nurture the

-

self and other and foster appreciation among staff³⁵. Improved peer support is therefore a factor that would help to support teachers' resilience.

A number of specific programmes have been established, for example, The Cultivating Awareness and Resilience in Education Programme (CARE) which aims to support teachers with regard to their own wellbeing, their ability to support the emotional wellbeing, behavior and learning of their students, improve their classroom environment and promote positive pro-social behavior with their students. The programme encourages teachers to participate in mindfulness practices to help them to recognize their own emotions and those of others, recognize and manage their own stress and nurture the skills of mindful listening to enable them to increase their understanding and empathy of their students and colleagues (Jennings and Greenberg, 2009³⁶). Following this programme, teachers have reported feeling less stressed, more able to manage their classrooms and more able to build positive relationships with their students.

Secondly, it has been shown that courses that have been delivered by teachers who are experienced mindfulness practitioners have been more effective. This stems from the fact that teachers will be more able to embody and model the qualities of compassion, open mindedness, empathy, patience, skills of focus and attention which regular mindfulness encourages³⁷. They will also be more experienced with regard to the benefits and challenges which one can experience with mindfulness practice. In line with the most recent All-Party Parliamentary Group on Wellbeing Economics 2014³⁸, this report recommends that mindfulness practice and training opportunities should be made available to teachers both trained and those completing their initial teacher training programme.

3.5 Primary School age interventions

Napoli, Krech and Holley (2005)³⁹ reported on a 24 week programme (12 sessions of 45mins each) with 194 children aged 5-8 from nine classes in two schools. The programme included sitting, movement and body scan exercises and relaxation practices. The results showed reductions in self-rated test anxiety and improvements in teacher-rated attention, social skills and selective attention.

Wall (2005)⁴⁰ used a five-week modified MBSR programme in addition with Tai Chi with 11 school children aged 11-15. The children did not have any reported behavioral difficulties but reported feeling an increased sense of calm and wellbeing. They also reported feeling less reactive and experiencing improved sleep.

Semple et al. (2009)⁴¹ carried out a 12-week programme using MBCT-C with 25 children aged 9-11 who had been assigned to a remedial unit for reading. When compared to the control group, participants experienced a significant reduction in attention difficulties. A reduction in anxiety was also observed in children who had clinically raised anxiety at the time of the programme.

41 Semple, R. J., Rosa, D., & Miller, L. F. (2009). A randomized trial of mindfulness-based cognitive therapy for children: Promoting mindful attention to enhance social-emotional resiliency in children. *Journal of Child and Family Studies*

Salzman and Goldin (2008)⁴² reported upon an 8 week ‘child-friendly’ MBSR programme for 31 children aged 9 to 11. The programme was written for children and parents and the teachers were trained mindfulness instructors. The participants reported improved attention, emotional reactivity and some areas of meta-cognition. Schonert-Reichl and Lawlor (2010)⁴³ undertook a study of 12 elementary classrooms in which six were randomized to receive the Mindfulness Education (ME)(now MindUP) programme and six to wait list control. Teachers delivered the programme of ten lessons with mindfulness sessions three times a day. Students participating in the programme reported increased optimism and teachers reported improvements in behavior and social and emotional competence and a decrease in aggression.

Singh et al. (2007)⁴⁴ used ‘Meditation on the Soles of the Feet’ programme with seventh grade boys who displayed aggressive behavior. The study suggested a reduction in aggressive behavior and participants reported feeling more relaxed, having increased impulse control, better focus and improved sleep. The effects were felt for over one year.

Flook et al. (2010)⁴⁵ carried out an 8 week programme of mindful awareness practices (Susan Kaiser-greenland’s ‘Inner Kids’ programme) with 7-9 year old children with 64 children divided between those experiencing the mindful practices and the control group. Those who participated in the programme who had lower pre course self-regulation exhibited significantly improved overall behavioral regulation, meta-cognition and executive function.

The MBSR programme for adults has been shown to reduce anxiety, manage and prevent recurrence of depression and facilitate improved sleep and self-esteem (Biegel, Brown, Shapiro and Schubert, 2009⁴⁶). The MBSR programme has been adapted for use with children (Saltzman & Goldin, 2008⁴⁷). Activities have been shortened and are presented in a more child friendly. Research on the programme suggests that children participating in the programme show improvements in attention, self-regulation, social competence and general wellbeing (Saltzman and Goldin, 2008).

3.6 Local Research and Experience

Local research into the effects of school based mindfulness practices is also growing and showing positive results. A Masters level study, (carried out by Emmet Kinsella and supervised by Queens University Belfast and the Children’s Interdisciplinary Schools Team, BELB) was carried out in a year 3 class in Lough View Integrated Primary School, Belfast in 2014. The study evaluated an 8 week, MBSR based, child friendly programme. Reports from the children, class teacher, school SENCO and parents were considered. Results showed ‘statistically significant improvements on ratings of psychological wellbeing and emotional regulatory ability’ among the children who partook in the programme.

Twemlow, Sacco and Fonagy (2008)⁵⁵ researched potential to use mind body techniques to reduce aggression - research suggests that physical movement is a vital element to reaching youth who are reluctant to engage with talk therapy.

Joyce et al (2010)⁵⁶ studied behavior problems and depression with a group of 10-13 year old children participating in a 10 week mindfulness programme which was delivered by teachers. The participants reported a significant reduction in behavior problems and depression after the programme particularly with pupils who had significantly high levels of behavioral problems and depression before the intervention.

The evidence above all supports the proposition that bringing mindfulness into schools is likely to bring significant benefits for the pupils especially with regard to key areas such as attention, depression, anxiety, stress, wellbeing, emotional regulation, behavioral regulation, self-esteem and executive function. A natural inference to draw from the evidence is that if stress, anxiety and depression decrease through mindfulness practice while wellbeing, attention and emotional regulation increase, it is likely that academic performance will also improve. Underdeveloped attention skills, Kaiser Greenland argues, can pose a considerable impediment to success in the school system⁵⁷. The research also underlines the importance of practice showing that the more consistent and regular the practice, the greater the benefits accrued.

3.8 Mindfulness and teacher training

As mentioned in the introduction, this paper posits that before children experience mindfulness, it is important that teachers develop their own practice. This proposition is based on two main tenets.

Firstly, teaching is a 'high stress', 'high burnout rate' profession. In the UK, 50% of teachers leave the profession before they have completed their first five years. Stress is cited as one of the main contributory factors. There is clearly a need, therefore, to provide a means to support teachers in the profession, to build resilience. Linda Laniteri who has been responsible for writing and delivering programmes for teachers and children who suffered severe trauma following 9/11 bombings in New York argues that Mindfulness can nurture the self and other and foster appreciation among staff⁵⁸. Improved peer support is therefore a factor that would help to support teachers' resilience.

A number of specific programmes have been established, for example, The Cultivating Awareness and Resilience in Education Programme (CARE) which aims to support teachers with regard to their own wellbeing, their ability to support the emotional wellbeing, behavior and learning of their students, improve their classroom environment and promote positive pro-social behavior with their students. The programme encourages teachers to participate in mindfulness practices to help them to recognize their own emotions and those of others, recognize and manage their own stress and nurture the skills of mindful listening to enable them to increase their understanding and empathy of their students and colleagues (Jennings and Greenberg, 2009⁵⁹). Following this programme, teachers have reported feeling less stressed, more able to manage their classrooms and more able to build positive relationships with their students.

59 Jennings, P.A. & Greenberg, M. T. (2009) The prosocial class room: Teacher social and emotional competence in relation to student and classroom outcomes. *Review of Educational Research*, 79, 491-525

Secondly, it has been shown that courses that have been delivered by teachers who are experienced mindfulness practitioners have been more effective. This stems from the fact that teachers will be more able to embody and model the qualities of compassion, open mindedness, empathy, patience, skills of focus and attention which regular mindfulness encourages⁶⁰. They will also be more experienced with regard to the benefits and challenges which one can experience with mindfulness practice. In line with the most recent All-Party Parliamentary Group on Wellbeing Economics 201461⁶¹, this report recommends that mindfulness practice and training opportunities should be made available to teachers both trained and those completing their initial teacher training programme.

Key Findings.....11

Appendices.....30

Executive Summary

Parenting NI undertook a consultation in September 2014 to gather a snapshot of views and opinions from parents across Northern Ireland in relation to Shared and Integrated Education. The consultation was formatted (based on the Terms of Reference of the Shared Education Inquiry) into an online survey and ran from the 20th September through to the 10th October. It was distributed via our Parenting Forum network (of which there are over 1800 individual parents and organizations involved) as well as through social media. In total, 209 parents from across Northern Ireland completed the survey with many more parents completing some of the questions.

Key Findings:

Definition of Shared and Integrated Education

Parents understood Shared Education to primarily mean 'bringing Protestant and Catholic pupils together'. Shared Education was seen as being beneficial in helping to share resources such as teachers, facilities, and providing a wider choice of subjects studied at Post primary level. Building relationships and promoting tolerance and respect while still retaining pupils own identity and culture were the main views held by parents. Providing a clear definition on Shared Education is essential to parents as there was confusion across the board in relation to the difference between Shared and Integrated Education.

Parents understood Integrated Education to mean educating children together regardless of ability, religious identity, and social background. Parents commented that Integrated Education promotes tolerance, accepts differences, builds relationships between pupils and is welcoming of everyone. Integrated Education was generally defined as children integrating daily in a school environment on a full-time basis.

Even though the survey was distributed to a broad range of parents, 65% of parents responding to the survey had a child/children currently attending an Integrated School. 61% of parents stated that they would consider sending their child/children to an Integrated School but factors affecting parents' decisions included locality of school, reputation of local school and how religion is viewed/taught at the school.

Advantages and Disadvantages of Shared Education

The advantages of Shared Education for parents included; more opportunities to study wider range of subjects that are not always available in every school especially at GCSE and A level (i.e. that pupils would be able to attend classes in their partner school in that subject). Some parents identified that this is currently happening in many schools including Ballycastle High and Cross and Passion in Ballycastle.

Overall most parents view 'Shared Education' as a step in the right direction in a 'shared future' for NI and that it encourages communities to work together where there may previously have been no opportunities for contact.

The disadvantages of Shared Education included, religious differences not being dealt with, practical timetabling for pupils, transport costs and the continued doubling of resources. Some parents commented that it was a small step towards the Integrating Education completely.

Advantages and Disadvantages of Integrated Education

Overall, parents agreed that Integrated Education breaks down barriers giving pupils opportunities to share their experiences of religion, teaches tolerance, mutual respect, encourages acceptance of difference, and broadens perspectives. Parents responded that, for many of them, Integrated Education is the future for NI preparing pupils to mix freely with all communities which they will eventually encounter in the workplace. Disadvantages included the locality and limited spaces available in

Integrated Schools; some parents responded that it would mean extra journey time. Parents were concerned about the percentages of pupils from different communities in Integrated Schools such as in some areas perhaps 20% from Protestant background and 80% Catholic. This, parents felt, might lead to one community being a minority and parents are concerned that this may lead onto pupils feeling excluded or being bullied.

Participation in Cross Community Programmes

68% of parents said that their child/children had participated in cross community programmes either in school or in the local community. Activities included; sport, The Arts, visits to other schools both in Northern Ireland and Southern Ireland, attending cultural events, sharing subject classes and participating in programmes provided by organisations who work in Community Relations such as the Corrymeela Community and the Speedwell Trust.

Alternative approaches to integrate children

Parents suggested other ways for children to be integrated in NI which included living in shared housing developments. Parents thought this would mean that children are building relationships across communities daily. Other approaches included; running joint after school clubs for schools in the same locality, joint summer schemes, cultural community events and communities working closely together, one parent provided an example in their community of a single identity project which is ongoing ahead of a joint programme with a neighbouring estate.

Ways forward to improve Shared/Integrated Education

Ensuring that all education in schools is of the highest quality and appropriate to the needs of each child was highlighted by parents as an issue within Shared/Integrated Education. Parents suggested that all teacher training degrees currently provided by St.Mary's, Stranmillis, Queens and University of Ulster, should be joint in the one campuses. Some parents highlighted that if we are segregating our teacher training then it does little to support the integration of our pupils. Other parents also

commented that initial teacher training and professional development training should have more of a focus on the benefits of Shared and Integrated Education. Parents also felt that more information or training to parents around the benefits and issues in Shared/Integrated Education needs to be provided.

Parents felt that providing more funding to schools that are currently Integrated, or willing to become Integrated, should be made available as well as more places for pupils at those schools. One parent commented that locality planning of schools by the Education Boards should be 'more strategic' in increasing parental choice about the best school to send their children to in the area. Parents also expressed the need for more places within existing Integrated schools and the need for more Integrated Schools as these were not always available to parents in their area.

Parenting NI

Parenting NI is the lead voluntary organisation, which focuses on supporting parents. We work with parents to improve outcomes for children and young people and to influence policy and practice on parenting. Our work is based on the principle that by empowering and working with parents, outcomes for children are improved. There are four key areas of Parenting NI's work:

- ▶ **Parents Helpline** - support & guidance to parents on parenting issues through a free-phone helpline
- ▶ **Parents Counselling** – face-to-face counselling for parents on parenting issues
- ▶ **Parenting Forum** - listens to needs of parents & works towards ensuring that parents views inform policy, practice & public opinion
- ▶ **Parenting Programmes** - to groups of parents & workshops for practitioners on a range of topics

Parenting NI have been advocating on behalf of parents since 1979, and are keen to ensure that the views of parents are taken seriously in the planning and delivery of all services for children in Northern Ireland.

Seeking parental feedback is now an integral part of the work of the Parenting Forum within Parenting NI, and as such the organisation has developed an effective methodology to carry out such consultations. It is important that parents are confident that the consultation process is worthwhile and that they feel comfortable sharing their views.

Parents were grateful for the opportunity to be involved in this consultation survey and they look forward to hearing the Outcomes of the Committee's Inquiry.

Background to the Inquiry into Shared and Integrated Education

The Committee for Education in NI are holding an Inquiry into Shared and Integrated Education here. The Terms of Reference for the Inquiry were set out for organisations to respond to. Parenting NI has previously been involved in a consultation for the Shared Education Advisory Group for Queens University, Belfast in 2012 on Proposals for Shared Education in Northern Ireland and we felt we would like to gain more up-to-date information from parents in relation to their views on Shared and Integrated Education to help inform the Inquiry's work.

Methodology

Development of the Consultation Tool

Aiming to gain as many responses from parents as possible, we developed an online survey for parents using Question Pro consultation tool. Online surveys offer a number of advantages including convenience for parents who can respond in their own time, with easy access through computer or mobile phone, assurance of anonymity and potential to complete the survey in much less time than would be required to participate via a focus group. The survey questions were based on the Committee for Education's Terms of Reference, which were published as part of the Inquiry. The survey was initiated on 30th September 2014 and closed on 10th October 2014. Publicity to promote the survey was generated via Parenting NI using Social Media such as Facebook and Twitter as well as through professional networks, the Parents Forum database and e-brief.

Profile of Focus Group Participants

In total 1297 parents viewed the survey. 502 parents started the survey and 209 completed it.

Participants consisted of 160 females and 34 males; 143 were married or in a civil partnership; 14 were cohabiting or living with their partners; 16 were single; 21 parents are divorced or separated and 1 parent was widowed. 22 parents were in the 18-34 age range; 103 between 35-44; 63 between 45-54 and 10 parents were 55 plus. 15 parents had a disability or additional needs and 24 participants had children with a disability. 15 participants were from ethnic minority/migrant communities including black African; Polish, Anglo Asian, and Metis. 92 participants brought up as Catholic responded, 71 Protestants, 6 other Christian, 6 preferred not to say what religion they were brought up in or currently practice and 1 participant stated 'other religion'. Between them, participants had a total of 189 children. In total 59 lived in urban areas; 59 suburban areas and 72 lived in rural areas. Participants came from the following counties in Northern Ireland, 50 in Co. Antrim, 29 in Co. Armagh, 49 from Co. Derry-Londonderry, 35 in Co. Down, 6 in Co. Fermanagh and 26 in Co. Tyrone. 2 participants were not currently living in Northern Ireland but had lived here previously.

Some parents did not answer all of these questions therefore some figures are not truly reflective of the parents who responded.

The following table gives a breakdown of these statistics:

Figure 1: Parent Profile Data:

Key Findings

The Education Committee in their undertaking of an Inquiry into Shared and Integrated Education state in their Terms of Reference that they will:

‘Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases-including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education’

Shared Education

Parents were asked to respond to the above by answering the following questions.

In your own words, what do you think is meant by the term “Shared Education”?

The responses to this question were varied and very positive. In order to present the information concisely, the responses have been grouped.

Protestants and Catholics being educated together

The majority of participants understood the term to mean Protestants and Catholics being educated together since the majority of schools in Northern Ireland are separated.

Sharing Resources

Many parents commented that Shared Education was about Schools sharing facilities, subjects, activities, and teachers but still maintaining their own culture, identity and ethos while being respectful to others. Maintaining pupils’ or schools’ own culture and identity was seen as being of great importance to parents while at the same time respecting others cultures. One parent said they thought shared education should mean, *‘developing specific subject excellence in particular schools and having*

*pupils/teachers move between the two schools. This will ensure children get the highest standard of teaching and **save schools money** by reducing the need for teaching and resources for some subjects.'*

Equality and Inclusion

Other parents understand the term to be broader than inclusion of Protestants and Catholics. For those parents, Shared Education is about equal access for all pupils, providing equal opportunities regardless of social status, religion, ability, nationalities in order to provide good quality education. There was a strong feeling from parents that equal access for all abilities should be available with more training provided for teachers/staff for pupils of severe special needs or other learning difficulties so that teachers would be better equipped to teach a range of abilities and needs.

Attitudes and Teaching on Respect and Tolerance

Parents thought that Shared Education should be provided under one roof, in the same school, where there is an ethos of respecting difference and being tolerant of differences. One parent commented, 'it should be about rethinking the curriculum in terms of history, culture and language and how these are portrayed. Pupils should have the opportunity to develop skills to accept difference without being threatened by them'.

Religious Education

A few parents felt that for Shared Education to be successful it should be free from religion with no Religious Education (RE) being taught in class or assembly. Other parents felt that they would like R.E. in shared schools to be include more of an element or focus on other faiths/ as opposed to the current curriculum which is based predominantly Christianity. Some Parents want their children to learn about people from other faiths especially they said 'since Northern Ireland has people living here of all

religions. Some parents stated that they would like to see less control of schools by the Churches

Whole Community Approach

Some parents responded that their understanding of Shared Education has shifted towards it being the responsibility of the whole community rather than only teaching staff and parents. One parent said, “*Sharing education is where all stakeholders have a role to play in education. Parents, pupils, communities, and schools are working together for the best possible education for all pupils.*”

No definition

For 10 parents they were unsure of what the term “Shared Education” meant, commenting that they did not know that there was any difference between Shared and Integrated. They felt the term was ‘too vague’ and parents would have found it useful for a definition to be provided.

General Comments

One parent said, “Shared Education is a good thing but nothing like enough. It’s a step up from the old EMU programmes schools were involved in but it does not go as far as full integration which is a pity.” Another parent commented, ‘it’s just a money saving initiative to reduce numbers of schools where there are falling numbers of pupils and in an environment where budgets are being reduced.’ One parent said they hadn’t heard the term ‘shared’ formally but felt that it was a way of avoiding or dealing properly with integrated education.

Integrated Education

Parents were then asked to state in their own words, **‘what do you think is meant by the term “Integrated Education”?’**

Overall parents seemed to have a clearer understanding of what the term Integrated Education meant to them and were positive in their responses.

Inclusion of all

Participants responded that they felt Integrated Education was more than just Protestant and Catholic pupils being educated together in the same facility but included pupils from different religions with a common ethos.

Many parents stated that integrated Education to them means being inclusive of all pupils regardless of age, disability, race, belief or any other measurable demographic. One parent commented “all pupils should have the opportunity to fully embrace their own education with any and all barriers seen as obstacles to be overcome rather than blocks”.

Physical Environment

Another stated that “Integration means one school, one entrance, one site, one uniform, one ethos. Choosing to teach children that we are all different but that we are all the same underneath. Choosing not to perpetrate the ‘them and us’ mentality that exists in Northern Ireland. It is a “grassroots response to challenging the divided and segregated nature of our education system.”

Some parents stated that integration is welcoming of all peoples in a shared facility, accepting of differences with tolerance being promoted rather than as one parent commented ‘simply tipping hats to sharing resources’. Parents talked about the ‘diversity’ of pupils from different religions, ethnic groups being an important part of

Integration, which can break down barriers. A shared vision and purpose in Integrated Education was highlighted as essential to living a shared future in Northern Ireland.

A few parents expressed their concerns that the perception of Integrated Education to them “seems like a deliberate attempt of a 45% representation of pupils from the Protestant and 45% from the Catholic Community with 10% other religions” represented rather than a desire for integrating pupils because of wanting them to build relationships. The mix of pupils from different traditions and religious backgrounds they felt, “is not always reflected depending on where the Integrated School is situated for example in a predominantly Protestant area where one community can become the minority or majority group.”

Curriculum and Teaching

The teaching of RE featured strongly in parents’ views on Integrated Education with some parents stating that to be an inclusive school, the teaching of Religion either needs to focus on all religions or not be taught at all. Most parents preferring that “it should be a personal and individual choice catered for outside of school.”

Uptake on Integrated Education

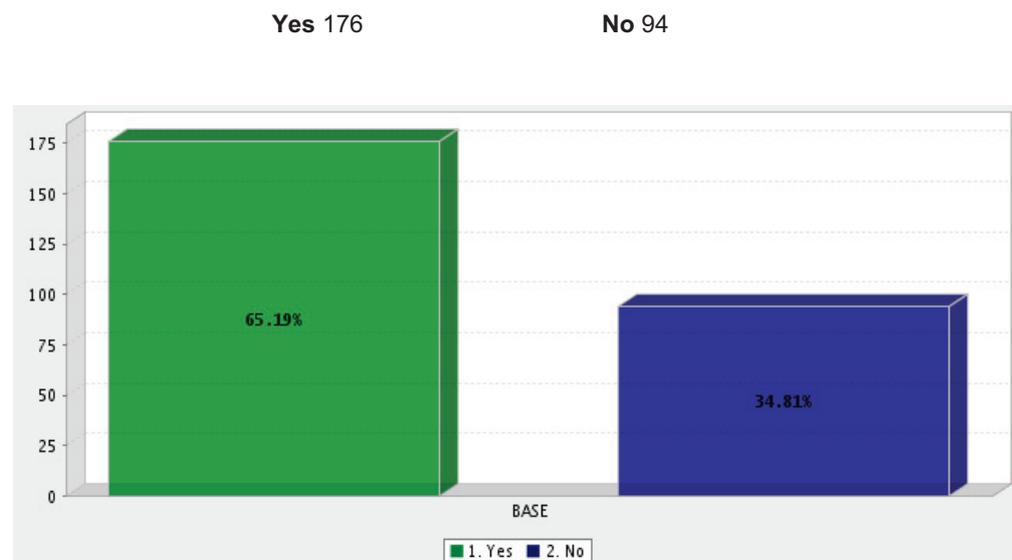

We asked parents whether they had children already attending Integrated Schools in order to understand where they were coming from and get an idea on general uptake. Although this online survey was sent to a wide variety of parents, schools and community/voluntary organizations who work with parents, 65% of parents who responded currently had a child attending an Integrated School.

Figure 2

Do you have a child/children who currently goes to an integrated school (including nursery/preschool)?

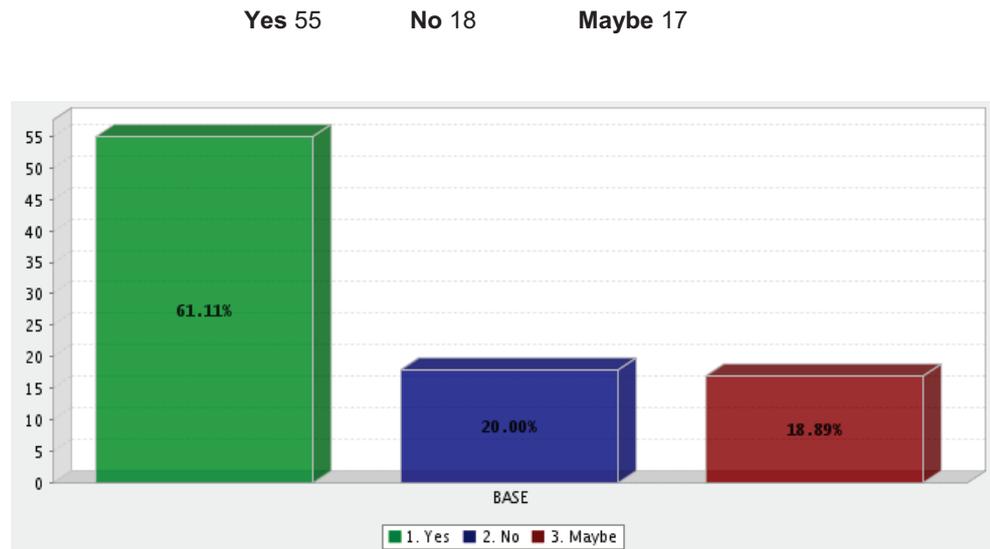

270 parents in total responded to this question.

Parents were then asked to respond to the question '**would you consider sending your child to an Integrated School?**' In total 90 parents responded to this question. Of those 90 parents, 61% said they would consider sending their child to an Integrated School.

Figure 3

Would you consider sending your child to an Integrated School?

Parents were then asked to explain their decision and the main reasons given were as follows;

- The location and quality of school needs to be considered. Integrated Schools are not always located conveniently and have a limited number of pupil spaces
- The standard of education in Catholic Grammar Schools can be superior especially in helping children to reach their full potential

- Comes down to the choice of one parent in the family who may be of a different religious persuasion
- It is important for children to have their own religious ethos taught in school and as well as at home. Some parents wanted their children to be prepared for sacraments
- Northern Ireland is a divided and segregated society and to be able to move forward schools needs to be Integrated. Children should be able to mix freely together breaking down sectarian barriers
- Integrated Schools should have no taught Religious Education
- It depends on each child's needs where they are best placed e.g. special needs/developmental needs
- Strong belief in the ethos and vision of Integrated Education
- Although some parents preferred their child to go to an Integrated Post-Primary School, they respected their child's choice in attending a school with their peers

Barriers and Enablers

The Committee for Education state in the Terms of Reference that they will "Identify the key barriers and enablers for Shared Education and Integrated Education"

We asked parents about the advantages and disadvantages of Shared and Integrated Education. Their responses were grouped together based on key themes/issues and outlined overleaf.

Figure 4 Advantages and Disadvantages of Shared Education

Advantages of Shared Education	Disadvantages of Shared Education
<ul style="list-style-type: none"> • Inclusive of all • Encourages communities to work closely together • Helps to build relationships • Economically sensible rather than doubling of resources • Explore more opportunities eg sports, subjects • Exposes children to other cultures, • Promotes tolerance, respect, accepting of difference • Breaks down barriers in NI • Shared resources • Has all the benefits of integrated education but schools can still retain their identity and religious ethos • No advantages, respect can be taught at home • Sharing expertise of teachers • Steps in the right direction 	<ul style="list-style-type: none"> • Quality of education depends on each school • Children are sharing classes but not really mixing with each other • Children still defined by cultural tradition • Lack of resources available • None • Diverts from being fully integrated • Issues of bullying if one community is in the minority • Religious difference being highlighted • Practical timetabling of classes, • Transport costs and availability • Too expensive • Subjects such as History being taught from one point of view • Loss of school identity • Divisive and not solve the problem of segregation • Lack of appropriate building • Separate Religious Education

	<p>classes still being taught</p> <ul style="list-style-type: none"> • Loss of parental choice • Difference in uniforms can lead to exclusion and highlight difference • Minimal inclusion of children with special needs
--	--

Figure 5 Advantages and Disadvantages of Integrated Education

Advantages of Integrated Education	Disadvantages of Integrated Education
<ul style="list-style-type: none"> • No distinctions are made on divisive grounds of religion • Education of all pupils bringing them together from an early age to understand other cultures • Social and economic advantages • Breaks down and removes barriers, opportunity to share experiences of religion, teaches tolerance, mutual respect, encourages acceptance of difference, broadens views, mutual understanding, removes stereotypes, racism 	<ul style="list-style-type: none"> • One community being the minority • It depends on the locality of schools so not may not fully reflect 'true' integration • None-“ <i>we should disband divisive education and cease funding schools who have religion as a requirement for entry either perceived or actual</i>” • The Identities of children can be lost • Misperceptions by parents, staff who think that integrated education is a

<ul style="list-style-type: none"> • Promotes the concept of NI as a nation and promotes national identity rather than British or Irish • Prepares pupils for society which is mixed e.g. the workplace • Builds relationships between cultures • None. One parent said it is '<i>a middle class attempt at social mobility through education, shouldn't be placed above any other type of education offered</i>' • Pupils are more aware of the common ground between their peers • Promotes equality regardless of background • Fully inclusive society, ethos of inclusion in integrated education • Reduces fear of 'the perceived other' • Education under same roof, financial benefits • Helps children understand religion is a choice, not born into religion • Embraces the child holistically rather than only academic achievement 	<p>neutral environment</p> <ul style="list-style-type: none"> • No real value placed on spiritual moral issues too eager to please to proclaim all things to all men, a melting pot, • Can be harder for pupils to retain their identity especially when they go back to segregated communities after school • The teaching of religion should not only be from a Christian viewpoint as it currently stands but incorporate all religions which reflects a more diverse society • Under-funded and lack of resources from government • Availability limited of integrated schools in certain areas to meet demands, limited amount of places in schools • Many parents see integrated as just another sector rather than a good model that is beneficial for children and society • Issues of bullying for being different • Local history not taught (ie. why people from different communities feel the way
---	--

<ul style="list-style-type: none"> • True integration is more than mixing religion, about mixed academic abilities, genders, special needs • Increased parental involvement • Normalizes education system removing religious/social class barriers • Promotes community cohesion • Way forward for change in NI to show we can live side by side, get along • Same advantages as shared education 	<p>they do)</p> <ul style="list-style-type: none"> • Some parents see them as being of a lower achieving standard than other schools as they are largely all ability schools while grammar schools are more academic
---	---

Overall, parents were positive about both Shared and Integrated Education viewing both as *“a necessary step in the right direction for living a shared future in Northern Ireland.”* Parents were in support of breaking down barriers between communities and teaching children to respect and tolerate others. Some parents stated that they preferred Shared Education as children are being taught about differences between communities but that there was still an element of retaining their own school and community identity.

Parents highlighted the limited availability of places in the Integrated Schools and the locality of Integrated Schools as a barrier to them sending their children to an Integrated School. *“The quality of the education provided”*, some parents said *“depends on individual Integrated Schools and can be perceived as inferior to a Grammar education”* which some parents prefer for their children.

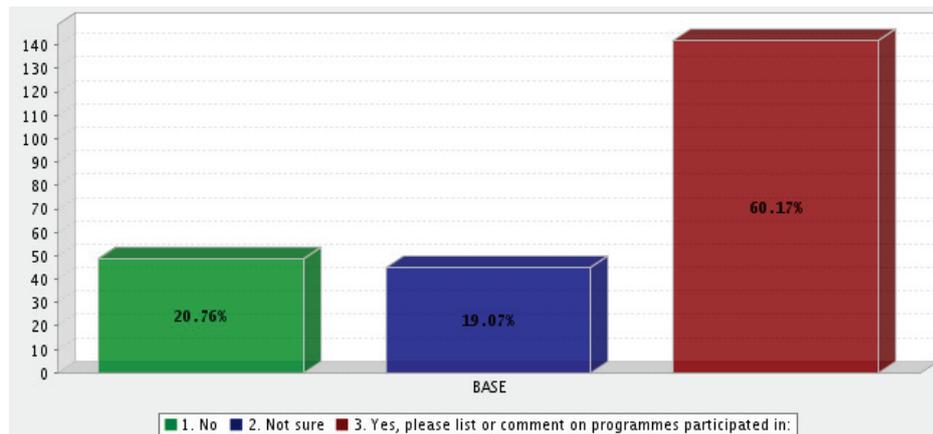

Good Practice

The Committee for Education suggested that the Inquiry into Shared Education will also *“Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes”*.

Parents responded to the question, **has your child participated in any cross community programmes either in school or in the local community?**

There were 236 responses to the question. 49 parents stated that their child (children) had not participated in any cross community programmes, 45 said they were unsure and 142 parents said their children had.

Parents were then asked to list the types and names of programmes that their children had participated in. These were then grouped into the following areas;

- Sport (eg football, boxing)
- Fermanagh learning community
- Cross border projects through Scout groups
- Community youth club/organisations
- Other types of programmes- cultural and identity awareness, drama, arts, music, nature, media activities
- Shared education classes
- Social gathering of friends from different backgrounds
- Summer camps/schemes
- EMU/CRED type programmes in school
- Visits to the Corrymeela Community
- Joint visits to local churches
- Links with schools in Europe
- Attending community run/based events

Parents were then asked to suggest what other ways they thought their children could be integrated in NI apart from through formal education. They suggested the following ideas;

- After school clubs where children from different schools in a local area meet
- Sport clubs
- Community groups
- Shared housing
- Compulsory places in nursery schools
- Summer schemes including cultural events
- Exhibitions/more family community cultural events
- Youth clubs
- Shared spaces in local communities
- Churches coming together
- Projects aimed at cross community
- Not forcing children to come together, problems are due to society, lack of parental education, unemployment, ghetto mentality
- Integrating all schools
- Music
- Removal of allegiance from societal clubs (eg beavers, scouts must pledge allegiance to Queen)
- Residential trips (eg to Corrymeela where differences can be explored in a 'safe space')

Key priorities and actions

The Inquiry also seeks to “*consider what priorities and actions need to be taken to improve sharing and integration-including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools*”. So we asked parents about the issues they felt were most important and how Shared and Integrated Education could be moved forward in Northern Ireland.

Improvements:

- Ensuring all education provided is of the highest quality and meets the needs of children despite academic ability
- Better support in place from local communities, churches, government
- Shared teacher training, shared professional development courses, parental training
- Financial resources, funding to integrated schools for more pupil places and better equipped buildings

- An agreed vision by the Northern Ireland Assembly to commit to integrating or sharing schools by a certain date, “*more support from ministers rather being a political ball passed about*”
- Better knowledge and awareness of Shared and Integrated Education for the public so they can make informed choices
- Organizing more intercultural events

- Remove religious doctrine. Some parents would prefer the removal of Religious Education from the Curriculum while some parents would like World Religions to be included in the Curriculum
- Several parents commented that Shared Education should only be viewed as a medium step towards full integration and that *“it should be a central focus of the TBUC strategy and all schools should be integrated”*
- Educate children together from the Early Years providing either more cross community programmes or integrated Nurseries/Playgroups
- Highlight the successes of shared/integrated education to the public
- Educate adults/public on changing attitudes
- Provide funding to schools who are willing to share education and less to those who don't
- Better strategic planning based on area needs and suited to local situations, area planning
- Cultural awareness training for teachers/staff
- Shared education must be defined as to its purpose, the benefits, some parents have misconceptions as to what is meant by this term
- Integrated education must become more inclusive and welcoming
- Agreement on Flags and Emblems – Some parents felt that all aspects of religion, flags and emblems should be removed from the educational environment. These parents felt strongly about the removal of emblems so as not to antagonize others and felt there was already too much separation on symbols in the wider community. However, other parents felt that to move

forward and open up discussions with children/young people to help them understand the significance that communities place on these objects would be more helpful in promoting respect and understanding of each other.

- Mixed transport on way to school
- Reduce power churches have on schools
- Twinning schools
- Develop better integrated ethos
- Shared timetabling at 16plus to allow more choice

Important Issues:

- Quality of education provided, should be excellent in every school
- Academic achievement should be the most important thing
- Maintaining of community identity whilst co-learning
- Building better Community support and understanding
- Collaboration between schools to work more co-operatively
- Religion should not be the central issue
- Lack of adequate resources
- Emphasize building relationships between pupils
- Funding to offer more places

- Bullying due to religious or community affiliation
- To learn to be more 'accepting of others', promoting tolerance, treating others with respect, breaking down barriers,
- Locality of schools to share education and locality of integrated schools
- Reassuring parents who fear shared or integrated education
- Parental choice
- More political support from NI Assembly
- Children learning what happened in the past
- To learn that we all have a Shared humanity
- Provide definitions of the terms, 'Shared' and 'Integrated' as although they are linked they are different

Appendices

Appendix 1

List of Questions developed by Parenting NI for the Online Survey

1. In your own words, what do you think is meant by the term “Shared Education”?
2. In your own words, what do you think is meant by the term “Integrated Education”?
3. Do you have child/children who currently go to an Integrated School (including nursery/preschool)?
4. Would you consider sending your child to an Integrated School? Please explain your answer.
5. Has your child/children participated in any cross community programme either in school or in the local community? If yes, please list or comment on programmes participated in.
6. What do you think are the disadvantages of Shared Education?
7. What do you think are the advantages of Shared Education?
8. What do you think are the disadvantages of Integrated Education?
9. What do you think are the advantages of Integrated Education?
10. Other than through formal education what other ways do you think children could be integrated in Northern Ireland?
11. What could be done to improve Shared/Integrated Education here in Northern Ireland?
12. What do you think are the most important issues within Shared/Integrated Education?

10th November 2014

Dear Peter,

Parent Survey – single teacher training facility

I am writing in response to the questions posed by the Committee for Education on the 5th November regarding Parenting NI's Parent Survey. Although only 10 parents mentioned that providing a single teacher training facility as one of the ways forward for Northern Ireland the responses were strongly felt. The survey question was not aimed specifically at asking parents their views on the current status of Teacher Training Facilities but at suggesting improvements to Shared and Integrated Education in Northern Ireland.

Thank you once again for meeting with us and giving us the opportunity to present our survey results.

Yours sincerely

Nicola McKeown

Dear Ms Jaffa

Parent Survey – single teacher training facility

The Committee would like to convey its thanks to Clare-Anne Magee and Nicola McKeown for their briefing on Wednesday 5 November 2014 as part of the ongoing inquiry into Shared and Integrated Education.

The Committee agreed to write to Parenting NI asking for information on the level and nature of responses from parents, in the relevant survey, to the proposed establishment of a single teacher training facility.

A reply by Friday 21 November would be much appreciated.

Yours sincerely

Signed Peter McCallion

Exercise 1

Exercise 2

Exercise 3

Key Findings

Appendix 1 – Facilitators' Pack

Introduction

In October 2012 the Parenting Forum commenced the task of carrying out a consultation exercise with parents on behalf of the Queens University Ministerial Advisory Group on Shared Education. An important aspect of this review was to engage in a transparent consultative process that would provide a platform for parents to air their views, concerns and objections to the new proposals.

The Parenting Forum was approached to carry out the consultation with groups of parents across Northern Ireland. The Parenting Forum has considerable experience in carrying out such exercises as it has regular contact with a network of parents and parent support groups throughout Northern Ireland and is well placed to carry out real and meaningful consultations with parents within an agreed frame-work. Over a seven week period 6 focus groups were accessed. In total this included 55 parents caring for 155 children and young people. An unusually high number of parents had children with special needs, although only one group was targeted. However only one parent represented ethnic and minority groups. Participants were mainly female with a twelve male representation, some parents worked and some did not work outside of the home.

The Consultation Process

As agreed with the Advisory Group, the initial plan was to enlist co-operation from groups of parents from the existing Forum membership as many of these parents had previous experience of consultation. Opportunities were also given to groups that the Forum had not worked with in the past. Focus groups were chosen from across Northern Ireland in schools and community settings which were both urban and rural.

The Parenting Forum used three of their own internal facilitators for all of the focus groups. Consultation with parents requires highly skilled and experienced facilitators who are capable of working sensitively with diverse groups and facilitators were chosen accordingly. Parents clearly valued the opportunity to be consulted on the document and readily contributed their views and their experiences.

Consultation Methodology

A consultation pack was designed to ensure a uniform approach across all the focus groups in collecting and collating the information. The pack also aimed to give parents an insight into the rationale and user friendly materials were designed in order to present the proposals to the parents in a way that would encourage debate [see Appendix 1- Facilitators' Pack]. Focus groups were used as the data gathering method because they brought parents together in a way that allowed them to share their experiences and their opinions, to identify issues of individual and common concern. The Parenting Forum was aware of the need to consult with parents from across Northern Ireland to provide a wide geographic spread from urban and rural communities.

The Groups

It is worth noting that many of the groups consulted contained parents who had children attending a mix of schools in a geographic area. In one instance, a number of parents scheduled to attend a mixed group session withdrew as they felt that it was an attack on grammar schools. A seventh school had agreed to take part in the consultation but had to withdraw. As agreed the groups targeted included:

- 2 primary
- 2 post primary
- 1 early years
- 1 alternative to education provided

Parent Profile Information

Total number of parents consulted: 55

Gender:	Male	Female		
	12	43		
Marital Status:	Single	Married	Sep/Div	Other
	8	33	11	3
Belong to ethnic/minority group?	Yes	No		
	1	54		
Parent with disability/special need?	Yes	No		

	8	47		
Ages of Children:	0 - 5 years	6 - 10 years	11 - 17 years	18+
Male	12	14	23	18
Female	6	8	40	16
Sex unspecified	2	1	7	8
Children with disability/special need?	Yes	No		
	29	26		
Community:	Urban	Rural		
	32	23		

Sep/Div = Separated/divorced

Exercise 1

This exercise was designed to introduce shared education to the group and to have an overview of their understanding and experiences. In almost all of the groups some parents initially answered 'no' to their children having experience of shared education but when other parents gave examples they changed their minds and provided examples. Some parents focused on integration of children from different backgrounds and abilities within their current school setting.

1. Have your children ever experienced opportunities for shared education?

- Yes. Most parents said that their children had.
- Most of the parents with children attending an alternative school had not experienced it.

2. What did they do?

The responses to this question varied and in order to present the information the responses have been grouped in categories.

Arrangements between schools

- Partnership arrangements between schools where kids went to another school and made smoothies or did a project (P6 and P7)
- Extended schools / EMU Programme
- One primary school came to another to use computers
- In transition year the young people go to local college and have an opportunity to try new things
- School twinning a good start, even to get teachers mixing
- Going to another school to study subjects
- Going to the local college to undertake vocational courses
- Visiting other schools particularly in transition years
- Contested Spaces project in Lisnagelvin School in Derry with 9 schools involved. Children out one day a week, curriculum related
- Grammar and High School share facilities as different specialisations

Programmes and training

- Love for Life - one parent recently went to sex education talk for parents from the three local schools (cross community)
- Primary school was integrated in every way, inclusive of young people from all backgrounds.
- A variety of parenting programmes where parents from a number of schools in the area came together for these

Additional or extra curricular activities

- Roe Olympics
- A language unit is coming to the school which will make it more inclusive
- When the army camp was open the school had many kids from an international context
- Child (protestant boy) sings in choir so has to attend First Communions
- Sports and football teams are mixed
- Music provision by Western Board where kids plan an orchestra
- Christmas concert
- Ulster project, mixed group and go to America
- High School meet with Special School and help out with literacy, Christmas sale etc.
- Rugby tour to South Africa forms global connections
- Cross community work

Concerns

- One parent questioned the need for a consultation as he felt that we are there in terms of shared education. It is happening already so what was the need?
- One parent was concerned that this was all about an attack on grammar schools.

3. What are your feelings about this?

Almost all of the parents were very positive about the experience and the benefits for their children. However some parents raised questions and concerns. The responses have been groups into themes.

Breaking down barriers and deal with prejudices

- Chance to get to know that other kids are not so different
- Communicating with others from different environments face to face is good
- “The kids are leading the way, teaching us how to relate to others from different cultures”
- Preferred boys and girls to be taught together
- Good to meet children with special needs – other children don’t know how to react when they see a child with a special need so it breaks down barriers Parents are very aware of how other people look at children with special needs

Benefits

- Good for children with special needs to get out into other schools or colleges as it helps when they are moving on and they have to use transport etc.
- New experiences build confidence
- Opportunities to study different subjects that are not available in their school

Concerns

- Different school may have a different ethos / approach / rules which is challenging when children and young people attend different schools
- Some of the parents of children attending an alternative school thought it could lead to bullying / victimisation

Exercise 2

This exercise was designed to take parents through key questions directly relating to the public consultation questionnaire.

In most of the groups there was a discussion about the current systems and geographic location of schools which mean that it could be difficult to advance shared education. Parents felt that attitudes would need to change from some parents, communities and schools themselves before real changes could be put into place. The responses to the questions often overlap and are interlinked.

Q1. What are the best ways to ensure shared education moves forward in NI?

Funding and Accountability

- Needs legislation to make it happen and there is a need to check it's happening as school may say they are part of Shared Education but do not always understand what this means in practice
- Needs funding / money to help it work
- Agreement from ESA

Parental and Schools Input

- Listen to schools and parents as they know best
- Parent power to ensure that Shared Education is a reality – this is linked to good parenting
- Need to bring everyone on board; parents, teachers and politicians to work together.

Provision of Education

- One shoe does not fit all – children with special needs may not be able to participate in Shared Education because their physical needs supersede everything else
- Better basic education and vocational education linked to better understanding of cultural and other differences
- Create ways to engage kids from underprivileged backgrounds
- All schools to be integrated so kids can go to their closest school. Some kids can't as schools are attached to a local parish. CCMS and controlled sector need to work together to sort this out.
- Religion was a recurring issue in one group and the group was divided about how they felt. 8 participants felt that religion should have nothing to do with schools and kept completely separate. A few others felt that Christian values should underpin our education system and new communities (BME) should respect that. A few others felt that world religion should be taught but not focussed on any particular religion.
- Cosmopolitan fluid society where no one is seen as minority. Lots of diversity and people from all over the world to make us integrate. More outside influence.
- Start mixing kids from a young age from nursery and playgroup right up. Secondary is almost too late.
- School twinning a good start, even to get teachers mixing.

- Super schools where all backgrounds are included but it needs investment to do it right.
- Need to be taught as individuals, something there for everyone no matter what their needs are. Kids need to have aspirations to achieve and do well. Give them hope.
- Adults need educated on shared education
- Pupils need better support – emotional as well as physical
- Integrating gender is important

Q2. What are the barriers to advancing a shared education system?

Current system

- Location of some schools would mean that children would have to go into another community. Not everyone would accept this and it may lead to bullying or more serious violence
- CCMS and the restrictions on the staff that they employ mean that some teachers cannot teach in their schools
- ESA input on shared education
- Numbers: in Derry there is a majority Catholic population and in any school Protestants will remain a minority. Where there is a 'majority' there will be discrimination against those in the minority.
- Children who have complex needs which cannot be met other than in their current setting. Health and education together
- Snobbery and attitudes of some schools particularly some grammar schools who feel they are better than secondary schools
- Class was seen as a major barrier as working class kids do not get the same opportunities.
- More state interference to support kids who are neglected. There is a spiral of deprivation that passes down through generations. Need to break the cycle.
- EMA keeps kids in school
- The need for mutual understanding of everyone in society and how moving forward after the troubles can be a barrier
- In secondary schools prejudice is already entrenched, it is too late.

Funding

- Money / funding is needed for school buildings and training
- Need for new buildings in neutral locations
- Better transport
- Schools get paid per pupil and schools might manipulate 'shared education' to get more kids through their doors permanently rather than just popping in to share resources.
- Geography and logistics. The cost of kids travelling to other schools. Logistics for teachers, needs resourced. Bus insurance and risks.

Other

- There was scepticism about the motives for government wanting to advance shared education. What is the purpose of this consultation? Is it to promote shared education or is it really about cutting costs? Group concerned that the government is planning to privatise education and introduce 'academies' as in England.

- We have high expectations for new communities or ethnic minorities who arrive in our schools as we expect them to speak the language, adapt to our culture. Most people felt that it was important for them to keep their culture but some members felt they should adapt to a Christian society and Christian values.
- Culture was a difficult issue as the group felt our own culture was so divided that we would not know how to help other new cultures integrate. We need to address our own prejudice first. Inner city parents have more entrenched prejudice.
- Lack of respect and discipline with kids.
- People who work with kids with special needs – not having the skills needed if the children are involved in mainstream education even if it is only part time
- Time, it might take three generations to start seeing huge changes. Change is slow.
- Fear. Parents at the Derry consultation commented that many parents were too afraid to come along tonight to a discussion about shared education.

Q3. How should Shared Education ensure it meets the needs of all learners and provides opportunities for learners to be educated together, regardless of their sex, gender, race, political opinion, disability and economic background?

Many of the parents who have a child with a complex disability felt that shared education would not meet their child's needs.

Most parents talked about a system that reflects the needs of individual children and how they can reach their full potential. There were extensive discussions in many groups about the academic versus the vocational needs of children and how the Department would ensure that all children were given equal opportunities. One or two parents mentioned education systems in other European countries where children who do better with vocational studies are separate from those following an academic path.

Individual Needs

- Need to know the needs of ALL learners. Particular needs have to be addressed to ensure that the children and young people can participate and this may mean having to employ other professionals to meet these needs
- Early intervention to ensure that children accept the integration from nursery age
- Costs of rugby kit and trips and sports fees cannot be afforded by poorer families and puts pressure on kids and parents and also subjects kids to peer pressure.

Delivery in schools

- Multi disciplinary approach to support children not just with educational requirements in a school setting
- Extra support for pupils that need it
- Where does Statementing sit in Shared Education?
- More teachers
- Smaller classes, especially if mixed ability
- Kids should have a say in big decisions.
- Teach some subjects in ways that suit the kids - link them to real life
- Homework clubs in the community, libraries more accessible.
- More languages should be taught in primary schools eg: Mandarin, Eastern block languages
- Uniforms are good to unite pupils and not make individuals stand out

- Two paths for education, academic and practical and there should be two different sets of exams. In Primary school all kids are lumped together.
- Mixed opinion about out two tiered education system. Some of the participants felt this was needed to ensure all needs were addressed and others felt this was not fair.
- 2 key areas were identified for any education system:
 1. A strong focus on self esteem, personal development. More important than educational attainment. When they have good self esteem they will flourish.
 2. The basics at primary level. All kids need to have a strong grasp of reading, and number work (English and Math). Many kids reach secondary standard without these.

Q4. (Question 6 in the questionnaire) How do you think that moving shared education forward will ensure that learners will have equal opportunities to learn?

- Very abstract and aspirational. How would it be rolled out?
- It should overcome social inequality and create ways for kids from working class backgrounds to achieve their potential.
- In NI we are mostly white and have been nearly all white until recently. This increase of people from other countries will continue, so we can prepare ourselves for this. We are ignorant about a lot of these issues. We need to start shared education when the kids are really young in nursery and continue the whole way up through the education system.
- Good example (Camphill which is a mixed community setting primarily for young people with disabilities) – ethos, opportunity, respect
- Take account of the needs of vulnerable young people
- One person commented that shared education should not include different academic ability and this should be kept separate. This should not be in section 75.
- Shared education is a very wide net and there is a danger of being too wide and vague. Needs to have clear agenda/purpose.
- Shared education is not for everyone, some parents won't agree eg: special needs kids should be in the right setup
- More after schools clubs

Exercise 3

Q4. How do you think the advancement of shared education might address such issues as ethos and identity? How can Shared Education address the following issues for learners:

Opportunities for participation

- After school meetings
- School meetings such as student councils to help children and young people have their say
- Open school facilities for community to meet in - not good to lock schools up at 4pm especially in rural areas
- Leadership from school principals. Schools need to work together on this and collaborate, not compete
- Teach citizenship
- Be clear about what it is. Does it suit all children?
- Voices of parents, children and teachers need to be heard

- Funders / MLA's etc should come into the schools and listen to the school community – children, young people, parents, teachers etc.

Be safe and their welfare needs are met

- Swipe cards for all lunch pupils so those taking free school dinners can blend in with the same form of payment
- We should address these issues (agreed by all group except one) but in an environment that is safe, where people are trained for this and using a range of methods like drama etc.
- Better cross community work
- Use the buddy system
- Need better supervision of kids on transport and in class. Better security in schools
- Ensure that each school has a full time mental health councillor
- have respect and dignity no matter who they are
- Better understanding of bullying particular social exclusion and isolation – having school policies does not go far enough
- Use uniforms so that all children and young people blend in

Have respect and dignity no matter who they are

- One person thought that differences didn't need to be talked about as it just reinforces difference. Need to focus on similarities
- Start young enough when kids are comfortable to talk about anything e.g. Puppet show about diversity in local playgroup at the minute
- Parents need to move across boundaries/communities. Move away from preconceived ideas or notions. Some won't want to change

Q5.

(a) In moving shared education forward in NI, will there be a need to change the curriculum to include particular skills or knowledge for learners?

- Some parents said 'no' as the curriculum is always changing and teachers never get a chance to get used to it or have a say in how it changes.
- Many participants felt it did need to change. It needed to value different routes not just academic. Needed different exams for people who are not academic. More hands on. (some people disagreed with this)
- Need social education
- Respect and dignity
- Less packed timetable to allow for this
- Religion to be taken out. Religion is political here so that needs to change
- Less assessment, there is over assessment at the minute in Primary where you have to assess every move.
- The content of the curriculum was seen as a barrier by some. History was used as an example of how subjects can be taught from one side/perspective. People need to know their history or culture but we need to look beyond this.
- The curriculum limits kids options for careers as it limits their skills - there is a need to be more holistic in education which should be reflected in the curriculum
- A focus on all kids getting basic English and Maths at an early stage is key

- Personal Development and mental health as a core part of education.
- Invest heavily in primary education as this is the key area. By the time secondary stages come it is too late.
- Management/leadership in schools is important and they need to have high expectations of teachers and support progress.
- Schools and teachers in NI are good and better than the UK so we need to be careful not to go down the same route as the rest of the UK.
- Need to have incentive for kids to achieve in school and jobs at the end.

Q5.**(b) How can they ensure that the rights of all learners to develop a broad range of essential life skills are met?**

- Leadership from above to ensure that essential skills are met
- Teaching participation, togetherness, tolerance, respect: all these things happen when you have to consider others.
- One person said that her son with dyslexia got very little support at school and she had to fight every day to get support even though he had an educational Statement.
- There needs to be extra support invested in school to deal with the range of needs and abilities. Staff time needs to be allocated to this and not cut which has happened in the past.
- Awareness raising about disability
- Mix able and disabled may have different needs to be able to attain essential skills
- Use different methods of teaching
- Get parents involved
- Have a meeting at the beginning of each school year with pupils, parents and teachers. Not a talk but interactive so they get to know each other.
- Develop a budget for the school parent's forum
- Financial education is important and needs to be part of curriculum
- Need life skills: coping with money/shopping to be able to exist in the community, to have choices, pathways open to young people, more exposure to other children for those with a disability is more important sometimes than what they achieve
- Access to education for those who need help
- Wider horizons
- Curriculum needs to reflect ongoing needs to attain essential skills
- Everyone needs to take responsibility for life skills; parents, teachers and the local community. All parents need to get involved, not just the usual suspects
- Parenting programmes are important to educate parents too
- More staff (which they are cutting). Security for staff
- Counselling for kids
- Don't put kids with special needs into a box
- Each school should have a Share Shop for books, uniforms, sport clothes and equipment. Legislation that suppliers of PE kits and uniform can't charge high prices.

Final comments made by parents during the sessions

- Some of the parents felt that it was a worthwhile consultation but were very sceptical as to why the government was taking an interest in this and they worried it was for cost cutting measures.
- They felt there were a lot of questions and sometimes the question was not very clearly worded.
- Parents felt that strong leadership is needed both from the Department and Principals to ensure that Shared Education is advanced in a way that supports all learners regardless of their abilities to reach their full potential.

Summary of Key Findings

The responses given by parents to the questions often overlap and are interlinked. Parents tended to jump about when thinking about one question and often responded to either previous questions or those yet to be asked. In summarising the key findings in the report, the overarching information has been recorded under themes.

General

The majority of parents were in favour of advancing shared education as they felt that it would benefit children and young people, both opening up opportunities to enhance learning and give them a better understanding of children from different backgrounds and capabilities. Some parents felt that shared education is good in theory but it may be aspirational for all children to be included, especially for children who have complex physical disabilities.

Parents also reflected on the wider community and how society's prejudices may be a barrier to advancing shared education. This was voiced from a number of perspectives including disability, racism and sectarianism. Parents felt that much needs to be done to educate adults including other parents.

There was a level of cynicism from some parents about the reason for the consultation taking place and they queried if one of the key outcomes would be to close schools.

Current System

A recurring issue throughout the process was that of the current system. This was discussed under a number of questions and different issues emerged. Primarily parents felt that in some areas the geographic location of schools would not lend itself to advancing shared education. They felt that in some of these areas there would be a question of the child or young person's safety, not only from other school children but also from other members of some communities.

The teaching of religion within the current system was often raised as a barrier to advancing shared education. Many parents were critical of CCMS which was said to only employ teachers who have studied religion as part of their degree. This may not be the case but it is the parents' perception.

All parents were in favour of making changes which children would experience from an early age as they felt that ongoing behaviours and prejudices can be embedded in children by the time they enter post primary education.

Parents felt that in order to advance shared education there needs to be strong leadership at different levels, not least the Department of Education and that funding would need to be available particularly in the early stages to 'make things happen'.

Practicalities

Parents raised a number of questions regarding the practicalities of advancing shared education and ensuring the safety of all children. They felt that timetabling is often too full to

allow young people sufficient time to move from one setting to another to avail of subjects and facilities in other settings. They felt that transport was a key issue if children need to travel to other settings and queried how this would be supervised.

Parental involvement was seen as crucial to ensuring that shared education becomes a reality. Some parents stated that parents may need to be educated themselves to deal with prejudices they may have which are often passed on to children.

10th November 2014

Dear Peter,

Parent Survey – single teacher training facility

I am writing in response to the questions posed by the Committee for Education on the 5th November regarding Parenting NI's Parent Survey. Although only 10 parents mentioned that providing a single teacher training facility as one of the ways forward for Northern Ireland the responses were strongly felt. The survey question was not aimed specifically at asking parents their views on the current status of Teacher Training Facilities but at suggesting improvements to Shared and Integrated Education in Northern Ireland.

Thank you once again for meeting with us and giving us the opportunity to present our survey results.

Yours sincerely

Nicola McKeown

23rd October 2014

Dear Mr McCallion

Shared and Integrated Education Inquiry

I am Chair of Governors at Phoenix Integrated PS in Cookstown, and was a member of the founding group in 2003/4 which set up the school. Previously I was involved in the formation and development of Mill Strand Integrated PS in Portrush and Windmill Integrated PS in Dungannon. I worked for many years in teacher education at the (integrated) school of education at the University of Ulster.

You have already received a response to the inquiry from Philip Reid of Mill Strand PS, and I hope the committee will both take his remarks seriously, and invite him to attend one of their future meetings. Philip speaks eloquently for many of us who are increasingly frustrated by the apparent attempt to develop shared education as a valid alternative to integrated education. There is nothing wrong in principle with forms of shared education, and many schools have worked hard to develop co-operative projects which are often useful and certainly better than nothing. But even at their best they always take place within a context of schools that are fundamentally representative of one tradition or another. None come close to being an adequate substitute for a school experience in which children (and, equally crucially, their parents) work together, all day, every day, for many years.

The stubbornly persistent sectarian divisions in our society have huge social and economic costs. Schools and teachers did not cause these divisions, nor can they solve them alone, but neither can education be absolved of all responsibility. We have a system in which children are separated at the age of four or five, sometimes even earlier, and separated again at the age of eleven. It is difficult to understand how, in the world of the mid to late 21st century that our children will inhabit, this could continue to be regarded as tolerable, let alone attractive. We do not need the tinkering about at the edges of our system that shared education represents but a recognition that we need an entirely new structure. It is not only the Stormont machine that is 'no longer fit for purpose'.

Even our teachers are mostly trained separately, which is particularly iniquitous. The very people who we expect to recognise and celebrate diversity in our schools have often never experienced it for themselves. I met a young classroom assistant in one integrated school only recently who said 'I never met a Protestant until I was twenty two'. Until such a time when it is impossible to say that and until the boundaries of religious background which currently inhibit our children and young people begin to be dissolved by the experience of living and working together, we will not make much progress towards a diverse yet inclusive society.

The integrated sector is more than thirty years old and within it there is vast experience of making it work. We have the astonishing achievements of hundreds of ordinary local citizens who set the schools up, often in a context of little external support (and certainly none from ELBs or DE). We have more than sixty flourishing schools; we have polls which demonstrate that more than 40% of parents actively wish their children to attend integrated schools; we have substantial research evidence of success; we have two useful representative bodies.

We even have a statutory duty placed on the Department to 'encourage and facilitate the development of integrated education'. In these circumstances one might have expected that integrated education would be developed and cherished and celebrated as an example to the world of a splintered society on a journey towards reconciliation

Yet recent headlines appearing in NI newspapers tell a different story:

- Blow for John O'Dowd's education policy after court rules expansion of integrated schools cannot be stifled
- Clintyclay Primary School: arguments for closure that don't stand up
- DUP blocks education body role for integrated sector
- Children in Phoenix IPS taught in grossly inadequate accommodation due to three year Departmental delay

The fourth of these is fictional, but it expresses our local frustration that the blindingly obvious fact that a school which expands from nothing to around 190 children and 20 staff needs buildings within which education can take place. Obvious, that is, to everyone except the Department of Education who far from encouraging and facilitating have delayed endlessly (and still are).

I don't know what is holding us back: is it just Departmental incompetence? Vested interests as expressed in the depressingly negative response of CCMS to the committee? Lack of political will? Whatever the cause we are missing the opportunity for a proper appraisal of our education system, looking at the current structure and the ways in which the integrated alternative could provide a sustainable way to bring our young people together to build a diverse yet united community. I hope that the committee's report will, at last, mark the beginnings of a change in our direction of travel.

Yours sincerely

Stuart Marriott

RE: PlayBoard NI Response to the Inquiry into Shared and Integrated Education

PlayBoard is an independent charity and the lead organisation for the development and promotion of children and young people's play in Northern Ireland. Since our establishment in 1985, PlayBoard has been committed to supporting the child's right to play through a combination of: service delivery, service development; campaigning, lobbying; awareness raising and working in partnership with others to put play on the agenda of policy makers and resource providers. The organisation takes great pride in promoting best practice in Play, Playwork and play based School Age Childcare services.

PlayBoard's mission is to drive the play agenda, ensuring that at every level of decision making across society, the child's right to play is not only recognised but is made a reality within the lives of children, young people, families and communities. Children and young people's views, aspirations and perceptions of themselves and the environment in which they live, are at the heart of PlayBoard's work. Our vision is of a society where the right to play is realised.

We welcome this opportunity to contribute to the Inquiry into Shared and Integrated Education. As an organisation we are deeply concerned about the largely segregated nature of our education system. We believe that play, and playwork in particular has a critical role to play in bringing children together -through their natural and shared drive to play - something which is unfortunately all too often overlooked and underutilised by your department, our schools and educational institutions.

PlayBoard's work over the past 30 years has included a considerable body of work aimed at using play as a positive vehicle for bringing school communities together. We would urge that cognisance be given to the untapped potential of play to become one of the central lynchpins that attracts children, teachers and parents to the idea of sharing services and spaces across and between schools.

Shared Education as a mechanism to achieve Integrated Education

PlayBoard is deeply concerned about the large number of children that are segregated from the age of 3 years until they enter either the workplace or tertiary education. We believe until the structure of Northern Ireland's school system is changed or schools collaborate more effectively with each other, this problem will remain.

The integrated education movement has against the odds etched an important sector within the segregated system, an achievement that has to be applauded. However the fact remains that over 90% of children still attend either a controlled or maintained school, with only 6.7% of primary and post-primary pupils attending integrated schools¹. A further concern is the low number of children attending the 'other' school system, particularly at primary level. More worrying is that at primary level only 1% of Protestant children attend Catholic schools (with

1 Knox and Boroah (2014). Briefing Notes for Committee for Education, 15th October 2014

Company Limited by Guarantee No. NI30225 - Inland Revenue Charity Number XR86639

5.7% of Catholic children attending controlled schools)². Furthermore, no maintained school has adopted the status of an integrated school. These few points alone highlight the need to radically change the structures of the system or more probably the processes used to create and enable contact between children and young people within the school setting.

In this response we do not want to be drawn into nuances of differentiating integrated and shared education because we appreciate there are benefits and shortcomings of both. We acknowledge also that the division is not just in relation to religion but there are repercussions for social class, which is more discernible at the post-primary level. Rather we would see shared education as a necessary precursor to achieving a system whereby the label of controlled, maintained or integrated is not an inhibitor for any parent or child.

In light of our experience of delivering a shared education programme we would broadly agree with the seven principles identified by the Ministerial Advisory Group³ as being required to create a blueprint for education. We believe the implementation of points 5, 6 and 7 as set out below are particularly important. They are to:

- Help children and young people develop a greater awareness of and respect for diversity, in all its forms, and equips them with the knowledge and skills to be able to live in an open, inclusive and confident society;
- Respect the rights and dignity of all children and young people, ensures that their views and opinions are heard and responded to and promotes their safety and wellbeing; and
- Acknowledge the central importance of good leadership in schools and the quality of teachers and support staff and thus places a particular emphasis on ensuring high quality initial teacher education and continuing professional development opportunities that encourage teachers and educationalists learning and sharing together.

Furthermore, as a rights-based organisation we absolutely agree with recommendation 11 of the Ministerial Advisory Group which calls for fulfilment of duties under Article 12 of the UNCRC. Indeed the findings of the NICCY report '*Shared Education The views of children and young people*'⁴ highlights the importance of listening to the views of children and young people on all matters affecting them. The report identifies how children and young people believe that shared education should be introduced at an early stage and there is a need to ensure that effective practical arrangements are in place; they suggest trialling shared education initiatives, expanding shared education to all schools and ensuring that pupils are consulted about on-going developments and their views are taken into account. Notably some respondents indicated that;

the collaborative activities and joint classes in which they had participated, had been a 'shared' but 'separate' experience, as pupils had remained within their own school or friendship groups and interaction between pupils from different schools had been limited.

On this point NICCY note that '*it will be important to clarify what is intended through 'shared' learning and to ensure that pupils are encouraged and supported to be genuine and equal collaborators*'. We would suggest that through the vehicle of shared play many of the silo mentalities that can linger within school or friendship groups may be dissipated.

We would also point out that in relation to fulfilment of the UNCRC's article 31, the right to play, General Comment 17 is very clear that schools have a role in relation to post conflict safety.

2 ibid

3 Connolly, P, Purvis, D., & O'Grady, P J. (2013). *Advancing Shared Education: A report of the Ministerial Advisory Group*. Belfast: Queen's University Belfast.

4 NICCY (2013). *Shared Education The views of children and young people* source at http://www.niccy.org/downloads/2013/publications/Adult_Report.pdf

States are obliged to ensure ... active measures should be taken to restore and protect the rights under article 31 in post-conflict ... situations, including ... creating ... safe spaces, including schools, where children can participate in play and recreation as part of the normalization of their lives⁵ (para. 57(e).

The general comment also references the role of schools to play a major role in fulfilling the obligations under article 31, including: physical environment of settings; structure of the day; school curriculum and educational pedagogy. Moreover there is little doubt that play is important to education and we also believe it has the potential to be critical to achieving the aim of shared education particularly that relating to promoting ‘...good relations, equality of identity, respect for diversity and community cohesion⁶’.

Our experience of Shared Education practice in schools and school age childcare settings

As stated above PlayBoard has issue with upholding a school system that enables children to be segregated on the basis of their religion. However, given that there is little as an organisation we can do about achieving a single education system; the remainder of this response outlines how we believe play is important to the shared education approach.

Over the past number of years PlayBoard has delivered a number of play programmes within the school setting, culminating in the ‘Spaces to Be’ programme. ‘Spaces to Be’ brings together children from maintained and controlled schools located in interface areas to play and come into contact with each other.

Play is special to children because despite perceived differences, the one uniting factor throughout childhood is play. It is through play that children understand each other and their world around them. They are all equal, and it is through play that children and young people’s learning in cooperation and conflict resolution skills begin. Play is an excellent vehicle to bring children from different backgrounds together because it is innate and a universal desire.

We would also highlight that although the school day is an ideal setting for shared education, it is hugely time constrained. Therefore we would suggest that considerable benefit can be accrued from extending the ‘shared’ approach outside of the ‘formal’ school day, through for example extra-curricular activities as identified by the Ministerial Advisory Group and through shared school aged childcare within the workings of OFMDFM’s Bright Start Strategy⁷.

Our work in schools: Over the past two years PlayBoard has piloted and developed the implementation of our ‘Spaces to Be’ programme within the wider Contested Spaces programme. This pilot programme is jointly funded by OFMDFM and Atlantic Philanthropies and uses play to facilitate participating schools to address community and cultural barriers enabling respect for difference and inclusion of others within the Personal Development and Mutual Understanding strand of the statutory curriculum.

The ‘Spaces to Be’ programme is premised on PlayBoard’s ‘Spaces to Be – Mapping Identity and Belonging toolkit’. The resource builds on PlayBoard’s many years of playwork experience and practice of working with children, young people across Northern Ireland. Through practical and playful exercises which are directed by the children and young people themselves, the toolkit aims to promote the creation and programming of innovative ‘shared space’, building reconciliation through play.

7 OFMDFM (2013). BRIGHT START The NI Executive’s Strategy for Affordable and Integrated Childcare A Strategic Framework and Key First Actions. Belfast: OFMDFM. Available at: <http://www.northernireland.gov.uk/bright-start-strategic-framework-key-actions.pdf>

Using a play methodology, the 'Spaces to Be' programme seeks to promote and improve the relationships between and across two interface/contested space communities. In its current incarnation, P5, P6 and P7 pupils from two schools in each area come together and through a range of play-based activities come to understand and respect difference relating to religion, culture, gender and disability. The programme is underpinned by the Playwork Principles, which puts children at the centre of their play experience. Playwork enables children to be free to: choose, personally direct and be intrinsically motivated, to play.

The aim of the 'Spaces to Be' programme is to enhance children's capacity for positive development by giving them access to the broadest range of environments and play opportunities. Through contact with the 'out-group' they become more inclined to develop mutual respect for the other group's cultural events, symbols and practices. This is achieved by using practical and playful exercises that support the school curriculum, and encourage children and young people to explore their understanding of difference.

School Age Childcare: PlayBoard is also passionate about leading the development of the School Age Childcare sector, a sector which provides childcare and age appropriate play opportunities for children aged between 4 and 14 years. School Age Childcare settings provide a caring and safe environment, offering a range of active and stimulating play activities for children.

Crucially, due to the cross-community nature of most settings, School Age Childcare providers have the ability to provide for many children an opportunity to meet with, interact and engage with children from another community or cultural background on an almost daily basis. Given the largely segregated nature of the education system the importance of School Age Childcare provision in helping to build a united community should not be underestimated.

The Executive recently launched 'Bright Start', the first stage of the Northern Ireland childcare strategy and this has seen the beginning of a much needed investment in the development and growth of School Age Childcare capacity across Northern Ireland. It is critical that this investment is protected and that the impact of providers in supporting cross-community contact is acknowledged by government.

Concluding Comments

As a relatively new post-conflict society Northern Ireland has made progress, however for many children – know or unknown to them - it remains a divided society. At the heart of much of the division is the segregated schooling system, which enables the status quo of children having little or no contact with the other group, to remain. Integrated education caters for less than 10% of the school population but the stark reality is that for the other 90% they are identified as enrolled in either a Catholic or Protestant school. To make serious inroads into bringing children into contact with the 'other' group, shared education offers the best vehicle to shift the status quo and we believe play has a critical role to play in achieving this.

As an organisation we are under no illusion that implementing a play programme within a school setting is challenging; and to implement a contact based play intervention is even more challenging. However, it is our firm belief that the challenges are outweighed by both the innovative nature of play as a mechanism for contact and the potential impact it has to bring about better intergroup relations for future generations. We have learned through our experience of 'Spaces to Be' that shared education is a journey requiring buy-in from schools, principals, teachers and parents who need to be 'empowered' to engage in a process that allows them to identify and confront problems and overcome barriers. We would like to reiterate a number of the messages highlighted by the Ministerial Advisory Group including:

- School collaboration presents significant practical challenges in relation to matters such as timetabling, curriculum planning and transport and thus strong leadership within schools is essential;

- There are resource implications for schools wishing to engage in shared education and thus some mechanism for supporting and incentivising schools to be involved in cross-sectoral collaboration is required.
- There is no 'one size fits all' model for how schools should collaborate but, rather, how this is done will vary from one context to the next
- It is important that particular models of collaboration are not imposed on schools but that they are allowed to develop organically, reflecting the needs and situations that exist at a local level.

Given the unique ability of play to bring children and young people together through a common, natural drive we strongly advocate that shared education approaches recognise the importance of play within the school curriculum, school playground, extracurricular activities, the school estate and the wider school age childcare sector.

There is little doubt that play is of considerable importance to childhood. It is our hope, that play - the uniting bond of all children - can be effectively harnessed through this initiative and others to build a shared future for the coming generations and end the harm that occurs because of segregation.

Yours sincerely,

A handwritten signature in black ink that reads "Jacqueline O'Loughlin". The signature is written in a cursive, flowing style.

Jacqueline O'Loughlin
Chief Executive Officer

Portaferry Integrated Primary School

PRINCIPAL MRS DOROTHY MCKEATING BA, PGCE, PQH

Dear Mr McCallion,

I write on behalf of Portaferry Integrated Primary School with the intention of submitting evidence for the Education Committee re Shared and Integrated Education Inquiry.

Background

Our school transformed to controlled integrated status almost 20 years ago. I began my career as a teacher in the school in September 1995, the beginning of the first school year as an integrated school. I was impressed at the time with the level of involvement and commitment of the parents in establishing the first integrated school in the Ards Peninsula, and perhaps more importantly, promoting integrated education within the local community. In this respect, not much has changed in the last 20 years. Parents continue to be a major driving force in promoting the school and raising awareness of its importance in a community which suffers from economic and social deprivation. Our school remains the only alternative to maintained school provision in the Portaferry area, and although small, is vitally important to the non-Catholic minority as well as people from the Catholic tradition who do not support a segregated education system. Thanks to the efforts of parents, past and present and many supporters within the local community, the school is valued and respected as an educational provider and a place where children of any faith or none feel valued, secure and nurtured.

Shared / Integrated?

Firstly, I wish to acknowledge the work going on in many schools across the province with regard to sharing of educational opportunities, facilities, resources and professionals. This is a big step forward from the total segregation of the past. I feel, however, that sharing of this nature does not go far enough towards addressing the fundamental issue of segregation. This issue can only effectively be addressed if the school ethos goes further than merely acknowledging difference. Difference should be respected and celebrated, and the ultimate aim is to help children as they grow into young adults to realise that difference isn't so different after all. In my experience, both as a teacher and a principal in an integrated school, the children do not see each other as different in terms of religious, social or economic background. They accept each other exactly the way they are. I would have concerns about the potential for shared education to highlight religious or cultural difference, because the sharing organisations still have their individual ethos, name and code of values.

Small World

Huge advances in recent years in travel and communication technology have effectively reduced the size of our world. Through social networking and the internet, it is possible to communicate efficiently with people from a vast array of racial, cultural and religious backgrounds. When placed within the context of a dynamic and ever changing global network, the idea of a segregated education system seems archaic and backward thinking. Half measures will not solve this problem. The way forward is integrated education, especially in areas of the province where demand for places is greater than the number of places available. I consider it a basic human right for parents to prepare their children for a future in a multi-cultural society by opting out of segregation from the age of five.

Let's look closely at the evidence, surveys and opinion polls. The demand is there, the parental willingness is there, the committed teachers are there, and, most importantly, the children are there. Let's not narrow the wonder and glory and variety of the child into protestant or catholic. Rather let's celebrate the uniqueness of each individual and give them the confidence to grow up as tolerant and forward thinking individuals willing to work to build a united community.

Inquiry

This inquiry is necessary and very welcome. It is right that all sectors within the education system have opportunities to contribute, because only through open and candid investigation and discussion can the barriers to societal unity be broken down. If there is a genuine desire to move Northern Ireland forward through this inquiry, I look forward with anticipation to the results.

Yours sincerely,

A handwritten signature in cursive script that reads "Dorothy McKeating".

18 March 2015

Dear Ms Michelle McIlveen (Chairperson)

Shared and Integrated Education update on ePartners;

You might recall that I gave evidence to the Education committee in November 2014 about the ways we had been using ICT to link schools in Northern Ireland to schools in the Republic of Ireland through the Dissolving Boundaries Programme. I mentioned on that occasion that we were starting a new project called ePartners with the aim of using a similar approach to link schools **within** Northern Ireland.

I'm pleased to include with this letter an update on the progress we have made so far and to let you know that the cost of this is working out at around £26 per pupil.

What the E-zine shows is the value of carrying out this work where there is a good mix of face to face contact connected to sustained online interaction and where University students are working to support classroom teachers.

We are currently working with 26 schools and would like to expand the numbers next year to include more schools that are geographically and culturally isolated; we will need financial support to do this and I'd welcome your guidance in determining the best way to do this.

Yours Faithfully,

A handwritten signature in black ink that reads 'RSP Austin'.

Professor Roger Austin

The schools have been using a Virtual Learning Environment (Fronter) and a Video Conferencing tool (Collaborate) to communicate and discuss issues such as cupcake designs, Vikings, experience with video conferencing, etc...

Fronter

This Frontpage looks brilliant!

So far on Fronter there has been a total of 700 posts from the 26 partnerships. (11/03/2015) The most from one partnership was 145 posts!!!

Some of our favourite posts are displayed in the graphic below:

The Vikings
 "The Viking age in European history was about AD 700 to 1100 ..."
 "The name 'Viking' comes from a language called 'Old Norse' and means 'a pirate raid!'"

Cupcake ideas
 I would like to make a sort of marshmallow cupcake, the icing could be marshmallow flavoured and coconut sprinkled on top...
 "Thank you for your ideas. We thought that we could have a red strawberry sponge, white chocolate icing and cookies for topping ..."
 "Our cupcake idea is an Oreo cupcake with vanilla icing sprinkled with oreos and smarties!!!!!"
 "These are the different cupcakes that I found in Tesco: Chocolate swirl 4 pack £1.00 Smarties 6 pack £1."

Video conferencing
 "...I have used skype with my uncle, auntie and my brother I am really looking forward to the next."

Face-to-face
 "...MC was easy, hangman was great and we need to get better at noughts and crosses. Group A had fun. BYE BYE!"
 "I really enjoyed the trip to WS... My favourite activity was when we had to make our own cars working in partners with someone in the other school."

Further information about ePartners is available from Professor Roger Austin – rsp.austin@ulster.ac.uk

Video Conferencing

Schools use a video conferencing tool called Collaborate for real-time contact. Some schools are using Collaborate to play games like hangman and noughts and crosses. This is a great way for the kids to get to know each other before their face-to-face and we heard a good story about how Collaborate is also creating friendships outside of school:

"Just want to share the news a child in my class told me today. That child had been to Jump Lanes a local recreational facility within our city where they spend their time bouncing on trampolines. Whilst there they had spotted a child from our partner school that they had recognised through the use of Collaborate. Due to this they were quite willing to speak to each other during their time there. Even though this was a chance meeting it was nice to hear that the children were willing not only to talk to each other but more importantly spend their time playing together. In the words of

Van Morrison it's nice to hear "there'll be days like these"..."

Face-to-Face

Schools either organise their own face-to-face meeting or come to events at Ulster University, planned for the end of March. Here are just 2 brief reports from schools that held their event early on...

"The schools ... started the morning of Friday the 27th with video conference. On this the children discussed their online contributions and what their expectations were for the tour of Derry's Walls later on in the day. The bus left ...The children from each school then had to sit beside a pupil not from their own school and find out five pieces of information regarding the person sitting beside them. For the tour the

children were then put into their five groups consisting of pupils from each school and together they walked the Walls with the guide getting the history of the city in which they live. Not only was this informative it proved very enjoyable with both sets of pupils mixing very easily so much you were nearly afraid to stop the conversations so the guide could give his

information. The collaboration that we had online helped with this as the children were not strangers to each other and were excited to meet the person in real life as opposed to a face on screen."

"Our schools had their face to face meeting at W5 this week.

It was a fabulous experience for both schools. We

had the opportunity to learn, play and eat together! The technology challenges lent themselves brilliantly to collaboration and the pupils worked together in teams to design, build and race cars. This encouraged lots of discussion. Problem solving and excitement. After working together in teams it was easier to make friends on the climbing activity and on the galleries. We all sat together for lunch, and we saw lots of discussion and sharing of ideas and experiences. It was a really positive experience for all the children, and adults, involved. We are looking forward to meeting online next week and launching our Fairtrade themed collaboration."

You can read more about what other schools are doing in the teachers' lounge online discussion in Fronter.

Impressions

Ulster University students are working in most of the schools through a volunteering initiative called Tutoring in Schools. Here are some of their comments, and the teachers they are working with.

Further information about ePartners is available from Professor Roger Austin – rsp.austin@ulster.ac.uk

Partnership between teacher & university students

"Our pupils have just completed a really worthwhile session with the 2 students. Throughout the week our children have experienced some problems saving and retrieving contributions that they have made together with importing images onto discussion boards, these ladies have spent time with us and ironed out all our issues and our children are becoming more confident as a result. Many thanks, I'm learning so many ICT skills myself!" - Teacher

"If at any point the pupils, as a whole class, become loud, the teacher has created a 'time out' phrase whereby he

shouts "pineapple, pineapple" and the whole class respond by shouting back "spikey on top". After this, the pupils sit quietly on their seats and behave." - Student

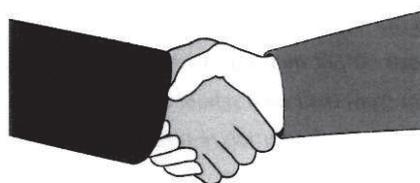

"The teacher offers plenty of support to us when we are leading the class. He will think of ways to help us get the children engaged and often start discussions. We feel very much as though we are working alongside him in this project... We feel very blessed to have such an engaged teacher who loves the project!" - Student

"The teacher is as supportive to us in this project as we are to him; ensuring the class are engaged at the beginning of the project

and supporting our input frequently" - Student

"The pupils in this class are very energetic and enthusiastic about learning and very excited about taking part in the E-Partner project. It is very rewarding to see the pupils getting so involved in something which we have helped organise. The teacher is very inspirational to both the pupils as well as myself and I feel I could learn a lot about organisation and leadership skills from her teaching methods" - Student

Using Fronter for pupils to build trust

"The children absolutely love the "pen-friend" aspect of the project and have found that they have many things in common. It's a great experience of them to enter into the world of "e-mail" to share information." - Teacher

"Fronter worked perfectly for us. Children enjoyed posting about themselves but especially loved reading about the pupils in our partner school. Some great conversations starting already." - Teacher

"After the past two weeks the children in the 2 schools are getting to know each other through Fronter and responding to each other's messages; today after a few teething problems we managed to get

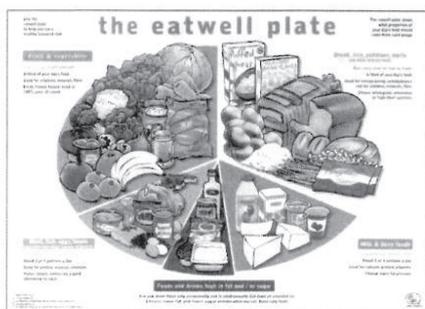

Further information about ePartners is available from Professor Roger Austin – rsp.austin@ulster.ac.uk

them talking through the use of Collaborate. After the initial shyness and giggles there was some positive discussion work.” – **Teacher**

“Pupils really enjoyed posting and finding out what their partners like and are interested in. We played a game of snap! Spreadsheet took a little while to type in and to avoid children staring at the computer thinking about interests, we made a paper copy in a worksheet layout for the children to fill in. This helped to speed things up and also allowed for discussion both in class and when the children typed their comments.” – **Teacher**

Working together on joint projects

“Week 2 went very well! We discussed and explained 'Healthy Shopping' to Primary 6. To further highlight this topic, we discussed the 'Eat Well Plate', using suitable activities to make it interesting for the pupils. In keeping with healthy shopping, we used flash cards suggesting sugar swap ideas.” - **Student**

“We explained the Fronter task that we would like them to carry out. This was to visit a supermarket and note down the

various flavours and colours of cupcakes that were available on shelves. We then invited the children to report their findings into the discussion board on Fronter.” - **Student**

“They have all been using the discussion boards on the Fronter page to discuss their ideas and concepts and all seem willing to engage with one another. They will also be using Collaborate this coming Friday to speak to the school and they will be doing this within their groups. They seem highly amused and are looking forward to this experience.” - **Student**

“They all really enjoy the discussion board with the other school as they really feel as they are getting to know the pupils they are working with when discussing as a group the various different recipes to create” - **Student**

Dealing with technology...

“However, as each pupil within my school has access to an iPad, they were unable to complete certain activities on an individual basis due to not having Adobe Shock Player. However, I made sure to turn this negative into a positive, and solve the problem by completing this activity as a

Further information about ePartners is available from Professor Roger Austin – rsp.austin@ulster.ac.uk

group and using one computer which allowed the pupils to work as a team and communicate effectively with each other."

- Student

"Limited resources within the school means that each child does not have their own computer, however allocating them into their ePartner groups from week 1 has helped them work as a team through all activities. As a result pupils have been open to all suggestions made about their new product and have even mentioned that their ePartners may have different suggestions."

- Student

"'Collaborate' was not as successful as we would have liked it to have been due to poor internet connection, however eventually we got it to work and both schools were able to communicate effectively over the webcam and come up with their final cupcake ideas. The chance to actually see the pupils in the partner school via webcam made the whole project become even more exciting for the pupils."

- Student

Working with Pupils...

"The beauty of working with younger school children is that they are less aware of the difference in backgrounds and cultures than older children may be. To children aged 10 or 11, friendship is friendship; it is this pure and simple nature that makes the E-Partnership so easy! The children are being exposed to other backgrounds in a natural way, using learning and fun as the primary focus. The

children are engaging with their partner school well on the discussion boards, and are freely sharing their ideas and coming up with compromises to ensure that everyone is pleased. I believe this helps the children to develop key negotiation skills as well as team work abilities."

- Student

IT Surgery

Remember if you need any help regarding problems with Fronter and Collaborate get in touch with Eoin. If it is a problem with login details your question would be better put to C2K.

If you would like to arrange a video conference session with Eoin to discuss any technical problems you are having send him an email –

Further information about ePartners is available from Professor Roger Austin – rsp.austin@ulster.ac.uk

Professor Austin UU

Connecting every school in Northern Ireland to shared education; lessons learned from the Dissolving Boundaries Programme

1. The challenge

At present the Department of Education says that around 20% of schools in Northern Ireland have had no involvement in any form of shared education. This presentation offers one way that these schools could be connected while also offering many others who have had some inter-school contact, a model to extend and deepen their partnership.

2. Blended learning

2.1 Blended learning is used to describe contact between schools which is based on a mixture of using ICT (Information Communication Technology) and face to face contact.

2.2 Evidence from the Dissolving Boundaries Programme which ran from 1999-2014 shows that there are considerable benefits to linking schools in this way.

3. Lessons from the Dissolving Boundaries Programme

3.1 The DB programme linked 50,000 young people aged 8-17 in Northern Ireland with young people of the same age across the border. 2,600 teachers in 570 schools, a mix of special, primary and post-primary were involved. The programme was funded by the Departments of Education in Belfast and Dublin but managed by the Schools of Education at Ulster University and Maynooth University.

3.2 **Lessons for teachers; the key role of meeting and planning.** Teachers from linked schools met at the start of the school year and planned the focus of their work, how they would use both real-time video-conferencing, a Virtual Learning Environment and a face to face meeting with their partner.

3.3 **Lessons for teachers; embedding work in the curriculum;** the outline plan indicated what activities would take place over a whole school year and in every case, teachers embedded their work in the curriculum of their respective schools. This included how the ICT work would relate to the expectations from CCEA about the ways that ICT should be assessed. Many different areas of the curriculum were used, ranging from science, enterprise, history, languages, history and the environment. This meant that a very wide range of teachers were involved, not just specialists in ICT.

3.4 **Lessons for pupils;** both internal and external evaluation showed that even a year after they had completed their involvement in the DB programme there were noticeable differences between pupils who had been involved in the programme and matched pupils in the same schools who had not. These included a greater degree of respect for difference, a stronger capacity for team-work and cooperation and significantly enhanced ICT skills. Pupils enjoyed having an audience for their work and were highly motivated to produce their best work.

3.5 Lessons for programme coordination. Although the University took the lead in managing the programme, it worked in close partnership with C2K, CCEA and the Education and Library Boards. This ensured that a wide variety of different types of school were involved, that ICT provision was appropriate and that ICT work was compatible with CCEA requirements.

3.6 The University employed 2 staff to run the programme by matching schools, (to ensure that classes were of roughly the same age and ability) providing training for teachers, monitoring the learning that had been planned and administering grants to schools to support the work.

Teachers felt strongly that there was a need for 'third party experts to train, support and encourage teachers in this specific area of education'. (online discussion on the role of ICT in shared education)

- 3.7 **Costs;** schools were given a grant of £350 towards the cost of face to face meetings and in most cases this was supplemented by the schools. Teachers who completed the agreed work programme were given a grant of £500 in their first year of involvement reducing to £200 p.a for any subsequent years. The average cost per pupil of taking part was £75 per annum. On average, schools stayed with the programme for 4 years.

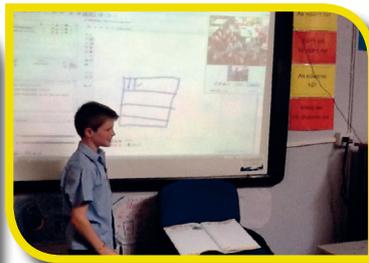

4. Possible implications for shared education

- 4.1 Much of the work done in shared education to now has been based on moving young people physically from place to place; insufficient attention has been paid to the role of ICT as a means of extending contact between teachers and pupils through ICT.
- 4.2 This type of contact not only makes use of the existing ICT infrastructure in every school in Northern Ireland but does so in a very cost-effective way. Furthermore, the skills that young people develop in using ICT for sustained contact with their peers are just as important for the work place as they are for community cohesion.
- 4.3 Using a blended approach to contact, both ICT and face to face, increases the potential for every school, irrespective of its geographical location, to be part of the shared education programme.
- 4.4 A short pamphlet, 'The Role of ICT in linking schools; emerging lessons from the Dissolving Boundaries Programme', has been sent to every school in Northern Ireland to raise awareness of the potential of ICT. (copies available for the Education Committee)
- 4.5 The University of Ulster is currently running a programme called 'ePartners' which is modelling a blended learning approach by providing student mentors to work alongside teachers in cross-community partnerships.

Professor Roger Austin

School of Education, Ulster University, Coleraine

The role of ICT in linking schools; emerging lessons from the Dissolving Boundaries Programme, 1999-2014

The Dissolving Boundaries programme, funded by the Department of Education in Northern Ireland and by the Department of Education and Skills in the Republic of Ireland, has linked 50,000 young people, 570 schools and 2,600 teachers on cross-border work over 15 years, using ICT as the main means of communication, supported by a face to face meeting for the teachers and the pupils. The programme has been managed by the School of Education at the University of Ulster and the Education Department at Maynooth University.

We summarise in this paper key lessons that have emerged about the best ways to use this kind of blended learning; we hope this will prompt discussion of possible implications for policy and practice in shared education in Northern Ireland.

1. Optimum conditions for linking schools

Research on the Dissolving Boundaries programme and others around the world suggests that links work best when the following conditions are present;

- 1.1 The link is for a **whole school year** - this gives teachers time to become familiar with the technology and for children to develop relationships.
- 1.2 The link is based around **regular online contact** through both a VLE and video-conferencing, **supplemented by face to face contact** relatively early in the year.

- 1.3 Teachers from linked schools are given the **responsibility to plan the focus of the work together**, including the use of ICT and the location and timing of the face to face meeting.

- 1.4 The link is between **two classes in two schools** (rather than larger clusters of schools); on the DB programme, it was noted that when teachers became confident in their use of ICT for working with another school, some principals introduced the programme to more than one class.

- 1.5 On the DB programme, schools were allowed to **continue their involvement in the programme for several years** provided that they had met the terms of their agreement. Even with a reduced grant, most schools chose to continue so that successive year groups of pupils could benefit.

- 1.6 The framework described above worked well with **special schools, primary schools and post-primary schools with children aged 8-17**.

2. Key Theory: the ideas underpinning Dissolving Boundaries project work

The Dissolving Boundaries Programme was strongly influenced by a theory called the ‘contact hypothesis’ which, in simple terms, explores the conditions in which contact between two intercultural groups is likely to lead to positive outcomes for all the participants.

The contact hypothesis says that, wherever possible, contact between two groups should be based around the following:

- 2.1 It should be cooperative rather than competitive
- 2.2 It should be based on group to group rather than one to one
- 2.3 It should be long-term rather than short term
- 2.4 It should be between those of ‘equal status’
- 2.5 It should be given institutional support

3. Operational issues

3.1 A face to face planning conference for teachers is essential and should be held early in the school year; there are considerable advantages in making this a residential event to give teachers time to develop a working partnership. From experience, we found it was better to match teachers before the event started, rather than leaving this to chance at the event.

3.2 The planning conference should familiarise teachers with what **collaborative learning** means and how ICT tools can contribute to this process; part of this includes an understanding of the central role of group to group contact. Teachers should be trained together in the use of appropriate ICT tools. The use of **Moodle** in the Dissolving Boundaries programme has been particularly effective in providing both a **forum** for the exchange of personal messages and a **wiki** where pupils can contribute to a shared web-space for their curriculum project. The selected VLE should be colourful, child-friendly, intuitive and fun.

3.3 At the conclusion of the planning conference teachers should complete a **learning agreement** outlining in some detail what they plan to do and when; copies of this should be made available to the conference organisers and the Principals of the respective schools. Examples of good practice of successful projects should be provided for teachers, as for example contained in the Dissolving Boundaries Yearbook. An exemplar agreement form could also be provided.

3.4 In many cases, particularly in primary schools, a good starting point for the pupils is the sharing of personal information. In the case of DB, a template was set up into which details could be entered by individual pupils. This information could then form the basis for a database which can be shared and used for data retrieval, graphs etc; more broadly, **any work done should be anchored in the curriculum and contribute to literacy, numeracy and ICT skills** (for example the UICT provision in the use of ICT for 'exchange').

3.5 The Dissolving Boundaries programme found that a **follow-up training session in January was beneficial**. This was a "just in time" training event and was a very useful way of ensuring that teachers were confident in the use of wikis for their collaborative curricular work.

3.6 Teachers reported that the **most successful face to face events** were those where there were maximum opportunities and time for the pupils to build on the relationships from their online groups. While most put the emphasis on **team-building**

through outdoor pursuits there were some very good encounters around curricular topics, such as history, geography, music and enterprise. These contacts often led to increased online interaction.

3.7 The DB team found that it was important to have a **defined day towards the end of the year to celebrate success** and to share the work done in the wider school and local community. Dissolving Boundaries Day, usually held towards the end of May, acted as a focus for all 200 classes involved; many held special events for parents, did a live video-conference with their partner school and posted messages to an open forum. This event also gave teachers the opportunity to assess with their pupils what they had learned from taking part in the programme.

3.8 A **website**, such as the one used in the DB project, (www.dissolvingboundaries.org) gave all teachers a **single point of access** for the VLE but also provided **key information on upcoming events for schools**, a **repository of research** carried out on the programme and DVD material to inform the general public what the programme was doing.

4. Costs and benefits

Most of the hardware and software needed for linking schools is already in place in each school and this reduces the cost of maintaining the collaboration.

4.1 The **average cost per pupil** of taking part in the Dissolving Boundaries programme was **£75 p.a.**

4.2 Research and evaluation of the programme indicates that there were **considerable benefits**.

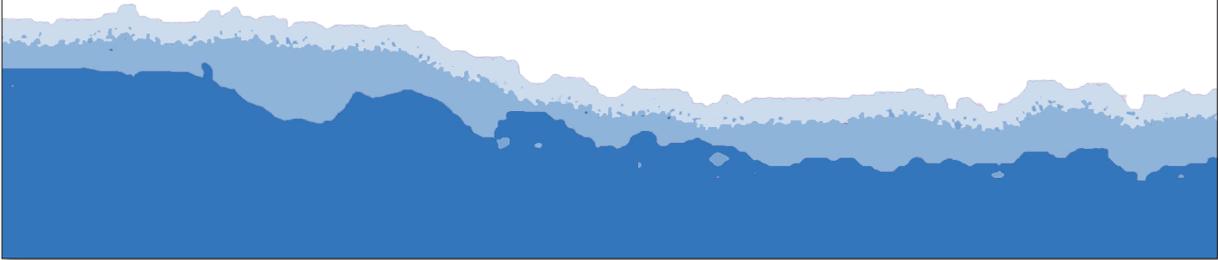

4.3 **Teachers gained confidence and competence in using a wide range of ICT tools for collaborative learning; they developed as 'extended' professionals by joint-planning with other teachers** and learning how to embed ICT in their everyday practice. They gained skills in handling diversity by working with teachers and children from across the border.

Teachers also had the opportunity for self-evaluation, comment on the work achieved, which was then presented in the form of a DB Yearbook. This Yearbook served as a showcase for the joint work done, as well as giving exemplar material to teachers new to DB.

- 4.4 Pupils not only gained much **wider understanding of how to use ICT for communication** but through working together with children from another school, learned important lessons about **cooperation, respect for difference and team-work**. The effects of this were **clear even a year after children had taken part** in the programme.

5. Programme Management

- 5.1 Evidence from the programme suggests that effective linking between schools **requires an external agency** to do the following: **match schools** (to ensure suitable ages, ability and curricular focus), **train teachers** in the use of ICT for effective links; **monitor participation** and offer support if there are problems; **administer any grants** for teacher attendance at training or for face to face links. The agency also needs to **evaluate the programme**. There may also be a need for **external evaluation** to supplement internal procedures.
- 5.2 There are advantages to be gained when the external agency is in the **HE sector** since this can enable the ongoing development work to be **quickly disseminated to trainee teachers** and to experienced teachers studying Masters programmes. It also increases the probability that **research and evaluation** of any development work will be consistent with other research priorities. (See below for published research carried out by DB). In the case of cross-border work, there is a strong case for the programme to be implemented by two bodies, one in each jurisdiction. In this model, regular meetings of both partners need to be held to ensure that all aspects of the programme, from school recruitment to training and monitoring are managed in an effective manner.
- 5.3 It is important that there should be **regular meetings of the funding agency** and those that **implement the programme**; **budgets need to be approved for at least a year** with clear agreement on broad lines of expenditure at the outset.
- 5.4 One of the strengths of the DB programme was the range of partnerships it established with other agencies; in Northern Ireland these included C2K, CCEA and the Education and Library Boards. These partnerships meant that there was a synergy between the ICT goals of DB and C2K, that work in DB was aligned with CCEA expectations for the use of ICT and that staff in the ELB's were able in the early stages of the programme to assist in the nomination of schools and in supporting them.
-

JOINT EVALUATION REPORT

Department of Education and Skills Inspectorate – Republic of Ireland
Education and Training Inspectorate – Northern Ireland

Dissolving Boundaries Programme
2010/2011

January 2012

1. Introduction

1.1 Rationale

The Dissolving Boundaries (DB) programme uses information and communications technology (ICT) to facilitate cross-cultural educational linkages between schools in Northern Ireland and the Republic of Ireland.

In 1998, the Taoiseach (Republic of Ireland) and the Prime Minister (Great Britain and Northern Ireland) took part in an event of historic and educational significance. A video-conference link between a school in Northern Ireland and a school from the Republic of Ireland was established. The occasion marked the first time in which two political leaders had used an ICT resource in schools across both jurisdictions. This virtual meeting led to the start, in 2000, of the DB programme, managed by the Schools of Education at the University of Ulster (UU) and at the National University of Ireland (NUI) Maynooth.

The DB programme is overseen by a steering committee. This comprises representatives from the two programme management teams and also of the Department of Education and Skills (DES) Republic of Ireland and the Department of Education (DE) Northern Ireland, the two co-funding departments of the DB programme.

In June 2010, both DE and DES agreed that a formal evaluation of the DB programme be conducted. This decision arose from a meeting of the North/South Ministerial Council (NSMC), Education Sectoral Committee, where it was decided that a joint evaluation be undertaken to ensure that the DB programme was delivering on its original objectives effectively, efficiently and economically.

1.2 Dissolving Boundaries Programme

The DB programme invites primary, post-primary and special schools in both jurisdictions to form partnerships and to develop a relationship based around a particular curriculum-related project. The DB programme's key aims are three-fold:

- to engage pupils in collaborative, curricular-based projects;
- to promote mutual understanding through collaborative cross-border links; and
- to promote sustainability of the use of technology in schools.

The UU and the NUI, Maynooth operate the DB programme and work directly with the participating schools. This work includes initiating and monitoring school partnerships.

2. Scope of the Evaluation

2.1 Terms of Reference/Evaluation Objectives

The Education and Training Inspectorate (ETI) in Northern Ireland and the DES Inspectorate in the Republic of Ireland, on behalf of DE and DES, conducted a joint evaluation of the DB programme during the academic year 2010-2011. This evaluation sought to report on the extent to which the DB programme has achieved its key aims. The impact of the 'enterprise' strand of the DB programme, through which ten cross-border school partnerships have been formed at both primary and post-primary level, was also investigated.

In carrying out this evaluation, ETI evaluated:

- the quality of the leadership and management of the DB programme;
- the quality of the provision in a representative sample of primary, post-primary and special schools; and
- the achievements and the standards attained by the pupils.

The evaluation of the DB programme conducted by the DES focused on four main areas of enquiry. These key areas of enquiry ascertained the quality of:

- management and leadership;
- planning;
- teaching and learning; and
- support for pupils in primary, post-primary and special schools.

Both the ETI and the DES Inspectorate identified the main strengths and areas for development of the DB programme through the examination of relevant documentation, visits to schools, meetings with principals, teachers, pupils and with the DB programme management teams.

Recommendations are made in this evaluation for DE (Northern Ireland), for DES (Republic of Ireland), for the DB programme management teams, for participating schools and for Education and Library Boards in Northern Ireland. (See Section 4.2)

2.2 School Selection

The evaluation of the DB programme in the Republic of Ireland was conducted in sixteen schools, including special schools and 'enterprise' schools. A wide range of schools was identified and selected for evaluation, in accordance with the following criteria: large/small schools; urban/rural locations; geographically dispersed schools; all-Irish medium schools (scoileanna lán-Ghaeilge) and single sex and co-educational schools. The school visits took place in March 2011. Ten inspectors from the DES Inspectorate, five teams of two inspectors, conducted the evaluation, working together on a cross-sectoral basis.

In October 2010, ETI selected and visited a representative sample of fourteen schools which comprised the three phases of primary, post-primary and special schools. There was a balance sought in school management type, which included controlled, maintained, Irish medium and integrated schools.

2.3 Methodology

A broad range of data-gathering methods was employed. Following meetings with each inspection team, self-evaluation exercises were completed by the two DB programme management teams, ie, in NUI, Maynooth and in UU. A review of documentation in relation to the DB programme was also undertaken.

In preparation for the DB evaluation, an ETI inspector attended the DB Planning Conference in September 2010. At this conference, teachers from existing DB school partnerships met and planned for the coming year; new school partnerships were also established.

Prior to the school visits in Northern Ireland, every school involved in the DB programme, both past and current, was invited to complete an on-line questionnaire. Approximately 44% of these schools completed and submitted the on-line questionnaire. In the Republic of Ireland, all participating schools were invited to respond to an on-line questionnaire at the end of the evaluation phase. There was a response rate of 31% from schools participating in the DB programme in the Republic of Ireland. The information obtained from the on-line questionnaires in each jurisdiction was analysed to inform this evaluation and to augment the evidence arising from the visits to the sample of schools. (See Appendix)

During the school visit stage of the evaluation in both jurisdictions, the inspectors conducted interviews with school personnel, including principals, class teachers and DB programme teacher co-ordinators, to discuss the whole-school approaches to the programme and to examine the impact the initiative has had on the pupils' learning. The quality of training and support which teachers have acquired for the implementation of the DB programme in their school was ascertained. Interviews with focus groups of pupils were also conducted

to find out about their experiences of the programme. Inspectors evaluated the quality of teaching and learning which pupils receive in the context of the DB programme sessions, including 'live-link' sessions. Pupils' work samples, whole-school and classroom planning documentation were reviewed. Inspectors also reported on pupil progress in the development of a variety of skills.

The schools visited by ETI were invited, prior to the visits, to complete a self-evaluation proforma based on their work in the DB programme, which formed the basis for discussion with the visiting inspector.

2.4 Quantitative and Qualitative Terms

For the purposes of this evaluation, a number of quantitative and qualitative terms are used which should be interpreted as indicated in the tables below:

Quantitative	% of Occurrence
almost all	more than 90%
most	75%-90%
majority	50%-74%
fewer than half	25%-49%
a small number	16%-24%
a few up to	15%

ETI Inspectors relate their judgements to the following six performance levels:

- Outstanding
- Very good
- Good
- Satisfactory
- Inadequate
- Unsatisfactory

DES Inspectors relate their judgements to the following four performance levels:

Performance Level	Example of descriptive terms
Significant strengths	Excellent; of a very high quality; very effective; highly commendable; very good; very successful; few areas for improvement
More strengths than weaknesses	Good; good quality; valuable; effective practice; competent; useful; commendable; fully appropriate provision although some possibilities for improvement exist; adequate
More weaknesses than strengths	Fair; scope for development; experiencing difficulty; evident weaknesses that are impacting significantly on student/pupil learning
Significant weaknesses	Weak; unsatisfactory; insufficient; ineffective; poor; requiring significant change, development or improvement; experiencing significant difficulties

3. Key Areas of Enquiry

3.1 Quality of Management and Leadership

- The strategic leadership of the DB programme in both the Republic of Ireland and in Northern Ireland is very good. In particular, the programme has contributed to and utilised international research to ensure that it is focused on improving the quality of the learning experiences for the participants. The DB programme management teams do not have a sufficiently rigorous and systematic approach to self-evaluation with the participating schools, focused on the outcomes for the learners; this has been identified in their own priorities for improvement.
- The DB programme seeks to enable learners to develop a clearer understanding of different social, economic, political and cultural perspectives through their experience of dissolved boundaries at many levels. The school links across the two jurisdictions involve different school management type, size and geography. The work of the programme in Northern Ireland is not linked explicitly enough by schools with the aims of the School Community Relations Programme (SCRCP)¹. Specifically where a school is both in the DB and SCRCP programmes, the online environment is not used frequently enough as a tool to promote community relations across a divided society.
- The school partnerships are not rigorous enough in their quality assurance of the final piece of work of the pupils, as a result, there is insufficient focus on the quality of the learning experience; this is an issue for the DB programme management teams.
- The DB programme management teams in both jurisdictions provide very good initial training and on-going support to all the participating schools. This support includes initial set-up and a helpline for technical support.
- Very good communication and collaboration with the partner school has been established and maintained in almost all schools visited as part of this evaluation. In the best practice, in approximately one-third of these schools, the senior management team (SMT) has a clear view of the potential to increase links with the partner school outside the parameters of the DB programme. In a small number of school partnerships, methods of communication such as video-conferencing, telephone and e-mail contact are used to monitor progress and to adjust plans as necessary. In Northern Ireland, almost one-third of the schools report a lack of consistent reliability in the use of the technology to support the programme. An over-reliance on one mode of communication, in a few instances, has led to limited contacts with the partner school. It is recommended, as identified by DB programme management teams, that consideration be given by teachers to planning for and utilising the alternative forms of communication available through the programme.
- There is very good management and leadership of the DB programme in a majority of the schools visited. This evaluation highlights the need to ensure that the DB programme does not lie solely with the ICT co-ordinator or class teacher involved, but that the principal, SMT and staff are clearly aware of its impact on the quality of learning. In schools where best practice was observed in both jurisdictions, it was found that participation in the DB programme is highly valued and that capacity building among members of the teaching staff is developed so that the future sustainability of the benefits of the programme within the school is ensured. In these schools, there is an evident strong spirit of collegiality and co-operation among the teaching team.
- In the Republic of Ireland, there is very good provision for the DB programme in schools where a significant cohort of pupils from various countries and of different religious backgrounds was enrolled. In these schools, the DB programme enables the pupils to work well in teams, thus breaking down barriers within and outside the school. In a few

1 SCRCP was replaced by the Community Relations, Equality and Diversity in Education policy on 24 March 2011. Findings and recommendations would apply to the new policy.

schools, however, inspectors highlighted the need to set clear expectations for ensuring equality, diversity and the inclusion of all pupils.

- In a small number of schools in the Republic of Ireland, it was found that there was insufficient emphasis on ensuring that the DB programme, over time, involves more classes and increases the number of school partnerships made.
- There are very good opportunities for the effective professional development of teachers. For example, at the planning conference, the participating teachers are trained well in the use of the virtual learning environment, with a particular focus on effective learning/teaching through the use of digital technology. In addition, the teachers view examples of completed projects. This sharing of good practice, however, is not developed sufficiently and there is insufficient rigour in the evaluation of the outcomes of the school projects for the learners.
- There are effective links with a range of stakeholders. In Northern Ireland, the DB programme management team links with C2K, the Curriculum Advisory and Support Services (CASS) of the Education and Library Boards (ELBs), and the Curriculum Council for Examinations and Assessment (CCEA) to ensure that the DB programme supports the Northern Ireland Curriculum (NIC) to meet the current and future needs of learners. In both jurisdictions, the liaison with the Joint Business Council (JBC), comprising the Confederation of British Industry (CBI) and Irish Business and Employers' Confederation (IBEC), ensures a greater emphasis on the development of pupils' entrepreneurial skills through jointly-presented projects.
- The programme makes very good use of ICT facilities in a safe and secure environment. The DB programme management teams ensure that there is a high profile given to e-safety and to pupils working in a secure on-line environment. The teams have planned for the ongoing progression in the use of elements of ICT, for example, widening the communication from forums and wikis to include class blogs, podcasts and photo-sharing activities.

3.2 Quality of Provision

- The overall quality of the provision of DB in the schools visited during the evaluation ranged from satisfactory to very good; in most schools, it was good or very good.

3.2.1 Quality of Planning

- The quality of the school planning documentation in relation to the DB programme is good in most of the schools evaluated, particularly in established partnerships.
- The DB programme management teams place strong emphasis on the importance of detailed action planning at the outset of each partnership. Most of the schools (89%) who responded to the on-line questionnaire in the Republic of Ireland reported that an action plan for the DB programme with the partner school had been formulated. In Northern Ireland, 61% of the schools incorporate the DB programme into the School Development Plan for the school. (See Appendix) There is, however, a variation in the quality of planning. Where a culture of planning is well-established in the school, the clear benefits and positive impact of the planning documentation on the quality of the DB programme provided are evident. In this best practice, in fewer than half of the schools visited, learning intentions are clearly identified, the pupils contribute to the planning process, there is considered use of learning activities and there is evaluation of the impact on pupils' learning.
- In the least effective practice, the planning consists of a list of activities to be completed, with limited evaluation on the learning attained by the pupils. In these schools there is insufficient clarity in the planning to incorporate cross-curricular themes, to facilitate progression in the pupils' learning and to ensure that the learning from involvement in the DB programme is disseminated more effectively within the school.

3.2.2 Quality of Teaching and Learning

- In the majority of schools, the quality of the teaching and learning resulting from the DB programme is very good. The teachers provide high levels of enthusiastic and effective support for their pupils' learning.
- In most schools, the DB programme has facilitated a greater emphasis on the learning process and encouraged the participating teachers to focus on effective learning and teaching strategies. Almost all schools implement a broad range of teaching approaches in the delivery of the DB programme. Most of the schools who responded to the on-line questionnaire in both jurisdictions reported that teachers used a greater range of teaching and learning strategies as a result of their participation in the DB programme.
- There is a strong, inclusive ethos within most of the school partnerships. This encourages participation from all the children, including in particular, those children with special educational needs (SEN) in mainstream schools. The nature of the on-line learning environment is motivating and appropriately challenging given the openness and transparency of the learning and participation by each child. In Northern Ireland, over a ten-year period, a majority of the special schools have been involved in the DB programme. The special schools involved in the evaluation reported that there is limited cognisance of the particular needs of their pupils in the programme. For example, the schools report that there is insufficient face-to-face contact at the start of the partnership to create a more meaningful context for the pupils in special schools.
- In a majority of school partnerships, effective use is made of a range of ICT tools and other resources, which are well matched to specific learning objectives and provide high-quality support for classroom practice. Good learning outcomes are demonstrated through pupils' knowledge of ICT and through their familiarity with the use of a variety of technology.
- The 'enterprise' strand of the DB programme has made a significant positive impact on the outcomes for pupils. Inspectors noted that, as a result of schools' participation in this aspect of the programme, pupils across both jurisdictions were developing very good entrepreneurial skills.
- There is very good alignment between the aims of the DB programme and the curriculum in both jurisdictions. In Northern Ireland, the DB programme management team encourages the participating schools to gain ICT accreditation. There is very good use made of the CCEA support materials in planning projects with a particular focus on the development of literacy. It is timely that the programme management team should now consider a greater focus on the development of numeracy.
- School responses from the on-line questionnaires in both jurisdictions indicate that the purposeful promotion of cross-cultural integration is emphasised. However, inspectors in the Republic of Ireland found that pupils in more than half the schools they visited did not have a deep understanding of the traditions or community of their partner school and that little emphasis was placed by the schools on the exploration of cultural similarity and difference.

3.2.3 Quality of Support

- Very good teaching is evident in special schools in the Republic of Ireland, where tasks are differentiated and where learning targets in pupils' Individual Education Plans (IEPs) are linked with specific elements of the DB programme. In the majority of the schools visited, inspectors from both jurisdictions reported that the DB programme facilitates the implementation of differentiated learning activities.
- In most schools in both the Republic of Ireland and in Northern Ireland, inspectors commended the whole-school emphasis placed on having an 'acceptable use policy' for the Internet. Schools ensure that the AUP is signed by parents and pupils. Good practice is also evident through the display of visual resources in the pupils' immediate learning

environment and through pupils' familiarity and understanding of internet safety issues during the DB programme activities.

- Pupil engagement and interest in the programme is very positive in the majority of the school partnerships; the pupils have ownership of the learning. The DB programme provides opportunities for pupils to acquire and develop key skills and knowledge in almost all schools visited during the evaluation. The investigative and practical approaches to learning and the sense of an external audience create high levels of motivation. Whilst the teachers facilitate the setting up of the partnership, the pupils increasingly take responsibility for the outworking of the individual projects.
- Given the examples of the high levels of learning by the pupils, not enough teachers maximise opportunities for the summative assessment of the learning, in particular, thinking skills and personal capabilities. The formal recording of the attainment of pupils and the tracking of their progress in the DB programme is not sufficiently rigorous.

3.3 Achievements and Standards

- In most of the schools, the pupils engage in their learning enthusiastically and with good levels of independence and confidence. The pupils have good opportunities to communicate in a range of meaningful curricular contexts, enabling them to apply and develop a range of skills across the curriculum, for example, communication and ICT skills.
- The DB school partnerships provide very good opportunities for the development of a wide range of the pupils' skills such as thinking, personal and social skills. For example, the pupils engage in working collaboratively, applying their organisational and planning skills, and developing their ability to problem-solve and to think critically and creatively.
- Pupils with SEN are achieving well through the DB programme. Through the medium of ICT, the pupils are enabled to overcome barriers to learning and they can better access aspects of the curriculum. Pupil engagement and interest in the programme is very positive and most schools promote the creation of an inclusive environment which supports learning and celebrates achievement. In a small number of schools, pupil engagement could be further enhanced through greater comparability with the profile of pupils in the partner school.
- There are very good opportunities for the pupils to develop their digital and media literacy through the DB programme. In addition, the pupils benefit from interaction with other pupils beyond the boundaries of the classroom. In both jurisdictions, in schools where there was very good practice the pupils experience increased mutual understanding of different perspectives.

4. Summary of Main Findings

4.1 Overall Summary of Strengths

- In the majority of schools, the DB programme achieves its key aims.
- The strategic leadership of the programme in both the Republic of Ireland and in Northern Ireland is very good.
- The DB programme management teams, in both jurisdictions, provide very good initial training and on-going support to all the participating schools.
- Very good communication and collaboration with the partner school has been established and maintained in almost all schools.
- There is very good management and leadership of the DB programme in a majority of the schools.
- There are very good opportunities for the effective professional development of teachers.

- There are effective links with a range of stakeholders.
- The DB programme makes very good use of ICT facilities in a safe and secure environment.
- The overall quality of the DB provision in most schools is very good.
- The quality of the school planning documentation, in relation to the DB programme, is good.
- In the majority of schools, the quality of the teaching and learning is very good.
- In most schools, the DB programme has facilitated a greater emphasis on the learning process and has encouraged teachers to focus on effective learning and teaching strategies.
- There is a strong, inclusive ethos within most of the school partnerships.
- In a majority of schools, effective use is made of a range of ICT tools and other resources.
- The 'enterprise' strand of the DB programme has had a significant positive impact on the outcomes for pupils.
- There is very good alignment between the aims of the DB programme and the schools' curricula.
- Pupil engagement and interest in the DB programme is very positive in the majority of the school partnerships.
- In most of the schools, the pupils engage in their learning enthusiastically and with good levels of independence and confidence.
- The DB school partnerships provide very good opportunities for the development of a wide range of the pupils' skills.
- Pupils with special educational needs are achieving good standards of work through the DB programme.

4.2 Overall Recommendations

Dissolving Boundaries Programme Management Teams

- The DB teams should facilitate the schools in developing more rigorous and systematic action planning and self-evaluation processes.
- The DB team should ensure a greater focus on special schools in Northern Ireland in the school partnerships.

Schools

- Schools should disseminate the learning from involvement in a DB partnership across all classes and ensure that progression in the pupils' attainments and learning experiences is carefully planned for, tracked and evaluated.
- The boundaries between mainstream and special education should be dissolved further.

Education and Library Boards (ELBs) in Northern Ireland

- ELB officers should be made aware of the depth and quality of the work achieved through the DB programme and should assist in the dissemination of the examples of effective practice, for example, through the Area Learning Communities.
- ELB officers should disseminate the pedagogical approaches through ICT from DB programmes in the further development of the Schools Community Relations Programme (SCR²).

2 SCR² was replaced by the Community Relations, Equality and Diversity in Education policy on 24 March 2011. Findings and recommendations would apply to the new policy.

Department of Education (DE)

- DE should encourage the DB programme management team to identify more clearly the links for schools between the work of DB programmes and other initiatives such as SCRP, Extended Schools, Specialist Schools, and the Entitlement Framework.
- DE should ensure that the outcomes of the DB programme are linked more clearly to the principles of the Cohesion, Sharing and Inclusion policy.

Department of Education and Skills (DES)

- The DES should encourage a renewed emphasis by the schools on the exploration of cultural similarity and difference within school partnerships.

5. Conclusion

The overall provision in respect of the DB programme in both jurisdictions is of a high quality. Some very good features of highly effective practice have been reported in each of the areas of enquiry evaluated. There are areas for further development in maximising the potential the DB programme has to offer in aspects of its provision. The DB programme has demonstrated its capacity for sustained self-improvement. This is a valuable programme supporting high quality work which is being undertaken in the participating schools.

ETI Analysis of Online Questionnaires – 44% response

Management Type	Primary	Post Primary	Special	Total
Maintained	17	4		21
Controlled	11	3		14
Integrated	2	1		3
Special			3	3
Total	30	8	3	41

Key ETI responses received from online questionnaire:

- all the schools are aware of the key aims of the DB programme;
- 61% of the schools incorporate the DB programme in the school's development plan;
- in 63% of the schools, there is dissemination of the work in DB across the whole school;
- all schools agree or strongly agree that involvement in the DB programme has clearly led to 'dissolved boundaries' amongst the pupils and staff;
- 71% of the schools have carried out an evaluation of the benefits for the school of involvement in the DB programme; 54% of the schools have responded to the findings of the evaluation;
- 99% of the schools agree or strongly agree that there is a positive change in pupils' values and attitudes, e.g. open-mindedness, acceptance, self-confidence, empathy, sense of curiosity, as a result of participation in the DB programme;
- 99% of schools expressed the view that the DB programme provides value for money; and
- 98% of schools agree or strongly agree that pupils are more engaged with their learning as a result of their participation in the DB programme.

DES Analysis of On-Line Questionnaires – 31% response

Sector	Primary	Post Primary	Special	Total
	16	10	1	27

Key DES responses received from online questionnaire:

- all schools agree or strongly agree that their school is aware of the key aims of the DB programme;
- 89% of schools agree or strongly agree that an action plan for the DB programme with the partner school has been formulated;
- 85% of schools agree or strongly agree that there is capacity in their school to support and sustain the DB programme;
- 89% of schools agree or strongly agree that teachers use a greater range of teaching and learning strategies as a result of their participation in the DB programme;
- 93% of schools agree or strongly agree that the DB programme in their school links purposefully with other aspects of the curriculum;
- 96% of schools agree or strongly agree that the DB programme in their school makes effective use of a range of ICT tools and other resources;

- 96% of schools agree or strongly agree that there is very good support for pupils in the on-line environment regarding ICT safety;
- 89% of schools agree or strongly agree that they would like their school to continue its involvement in the DB programme in the future; and
- 85% of schools agree or strongly agree with the view that the DB programme provides value for money.

Professor Brandon Hamber

Submission to the Committee of Education Inquiry into Shared and Integrated Education

Professor Brandon Hamber

Incore (International Conflict Research Institute)
Ulster University

24 October 2014

Introduction

Northern Ireland remains a society emerging from conflict. While a peace agreement has been made, aspects of Northern Ireland society remain deeply divided. It is my view—based on over two and a half decades of experience working in societies emerging from conflict around the world and in Northern Ireland for nearly 15 years—that segregated education is a driver of division and needs to be addressed urgently.

There is of course sensitivity around the language used to describe Northern Ireland's education system. I will not review these debates here for two reasons. Firstly, others have already dealt with this issue comprehensively (Hansson et al., 2013), but secondly, because in many ways, the language is not what is important. What is important is that in 2014, almost 90% of children are educated in a school which is predominantly Protestant, or predominantly Catholic. DE figures show that almost half of Northern Ireland's school children are still being taught in schools where 95% or more of the pupils are of the same religion (Hansson et al., 2013).

When I share this fact with politicians, peacebuilders and academics around the world, they are astounded by it and specifically how little progress Northern Ireland has made with regard to integrated education which is considered internationally as a fundamental building block of sustained peace. Integrated education in this context is understood to be at a minimum, in divided societies, a schooling system that is dominated by schools with significant proportions of children of diverse traditions and backgrounds attending together.

That is not to say that segregated schools are inherently bad schools—many serve their children well, with an excellent academic education. However, it is questionable whether they are able to supply the core skills which a child needs in today's society: the ability to exist, work and play alongside children from other backgrounds within an explicit ethos that names, respects and celebrates diversity of background and belief. As the world globalises this is not only important locally but internationally—segregation is arguably failing our young children in terms of equipping them at an early age with the skills needed to maximise global opportunity. There is growing international research that shows that diversity increases productivity on a number of levels (Page, 2007).

Although those that run segregated schools would probably disagree, and separate or faith schools are not necessarily divisive (Hughes et al., 2013), research has found that segregating children on grounds of religion in a way that limits contact between them and other children generally promotes less positive attitudes of others. Globally, the United States Institute of Peace, one of the largest state funded peace building organisations in the world, concludes that ethnic segregation or integration of schools is an important structural aspect of education, and when ethnic groups are educated separately within the national education system important overt or hidden messages to students are inevitably conveyed about other groups in society (Cole and Barsalou, 2006). In Northern Ireland, research has convincingly confirmed that separate schooling on grounds of religion can create negative social attitudes

of those perceived as the “other” (for example, and among others, Hughes, 2011, Hayes and McAllister, 2009, Niens and Cairns, 2005).

Reasons to Promote and Encourage Integrated Education

Statutory Duty

A recent judicial review (Drumrath judgement May 2014) has reaffirmed the statutory duty of government (Article 64 of the ERO (NI) 1989) to promote and facilitate integrated education. The judge stated the Department needs to “be alive to the A64 duty at all levels”.

Peace and Reconciliation

The linking of integrated education to creating, sustaining and building peace has been ubiquitously asserted over the years. A few examples include:

The Belfast Agreement of 1998:

An essential aspect of the reconciliation process is the promotion of a culture of tolerance at every level of society, including initiatives to facilitate and encourage integrated education and mixed housing.

The Consultative Group on the Past:

The arguments about the ethos or quality of education provided in the faith based sectors have to be balanced against the reality that reconciliation may never be achieved if our children continue to attend separated schools (p.77).

The Peace Monitoring Report (2014) states that “the peace process has lost the power to inspire...without a vision of shared society to sustain it”. President Obama on his last visit to Belfast stated “...issues like segregated schools and housing...symbols of history that are a source of pride for some and pain for others...these are not tangential to peace, they are essential to it...”.

In addition to the broad statements, there is now a plethora of research that shows the benefits of integrated education in terms of attitudes towards those perceived as the “other”, as noted above (for example, Hughes, 2011, Hayes and McAllister, 2009, Niens and Cairns, 2005).

Outside of this sound academic research, what is interesting in that the vast majority of citizens also recognise the value of integrated education in terms of long-term peace. It has been found in a Millward Brown Ulster survey that 8 in 10 respondents (83%) perceived integrated education to be important for the promotion of mutual respect and understanding within a post conflict society (Hansson et al., 2013). It has been concluded that:

Data consistently reports that public support for formally integrated schools remains very high in terms of its contribution to peace and reconciliation, promoting a shared future, and promoting mutual respect and understanding (Hansson et al., 2013, pp.4-5).

In the extensive consultation carried out by the Consultative Group on Past they noted that “many emphasised the importance of education in building a better future and suggested that there should be more opportunities for integration” (Consultative Group on the Past, 2009, p.73).

In other words, hard facts and research aside, the general populace, having grown up in a divided society and using the intuitive wisdom that such struggles often imparts, recognise that integration is needed for ensuring a more peaceful future. Despite this, structurally and politically Northern Ireland is making little or no progress in that regard. This suggests that the key factors holding back integration are at the political level, and within the education

system itself. This is of grave concern, but also means that if the right steps are taken at these levels integration would not be something that the majority of the society would resist from the perspective of the peace process. In fact the opposite is likely, there is a general acceptance that integrated education is key to lasting peace.

Parental Choice and Equality of Provision

Many parents want integrated education. Research undertaken by both NICIE and IEF shows a high level of desire for integrated education. A recent report concludes after reviewing a range of attitudinal data, based on surveys such as Millward Brown Ulster (2008, 2003); Ipsos MORI (2011); Young Life and Times Survey (YLTS) (2003-2011); and Northern Ireland Life and Times survey (NILT) (1999-2010), that support for integrated schools remains high (Hansson et al., 2013). A recent Millward Brown survey found that almost 70% of those questioned were of the view that an integrated school was the best preparation for living in a diverse society. If data is aggregated from Ipsos MORI (2011) with the Northern Ireland Life and Times Survey (NILT 1999 and 2001) the support for “mixed schooling” has increased from 74% in 1999 to 81% in 2011 (Hansson et al., 2013).

Yet the provision—and therefore the choice—is simply not available to many parents. Indeed there is an inequality of provision. Comprehensive research on the subject has concluded that the main reason for preferences for integrated education not being met is insufficient numbers of shared spaces to accommodate demand (Hansson et al., 2013).

I have heard it said that the fact that integrated schools only make up 7% of the school population, about 22,000 children, is evidence in itself that there is no desire for integration. Those who say this are simply casting aside the number of available places and geographical availability of integrated schools, as well as historical realities. As has been pointed out, any level of integration was “a considerable achievement in the midst of conflict and within a divided society” (Hansson et al., 2013, p.3). The merits of the integrated movement in Northern Ireland have been studied and lauded the world over, but strangely they go underappreciated in Northern Ireland.

Parents who want an integrated education for their children do not currently have equality of access as compared to those who want to send their children to Catholic or Protestant dominated schools. Globally there is a move to recognise the right of minorities to send their children to schools of their choice, normally as an alternative to a secular state sector. This, of course, should be supported. In Northern Ireland, however, the situation is reversed where parents who want to avail of integration, which is generally the norm in other societies, have to argue for the right to integration.

In other words, there is a serious inequality in terms of the rights of parents who want integrated education. As with most inequalities, the context can work in such a way that some parents do not even know their rights are being violated when they are forced to choose a school based on a limited number of options in a context where this has become normative. In this context, the argument that parents’ “choice” is evidence of a desire for segregation, and when seen in the light of research evidence in favour of integrated schooling, is illogical and based on a set of limited premises. It is unlikely that “choice” for integration will take place if the system and structure do not change, and the inequality in the rights afforded to those who want integrated education will endure.

I will now say something about the distinction between “Integration” and “Sharing”.

Integrated Education

An integrated school brings together children from all religious and ethnic backgrounds. Some non-integrated schools say that they are integrated, because they have a mixed school population often with a small minority of children from one background or another. This is a positive development. But limited desegregation is not the same as integration. Integrated schools are integrated not only in terms of significant numbers of pupils from

different backgrounds, but also in terms of ethos. Integrated schools have an explicit ethos to recognise and celebrate diversity. Integration means that children learn about each other's backgrounds and cultures in a spirit of equality within the school, the best environment to offer the opportunity for lasting and significant contact. In a truly integrated school, there should be no dominant ethos to either assimilate or "accommodate" children from other backgrounds. For example, while some Catholic schools claim to be "integrated", the reality is that the dominant ideology of the school, its iconography, its celebrations, its culture, are by definition, Catholic. This makes it extremely difficult for children from other backgrounds to feel that they or their beliefs and culture have equality of position within the culture of the school.

As with building peace in any society, Northern Ireland requires children to be brought together from the earliest possible age, not just for occasional contact, but in order to build meaningful and deep friendships with those from other backgrounds which can last into adulthood, forming a generation with a higher degree of mutual understanding and respect than current generations. Other divided societies continue to learn from the work of the Integrated Education movement in Northern Ireland, yet within Northern Ireland, there appears to be little political will to support this ground-breaking and internationally recognised movement.

Shared Education

Shared education—that is, separate schools with some shared resources, pupil contact and collaboration between them (Hansson et al., 2013)—has a benign ring to it. At face value, sharing and contact between groups is, of course, positive. The research in the area is promising showing, among other benefits, that the type of intergroup contact shared education offers can lead to more positive relationships and perceptions of others, and build inter-school collaboration (Blaylock and Hughes, 2013, Duffy and Gallagher, 2014). If the logical outworking of shared education is that there should be a focus on how all schools can be made more inclusive (Hughes et al., 2013) this is a step in the right direction.

In many senses, however, the move to shared education merely proves the obvious and what has been well-established in international research for decades, that is under certain conditions contact between groups can promote positive views of the other (Pettigrew and Tropp, 2006). Of course, any increased contact between school-age children and schools representing different traditions is to be welcomed. But as a recent research on shared education notes, an environment that seemingly reinforces a mono-cultural order can limit the potential of such programmes (Hughes, 2013). It is added "it is hardly surprising that pupils, who meet with peers from the 'other' community for short periods (albeit sustained over time) and in a highly structured setting, struggle to develop friendships that can be maintained outside of the school setting" (Hughes, 2013, p.206).

In other words, contact programmes taking place within an overall segregated context are—despite their positive indicators—essentially a sticking plaster on a system that is largely not conducive to creating positive attitudes between groups. It is possible to argue that shared education might incrementally change the system, and result in cross-community activities taking place at the heart of the community over time (Borooah and Knox, 2013). But equally, questions have been raised as to whether the initial experiments will continue to be supported once philanthropic sources of funding dry up (Hansson et al., 2013), and what the future is for shared education making a real and lasting impact within a segregated system that it tacitly endorses.

It is, from a policy perspective, counter-intuitive to set up a range of new programmes to bring children into meaningful contact with one another through various collaborative ventures—at great expense financially and in terms of resources (e.g. timetabling, travel time, busing children)—when the context itself is going to continually undermine any potential achievements, unless this is part of a wider strategy to fundamentally change the context.

Of course, there are many reasons as to why the context cannot be changed instantly, and we must foster contact where we can, but to lose sight of the fact that the most logical place to foster contact is in the classroom on a day-to-day basis is missing the most obvious long-term and sustainable solution.

The Ministerial Advisory Group's Report on Shared Education was a missed opportunity to name the fact that while sharing might be encouraged, integrated education is the logical pinnacle of shared education. The resultant proposal of 10 shared education campuses will mean children going to school in the same place, but remaining separate, in separate uniforms. The message this gives to children is a dangerous one as the extract from the United States Institute of Peace quoted above conveys—that is, it is a step too far to allow children to be educated together in all subjects every day as a unit. While shared education projects are a necessary starting point for many schools, shared education should not be considered the end point for education in Northern Ireland. The ultimate goal must be to break the stranglehold of the major sectors who have vested interests in keeping education segregated, and to move to a position whereby the default setting for education in Northern Ireland is that children go to schools that are integrated in number and in ethos.

Recommendations

The Department of Education should find ways to promote and encourage the provision of more integrated places in Northern Ireland by:

1. Supporting the expansion and development of existing integrated schools;
2. Actively pursuing ways to enable schools to transform to integrated status. This will require schools to be supported, in some cases for a number of years;
3. Ensuring that schools embarking on shared education projects are supported and enabled to understand the option of progressing to pursue integrated status, and supported to do so;
4. Ensuring that as part of the shared education agenda, resources are in place to promote and facilitate integrated education as the most intensive and sustainable form of sharing;
5. Ensuring that integrated education representatives have a place at Area Based Planning bodies, and other decision making bodies, so that each area can be required to make fair and equal provision to meet parental demand for an integrated school;
6. Enacting the recommendations in the International Review Panel on Teacher Education in Northern Ireland, which points to the need for a desegregated approach to teacher training;
7. Planning ahead for the transformation of the education system to become fully integrated by the year 2024. This would include making clear commitments and plans for the expansion of integrated education in future Programmes for Government and strategies such as Together Building a United Community.

Conclusion

In conclusion, I welcome shared education only as a series of steps towards achieving a fully integrated education system in Northern Ireland. I would urge the Committee to attend to local and international research which shows clearly how essential this is to long term reconciliation and stability, and to note the evidence on parental choice which shows that, despite the strength of sectoral interests, there is a growing appetite and readiness for fully integrated education. Integration should be viewed as an opportunity rather than a threat, and a key building block to sustainable peace. This is how it is viewed the world over by experts working on peacebuilding in range of societies.

I urge the Committee to be bold in its recommendations and set a timetable for full integration. This will truly offer children the best opportunity for the future locally and globally, and give Northern Ireland a rightful place as an exemplary peace process rather than one that is viewed internationally as having made significant steps but is still hampered by sectoral interests that maintain divisions that have fuelled the conflict over the years and continue to do so. Without this the society will constantly remain at risk of ongoing and future conflict.

About the Author

Professor Brandon Hamber is Director of the International Conflict Research Institute (INCORE), an associate site of the United Nations University based at the Ulster University. He is also an Associate of the Transitional Justice Institute at the university. He has recently finished a term as a Mellon Distinguished Visiting Scholar in the School of Human and Community Development at the University of the Witwatersrand in Johannesburg (2010-2013). He was born in South Africa and currently lives in Belfast, where he has been working since 1996. In South Africa he trained as a Clinical Psychologist at the University of the Witwatersrand and holds a Ph.D. from the University of Ulster. Prior to moving to Northern Ireland, he co-ordinated the Transition and Reconciliation Unit at the Centre for the Study of Violence and Reconciliation in Johannesburg. He co-ordinated the Centre's work focusing on the Truth and Reconciliation Commission. He was a visiting Tip O'Neill Fellow in Peace Studies at INCORE in 1997/1998. He was also the recipient of the Rockefeller Resident Fellowship (1996) and was a visiting fellow at the Centre for the Study of Violence in Sao Paulo, Brazil. He has consulted to a range of community groups, policy initiatives and government bodies in Northern Ireland and South Africa. He has undertaken consulting and research work, and participated in various peace and reconciliation initiatives in Liberia, Mozambique, Bosnia, the Basque Country and Sierra Leone, among others. He has written extensively on the South African Truth and Reconciliation Commission, the psychological implications of political violence, and the process of transition and reconciliation in South Africa, Northern Ireland and abroad. He has published some 40 book chapters and scientific journal articles. He is the author of "Transforming Societies after Political Violence: Truth, Reconciliation, and Mental Health" published by Springer in 2009, and published in 2011 in Spanish by Ediciones Bellaterra. His most recent book, edited with Ingrid Palmay and Lorena Nunez, is entitled "Healing and Change in the City of Gold: Case Studies of Coping and Support in Johannesburg" and was published by Springer in October 2014.

Professor Hughes QUB Centre for Shared Education

Briefing Notes from the Centre for Shared Education at Queen's University to the Committee for Education, Northern Ireland Assembly

The Centre

The Centre for Shared Education was established by the School of Education in Queen's University in May 2012.

Vision

We are an applied and interdisciplinary Centre committed to researching and promoting evidence based practice in all areas of shared education. Shared education is broadly defined as,

Collaborative activity between schools from different sectors that is underpinned by a commitment to reconciliation objectives and can contribute towards school improvement, access to opportunity and more positive intergroup relations in divided societies.

We are particularly interested in the role of shared education in societies that are divided on ethno/religious lines, and our work is underpinned by a commitment to the principle that all schools have role to play in promoting social harmony.

Mission

Our mission is to promote shared education as a mechanism for the delivery of reconciliation and educational benefits to all children. This mission is delivered through 3 core strands of interlinked activity:

Research

The Centre supports a programme of comparative national and international research that aims to enhance understanding of school-based sharing, the collaborative process, and associated outcomes. Our work is theory driven and empirically based, and we work in partnership with leading experts from a range of academic disciplines.

Programme

A major Programme for Sharing Education (SEP) in Northern Ireland is delivered through the Centre. SEP offers a model for exploring the possibilities of sharing in a deeply divided society that is seeking to build peace after a long period of violent conflict. The model can be shared globally and we are currently working with academics, policy makers and practitioners in other divided jurisdictions to develop similar programmes.

Education and training

We have an established training programme for practitioners in Northern Ireland, and we have offered in-country courses to other jurisdictions. Our aim is to consolidate and extend existing training provision and to develop a short course programme that can be tailored to meet the requirements of practitioners in a range of sharing contexts. In addition, we are in the process of developing Masters pathways in Collaborative Education and Intercultural Education. We anticipate that these programmes will be delivered in regular and online formats.

In this briefing we present the rationale for shared education in divided societies and offer a summary of our research and programme activities. Drawing on our work to date, we present the Shared Education Continuum, which has been developed as a conceptual model for

representing the stages involved in developing and delivering a partnership or programme. We conclude with an assessment of the value of shared education in situations of ethno-religious division, and a consideration of enabling and inhibiting factors.

Rationale for Shared Education

Since the foundation of the State in 1921, the education system in Northern Ireland has been characterised by separation along ethno-religious lines, tempered only by the emergence since the early 1980s of a distinctly integrated sector and, more recently, by a smaller Irish Medium sector. Currently, around 94 per cent of pupils attend either Maintained (predominantly Catholic) or Controlled (predominantly Protestant) schools (Department of Education (Northern Ireland), 2014).

In the context of a protracted conflict that began in the late 1960s, the separate education system has come under considerable scrutiny (Gallagher, 2004). In 2010, the Secretary of State for Northern Ireland, Owen Paterson, argued that Northern Ireland's segregated schools system involves a 'criminal waste of money' (*Belfast Telegraph*, 2010a). In a speech some days later, Northern Ireland's First minister, Peter Robinson described the education system as a 'benign form of apartheid' (*Belfast Telegraph*, 2010b). Responding to the First Minister's remarks, a Catholic bishop argued that parents should have the right to choose a faith-based education for their children, and that faith schools are a 'hallmark of a stable and pluralist society' (*Belfast Telegraph*, 2010c).

The positions adopted in this exchange of views are resonant with more global debates that concern the right to a separate education (based on ethno-religious criteria) in a pluralist society, against the role that separate schools are perceived to play in perpetuating division and sectarianism (Berkeley, 2008; Gallagher, 2004; Grace, 2003; Short, 2003). Separate school protagonists argue that faith schools are well placed to contribute to the common good because they can provide children with a moral and religious framework that engenders confidence in their own identity, and helps them to be respectful of the beliefs and values of others (Halstead and McLaughlin, 2005). Detractors argue that separate schools, de facto, pose a threat to social cohesion because they lead to a fragmentation of society (Hand, 2003; Judge, 2001; Short, 2003). In Northern Ireland, representative bodies for faith-based education have publically challenged the view that their schools feed inherited prejudice and promote sectarian tension, arguing that faith schools have an important role to play in building the peace (Catholic Council for Maintained Schools, 2007).

Despite the intuitive appeal of 'common' or integrated schools in divided societies, education systems are often characterized by the persistence of separation (e.g. NI, Israel) or, where common schools exist, by a crusade on the part of minority ethnic or religious groups for separate education (e.g. states of the former Yugoslavia). This dominance of the separation theme in divided societies is undoubtedly linked to the relationship between the school as a representation of cultural, political and religious identities, and the sources of tensions that exist between different groups in society (disadvantage; discrimination; competing claims of sovereignty; lack of agency etc.). Hence, in Northern Ireland, despite a long campaign of advocacy for integrated education that began in the 1970s, officially designated integrated schools account for only around 4% of overall provision. Other societies, such as Macedonia, Bosnia and Kosovo, have seen the demise of formerly integrated school systems in the wake of the interethnic conflicts that led to the breakup of the former Yugoslavia.

Accepting the reality of separate education as a legitimate expression of community identity, against the fact that such a system tends to deny children an opportunity to directly experience 'the other', shared education offers a model for building relationships between different groups.

Theory Underpinning Shared Education

One of the most prolific strategies for improving intergroup relations, and the theoretical underpinning of shared education, is the hypothesis that contact between members of different groups can, under certain conditions, reduce prejudice, better known as the 'contact hypothesis' (Allport, 1954). These conditions include contact that promotes equal status between the group members in terms of power, influence or social prestige, encourages the pursuit of common or shared goals, is characterised by cooperation between groups, not competition, and has institutional support or the sanction of appropriate authority figures.

Attesting to the hypothesis' robustness, research supports the potential of contact to reduce prejudice across a variety of situations, groups, and societies. The contact hypothesis has been tested and supported by a range of research methods and procedures. Prejudice reduction has been found in the form of both subtle and direct prejudice (Hamberger & Hewstone, 1997; Pettigrew, 1997), automatic processes associated with prejudice such as implicit associations (e.g., Aberson & Haag, 2007; Prestwich, Kenworthy, Wilson, & Kwan-Tat, 2008; Tam, Hewstone, Harwood, Voci, & Kenworthy, 2006; Turner, Hewstone, & Voci, 2007a) and automatic physiological threat responses to outgroup members (Blascovich, Mendes, Hunter, Lickel, & Kowai-Bell, 2001). These positive outcomes have been found not only for racial and ethnic groups, but also for a variety of other stigmatised social groups including the elderly (Caspi, 1984), the mentally ill (Desforges et al., 1991), and victims of AIDS (Werth & Lord, 1992). Further, a recent meta-analysis (a statistical procedure examining the results of multiple studies) by Pettigrew and Tropp (2006) of 515 studies and more than 250,000 participants in 38 nations found conclusive evidence that intergroup contact typically corresponds with lower levels of intergroup prejudice. A relationship that is enhanced when contact is structured according to Allport's conditions.

Since its original formulation, research on the topic has increased rapidly and extended in new directions (Hewstone & Swart, 2011). In recent years, significant progress has been made towards understanding the underlying process of when contact is most likely to be effective, as well as how contact promotes more harmonious intergroup relations. In addition to the original optimal conditions, research suggests that contact situations which provide the potential for cross-group friendships to develop can be extremely effective. However, it is important to note that structuring contact situations to engender opportunities for cross-group friendships to develop requires repeated contact that is intimate and sustained rather than superficial in nature (Davis, Tropp, Aron, Pettigrew, & Wright, 2011; Pettigrew, 1998). The introduction of these scenarios which invokes many of the optimal conditions, facilitates self-disclosure, and provides the time and space for friendship-developing mechanisms to occur.

Research also has explored the psychological mechanisms which underlies the relationship between contact and prejudice reduction. A number of variables have been investigated and a second meta-analysis conducted by Pettigrew and Tropp (2008) reveals the critical role that affective responses, such as intergroup anxiety, empathy, and perspective taking, play in the reduction of prejudice. Expectations of negative consequences for oneself during intergroup encounters, from the outgroup directly or from the reactions of the ingroup, can lead to high levels of anxiety (Stephan & Stephan, 1985) which may lead to awkward interactions (e.g., Shelton, 2003; Wilder & Simon, 2001) or in some cases to the avoidance of contact all together (Plant & Devine, 2003; Shelton & Richeson, 2005). Research consistently demonstrates that positive experiences of intergroup contact have the ability to reduce expectations of negative consequences therefore reducing experiences of anxiety.

Additionally, intergroup contact, particularly where it is more intimate and may lead to the development of cross-group friendships, has been found to enable participants to take the perspective of, and empathise with, members of the 'out' group leading to improved intergroup relations (Pettigrew & Tropp, 2008; Swart, Hewstone, Christ, & Voci, 2010). Contact appears to have the strongest impact on prejudice by reducing negative affect, such as intergroup anxiety, and by inducing positive affective processes, such as empathy and perspective taking.

It is important to understand that contact is not a panacea for prejudice or the improvement of intergroup relations. It is only under key conditions and through specific psychological mechanisms that positive, sustained intergroup contact may illicit more harmonious relationships. At the Centre for Shared Education, we have expertise in the theoretical and practical underpinnings of intergroup contact and have used this expertise to inform the structure of shared education supported through our programmes.

Network Theory and Collaborative effectiveness

Shared education is also underpinned by a range of theoretical perspectives which are broadly termed network theory and interrelated research which focuses on the characteristics of collaborative effectiveness. Importantly collaboration between schools should be thought of as activity which ultimately leads to school improvement.

Katz and colleagues (2008; 2009 & 2010) have developed a networked learning theory of action and propose six key features which define successful and effective networked learning communities (Katz & Earl, 2010). These features include: a clear purpose and focus for the collaboration; strong relationships which connect individuals/institutions and provide social capital; the type and extent of collaboration; creating opportunities for collaborative enquiry and professional reflection; strong leadership which supports collaboration; opportunities for support and capacity building for individual and collective learning to take place. If these characteristics are present both within schools and forged between schools they are likely to create the conditions in which schools can improve. Other related research which focuses on collaborative effectiveness in educational contexts has also been influential (Atkinson et al., 2003; Higham & Yeomans, 2009; Hodgson & Spours, 2006; Woods et al., 2006).

In addition, Wenger's communities of practice (1998) has been useful in this context in regards to discussions about the formation of networks, through joint enterprise, mutual engagement and the formation of a shared repertoire of resources. Wenger's (2000) descriptions of effective communities of practice identify how organisations such as schools act as social learning systems and are capable of creating porous boundaries and bridging processes between each other and thus off-setting organisational myopia (Muijs et al., 2010) and creating conditions in which schools can in collaboration, share expertise, resources and create new knowledge and develop a type of collective competence (Boreham, 2000).

Research evidence demonstrates that effective collaboration can help schools improve in terms of: improving pupil performance and engagement (Chapman & Muijs, 2014; Chapman, Muijs, & Collins 2009; Chapman, Muijs, & McAllister 2011; CUREE 2005; Hadfield & Chapman 2009; Hadfield et al., 2006); impacts upon school leadership (Chapman, 2008; Hadfield and Jopling 2012; Hargreaves 2010; Kubiak and Bertram 2010; Harris, 2008); and on teacher development, performance and motivation (Ainscow, Muijs, and West 2006; Chapman 2008; Chapman, Muijs, and Collins 2009; Hadfield and Jopling 2012; Hadfield et al., 2006; Harris and Jones 2010; Ofsted 2011; Muijs, West, and Ainscow 2010). School collaboration and networking is also promoted as a strategy for offering wider curricular choice and broadening opportunity in order to meet the diverse needs of pupils (Muijs, West, and Ainscow 2010; Pring 2009).

Centre for Shared Education Research Activity

Research undertaken by members and associates of the Centre can be categorised as follows:

- Background or foundational literature
- Intergroup contact
- Evaluation and context of shared education
- Impact of Shared Education

Background and foundational literature

Output in this category represents a foundational framework within which to locate the origins of shared education. Gallagher (2004) provides a starting point locating and comparing the education system in Northern Ireland with other societies where there is ethnic or racial division. Set within this context, education is considered as a vehicle for promoting a shared and more cohesive society. Gallagher (2005) argues that the largely separate education system which exists in Northern Ireland perpetuates ethnic division in a society trying to emerge out of conflict. Similarly, Hughes (2010) argues that separate education system may promote both ethnic and cultural isolation amongst children. Gallagher (2004; 2005) outlines how over recent decades, a series of educational initiatives have sought to mitigate the impact of ethnic division and improve community relations. These initiatives are represented as having limited impact and a case is made for the collaborative approach that characterises shared education (Gallagher, 2005).

A number of studies from Queen's University (Atkinson et al., 2007; Donnelly and Gallagher, 2008; O'Sullivan et al., 2008) and wider (Russell, 2009; Oxford Economics, 2010) sought to ascertain the extent and context of inter school collaboration to provide baseline data for the first shared education programme. Atkinson and colleagues (2007) provided a significant review of literature on interschool collaboration; Donnelly and Gallagher (2008) explored the existing context of collaboration between schools and concluded that the principle of collaboration was met with enthusiasm by schools.

Alongside this research, Fishkin and colleagues (2007) carried out a deliberative poll in an ethnically divided market-town in Northern Ireland. The poll focused on exploring parents perspectives on education; elements of this poll identified that parents were largely supportive of the idea of schools working co-operatively. This literature helped build a case for shared education and more broadly, intersectoral collaboration between schools, in turn, this led to securing significant funds from Atlantic Philanthropies and International fund for Ireland for the Sharing Education Programme.

Intergroup contact

The concept of shared education is underpinned by 'Intergroup contact' theory, and a number of research studies have explored the context and the quality of contact between pupils who engage in shared educational activities. This body of literature (Hughes, 2010; Hughes et al., 2012; Hughes, 2012; Hughes, 2012a; Hughes & Donnelly, 2012; Hughes & Donnelly, 2012a) indicates a number of important findings:

- Separate schooling can be divisive whereby minimal and superficial contact between pupils can lead to physical and cultural isolation.
- The Sharing Education Programme offers a potentially more effective contact model than previous 'short term' educational initiatives.
- Sharing offers significant community relations benefits and improved intergroup relations.
- Pupils who engage in shared education demonstrate reduced levels of anxiety; demonstrate positive action and more trust towards members of the other ethno-religious community.

One of the Centre's largest research projects is the exploration of intergroup contact in post-primary schools in Northern Ireland. Funded by Atlantic Philanthropies, this project is a 5-year longitudinal study designed to explore young people's attitudes and experiences of intergroup contact within various school contexts. The first phase of the research began in June 2011 when we conducted an online survey with all Year 8 pupils in approximately 70 postprimary schools, these pupils will be surveyed each year of their post-primary experience as they move from Year 8 to Year 12. As one of the few longitudinal studies of attitudes and experiences of intergroup contact in the UK, the research will shed new light on the complex issues pertaining to schools and intergroup relationships in divided societies. Further, as

pupils progress through their post-primary education, some will have experiences of shared education. As such, this project is uniquely placed to follow these pupils and to compare their progression with those of their classmates from across Northern Ireland.

Currently in the final year of data collection, we have had the opportunity to analyse cross-sectional data collected from the early years of the project. This research demonstrates that opportunities for contact with members of the 'other community' at school are associated with more positive intergroup attitudes and experiences. Comparing Controlled, Maintained, and integrated schools, findings indicate that pupils attending integrated schools generally outperformed pupils in Controlled and Maintained schools on measures of intergroup contact and outgroup attitudes. For example, pupils in integrated schools reported more experiences of contact, higher quality contact, and a larger number of cross-group friends than pupils in Controlled and Maintained schools. These results point to the role that the diversity within the pupil body population may have in experiences with and attitudes towards members of the other community; therefore, a second set of analyses were conducted to explore in more detail the make-up of the pupil body within the Controlled and Maintained sector schools in our sample.

While Controlled schools primarily draw pupils from the Protestant community and Maintained schools primarily draw pupils from the Catholic community, there is a broad range in the percentages of 'other' group members within each of the sectors. Therefore, in addition to three original school categories – Controlled, Maintained, and integrated – further school categories were created based upon the percentage of the 'other' community within the school. We classified schools that had 10% or more of their school body from the other religious community as 'super-mixed' schools. Further, we classified schools that had 5-10% of their school body comprised of pupils from the other religious community as 'mixed' schools. In addition, we examined the group of respondents who were a clear ethno-religious minority in their school, Catholic students attending a Controlled school or Protestant students attending a Maintained school, whom we refer to as the 'numerical minority' group.

Comparing these new categories – mixed, super-mixed, and numerical minority - with single identity Controlled and Maintained schools (less than 5% of the other community in attendance) and integrated schools, we see a new pattern emerging. In general, pupils from single identity school, regardless of whether it was Controlled or Maintained, reported equivalent scores, while the pupils attending schools with a more heterogenous school body reported more favourable responses. For example, pupils attending super-mixed and integrated schools did not differ from each other in the amount of reported contact, the general contact quality, and the number of cross-group friendships. As such, it seems that the opportunity for contact regardless of school type is a crucial factor in promoting more positive cross-group relationships. Further, these beneficial effects of increased opportunity for contact on outgroup attitudes are driven by a large extent to the perception of positive ingroup norms. We can conclude then that the opportunity for contact and the formation of cross-group friendships in a climate of supportive perceived norms, rather than a generally conducive school ethos exclusively, are the key contributory variable that account for the more positive outgroup attitudes in the more mixed schools.

Cross-sectional analyses of the longitudinal data also reveal key differences between pupils in their experiences of intergroup contact and their attitudes towards members of the other community. Comparative analyses of the level of relative deprivation that a child experiences, measured in the form of free school meals, reveals that pupils receiving free school meals reported less pleasant interactions, more experiences of negative contact, were more anxious interacting with members of the other community, and believed that their own community would be less likely to approve of intergroup contact than those who were not receiving free school meals. They also reported lower levels of empathy and trust, and less positive attitudes than those who were not receiving free school meals. In the context of empirical evidence that posits a relationship between social deprivation and more negative experiences

of conflict, it follows that negative intergroup interaction is more likely to be the norm for those experiencing greater levels of deprivation.

Evaluation and context

There are a number of studies carried out recently which evaluate or provide contextual data on sharing and collaboration between schools. An evaluation of the first cohort of the Sharing Education Programme (FGS McClure Watters, 2010) provides perspectives from pupils, teachers and school leaders. Knox (2010) provides a non-formal evaluation of 12 partnerships in SEP1, this report reflects the perspective of teachers and school leaders and focuses on four key areas, implementation, impact, sustainability and how shared learning and school collaboration can shape policy. Studies by Duffy & Gallagher (2012; 2012a; 2014a 2014b) evaluate number of school based partnerships and identify effective practice and conditions which are most likely to lead to sustainable partnerships.

Our largest context driven work to date, the Foyle Contested Space Partnership, (see also Duffy & Gallagher, 2014b) explores shared education initiatives within contested spaces (Morrisey & Gaffikin, 2006). Contested spaces tend to be characterised by bounded containment where individuals are limited in their exposure to the other community because of intra-area movement, a lack of concerns about the workings of the other community, and fears of travelling to the other community; with many of these fears being sustained by intergenerational and peer influences.

Schools within Derry/Londonderry face a unique challenge that is compounded by historical division, political violence, and a unique geography, namely a river, which sustains ethnic division and effectively locates the Protestant minority on one side and the Catholic majority on the other. However, evaluation suggests that the partnership has demonstrated effective movement of over 1000 participants across the contested space and into each other's communities over a regular and sustained period of time. Shared learning, teacher collaboration between participants has had the effect of reducing anxiety about the other and normalising the experience of shared education.

Research reveals that relationships between pupils are forming that extend beyond the classroom; for example, pupils are meeting each other outside of school and through social media. Through various educational seminars and parental showcase events, the partnerships have encouraged greater engagement between parents and schools. And through the use of schools and other venues across the city as a conduit, the partnership has successfully encouraged interaction and movement into the other community. A key finding is the significant impact of the relationship that has developed between schools and external agencies. These agencies, presenting in shared classrooms, support teachers in the delivery of the social need themes and share resources. An example of note involves the relationship between schools and the PSNI.

In 2011 the Catholic Church and the Council for Catholic Maintained Schools [CCMS] have, as part of a peace building strategy, developed a strategic partnership with the Police Service for Northern Ireland [PSNI], endorsing a programme which encourages Catholic schools to develop links with the police, including access to classrooms. This strategy however, has met with some resistance in a number of predominantly nationalist communities. Parents and local community representatives have voiced their concerns in national and social media outlets. Parents have concerns that the PSNI will use access to schools as a long term strategy for recruiting Catholics. Others argue that poor relationships between the police and the community continue, despite recent police reforms as part of the peace process. Moreover, the PSNI should not have access to what has been described as neutral learning environments. However in the partnership the PSNI regularly visit many of the schools, some of which are in Nationalist communities. The police have delivered lessons on internet safety, anti-social behaviour and substance misuse. Interviews with PSNI representatives reveal that the partnership enables the PSNI to access pupils across the city particularly in shared settings. While there are two maintained schools where PSNI are still not welcome,

parents do not object to their children visiting their partner schools where the police deliver lessons to shared classrooms. Key to this success comes from the fact a representative from the PSNI was invited to sit on the partnership steering group and thus developed a close relationship with teachers and leaders.

Given the context of a denominationally divided education system, the Foyle Contested Spaces Education Partnership demonstrates a strategy in which systematic and sectoral boundaries can be challenged. The collaborative network established between the schools offers a model of education that is effectively nascent in Northern Ireland.

Programme Impact

Additionally, research has sought to understand the logistics and benefits of sharing and collaboration, (Hughes et al., 2010; Duffy & Gallagher, 2012; Duffy & Gallagher, 2012a; Duffy & Gallagher, 2014a; Duffy & Gallagher 2014b; Gallagher et al., 2010; Donnelly & Gallagher, 2008; Knox, 2010; FSG McClure, 2010).

Comparisons between schools involved in the SEP and those who were not found that involvement in SEP directly impacts intergroup attitudes and behaviours towards members of the other community and that it does so by increasing cross-group friendships and reducing intergroup anxiety (Hughes et al., 2012). Looking more closely at those pupils participating in shared classrooms, a quasi-experimental design was constructed in which pupils participating with SEP were compared with pupils from the same school who were not participating in the programme. Analyses revealed that involvement with the programme was associated with a reduction in bias towards the ingroup, greater trust towards the outgroup, reduced anxiety when interacting with members of the outgroup, and more positive behaviours towards the outgroup including a greater desire for future contact (Hughes et al., 2010).

This body of evidence suggests that on the whole shared education can positively impact intergroup attitudes and behaviours and that it does so in a manner which is consistent with contact theory. However, not all schools and not all children will enter the programme with the same set of beliefs, attitudes, and experiences, and contact research suggests that some individuals and groups are more open to contact than others (see Dixon et al., 2005).

To investigate this possibility two shared education partnership from localities with varying degrees of current, and historical, intergroup tensions were examined (Hughes, 2013). The first partnership had been relatively less affected by violence during the Troubles and current community relations are considered to be stronger than other areas in Northern Ireland. The second partnership was considered a 'hotspot' during the Troubles, experiencing a high number of conflict-related incidents, and current community relations are quite strained with a number of contentious interface areas. Analysis of interviews and focus groups reveal that there are clear differences in how individuals understood and experienced contact. Where there was greater consonance between school and community values in terms of contact, higher levels of engagement between the school and community, and lower historical tension, pupils expressed more positive responses to intergroup contact. In comparison, where there was greater dissonance, lower levels of engagement, and more intense historical tensions, pupils expressed initial trepidation about contact.

The influence of these contextual differences on initial pupil readiness for intergroup contact is supported by quantitative findings. Survey data suggests that pupils attending SEP schools in more divided areas were less likely to indicate that they had formed cross-group friendships and more likely to report feeling anxious interacting with pupils from the other community than pupils who were in SEP schools located in less divided areas (Hughes et al., 2010). However, it is important to note that even in a more divided context, those pupils attending a SEP school are still more likely than those in non-SEP schools, regardless of whether it is a more divided or less divided context, to view the outgroup more positively.

That shared education has been found to improve intergroup relations for pupils who attend schools that are located in more divided areas, where intergroup relations can be extremely tense is perhaps the strongest endorsement of the programme's efficacy.

Additionally this research outlines, as a consequence of schools collaborating, pupils benefit in terms of enhanced curricular delivery and access to a broader range of subjects and resources. This literature base also highlights how teachers benefit from collaborative practice with other schools both in terms of professional development through shared practice but also personally where, like pupils, teachers involved in delivering shared learning have the opportunity to work with other teachers across sectors - teachers report valuing this opportunity. Further, schools benefit in terms of developing stronger institutional relationships. As a consequence senior leaders and governors across sectors work more closely together and in some cases collaboration becomes a vehicle for school improvement.

Centre for Shared Education Programme Activity

Programme experience within the Centre can be traced back to the implementation and development phase of the Shared Education Programme (SEP1) in 2006. The past seven years have seen this widen out both in impact in Northern Ireland and in transferability to other contexts such as Macedonia. A brief overview of programmes delivered to date can be found below.

Northern Ireland

Sharing Education Programme 1 – (2006-2010) Introduction of Sharing Education into schools in Northern Ireland and development of models and implementation strategies. Throughout these first years of the programme approximately 3,500 pupils from 65 schools benefited from additional educational opportunities across a wide range of curricular and extra-curricular activities. The first cohort of schools demonstrated the effectiveness of crosssectoral collaborative activity and the potential for schools to form effective interdependent relationships. SEP1 was initially an activity based programme encouraging the development of institutional links and trust through working together.

Sharing Education Programme 2 – (2010-2013) SEP2 partnerships started in September 2010. Working with 72 schools both primary and post-primary and annually approximately 5,000 pupils. In many cases the initial partnerships were based on Area learning Community collaboration. Learning and research from SEP1 looked at the creation of institutional trust and interdependent relationships at all levels of schools. The result is a more robust model of school collaboration based on common need and focusing on societal, educational and economic outcomes.

Sharing Education Programme 3 - (2011-2014) Working with partnerships from all previous programmes (43 schools making up 17 partnerships and over 4,000 pupils) the SEP team is working to take a number of key school partnerships to a higher level of collaborative relationship that compliments current Departmental policy around Area Based Planning. The strategy is to present the Department with key collaborative partnerships that can demonstrate delivery of the curriculum, economically, efficiently and within a shared environment – providing the Department with both an educational and societal return.

Foyle Contested Spaces – (2011-2014) The Foyle Contested Space programme is a schools based initiative made up of 3 post-primary and 5 primary schools in Derry/Londonderry with a total of 1,161 pupils. The core aims of the programme involve offering sustained shared classes, focusing on a number of key areas which impact both on pupils and the community at large. The eight schools have developed an educational programme for pupils between the ages of 8 to 15 which utilises elements of the curriculum to address social issues facing young people. Together they are now sharing expertise, resources, space, pupils, energy and ideas. The issues are addressed through a shared and collaborative approach in schools

using the Personal Development and Mutual Understanding curriculum at Key Stage 2 and the Learning for Life and Work curriculum at Key Stage 3.

Macedonia

On the basis of expertise and experience of the Shared Education Programmes in Northern Ireland UNICEF (Macedonia) invited the Centre to tender for a project aimed at strengthening the capacity of the Macedonian education system to promote and enhance ethnic and cultural diversity. Over two years the QUB team worked with senior officials and educationalists in Macedonia to deliver a national level programme for intercultural education. Drawing on the shared education model (NI) a plan was developed to connect separate Macedonian and Albanian schools on the basis of shared educational outcomes, that would also facilitate the opportunity for extended intergroup contact (thereby addressing 'reconciliation' objectives). The development of the programme involved key officials visiting Northern Ireland for a study tour of educational initiatives currently ongoing, and a series of 'in-country' workshops delivered by the QUB team in Macedonia.

UNICEF has now ended its association with the initiative. However, another NGO (USAID) working together with the Centre for Human Rights in Macedonia is involved in taking the initiative forward. The Centre for Shared Education continues to be involved in a consultancy role. The programme now being delivered is a state wide shared education programme modelled on the activity based SEP1 but with key learning in terms of institutional links and leadership training. The advocacy model of the SEP programmes is also being implemented.

Israel

The work in Israel remains relatively exploratory, with expressions of interest coming to learn more about the rationale and practice of shared education in Northern Ireland. An initial study visit involved presentations and meetings with Israeli and Palestinian educators. Following these initial discussions, a small number of Arab and Jewish schools are undertaking shared education initiatives, and others are under consideration.

A subsequent visit involved more substantial discussions, including an invited presentation on the work in Northern Ireland to the Minister of Education and his senior team. A meeting was also held with a number of members from key Palestinian education NGOs in Nazareth. In addition a working relationship has been established with the Center for Education Technology in Tel Aviv, which in turn has been working for some years with a network of Arab, Jewish, Christian and Muslim schools in the city of Ramleh. Initially this work was advanced through paired schools, but as a consequence of discussions on the shared education model, the schools have decided to build wider network connections. Additional interest has been expressed by Jewish and Arab schools in the Negev and a study visit by Israeli educators to Northern Ireland is planned in Spring, 2015

United States

A collaborative relationship has been forged between the School of Education at Queen's and the School of Education at Loyola Marymount University in Los Angeles. Since 2012 staff from each school have visited each other's settings to explore the context of school collaboration. In the Los Angeles Unified School District different school types including: traditional schools, charter schools magnet schools and pilot schools are often required to co-locate on the same site. This poses challenges both at local and systemic levels but also offers significant opportunities for schools to work together and in particular share resources, space and expertise. The context of shared education in Northern Ireland has proved very useful for academics, schools leaders and teachers in the US in regards to how schools collaborate.

Collaboration Continuum

Based on research evidence to date and our experience of programme delivery Duffy, Gallagher, Stewart and Baker (2014) have developed a collaboration continuum. The model offers a conceptual typology of shared or collaborative models of education ranging from schools operating in isolation of one another to a model of collaborative education whereby schools become so institutionally close that a type of interdependency or symbiosis emerges. The continuum categories are described below. It is important to note that the category described at the right end of the continuum is best thought of as aspirational at this point; there are currently no cross-sectoral partnerships in Northern Ireland that can be entirely described as institutionally interdependent. However, given the DENI announcement in June 2014 regarding shared campuses the idea of interdependent cross-sectoral arrangements could be realised given the right conditions. The continuum is intended to describe the diversity and importantly the depth of collaborative initiatives which currently exist in Northern Ireland. The model implies the potential to evolve from unsustainable models of partnership towards more effective models of collaboration which are sustainable and focused on core school activity as opposed to characterised by other shared education initiatives which are often located on the periphery of school activity and less sustainable.

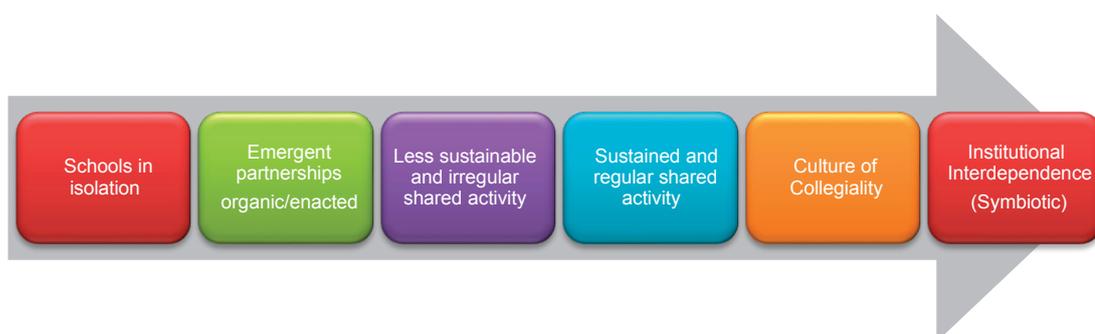

Figure 1: Collaboration Continuum: Duffy, Stewart, Baker & Gallagher, 2014

Continuum descriptors

Schools In Isolation

Schools which are in isolation of one another, where there is little to no collaboration with other schools.

Organic and Emergent

Emergent partnerships are those where collaborative activity first begins. This may be characterised by limited and ad hoc contact between schools. A distinction may be made between organic and enacted partnerships whereby the former is partnership activity motivated by the schools themselves as opposed to partnership activity which is motivated or enacted by an external agency.

Less sustainable and irregular shared activity

Characterised by more frequent contact between schools, activity may be defined by limited teacher and leader contact. Elements of shared learning between pupils may occur. Activity between schools is likely to be programmatic, with defined and short periods of contact such as joint school trips, visiting partner schools or short learning programmes. Collaborative activity is limited in terms of sustainability.

Sustained and regular activity

Collaboration between schools is increasingly regular and well-co-ordinated. Collaborative activity involving staff and pupils occurs over a sustained period of time. Shared learning

between pupils is regular, timetabled and embedded within the curriculum. Senior staff begin to form partnership infrastructure.

Culture of collegiality

Schools have been involved in sustained collaborative activities and are developing strong institutional relationships characterised by high status curricular shared learning between pupils and increased collaborative activities between teachers and leaders. Management and co-ordination of collaboration is distributed across staff. A strong partnership infrastructure is evident and the practice of collaboration begins to normalise. Collegial relations embed. Teachers and leaders have more frequent contact and generate shared resources. New knowledge and shared resources are created.

Institutional interdependence

Schools develop a kind of organisational symbiosis in that collaboration has normalised, is based on common need, involves significant shared learning and where staff, leaders and Governors recognise the value of collaboration. Schools have reached a point where they pool resources in terms of expertise, finances, teachers, and facilities. While schools remain distinct and maintain their separate identities they enter into an interdependent relationship. Collaboration becomes a vehicle to deliver education more effectively.

The Value of Shared Education in a Divided Society

Drawing on our research and programme experience, we see the unique value of shared education as relating to the following:

There is now a considerable body of internationally generated evidence that endorses intergroup contact as a mechanism for ameliorating prejudice and promoting mutual understanding. Shared education affords pupils and teachers an opportunity for the type of contact encounter that is known to be most effective. Hence, the emphasis on educational outcomes can be seen as a *superordinate goal* that schools can only achieve through *working collaboratively*; the nature of the intervention facilitates *sustained contact* that allows participants to develop the type of friendship relationship that is associated with reduced anxiety, prejudice reduction, trust building and perspective-taking. Shared education, because it is curriculum based, requires considerably more commitment from schools than short-term, one-off projects. For the initiative to work, a high degree of *institutional support* is required. Finally, schools participate in contact on an *equal basis* and, by dint of the fact that schools are separated on ethno-religious grounds, *identity is salient* throughout, not least in the form of the uniforms worn by children who move between schools.

Attempts to build community relations through education in divided societies tend to fall into two categories; the establishment of desegregated schools, and the promotion of policy initiatives that support short-term contact initiatives. Often, as is the case in Northern Ireland, both approaches exist as options within the dominant divided system. Research has shown that integrated education, whilst an effective mechanism for relationship building, has only limited appeal – with the overwhelming majority of parents in Northern Ireland and other divided societies where such schools are an option (eg Israel), opting to send their children to separate schools. It has also been shown that short-term contact initiatives, whilst sometimes symbolically important, tend to be limited in terms of positive attitudinal and behavioral outcomes impact, and can sometimes exacerbate tensions between groups. The shared education approach bridges a gap between integrated education which has very limited reach, and short-term, largely ineffective, contact initiatives, by offering pupils and teachers an opportunity for engagement that is sustained and curriculum based.

The elevation of educational outcomes as opposed to the foregrounding of reconciliation objectives, enhances the appeal of the initiative in divided contexts amongst stakeholders

who are wary of state sponsored 'community relations' initiatives, fearing that the latter are designed to denigrate or assimilate distinct identity groups.

The fact that shared education objectives are consistent with the educational outcomes prioritized by schools can enhance engagement. Unlike other contact initiatives that are often resource-intensive, and perceived as achieving little in respect of educational targets, there are tangible associated benefits to be accrued from participation in shared education.

Educators in divided societies are often fearful of engaging with controversial issues in the classroom. In Northern Ireland and other jurisdictions this is often associated with the absence of appropriate training, and a perceived conflict in the minds of teachers between the role of teacher as a Professional, and the extent to which they (teachers) should be responsible for taking on the ills of wider society. A core strand of the Shared Education Programme is the provision of support for those delivering the initiative - potentially assuaging the fears of those who might be committed to community relations work but are anxious about undertaking it, and better preparing them for it.

Barriers and Enablers

Local Level

Given that shared education is a relatively new educational approach, research and evaluation is essential to help contextualise school partnerships. The local research highlights a number of common logistical challenges that often accompany sharing and collaboration between schools (Donnelly & Gallagher, 2008; Duffy & Gallagher, 2012, 2014a, 2014b; Knox, 2010). These include:

- Location and proximity of partner schools
- Travel time between schools
- Timetabling
- Adjusting to cultural differences in schools

Interviews with teachers and school leaders reveal that proximity, travel between schools and timetabling are the most significant logistical issues facing schools in partnership. Importantly these issues are often interrelated. However the most effective partnerships find solutions to these thus providing key learning for existing and emerging partnerships.

By design, pupils who are involved in shared learning will visit each other's schools and this requires elements of time and travel from one site to another. In some contexts pupils can walk between schools but in other settings transport is required. Schools that are closely located together find it easiest to engage in effective collaboration, but even when schools operate at a distance, innovative approaches to a re-thinking of the traditional school curriculum provide a means by which little or no teaching time is lost. Research from the Foyle Contested Space Partnership suggests that pupils not only enjoy the experience of travelling, but highlight that, in the absence of shared education they would be reluctant or anxious about visiting each other's community given the context of city.

Timetabling differences between schools can present logistical issues as the structure of the timetable often differs between schools. This practical challenge has been overcome through a variety of means, including: aligning sections, but not all, of the timetable; co-ordinating an agreed time for shared learning to take place; and strategically positioning shared lessons on timetables to facilitate travel time.

The practice of shared education exposes pupils and educators to a broad array of differences in terms of cultural practice and, more prosaically, the ways schools are managed and operate. For example in some partnerships, participants talked about cultural differences such as the use of national and religious symbols, cultural terminology, and different

denominational practices and rituals. In other contexts the challenges for pupils have been about adjusting to gender differences in shared classrooms. Others have talked about adjusting to different school rules and policies in their partner school. Many pupils talked about initial anxieties about taking part in shared lessons but over time these anxieties have abated and pupils talk more readily about feeling more confident and enjoying shared education. Teachers have talked about adjusting to differences in approaches to teaching and learning and coteaching. Macro-level

At macro level a particular barrier is the lack of agreed policy around shared education. A number of key policy and strategy documents reference shared education and the value of collaboration between schools in terms of societal, educational and economic benefits. However these have not been presented as part of a coordinated policy strategy and there remains no agreed definition of shared education in policy or legislation. The absence of agreement around definition has led to a policy vacuum. In turn this affects the depth of shared education activity and limits its potential for change. For example the basic understanding of Shared Education being activity between schools from different sectors can be anything from limited activity represented by joint extra-curricular trips to regular and sustained curricular activity leading to enhanced educational outcomes. The absence provides a space to present shared education as being light touch and as having limited potential for systemic change and therefore supporting the current status quo within the education system. A coordinated policy strategy would include a clear agreed definition and would involve a review of key DENI policies and initiatives including Area Learning Communities, the Entitlement Framework, the Sustainable Schools policy and the current Area Based Planning process. This lack of clarity is a clear barrier to the advancement of Shared Education. To the contrary support within policy is a vital enabler.

As such, the most significant enabler for Shared Education would be to create legislation providing a consensus around definition and the basis for development of policy and strategy. Currently the Department has presented its externally supported Shared Education initiatives to date (SiEP, SESP) as being pilot programmes that may lead to future policy. The research and programme evidence from the SEP initiatives of QUB and others provides the foundation for legislation and policy. There is no longer a requirement for further piloting. Legislation is required to move implementation into the system itself rather than being at the pilot level.

Shared education and the theory that underpins it places emphasis on facilitation of cooperative and harmonious encounters and as shown by the quantitative research reported earlier, there is little doubt that attitudes towards the 'out' group do change for the good as a consequence of participation. However, the challenge faced is to ensure that the nature of the encounters does not intentionally or unintentionally suppress the differences that preserve the institutional, social, and political structures which, in turn, can perpetuate stereotypes and prejudices, particularly in contexts characterised by asymmetries of power and status between groups (Abu-Nimer, 2004; Dixon, Durrheim & Tredoux, 2005; Nagda & Derr, 2004). The problem is exacerbated in Northern Ireland where cross-cutting cleavages in the education system are reflected not only in faith orientation but also in social class leading the Ministerial Advisory Group on Shared Education to recommend that the objectives of shared education can only be achieved within a more fully egalitarian system of post-primary education (MAG, 2014).

Duffy and Gallagher (2014a; 2014b) identified a series of collaborative effectiveness characteristics which include: the formation of a strong collective identity, which in turn is supported by a partnership infrastructure; school leaders needing to be involved and supportive of the partnership. An effective partnership is one where personal and professional relationships flourish through sustained and regular contact, and where additional opportunities for collaboration are encouraged and seized. The extent and quality of the collaborative activity between individuals (pupils, teachers and leaders) is important. Effective collaboration should provide opportunities for professional development and

capacity building for teachers and leaders. Collaboration should produce tangible collective commodities in the form of shared resources, new knowledge and joint approaches.

The most effective collaborators are those where shared activities permeate throughout schools and are not bounded or constrained by delineated activities. The most effective and sustainable models demonstrate the capacity to innovate and evolve. Importantly shared learning needs to be located in core curricular areas. When this occurs, the practice of collaboration and shared learning is more likely to become embedded in schools and develop new habits of sustainable activity.

Based on our research, the partnership infrastructure is an important characteristic of effectiveness. This infrastructure is underpinned by supportive advocates at strategic levels, and should include school leaders and committed teachers to oversee the management of the partnership. In some cases we have observed partnerships which have invited representatives from external bodies to assist and advise schools in the delivery of collaborative activity (examples include representatives from community and statutory agencies or local education authorities). Our evidence suggests that the more effective a partnership becomes, the more likely a strong institutional relationship will develop based on mutual benefit. When this occurs schools are more likely to be able to identify common needs and share resources.

Within Northern Ireland, our strongest partnerships provide clear evidence of school improvement outcomes including: sustainable teacher and school leader networks which offer capacity building and professional development opportunities for staff; partnerships share resources, such as expertise, space and equipment; schools generate new knowledge and practice, while working together enables schools to offer pupils a broader curricular choice. Our research also indicates that pupils find shared learning impactful and engaging. Shared education and collaboration offers social benefits, including: the movement of pupils, educators and parents across contested space settings into each other's communities; provides meaningful contact between participants from different cultural and religious backgrounds; and helps form social relationships between participants. In some partnerships, the relationship between schools, and external statutory and voluntary agencies has developed or improved.

Summary

Accepting the reality of separate education in divided societies, against the fact that such a system tends to deny children an opportunity to directly experience 'the other', shared education offers a useful model for building relationships between different groups.

There is clearly an appetite for shared education in Northern Ireland and in other jurisdictions. The Centre for Shared Education at Queen's operates as a hub for research, programme and educational activity associated with the shared education agenda.

Briefing Notes from the Centre for Shared Education at Queen's University to the Committee For Education, Northern Ireland Assembly

Attempts to build community relations through education in divided societies tend to fall into two categories; the establishment of desegregated schools, and the promotion of policy initiatives that support short-term contact initiatives. Often, as is the case in Northern Ireland, both approaches exist as options within the dominant divided system. Research has shown that integrated education, whilst an effective mechanism for relationship building, has only limited appeal – with the overwhelming majority of parents in Northern Ireland and other divided societies where such schools are an option, opting to send their children to separate schools. It has also been shown that short-term contact initiatives, whilst sometimes symbolically important, tend to be limited in terms of positive attitudinal and behavioral outcomes impact, and can sometimes exacerbate tensions between groups.

Accepting the reality of separate education as a legitimate expression of community identity, against the fact that such a system tends to deny children an opportunity to directly experience 'the other', shared education nurtures distinct social identities, whilst simultaneously offering a model for building relationships between different groups. At the Centre for Shared Education at Queen's University we broadly define shared education as,

Collaborative activity between schools from different sectors that is underpinned by a commitment to reconciliation objectives and can contribute towards school improvement, access to opportunity and more positive intergroup relations in divided societies.

Sharing Education promotes sharing and collaboration between schools, where pupils from different schools can learn together and where schools and teachers can share resources and expertise with the aim of developing sustainable institutional relationships. In doing so, the Sharing Education Programme (SEP) is committed to enhancing pupils' educational opportunities, demonstrating how resources between schools can be shared and used more effectively, while providing enhanced opportunities to explore denominational and cultural differences. A core element of SEP involves creating cross-sector collaborative networks of schools which offer shared, regular and sustained learning experiences for pupils in core curricular areas.

The School of Education at Queen's University Belfast has led the way in regards to promoting shared education through research and supporting schools involved in shared learning and broader collaboration. The Sharing Education Programme has been supporting school partnerships since 2007, broadly this has involved 41 partnerships, involving 137 primary and post primary schools and over 10,000 pupils all supported by teacher and school leader networks across Northern Ireland.

The Centre for Shared Education at the School of Education also supports a programme of comparative national and international research that aims to enhance understanding of school-based sharing, the collaborative process, and associated outcomes. Our work is theory driven and empirically based, and we work in partnership with leading experts from a range of academic disciplines.

The collaborative activity supported through shared education responds to claims that integrated education has limited reach, and contact initiatives have been shortterm and largely ineffective, by offering pupils and teachers an opportunity for engagement that is sustained and curriculum based. The elevation of educational outcomes as opposed to the foregrounding of reconciliation objectives, enhances the appeal of the initiative in divided contexts amongst stakeholders who are wary of state sponsored 'community relations' initiatives, fearing that the latter are designed to denigrate or assimilate distinct identity groups. The fact that shared education objectives are consistent with the educational outcomes prioritized by schools can enhance engagement. Unlike other contact initiatives that are often resourceintensive, and perceived as achieving little in respect of educational

targets, there are tangible associated benefits to be accrued from participation in shared education.

A key theoretical underpinning of shared education is based upon the contact hypothesis. As one of the most prolific strategies for improving intergroup relations, the hypothesis states that contact between members of different groups can, under certain conditions, reduce prejudice. These conditions include contact that promotes equal status between the group members in terms of power, influence or social prestige, encourages the pursuit of common or shared goals, is characterised by cooperation between groups, not competition, and has sanction of appropriate authority figures. In addition to the original optimal conditions, research suggests that contact situations which are intimate and sustained, rather than superficial in nature, facilitates self-disclosure and provides the time and space for friendship-developing mechanisms to occur. There is now a considerable body of internationally generated evidence that endorses intergroup contact as a mechanism for ameliorating prejudice and promoting mutual understanding. Further, this work suggests that contact appears to have the strongest impact on prejudice by reducing negative affect, such as intergroup anxiety, and by inducing positive affective processes, such as empathy and perspective taking.

It is important to understand that contact is not a panacea for prejudice. It is only under these key conditions and through specific psychological mechanisms that positive, sustained intergroup contact may illicit more harmonious relationships. At the Centre for Shared Education, we have expertise in the theoretical and practical underpinnings of intergroup contact and have used this expertise to inform the structure of shared education supported through our programmes. As such, shared education affords pupils and teachers an opportunity for the type of contact encounter that is known to be most effective. Hence, the emphasis on educational outcomes can be seen as a superordinate goal that schools can only achieve through working collaboratively; the nature of the intervention facilitates sustained contact that allows participants to develop the type of friendship relationship that is associated with reduced anxiety, prejudice reduction, trust building and perspective taking. Shared education, because it is curriculum based, requires considerably more commitment from schools than short-term, one-off projects. For the initiative to work, a high degree of institutional support is required. Finally, schools participate in contact on an equal basis and, by dint of the fact that schools are separated on ethno-religious grounds, identity is salient throughout, not least in the form of the uniforms worn by children who move between schools.

Pupils who engage in shared education demonstrate reduced levels of anxiety; demonstrate positive action tendencies and more trust towards members of the other ethno-religious community. Further, shared education has been found to improve intergroup relations for pupils who attend schools that are located in more divided areas, where intergroup relations can be extremely tense. This is perhaps the strongest endorsement of the programme's efficacy. In total, research suggests that shared education can positively impact intergroup attitudes and behaviours and that it does so in a manner which is consistent with contact theory.

Shared education is also underpinned by a range of theoretical perspectives which are broadly termed network theories and interrelated research which focuses on the characteristics of collaborative effectiveness. Importantly collaboration between schools should be thought of as activity which ultimately leads to school improvement. Given the divided nature of education in Northern Ireland shared education offers a means of creating porous boundaries and bridging mechanisms between the sectors and thus creating the conditions where schools can, in collaboration, share expertise, resources, create new knowledge and develop a type of interdependent and collective competence.

Effective partnerships demonstrate a clear purpose and focus for the collaboration; strong relationships which connect individuals/institutions and provide social capital; the type and extent of collaboration; creating opportunities for collaborative enquiry and professional

reflection; examining how leadership supports collaboration; the types of support and capacity building for individual and collective learning to take place. If these characteristics are present both within schools and forged between schools they are likely to create the conditions in which schools can improve.

At the local level, interviews with teachers and school leaders reveal that proximity, travel between schools and timetabling are the most significant logistical issues facing schools in partnership. Importantly these issues are often inter-related. However the most effective partnerships find solutions to these thus providing key learning for existing and emerging partnerships. At macro level a particular barrier is the lack of agreed policy around shared education. A number of key policy and strategy documents reference shared education and the value of collaboration between schools in terms of societal, educational and economic benefits. However these have not been presented as part of a coordinated policy strategy and there remains no agreed definition of shared education in policy or legislation. The absence of agreement around definition has led to a policy vacuum. In turn this affects the depth of shared education activity and limits its potential for change. As such, the most significant enabler for Shared Education would be to create legislation providing a consensus around definition and the basis for development of policy and strategy.

PTA Northern Ireland

Parents and Shared/Integrated Education

A response on behalf of PTA NI

PTA NI

PTA UK is one of the largest voluntary sector membership organisations in the UK. We have over 13,600 PTA members that represent 1 million volunteers. We are a charity. Children and schools are at the heart of what we do. For almost 60 years we have been supporting PTAs to build parent communities, run effective and efficient organisations that raise money and run activities to support their school.

Within Northern Ireland, PTA NI is working with an estimated 100,000 parents through our 300 PTA members; PTA NI represents the largest group of parent communities in statutory education in Northern Ireland. Based on the 2011 census results, there are an estimated half a million parents with dependent children in Northern Ireland. Through our membership, PTA NI is working with 20% of the NI parent population.

Our membership is representative, comprising 243 primary, 45 post-primary and 12 special schools (respectively 28% of primary, 20% of post-primary and 30% of special schools). PTA NI membership engages across all political and religious affiliations.

PTA NI has an existing reputation in providing access to NI parent opinion. We have supported the Education Committee to gain parent opinion on Common Formula Funding and Area Based Planning, with an emphasis on ensuring representation and geographical spread.

Mission

It is our vision for every school to have the benefit of a successful and supportive PTA to enhance the education and futures of all our children.

To achieve this, our mission is:

- To be the voice for all parents and PTAs
- To provide credible, well research and authoritative support
- To enable PTAs to achieve more and serve their community
- To innovate and inspire as an expert voice
- To be market leaders in the benefits, services and practical tools we offer

Over the next year, PTA NI membership will increase by 10%, growing our parent community to around a quarter of all NI parents with dependent children. By 2018, PTA NI membership will be close to half of all schools.

Parental involvement

PTA NI's specific interest with regard to the Shared Education and Integrated Education policies is parental involvement. We welcome the findings of the Ministerial Advisory Group on Education, "*Parental involvement was seen as crucial to ensuring that shared education becomes a reality.....Barriers to the advancement of shared education outlined by parents included perceived prejudices in the wider community in relation to disability, racism and*

sectarianism and the teaching of religion in schools. Some felt that parents themselves may need to be educated to deal with prejudices they may have which can be passed on to their children”.

The influence parents have on their children’s learning is well document and is expressed in terms of attainment¹. PTA NI therefore welcomes this inquiry’s focus on parents and the need to engage effectively.

PTAs and parental involvement

Our PTA members have a proven track record in parental involvement and supporting the implementation of Shared Education and Integrated Education:

1. Case study 1: Shared Education

After many years of Shared Education, the PTSA at Brookeborough Primary School has forged an excellent relationship with the PTA at St Mary’s PS Brookeborough.

Through the Shared Education programme, children, staff and parents from both the controlled and maintained schools have engaged in Shared Education classes covering respecting difference, choral speaking, drama, history and art projects. Highlights have included the pupils joining together in choral speaking for the Fermanagh Feis. The children won this section and followed on with both schools producing a drama on racism.

This shared working was infectious and led to the PTSA considering working together. The focus was on how to enhance the local village. The objective was for something that visually showed how the two groups had readily taken on a project together. Children from both schools came together with the Friends of St Mary’s representatives and the Brookeborough Parent Teacher Support Group to plant flower boxes in the village. Grandparents also helped. The local community enjoyed the colourful floral display that enhanced the village.

Recently the cross-community Playgroup Committee organised a Halloween disco for 0-P3 age group and their parents. The PSNI provided the music and this was another example of Shared Education in Brookeborough for all the children in the village.

Following a consultation process with parents and the community, the playgroup and two schools are currently preparing an application for a Shared Education campus in Brookeborough.

Both schools, supported by their parent groups continue to look at ways to work together to continue to develop a vibrant community spirit and shared community environment.

2. Case study 2: Integrated Education

Rowandale Integrated Primary School was founded in 2007 by a group of local parents responding to a need for Integrated Education in the area. Continually supported by these and many other parents, the school has grown significantly in the past eight years and today prides itself on providing a wonderful and stimulating environment where 198 pupils are educated together as equals, sharing and celebrating each other’s faiths and beliefs.

1 “Typically parents and caregivers are a child’s first and most interested teachers. This role does not cease to exist when children enter school; in fact, families play a critical role in the education of their children. Working with the school, parents and caregivers can help create collaborative partnerships that support all aspects of a child’s achievement at school”, (Parental Involvement: The Missing Link in School Achievement, Larocque, Kleinman and Darling, 2011). Sacker et al (2002) states that parents have five times more influence on achievement at age seven than school. This diminishes as children get older but parents still have more influence on achievement than school at age 11. Whilst school has much more influence at age 16, parents still have some influence. Desforges, (2003) states that “parental involvement in the form of ‘at home good parenting’ has a significant positive effect on children’s attainment and adjustment even after all other factors shaping attainment have been taken out of the equation”.

Parents founded their own Council to strengthen the school and assist its growth, to foster community relations and share the positive message of integration throughout the area. Children at the school do not experience segregation; they know one another as individuals, not stereotypes and together they explore the diversity of their country. Value is placed on the importance of playing, creating and learning together. Monthly art clubs are run for all children in the area and a Community Playgroup has been opened giving families the opportunity to access an integrated environment at the earliest possible opportunity.

Fundraising by parents is always important to any school but for a newly opened one it is vital and the Parents' Council has organised many events both in the school and the surrounding area which raise money and local awareness of Integrated Education. Whether it be Christmas bag-packing in supermarkets whilst wearing Rowandale t-shirts, successfully gaining sponsorship for the school cross-country kit from local businesses, running the popular annual Christmas craft fair, entering teams in the Belfast Marathon, organising social events or putting on simple fundraising initiatives such as car boot sales, parents are involved in the school and the community with significant benefit. As a direct result of fundraising many items have been provided including cameras, interactive whiteboards, iPads, kindles, e-books and musical equipment. The Parent Council has also successfully applied for grant funding which allowed the school to develop an 'extended care' scheme including a breakfast club and an extensive range of after-school activities. At the heart of these activities is a desire not only to provide for children but also to spread the positive message of integration far beyond the school walls.

3. Case study 3: Parental Engagement

The Parent Teacher Association of Carnalridge Primary School was set up over 25 years ago, and right up until 2010 was exclusively involved in fundraising activities. Since then, it has explored other ways to benefit pupils and the school community. Over the past 4 years, it has introduced new after school activities, such as archery and golf, and assisted with running these by supplying volunteers to help the coaches. The PTA has expanded its work to promote increased engagement between parents and school governors, with the latter becoming much more visible and accessible as a result.

In short, the PTA's focus has shifted from fundraising developing a closer and stronger partnership between the school and PTA, with the benefit felt across the school community.

Opportunities

PTA NI provides a range of opportunities to support and enhance the implementation of Shared Education and Integrated Education:

1. **Giving parents a local voice:** as the only parent organisations that exist within the majority (75%) of all NI schools, PTAs are the prime opportunity by which to engage and consult locally with parents around the implementation of Shared Education and Integrated Education, achieving the recommendation of the Ministerial Advisory Group. PTA NI is working to ensure every school has a parent organisation that gives parents the opportunity to be part of the school environment, to have a say on what is happening in school and developments that effect their children's education.
2. **Supporting implementation:** as shown by the case studies, PTAs are a valuable asset in delivering activity that supports the implementation of Shared Education and Integrated Education. They bring additional resource and support to help achieve these policies and crucially are the means by which to get parents actively involved, providing ownership and engagement.
3. **National consultation:** with our reach to the NI parent population, proven track record and credibility with parent groups, PTA NI provides a unique opportunity to consult nationally with parents on Shared Education and Integrated Education. This could be used to benchmark parental attitudes towards both initiatives using a demographically

weighted sample, assess barriers to participation and then monitor movement in perceptions and engagement. PTA NI also provides opportunities to understand attitudes in depth with assessment through focus groups and parent representation at the Education Committee enquiry.

Summary

Parents are important in achieving Shared Education and Integrated Education; without engagement parents may become a barrier to the success of both policies. PTA NI has a well-established and extensive parent reach within statutory education. Our PTA members are already working to support the implementation of Shared Education and Integrated Education. This provides a range of opportunities to consult and engage parents as well as harnessing PTAs to help deliver Shared Education and Integrated Education policies.

Response to Education Committee Inquiry into Shared and Integrated Education

Rowendale Integrated Primary School in Moira opened in September 2007, with an intake of 18 pupils. It now has an intake of 198, is oversubscribed and currently has a development proposal before the Minister to expand to 2 form entry. This proposal received 130 letters of support initially.

We welcome the opportunity to respond to the call for evidence from the Committee on their Inquiry into Shared and Integrated Education. The Department for Education has a statutory duty to encourage and facilitate the development of integrated education in Article 64 of the 1989 Act. The subsequent judicial review earlier this year and the ruling by Justice Treacy clarified this duty and how it applies to education policy. This ruling should enable the expansion of integrated education to meet local demand.

At present we do not consider that the Department is fulfilling its existing duty with regard to integrated education. As part of the judicial review an attempt was made to provide a definition of “shared education”. We are strongly of the view that any attempt to put a duty on the Department to promote and facilitate shared education would further dilute and impede the Department’s to avoid their existing, and currently failed, statutory duty to promote Integrated education.

Shared and Integrated Education are not the same, neither are they mutually exclusive. It is our belief however, backed up by years of academic research and evidence that shared education is not a viable alternative to integrated education in social, academic or financial terms. Rather shared education perpetuates division, with children being labelled according to the school they attend and the uniform they wear.

Shared Education sustains the segregation. The children remain taught in separate classrooms by different teachers on different topics. There is limited or no attempt to learn about their own or each other’s beliefs to try and break down societal divisions.

It can be described as promoting education apartheid, and whilst we recognise that it is better than no effort being made at all, programmes such as CRED have little lasting impact.

Our parents have chosen integrated education for their children because they wish to have their children from across the communities educated in the same school, by the same teachers, wearing the same uniform and being taught the same things as their peers of different religious backgrounds and none. Lasting and meaningful change can only be achieved by stopping the prejudices and barriers from being built in the first place.

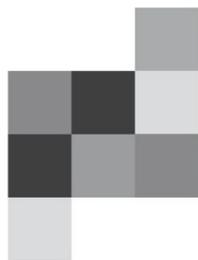

Rowendale, as with other integrated schools, seeks to provide an environment which promotes a united community through celebrating diversity and respecting all cultures and backgrounds all day and every day. It is ingrained in the ethos of our school and we seek to do this not just in the classroom but within our local community, as recognised by the awarding of the Queens Award for Service to the Community to the school in 2009.

We would be happy to meet members of the Committee, either formally or informally to discuss further the key aspects of integrated education. If the Committee wishes to meet pupils, parents, staff or Governors of the school at Stormont we will facilitate that, or would welcome any MLA who wishes to spend time at the school and begin to understand why so many parents seek an integrated school for their children.

October 2014

Introduction

RCN welcomes the opportunity to respond to the Committee for Education's Inquiry into Shared and Integrated Education. Our response is informed by a series of public conversation events between November 2011 and June 2012 delivered in partnership with the IEF and local community. These events were designed to:

- Provide parents and communities with information on policy changes in education
- Explore how changes in policy and funding may impact on local schools and,
- Explore the potential for shared and integrated solutions to maintain education provision in rural communities

Overall a total of 419 people attended the 10 events held across Northern Ireland.

Since then RCN has supported rural school communities who have approached the organisation in relation to responding to the Area Planning consultations and some of those schools who have been identified for closure as a result of area planning.

More recently RCN in partnership with Youth Action, NI Youth Forum, University of Ulster, NEETS Forum (Belfast) and Mencap, have engaged with young people living in rural areas (aged 16 – 25 years) to gather their views and opinions in relation to shared education and integrated education. To date one event has been held in Newry with another two events planned for Ballymena and Derry/Londonderry before end of December 2014.

The Nature and definition of Shared Education and Integrated Education

The definition of integrated education is, in our view, reasonably clear both in practice and in law. The recent Judicial Review taken by Drumragh Integrated College in May 2014 of the Department's refusal to allow the school to expand because of the spare capacity within the post primary sector in the Omagh District, further clarifies the definition of integrated education and differentiates it from shared education. The Judge took the view that:

“However, upon analysis I consider that ‘Integrated Education’ is a standalone concept and the second part of the sentence i.e. ‘that is to say the education together at school of Protestant and Roman Catholic Pupils’ clarifies the type of integrated education that is to be supported, i.e. integration between Protestant and Catholic Pupils as opposed to integration within school of any other distinct sets of pupils. The provision plainly envisages education together at the same school.”

Justice Treacy further clarified that a school that has a predominantly Catholic or predominantly Protestant ethos cannot be said to be delivering integrated education because as part of its constitution, as an institution, it is fundamentally oriented to one religious cannon over another. Against this an integrated school strives to achieve an equal balance in relation to worship, celebration and exposure to both faiths.

The Ministerial Advisory Group on Shared Education which reported in March 2013 defined shared education as:

“Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.”

Both integrated and shared education are to be encouraged in a society, still emerging from conflict and still deeply segregated particularly in rural areas. Whereas the definition of integrated education is clear in law the development of shared education is a more recent phenomenon and can involve a range of contact from schools attending joint one off events to pupils from different schools being educated together on the core curriculum for most of the school day. The spectrum of shared education can span many facets depending on the level of sharing a school wishes to engage in.

RCN is of the view that a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education would be useful in the context of Area planning. In our view, education provision is rationalising within sectors rather than developing grass roots shared solutions which have the potential to be more sustainable in rural communities into the future.

We believe that shared and integrated education can be seen as part of a continuum and that they should not be seen as either/or by policymakers.

Key Barriers

Within many rural communities, segregation remains widespread. Whilst divisions may not be as apparent as in urban areas, they still exist. Patterns of land ownership, patterns of residence and the legacy of the Troubles underpin segregation in rural communities. This has obvious implications for the development of shared education especially at primary level where children are, for the most part, educated within their local community and primarily on a single identity basis. This may be less of an issue at post primary level where pupils travel longer distances to (for the most part) towns and villages to access post primary schooling. However the numbers of primary schools in rural areas are almost double that of the secondary sector, therefore efforts should be made at a primary level to promote shared or integrated education, when young children formulate friendships and attitudes towards others.

Segregation within the education system is a symptom of the wider division in society and this historical legacy is hard to address. In practical terms it may be logistically difficult in

some parts of Northern Ireland, which are still highly segregated, to identify partner schools for shared education work. There may also be an unwillingness within the individual schools to engage in shared education as there is no statute in law.

The concept of shared education is not widely understood amongst parents and the wider community as it is still relatively new. This was evident through feedback received from the events held by RCN and the IEF. Local communities need to be fully informed in relation to this concept and how it can and does shape a more inclusive, shared rural community.

RCN believes that it is critically important that parents and the whole community are involved in planning for education in their area. Again this was evident through the localised events, where parents and members of the community were not aware of the area planning process and how their views and opinions could assist and shape education in their own community.

We acknowledge that this is not an easy task for officials whose previous experience of public engagement may only have concerned school closures and is largely negative. RCN is of the view that the promotion of sharing in schools across sectors (if it can be done sensitively with local community support) offers some hope for retaining some rural schools which would otherwise close.

Currently within the area based planning process, no pathway for grassroots shared education models to emerge has been set out. The Terms of Reference for Area Based Planning published in December 2011 includes: "Identifying realistic, innovative and creative solutions to address need, including opportunities for shared schooling on a cross-sectoral basis."

RCN is concerned that the Education and Library Boards and CCMS have embarked on a twin track process that implements area based planning within the controlled and maintained sectors separately. This twin track process means that shared education options are less likely to emerge from communities. Schools that may have been viable on a shared basis will close leading to further segregation within the education system and longer travelling distances for pupils from rural communities. An obligation in statute to facilitate and encourage Shared Education should make the area planning process more sensitive to shared solutions where community support exists.

In terms of how a shared school might look and feel, in terms of symbols and emblems displayed, sports played and general ethos, these are difficult issues in rural communities as they are in urban communities. The sports that schools play, the symbols and emblems they display and the ethos they adopt in relation to religion, are existential representations of our communities and our different allegiances and aspirations. These issues can be even more sensitive in areas which were badly impacted by the Troubles and where the descendants of victims and survivors carry a legacy of hurt around what happened to their loved ones as well as a strong sense of identity.

Issues of ethos and identity in shared education must be addressed but this will take time and will involve negotiations that will need to be resourced. The Integrated school movement can offer some learning from the practice of education in their sector over the past 30 years and their approach to issues of ethos and identity. However the context of parents choosing to send their children to integrated schools is different in that it demonstrated a commitment to "shared education" that only a small minority of families made. Approximately 7% of all pupils attending school at present attend Integrated status schools, therefore the concept of parental choice in relation to their children engaging in shared education programmes as well as attending shared schools, needs to be fully considered.

Parents may harbour fears about sending their child to a school where they are in a significant minority. These views were expressed at some of the localised events held by RCN and IEF and explicit fears around sectarian bullying and health and safety were identified.

Shared approaches to schooling appear to work best where two schools from different sectors are relatively evenly balanced in terms of enrolment. Where one school is well below

enrolment threshold and a neighbouring school is above it there is much less incentive for the latter school to enter into a shared education project. This can significantly impact rural areas where there is a potential for a school closure but no willingness for other schools in the geographic area to engage as their own enrolment numbers are sustainable.

Key Enablers

The area planning process, if delivered in a more holistic way with much more input from local communities, could be an enabler for shared and integrated education in rural communities if people are made aware at an early stage and are involved as part of the process. Currently we believe area planning is being done “unto” communities rather than being done “in partnership with them”. To make area planning truly effective will require a completely different mindset from educational managing authorities.

The experience of the shared education projects that QUB have developed and delivered with a range of stakeholders across Northern Ireland are practical examples of what can be achieved and can inspire other schools across the region to explore the potential for shared education. The joint submissions from several of the school partnerships in Fermanagh to the Area Planning process seeking shared solutions is further evidence of the effectiveness of shared education.

Advancing shared and integrated education

The best way to advanced Shared Education is to keep promoting the shared education projects that Queens and other stakeholders have developed across NI. These are practical examples of what can be achieved in local communities and demonstrate the practical, educational and societal benefits. The recent announcement of additional funding for shared education will allow these projects to continue and deepen the links between schools from across different education sectors.

The Department of Education needs to make a clear commitment to shared education solutions and provide a clear pathway for such solutions that have grass roots support to emerge. ELBs need to examine where resources can be pooled and shared within schools in a locality. Shared education should continue to be promoted through the implementation of the CRED policy in relation to the potential for local cross community school partnership projects. These initial partnership projects, whereby children and parents begin to make links in terms of relationships, also break down barriers and fears in relation to the concept of sharing across different sectors.

With regard to integrated education the statutory duty to encourage and facilitate the development of integrated education should remain in place. RCN recognise that whilst parental choice for children is paramount, support should be given by the Department to integrated schools wishing to increase their enrolment numbers and capacity to deal with the increasing number of people wishing to send their children to local integrated schools.

Submission of Seaview Enterprises Ltd to the Education Committee Inquiry into Shared Education

This submission relates to the experience of Seaview Enterprises Ltd in leading an Expression of Interest application on behalf of schools and tertiary level training and education providers in Lower North Belfast to the recent March 2014 Department of Education call for Expressions of Interest to the Shared Education programme.

Seaview Enterprises Ltd is the social enterprise company of two North Belfast football clubs, Crusaders FC and Newington FC, set up to utilize the power of sport to achieve social goals – notably in education, health and crime prevention – see at <http://morethanaclub.org.uk/> Under the banner of the “Mes Que un Club” (More than a Club) programme, the company has worked with over 32 Primary schools and 20 Post Primary schools in its programmes. Paradoxically, perhaps, at the time of the Ministerial announcement of the opening of the Shared Education programme to Expressions of Interest, Seaview Enterprises Ltd was in a better position to lead a collaborative bid than any North Belfast school or any education support body. The evidence we had through the North Belfast Area Learning Partnership was that Post Primary inter-school curriculum collaboration was limited, and Primary level shared education was sporadic, random and sub-optimum for the times that we are in.

As such, we were in an ideal position to develop a shared education Expression – the Lilliput Complex, a shared sports curriculum project based at Loughside Playing Fields, Shore Road, Belfast. The landowner, Belfast City Council, agreed in principle that the land be used for this purpose.

From the outset, we understood that an Expression of Interest from the social enterprise company of two football clubs would be, at minimum, perceived as somewhat “left field”. As such, prior to undertaking the significant work of bid-preparation we sought advice from:

- The CEO of Belfast Education and Library Board, and
- The Minister for Education’s Special Advisor

Neither, at that stage, discouraged us and – in particular – we judged that the process could be an “open process” (ie: there did not appear to be too many “pre-earmarked” projects to make putting significant effort required in bid preparation a nugatory exercise)

Taking advice from the School of Shared Education at QUB, and a cross sectoral sub-group of Principals, as well as the 12 schools concerned, we developed a well founded Expression of Interest (see attached). With bids limited to 12 pages, none could reasonably provide detailed curriculum content or timetabling data.

Critical to the bid to DE was the key requirement for the “endorsement” of the BELB, the lead body in Area Planning. We are, regrettably, of the view that the BELB, through the offices of its

CEO, wrongly and unfairly disadvantaged our Expression of Interest to the Shared Education Campus Programme with the DE panel.

The following, then, sets out our experience with BELB.

- The BELB applied a new (non DE) criteria to our application which was different and distinct from those in the DE Protocol document; in particular, this ‘made-up’, ‘on-the-hoof’ criteria of the BELB was that the land proposed by Seaview Enterprises was not “education land”. Of course, had this criteria have been applied to the “Iodestar” Lisanelly project (using MoD land in Omagh) it would never have seen the light of day;
- The BELB, having indicated to us through senior education staff that they would “not be assessing” any bid and would be acting merely as a “post box” instead decided, mid-stream, to apply an assessment process to submitted Expressions;
- The BELB, in applying their own (ie: not DE’s) criteria, did not make clear to Bidders/ Applicants what the process was, despite requests;
- The BELB have not applied their (as opposed to DE’s) process fairly or equally;
- It is unclear whether there was a BELB panel, whether this panel consisted of no-one except the CEO;
- The CEO of the BELB declined to meet us to discuss our concerns;
- The BELB Board have had no part to play in any of this;
- The Chair of the Board, did accede to a meeting, then changed her mind, deciding unilaterally that a meeting was “not appropriate”;
- The BELB determinations on whether to support expressions or not have been made at senior level, below the level of the Board but above the level of the Senior education advisors who engaged with and gave advice on the Expression.

Frankly, the behaviour of BELB, and its CEO is unacceptable. The only conclusion that we could draw was that the BELB is not a fit body to administer or assess Shared Education programme bids in the future. BELB’s ignorance of the issues on the ground was wanton, and its behaviour prejudiced potential benefits to its own Controlled schools within the bid, let alone schools from other sectors.

Seaview Enterprises took legal advice on the potential to judicially review the decision of BELB. Our legal advice was that we would win such a case. However, it would have been a pyrrhic victory. Our Counsel indicated that – were they advising BELB - the best way for the BELB and DE to proceed was to mark/assess the bid in such a way as to disable its progress. That, we believe, is precisely what happened. And, in receiving a letter of rejection, it was made clear that Seaview Enterprises Ltd (the group that put the bid together with the support of the schools) could not receive – or would be excluded from – feedback from DE or the panel.

From the perspective of Seaview Enterprises Ltd, our core business is Community Relations. Our location is in working class Lower North Belfast. North Belfast is the most divided and segregated quarter in Northern Ireland. There are more NIO Peace Walls in North Belfast than in all other 17 constituencies of Northern Ireland put together. The area suffered, pro-rata, more conflict related casualties than any other. The highly segregated areas are pock-marked with territorial and interface disputes, some of which threaten the stability of the Good Friday Agreement political institutions. The area has high levels of deprivation, high rates of suicide, a high incidence of mental illness, is marked by educational under-achievement and by poor access to the sort of leisure provision provided for in the bid.

Any civil servant seeing an Expression of Interest with such a strong range of committed partners (from all school sectors, from tertiary education, and from the community) as that led by Seaview Enterprises – even if that partnership was in its infancy – would (or should)

immediately seek to support and build on the those efforts. That BELB did not see the opportunity in front of their eyes is the best commentary as to their unsuitability to make future decisions on Shared Education.

Finally, in regard to DE's role, our understanding is that the Shared Education programme had its genesis within the NIO and OFMDFM, probably influenced by the QUB Centre for Shared Education. It did not "transfer" well to DE, a more traditional, staid, culturally conservative Department unused to the flexibility and 'intelligent risk' required to support innovative projects such as the Lilliput Complex proposal.

Conclusion: The conclusion that we draw from a sorry saga are follows:

- BELB is not a fit body to play any determining role in future Shared Education programme bidding;
- That DE lacks sufficient understanding of the community relations 'buttressing' required for school sharing projects emanating from and supported by the community;
- That the Committee consider the merits of devolving future Shared Education programme bidding rounds to the QUB Centre for Shared Education;
- Alternatively, the Committee could consider the merits of appointing an Independent panel by public appointment, to ensure that decisions in relation to future rounds of Shared Education programme funds are assessed by fair process.

APPENDICES

"North Belfast is made up of many small, isolated communities. The area is highly segregated along religious lines and has suffered more, as a result, from sectarian violence than any other part of Northern Ireland..... As a direct result of its highly diverse and segregated nature, the area has failed to fully benefit from many of the initiatives aimed at economic development, with statutory agencies being widely perceived by the local community as not having supported, nor invested in, the social, infrastructural, economic, educational or recreational development of North Belfast. Without doubt, the image of the area has contributed to North Belfast's inability to attract sufficient resources."

Rev John Dunlop & Fr Tom Toner: The Report of the North Belfast Community Action Project

PROJECT OVERVIEW

SECTION 1

PROJECT OVERVIEW

Title: The Lilliput Complex, a shared Educational Sports Campus for Lower North Belfast takes its name from Dean Jonathan Swift's Gulliver's Travels Cavehill in Belfast was the inspiration for the novel. Swift imagined that the mountain resembled the shape of a sleeping giant safeguarding the city. Belfast has remembered Swift and Gullivers travels through the street name Lilliput Street (off North Queen Street in the Limestone Road area). By coincidence, Belfast's Lilliput Laundry provided many players for the original Crusaders football team (est 1898) to the extent that the team was nicknamed 'the Smoothers'

Planning Authority – Belfast Education and Library Board

Managing Authorities Involved: In addition to BELB, the project has the support of the Council for Catholic Maintained Schools and the Northern Ireland Council for Integrated Education.

Other Key Organisations: The project has the involvement of many local primary and secondary schools in the locality (details provided in later sections). The bid has also been coordinated and promoted by Seaview Enterprises Ltd. Seaview Enterprises is a not for profit social enterprise, managed by a project advisory board of Crusaders FASC and Newington FC, working within North Belfast and Newtownabbey, promoting good relations, vocational training, education and sports development. Some other key organisations that have formally supported the project include Belfast Metropolitan College, Stranmillis University College, the Integrated Education Fund, Bryson FutureSkills, Fingerprint Learning, NI Youth Forum, Peace Players International, LCAP, Belfast Community Sports Development Network, the Sports Partnership Group, Monkstown Amateur Boxing Club (including the 'box Clever' schools initiative), the Association of Teachers and Lecturers, the Association of Managers in Education, the Irish Football Association. As the land owners, Belfast City Council is also formally supportive of the bid (please see extract from Council Minutes in Appendix 1)

Area Planning: The project proposers have closely studied the Belfast Education and Library Board's Area Plans for Primary and Post Primary schools. These include the following:

- Area Plan for Post Primary Education Consultative Report, 26 Feb 2013
- Area Plan for Post Primary Education, 26th February 2013
- Area Profile for Post Primary Education, 27th June 2013
- Area Profile for Primary Education, 27th June 2013
- CCMS Viability Audit, 6th March 2013

At a meeting with senior BELB officials, Catherine Burnett and Paul Lawther, on 26th February 2014 it was confirmed that all schools listed in the Seaview Enterprises Ltd led bid in respect of Loughside Playing Fields were considered viable going forward within the context of the Area Planning exercise.

Senior Responsible Officer – Dr Clare Mangan (signed off in Appendix 13)

Early Overview of the Project

The project aims to establish a shared education sports campus on a main arterial route (Shore Road) of Lower North Belfast. With 18 partner schools (all with their own physical education and sports facility deficits), and a host of other educational partners, the project aims to develop a range of shared sports educational facilities, to include a six court indoor sports hall, teaching rooms, sports science labs, fitness suite, and a host of floodlit outdoor sports pitches (various sizes and surfaces). The project can only be realised if the land is forthcoming from Belfast City Council (as the land owners) of Loughside Recreation Centre.

These facilities would allow individual and joint school access to the facilities to deliver physical education, competitive sports and shared classes. There will be many shared topics taught at the facilities ranging from GCSE and A Level Physical Education for the secondary schools, to BTEC's and sports science qualifications, etc. The educational programme for the campus is still very much in the embryonic phase, but the benefits of 'doing something' in this locality far outweigh the economic and educational costs of 'doing nothing'.

For the avoidance of any doubt the location of the project site is detailed in Appendix 2

PROJECT OVERVIEW

SECTION 1

PROJECT OVERVIEW (Cont'd)

The following tables present key information that link directly to the essential and desirable criteria for the programme;

Essential Criteria	Additional Information on Partner Role
Number and Management Type of Schools	<p>Formal School Partners: BELB: Seaview PS, Currie PS, Cedar Special School, Lowwood PS, Loughshore Alternative Education CCMS: St Mary's Star of the Sea PS, Holy Family PS, St Patrick's PS, Little Flower Girls (CCMS), Voluntary: Hazelwood Integrated College, Other schools/Users: Glengormley HS, BRA, Ben Madigan (Voluntary) Other Educational Bodies: Belfast Metropolitan College, Bryson Future Skills, Stranmillis University College, Fingerprint Learning, Integrated Education Fund, Association of Teachers and Lecturers, Association of Managers in Education Cliftonville IPS, Hazelwood IPS, Newtownabbey CHS, Monkstown CHS (NEELB) and Dominican Fortwilliam have been consulted as part of bid development and are supportive but not formal partners yet.</p>
Educational Benefits	<p>The majority of the educational benefits will be focussed on that of physical education and community relations. All of the partner schools and those intending to use the proposed facilities will have a net positive benefit in terms of their education. The developing partnership will ensure that all school goes (from primary one through to upper sixth) from the partner schools will benefit from enhanced shared education opportunities and facilities. The project will ensure provision for those in mainstream, voluntary, CCMS, and special educational settings</p>
Societal Benefits	<p>There are a number of clear societal benefits associated with this proposal, namely:</p> <ul style="list-style-type: none"> Improved community relations through the use of a shared space Enhanced opportunities for sport, community and health development through the development of proposed facilities Community regeneration in a DSD designated neighbourhood renewal area Creation of up to 500 construction jobs, 15 full time jobs on site post construction and further economic stimulus into this area

Essential Criteria	Additional Information on Partner Role
Endorsement from Managing Authorities	<p>The project has the formal support of the Belfast Education and Library Board, the Council for Catholic Maintained Schools and the Northern Ireland Council for Integrated Education.</p>
Evidence of Community Support	<p>The Local Community Partnership – the Loughside Community Action Partnership and Belfast Community Sports Development Network will be the strategic community partners. Stranmillis University College (with Fingerprint Learning) will advise on the Learning Zone concept which will be integral to securing community support.</p> <p>Additional commitment and support has been forthcoming from Co-operative Alternatives (Community Shares), Peace Players, The Northern Ireland Youth Forum, Brantwood FC, Loughside FC and the Irish Football Association. An indicative list of 'Ambassadors' in North Belfast who have indicated support for the concept of a shared sports educational village (since it was formally launched in August 2008) is attached for information.</p>
Context of Area Planning	<p>At a meeting with senior BELB officials, Catherine Burnett and Paul Lawther, on 26th February 2014 it was confirmed that all schools listed in the Seaview Enterprises Ltd bid in respect of Loughside Playing Fields were considered viable going forward within the context of the Area Planning exercise.</p>
Desirable Criteria	Additional Information on Partner Role
Location	<p>As this is a bid for enhanced facilities and a shared sports campus, Appendix 12 provides a list of the partner schools and how far they are situated from the campus project site</p>
Evidence of Existing Sharing	<p>Appendix 4 provides a list of the partners schools and information and evidence on the current sharing arrangements with and between the partner schools. Please note that this will be factually documented at stage 2 of the process if successful.</p>

RATIONALE, AIMS & OBJECTIVES

SECTION 2

■ RATIONALE, AIMS AND OBJECTIVES

The aim and vision of this proposed project is to;

“To create a world class shared educational sports campus allowing for the development of our schools, our young people, their families and the subsequent wider community of this segregated area of Lower North Belfast”

The proposed project is underpinned by a clear evidence of need and will in turn meet the following objectives;

Project Objectives

1. To develop a world class shared education sports campus in a highly segregated and disadvantaged area of North Belfast that will be used by 18 partner schools, their pupils and their families.
2. To provide a North Belfast-wide shared physical education curriculum to all the partner schools and use this project as the first step to further mainstream sharing in the locality
3. To develop a shared and coordinated approach to addressing the high levels of sporting facility deficits that exist across the partner schools in North Belfast.

From the Needs Analysis carried out with the partner schools as part of this SOC and a subsequent review of the DE Guidance within the schools handbook, the following facilities have been proposed;

- Education Hub building, three stories containing 2 classrooms, a lecture hall, 1 IT lab, 1 Learning zone for informal learning, 1 small meeting/mentoring room, 1 office
- 1 full size 70 x 110 3G pitch to FIFA 2 star standard
- Multi Use Games Areas and Field Hockey Pitch
- Indoor Sports Arena – 6 Court Sports Hall & Fitness suite, Futsal area, fixed table tennis area, dance studio and indoor handball court
- Boxing, Judo and Martial Arts Facilities
- Associated car parking and Ancillary environmental works
- Will be fully DDA compliant

■ RATIONALE FOR LOWER NORTH BELFAST

Lower North Belfast remains a highly polarised and segregated environment. In terms of current patterns of residential segregation, almost half of the 88 identified interface barriers in Belfast are located in North Belfast, and an interface barrier was erected as recently as 2007 in the grounds of Hazelwood Integrated Primary in the Whitewell area (CRC 2009).

In part these divisions are a direct legacy of the Troubles as the region was the second most impacted part of Northern Ireland with regards to deaths attributable to the violence (after West Belfast). In total, 563 people (more than 25% of all of those killed during the Troubles) were killed in North Belfast in the three decades between 1968 and 1999 (McKittrick et al. 1999). A third of these victims were killed within 250 metres of an interface, while 70% of all deaths occurred within 500 metres of an interface (Shirlow 2003: 81).

The violence of the conflict impacted upon the club directly on a number of occasions. This included the 12th January 1980 killing by the PIRA of an RUC constable who was on duty at the Crusaders versus Portadown game, with the game subsequently being abandoned (McKittrick et al. 1999). The year previous to this, Crusaders and Cliftonville set an unfortunate record in British and Irish football which to this day has not been surpassed – the highest number of recorded police officers on duty at a game in the British Isles (1,900).

Although political progress and hard work in local communities have decreased tensions and drastically reduced levels of politically motivated violence, there are still a number of issues impacting upon communities in North Belfast. Tensions across the interface can fluctuate in relation to contemporary disagreements over the route of the annual Tour of the North or Ardoyne shop front parade, as well as the tension over marches at Donegall Street, which perennially seem to have the potential to act as trigger events for communal violence and rioting.

FACILITY DEFICIT NEED IN NORTH BELFAST SCHOOLS

In addition to the above, Appendix 3 shows the proposed partnering schools and the proposed facility deficits that exist across these 13 schools. The key headline information across these 13 schools is a deficit of 18 outdoor pitches, 15 courts and 2 gymnasiums. This provides a solid legislative rationale for these schools coming together to develop shared educational sports facilities in this locality. Schools will agree to cede some agreed element of their schools facility deficit in return for usage at the shared provision

RATIONALE, AIMS & OBJECTIVES

SECTION 2

■ RATIONALE FOR LOWER NORTH BELFAST

Indeed, these elements combined to cause the postponement of a recent Crusaders Vs Cliftonville match at Seaview – halted by a flag protestors' demonstration. Crusaders coaches have been involved in diversionary activities to relocate young people who may potentially get involved in interface violence away from the area. Crusaders and Newington have secured small amounts of funding for diversionary activities to work with young people at risk of engaging in interface violence. This drive towards community relations based activities by the club is in part a recognition of the broader societal divisions in which they find themselves. The club's home ground, Seaview is located along the Shore Road and bordering the M2 motorway in the Duncairn ward, which according to the 2011 Census was 63.8% Protestant in terms of the background of residents (NISRA 2011), in 2001 Census, this figure was above 90%, which shows a changing demographic in the locality. This location of the club within a predominantly 'Protestant' area is highlighted by the Union (and at times paramilitary) flags that fly outside Seaview on lamp posts and red, white and blue kerbstones which clearly demarcate the territory as being the 'space' of one ethno-political community.

Not only therefore is the immediate home of the club located in a residentially segregated area, but the area also suffers in terms of socio-economic deprivation. The Duncairn ward was the 14th most deprived of all 582 wards across Northern Ireland according to the Multiple Deprivation Measure in 2010 (NISRA 2010). In line with this, the residents of the area suffer from poor levels of educational attainment, with 80.9% having no or low level qualifications which compares very unfavourably both with the North Belfast average (68.6%) and the overall Belfast average (56.6%). See, NISRA 2010.⁶ These issues are important because they document the environment in which Crusaders currently exist as a club in terms of the sectarian divide in Northern Ireland, as well as in terms of the socio-economic deprivation which characterises many working-class communities right across Belfast and beyond. The location of the proposed Loughside Shared Education Campus, in "territory" perceived to be within the PUL. In the context of North Belfast, however, demographics are shifting traditional 'territory' and collaboration on the ground of sports and education in relatively uncontentious.

If the club are going to increasingly embed themselves in their local community, it is therefore useful to note the current 'state of play' on the ground, which will in turn inform what steps the club can practically take to increase their sustainability as a community orientated club. The following sub-section documents some of the history of the club before going on to record some contemporary activity with regards to community relations.

■ EDUCATIONAL RATIONALE

The case for the education benefits of shared education has largely been made. This research and evidence is set out in several documents, notably by University of Ulster, QUB the report of the Ministerial Advisory Group and by the CCMS. The economic case has been developed by Oxford Economics. One of the Project Team putting forward the bid is Mark Langhammer, Director of the Association of Teachers and Lecturers. Mark chaired the working group on Educational Disadvantage in Protestant Working Class areas set up by Dawn Purvis, then MLA for East Belfast. He co-authored the final report which was widely and critically acclaimed at the time and developed thinking at the heart of government.

The concept of shared education is supported by a number theoretical perspectives. One such perspective, inter-group contact theory, explores the context and the quality of contact between pupils who engage in shared educational activities. This body of literature (Hughes, 2010; Hughes et al. 2012; Hughes, 2012; Hughes 2012a; Hughes and Donnelly, 2012; Hughes and Donnelly, 2012a) indicates a number of important findings (i) separate schooling can be divisive whereby minimal and superficial contact between pupils can lead to physical and cultural isolation (ii) sharing offers a potentially more effective contact model than previous educational initiatives (iii) sharing offers significant community relations benefits and improved intergroup relations and (iv) pupils who engaged in shared education demonstrated reduced levels of anxiety; demonstrated positive action and more trust towards one another other.

Educational benefits are supported by research literature where collaborative activity between schools is frequently promoted as activity which is beneficial for schools (please see Appendix 8). In effect the data exploring this relationship appears to define school improvement in a broad sense. By working in partnership and drawing more institutional interdependence, the schools in Lower North Belfast intend to continue to focus energies on school improvement. A number of thematic areas emerge:

- Pupil attainment, engagement and performance (Chapman et al. 2009; Chapman et al. 2011; Hadfield et al. 2006; CUREE, 2005; Hadfield and Chapman, 2009; Chapman and Mujijs, 2013)
- School leadership (Ofsted, 2011; Hargreaves, 2010; Kubiak and Bertram 2010; Chapman et al. 2008; Hadfield and Joplin 2012)
- Teacher development, performance and motivation (Hadfield et al. 2006; Harris and Jones, 2010; Chapman, 2008; Ofsted, 2011; Mujijs, et al. 2010; Chapman et al. 2009; Hadfield and Jopling, 2012; Ainscow et al. 2006)
- Offering wider curricular choice and opportunity (Pring, 2009; Mujijs et al. 2010)

RATIONALE, AIMS & OBJECTIVES

SECTION 2

EDUCATIONAL BENEFITS / OFFER

This draft curriculum offer is informed by the following consultations:

- **Tertiary:** QUB Centre for Shared Education, Belfast Metropolitan College, and Bryson FutureSkills
- **Managing Authorities:** BELB, CCMS, NICIE
- **Schools:** Meetings with all schools listed in the document
- **Others:** Meetings with the North Belfast Area Learning Partnership Coordinator, the Integrated Education Fund, the Irish Football Association School Curriculum Coaching programme

Foundation (P1, P2), and Key Stage 2 (P5, P6, P7)

- At Foundation stage, study will focus on the
- LL Language and Literacy
 - MN Maths and Numeracy
 - A The Arts
 - WAU World Around Us, the modules on interdependence, movement, Place and Change over Time allow meaningful opportunity for interaction and community relations intervention
 - PDMU Personal Development and Mutual Understanding
 - PDM Physical Development and Movement (fundamental movement skills, including Jumping, Running, Catching, Hopping, Balance and Sprinting).

Ideal inter-school partnerships will develop organically from existing relationships between schools. However, where individual schools are willing, but lack partners, the Partnership Manager will seek to 'pair' schools with one or more partners. The methodology utilized will be the same as that currently used by Seaview Enterprises *Mes Que un Club* initiative whereby groups of 16 Primary Schools per term are **paired** (normally controlled with Maintained) and work together on Curriculum work. Using the concept of *'Maximised sharing'*, schools will be incentivised and rewarded with facility booking of sports amenities. For example the Seaview Enterprises 'Mes Que un Club' initiative has used its Champions League Primary Schools Project (using the cities and countries of the champions league participants to learn of the geography language, culture of these countries) as a methodological 'hook'.

The Education Hub facilities will lend curriculum focus on the WAU, PDMU and PDM units, but, with classrooms, IT lab and lecture hall, there will be scope to undertake shared learning in LL, MN and Arts. Whilst all except PDM are non-sports, these can be accommodated at the Education Hub and mixing sport with non-sport learning in 'blocks' may be easier to accommodate in harmonised school timetables. The 'carrot-stick' incentivisation of facility hire through 'maximised sharing' may, initially, allow non sport courses to be taught where class size viability at individual school level is questionable.

Key Stage 1 (P3, P4) and Key Stage 2 (P5,6 and 7)

All areas of the Key Stage 1 & 2 Curriculum could be taught in shared classrooms at Loughside (Language and Literacy, Mathematics and Numeracy, The Arts, the World Around Us, PD&MU, PE and RE). Focus is likely, however, to be placed on WAU, PD&MU and PE.

At KS2

Physical Education for Key Stage 1 will focus on

- Athletics
 - Dance
 - Games
 - Gymnastics
- All can be accommodated at Loughside with 'maximised sharing' the means through which access to facilities will, ultimately, be determined. The Key Stage 1 curriculum, as set out in the NI Curriculum (Primary) guide (colloquially known by teachers as "the golden book")

The NICIE developed 'Sharing Classrooms: Deepening Learning' resources and methodologies will be utilized to support teachers in teaching shared classrooms. Section: Exploring Diversity, Identity and Values contains particularly relevant preparation and exercises for learning and teaching in shared environments. These resources were developed under the IF1's shared Education Programme and are accessible at www.scdi.co.uk

At KS 2 swimming is added to the curriculum, catered for at the nearby Grove Leisure Centre.

Key Stage 3 (years 8-10)

At KS3 the Loughside curriculum offer will focus on;

- Learning for Life and Work
 - PE
 - Games
- In addition, the Shared Campus prospectus will focus on thematic units in;
- Personal Understanding Who am I?
 - Citizenship Growing up in Northern Ireland
 - Education for Sustainable Development

Within PE, the focus is on;

- Positive attitudes to enjoyment of physical activity
- Awareness of positive impact of physical activity upon health and well-being
- Positive relationships, sportsmanship, fair play and respect for differing capabilities

RATIONALE, AIMS & OBJECTIVES

SECTION 2

EDUCATIONAL BENEFITS / OFFER

<p>Keys Stage 4 (Years 12 & 12) and 5 (Years 13 & 14)</p> <p>At KS4 schools are obliged to take account of the report on Advancing Shared Education as a mechanism for the delivery of the entitlement framework (Connolly, Purvis and O'Grady, 2013) with schools collaborating with the aim of delivering educational benefits to learners. Schools should take into account this report when considering their Key Stage 4 curriculum provision. From 2015-16 onwards the statutory obligation under the "Entitlement Framework" will be for 24 subjects at KS4</p> <p>Qualifications Offered at KS4 and KS5 will be;</p> <ul style="list-style-type: none"> • Vocational BTEC First Diploma in Sport • City & Guilds Diploma in Playwork • Level 1, 2, 3, 4 BMC • Active IQ Level 2 Certificate in Fitness Instructing • Active IQ Level 2 Certificate in Personal Training • Active IQ Level 3 Certificate in Fitness Instructing and Personal Training • Edexcel Level 3 Diploma in Sport (not including Football Academy) • Edexcel BTEC Level 3 Diploma in Sport and Exercise Sciences • PE 'A' Level • PE GCSE • L2 Sports Studies BTECX • L3 Sports Studies, Cambridge Technical • L2 BTEC Dance • L3 BTEC Dance • Psychology 'A' level • Psychology GCSE <p>Coach education programme for post 16 pupils to include;</p> <ul style="list-style-type: none"> • Community Sports Leadership Level 1 • Using Sport to Tackle Youth Crime. Level 1 • Sports Leadership award L2 • Dance Leaders Award at L2 • Sports Leaders UK • Nutritional Development Level 1 Body Lab, see http://www.bodylabni.com/ • Nutritional Development Level 2 Body Lab • Stripping it back: motivation & team dynamics' <p>Europa League Post Primary Schools Project (using the cities and countries of the Europa league participants to learn of European conflicts, causes and the resolutions reached applied in these countries)</p>
--

<p>Post Primary Enrichment:</p> <p>The Loughside Shared Campus will provide an enriched curriculum to include;</p> <ul style="list-style-type: none"> • OCN Level 1 and 2 in Developing Community Relations through Sport • Employability & Entrepreneurship taster seminars • Careers Days • Positive Mental Health • Alcohol & Drug Abuse workshop • Mind Your Mate Suicide Awareness, PIPS • Body Lab Personal Development programme • Study Skills for Parents • Boxercise and 'Box Clever' programme <p>We will work with the Council's corporate citywide Health Plan, Belfast Healthy Cities and the Health Trust to incorporate an EU Healthy Stadia network methodology to the Education curriculum.</p>
<p>Additional Curriculum Offer</p> <p>Tertiary, BMC will offer a full Community Education Programme, including</p> <ul style="list-style-type: none"> • Fitness Health & Sport, including elements of the Sport Academy, notably Edexcel BTEC Level 5 HND in Sport (Coaching and Sports Development) and Edexcel BTEC Level 5 HND Diploma in Sport and Exercise Science • Hospitality & Tourism • Community Based Learning • Essential Skills • Catering • Creative Studies <p>Bryson Future-Skills will offer a full range of employment, employability and labour market initiatives including Apprenticeships NI, Training for Success, Steps to Work, Young Persons Employment Initiative, Graduate Acceleration Programme and the 50+ employment Initiative</p>

The project promoters and the partnering schools do acknowledge that there is still quite some work to do to ensure that the curriculum offer and the timetabling meet the needs of the students in question. At this early stage in the development process, that has yet to be worked up, it is worth noting that if progressed to stage 2, the entire breadth of the curriculum offer, the timetable, the access policies, the transport and the management will all be worked up and agreed.

CONSTRAINTS

SECTION 3

The following table will consider and highlight some of the potential constraints to the successful development of a shared education campus at Loughside. These are important in any outline case as they will inform the possible pitfalls and areas of concentration for any development to proceed.

Technical	Economic
<p>This site will contain a diverse mix of sports facilities, required to service the needs of a vast schools cohort. (P10) Given the range of sports currently offered or desired in these schools, it is important that site configuration reflects this need.</p> <p>Given the nature of the funding stream this case has been prepared aggressively with outline and broad agreement reached on many issues. The relationships between the schools and their representative governance will require more work.</p> <p>Based on the above point the schools and the sports played there will allow for social mobility and acceptance given the geographic location of the site in a predominantly PUL community.</p> <p>The site is currently managed by Loughside Boys FC. It is important that their needs are considered and met in any re-development on this site. An agreement has been reached with Loughside Boys as the incumbent. The management function on the site will require work and strong governance arrangements. KPMG have already conducted a detailed study and provided suggestions on the management and governance structure of a project similar to this.</p>	<p>This facility will require appropriate levels of investment to realise the vision as proposed.</p> <p>The ongoing revenue costs for the management and sustainability of a range of facilities of this kind will be large and so income generation must be seen as a priority focus.</p> <p>The site currently hosts a Council Leisure Facility which is subsidized by Belfast City Council. The development proposed may allow the Council to consider an arms length "lease and management" or other arrangement.</p> <p>To ensure acceptance and agreement on all the above issues, a robust financial planning process will be deployed with sensitivities and scenarios applied to mitigate any risks.</p>
Legal / Environmental	Political
<p>Belfast City Council currently own the site with a management arrangement in place with Loughside Boys FC.</p> <p>No planning application has currently been submitted nor succeeded for the development of these facilities, however upon progression to Stage 2 of this process an application will be prepared and submitted.</p> <p>An initial meeting has been held with DoE Planning Service. A planning application on behalf of ASDA supermarket recently tested usages on the site. Whilst the usage proposed is not significantly more intensive than current usages, the proximity of wetlands at Belfast Lough will require an Environmental Impact Assessment."</p> <p>The vast range and levels of stakeholders on this site will necessitate the development of a robust management structure.</p>	<p>Belfast City Council own the land and any decision pursuant to the Council Minutes in March and April (see Appendix 1) will require a structured consultation process which the proposers will agree with Council.</p> <p>The site is in a predominantly PUL community. As such, cross party and cross community support will be necessary to promote a welcoming, accessible, sage and good quality space.</p> <p>There are a number of high profile partners / stakeholders to this process who must be satisfied that governance and management arrangements are appropriate and acceptable to all.</p>

STAKEHOLDER ISSUES

SECTION 4

STAKEHOLDER ISSUES

Stakeholders: The following table provides some key information on the stakeholders involved and committed to the project, their issues and how this project can help to deliver a long term solution to their issues. Please note that a key outlining the stakeholder groups is presented in appendix 7.

STAKEHOLDER GROUP	IDENTIFIED ISSUES	SOLUTION ACHIEVED THROUGH THIS PROJECT	SIGNED UP AND SUPPORTIVE
Managing Agencies (BELB, CCMS and NICIE)	Require land and viable solutions for the development of shared educational facilities in North Belfast, and require creative thinking to help address the facility deficits that exist across the 13 partner schools.	A successful application will go some way to meeting the facility deficits that exist across the 13 schools and also provide a location for the future of sharing of PE and sports education.	All agencies have signed up and are supportive of this proposed project and it has been approved at Senior Management Levels within these organisations; <ul style="list-style-type: none"> • BELB – Formal support approved • CCMS – Formal support sought on 20th March • NICIE – Formal support approved on 25th Feb 2014
Formal School Partners (13 schools)	Require the use of appropriate school sports facilities and have long term ambitions for future collaboration and sharing.	A successful application will go some way to meeting the facility deficits that exist across the 13 schools and also provide a location for the future of sharing of PE and sports education.	All schools have formally signed up to be partners of the proposed project and have offered letters of support
Other School / Users	Require the use of appropriate school sports facilities and have long term ambitions for future collaboration and sharing.	A successful application will go some way to meeting the facility usage requirements of these schools and all believe that this is a much needed project in the locality.	All schools have formally signed up to be users of the proposed project and have offered letters of support.
Other Partners	Are seeking a suitable shared venue in North Belfast to lay down roads and deliver their programmes to a this hard to reach community audience.	A successful application will help many of these signed up educational partners meet their corporate, educational and community goals.	All other educational partners have offered letters of support and have offered to deliver the services from the site.
Community Partners	Many of the community partners are campaigning for the development of shared sports facilities in the locality.	The community access to the proposed project during the extra curricular periods would satisfy this key stakeholder issue.	All community partners have offered their support and have agreed to deliver their services and support the development of this project.
Belfast City Council (Landowner)	Belfast City Council are currently operating a Leisure Centre on the site. It is the project promoters understanding that Belfast City Council do not have any long term plans for the centre and have been actively seeking disposal or a different use for the site for the last decade.	A successful application would allow Belfast City Council to provide the land and play a key role in developing a shared space that will retain its civic benefit and encourage regeneration along this main arterial route.	Belfast City Council approved that Seaview Enterprises could proceed with the application to the Department of Education on the site and may provide the land if the funding application is successful. It went through the Parks and Leisure Committee on the 13 th February 2014 and was approved at Full Council on the 3 rd March 2014.
Seaview Enterprises Ltd	Have been campaigning for development of shared sporting facilities for Lower North Belfast for the previous 5 years and have an ambition to take on a management and development role in this project.	A successful application would help to address the key needs of Seaview Enterprises and their constituent member groups.	The Board of Seaview Enterprises are fully behind the scheme and will play an active and central role in any outworkings of the stage 1 Strategic Outline Business Case.

MANAGEMENT AND IMPLEMENTATION

SECTION 5

MANAGEMENT AND IMPLEMENTATION

Preliminary Management Considerations: The Strategic Investment Board, assisting Crusaders FC and Newington FC to pursue their plans for a shared sports & educational village for North Belfast, have already commissioned a detailed report on proposed governance structure. This study was undertaken by KPMG in June 2009 and funded by SIB. At Expression of Interest stage, it is understood that the precise governance of the project will be a matter of discussion and, in particular, the main funder (DE) and the land owner (BCC) will have views to consider. In the first instance, however, the proposers would offer three potential Governance options. Ultimately, it is accepted that DE will determine the matter of governance. The proposers have also taken full account of the Sport NI Publication – ‘Your School, Your Club’.

Option 1 Seaview Enterprises Ltd the existing social enterprise company of Crusaders FC and Newington FC could expand its Board of Directors, widened to include Education, Council & Community representatives – KPMG Report. In addition, there would be a specific **Project Board** for the Loughside project, together with a **Campus Education Group** and a **User & Community Board**.

Option 2 Would see a new **Community Interest Company** created representative of the main interests – Education, Community, Clubs and Council. As with Option 1, there would be a specific **Project Board** for the Loughside project, together with a **Campus Education Group** and a **User & Community Board**.

Option 3: A Community Benefit Society incorporated under the Industrial and Provident Societies Act 1965 would allow the promoters to raise capital funds through a Community Shares offer (see <http://www.coopalternatives.coop/community-shares/>) in order to deepen and widen cross community involvement and ownership across the North of the City.

The Curriculum Offer - How will it work? In addition to the proposals for the Governance of the Campus set out above, the Educational Partnership surrounding the Shared Campus will require a degree of sophistication. For the Loughside Facility this would include:

- **Service Level Agreement** signed by all School Principals. There may be a distinct or separate Primary from Post-Primary SLA.
- **Partnership Manager:** Employment, at least in the first 3-5 years, of a Partnership Manager tasked with maximising usage, shared and educational outcomes. Funding for such a role will be sought through BELB, CRED, IEF, PACT, BELTIE and other funds.
- **Lead School:** The Partnership Manager will be employed by a lead school. It was not thought that the Area Learning Partnership, for instance, was sufficiently robust to undertake this function. The work of the Manager will be informed and overseen by a Campus Education Group made up of representatives of the Schools, which would meet every term.
- **Partnership Protocol:** The Partnership Protocol (see Appendix 10) has been drafted for the Teachers Negotiating Committee and is currently under negotiation.
- **Link Teachers:** In each participating school, remunerated (subject to six) through a TA1 or TA2 teaching Allowance.
- **Timetabling:** The Manager will work with schools on the timetable, seeking to maximise harmonisation to facilitate class sharing. A sample timetable for Primary schools is included at Appendix 9.
- **Facility booking:** The Partnership Manager will adopt a direct incentivisation criteria to facility booking – those schools practicing ‘maximised sharing’ will gain priority for sports facility booking.
- **Facility Management:** It is envisaged that Seaview Enterprises Ltd undertake the facilities management and booking function. An integrated web and intranet-based booking system (currently in place and operational), will be coupled with a ‘Teamcard’ CRM (Customer Relationship Management) System will provide a seamless facility management support and information service. This system is currently in place through Seaview Enterprises Ltd.
- **Transport to and from the Shared Educational Campus from Partner Schools:** Transportation is a critical driver in any shared educational project, this will be considered in detail at economic appraisal stage, taking account of the recent PEDU report into school transport and the forthcoming recommendations from the Ministerial Working Group on home to school transport.

SECTION 6

COSTS, BENEFITS AND RISKS

COSTS

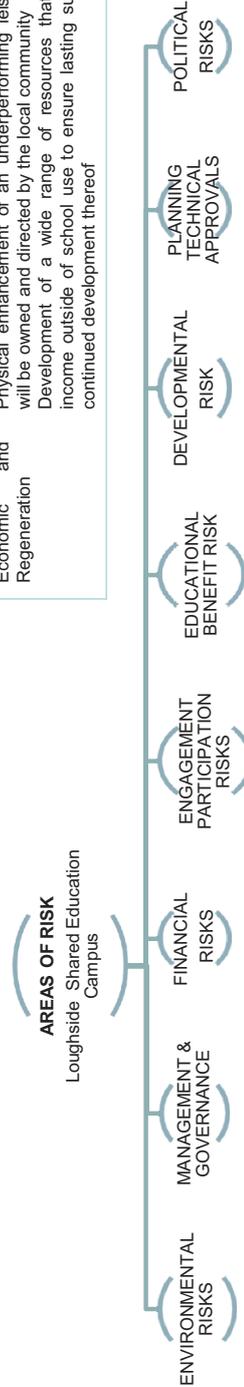

As part of the development of the outline business case the project promoter's commissioned the support of a Quantity Surveyor. The early indication of costs for the associated project and scheme outlined in Appendix 5 and 6 is detailed below;

Facility and Construction Element	Early Indication of Cost
Pitches and Playing Facilities	£2,169,000.00
Indoor Sports Block and Changing Pavilion	£8,100,000.00
Car parking, roads and infrastructure	£910,000.00
Sustainability and green technology	£600,000.00
Total Approx Cost	£11,779,000.00

NB* Please note that this figure does not include VAT, statutory or professional fees

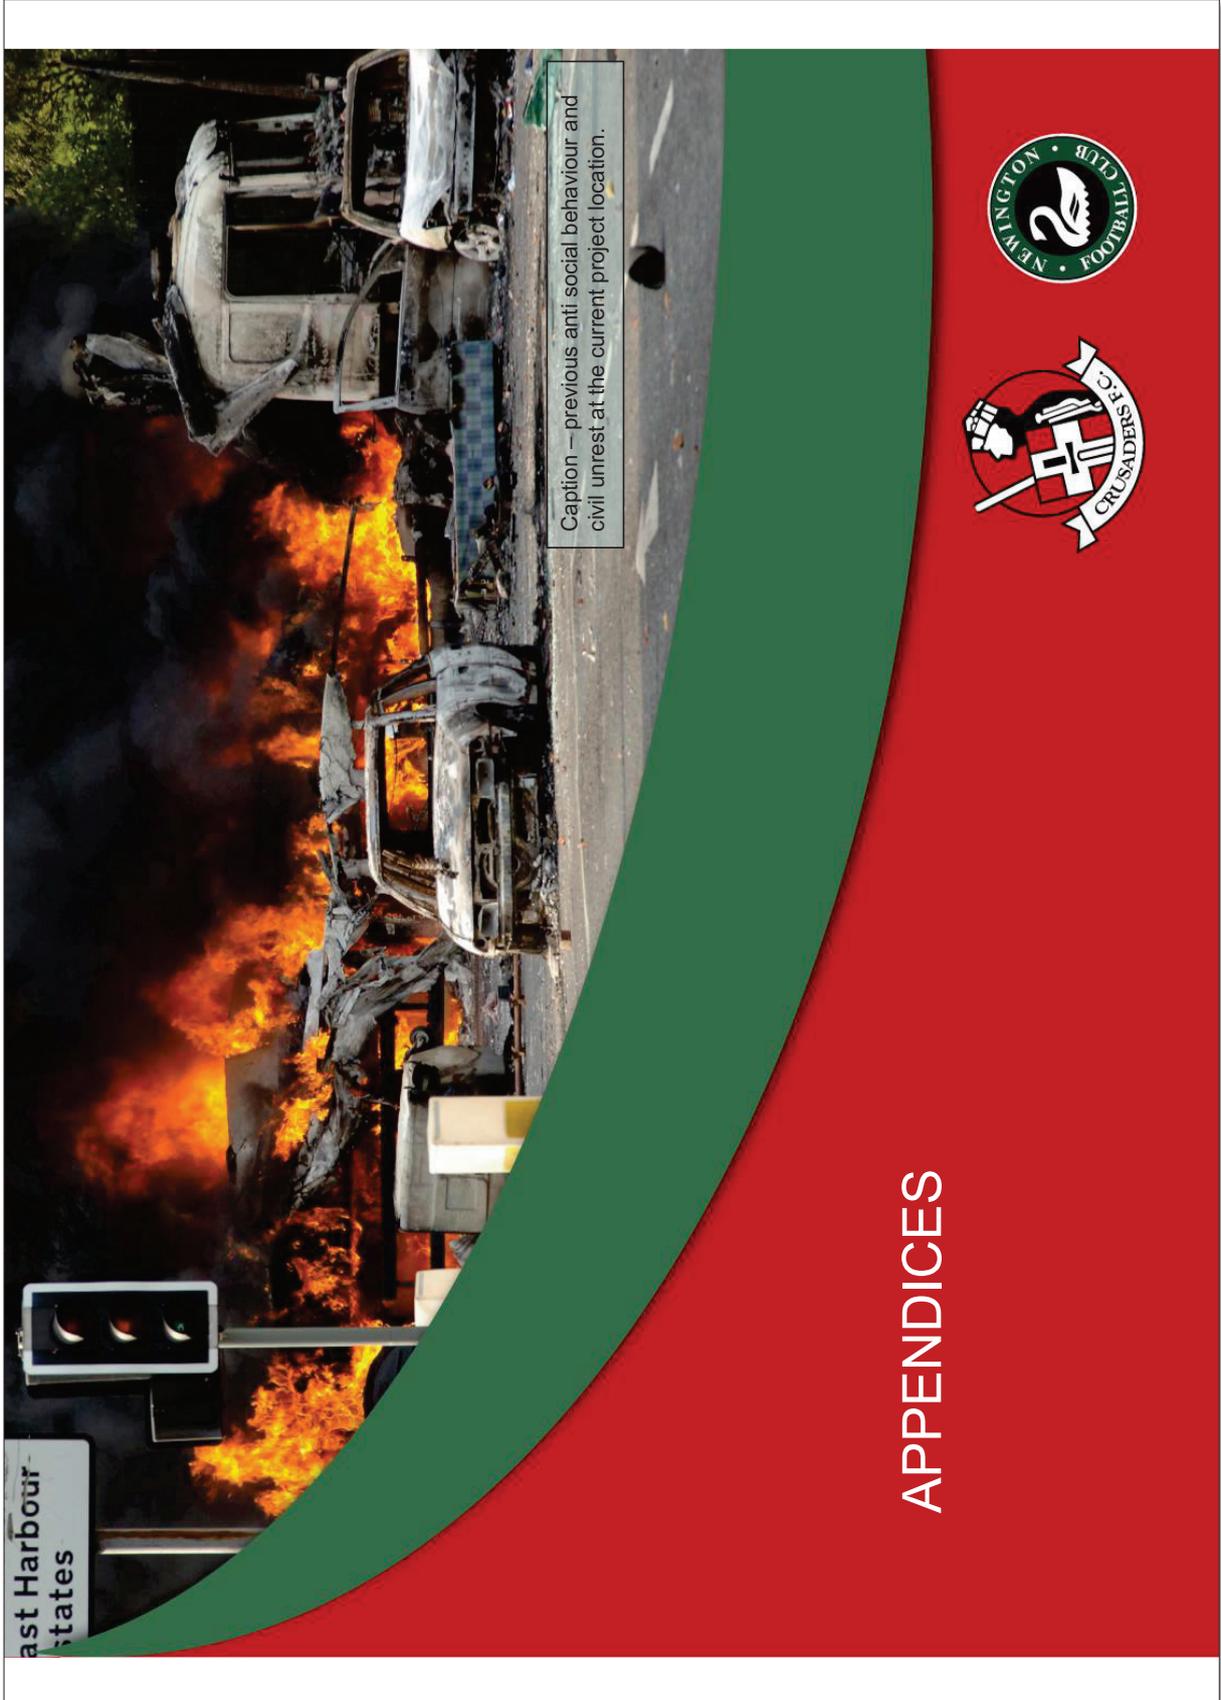

RISKS

The graphic below represents the broad thematic areas where risk, that can limit, inhibit or stop the progress of the project could be encountered. These risks will reflect those issues identified in the constraints aspect of this proposal but also those specific to pre construction, construction and post construction phases. All aspects of risk will be considered in greater detail in the course of any economic appraisal commissioned on this project.

BENEFITS

Area of Benefit	Further Detail
Shared Space and Destination	Creation of a flagship sports resource that will promote and guarantee integration on a daily basis Development of a facility that will engage and inspire schools, communities and the sporting fraternity Alaying of traditionally perceived and long held fears of racial or sectarian tensions through the medium of sport
Educational Enrichment	Ability for schools cohort identified to fulfil and exceed aspiration and base requirements for PE Curriculum. This will enhance their motivation, pride and support increased attendance and retention. Ability for pupils of all schools to engage in a wider range of sports opportunities through the medium of a shared space and help them understand different learning styles. Increased marketability of the schools as a collective and assessment of issue of academic selection specifically in an area of mixed educational attainment Promotion of integrated education and good relations.
Social Mobility	Ability for people from across North Belfast to define and pursue their aspirations in life Ability for the schools and the provision on site to reach and provide for a much more diverse cohort Ability for new and enhanced opportunities for volunteering, employability and entry to employment
Community and Societal benefits	Reduction in crime and more importantly fear of crime in the area Increased relationships within and between communities Shared resources demonstrating the value of community in NI
Economic and Regeneration	Physical enhancement of an underperforming leisure facility that will be owned and directed by the local community Development of a wide range of resources that can generate income outside of school use to ensure lasting sustainability and continued development thereof

APPENDICES

BELFAST CITY COUNCIL MINUTE

APPENDIX 1

BELFAST CITY COUNCIL – EXTRACT OF MINUTE

- Loughside Sports Educational Village
- [Meeting of Parks and Leisure Committee, Thursday, 13th February, 2014 4.30 pm \(Item 6.\)](#)
- **Minutes:**
- The Committee considered the undernoted report:
 - “1. Relevant Background Information
 - The purpose of this report is to inform the Committee of an emerging proposal from Seaview Enterprises in respect of Council owned land at Loughshore. The land in question is the site of the Loughside Recreation Centre and associated football pitches at Loughside, which is adjacent to Shore Road / Mount Vernon. Clearly at this stage of the Leisure Transformation Programme no decision has been taken about the future of the Recreation Centre.
 - Members may be aware that the Department of Education has recently released a call for expressions of interest in respect of its Shared Education Campuses Programme. This is part of the wider ‘Together: Building a United Community’ initiative from the First Minister / Deputy First Minister.
 - A preliminary meeting between Council Officers and representatives from Seaview Enterprises (SE) has indicated that it wishes to make application to the programme for funding to deliver a ‘Shared Campus’. To do SE has identified the Loughshore site as its preferred location and has asked for the Council’s support in a number of ways:
 - 1. To agree in principle to lease land to SE to enable the project to proceed; and
 - 2. To be a partner to the bid and participate in the development of the bid and the project moving forward
 - The indicative scheme includes a 5,000 seat stadium, however, at this time; this is not included in the proposal going forward to Department of Education, although the proposal will include the provision of a 3G artificial turf pitch.
 - 2. Key Issues
 - There are a number of issues which members may wish to consider at this time;
 - 1. This project is at a very early stage in development;
 - 2. The proposal cannot proceed without the land;
 - 3. At this stage, detail regarding the terms and conditions of the funding are not known;
 - 4. Based on the guidance notes accompanying the call for expressions of interest there is no requirement at this time in relation to security of tenure;
 - 5. The proposal presents a potential opportunity to secure funding which would enable an existing sport and leisure facility to be regenerated and offer potential benefits to the wider community in North Belfast;

BELFAST CITY COUNCIL MINUTE

APPENDIX 1

■ BELFAST CITY COUNCIL – EXTRACT OF MINUTE

3. Resource Implications

Asset and Other Implications

The proposal presents an opportunity to regenerate the site within similar existing land use parameters and would provide additional modern facilities to support programmes for the local community.

5. Recommendations

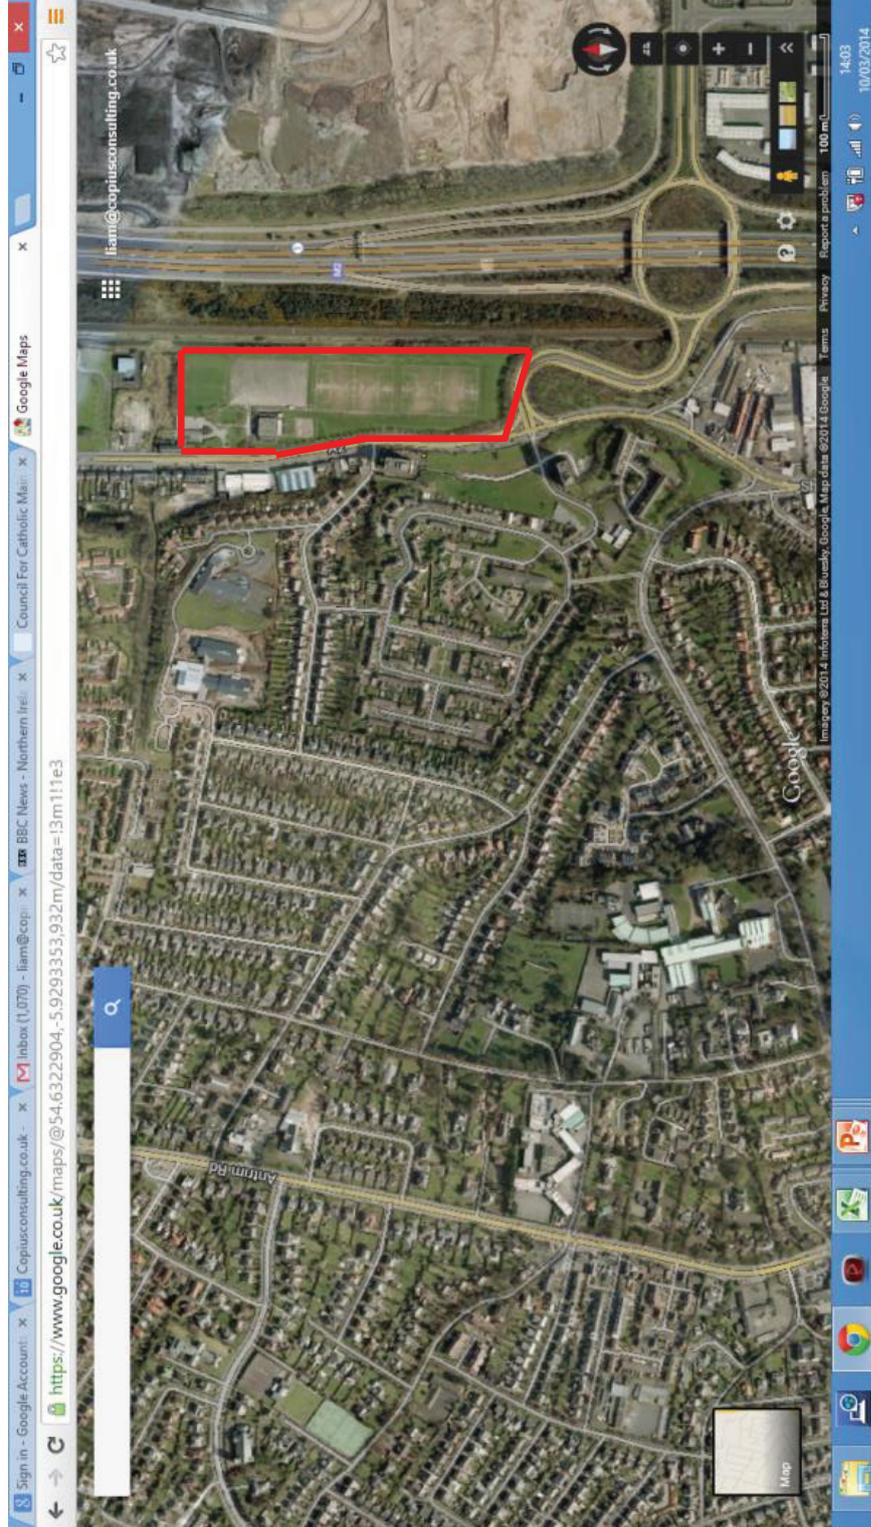

The Committee is asked to give consideration to agreeing to authorising Officers to represent the Council on a Project Board to progress the bid to Expression of Interest Stage with a view to the potential use of the existing land at Loughside Recreation Centre to facilitate the proposal;”

During discussion, a Member expressed concern that the plan which had been formulated by Seaview Enterprises had been placed within the public domain prior to it being considered by the Council. Concern was expressed also that the current users of the facility, together with Loughside Boys’ Football Club, had not been consulted in respect of the plans and it was suggested that the proposers would undertake to rectify this matter.

After discussion, during which the Director undertook to write to representatives of Loughside Boys’ Football Club in respect of the proposals, the Committee adopted the recommendation as set out within the report.

APPENDIX 2

PROJECT LOCATION

CURRENT AND REQUIRED SCHOOLS PROVISION

APPENDIX 3

■ SCHOOLS CURRENT PROVISION

The following tables present information on schools located within the North Belfast area for the potential Shared Education Campus at Loughside. Utilising the Schools Building Handbook (separate handbooks for primary and post-primary schools), the table details schools' minimum requirements for physical education facilities. According to the primary schools handbook, all schools should have a multi-purpose hall (up to 20 classrooms). Schools with more than 21 classrooms should have a secondary multi-purpose hall.

According to the secondary schools handbook, the NI Curriculum Programme for PE includes athletics, dance, gymnastics, games, swimming and outdoor adventurous activities. The teaching of PE requires the provision of a sports hall in ALL post-primary schools. Enrolments of more than 600 should include an additional gymnasium and fitness activity area. In schools less than 600, a multi-purpose hall is also to serve as a gymnasium. In terms of pitch provision, the table on the right sets out the recommended guidelines for the number of pitches based on school enrolment numbers.

School Enrolment	Category	Pitches	Courts
Up to 349	Boys	2	2
	Girls	2	4
	Co-educ	2	4
350 to 549	Boys	3	2
	Girls	3	4
	Co-educ	4	4
550 to 749	Boys	4	2
	Girls	4	5
	Co-educ	4	5
750 and Above	Boys	5	2
	Girls	5	5
	Co-educ	5	5

Rainwater Harvesting		200000.00		
Solar		800000.00		
			600000.00	
				11779000.00

Please note that these costs will require further testing if the project moves to stage two of the process.

KEY FOR THE STAKEHOLDER ISSUES

APPENDIX 7

■ STAKEHOLDER ISSUES

Stakeholders: The main stakeholders in the project are as follows (letters of support attached)

Managing Authorities: BELB, CCMS, NICIE

Schools: Seaview PS, Currie PS, Cedar Special School, Lowwood PS, Loughshore Alternative Education (all BELB); St Mary's Star of the Sea PS, Holy Family PS, St Patrick's PS, Little Flower Girls (CCMS), Dominican FortWilliam (Voluntary) Hazelwood Integrated College, Hazelwood IPS, Cliftonville IPS

Other schools/Users: Glengormley HS, Newtownabbey CHS, Monkstown CHS (NEELB), BRA, Ben Madigan (Voluntary)

Other Educational Bodies: Belfast Metropolitan College, Bryson Future Skills, Stranmillis University College, Fingerprint Learning, Integrated Education Fund, Association of Teachers and Lecturers, Association of Managers in Education

Local Government: Belfast City Council (see Council Minutes attached)

Community: LCAP, Belfast Community Sports Network, Co-operative Alternatives (Community Shares), Peace Players

Levels of Commitments & Strategic Roles : All schools listed above will be users of the project and will be signatories to the Partnership Service Level Agreement (SLA). The strategic roles and specific commitments are as follows:

- Belfast City Council:** Provision of land, will contribute to determination of Governance
- Education Curriculum Offer:** QUB Shared Education Centre through Dr Mark Baker will oversee the development of the educational curriculum prospectus. He will be joined by Principal Kathleen Gormley, ex Principal Noreen Campbell, Principal Geri Cameron and a CCMS representative in the development of the Post Primary prospectus.

- Tertiary Offer:** Belfast Metropolitan College will offer evening community education, literacy, numeracy and ICT classes along with a core Sports Science offer. Heather Hedley, Curriculum Manager for School Partnerships will be a key contact. Bryson Future Skills (chaired by Geri Cameron., Principal of Loughshore Alternative Education Provision) aim to open an office in the Education Hub to offer Employability assistance and DEL funded labour market initiatives such as *Apprenticeships NI, Training for Success, Steps to Work, Young Persons Employment Initiative, Graduate Acceleration Programme and the 50+ employment initiative.*¹²

- Community:** LCAP and BCSN will be the strategic community partners. Stranmillis University College (with Fingerprint Learning) will advise on the Learning Zone concept which will be integral to securing community support.

Further Consultations: In addition to the consultation with Managing Authorities, Schools, Users and Community Interests, the following consultations have been undertaken or are scheduled:

Political Parties; DRD Planning Service; Irish Football Association (school coaching curriculum programme); 30+ stadia facility visits (2008 to present) in England, Scotland, Republic of Ireland, France, Netherlands, Czech Republic, Macedonia, Australia, & USA; Integrated Education Fund; Supporters Direct Network; European Fans Association (Hamburg).

ADDITIONAL RESEARCH

APPENDIX 8

■ ADDITIONAL RESEARCH ON THE EDUCATIONAL BENEFITS OF SHARED EDUCATION

Information provided by Mark Baker - Programme Manager - Centre for Shared Education, Queen's University Belfast

Other demonstrated benefits of collaboration and networking include: motivating disengaged and at risk students (Hadfield et al. 2006); helping schools cope with challenging circumstances (Ainscow et al. 2006); combatting negative effects of competition (Hodgson and Spours, 2006; Ainscow and West, 2006); and helping schools make more effective use of resources by providing economies of scale. Research from Bell et al. (2006) argues that collaborative arrangements between schools tend to be more effective when there is specific and focused goal driving partnership. By extension, Chapman and Muijs, (2013) demonstrate that impact is strongest in federated arrangements which had an explicit focus on student performance and school performance.

For a selected review see (Muijs, et al. 2010; Chapman et al. 2011; Chapman et al. 2009; Hadfield and Jopling, 2012; Harris & Jones, 2010; Ainscow et al. 2006; Hadfield and Chapman, 2009) Research which focuses on the Northern Ireland context can equally demonstrate that sharing and collaboration can have positive impacts on educational outcomes. This literature can similarly be divided into the similar categories as outlined above: pupil performance (Borooah and Knox, 2012a; Borooah and Knox, 2012b; FGS McClure Watters, 2010; Gallagher et al, 2010); teacher development and perspectives of school leaders (Knox, 2010; Duffy and Gallagher, 2012a Duffy and Gallagher 2012b; FGS McClure Watters, 2010; Hughes et al 2010; Gallagher et al, 2010) and economic improvements (Borooah and Knox, 2012a Borooah and Knox, 2012b)

Draft Document on Learning Partnership Guidance

APPENDIX 10

Hard copy of draft document is presented overleaf

LETTERS OF SUPPORT

APPENDIX 11

Hard copy of letters of support are presented overleaf, but a summary of the letters provided are presented in the grouped table below;

Organisations that Have Provided Letters of Support	
Group \ Section	
BELB Linked Schools	Lowwood Primary School Seaview Primary Currie Primary School
CCMS Linked Schools	St Marys Star of the Sea Primary Little Flower Girls School St Patricks Primary School Holy Family Primary School St Patricks College 'Bearnageeina'

South Eastern Education & Library Board

Mapping the Journey to Shared Education

1.0 Introduction

- 1.1 The purpose of this paper is to provide an outline of the South Eastern Education and Library Board's involvement in Shared Education. The paper maps the journey of both schools and the Board's Youth Service's involvement in community relations and includes an outline of previous experience in the delivery of Community Relations, Equality and Diversity (CRED) work, Schools Community Relations and the delivery of projects through the International Fund for Ireland.

2.0 CRED Policy

- 2.1 The aim of the CRED policy is to contribute to the improvement of relations between communities by educating children and young people to:

- Develop self-respect and respect for others;
- Promote equality;
- Eliminate discrimination by providing formal and non-formal education opportunities; and
- Enable the building of relationships with those of different backgrounds and traditions.

- 2.2 CRED seeks to embed this work firmly within educational settings by providing a strong skills base for educators, as well as the teaching resources required, in order to make this a more sustainable and accepted practice across the education sector.

- 2.3 Schools and Youth Organisations have been supported to develop programmes to help young people to build relationships with young people from different backgrounds and traditions.

3.0 Key Elements of the Policy

- Ensure that learners, at each stage of their development, have an understanding and respect for the rights, equality and diversity of all, without discrimination;
- Educate children and young people to live and participate in a changing world, so that they value and respect difference and engage positively with it, taking account of the ongoing intercommunity divisions arising from conflict and increasing diversity within our society; and
- Equip children and young people with the skills, attitudes and behaviours needed to develop mutual understanding and recognition of, and respect for, difference.

4.0 The Role of Teachers and Youth Workers

4.1 The Curricular Guidance for Pre-School Education, the NI Curriculum and the Curriculum Framework for Youth Work all provide opportunities within formal and informal education to enable children and young people from all communities and backgrounds to better work together. Across all Key Stages there are opportunities for children and young people to develop the capacity and skills necessary for building better community relations and taking their place in a diverse society.

4.2 The policy supports the delivery of the above curricula by providing:

- Educators with the knowledge, skills and experience to deliver the relevant CRED areas of learning components;
- Opportunities to learn from good practice; and opportunities for children and young people to put learning into practice.

5.0 Outcomes

5.1 The outcomes of the policy are to develop children and young people who:

- Understood and respect the rights, equality and diversity (including linguistic diversity) of each section 75 groups; and
- Developed the skills, attitudes and behaviours that enabled them to value and respect difference and engage positively with it.

5.2 While the requirement is to address all section 75 groups, the policy is implemented in a way that is age appropriate and suitability flexible to focus on particular issues relevant to the needs of the learners and the communities within which the school or youth group was located. In particular, it is important that issues relevant to children and young people which are considered as difficult or controversial are given the due regard that they require.

5.3 It is through the work of teachers, youth workers and other staff that help to address the issues within Community Relations, Equality and Diversity.

6.0 Future

6.1 The CRED practice in the SEELB facilitates schools and youth organisations to support young people to develop self-respect and respect for others from different backgrounds. Relationships are developed across the formal and informal sectors. There is scope for more work in this area including opportunities for schools and youth organisations to work collaboratively to prepare young people better for the diverse world of life and work.

6.2 Shared Education will provide more opportunities for children to learn together in regular and sustained ways, in order to improve educational and reconciliation outcomes.

7.0 'Learning to Live Together' 2011-2013 (IFI Funded Initiative)

- 7.1 The SEELB 'Learning to Live Together' programme was established to support pupils to benefit from shared educational experiences. Youth Workers applied their skills of informal social education within school settings to help realise and build the vision of a shared future. This helped to promote understanding between pupils and staff in paired post primary schools from the divided and diverse communities of Northern Ireland. It also helped to facilitate integration between the participating schools and the communities within which they were located. The project established strong strategic alliances between formal and informal education and delivery was enhanced through the sharing of skills and expertise between youth workers and teachers.
- 7.2 The 'Learning to Live Together' project has been operational since June 2011 and supports Cross Community contact between young people in the SEELB area. The 'Learning to Live Together' programme was a three year project facilitated by the SEELB and was funded through the International Fund for Ireland's (IFI) Sharing in Education Programme (SiEP) which seeks to break down barriers from Northern Ireland's historic conflict by providing a range of opportunities for young people to learn and work together.
- 7.3 It brought together young people aged 11 to 16 from both sides of the community with the aim of encouraging contact, dialogue, promoting reconciliation and community relations. The project was awarded £672,000 by IFI to build bridges between schools and communities demonstrating the funding commitment to the promotion of Peace and Reconciliation. The fund also committed to help young people to benefit from shared educational experiences.
- 7.4 Through a combination of classroom sessions and workshops, culminating in residential experiences, young people have taken part in a variety of programme areas which allowed them to explore their understanding of prejudice, discrimination, and sectarianism and increase their awareness of diversity. Participants were also able to complete Open College Network (OCN) accredited awards.
- 7.5 The project has built strong partnerships between schools and the SEELB's Youth Service. Youth Workers have worked in harmony with link Teachers to support and facilitate projects that provided opportunities for young people from different community backgrounds to come together to discuss and compare differences and celebrate diversity. Participants on the 'Learning to Live Together' Project have enjoyed a wealth of different experiences which will help them to make their contribution to building a better future for Northern Ireland.
- 7.6 Staff from Schools and the Youth Service worked together to help pupils develop a greater understanding of their identity within the context of Northern Ireland. Teachers and Youth Workers have completed training to help them to plan for sustainability after the end of the funding period in December 2013.

8.0 'Learning to Live Together' School Partnership Participants

- Assumption Grammar and Regent House Grammar
- St Mary's High School and Knockbreda High School
- St Malachy's High School and Laurelhill Community College
- St Colm's High School and Fort Hill Integrated College
- Movilla High School and St Columbanus College
- St Colmcille's High School and Nendrum College
- St Colmcille's High School and Priory Integrated College (20011-2012)

9.0 The 'Learning Together' Programme

- 9.1 The 'Learning Together' Programme created a collaborative working partnership between individual schools and the Youth Service. The programme LINKED identified primary and post-primary schools by offering a range of elements, across Key Stages 2-4, which contributed to raising achievement, closing the gap and supporting pupils to re-engage with education. A core component of the programme was to create stronger links between communities and schools.

10.0 Key Stage 2/Key Stage 3

- 10.1 The Key Stage 2 and 3 aspects of the programme offered interventions which focused on transitions and helped to address key issues that impede pupils taking the best advantage of learning opportunities available. An assessment of need was undertaken in each individual post-primary school, on an annual basis, to determine the most effective blend of intervention required to enhance the educational opportunities for select groups of young people. This enabled the development of a bespoke response to the context of an individual school's environment. Regular interventions included transition work with feeder primary schools, summer schemes, buddying/mentoring programmes and individual or small group work programmes aimed at specific issues identified as required by the partnership of teaching staff and ELB personnel.

- 10.2 Outcomes for pupils included:

- An increased ability in coping with perceived challenges and difficulties;
- Development of confidence and self-esteem;
- Respect for others;
- Building positive relationships;
- Taking responsibility for themselves;
- Developing team-work, problem-solving and communication skills.

11.0 Key Stage 4

11.1 The Key Stage 4 aspect of the programme had a focus on the delivery of outcomes for young people through an accredited course. The OCN Certificate in Personal Success and Well-Being was accredited by OCNNI and has the equivalence of a Grade B pass at GCSE level.

11.2 The OCN Programme consisted of a menu of Level 2 modules from which 10 were selected, to be completed over a two year period. When candidates successfully complete the 10 modules they will be awarded an OCN Certificate in Personal Success.

11.3 The normal model of delivery allowed for the majority of the modules to be delivered by the Youth Worker/Link Teacher in the school environment. However, in-built flexibility also allowed for the delivery of up to 2 modules to be delivered by Youth Service in a community or residential setting.

11.4 The menu of OCN level 2 programmes was as follows:

- Drugs and Substance Abuse;
- Understanding Risk;
- Teamwork Skills;
- Valuing Equality and Diversity;
- Personal Identity and Self Esteem;
- Beliefs and Values;
- Understanding Relationships;
- Understanding Rights and Responsibilities in Society;
- Developing Confidence and Self Esteem;
- Enrichment Activities.

12.0 Methodology

12.1 The various elements of the 'Learning Together' Programme were delivered as discrete Curriculum Programmes timetabled to meet the needs of the targeted group of pupils. There was also an opportunity to build the various elements of the programme into existing Curriculum subject areas and timetable for example:

- Religious Education (RE) incorporated OCN Level II Unit on Beliefs and Values;
- Learning for Life and Work (LLW) incorporated OCN Level II Unit in Understanding Rights and Responsibilities in Society.

12.2 At the planning stage of the programme the school Leadership Teams and Youth Service Managers worked together to ensure that the programme was delivered to ensure the best outcomes for pupils and to facilitate timetabling within School, best utilising resources. This helped to ensure a Shared Educational approach between the School and the Youth Service.

12.3 With this in mind, it was important that the 'Learning Together' Programme would be included within the School Development Plan and reviewed through existing Senior Leadership Teams and by the Heads of Departments.

12.4 The programme was key to the delivery of the policy 'Every School a Good School', and in particular to focus on:

- Tackling inequality and disadvantage;
- Enabling every young person to fulfil their potential;
- Connecting the school to the local community;
- Empowering young people;
- Driving and supporting School Councils; and
- Increasing parental involvement in Curriculum delivery.

13.0 Conclusion

13.1 In a recent CRED inspection (September 2014 – December 2014), the Education and Training Inspectorate (ETI) commented as follows:

"children and young people demonstrate high levels of self-respect and respect for others; and when given the opportunity through sustained contact, they develop meaningful relationships with others from different backgrounds;"

"schools and youth organisations embed CRED practice through whole-school/organisation improvement"

13.2 The ETI suggested:

"The case for Shared Education has now been well established. This may be summarised as:

- *The education case – improving access for pupils to a wider choice of subjects encompassing the full range of the curriculum; increasing access to specialist teaching and to modern facilities; and facilitating the sharing of ideas and good practice between education providers.*
- *The social case – improving societal well-being by promoting a culture of mutual understanding and inter-relationship through significant, purposeful and regular engagement and interaction in learning between pupils from different community backgrounds and between schools and their communities.*
- *The economic case – making more effective and efficient use of limited resources to improve value for money."*

13.3 The Shared Education project will provide opportunities for children and young people from different communities to learn together. Shared Education partnerships will deliver social change by delivering educational and reconciliation outcomes for pupils.

13.4 The Signature project will also make more effective and efficient use of limited resources to improve value for money.

13.5 Within the pilot phase of the Shared Education Signature Project, 4 of the schools who were involved the IFI funded 'Learning to Live Together' Programme have submitted applications for funding. These include:

- St Colm's High School (Twinbrook) and Fort Hill Integrated College (Lisburn)
- St Mary's High School (Downpatrick) and Nendrum College (Comber)

13.6 A number of other schools have indicated their intention to apply in Cohort 2. These include:

- St Malachys High School (Castlewellan) and Laurelhill Community College (Lisburn)
- Movilla High School (Newtownards) and St Columbanus' College, (Bangor)
- St Colmcille's High School (Crossgar) and Priory Integrated College (Holywood)

N.B. Please note that prior to the CRED programme the Schools Community Programme provided funding for schools to develop single identity work and cross community work. For your information a list of the school involved in this initiative for the 2010 can be viewed at **Appendix A**. This list also incorporates the school who received funding from CRED.

13.7 The SEELB is at the early stages of exploring the possibilities of a number potential "Shared Education Campuses" with a number of post-primary schools from the Controlled, Catholic Maintained and Grant Maintained Integrated sectors. This work will be taken forward by the South Eastern Region of the Education Authority after 1 April 2015.

Appendix A

LEAD SCHOOL/GROUP	PARTNER SCHOOL/GROUP
Assumption Grammar School	Regent House Grammar School
St Mark's Primary School	Ballymacash Primary School
Glencraig Integrated Primary School	Hazelwood Integrated Primary School
Downshire Primary School	N/A
Nendrum College	St Colmcille's High School
St Joseph's Primary School, Carnacaville	Newcastle Primary School
Good Shepherd Nursery School	Stanhope Nursery School
Kircubbin Integrated Primary School	N/A
Ballymacrickett Primary School	Ballinderry Primary School
Dundonald Primary School	Christ the Redeemer Primary School
Millisle Primary School	Killard House Special School
Bloomfield Primary School	St Nicholas' Primary School
Beechlaw Special School	N/A
St Anne's Primary School	Ballyvester Primary School
Academy Primary School, Saintfield	St Mary's Primary School, Saintfield
St Macartan's Primary School	Cumran Primary School
Moira Primary School	Rowandale Integrated Primary School
Lagan College	Grosvenor & OLSP
Derryboy Primary School	St Caolan's Primary School

Southern Education and Library Board (SELB)

Northern Ireland Assembly Committee for Education

Inquiry into Shared/Integrated Education

October 2014

Background

The Southern Education and Library Board (SELB) serves the district council areas of Armagh; Banbridge; Cookstown; Craigavon; Dungannon and South Tyrone; Newry and Mourne.

The SELB has been involved in leading, managing and promoting a range of school-based cross-community contact programmes since the early 1980s. These programmes have included the Education for Mutual Understanding (EMU) Programme, the Schools Community Relations Programme (SCRCP) and the Community Relations, Equality and Diversity policy and strategy (CRED). More recently, the SELB has led the implementation of two Shared Education Projects, funded through the International Fund for Ireland's (IFI's) 'Sharing in Education' Programme: the 'Primary Curriculum Partnership Programme' (PCPP) and the 'Welcoming Schools' Project (2011-2013).

Under current legislation, the SELB has no direct powers or responsibilities in relation to the promotion of shared education, but through the work of its Curriculum Advisory and Support Service (CASS) and its Youth Service, all schools and youth groups are encouraged and supported to engage in meaningful cross-community collaboration and sharing. Through its leadership of the IFI funded Sharing in Education programmes, the SELB has facilitated the development of a number of local school-based examples of meaningful shared education programmes, which have helped to establish sharing as normal practice. Examples include the development of sharing and curricular collaboration between the two primary schools in the village of Moy, which have led to those schools' joint application for funding from the Department of Education's (DE's) Shared Campus Programme. This application was one of only three which have recently been approved for funding and work to create a shared campus is now underway.

The SELB also has a limited role, under current legislation, in relation to Integrated Education, with its major responsibility being to facilitate elements of the 'transformation' process, through which a school may apply for change of status and become formally recognised as 'integrated'. The SELB, in common with all ELBs, is required to respond to parental requests for information on integrated education and on the process for transformation to controlled integrated status and will collaborate with the Northern Ireland Council for Integrated Education (NICIE) where such requests arise. While there are a number of Grant Maintained Integrated Schools within the SELB, there are only two that fall under the management of the SELB, as Controlled Integrated Schools, namely Brownlow Integrated College in Craigavon and Kilbroney Integrated Primary School in Rostrevor.

1. Definitions

1.1 Shared Education

Shared Education has been defined by the Department of Education as follows:

Shared education means the organisation and delivery of education so that it:

- meets the needs of, and provides for the education together of learners from all Section 75 categories and socio-economic status;

- involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

Shared Education encourages schools from across all the educational sectors within Northern Ireland to work together for the greater good of their pupils. It is expected that Shared Education will be organised and delivered in such a way that promotes equality of opportunity and social inclusion by providing opportunities for children from differing Section 75 groups (e.g. children from different racial backgrounds, children with and without disabilities, children who are carers or school age mothers) and from differing socio-economic backgrounds to learn together at school and in less formal education. Within shared approaches to educational provision, the right of parents and pupils to choose to attend a school with a particular ethos is fully respected.

1.2 Integrated Education

The Northern Ireland Council for Integrated Education has defined Integrated Education as follows:

“Integrated schools bring together children and adults from Catholic, Protestant and other backgrounds in each school. The schools strive to achieve a religious balance of pupils, teachers and governors and acknowledge and respect the cultural diversity they represent.

Integrated schools educate children in an environment where self-esteem and independence are developed as priorities. Self-respect and respect for others are strongly encouraged. The integrated ethos is nurtured to ensure inclusion of people from different religions, cultures, genders, abilities and socio-economic backgrounds.”

- 1.3 Both shared and integrated approaches to the provision of education have the potential to provide learners with enhanced opportunities to acquire a range of transferable skills and capabilities including those of decision making, problem solving, leadership and teamwork - all of which will be of benefit to them in later life. Positive participation in shared/integrated activities has been shown to build pupils’ self-esteem, self-efficacy and ability to express themselves and their identity with confidence, whilst being respectful of the identities of others. Such approaches support pupils to take responsibility for their actions, and to demonstrate that they can work together with others from different backgrounds and cultures.

1.4 Links with Key Education Policies

Shared Education and Integrated Education can both be clearly linked to key DE policies including the ‘Every School a Good School’ School Improvement suite of policies and the ‘Community Relations and Equality and Diversity’ policy, through their promotion of child-centred provision, high quality learning and teaching, effective leadership and schools connected to their community. Through shared education projects, schools are providing value-added educational experiences which link clearly with school improvement. In its evaluation of the IFI Funded ‘Sharing in Education Programme,’ the Education and Training Inspectorate concluded:

“The evidence demonstrates that high-quality shared education contributes to better learning for young people. The young people demonstrated positive attitudes and dispositions to learning, developed their thinking skills and personal capabilities and displayed good personal and social skills.”

ETI Final Evaluation of the Sharing in Education Programme, Oct 2013.

Both models of provision also clearly support the N.I. Executive’s ‘Together Building a United Community’ Strategy as both are focused on improving community relations and in supporting the development of a more unified and shared society.

2. Key Barriers and Enablers

Through the experience of leading and managing the implementation of Shared Education programmes, as well as many years of supporting cross-community contact programmes, SELB officers have concluded that the quality of shared education and integrated education provision depends significantly on:

- a school’s ethos
- the effectiveness of the leadership within the school and on
- opportunities for the professional development of members of staff, especially when dealing with more controversial issues and the attitudes and values present within the community the school serves.

2.1 Barriers and Enablers - Shared Education:

The table below identifies the key barriers and enablers for shared education, based on SELB officers’ experience of developing and implementing shared education programmes.

Barriers	Enablers
<p>Lack of Effective School Leadership:</p> <p>Lack of leadership and vision to promote and see the value of shared education will be a significant barrier.</p> <p>The development and sustaining of shared education will be hindered if it is not a high priority for a school’s leadership team, including the Board of Governors.</p> <p>Lack of leadership ability and capacity within a school can also be a barrier, as the development of shared approaches to provision requires a high level of skill, in terms of building understanding, bringing people on board, overcoming resistance, etc.</p>	<p>Effective School Leadership:</p> <p>An environment where there is a clear commitment within school leadership to the development and sustaining of shared education is key to success. In such schools, the commitment to the development of shared provision is evident and is fully embedded in the ethos, values, practice and professional relationships.</p> <p>In such schools, school leaders show vision and commitment to the development and sustaining of shared provision, particularly during critical points in the development of collaboration, when difficulties may be encountered.</p> <p>Existing good relationships between school leaders and staff from participating schools is clearly beneficial in providing a foundation upon which collaboration can be built.</p>
<p>Shared education viewed as an additional initiative to be implemented within an already crowded curriculum</p> <p>Failure to see shared approaches and collaboration as a means towards enriching existing curricular provision rather than as an additional aspect of provision which has to be fitted is a substantial barrier to development.</p>	<p>A perspective which views shared provision as an opportunity to enrich and enhance the existing curriculum, rather than an additional initiative to be implemented</p> <p>When shared education and shared classes focus on enhancing the quality of provision of elements of the already existing NI curriculum, teachers and pupils see meaning and value in the approach, in terms of its potential to support learning and achievement, as well as achieving reconciliation objectives.</p>

Barriers	Enablers
<p>Lack of staff expertise and training</p> <p>School staff will often be unwilling to participate in shared education initiatives due to a perceived lack of expertise and experience in dealing with sensitive and controversial issues related to cross-community contact.</p>	<p>Availability of high quality professional development for all staff</p> <p>High quality professional development provided for teachers, enabling them to explore and develop their own understanding in relation to more sensitive issues, has been shown to be crucial in building skill, competence and confidence in school staff.</p>
<p>Time:</p> <p>Timetabling issues, especially in post primary schools, may be seen as a significant barrier to enabling shared and collaborative provision, particularly within Key Stage 4 and post-16 provision, due to pressure of covering exam syllabuses. Additional work is required of staff involved in organising and delivering collaboration and a lack of time to facilitate this may become a barrier.</p> <p>The contact between schools needs to be regular and sustained throughout the academic year if shared provision is to be effective. This may also be a challenge for many schools.</p>	<p>Time:</p> <p>In the most effective practice, school leaders prioritise time for the developing of relationships between partner schools, time for provision of whole school professional development, time for planning and sharing work by teachers and timetabling that enables shared classes to take place.</p> <p>Through planned, regular and on-going pupil contact, there is a reduced anxiety/ sense of threat within staff and pupils which may sometimes be associated with shared and collaborative provision.</p>
<p>Pupils:</p> <p>In most schools only a minority of pupils are likely to be resistant to working with pupils from another sector. This will often stem from resistance by parents and the wider community, as well as from fears of intimidation from 'the other sector'. These concerns must be acknowledged and attended to.</p>	<p>Pupils:</p> <p>Generally, a majority of pupils enjoy and see the benefits of shared education experiences. Experience has shown that many pupils consider differing religious or cultural backgrounds as less important than shared interests when they engage in shared activities.</p>
<p>Funding:</p> <p>Lack of adequate funding or removal of funding will inhibit the quality, depth and sustainability of sharing and collaboration.</p>	<p>Funding:</p> <p>If adequate funding is sourced and made available to fund core activities, shared classes, transport and professional development for staff, there is evidence of a greater level of effective and sustained collaboration. This has been shown to be particularly important in the early stages of developing shared provision.</p>
<p>Resistance from parents/ local Community:</p> <p>Existing community tensions and a lack of willingness to engage with other communities can create difficulties for schools in developing sharing opportunities with another sector.</p>	<p>Supportive parents/local community: Research indicates that the relationship between the school and the local community is an important factor in the promotion of collaboration and may be an important determinant of local community receptiveness to it. Supportive parents understand that shared education will not detract from or threaten the values, beliefs and ethos of each community.</p>

3. Models of Good Practice

3.1 Experience of Shared Education in the SELB area

- 3.1i The SELB has limited powers and responsibilities in relation to the promotion of shared education, but actively encourages schools to engage in collaboration and sharing through a range of programmes and projects. The SELB has been involved in supporting shared and collaborative provision for over twenty years, through Programmes such as EMU and SCRIP and CRED. There are also more recent examples of meaningful shared education programmes where sharing in schools has become the accepted normality. Examples include the ‘Primary Curriculum Partnership Programme’ (PCPP) and the ‘Welcoming Schools’ project (2011-2013), both projects were funded by the International Fund for Ireland and managed within the SELB.
- 3.1ii The PCPP project was a cross community project, whereby schools within the same community, village or town, and from different religious backgrounds, worked in partnership with each other. The project provided shared training and support structures for staff to deliver lessons in shared classrooms. The project required whole school involvement, working with Principals, Board of Governors and all members of the school staff and the wider school community, including parents. The rationale for this approach was that the whole school community would benefit from meaningful collaboration and that the work was linked very closely to school improvement, aiming to improve the quality of teaching and learning. With whole school involvement and the project being a central part of the school development plan, there were clear examples of the more efficient and effective use of resources, and the promotion of equality of opportunity and good relations. ETI evaluation of the project clearly indicated the improvements in learning and teaching:
- 3.1iii SELB schools have engaged positively in other shared education work, including the IFI funded project ‘Sharing Classrooms, Deepening Learning’ aimed at post primary schools and delivered through the Area Learning Communities and through participation in the Queens University Sharing in Education Programme, funded by IFI and Atlantic Philanthropies.
- 3.1iv A key feature of the Entitlement Framework in the SELB is the extensive collaboration between schools in order to support effective delivery of the required range of GCSE and Post 16 courses. There is an even greater need for sharing costs and resources with schools and pupils from across the sectors working together in order to maximise the effectiveness of resources and increase educational choice. This is particularly pertinent given the current economic situation, coupled with the Entitlement Framework requirements which many schools will struggling to provide without collaboration.

“The children and staff handled controversial and sensitive issues more effectively. This resulted in raising standards of learning and teaching in PDMU for the children and schools.”

ETI Second Interim Evaluation of PCPP, June 2013.

- 3.1v The SELB has been managing the CRED schools’ programme through which a number of schools are involved in collaboration and sharing on a range of Section 75 issues. Projects have included work between all sectors, including mainstream and special schools where significant benefits have been recorded. The broader approach to inclusion, equality and diversity, promoted through CRED has stimulated and enabled new areas of collaboration between schools and the tackling of a broader range of issues.

4. Priorities and Actions:

To support the Committee's consideration of what priorities and actions to be taken to improve sharing and integration, the SELB, based on experience of leading and facilitating the development of shared education, would suggest the following:

1. It is vital to engage with schools and communities to raise awareness and develop a deeper understanding of shared education. Targeted engagement with school leaders and Boards of Governors is required in order to promote, encourage and challenge their commitment to developing shared models of educational provision.
2. The concerns of the teaching staff involved in shared education projects and the key role played by the principal and Senior Leadership Team need to be considered and addressed in any development work. In particular, adequate professional development and adequate planning time is necessary to prepare principals, staff and governors for engaging in shared education developments.
3. Close engagement with parents and the local community is essential, especially in areas where there may be community tensions around sharing and collaboration between and across sectors.
4. In the development of shared education practice, it will be helpful for schools to have a range of tested models of effective practice available for consideration, together with advice and guidance on that range of models for shared provision. A collation of existing and previous effective models of shared education would provide a useful resource.
5. The integrated sector has substantial experience of dealing with difficult issues such as sectarianism and conflict resolution as well as experience of teaching children about diversity, respect and tolerance for others. This learning and experience should be drawn upon in the further development of shared and integrated models of provision.
6. It is apparent that no one model of provision fits all situations and contexts. The most appropriate model will be the model that has the support of the community which a school or schools serve.

Shauna Mulligan (an integrated education alumnus)

To the Committee for Education in Northern Ireland,

I would like the following views on shared and integrated education to be considered by the Education Committee as part of your ongoing review.

I am one of 6 siblings all of whom have attended an integrated primary and post primary school in Omagh. I am also a member of the Integrated Education Alumni Association in London. I have just graduated with a degree in English Language and Special Needs Education from a university in London and have a great passion and interest in education in general. As part of my degree I had to do research into the different types of education providers and the ratio of school places needed and those available in different localities and the impact of parental choice. I was shocked to discover that in Northern Ireland we have a massive duplication of provision and as a consequence our education system is not economically viable or cost effective. With future austerity measures looming now is the time for those decision makers in our midst to take brave decisions and bring our finances back into shape. In my own town of Omagh we have a total of 7 post primary schools an equivalent area here in London with similar population size has 2. It is obvious that 3 times the amount of provision is definitely overkill and needs to be addressed as this is only one area of Northern Ireland what must it be if the whole of Northern Ireland were to be surveyed.

When talk of a shared education campus was first muted I was only in my third year at my post primary school, myself and my classmates were not quite sure what it all meant but we were eager to hear more. Eight possibly 9 years on, millions of pounds spent and not a brick built. Young people in the area still have no say in what is being provided decisions are being made by service providers and politicians instead of listening to the service users the students. What we do know is that when the shared education campus is complete we will still have 7 post primary schools in the area thus continuing the duplication of provision, young people will still be segregated as each school will still have their own building and there is no provision for any integration of sport facilities or outside space as each school will have separate times for use of such facilities and to crown it all the only Integrated post primary school in the area has been refused permission to relocate to the site. What is being proposed is also not going to save any money at all in the future and therefore offers no financial savings and poses the question what are the benefits?

Our hope at the time a Shared Education Campus was announced was that there would be one large school for all in the Omagh area regardless of gender or religion up to the age of 16/17 and then a Sixth Form College catering to the needs of young people. This would have been a truly courageous initiative putting our needs before those of our outdated institutions who are only interested in protecting themselves. Calling it an Integrated Campus or Shared Education Campus is irrelevant what it provides is much more important.

I feel very privileged and thankful that my parents supported integrated education and bravely chose our local primary and post primary integrated schools for us to attend. They went against what their families, friends, neighbours and church believed in. Attending schools not dominated by one view, belief or idea and so open minded that it allowed all of us not to be afraid to discuss our differences, be less judgemental and respect what makes us all different while at the same time pushing us to academically achieving our best whatever that might be. Being educated alongside

those with learning disabilities helps us develop our communication and interpersonal skills and allows us to integrate with those who find life more challenging than others. I have found this foundation so relevant during my studies for my degree and my present employment with Greenwich Council. There is so much we can do to make our education system in Northern Ireland better. It should start by educating us all together from nursery right up to leaving

school. If young people choose to go down the vocational route and attend one of our FE colleges they have an integrated education why not then if we choose the academic route.

Integrated Schools in Northern Ireland have been a choice for parents but so many are oversubscribed and their expansion blocked by religious and social groups that it is not available to all children and therefore so many are losing out. To learn side by side and in a completely neutral environment where differences are celebrated discussed and explored should be a right and not a choice and this is what NI should be aiming for rather than continuing with segregation.

In conclusion I would like to state that although I am not a fan of the shared education concept it is a tiny step towards integration but is it sustainable and where is it going? It appears to be just a buzz word for politicians and others who are afraid of the term integration . If it is such a great concept then why not be brave, save money and take a big step rather than a tiny one and recommend full integration of our education system including our teacher training and provide an exciting future for young people now and those not yet born. I know I would like to believe that any children I might have will have the right to an integrated education not the possibility of one.

Finally I thank you for allowing me to submit my thoughts and I would ask that you speak to as many young people like myself and those still attending school as you can. We know what we want our schools to provide, we know what makes a good lesson a good teacher and what makes us want to learn and helps us to learn.

Submission to the Inquiry into Shared and Integrated Education

Shimna Integrated College was founded by local parents who wanted an education for their children, which is Integrated, academically excellent, all-ability, child centred and parent friendly. Many of those involved in founding Shimna were parents of children at All Children's Integrated Primary School, the first Integrated school in Northern Ireland outside Belfast. Shimna grew as an Integrated school from its community, and Shimna has since 2006 run the Sharing Languages, Sharing Cultures programme for sixteen of our local primaries. The SLSC programme serves sixteen primaries which are, all but two, single identity school, and provides a regular, weekly element of Shared Education throughout the school year to a whole year group of children. Integrated schools are founded by parents who choose to do so. Integrated school respect absolutely the wishes of other parents for other kinds of schools. Our SLSC was founded in response to the desire across all educational sectors for an element of sharing as a normal part of the experience of all children in all schools. We are very proud to be able to offer the service. Shared Education should never be seen in opposition to Integrated Education. Shimna's roots in in Integration inspired our long-running Shared Education programme.

Of course, those of us who believe that the best system for Northern Ireland is Integration would prefer to see a fully Integrated system. We would prefer not to see resources go into further institutionalising separation, even within a campus. However, we have the greatest respect for thoroughgoing, purposeful, community led Shared Education projects, such as the Fermanagh Trust project. We respect the fact that the Fermanagh project is at the point on the spectrum of Integrated and Shared Education which the community has chosen. We recognise that in such a mature and complex Shared Education programme, the processes of Integration we value are strongly present. We also note the steady increase in contact, joint planning and holistic approach which has been apparent in the Fermanagh. We have found exactly the same dynamic within the communities served by our SLSC, and believe that that dynamic should be facilitated in bringing communities as close together as they continue to choose. Of course, as an Integrated school, we would love to see full Integration as the outcome. However, we repeat, our school is founded on the principle of parental choice, and we respect that choice for all parents.

We would regret a situation where students' opportunity to share education or to integrated would depend merely on joint projects, on occasions, on events. This is simply not enough.

Integrated Education is a commitment to living and learning together, and to addressing difference. We integrated because we disagree, not because we agree or imagine we have found a solution. It is a privilege we wish for every student, and we believe that the integrative effect on a local community is a powerful force towards social cohesion.

The effect in our small community has been substantially stabilising. A strong demographic swing has been stemmed, and our community remains mixed. Among our staff are members of our local minority community, who have now settled in the area, married and started families.

Our request to the inquiry team is for continued investment in Integrated Education. We would also request access for deeply rooted, sustained Shared Education programmes, so that they can be staffed appropriately with teachers who are subject/sector specialists and who have ongoing access to training in developing cross community work.

Our SLSC is in its eighth year, and has had to, temporarily we trust, downsize due to the end of funding. We have worked hard to establish our infrastructure and staffing expertise and we believe that we have a replicable, cost effective model of Sharing, which gives children in single identity schools access to regular, content and process rich, normal learning together. The main cost is staffing, and the only other essential cost is for transport, though we have designed our project to bring nearby schools together, both to minimise cost and to have the maximum community impact.

Shimna Integrated College is in its twenty first year. The evidence of our success is now to be seen in the generations of successful OldScholars now bringing Integration into every aspect of their adult lives. Integration has never been a quick fix, but makes a sustained and long term contribution to a cohesive society. The Integrated sector is small if measured in school and student numbers, but the impact of the injection of Integrated values into our education system has been massive.

We would draw the inquiry's attention to two current disappointments: that the Integrated sector has not been given full representation in proposed new structures; that the current CCMS submission to this inquiry has focused so much on abolishing the Integrated sector. We will not ever be campaigning against any other sector, nor against its full recognition.

Principal and Governors of Shimna Integrated College

22nd October 2014

"Learning from each other"

Sir Bob Salisbury

Committee for Education Inquiry into Shared and Integrated Education

Submission from Sir Robert Salisbury

I do not represent any organisation and write as a private individual, resident in Northern Ireland. In the past I have chaired the Task Force on Literacy/Numeracy, Chaired the Funding Review and a Review of FE Colleges in NI. I have also worked for many years with schools and school leaders in NI, UK and internationally.

For brevity my submission will be in bullet point format, but I will be happy to expand the content at a later date if the Committee for Education think this would be helpful.

- 1 Virtually every political or educational observer from outside Northern Ireland sees our divided educational system as one of the root causes of the social unrest, innate mistrust 'of the other side' and a crucial factor in prolonging the ongoing tensions which exist in this small country. Many have urged the political and religious leaders to move with speed towards an integrated system which educates all of our young people together. To the neutral observer - and though I have lived in NI for thirteen years, I still regard myself as such - separating children, often from the age of three, into different educational channels where they seldom converge, inevitably fosters misunderstanding and prejudice. In my view the overarching thrust of this review should not be about deciding the relative merits of either Shared Education or Integrated Education, because they clearly both have strengths and weaknesses, but about moving towards a system which is fit for the 21st Century and educates **all** of our children together.
- 2 Perhaps a starting point is to ask if we are beginning this debate from the wrong end. It might be more useful to ask a fundamental question of all sectors in our present educational system. Are we truly focussed on fulfilling the needs and aspirations of our young people for the next twenty to thirty years or are we tinkering at the edges of what is for many students a failing system and still looking back to a world which is no longer relevant? Flexibility and adaptability, global awareness, co-operation and networking, confidence in meeting ever-changing circumstances, technological competence and high quality communication skills will be vital attributes for all children who are currently moving through our schools. Are our schools actually providing those vital foundations or are we still far too preoccupied with digging our heels in and defending our corner? Young people are our future. We should ask them what they think and all those with vested interests should begin to soften their traditional resistance to change and put the needs of young people before the needs of institutions or particular faiths. Arbitrarily divided education, whether it be in pseudo-academic terms or on religious grounds is surely out of its time and we should all have the confidence and strength to take a truly fresh look at what should happen in our schools.
- 3 If our current system of schooling was successful enough to compete with the best in the world and all of our young people were being given the confidence, skills and qualifications to be successful in life, there would be some virtue in maintaining the status quo and sticking with what we have. Sadly this is not the case and though many of our top students achieve high standards there is a long tail of underachievement, especially in the inner city areas, where results are some of the worst in the whole of Europe. Whatever changes we consider to the present system must therefore have as a central tenet - the pressing need to raise educational achievement for **all** young people.
- 4 Consideration of the future shape of our schools must also take into account the current financial situation. During the recent Funding Review it was very clear that Northern Ireland has too many small schools and too many 'types' of school to be economically viable as budgets decline. For example Omagh has six post primary schools with salaries, buildings

costs etc and Retford in Nottinghamshire, with an almost identical population has two post primaries. Replicate this across NI and the financial implications are obvious. Maintaining the duplication of the Controlled and Maintained sectors, Grammar Schools and High Schools is expensive and will increasingly become financially unsustainable. All ability integrated schools are clearly in the long term a more workable and affordable option.

5 Amalgamations and closures of small schools are inevitable in the future. Not only are many of these small establishments costly to maintain, but a restricted curriculum, lack of opportunity for sporting and cultural events and limited educational experience for the pupils increasingly occurs as numbers on roll decline. Of course no one relishes the closure of schools, especially those in rural areas, but it was very disappointing to discover in the recent Area Planning exercise, that more consideration was given to the separate rationalisation of Controlled or Maintained schools than to the possibility of integrating small schools in order to maintain at least one educational establishment in an area. Taking a school out of an area almost always means more travel and less convenience for both pupils and parents so when closures are proposed, communities should always be given the option to consider cross-sector amalgamations and integration as a possibility. This should take precedence over the present 'divided' area planning process which is now taking place.

6 Clearly, in educational terms, one of the main attractions of bringing small schools together to form a larger unit in order to maintain a school in an area, brings wider curricula opportunities for the children, greater diversity amongst the teaching staff and a secure future for the establishment. Integration of this type would also bring disparate communities together because though we hear a great deal about 'small rural schools being the heart of the community' in reality having separate Controlled or Maintained establishments a few miles apart is the very thing which divides populations.

It may be that to encourage governors, principals and parents to consider 'integrated amalgamations' a new range of financial incentives and new build opportunities for the school have to be offered. Similarly an attractive financial package, akin to that arranged for police officers when the PSNI was re-organised, might need to be put together to encourage principals to retire early, thus facilitating and encouraging opportunity for school amalgamations.

7 Finally we regularly hear 'parents must have the right to choose the school they want' which, though it may be understandable, inevitably comes with a cost in terms of transport, financial support for small schools etc which as has been mentioned earlier, is a situation which is unlikely to be sustainable in the future. Eventually parents making such a choice will undoubtedly have to contribute financially, especially towards transport, but a move towards local 'integrated' schools might anticipate and alleviate this problem.

8 The 'integrated schools' movement has made significant strides over the past years but for various reasons has still not achieved the major break-through in terms of student numbers that it initially hoped for. This may be because:

- a) Early development of the movement concentrated more on setting up new schools (which exacerbated the issues mentioned earlier in terms of small schools and the range of schools in NI) and was much less encouraging to schools which wanted to 'transform' into integrated establishments.
- b) The movement considered that mere 'integration' was enough to make them successful and failed to understand that high achievement for all students was also crucial to reputation and sustainability.
- c) Schools too often aped the local selective schools and missed the opportunity to create a unique, truly integrated ethos which had high aspirations for all pupils from all backgrounds and all traditions. As one successful former principal put it to me 'my hope for this school is that we will have students winning places at Oxbridge, students

with special needs reaching their full potential and everything in between. In short, a school which truly does provide the best for all students.'

- d) For years there has been a lack of strong, committed political support for integration, the continued existence of a selective system, widespread and systematic covert and overt pressure from the various religious groups to block integration, the 'capping' of integrated school numbers and the absence of schools in some areas are factors which have all had a detrimental effect on the expansion of integrated schools.
- e) Sadly the emergence of the 'shared education' movement seems to have been met with defensive animosity by some members of the 'integrated' sector. As one principal put it to me, 'they have stolen our thunder', which seems an odd reaction when the aspiration to teach all children together is surely common to both movements.

9 'Shared Education' should be viewed as a step in the right direction but there are some fundamental short-comings both in its philosophy and to its long term sustainability:

- a) Some schemes are clearly designed as a survival device to protect small schools which may be under threat from closure, thus prolonging the issues raised above.
- b) Educational outcomes are usually reported as very positive, though are often ill defined and difficult to quantify and prompt the obvious question that if these schemes work so well on restricted contact, why not fully integrate?
- c) Logistically 'shared' educational schemes have a finite limit so definitely do not offer a permanent solution. Planning joint timetables, arranging transport of staff and students quickly begins to exert a negative influence on the rest of the school. There is usually a substantial financial cost involved in this process and it is reasonable ask if the funding ceases in the future is the initiative likely to survive?
- d) Some schemes which have young people sharing the same building but having different uniforms and entering by separate doors are patently absurd and a better way to perpetuate difference is hard to imagine.
- e) It would be useful if all shared educational schemes are time-bound so that development of the initial idea is seen to be moving forward as the various parties become accustomed to working together. Hard evidence that all schemes are benefitting the educational and social outcomes for the children should also be a pre-requisite of any coming together between schools.
- f) In the long run, for 'shared education' schemes to work practically the structure, purpose and composition of the Governing Bodies of schools will need to be reviewed.

10 There are three areas where full integration would be relatively easy to achieve and would have a significant impact:

- a) All pre-school and nursery schools should be integrated. By school starting age many prejudices are already entrenched.
- b) Integrated Teacher Training should be introduced with some urgency because professionally it is ludicrous, duplication is expensive and potentially restricts the career opportunities for teachers.
- c) Development of joint Post 16 centres linked to FE colleges. Far too many school sixth forms offer restricted curricular packages, compete unashamedly with neighbouring schools for students and are uneconomic. An integrated regional approach to the provision of post-sixteen education based firmly on the needs of students rather than the individual institutions would be a rational move in the right direction.

- 11 Northern Ireland has moved forward massively in the last few years but huge divisions still exist in our society and many of these are clearly perpetuated by our segregated education system. Powerful religious and social groups conspire to maintain this situation and repeatedly seek to block any move towards teaching all pupils together. Historically there was clearly a need to develop a separate catholic education system to counteract the restricted opportunities experienced by people coming from that tradition in NI. However what was once an understandable route to achieve equality is no longer a solution but is now clearly part of the problem. Similarly, the birth of integrated education initially faced huge obstacles and its proponents had to be single-minded in the pursuit of their aims so that nothing less than 'full integration' was envisaged or tolerated. It would be a shame if these parties and indeed any others with 'self' interest in maintaining segregated education cannot now moderate their entrenched views and begin to see the immense benefits both educationally, socially and economically of bringing all children together into a single system.

For years now I have been asking the question of these vested interest groups 'What do we actually lose if our schools become integrated?' and so far have been unable to get any quantifiable or indeed honest response. Interestingly the only submission to this inquiry which came from young people who are part of the next generation (NUS-USI) unequivocally urges the committee to move with all speed towards integration and argues forcibly that 'children in NI should be educated together within an Integrated Educational system'. Perhaps asking all young people what they feel a modern school system should offer them for their future success and well-being might be a worthwhile starting point for this debate and would I am sure prove very illuminating!

Sir Robert Salisbury

Oct 2014

Speedwell Trust

Northern Ireland Assembly Committee for Education
Shared/Integrated Education Inquiry
Submission from the Speedwell Trust

Executive Summary

The need for all schools to facilitate cross-community contact for their pupils on a regular basis is clear. The evidence suggests that nearly a quarter (24%) of young people in Northern Ireland who consider themselves either 'Protestant' or 'Catholic' have no friends from the 'other' main religious community. Moreover, 45% of 16 year olds report having nowhere in their area where they could meet young people from a different religious background. There is also robust evidence that cross-community friendships and social activity are more likely among young people who have been given opportunities at school or in youth groups to mix with their counterparts on a cross-community basis.

Furthermore, there is an urgent need for the Education Minister to introduce a statutory definition of shared education which defines it in such a way that it must facilitate sustained and meaningful contact between children from the two main religious traditions in Northern Ireland. We are concerned that the Ministerial Advisory Group on Shared Education defined it in a way which appears to allow for a much wider interpretation of 'shared education'. We are further concerned that the Department of Education appears to be using a wider interpretation.

Moreover, it is vital that schools are placed under a statutory obligation to facilitate and encourage shared education. The need for this obligation is demonstrated by the fact that, in a recent schools' survey carried out by the Department, only 54% of schools said they had been involved in shared education on a cross-community basis. As the Department's Community Relations, Equality and Diversity (CRED) policy does not require schools to facilitate cross-community contact for their pupils, there is no obligation for schools to ensure that their pupils are provided with the opportunity to mix in this way.

There is also robust evidence that lack of sufficient funding is a major barrier which is currently impeding schools from participating in shared education and in the Department's CRED programme. In this regard, we are concerned that there is currently no dedicated statutory funding scheme for shared education, and that the Department has significantly cut the funding it provides for community relations and cross-community programmes in schools.

Our recommendations for taking forward shared education and CRED are as follows:

- The Education Minister should bring forward, at the earliest possible opportunity, a statutory definition of shared education which makes explicit that it must involve meaningful cross-community interaction by pupils on a sustained basis.
- Using this definition, the Department of Education must make it a statutory obligation for schools to ensure that all their pupils are provided with the opportunity to participate in shared education on a regular basis.
- The Department must also make available sufficient funding to ensure that all schools can ensure that their pupils have the opportunity to participate in meaningful cross-community shared education and CRED programmes on a regular basis.
- The Department must institute a robust system of monitoring which enables it to evaluate, on a regular basis, whether and how each individual school is implementing shared

education and CRED, including the extent and quality of cross-community engagement which is offered by each school.

- The Department should introduce an award scheme for schools which provide outstanding examples of good practice in shared education and CRED.

Introduction

The Trust greatly welcomes the decision by the Committee to hold an inquiry into shared and integrated education. These two forms of education are of the upmost significance in helping to ensure that the two main communities in Northern Ireland can move forward constructively and with a greater degree of understanding than hitherto.

Our comments will be confined to shared education and the implementation of the Department of Education's Community Relations, Equality and Diversity (CRED) policy, as our work involves supporting schools in implementing shared education and CRED, but does not extend to the implementation of integrated education. In addition, while we are able to deal with the most of the questions outlined in the Inquiry's terms of reference as they relate to shared education and CRED, we will not be commenting on special schools as we have no experience of work in this type of school. In addition, our comments on models of good practice are confined to our own work in Northern Ireland and the Republic of Ireland, as we have no direct experience of models of good practice elsewhere.

The Speedwell Trust

The Speedwell Trust is a charity which has 23 years' experience of delivering educational programmes designed to facilitate constructive contact and greater understanding between children from different religious and cultural backgrounds. It is based near Dungannon, but works with schools and youth groups across Northern Ireland and, on occasion, in border areas in the Republic of Ireland. To date, the Trust has provided services to more than 200 schools. Within the last financial year alone (2013/14), Speedwell delivered programmes in partnership with more than 100 schools.

The nature and definition of shared education

The need for shared education

Before discussing the precise nature and definition of shared education, we believe that it is vital to examine why both shared and integrated education are so important. One of the main reasons that cross-community contact between children and young people is so crucial is that the evidence suggests that a significant minority – just under a quarter – of young people in Northern Ireland who would consider themselves either 'Protestant' or 'Catholic' have no friends from the main religious community in which they did not grow up. In 2012, the annual Northern Ireland Young Life and Times (YLT) survey found that 24% of 16 year olds from the Protestant or Catholic religious community reported having no friends in the other main religious community.¹ Moreover, a previous YLT survey, carried out in 2011, found that such friendships were more likely among those who had previously participated in a cross-community scheme, or who had attended a planned integrated school.² Those who fall into these categories were also more likely to socialise or play sport with people from a different religious community.³

1 Devine, Paula (2013) Research Update No. 83: Into the mix. ARK Northern Ireland.

2 Devine, Paula and Robinson, Gillian (2012) Research Update No. 79: No more 'us and them' for 16 year olds. ARK Northern Ireland.

3 Ibid.

Furthermore, 45% of respondents to the 2012 YLT survey said that there were no facilities in their area where they could meet young people of a different religion, and 77% thought that cross-community relations would improve if there were more cross-community projects.⁴

Thus, there is a clear need for all children and young people who regard themselves as belonging to either the Protestant or Catholic community to be provided with opportunities to participate in cross-community programmes – both because these facilitate cross-community friendships and social activity, and because such a high proportion of young people cannot easily meet their counterparts from the ‘other’ community.

In addition, there is specific evidence that children and young people benefit from experiencing such contact on a sustained basis within an educational setting. A research team at Queens University, Belfast, found that children at schools which had participated in a shared education programme run by the University were less worried and more positive about the ‘other’ community than children at schools which did not participate in such a scheme.⁵ This finding applied even when the team confined its comparison to schools which were located in areas viewed as having greater divisions.

The need for a statutory cross-community definition of shared education

The above evidence provides strong support for the value of shared education. We are heartened, therefore, that the Northern Ireland Executive’s current *Programme for Government 2011–2015* contains a commitment to ensure that all children have the opportunity to participate in shared education programmes by 2015.⁶ We also welcome the commitment in the OFMdfM policy document, *Together: Building a United Community*, to deliver ten ‘shared education’ campuses⁷, and the subsequent pledge by the Education Minister in January 2014 to deliver on this promise.

However, if shared education is to form a central element of the Executive’s approach to cross-community relations, as we believe it most certainly should, it is essential that all involved are using the same clear definition of ‘shared education’, and that any ‘shared education’ will facilitate sustained and meaningful contact between children from the two main religious traditions in Northern Ireland.

We have been disappointed, therefore, to discover that there is no clear statutory definition of ‘shared education’, and that the Executive seems to be using a definition which appears to allow collaboration between Catholic grammar and non-grammar schools, on the one hand, and between predominantly Protestant controlled or voluntary grammar and non-grammar schools, on the other, to be viewed as ‘shared education’. It also appears to allow for collaboration between a Catholic primary and Catholic post-primary school, or a predominantly Protestant controlled primary school and a predominantly Protestant controlled or voluntary post-primary school.

The definition in question was drawn up by the Ministerial Advisory Group on Shared Education. This Group was tasked by the Executive with providing a set of recommendations on how best to take forward shared education. It reported in March 2013. It defined shared education as follows:

Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality

4 Devine, Paula (2013), op. cit.

5 Hughes, Joanne et al. (2010) *School Partnerships and Reconciliation: An Evaluation of School Collaboration in Northern Ireland*. Queen’s University, Belfast, p. 40.

6 Northern Ireland Executive Programme for Government 2011 – 15, p. 51.

7 See: <http://www.ofmdfmi.gov.uk/together-building-a-united-community>

*of opportunity, good relations, equality of identity, respect for diversity and community cohesion.*⁸

Crucially, however, the report further clarifies that: “By ‘different sectors’, the definition refers to schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance.”⁹ Such a definition seems to allow the ‘single community’ interpretations referred to above.

Moreover, the impression that something close to the Group’s definition is being used by the Department of Education and by schools is reinforced by the fact that, in the “shared education” section of an Omnibus survey of schools carried out by the Department in March 2013, the Department lists a number of types of ‘shared education’ collaboration in which each school might have participated and includes, as an option, collaboration with a school “from the same sector (e.g. controlled, maintained, integrated, Irish medium)”. Thus, although the Department has a different definition of the term ‘sector’ from the Ministerial Advisory Group, it appears to share the view that ‘shared education’ does not have to involve cross-community collaboration.¹⁰

Any such ‘single community’ collaboration, while it may bring many other benefits, is not going to facilitate the type of cross-community contact which the evidence shows is so important in helping to increase cross-community understanding and foster good cross-community relationships in Northern Ireland.

We appreciate that the Education Minister has since committed to bringing forward a definition of shared education and appreciate that the final statutory definition may differ from the above.¹¹ However, we are concerned that, in the absence of any official definition, the definition recommended by the Working Group will be used, in the meantime, by the Department of Education, education boards and schools in working towards the Executive’s current policy objectives concerning shared education. Moreover, until a firm statutory definition is produced, it will be impossible for the Department to monitor robustly the degree and quality of shared education which is taking place, as it will not be clear what it is monitoring.

The need for a statutory obligation to facilitate and encourage shared education

We welcome the Education Minister’s commitment to bring in a statutory obligation to facilitate and encourage shared education. However, as outlined above, it is essential that this relates to a cross-community definition of shared education.

The need to both require and encourage schools to participate in cross-community shared education is underlined by the fact that, of the 568 schools which responded to the Department’s ‘shared education’ survey, only 306 (54%) had been involved in shared education on a cross-community basis. In other words, nearly half (262 or 46%) had not participated in cross-community shared education.¹²

Moreover, the survey also found that only 15% of schools which had participated in shared education had done so in a way which involved the whole school.¹³ We believe it is essential

12 Department of Education, *op. cit.*, Tables 5 and 10. Table 10 gives a percentage for involvement in cross-community shared education which excludes those schools which did not participate in any shared education. It is important, therefore, to read both these tables in conjunction with each other to discern the actual level of cross-community engagement.

13 Department of Education, *op. cit.*, Table 8.

that all children from either the Protestant or Catholic tradition in Northern Ireland are given the opportunity to engage in a meaningful way with children from the other main community on a regular basis. This can only happen if each class in every relevant school is provided with such an opportunity. It is also the only way in which the Programme for Government target, referred to previously, can be achieved.

Furthermore, the 2012 Northern Ireland Kids' Life and Times Survey, which surveyed children in P7, found that only 58% reported having taken part in an activity with a child from another school.¹⁴ Although the YLT survey in the same year found that a much larger proportion - 82% - of 16 year olds reported having taken part in such activity, only 72% of those who had participated in shared education (i.e. 59% of the whole sample) said that some of the pupils from other schools had been from a different religious background.¹⁵ In other words, it would seem that substantial proportions of both primary and post-primary pupils are not being given any opportunity by their own school for cross-community engagement with children from another school.

Key barriers and enablers for shared education

Key barriers

The Speedwell Trust recently carried out a survey of 130 of the schools with which it has worked.¹⁶ Schools were asked what they thought were the most significant barriers to participation in shared education activities with another school. By far the most commonly cited issue was the cost of transport; 85% of respondents thought this was a key barrier to participation in shared education (see Table 1 on p.12 of this submission).

This issue is obviously more relevant in some areas than others; in some parts of Belfast, for example, many schools whose pupils are predominantly Protestant or Catholic are within walking distance of at least one school whose pupils are mostly from the 'other' community.

On the other hand, the only Catholic maintained post-primary school in the Waterside area of Derry/Londonderry is due to close in 2015, meaning that predominantly Protestant post-primary schools in that area which wish to collaborate with Catholic maintained post-primary schools will have to organise transport for their pupils. There are also many towns in Northern Ireland where the population is predominantly from one religious community and, therefore, most or all of the schools have pupils which are from the same community. In such situations, it would clearly be impossible to ensure all schools can have shared education partners located in close proximity to their own institution.

The related issues of the distance between potential shared education partner schools and transport costs are obviously most acute for schools in relatively sparsely populated rural areas. In addition, not all schools have the space to accommodate large numbers of additional children participating in a joint activity, and some schools prefer that cross-community engagement takes place in a neutral, external venue, rather than in a school.

Indeed, The Speedwell Trust offers such a facility at our headquarters in Parkanaur Forest near Dungannon, where children have the opportunity to experience a range of outdoor activities in the forest setting, and to make use of indoor accommodation which is designed to accommodate large groups of children. The facility has proved very popular with schools. However, for those schools travelling from further afield than the Dungannon area, the transport cost is obviously an important issue.

14 Kids' Life and Times 2012 Survey results. Available at: http://www.ark.ac.uk/klr/results/Shared_Education.html

15 Young Life and Times Survey 2012 Survey results. Available at: http://www.ark.ac.uk/ylt/2012/Shared_Education/

16 The survey was carried out online in June 2014. An invitation to take part in the survey was issued by email to 130 schools. 65 (50%) responded.

As can be seen from Table 1, the second most commonly cited barrier was curriculum pressures. This chimes with one of the findings from a schools' survey carried out by the Queen's University team referred to earlier. 71% of respondents to their survey stated that the additional workload for teachers which was involved in shared education was a barrier.¹⁷

Clearly, many schools view shared education as an 'add-on' where time permits, rather than an essential element of the learning experience for their pupils. This perception reinforces the need for a statutory requirement for schools to engage in cross-community shared education in order to encourage schools to give it greater priority, and to view it as part of their mainstream educational offer. In addition, we believe that the Department could do much more to raise awareness among schools of the ways in which cross-community engagement fits with and can enhance the delivery of the existing curriculum, and of the extent to which some subjects can be delivered more cost-effectively in a shared education context.

The third most commonly cited factor, selected by more than half (53%) of the respondents, was lack of resources. Lack of resources was also the most commonly cited barrier in the Queen's University schools' survey referred to above. 83% of their respondents selected this factor.¹⁸ These findings, together with our survey evidence highlighting the issue of transport costs, point to a need for an easily accessible source of public funding for shared education. At present, schools can apply to their local education board for funding to implement CRED. However, there is no dedicated public funding stream for shared education, and schools have told us that they find the CRED funding application process cumbersome.

Key enablers

In light of the above evidence, it is not surprising that availability of funding was seen by the schools which responded to the Queen's University schools' survey as one of the two most important 'enablers' for shared education; 84% of schools cited this factor. The other factor which was cited most frequently was the relationship between the leaders of the schools in question, selected by 85% of respondents.¹⁹ In this regard, in addition to providing adequate and easily accessible funding, it is vital that the Department does more to encourage school principals and senior managers to develop positive and constructive relationships with their counterparts in schools with a different religious composition. 76% of respondents to the Queen's University schools' survey also cited 'the commitment of other staff' as an important enabling factor, suggesting that shared education works best where all staff in a school are firmly committed to it.

The issue of geography was also highlighted in the Queen's University survey with 69% of schools selecting the geographical proximity of the schools in question as a key enabler. This finding reinforces the need for the Department to work to assist school in addressing issues posed by geographical location to ensure that this is not an insurmountable barrier for any schools.

Models of good practice

The Inquiry's terms of reference refer specifically to alternative approaches and models of good practice in other territories. As mentioned earlier, the Speedwell Trust has no direct experience of good practice models in other territories, beyond our own work in border areas of the Republic of Ireland. However, we believe it is vital that the Committee examines models of good practice within Northern Ireland as well as elsewhere, not least because the Inquiry is focusing on how best to take forward shared education in Northern Ireland. Below we highlight three of our most successful programmes which we believe provide models of good practice which could be rolled out more widely.

17 Hughes, Joanne et al., *op. cit.*, p. 23.

18 *Ibid.*

19 *op. cit.*, p. 22.

Diversity and Drums

The success of our Diversity and Drums programme illustrates the value of facilitating children in directly addressing cultural difference and potentially contentious issues, and encouraging them to understand, respect and appreciate cultural diversity. For the children, the highlight of the programme is generally the opportunity which it provides them to have a go at playing a variety of different types of drum, including both the bodhran and the Lambeg drum. Participating in an activity which most children find hugely enjoyable is a great means of breaking down barriers and reducing any anxieties which the children may feel. However, the programme, through an educational thematic unit, also enables children to find out how drums have been used in different periods of history and in different parts of the world. As part of the programme, children also discuss sensitive issues such as bullying, sectarianism and racism, including the ways in which discriminatory and aggressive behaviour and attitudes impact on people, and on what can be done to address these issues.

The Diversity and Drums thematic unit, which is aimed at children in Key Stage 2, consists of 12 inter-related activities which are designed for use across one or two school terms by two schools whose pupils are each from predominantly different religious traditions. Schools are encouraged to deliver this module to joint groups of pupils from each of the partner schools. To date 30 schools have taken part in this programme and the feedback from them has been overwhelmingly positive.

Connecting Communities

The Connecting Communities programme is also aimed at children in Key Stage 2 and has been very successful. As with Diversity and Drums, Connecting Communities does not shy away from contentious issues, but rather encourages children to think about cultural difference. This is a very practical, hands-on programme and provides opportunities for children to examine, explore and investigate flags, emblems and symbols associated with diversity in our community. It is also a collaborative programme with input coming from the PSNI and local church representatives. Children are provided with opportunities to interact with their local neighbourhood policing team as well as visiting various churches in their community.

The Connecting Communities thematic unit consists of 14 inter-related activities which are designed for use across one or two school terms by two schools whose pupils are each from predominantly different religious traditions. In this instance, the module explores how our concept of community is formed, the differences within a community, and how we come to think of some people as being 'inside' or 'outside' our community. Participants are also asked to imagine what it would be like to be a newcomer to their own community and how they might feel.

To date, 15 schools have taken part in the practical workshops and, once more, feedback has been very positive.

Speedwell Schools' Engagement Project

This project is designed to build on the Speedwell Trust's long-established work in the area of fostering an appreciation of diversity within and between schools. It involved 'Catholic' and 'Protestant' Primary Schools in the various locations throughout Northern Ireland coming together to engage with each other and, crucially, the PSNI. The project facilitates the delivery of core PSNI safety-related work (internet safety, road safety, 'stranger danger' and fireworks safety) but its real value is in (a) bringing together of children and teachers from different educational sectors and (b) introducing PSNI officers and their work to schools/communities where they traditionally might not have had a place/presence.

To date 64 primary schools have taken in the Schools Engagement Project. The process involved (1) a team-building event at Parkanaur involving Schools from the two communities and PSNI officers (in plain clothes) (2) a shared event in one of the Schools exploring cultural

traditions, diversity, flags, symbols and identity issues (3) a shared event in the other School where the PSNI officers appear in uniform and deliver safety awareness training

This project was evaluated by an independent assessor with very positive outcomes.

Priorities and actions to improve shared education and cross-community interaction

The Inquiry's terms of reference state that, under the above heading, the Inquiry will consider the effectiveness of relevant parts of the Department of Education's CRED policy, the need to engage more effectively with parents/carers, and the role of special schools. As mentioned previously, we will be confining our comments to CRED and the need to engage with parents/carers, as we have not worked with special schools.

Effectiveness of relevant parts of CRED policy

As the Committee will be aware, in 2011, the Department of Education published *Community Relations, Equality and Diversity in Education* (CRED), a new policy which was designed to encourage all schools to foster mutual understanding and good community relations.²⁰ The Department now provides some funding on an annual basis to schools and youth groups to help implement CRED.

We have a number of concerns about the effectiveness of CRED. Our principal concerns relate to the lack of any obligation for CRED to incorporate cross-community interaction, the current inadequate arrangements for monitoring the extent to which schools are delivering CRED, and the insufficient level of funding available to implement the policy.

In particular, the CRED policy document stipulates only that schools should provide opportunities for their pupils to interact with others from different backgrounds "within the resources available"; in other words, where a school feels it cannot afford to initiate such cross-community engagement, that engagement does not have to take place.²¹ Taken together with the broad Advisory Group definition of 'shared education', referred to earlier, this means that schools whose pupils belong predominantly to one of Northern Ireland's major religious communities (i.e. Protestant or Catholic) are not required to ensure that their pupils have opportunities to mix with pupils from the other major community.

The 2011 YLT survey found that 70% of their 16-year old respondents reported having engaged, at some stage, in activity which would fall under the umbrella of the CRED policy, either in school, in a youth group, or in both types of setting. Most of these respondents (60% of the whole sample) had taken part in such activity at school. Conversely, 30% of respondents said they had not participated in such activity.²² However, this survey did not examine how many of these young people met members of the other main religious community as part of this activity.

In our view, it is absolutely crucial that the degree of cross-community interaction which takes place under CRED is robustly monitored. As we have already stated, cross-community engagement is of fundamental importance if children and young people are to develop real understanding and awareness of those who have different cultural or religious traditions from themselves, and if they are to be facilitated in forming cross-community friendships, where desired.

20 See: Department of Education (2011) *Community Relations, Equality and Diversity in Education*. Available at: <http://www.credni.org/contents/what-is-cred/>

21 Ibid. para. 6.5.

22 Devine, Paula (2013) *Community Relations, Equality and Diversity in Education (CRED): Findings from the 2012 Young Life and Times Survey ARK Northern Ireland*

When we asked the Department of Education how it was monitoring the implementation of CRED, it stated that the only evaluation it had commissioned to date was the above-mentioned YLT survey. We do not believe that this survey is sufficient as, while it contains valuable data, it relies on the impressions of young people who may not always be sure whether or not they have participated in an activity which was intended to form part of CRED. Moreover, while the survey sample was large (1,208 respondents), there is no guarantee that the schools attended by the respondents is in any way representative of all schools in Northern Ireland.

The Department has stated that it will commission a similar suite of questions on CRED to be included in the 2014 YLT survey, and that it is also asking the Education and Training Inspectorate (ETI) to undertake a review of the CRED policy in schools. While we welcome these moves by the Department, they are insufficient on their own. We assume that the Inspectorate's review will follow the approach of similar thematic reviews previously carried out by ETI and will draw on inspections carried out at a sample of schools. While this work will be very helpful, we believe that all schools should be required to report to the Department on an annual basis on both their CRED and shared education work, and that the resulting data should be published. Where schools are failing to engage in such activity, the Department should proactively assist them in participating in such work.

We are also very concerned about the level of funding which is made available to schools and youth groups for the implementation of CRED. The Department of Education has significantly reduced the resources which it allocates for the support of community relations in schools. Up to March 2010, it allocated some £3.6m annually for such support in both formal and informal educational settings. It now allocates only £1.2m approx. annually.²³

Only 15% of schools (181) took part in projects which were allocated funding by the Department through this programme in 2013/14.²⁴

We further note, from data in OFMdfM's most recent 'Good Relations Indicators' report, that the proportion of schools engaging in community relations activity fell drastically between 2006/07, when it stood at 43%, to 2011/12, when it stood at 21%.²⁵ It is not clear, from the report, how the OFMdfM data is compiled. It may refer only to schools which have been allocated funding for community relations programmes. Obviously, some schools may participate in community relations activities without recourse to external funding. However, the figures are undoubtedly a cause for concern. Moreover, they mirror informal feedback which we have received from schools which suggests that far fewer schools are now participating in such activity than was the case previously.

Parent/carer engagement

In general, we have not found parental attitudes to present any barrier to the work that we carry out. However, we appreciate that some schools may be reticent about engaging in cross-community programmes because they fear the reaction which they may receive from some parents. We further note that, while most of the schools which responded to our survey did not see lack of support from parents as a barrier to shared education, 11% of respondents did feel it was an obstacle (see Table 1).

However, while parental attitudes may not represent a significant obstacle to such engagement in most instances, the evidence does suggest that parents have a major influence on the attitudes and friendship patterns of their children. A study which was

23 The previous figure is cited in Department of Education (2011), *op. cit.*, p.8, para. 2.4. In Assembly Written Answer AQW29095/11-15, the Education Minister stated that his Department provided £1.163m in 2012/13 to fund the delivery of CRED.

24 The figures quoted are drawn from statistics supplied by the Education Minister in Assembly Written Answer AQW 29626/11-15.

25 OFMdfM (2012) Good Relations Indicators – 2012 Update, 4.11. Available at: <http://www.ofmdfmi.gov.uk/index/equality-and-strategy/pfg-economics-statistics/equalityresearch/research-publications/gr-pubs.htm>

published in 2010, involving 1,700 children in Northern Ireland and 880 of their parents, found that parental social attitudes were the most powerful factor influencing the social and political attitudes of their children.²⁶ This certainly suggests that, if we are to encourage children to have open and positive attitudes towards those from different cultural and religious traditions, it is vital to engage with parents.

Our own experience suggests that one of the most effective ways to engage with parents is to ensure that our cross-community programmes include a performance by the children involved to which parents are invited. Where this opportunity is offered, it is generally taken up by most parents who respond positively. Such opportunities enable parents to have a better understanding of our programmes and to engage with each other on a cross-community basis.

In addition, on those rare occasions where there is real opposition from parents, we have also found that it can be very helpful to engage directly with such parents in an open and constructive way prior to commencing a cross-community programme. Moreover, where there is any parental mistrust, it has never arisen from the cross-community contact per se, nor from the actual content of the programmes. Parental objections have only been raised on very infrequent occasions due to the location of a particular school (i.e. being in an area which is viewed as associated with paramilitary supporters), or due to the involvement of an institution which has a negative symbolic significance for the parent(s) concerned e.g. a particular church or the PSNI.

Recommendations

Our recommendations for taking forward shared education and CRED are as follows:

- The Education Minister should bring forward, at the earliest possible opportunity, a statutory definition of shared education which makes explicit that it must involve meaningful cross-community interaction by pupils on a sustained basis.
- Using this definition, the Department of Education must make it a statutory obligation for schools to ensure that all their pupils are provided with the opportunity to participate in shared education on a regular basis.
- The Department must also make available sufficient funding to ensure that all schools can ensure that their pupils have the opportunity to participate in meaningful cross-community shared education and CRED programmes on a regular basis.
- The Department must institute a robust system of monitoring which enables it to evaluate, on a regular basis, whether and how each individual school is implementing shared education and CRED, including the extent and quality of cross-community engagement which is offered by each school.
- The Department should introduce an award scheme for schools which provide outstanding examples of good practice in shared education and CRED.

In addition, we believe that consideration should be given to synthesising the Department's shared education and CRED policies as there is clearly a considerable degree of overlap between them. However, if this is done, it is vital that the definition of shared education remains one which gives a central role to the importance of cross-community contact between Protestant and Catholic schoolchildren. Clearly, religious division is only one form of division in Northern Ireland, and we welcome the fact that CRED is also designed to address other divisions and stereotypes. At the same time, Northern Ireland will be unable to move forward into a truly harmonious and peaceful society if its most fundamental division is not addressed in schools.

Sperrin College

Sperrin Integrated College on Shared and Integrated Education

Many weighty submissions have been made in response to the inquiry into Shared and Integrated Education. This submission is not one of those. It is a very brief journey through the life of our school from conception to reality with a few questions thrown in. This is followed by a quotation from one of our former Governors who, as a statistician, highlights the 'false economy' argument put forward through the idea of 'Sharing' rather than 'Integrating'. We have to ask the appropriate questions, if we hope to get the right answers.

Our journey from 2002 to 2014 and beyond - 51 to 501!

2002 January:	School launch. But no site yet.
	How many prospective pupils? 40. Not enough.
2002 March:	Teacher recruitment.
	How many pupils? 42. Not enough
2002 April:	6 Teaching professionals resign current posts to join Sperrin, but Sperrin doesn't exist yet.
	How many pupils? 45. Not enough.
2002 May:	Around the kitchen table, planning the curriculum.
	How many pupils? 46. Not enough
2002 June:	Door to door visitation seeking 4 more pupils, in order to secure public funding.
	How many pupils? 47. Not enough
2002 June:	Do we need private funding?
	How many pupils? 48. Not enough
2002 June 25:	How many pupils? 51 GO!!
2002 June 30:	Minister signs, breathe again.
2002 July:	Nothing happening. Traditional routes.
2002 August:	Mobiles on site, yes it is actually happening!
2002 September:	We are open for educating our 51 wonderful pupils.
	Quality of education must now come first, integration is ongoing
2003 June:	Permanent site
2003 August:	On site

2005 September: New build occupied

Fast forward to 2014

- 501 pupils
- 35 teachers
- 35 ancillary staff
- Inspection? Very good
- GCSEs? Of course
- A level outcomes? Excellent
- Graduate alumni? Plenty

Was it worth it? What do you think?

Educational evolution for social revolution.

Together building one united community

or

Separately building many separate communities?

Integration or just Sharing? You decide

“The positive impact of ‘real’ integrated education (the proactive choice of an increasing number of parents in Northern Ireland) cannot be denied. It is the real choice of people who want to attack societal differences from the start of academic learning, rather than trying to paper over the cracks which can develop from a very early age in a non-integrated environment. Shared education alone, in my opinion, is an economic measure rather than a sociological one. Those who want to make economic savings across the board would do well to realise that ‘true integration’ is the life-line to achieving this”.

23 October 2014

Dear Mr McCallion

Spires Integrated Primary School, Magherafelt, owes its birth to the hopes and dedication of local parents and grandparents. People, who differed greatly in background, shared a common desire – to see children from different cultural and religious backgrounds educated together in an environment in which the traditions of all are valued equally. It opened in September 1999 catering for 58 children in P1 – P4 and has grown steadily to an enrolment of over 200. Having an enrolment figure of 29 each year, which is set by the Department frequently results in children being denied an education in an integrated setting. Indeed last year eleven children were denied the opportunity to attend Spires Integrated Primary School.

As an Integrated school we bring families and communities together; integration, respect for differences and cultural awareness seeps into the wider community as a direct consequence of the existence of our school.

The 2011 Census indicated a clear demographic change in Northern Ireland and the Integrated Sector can accommodate this trend very effectively. There is a statutory duty to encourage and facilitate the development of integrated education and it is, therefore, disappointing to see that this is not actually apparent in Northern Ireland.

Communities face barriers at the initial stage of establishing a school, as DENI give more consideration to the impact on existing schools rather than parental choice. Similarly, capped enrolments ensure that only a limited amount of children can avail of the unique and diverse experiences offered through Integrated Education.

To develop Shared Education would put additional pressure on an already restricted Education Budget. As past experience (EMU) and current policy (CRED) have shown, schools are willing to participate in these programmes primarily for two reasons; (i) DENI requirement (ii) financial incentive. If these were removed it is doubtful how many schools would engage in such initiatives. I feel there is a similar attitude towards Shared Education. Schools may engage in it for financial reasons without any real commitment towards establishing strong, worthwhile connections to schools from different sectors.

Rather than allocate additional funds to Shared Education, money should be provided to grant further places for children within integrated schools and allow them to grow in accordance with parental choice. Shared Education and Integrated Education are not the same. Integrated schools have existed for over thirty years now and are having a major impact on strengthening relationships across the religious divide.

On a daily basis, pupils at our school engage in open and meaningful discussions with each other both inside and outside of the classroom. Integrated schools are very effectively bringing communities together because they are planned, desired and there is a commitment to their success, as opposed to Government initiatives that are taken on board due to requirement or financial gain.

Integration works. It is an extremely significant and positive step towards a peaceful future in Northern Ireland. In order for the Education Committee to make an informed decision regarding Shared and Integrated Education, it needs to **experience** integration and **engage** in purposeful discussions with all elements of the integrated sector namely Governors, Staff, Pupils, Parents and NICIE.

The children are the future and their voices should not only be heard but given serious consideration when the Education Committee meets to discuss this area.

I have also attached the thoughts and feelings of some of the pupils from Spires Integrated Primary School.

Yours sincerely

J Bell

Principal

Minutes of School Council Meeting

Monday 20th October 2014

Mr Clarke welcomed everyone to the school council meeting and Lee was voted as chair person and Alanagh as secretary.

Examples of how Integrated Education is good

- Learn about religions and celebrate them.
- Learn, eat and play together, if we eat together we know what our friends like or what they don't like.
- We get to play sports together.
- All the classes work together as a whole school on Tuesday evenings – mixed age groups for literacy and numeracy.
- We don't only learn about other religions and languages, we get to share experiences, we don't just learn about Catholics doing their confirmation we can see it and talk about it.
- If your parents are different religions you get to choose which one.
- You get to make very close friends with people who are very different or have disabilities.
- You get to experience being with different people.
- We do activities with other schools.
- Going to an integrated school makes you more tolerant a reason why is, you have friends that are different, so you understand.
- A good rule is don't do something mean to someone, if you don't want it done to you. (Would I like them to do it to me?)
- We get to make friends with different people, we get to celebrate some things like (St Patricks day and 12th July, Orange Order) but we celebrate everything.

Meeting finished at 2.50 pm.

People that were here:

Katie, Lee – P6

Alangah, Tiarnan – P7

Rhys, Emily – P5

Harry, Olivia – P4

21st October 2014 P5 Class Council

- We talked about why Integrated schools are important.

The following reasons were given:

- Everyone has the right to an education.
- It doesn't matter who you are or what language you speak.
- Everyone is equal.
- Everyone has the right to have friends. It shouldn't matter what religion they are.
- We get to learn other languages.
- We get to learn about other religions.
- You get to play more sports such as gaelic and camogie.

What Integration means to me

What Integration Means to me

Integration means that I can meet people that are from different cultures, different Religions and believe in different Gods. For example; My Mum is Protestant and my Step dad is Catholic, It doesn't matter to them or me because to us, everyone is the same and God loves all of us no matter what.

Why Does Skin Colour Matter?

In my opinion skin colour doesn't matter. We are all the same in my eyes. No matter what religion, culture, what God we believe in or what skin colour we are. My best friend is Priya. Her mum is Indian and her dad is Northern Irish, so she is half Indian. She gets treated the same as everyone else and I think everyone should be treated like her.

God Everyone No Matter What

The Meaning Of Integrated

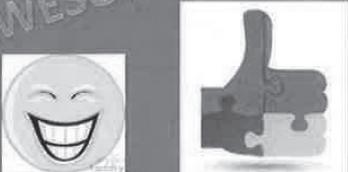

To make into a whole by bringing all parts together; unify

My School

My School is an integrated School. I really like it because I get the chance to mix with people from different backgrounds, cultures and religions. I get to learn about their beliefs (if they believe in a different God etc.) In some assemblies priests or ministers come in to talk to us, I find it really interesting because I get to find out things that I never know before.

Integration is AWESOME!!!

Thank You For Watching!!

THANK YOU

By Ellie Montgomery P.7 ©

In my school we have the chance to participate in many different sporting activities such as:

Rugby
Hockey
Football
Gaelic
Athletics
Swimming
Basketball
Dodge ball

Once again many of these sports were new to me when I started Spires and as a result, I have met many different people and have made some good friends 😊

Spires Integrated Primary School Board of Governors

Spires Integrated Primary School was established in 1999, through the recognition of both parents and the local community of the need for an Education System that would provide a forum for all and every faith and none.

Through successful pioneering and lobbying this was achieved for the greater good of the Mid Ulster Community.

For the last 15 years this School has thrived and every year we are over subscribed. One long term barrier to us, is that we have a limited number of places to allocate and as a result every year we are turning families away that wish to avail of Integrated Education.

As the demographics of our Society change, we now more that every needs to offer our children and young people the opportunity to integrate and socialise with other faiths and cultures, to widen their opinions, address prejudices and widen outlooks throughout their school lives.

The school still receives great support from the community, for example we have great attendance at open events, we have partnerships with various local companies for reading schemes and we received generous sponsorship for different elements of our recently added Outdoor classroom.

Finally may we remind you of the statutory duty to encourage and facilitate the development of integrated education in article 64 of the 1989 act, there was a judicial review that clarified that the education policy should enable the expansion of integrated education to meet local demand - we have demand in Magherafelt at both primary and secondary level.

Caroline Keatley - Vice Chair

Lucy McCulloch

Board of Governors

Spires Integrated Primary School

St. Mary's Limavady

Shared and Integrated Education Inquiry : Request for Written Evidence

As a school with a history of more than forty years of shared, cross – sectoral educational delivery, we are delighted to contribute to this current inquiry by the Education Committee.

We would invite the committee to reflect on our submission below and would welcome the opportunity to meet and speak with the committee. Should the Committee wish, they would be welcome to visit and experience first-hand our Shared delivery of Education.

To contribute to this current inquiry effectively we will address the committees terms of reference directly:

1. Review the nature and definition of Shared Education and Integrated Education

We feel it is important at the outset to clarify that Shared Education and Integrated Education are not the same.

Both have clear definitions which clearly identify the main differences. Shared Education allows sectors to maintain their own identity (religious ethos, academic selection etc) and yet share their delivery of education for mutual benefit. Integrated education is the creation of a separate shared sector in which all participants accept their identity is determined by the sector ethos which does not endorse religious or academic difference.

As clear formal definitions exist (Dr. Paul Connolly proposed a definition for Shared Education, NICCE proposed a definition for integrated Education) we do not feel there is a need for the committee to do likewise. Should the committee see the need for these to be adopted as statutory, we do not see the need for revision before doing so.

Obligation in statute to facilitate and encourage Shared Education

Given the obligation on the Education Minister to facilitate and encourage Integrated Education, given the small percentage of the school population which attend the integrated sector, it would appear logical that the Education Minister facilitate and encourage Shared Education. The Shared Educational Campuses Programme, alongside recent Atlantic Philanthropies funding which will be overseen by the Education and Library Boards, are both initiatives upon which to build.

2. Key barriers and Enablers for Shared Education and Integrated Education.

The failure of educational authorities to address the underlying issue of school age population V school places makes true sharing across sectors very difficult. The underpinning competition between sectors to fill places means schools can only share to a certain degree.

The key enabler of Sharing is always mutual benefit – be these curriculum, economic, social or otherwise. The greater the advantages that can be identified, the greater the enablement.

The Key barriers and enablers of Integrated Education are better identified and discussed for the committee by educators from within the integrated sector.

3. Identify and analyse alternative approaches and models of good practice.

We believe ourselves, St. Mary's Limavady and Limavady High School have an excellent model to reflect upon and learn lessons from. Cross and Passion College and Ballycastle High School also enjoy a mature and effective model of Shared cross sector delivery.

Our model includes shared classes at Key Stages 3, 4 and 5 seeing close to 500 students experience shared lessons weekly. This is underpinning by shared staff planning, shared staff

training, shared parents evenings, shared student enrichment activities, joint student councils and Shared Capital Programmes. At all levels our model of Sharing is putting in place a Shared future between the two schools.

4. Priorities and Actions which need to be taken

The main issue to be addressed in the current Northern Ireland Education system is the underlying issue of school age population V school places. Only when schools have a certain and sustainable future can they firstly exist and secondly share in confidence and trust.

The CRED policy, the role of parents, inclusion of Special Schools are all aspects which a dynamic and programme of Shared Education encompasses.

St Martin's Primary School Garrison

Inquiry into Shared and Integrated Education:

Submission from St. Martin's Primary School, Garrison

St. Martin's PS has been involved in the Shared Education Programme since its inception. Initially the programme was with another primary school in Co. Donegal. In recent times, the school has established links with other schools in the locality which led to the establishment of the Erne West Learning Community in 2012. The programme has been integral to school life and all pupils have had opportunities to take part in shared classes. Teachers have also had the opportunity to take part in cluster groups concentrating on upskilling and professional development across a number of curricular areas including Literacy, Numeracy, ICT. SENCOs have also been working together and facilitated an information evening for parents from all schools on the theme of dyslexia. Teachers have also been released for one day per week to facilitate a utilisation of their skills in other schools where there has been a deficit of skill e.g. music, ICT.

Significant financial resources have allowed Shared Education to permeate school life and it is thanks to Fermanagh Trust through Atlantic Philanthropies for taking this work forward with enthusiasm and putting it high on their agenda of work.

The schools of the Erne West Learning Community employed the services of a consultancy group to determine the views of staff, governors and parents in relation to Shared Education. The pupils have displayed overwhelmingly their support for the programme and look forward to its future with enthusiasm.

Benefits

- Children building positive relationships with other children from the locality
- Relaxed atmosphere of learning for pupils – sharing of ideas, working together, constructive work on different projects
- Focus on what they have in common as opposed to what makes them different
- Pupils feel comfortable visiting other schools
- Parents have become interested as to what shared education means for their children and for schools
- Parents building links with parents from other schools
- Teachers sharing information, resources and coming together in cluster groups
- Shared School Development Days
- Alignment of work within School Development Planning Process
- Joint submission to the Area Planning Process
- Ethos of each school is respected
- Access to services and programmes for children which individual schools could not afford to provide
- Acquisition and sharing of resources between schools
- Support from Boards of Governors and Trustees for the Shared Education programme
- Parents willing to see an expansion of the programme to include strengthening of links between parent groups
- Educational benefit has led to raising of attainment levels

-
- People in leadership with shared vision to take the programme forward
 - Agreed objectives for the schools to take Shared Education forward
 - Agreement that Community background / Culture should be an integral part of the Shared Education programme
 - Department of Education has agreed recommendations as to the definition of Shared Education and how it should be implemented

Challenges

- Uncertainty of future funding
- Adequate funding to keep the programme at a high level which has been seen in the school over the last 5 years
- Streamlining of funding and application process
- Paperwork and workload as demanded by DE may lead to less enthusiasm for the programme
- Wealth of information and knowledge and experiences from Fermanagh schools may not be tapped into
- Bringing all parents on board
- Piecemeal approach due to funding or direction
- Shared Education is not the same as CRED
- Up until now Shared Education has had many facets – what it looks like in Fermanagh has been very different for other organisations involved.
- How will Shared education look in 5 years time?
- Vision of DE for Shared Education
- Schools should be further supported in their aspirations and work in relation to Shared Education. There is a need for Government to back this crucial work in the community also. It will be a lost cause if schools have to take on the work alone.
- School leaders not sharing the same vision for Shared Education
- Resistance in other parts of Northern Ireland – the need to move sensitively
- Shared Education can be seen as an ‘add-on’. If this is the view, it will have no meaningful place with a school
- Diminishing school identity
- Small school of a different ethos from larger schools could feel overwhelmed

While this submission does not address the terms of reference clearly, it is a snapshot of the experiences which this school has had over the last number of years. The list of benefits and challenges is a reminder of the positives which have been had and also is a marker as to what needs to be addressed to enable a positive and meaningful implementation of Shared Education across Northern Ireland.

St Paul's Bessbrook and Newtownhamilton High School

Response to the Education Committee-

Introduction/Background to Partnership;

Within the Newry and Mourne ALC there are 16 member schools including the Newry Campus of SRC. Given that the geographical span of our ALC is so wide, stretching from Newtownhamilton through to Kilkeel, we have divided the community of schools in to more feasible collaborative partnerships comprising of what we term as;

- The Western Campus (Schools in the South Armagh area)
- The Central Campus (Schools in the Newry City area)
- The Eastern Campus (Schools in Warrenpoint and Kilkeel)

Our partnership in the **Western Campus** includes four schools;

1. St Paul's High School, Bessbrook
2. Newtownhamilton High School
3. St Joseph's High School, Crossmaglen
4. Newry High School

Together we offer a bespoke menu of collaborative courses at both KS4 and KS5 including:

KS4

- GCSE ICT
- GCSE Drama
- GCSE Agriculture
- GCSE Psychology
- Btec Children's Play, Learning and Development
- Btec First Sport
- Btec Engineering
- Btec Media

KS5

- A Level Biology
- A level Physics
- A Level Psychology
- A Level Travel and Tourism
- A Level History
- A Level Music
- A Level Maths
- A Level Irish
- Btec Engineering
- Btec Construction

1. Identify the key barriers and enablers for Shared Education

Barriers-

Micro- level (Within our partnership);

We have worked very hard within our partnership to overcome a range of barriers including-

- Establishment of a shared vision and trust which will enable support for sharing in a cross-sectoral partnership (from staff, students, parents, Board of Governors and wider communities) which is located in a traditionally very divided area
- Economic challenges- as our schools are rurally located access to transport (taxis and buses) is both necessary and costly to support our shared courses.
- Lack of funding for essential cover to enable continued vital shared planning time, joint staff training and PD opportunities and team building experiences for staff, students and very importantly for parents and the wider community also
- Resources-With growing numbers in shared course classes, the costs for more ICT equipment, books etc is growing
- In order for a partnership to run successfully strong leadership is crucial and as the number of shared ventures grow the role of the co-ordinators has grown and the time demands related to this are costly

Barriers

Macro Level;

Inhibitors

There are a number of common inhibitors to inter-school collaboration, but one of the most frequently cited barriers tends to be linked to finance. In the current economic climate school budgets are already stretched and this puts a strain on schools (for example) who would like to collaborate but cannot afford to meet the costs in relation to transport. Duffy & Gallagher (2012) also found that finance acted as a potential inhibitor to sharing between schools, noting that the withdrawal of funding presented many of the SEP 1 schools with difficulties in relation to sustaining their collaborative activity.

Researchers in this field have also identified an array of other contributory logistical challenges that could potentially inhibit collaboration between schools, including differing approaches to time-tabling as well as the challenge of synchronising school calendars. Other commonly cited inhibitors included inconsistencies in school policies and perceived inequality in the deployment of resources (Knox, 2010; Donnelly and Gallagher, 2010; Hughes et al., 2010).

Aside from these more practical issues, a range of less tangible considerations stemming from poor leadership, competition between schools, lack of trust, fear of losing identity/ethos and an imbalance of power can also feature as inhibitors to collaboration (Perry, 2011; Knox, 2010).

Interestingly, many of the components which are listed as potential inhibitors are also considered to be vital elements of effective collaborative practice when taken from a positive perspective, for example, strong leadership, trust and good relationships and parity are all deemed as being features of successful inter-school collaboration.

Potential barriers to advancing shared education in Northern Ireland

To date DENI have failed to recognise the benefits from collaboration and sharing apart from seeing sharing as a community relations function; whilst sharing has a contribution to make regarding relations between communities, sharing can also significantly contribute to

educational benefits. DENI needs to pro-actively promote the shared model as a means for schools to widen provision and improve outcomes.

The area based planning process demonstrates the difficulties the ELBs, CCMS and DENI have when tasked with identifying:

“...realistic, innovative and creative solutions to address need which include opportunities for shared schooling on a cross sectoral basis.”

Sectoral interests are also a potential barrier, particularly with regard the area based planning that is described above.

The funding formula is crucial to enabling shared education; currently this is largely based on pupil numbers, thereby encouraging schools to compete for pupils. Some element of competition is useful, but the current arrangements make collaboration difficult as it may encourage perceptions of ‘poaching’ between schools. If any new funding formula contains some element of support for collaboration then this will provide a positive incentive for schools to engage in shared education.

Enablers

Micro level-

Key stakeholders within the partnership are committed to sustaining and growing their links as they recognise the educational and social benefits which such sharing can bring.

A range of enabling factors currently support this partnership include;

- Strong support for a vision of working together to create further opportunities for the provision of high quality education for all young people in our area irrespective of their cultural or religious backgrounds
- Strong buy-in or support and very importantly, growing trust between all key stakeholders
- Established infra-structure to support collaboration at all levels within the partner schools
- Strong and effective leadership across the partnership
- A proven record of well-established and effective collaborative links between the partner schools
- High up-take of shared courses and good exam results

Macro- level

Enabling Factors

There are a number of significant enabling factors already in place within the current system which support the notion of collaboration. A culture of community networking already exists to some degree within Northern Ireland, as does a favourable political agenda (Hughes et al., 2010). In addition, the geographically small nature of the country could be deemed as another enabling factor to inter-school collaboration.

With regards to schools widening provision and raising educational standards, sharing can benefit all of those groups mentioned in Section 75. Over the last 6 years the sharing education programme has provided the opportunity for well over 15,000 pupils from over 120 schools to benefit from regular sustained curricular activities.

SEP has demonstrated that by working together schools from across the sectors can address a number of issues for pupils, staff and parents, all of whom feature in the Section 75 categories above, including:

- Provision of key accredited curricular subjects on a shared basis
- Provision of extra-curricular activities on a shared basis
- Provision of accredited programmes for pupils with special educational needs
- Provision of key elements of KS2 curriculum for primary schools
- Provision of transition activities between primary and post-primary school
- Provision of formal training and accreditation for teachers
- Development of next practice for teachers and educational managers through the creation of institutional links
- Provision of accredited and non-accredited short courses for parents
- Opportunities parents and teachers from different backgrounds to meet at shared events (Parent/Teacher evenings, celebration events etc.)
- Opportunities for schools to manage resources strategically for the benefit of all pupils

Whilst this list is not exhaustive it demonstrates that sharing increases the benefits and effectiveness of existing school resources for all stakeholders.

The promotion of shared education allows schools to maintain and celebrate their ethos and identity, whilst also providing opportunities for teachers and pupils from different backgrounds to meet on a regular, sustained basis. Through this prolonged contact participants get opportunities to share perspectives on ethos and identity.

It should be remembered that schools will only engage with sharing in a meaningful way if there are clear improvements in educational outcomes – this use of sharing as a means of delivering key elements of provision will ensure that appropriate structures are in place to address the rights of learners.

Through SEP schools have been able to ensure that pupils can learn together in a positive environment, this is because “sharing” is seen in these schools as a normal means of delivering education, no different from any other, therefore normal rules and procedures apply. Additionally some partnerships have started the process of creating shared pastoral policies and code of conduct such is the extent of sharing between the institutions.

In partnership, schools can offer a wider range of activities, whilst improving outcomes, at the same time as maintaining their individual ethos and identity.

Shared education initiatives between locally based schools from diverse backgrounds, and with diverse expertise and facilities, helps fundamentally to provide access to, and delivery of, the full range of the entitlement framework for pupils. Schools working together in this manner also provide opportunities for investment in shared facilities, of a higher standard than any single school can ever hope to develop, and available to the widest possible group of pupils. Shared staff development activities within locally based collaborative networks will not only allow support and improve the quality of teaching and learning within the network, but will also allow for the sharing of expertise and experience among teachers across diverse types of schools.

Through sharing schools across Northern Ireland have been able to provide a much broader range of curricular choice for pupils; this includes accredited KS4&5 activities, KS2&3 curricular and a range of extra-curricular provision.

Partnerships have also began the process of delivering PDMU and LLW on a shared basis with the aim of tailoring the statutory curricular provision in order to make it more relevant to the local context in which they operate

We believe that shared education can be advanced in ways that ensure equality of opportunity and access to education for all learners.

There are clear lines of division within the education system in Northern Ireland with regards quality of provision this is particularly stark at post-primary when we look at the difference in results between the selective and non-selective sectors. In light of the continued uncertainty with regards transition from primary to post-primary, sharing empowers schools to work together to offer learners the best educational provision possible, to maximise the resources at their disposal; for instance through a collaborative approach to timetabling schools can ensure that subject specialist teachers spend a higher percentage of their time delivering their specialism across a number of schools rather than covering a range of subjects.

In partnership, schools can ensure that all learners are better able to access the educational pathways that best suit their needs.

By working together schools start to form institutional interdependencies, allowing them to make joint decisions regarding provision, teaching and learning, target setting, quality assurance and pastoral policies in order to ensure high quality provision and full access for all learners.

2. Alternative approaches and models of good practice in other jurisdictions

SEP- A Model of Good Practice-

In addition to our close working relationships through our ALC links, St Paul's High School and Newtownhamilton High School have established a wide range of sustainable and meaningful links as a result of their collaborative ventures arising from their involvement in SEP 11.

The SEP partnership between the two schools involved a wide range of curricular and extra-curricular based activities spanning a range of subjects and encompassing the participation of students from both Key Stages 3 and 4. Moreover, a considerable cross-section of staff from both schools were involved in the planning, implementation and leading of the various components of the collaboration, as well as engaging in very beneficial and meaningful staff development and joint professional development opportunities.

The Sharing Educational Programme (SEP)

SEP was introduced in September 2007 to encourage schools to make cross-sectoral collaborations an integral part of school life, creating educational and personal development opportunities for everyone involved (Hughes et al., 2010, p.3).

The project which is funded by the Atlantic Philanthropes Group in conjunction with the International Fund for Ireland (IFI) made over £7 million pounds available to support collaborative activity between participating schools. The idea of shared education within the SEP programme promotes positive interdependence between schools that otherwise would exist as totally separate institutions. However, unlike the concept of integrated education, the rationale behind the type of shared education approach promoted through SEP is perceived by many as less threatening in terms of institutional boundaries. It was hoped that such a programme would enable schools to retain their own unique identity and ethos, while at the same time "challenging the potentially divisive effects of silos by finding practical ways of

making institutional boundaries more porous and developing interactive bridges between otherwise separate institutions.” (Duffy and Gallagher, 2012, p.7)

These views were operationalised in the Sharing Education Programme by potentially enabling students to access an enhanced curricular choice, supporting the implementation of shared courses and giving rise to opportunities for enriching personal, social and educational experiences through collaborative ventures. Another objective of SEP was the creation of links between teachers and school leaders, opportunities for sharing of good practice and for the pooling of resources between neighbouring schools. However, one of the core objectives of the programme was the development of cross denominational partnerships between schools in Northern Ireland with a view to promoting social cohesion in a divided society by enabling young people to learn about and respect religious and cultural diversity.

The SEP team decided not to adopt the standard approach to educational reform measurements which involves looking at existing models of best practice and using these as a template to draw up a specific prescriptive framework with narrow guidelines within which participants must work. Instead the aim of SEP was to attempt to develop “next practice” by giving schools virtually “carte blanche” to develop creative, innovative ideas, systems and approaches to delivering shared education in a way that would best suit the specific needs of the student body, staff, partner schools and wider community of their partnership. This dynamic approach of allowing senior leaders and teachers in schools to explore ideas and experiment with possibilities which they deemed fitting for their area marked a significantly different approach to previous funding schemes. Mr Denis Rooney from the International Fund for Ireland at the SEP Next Steps Conference in Belfast (September 2011), described the merits of such a dynamic model of collaboration as having the potential to create a “springboard to lasting change”.

Research has shown that previous contact programmes designed to mitigate the impact of separate education rolled out across schools in Northern Ireland in the late 1990’s and early part of the last decade, including Education for Mutual Understanding (EMU), and curricular initiatives such as the introduction of Local and Global Citizenship and common history and religious curricula, have had little meaningful impact (Duffy & Gallagher, 2012; Smith & Robinson, 1992; Leitch & Kilpatrick, 1999; O’Connor, Hartop & McCully, 2002; Gallagher, 2004; Smith & Robinson, 1996). Speaking at the “Next Steps Conference” (2011), in Queen’s University Belfast, Professor Tony Gallagher, explained how the growing body of evidence around effective inter-school collaboration suggests that in order for shared education initiatives to be successful, collaboration must be based around core curricular activity and that the notion of shared education needs to become a central and sustained part of school life rather than an add-on or occasional joint venture with a neighbouring school.

Recent changes in educational policy (such as The Education NI Order, 2006), coupled with the introduction of a range of new initiative (such as the Sharing Education Programme, 2007), have impacted greatly on how some schools in Northern Ireland are currently working together. In addition, the growth of shared courses now being offered through the Entitlement Framework funding within Area Learning Communities (ALC) across Northern Ireland have led to a new appetite for sharing between schools. Moreover, this type of joint curricular venture is considered to be mutually beneficial for all participants as it offers a more sustainable and effective collaborative model for schools than previous initiatives (Gallagher, 2010a).

An array of government led initiatives and educational legislative changes have resulted in the emergence of a wide range of collaborative partnerships between schools. However, it is important to consider that as yet inter-school collaboration is not a statutory requirement in Northern Ireland, although the vast majority of schools are working at some level in an effort to meet the requirements of the Entitlement Framework by September 2015. Another point worth noting is the very diverse approaches and depths of collaborative practice that exist within the province (Atkinson et al., 2007; Perry, 2011). Some schools have only begun to

tentatively dip their toes into partnerships whilst others have fully embraced the opportunity to work with neighbouring schools and collaborative structures and practice are now embedded into their fabric (IEF Scoping Paper 2010).

Within recent literature there are a range of examples including the Boston College-Allston/Brighton Partnership in America, (Walsh et al., 2000), the Excellence Clusters in England (McMeeking et al., 2004) and the case studies in relation to the Shared Educational Campus in North Lankashire in Scotland (O'Sullivan et al., 2006) whereby collaboration was used as a vehicle for promoting social cohesion within the context of divided societies, and although many societal benefits have been attributed to the increased contact with the out-group in these examples, a recurring theme within the research is that contact or sharing needs to be supported by a range of social initiatives beyond the school in order for it to be effective.

What priorities and actions need to be taken to improve sharing and integration?

In order to advance shared education it is essential that the schools recognise and clearly benefit from the process of sharing; simply relying on altruistic, emotive reasoning will not lead to sharing becoming embedded in schools. For schools to value the concept of sharing and gain the most benefit it must be demonstrated that there are significant educational benefits arising from working together.

In order for this to take place a number of things must happen. In the first instance a mechanism must be found to incentivise sharing – to be clear this should not be interpreted as a request for additional funding, rather schools should be given the support and freedom to use existing resources in partnership in order to provide the widest curricular provision for all pupils regardless of ability or preference. The current funding model also mitigates against sharing, as it puts schools in competition with each other for pupils – schools should be encouraged and supported to be innovative in their approach to enrolments and how sharing can help address issues regarding competition between schools.

Schools should be encouraged to identify areas of common need and then adopt a joint approach to addressing these; this could involve the provision of additional curricular choice in order to meet EF requirements, or a joint strategic approach to shared areas of concern e.g. literacy/numeracy. The initial steps regarding partnership working should be based on shared activities between pupils, as this demonstrates the immediate benefits arising from sharing; perhaps more crucially it also allows the process of relationship building to start and through this schools' can begin to forge institutional links.

Statutory bodies will need to properly support and encourage the creation of cross-sectoral partnerships where practical. Principals, senior leaders, heads of departments and key Governors must be given explicit time and space to identify key areas of school business that will benefit from sharing, in order to properly plan, resource and provide the activities. Schools will require assistance in drawing up agreed strategies for bench marking, target setting, improving of standards, timetabling, provision of training opportunities for staff, agreed curricular pathways and maximisation of resources. All of these steps are crucial to ensure that sharing is embedded and central to the partnership, rather than a peripheral activity.

Running parallel to this there should be on-going consultation with Boards of Governors and other stakeholders e.g. parents – this provides vital support and encouragement of the evolution of the partnership. It is important to be very explicit in terms of identity and ethos – sharing in no way compromises school identity and ethos; rather it protects and celebrates the identity of the schools involved, through empowering the schools to offer high quality educational and pastoral provision. The role of governors and parents in providing support for this process is essential, as they can assure the institutions of wider community support for the partnership. It is fundamentally important that all stakeholders are comfortable with the

notion of sharing as a means of improving educational outcomes and not as an inexorable move towards amalgamation/integration.

It is essential that the shared work that schools engage in is seen to be valued by DENI and the Inspectorate, this will require the shared nature of any partnership to be commented upon and evaluated in the same way as any other part of school business. The Inspectorate should also be encouraged to share good practice across all schools as they see fit in order to ensure the greatest effectiveness.

Supporting notes (pertaining to the partnership)-

The SEP Co-ordinator within the partnership completed in-depth research into the partnership as the focus of her Master's Degree (Collaborative Leadership and Management) dissertation. This study involved a range of research methodologies including online surveys and interviews with key staff in the shared education partnerships across all areas of learning, she also drew on existing evidence pertaining to former research involving students and parents from both school communities. In line with existing academic research, the study concurred that in order for effective collaboration to take place a number of key ingredients were necessary namely;

- A Clear and Strategic Vision
- Depth of Collaborative Practice and Relationships between Staff
- The Leadership Dimension
- Level of trust

Each of these key factors were identified as being existing and strong components of the partnership between St Paul's High School, Bessbrook and Newtownhamilton High School-

Clear and Strategic Vision

Effective models of collaboration are often characterised by schools which can articulate a clear and strategic vision (Woods et al., 2006) and the research would suggest that the partnership have successfully achieved this. All respondents to the questionnaire agreed that a clear and strategic vision has been established between the two schools and 97% indicated that they had a clear understanding of the aims of the partnership. The leaders of the partnership all indicated that they recognised the importance of carefully crafting a clear, strategic and in the words of the Principal of St Paul's High School, an "appealing vision", in order to engage and mobilise staff and other key stakeholders. It would appear that the leaders of the partnership are cognisant of the need to align the focus or vision with its members' practices and values gauging from the strong support from the staff surveyed. Hadfield & Chapman (2009) support this approach claiming that in order to achieve the necessary "buy in" from all key stakeholders it must be justifiable for all parties and worthwhile in terms of expenditure of their limited resources. The two Principals and SEP Leaders discussed in their interviews, how they had spent a lot of time during the initial application and planning stages defining and creating a shared vision as they were determined to "get it right" and "create a strong and meaningful vision which would reflect the needs and aspirations of both school communities"

In the interviews, 5 out of 6 of the participants described the vision as being "strong" and they spoke about how this was crucial to the success of the partnership, a view which concurs with Kotter's assertion that a weak vision or ambiguity in underlying principles will almost always lead to the failure and dissolution of a partnership (Kotter, 1998). Hodgson and Spours (2006, p335) also stress the importance of a strong vision in a partnership, referring to it as being the "glue that binds actors together".

Kotter (1998) suggests that a critical mass of at least 75% must support the vision in order for it to be successful. Moreover, he points out that a successful vision is one that

is understood by all key players and it needs to be a “living part” of the partnership. In the interviews with key leaders, participants were asked about how well the vision was articulated among staff within their schools and they indicated that they had used a wide range of on-going opportunities and media, to articulate and re-affirm their commitment to the shared vision. The Principals spoke about how they had presented the vision and detailed plans for the partnership to all staff at a whole school meeting, as well as convening a meeting of the Board of Governors for this purpose. Before the submission of the final application for SEP, both Principals and their Chair of the Board of Governors also had to sign a contractual style document affirming their approval and support for the vision and all aspects of the planned 3 year project. One Principal spoke about how he introduced and began to embed the vision within his school;

“In the beginning I called whole staff meetings as well as some more specific meetings with those who were directly involved in implementing the projects... I discussed the vision of the partnership with my staff and, in all honesty, there was some resistance from a minority of staff, this was also the case with a small number of parents. However, I think that I used every opportunity, when I had captive audiences, to speak about the vision, strengths and indeed success of our collaboration”.

SEP leaders stated that they were committed to their shared vision and that they had already witnessed what a SEP Coordinator described as a “sea change” in attitudes now that people had witnessed the benefits of sharing. One of the Principals stated however, that support for the vision had only “gradually grown over the three years among some members of his staff and indeed within the wider community”. Conversely, the other Principal commented that he did not meet with opposition from any section of his school community in relation to the vision of the partnership. Therefore, despite some reluctance to begin with, from a minority of staff (11%) and a small number of parents in one School, overall the support for the vision was relatively high across the partnership. Furthermore, the feedback from the interviews and questionnaire would suggest that support for the vision has not only grown within the staff but that parents are increasingly recognising the benefits of and supporting collaboration between the two schools.

An interesting point that was made by a Senior Teacher was how the Senior Leadership Team in his school had recently met to review their schools aims and objectives and having discussed the impact and importance that interschool collaboration had assumed within their school, they decided to re-draft part of their mission statement. Moreover, the current School Development Plans for both schools now heavily reflect the joint commitment to their shared vision, with plans for sustaining and developing new collaborative activities listed as key priorities within both documents.

4.2 Depth of Collaboration

When considering the depth or extent of collaboration between the two case study schools, the researcher looked at a number of areas as identified by Woods et al.(2006) including group identity; organisational infrastructure; professional collaborative activity and penetration below senior management as well as considering normalised collaboration as part of the schools’ culture.

In relation to group identity, the data would suggest that the case study partnership appears to have developed a very real sense of its own unique identity. The Principals spoke about the importance of “creating an identity for the partnership” during their interviews. They talked about how during the initial planning stages they had spent a considerable amount of time discussing a name for the partnership which would successfully “convey a sense of their shared vision”. They also designed a logo which both schools have included on all school letter headed paper and on the home page of their school websites. The data suggests that both principals are very aware of the need to continually exploit all opportunities to raise the

profile and build capacity of their collaborative work and shared identity through the media. One Vice Principal in School commented;

The fact is that at our Area Learning Community meetings other schools in the area very much acknowledge and indeed admire our partnership and how far we have come in a relatively short period of time. We have developed a very real sense of shared identity within the partnership. PEACE (Partnership for Education and Community Enrichment) is very significant for us and those words speak volumes about what we are committed to achieving together. I also believe that our Sports students in particular who designed their own shared uniform are very proud of this new and unique identity, their jersey carries the crests of both our schools as well as our PEACE logo. Equally however, it's important to us that whilst we create and are proud of our shared identity, that we still celebrate our different heritage, ethos and backgrounds and that is why the joint LLW Diversity Celebration Events are so important where the students get a chance to learn about our different cultural heritage and traditions

Many staff praised the work which had been carried out in relation to celebrating the different cultures within both schools. Before Christmas each year, an event is organised to showcase aspects of all cultures represented within the partnership including customs, dance, music, sport etc. Last year a pipe band and Ulster Scots dancers participated in a show in School A. This event was a momentous occasions for both communities and a lot of staff and all of the leaders commented on the significance and symbolism of this event. One teacher remarked "I never thought that in my lifetime that our band would march and play in their school and receive such a respectful and warm welcome" Another teacher said that

It was more significant for us the staff and the parents, our youngsters were just curious and there wasn't the same sense of something ground breaking is happening here

Many respondents in the questionnaire alluded to this event as being important, in the sense that both communities were proudly exhibiting aspects of their cultural background and that they weren't just assuming a new, shared identity that ignored their individual ethos or one which one Principal referred to as "bland"; instead there was recognition of and respect for diversity.

In relation to organisational infra-structure, the partnership has established over the past three years, a range of logistical structures which were necessary to facilitate the wide range of collaborative activity contained in the SEP projects. The schools have worked very closely to develop a more synchronised school calendar and a lot of time, effort and imaginative planning has went into designing a series of timetables which contain the necessary degree of flexibility for further collaboration.

The data revealed how a lot of preparation went in to setting up the shared GCSE course in terms of staff training (in techniques for the effective induction and integration of students), the development of a detailed Service Level Agreement and the creation of a new school uniform for the collaborative class. A common induction process and induction booklet has been created within the partnership to ensure that students and their parents have all the necessary information pertaining to their collaborative course and the partner school. In addition, the schools share pupil information through SIMS and they have developed a "Pupil Passport" containing all relevant information for subject teachers. A number of staff within the two schools were also appointed to positions of responsibility in relation to managing the partnership to ensure the smooth running of the collaboration. It is the responsibility of this appointee to liaise with subject teachers, EF Co-ordinators, Exams Officers and if necessary the designated teacher for Pastoral Care. Other evidence illustrating how the partnership have developed a range of vital organisational infra-structure to support and enhance collaboration was the establishment of a Peer Mentoring Scheme which is primarily a student led support system which was set up to help new collaborative students to integrate better into the partner school. A teacher with training in mediation and mentoring was appointed to oversee it. One Vice Principal noted how the organisational infra-structure is developing quite rapidly

and how professional collaborative activity between teachers in relation to sharing of good practice is also becoming more common;

Aside from the tiers of management which have been put in place to facilitate collaborative practice in a range of different areas, staff in both schools are naturally forming their own alliances with each other for their mutual benefit. Documents, policies, resources, information and ideas are being shared and exchanged between Subject Departments, Pastoral Care Teams and Entitlement Framework Co-ordinators. It's as if this culture of sharing is taking on a life of its own

This growing level of professional collaborative activity which is taking place at a number of levels is characterised in many examples offered by respondents to the survey as well as from interviewees. Some staff gave examples of how they were working together to prepare resources, whilst some of the leaders mentioned how they were tapping into expertise that existed in the partner school. From the research conducted with the Senior Leaders and Principals it is clear that they are fully committed to collaboration and that they have a range of infra-structure in place to facilitate this.

Analysis of information arising from the questionnaire reveals that approximately one third of the teaching staff in St Paul's HS are involved in SEP collaborative projects whereas in Newtownhamilton HS over half of staff participate at some level. However, given that it is significantly smaller than St Paul's HS this is to be expected. Hargreaves (1992) comments on the concept of "bounded collaboration" whereby the impact of collaboration is restricted or constrained, and as a result it fails to penetrate deeply enough into the school's culture. One instance of this would be in the case of the collaborative practice being confined to managerial level only, and this is not the case in this study as there is a wide range of staff from technicians through to principals involved in the process. Another instance of bounded collaboration is whereby the penetration is deep (includes a range of levels) but that it only involves a small sphere of people who for example are linked to a specific subject area. In the case study partnership, the impact is wide as the programme spans a large range of curricular areas and this increases the scope for involving an increased number of pupils in collaboration.

Moreover, the data would suggest that support for the collaborative partnership is quite high in both schools with the majority of respondents indicating positive sentiments. In relation to the depth of collaboration, it would appear that for the most part the partnership have developed a range of organisational infrastructure both structurally and in a personnel sense to advocate and support collaborative activity.

Furthermore, within the partnership there exists some degree of shared leadership but each school is governed separately. The data supports the notion that institutional links have been forged between both partners and that a considerable amount of strong infrastructure is now in place to support current and future collaboration.

4.3 Leadership

Given the highly complex nature of collaborative practice it is a given that strong leadership will be a key component of effective collaboration (Ainscow et al., 2006). Therefore, in this research study participants were asked to consider the role of leadership within the SEP partnership. More specifically they were encouraged to comment on whether the Principals, Vice principals and the SEP Coordinator provided strong leadership across the three years of the programme. Most participants (92%) in the questionnaire indicated that in their opinion the leaders effectively adopted a new style of leadership required for collaboration, some staff used examples to substantiate their opinions and a Vice Principal stated how;

Within both schools, the principals empowered key staff and created another tier of managers to implement and oversee projects- this strategy worked very well and it meant that different

levels of staff from across the curricular areas were involved and were committed to this partnership

Atkinson et al., 2007, support this approach, they posit that leadership needs to be firmly located within the partnership with a focus on distributed leadership in order to avoid domination by one key player and that all participants need to feel part of the process. A teacher in stated that;

The Principals played central roles and were very much singing off the same hymn sheet from the outset. The VP and the SEP Co-ordinator in our school done most of the organising and management of the projects by meeting with subject heads etc... who in turn cascaded information to subject teachers and coaches or technicians. They held regular planning and review sessions which ensured that everyone felt included and their input was valued.

It would appear from the feedback that most staff felt that leaders successfully adopted a new style of leadership and they created a new leadership structure within the partnership which staff approved of. Cribb (2009, p10) asserts that adopting an appropriate leadership style is crucial in order to “empower and mobilise participants”. Like many other researchers he believes that leadership (within a network) needs to be distributed to allow decisions to be made. This idea is further supported by Knox (2010) who found that the most successful collaborative partnerships involved leaders who favoured shared responsibility in their own schools. The Principal in one school concurred with this approach he commented that a good leader needs to employ different leadership styles to suit the circumstance or environment in which they find themselves. However, he noted that distributive leadership would (in the majority of situations) be the most apt style in a collaborative context;

I think if you give responsibility and allow them to grow through the responsibility, that you have a much stronger organic unit developing, which is less dependent on the one leader and that takes on its own momentum and moves forward, with each of the new leaders looking for new ways to improve the organism of the school or in this instance the partnership

However, the other Principal in stated that he believed a more “top-down approach” was needed within his school especially at the beginning of SEP. He stated that particularly when the collaboration was still in its early stages, it was important that he managed and led staff in a tentative way, advocating a “small steps” approach.

I was acutely aware of the concerns and misgivings of some teachers and some of our parents and wider school community- SEP was a big gamble for us

He did however acknowledge the need for this to change and that his Vice Principal and some other teachers within the school were now assuming stronger leadership roles. Significantly, both principals commented on their age profile and the fact that they both are nearing retirement. They stressed the importance of ensuring that there would be staff in place who could replace them or other key players (who may leave or retire for example) and the need for them to be committed and skilled to sustain and grow the collaborative partnership. One of the Vice Principals also commented on the importance of having the right personnel involved in managing and leading collaborative projects;

“The right personnel are crucial in terms of leading collaboratively. The SEP Coordinator has been a key driving force in all of this in terms of making sure the collaboration works, if there were any issues at all she dealt with them, she was not afraid to say if there were any problems. She was off school last year and her absence impacted on the partnership”

Another key element of successful leadership within this type of collaborative arrangement is the need for leaders to show sensitivity and understanding. A teacher spoke about how the project leaders showed sensitivity to the specific needs of staff and issues in relation to localised context of the partnership. There was agreement among the vast majority of staff in the questionnaire that the leaders within the partnership were able to deal effectively with contentious issues and unexpected problems. A Vice principal noted;

There was quite a serious issue in relation to a sectarian incident that happened outside of school, and although it did not involve our pupils, there was some bad feeling in the other community over it. As a result some parents in one school were reluctant to support the continuation of the programme. However, both principals took a united stand on the issue and stood together in defence of the partnership and that sent a very strong message out to the community

The leaders were also acutely aware of the need to get the timing and pace of the project delivery right, the Vice Principal in one school in particular stated very clearly how he needed to move slowly particularly during the first two years;

When the partnership was in its embryonic stages and there was a degree of uncertainty within some quarters as to whether it was a worthwhile venture.... It is vital that leaders take account of the feelings and views of others and that they adjudicate what is the best way forward considering all angles

The teaching staff also indicated that they felt supported and appreciated by the SEP leaders. 90% noted that leaders engaged in regular consultation with them and were supportive of them. They commented on the fact that the leaders celebrated the small success stories from SEP and that this was important in ensuring staff felt appreciated and that their effort and success were recognised. In addition, 97% indicated that the leaders made staff feel valued and 90% felt that leaders had recognised their achievements within the programme. Hill (2009) asserts that the ability to respect others' achievements is crucial in network leadership.

The studied literature highlights how it is good practice to have a measure of flexibility in the aims so that activities can be tailored to the individual needs and context of participating schools (Powell et al., 2004; Wohlstetter et al., 2003). Fluidity and compromise are key elements of effective collaborative networks (Hadfield & Chapman, 2009; Hanford et al., 1997). The data suggests that leaders within the case study partnership appeared to understand this and that they listened to the needs of staff and responded accordingly, even if this required them deviating from a planned path.

However, there were a couple of areas in relation to leadership which a significant number of staff felt needed to be improved. 21% of the teachers felt that leaders had not provided them with enough training for working as part of a collaborative partnership and 23% of staff felt that they did not receive sufficient incentives to participate in SEP. Another point made by 17% of staff conveyed an opinion that leaders should have given staff more opportunities to get to know teachers from the partner school;

"I would have appreciated more time to get to know staff in (name of school) prior to working in the shared classroom environment as it was a bit awkward at the start"(Teacher in School B)

I think staff in both schools should have more opportunities, particularly at the beginning of the programme, to meet and even engage in team building activities in order to encourage deeper relationships and trust (SEP Teacher)

However, in general, the feedback in relation to the leadership provided by the principals in both schools was very positive. Both in the questionnaire and interviews it was clear that the principals had a lot of genuine respect and admiration for each other and that the staff within the partnership felt this also. Staff used a multitude of complementary phrases to describe their approval of these leaders including; "visionary leaders", "Charismatic leader", "highly respected within the community", "transformational leadership", "genuine values", "Christian morals", "inspirational drive and commitment" and "deep camaraderie". In some cases participants specifically attributed the overall success of the partnership to the vision, drive and courage of the two Principals. The Vice Principal in one school noted that the Principal in his school was a long standing appointment who was very well respected and that he has built up a close rapport with the wider community. He asserted that it would have been "a

step too far” in building community relations to suggest this type of partnership for anyone else other than the current principal because the community trust him implicitly. He stated that his Principal and the partner Principal were brave leaders who were not afraid to take risks and that this was central to the success of the partnership.

4.4 Trust

Trust is a key component of any relationship and therefore it follows that all of the respondents in this research study placed a very strong emphasis on the development of trust as being central to the success of the partnership. Given the traditional rivalry that has been cultivated over many years between schools in Northern Ireland, very often there is an undercurrent of competition between neighbouring schools which is not conducive to collaborative working and this can create an atmosphere mis-trust and suspicion (Hughes, 2010).

School budgets are dictated by pupil numbers and so schools in the same area may be competing for students (McMeeking et al., 2004; Bell et al., 2006) and this coupled with the pressure on schools to compete for better results than other schools in their area can lead to a reticence to collaborate (Woods et al, 2006; Leonard, 1999). The data however, would suggest that neither of these considerations were pertinent to the relationship between the two case study schools. The trust issues instead tended to stem mainly from a fear of working with the “other community”, and to a lesser extent questions around a potential imbalance of power and an inequality in relation to effort and staff workload.

If schools are to work together effectively, key participants at all levels must establish relationships which are characterised by a sense of equality, parity and above all trust. Both leaders spoke about how “honesty was required from the outset so that they could create a true and meaningful vision” and avoid the creation of what Hadfield & Jopling refer to as “comfortable collaborative partnerships and instead strive for meaningful and worthwhile collaboration”(2007,p9).This process requires members to engage openly and critically about what they want to achieve, their values, the current issues and problems within their school; there is no point in setting unrealistic aims. Somekh (1994) uses the analogy of “inhabiting each other’s castles”, implying that in order to develop an in-depth understanding of each other’s schools, head teachers must be prepared to open their doors to their partners in a “warts and all” type approach. The data would suggest that staff within the partnership are growing increasingly honest and open with each other as trust develops between them. One of the Vice Principal alluded to this, when they stated:

We are now moving from the embryonic stages of building a collaborative relationship whereby participants are very polite but not always totally honest with each other. We are increasingly engaging much more openly and are confident to have the more difficult conversations with each other and I suppose that is indicative of how much trust has grown between our two schools

The data supports the notion that the development of trust between staff involves a process which takes time and commitment and moreover, it requires participants to take risks and to weather the storm together during challenges which may present themselves. Within the research the establishment of a sense of parity and equality between partners were also considered to be vital in the development of a trusting relationship among all of the key leaders. However, the reality is that within any partnership there will often be an imbalance of power to some extent, for example one school could be perceived to be a more powerful partner due to its size, the persona of the principal, or even based on the sector which it belongs to could cause a perceived inequality. The Principal and all of the Senior Leaders in one school spoke in their interviews about how they were very conscious of the need to avoid being portrayed as the dominant partner, owing not only to the dramatic difference in size of the schools but also because their school was deemed the “lead school” within SEP. The Vice Principal stated that it was important to them that the partnership was seen to be fair and

equal and that all decisions were made together. In addition, they were keen to avoid what the Principal described as “one-way traffic” which would see the majority of events or projects taking place in their school based on the fact that they were better resourced than the other school.

Another potential trust issue stems from the perception that one partner is perceived to be “not pulling its weight” and leaving all the work to others, this can impact on relationships and ultimately trust.

Overall however, within the case study, the fear of working with a school from a different sector or engaging with people from the “other community” presented the greatest concern for some stakeholders. The Vice Principal in one school summarised this challenge in relation to trust building for the partnership stating;

Prior to SEP the two schools had little or no contact with each other. The fact that the partnership is cross-sectoral and that both schools are located in South Armagh which has been deeply affected by the troubles, with both communities having suffered greatly over the years, hostilities, fear and suspicion of the other side still exist today, so the issue of building up trust is at the core of the success of our partnership

One Principal recognised that for him it was not as challenging “to sell the vision” as it was for the other Principal. He attributed this in part to the fact that within his school they had already established collaborative links with other schools and it was “no big deal” to see students in different uniforms in their school. Another possible reason for the more open and positive attitude to the partnership within this school was attributed by some staff to the fact that they were very secure, they were the bigger school and significantly the area in which the schools are located is very predominantly Catholic, one teacher suggested;

During the troubles we didn’t experience the same sectarian fear as they did living in South Armagh and so for us it was not such a big deal to work with Protestants and to travel to our partner school, plus we were already collaborating with two other schools in the area

Both Principals also spoke about the need for them to continue to provide opportunities for staff, students, parents and governors to meet more regularly not only in a formal environment but also to provide social interaction which could potentially build trusting friendships as well as professional relationships between all key stakeholders.

The data would suggest that the partnership has developed the stated ingredients for effective collaboration. The vast majority of the participants responded positively in each of the four key areas but there were some areas where staff indicated that they were concerned about.

4.5 Sustainability

All of the interviewees expressed a very real desire to sustain and further develop their collaborative partnership. Equally, the data arising from the questionnaire revealed that 96.6% of teachers believe that there exists a strong determination to build on the collaborative work completed to date. Participants spoke about a genuine willingness and commitment to ensure that what they had achieved would not be lost and that after SEP has ended that they will pursue new collaborative ventures together for the mutual benefit of both partners. 96.6% of staff also indicated that the experience of working in collaboration through SEP would encourage them to participate in further future collaborative initiatives. One of the main reasons for this impetus to sustain the partnership stemmed from the fact that “trusting relationships and indeed friendships have developed between staff in both schools” Moreover, recognition that collaboration between the two schools had proved to be beneficial for students in terms of accessing a broader curriculum, and facilitating enhanced personal and social development opportunities, was a key motivating factor in relation to sustainability;

Together we have been able to provide a menu of new courses for students and there is no doubt that attending lessons in the partner school has been a very enriching for all parties. I think this type of experience is very positive as it allows our young people to experience a new educational environment and access subjects which are not offered in their home school. It would be a shame if this were to stop now (Senior Leader)

Some consideration was also given to the need to sustain and grow the culture which was emerging between the two schools of sharing of good practice, expertise and resources. The Vice Principal in one school noted how this type of sharing was very “productive” and that he hoped that this type of practice would continue beyond June 2013 (the end of SEP funding). In all of the interviews the data revealed a determination to maintain the growing institutional links and strong relationships (at senior management level) that had developed within the partnership.

However, there was an overwhelming notion that the current level of collaborative activity spanning a wide range of curricular and extra-curricular areas at Key Stage 3 would be largely unsustainable once funding ceased.

There is no way that we would be able to maintain all projects once the funding has gone. Although we are very much committed to sustaining our partnership, we are faced with growing budget cuts which will mean that schools will struggle to meet their basic costs, so any extra activities outside of core curricular considerations will not be an option. For this reason, we are endeavouring to strategize together to come up with alternative ways of sustaining at the very least our Key Stage 4 collaborations (Principal)

25% of teachers also felt that the current level would be unsustainable and all of the interviewees stated that due to transport and sub-cover costs they could not continue with the vast majority of Key Stage 3 activities without funding. However, the research illustrated how the schools have worked very closely over the last year in particular to plan for more sustainable and cost effective collaborative ventures, including an increased shared curricular offer at GCSE. Duffy & Gallagher (2012, p23) noted how many of the partner schools in their research study had used the “lexicon of collaboration provided through SEP to create a foundation at institution level” and this could also be said of the partnership in this research study. The two schools have gone beyond the original SEP plans and they have used their SEP experience to create a new, more informed and sustainable model of sharing based around the unique circumstances and needs of their partnership.

Steiner Waldorf School Fellowship

Dear Members of the Assembly for Northern Ireland,

I wish to make a brief submission to your enquiry into integrated & shared education on behalf of the Steiner Waldorf Schools Fellowship &, in particular, our member school in Northern Ireland, Holywood Steiner School (www.hollywood-steiner.co.uk).

Rudolf Steiner (Waldorf) education is a world-wide grouping of schools working with an educational philosophy & curriculum, the bases of which were developed for the first Waldorf School in Stuttgart, 1919. There are now approximately 3000 Waldorf settings (including kindergartens & all-through schools to age 18) in over 60 countries. In a number of these countries the education is publically funded, either as “schools of distinctive character” (e.g. New Zealand, Germany &c) or full members of the public education system (e.g. Holland, Finland &c). The SWSF (www.steinerwaldorf.org) is the member organisation for Steiner Waldorf schools throughout the UK & the Republic of Ireland, with some 48 members including full schools & early years centres (not including initiative groups or other affiliate members). In England four members are publically-funded under the Academy programme & in the Republic of Ireland two members are Steiner National Schools (both in County Clare). European co-operation is achieved via the European Council for Steiner Waldorf Education (www.ecswe.net) at which the associations for Waldorf education are represented, both those within & out with the European Union or EEA (e.g. Russia & Armenia). All schools are comprehensive, co-educational & run as co-operative enterprises with parents.

The principles of Steiner Waldorf education are intended to support young people to develop as resourceful, creative, & active citizens with a deep sense of tolerance to inform an awareness of, & respect for, cultural & other varieties of human background & experience. Relevant to this Enquiry & to the contribution of Waldorf education in this regard are the findings of Dr Christian Pfeifer of the Department of Criminology for Lower Saxony which found Waldorf pupils to show statistically lower intolerant or racist responses than young people of the same age in other types of German Secondary school (www.uni-konstanz.de/rtf/ki/Download_Abridged_Version.pdf). Furthermore, Waldorf schools have not infrequently worked across divided communities, including, for example, combined Palestinian & Israeli schools in Israel, a school for children orphaned during the civil war in Sierra Leone &, during the apartheid era in South Africa, the provision of integrated education in integrated classrooms. In the view of SWSF, educating children together, with a care for the development of social & emotional intelligences alongside academic skills, is essential & the only sound basis for building healthy societies.

Our member school, Holywood Steiner School, has been in existence since 1974. Throughout this time, operating, reluctantly as a private school (although charitably registered) it has attempted to explore options that would make it more accessible to a wider demographic. Negotiations have taken place with past holders of the education mandate. On a number of occasions, the school has been advised to try to obtain integrated school status. They have children on roll from both traditions & none, but the route to integrated status has been blocked by a simple, dilemma: they have maintained a policy of not requesting at admission any information about religious affiliation. In this respect the school seeks to be blind to what might otherwise act as a divisive label.

We understand that the number of Integrated schools in Northern Ireland is gradually increasing. We also recognise the exceptional work being done by teachers throughout the country to provide opportunities for children to come together. While we respect the intent & positive results of this work, we wish to point out that, with an estimated 93% of pupils still attending segregated schools, the Enquiry seems to need a broader view (the 93% quoted here is based on the Department of Education’s own estimate that Integrated schools educated around 7% of pupils). The Integrated Education Fund clearly does very

important work, but this has its limitations as a result of the criteria it has to apply. Shared education schemes too have their unintended draw-backs (partially acknowledged in the March 2013 Ministerial Advisory Group report, Advancing Shared Education & set out in stronger colours in an article in the Belfast Telegraph, 14/10/2014 by Steven Agnew). SWSF would, consequently, propose that the Committee explore how greater diversity of educational philosophy & provision could be actively encouraged. In our view, the Holywood Steiner School, which has struggled with inadequate resources for so long, at least represents one model the Committee might be advised to examine. While greater unity through diversity might sound a counter intuitive approach, it is one that has been successfully applied for centuries in the Netherlands from a time when itself was emerging from a period of self-destructive conflict.

A more modest, & readily implementable proposal might be simply to add it as a requirement for your inspectorate to comment on the contribution of any school in fostering community cohesion. This could be done with or without introducing a specific standard. The inclusion of an overview judgement in published reports would be a stimulus to all schools to demonstrate what they do & provide essential evidence for future or ongoing review of progress. ETI reports might include such a comment either under part 7, "Leadership & Management", or as a discrete judgement, as a part 8 (i.e. above the "conclusion" of reports as currently written). It must be a matter of disappointment, if it reflects general practice, that none of the available inspection reports briefly surveyed in the writing of this submission made reference to this important aspect of a school's potential contribution.

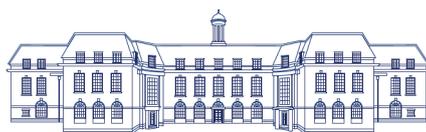

Please refer to the undersigned if your Committee wishes to discuss any aspects of this email.

With respects,

Yours faithfully,

Kevin Avison

Stranmillis University College

STRANMILLIS UNIVERSITY COLLEGE

A College of Queen's University Belfast

Stranmillis University College Response to Shared/Integrated Education Inquiry

0. Summary

- 0.1 We welcome the opportunity to contribute to the debate on shared/integrated education and support the need for agreed definitions and obligations in statute.
- 0.2 We believe that agreement should be sought on principles governing shared education but that, as a developmental approach is required, these principles should allow for many existing models of practice to exist and indeed for schools to develop their own models of practice if appropriate.
- 0.3 We acknowledge a range of barriers to shared education including wider societal issues and identify key enablers such as developmental work and equipping teachers and other education professionals.
- 0.4 We identify the need for key strategic investment in this area that encompasses the broad educational spectrum. Such investment needs to be sustained and systematic.

1.1 Brief introduction to the organisation

Stranmillis University College (a College of Queen's University) is an autonomous institution academically integrated with Queen's University.

The University College has been providing a high quality learning experience for its students for over 90 years. This is reflected in its exceptionally low dropout rate and high success rates. The most recent figures published by the Higher Education Statistics Agency indicate that in relation to the employment of leavers obtaining degrees from full-time courses, Stranmillis had a 95.7% success rate.

The current educational policy context presents many challenges but the University College remains committed to nurturing a student-centred learning environment where students are encouraged to engage in critical enquiry and academic challenge. The University College's increasing focus on international engagement and partnership is helping to transform its culture by enriching the learning community and widening the horizons of staff and students. Teaching, which is informed by scholarship and research, continues to be our primary focus, in the words of our motto: **Docendo Discimus: by teaching we learn.** In both our teaching and scholarship we seek to pursue a vision which aims to have a positive impact on the local community and beyond through sharing learning and resources. We believe education can have transformative power in the lives of individuals and communities.

1.2 Brief biography of response authors

Dr Patricia Eaton

Dr Eaton has experience in post-primary schools and in Stranmillis University College, where she teaches on the undergraduate and postgraduate degree programmes and researches in

the field of education. She was project director of the International Fund for Ireland funded CREDIT (Classrooms Re-imagined: Education in Diversity and Inclusion for Teachers) project. The core aim of the CREDIT project was to provide substantive in-service courses for existing teachers across Northern Ireland in primary and post-primary schools to assist them in developing awareness and practical skills in dealing with division, diversity, inclusion and community relations/reconciliation in the classroom and on a whole school basis. Since she joined the staff of Stranmillis University College she has been a member of the Diversity and Mutual Understanding (DMU) Committee, with responsibility for designing and delivering DMU programmes to students. She is Head of Continuing Education with responsibility for Continuing Professional Development including master's level programmes.

Ms Lisa McKenzie

Ms McKenzie previously taught in the post-primary sector for 8 years and now teaches in Stranmillis University College on the undergraduate and postgraduate degree programmes, in addition to research in the field of education. She has a keen interest in contributing to the development of Learning for Life and Work in the curriculum. She was deputy project director of the CREDIT project and is also a member of the Diversity and Mutual Understanding (DMU) Committee, with responsibility for designing and delivering DMU programmes to students. Within College she has also contributed to the work of the DAISY project (Diversity Awareness Intervention: Start Young) and projects with Barnardo's developing resource materials to aid skill development of children and young people.

Dr Brian Cummins

Dr Cummins is Head of Widening Participation (WP) in Stranmillis University College and lectures in Education Studies at both undergraduate and postgraduate levels. In his WP role he is focused on ensuring that Stranmillis is a fully inclusive institution that welcomes diversity and offers a variety of support to students from underrepresented and disadvantaged groups within Higher Education. Dr Cummins is a strong advocate of direct community engagement as a core part of part of Stranmillis WP policy and practice and this includes providing opportunities for children from all backgrounds to meet and work together on campus activities. Within his teaching role Dr Cummins coordinates the year 1 education studies module which covers the History of Education in Ireland, introducing students to the development of shared schooling, the problems this faced and the debate surrounding the wider societal goals of schooling.

Dr Norman Richardson

Norman Richardson teaches Religious Studies and intercultural education to student teachers at Stranmillis University College, Belfast, where he has also been significantly involved in organising the inter-college Diversity & Mutual Understanding programme and contributing to the CREDIT project. A former teacher, he worked for over a decade as Peace Education Officer with the cross-community Churches' Peace Education Programme and has had a long-standing involvement in community relations, inter-church and inter-religious activities. He is currently the Secretary of the Northern Ireland Inter-Faith Forum and an Executive member of the UK Inter-Faith Network. He has written and lectured regularly in the field of religious and cultural diversity in education and is a member of several local, national and international professional and academic bodies concerned with religious education and inter-faith relations. He has also developed classroom resources to support work in inclusive religious education and related curriculum areas, particularly from the perspective of developing awareness of diversity and mutual understanding. Recently retired from full time work he continues to contribute as an Honorary Lecturer in Stranmillis and is also involved with various research projects and as a contributor to other cross-community and intercultural educational initiatives. Among his most recent publications are Education for Diversity and Mutual Understanding: the experience of Northern Ireland (2011 – co-edited and co-written with Professor Tony Gallagher of Queen's University Belfast) and Sharing Religious Education:

a brief introduction to the possibility of an inclusive approach to Religious Education in Northern Ireland (2014).

2. Factual Information

Stranmillis University College

The Bachelor of Education (BEd) degrees in Stranmillis provide students with a professional education in the foundations of teacher education from the Foundation Stage to Post-16. A Primary and Post-Primary BEd are offered and these programmes include Curriculum/Subject Studies, Education Studies, Professional Studies and School Placement. These parallel strands reflect the competence-based approach to initial teacher education required by the Department of Education, the relevant accreditation body, and the teacher competences as detailed by the General Teaching Council for Northern Ireland (GTCNI). On both BEd programmes students follow common Education Studies modules for the first 3 years and then choose from a menu in their final year. The concept of Shared and Integrated provision is explored in all years.

In response to GTCNI competence 2 that, 'Teachers will have developed a knowledge and understanding of contemporary debates about the nature and purposes of education and the social and policy contexts in which the aims of education are defined and implemented' all BEd students in year 1 are introduced to the history of education in Ireland and required to know that a statutory system of 'Shared' education was implemented in 1831 and 1923 but that it subsequently failed in this ideal due to religious and political wrangling. The establishment of the current Integrated school sector is introduced to students along with Irish medium education. Post-Primary Students also have the opportunity in their first year to visit a Controlled, Maintained and Integrated school. A major part of assessment in the year 1 BEd is to investigate school aims and this requires students to appreciate the common and shared features of educational provision as well as why divisions exist in relation to religious and academic segregation. Theoretical insights provided on the module combined seminar discussions with peers who have experienced a different school system (controlled, maintained, international, further education) along with new personal experiences of different school types ensure that BEd students have a solid understanding of education to contribute to any debate surrounding shared education. Education Studies does not promote one preferred system but ensures that students are knowledgeable of the foundations of the system and appreciate the challenges and opportunities that changes may bring.

In Year 2 of the BEd, Education Studies begins to look beyond religious divisions towards fully inclusive education and meeting the needs of diverse learners, conscious of the need to develop in student teachers, 'a knowledge and understanding of the need to take account of the significant features of pupils' cultures, languages and faiths and to address the implications for learning arising from these' (GTCNI Teacher Competence 8). Through presentations, reading and sharing of experience, BEd students are prepared to engage in debate and are professionally prepared to deal with inclusion. Stranmillis does not promote either full inclusion or special provision; students are introduced to what exists and are encouraged to make their own professional judgements based on a greater degree of knowledge.

GTCNI Teacher Competence 9 states that, 'teachers will have developed a knowledge and understanding of their responsibilities under the Special Educational Needs Code of Practice and know the features of the most common special needs and appropriate strategies to address these'. In the 3rd year of the BEd, Education Studies focuses on Special Educational Needs provision. Students have the opportunity to build up their knowledge of how to meet the learning needs of students on the SEN continuum both in a mainstream environment and in a Special Needs School/Unit. This builds on the insights provided in year 2 and every BEd student undertakes a compulsory one week placement in a Special Needs School/Unit. Students experience first-hand a shared learning environment in which the focus is on meeting the needs of each child.

In the final year of the BEd, students undertaking Education Studies can choose from a variety of modules that highlight the importance of a shared approach to improving educational attainment for all children. Some modules are focused on particular aspects of SEN and meet with GTCNI competence 21 that, 'Teachers will employ strategies that motivate and meet the needs of all pupils, including those with special and additional educational needs and for those not learning in their first language'. Another focus is on the role played by community and other key stakeholders in addressing educational needs and this is in line with GTCNI competence 12 that, 'Teachers will have developed a knowledge and understanding of the interrelationship between schools and the communities they serve, and the potential for mutual development and well-being'. Students can undertake modules in DMU and Social Disadvantage that require a greater understanding of the impact of social division on educational aspiration and attainment. In Year 4 students undertake an education dissertation and in many cases they will carry out a small-scale research study that focuses on inclusion, diversity and shared education policy and practice.

In short Education Studies in Stranmillis progressively engages students in the contemporary inclusion and sharing debate, from introductions in year 1 through to in-depth studies in year 4. Drawing on arguments from the literature and other sources Education Studies encourages critical reflection on professional practice among students with a synthesis between the development of theoretical and practical aspects and the students' own personal philosophical position in relation to education. The role played by International students on Education Studies modules is crucial to inform and challenge local students on the system of education that exists here. Stranmillis students are clearly prepared to play their role in the debate regarding shared and integrated education based on informed insights into educational structures and systems.

2.1 Diversity and Mutual Understanding Programme

The Inter-College Diversity and Mutual Understanding (DMU) programme has operated for many years as a joint initiative between Stranmillis and St. Mary's University Colleges. It seeks to offset some of the obvious disadvantages of nominally separate teacher education and schooling by preparing student teachers for the challenges of living and teaching in a still divided and increasingly diverse Northern Ireland. It also seeks to offer broad global and intercultural perspectives on issues associated with the understanding, acceptance and management of difference in society and in schools. It provides a series of joint seminars and interactive workshops for BEd and PGCE students to challenge them to think through the personal and professional issues around identity, diversity and the creative handling of conflict, and it offers training and support in dealing with controversial issues. There are opportunities for students to engage in training as peer leaders/facilitators, for international and intercultural exchanges and for establishing links with organisations involved in supporting schools and other community groups in these areas. In these ways the DMU programme helps to support students in their preparation for the curricular areas of Personal Development & Mutual Understanding (primary) and Local & Global Citizenship (post-primary), and in their general awareness of the Department of Education's Community Relations, Equality & Diversity (CRED) policy.

2.2 CREDIT Programme

The CREDIT (Classrooms Re-imagined: Education in Diversity and Inclusion for Teachers) project delivered during the period 2011-2013 was funded by the International Fund for Ireland (£839,000) and administered by the Department of Education. It was developed by Stranmillis University College, in joint collaboration with St. Mary's University College and aimed to help all qualified teachers, working in all phases and sectors, to develop skills and confidence in dealing with issues of diversity, inclusion and community cohesion in the classroom and on a whole-school basis. Youth workers and other educational professionals were also invited to participate.

The CREDIT project provided practitioners with insight into the broader diversity issues that impact upon young people beyond the classroom and helped to develop the practitioners' personal awareness, skills and confidence working in these areas within and between schools, in relation to the curriculum, extra-curricular activities, community involvements and whole-school policy and practice. It did this in a way that encouraged participation and long-term continuity. While supporting the development of specific curriculum areas such as Personal Development & Mutual Understanding (primary) and Local & Global Citizenship (post-primary), the courses also addressed other relevant curriculum areas.

The project developed a suite of professional programmes. These included the Exploring Skills in CREDIT course which was aimed at teachers who felt they would like to develop basic skills in this area of diversity and community relations. Extending Skills in CREDIT was a more in-depth course for teachers who had shown an existing awareness of community engagement issues and helped to equip participants to embed good practice in this area into their own settings. A Leadership Skills in CREDIT course was suitable for principals who wanted to lead the school forward in CRED practices through practical consideration of planning, implementation, monitoring and reviewing at a whole-school level. Each course aimed for a balanced representation to facilitate optimum sharing of experiences, learning and engagement at all levels of education.

The CREDIT project has emphasised the need to focus on skilled practitioners and has highlighted the power of transformation in providing teachers with the time and space to embed good practice. A central feature was the inclusion of an interim period in each course, in which each participant returned to school to reflect on their own learning and consider the next steps appropriate to the individual setting prior to returning to the programme, to reflect on how they had or were planning to change practice as a result of engagement with the programme. The collective wisdom of teachers and educationalists across the continuum of education provided a rich learning experience for everyone. Further the course accentuated the mixing of education and community as a powerful way of moving forward.

Ultimately CREDIT empowered teachers to help children and young people to learn to live peaceably together in a more inclusive and less divisive society and to help young people to reach their full potential and become meaningful contributors to society, better equipped to deal with specific challenges.

2.3 Community Engagement

Strategic Aim 8 of Stranmillis University College's Operational Plan is to 'support and inspire students from the widest possible range of educational, social and cultural backgrounds'. This is achieved through the College Widening Participation policy which clearly demonstrates that the University College is a shared and integrated learning community. Stranmillis University College is strongly committed to ensuring that the environment can be shared by as wide a range of people as possible, including through its International and Erasmus programmes and Continuing Professional Development and Lifelong Learning courses which have attracted the local community to participate in a varied and interesting programme. The University College recruits students and staff from all sections of the community and the Widening Participation policy is attracting students from varied social backgrounds who may not in the past have considered Stranmillis University College as a place to study. We recognise that our student body is representative of all sectors of the Northern Ireland community. Through Widening Participation support our Health and Leisure Degree programme offers a 2-day residential induction to enable students from across, social and religious backgrounds to break down pre-conceived views of others and to begin their degree with a positive attitude to those from a different background to themselves.

While Stranmillis University College educates teachers to draw the best from every pupil they teach, we also recognise that schools alone cannot raise educational aspiration and attainment; what is required is effective partnership with communities and the various groups that serve them. With a core business in teacher education Stranmillis University

College is influential in relation to community engagement. Our daily business concerns working directly with schools, the Regional FE Colleges and communities. While this informs student modules/placements and our research activity, our outreach work directly impacts on the wider community. Stranmillis has established strategic partnerships with various community groups struggling with social deprivation and educational underachievement. This generally involves homework clubs, support for special needs, games/sporting and enterprise activities. As part of our WP activity we bring children onto our campus to engage in 'curriculum enrichment' mini-university days that both raise their aspirations and contribute to achieving better educational attainment. On these days student groups are from different religious backgrounds and while the focus is on university insight, the opportunity to mix with someone from a different community replicates what it is like to attend a mixed university having come from a segregated community. Such initiatives have a direct relevance to community relations. Racial and sectarian incidents are most common in inner city socially deprived areas and when communities have low self-esteem and little expectation of a future in productive employment, they can too easily look at newcomers to their area with suspicion and resentment. Education can help to address the central issues of expectation and self-worth and Stranmillis University College provides quality volunteers to support communities in identifying solutions to local issues. In the main this involves working with community groups to support the work that they are undertaking in building good relations within and across communities. Student volunteers provide a link between communities and the resources that are available within Stranmillis. Commitment to Widening Participation and Community Engagement within Stranmillis University College ensures that support for local communities is integral to its mission. Crucially this support is not simply vocal or passive but can be seen in action within communities. Numerous initiatives have incorporated bringing sections of the community together, to raise aspirations in a shared neutral environment. The value of higher education involvement in supporting local communities cannot be underestimated in promoting a shared education culture.

2.4 DAISY

The DAISY (Diversity Awareness Intervention: Start Young) programme, funded by Lisburn-Castlereagh PEACE III, focused on diversity practice in early years settings. A team from Stranmillis University College was awarded the tender to deliver a project aimed at increasing awareness amongst children, parents and staff in the identified cluster areas (Lisburn and Castlereagh) of diversity and inclusion related issues, including other cultures, religions and traditions. The early years' practitioners were engaged in a series of interactive sessions that involved many practical activities. Initially the sessions were based around raising knowledge and confidence of the practitioners, but towards the end of the planned series of sessions the onus moved towards the practitioners working directly with parents and children in their own settings. A mentoring process with staff and students of the University College supported practitioners, enabling them to start where they felt comfortable, providing them with the skills and support they needed to implement change within their practice.

As a result of involvement in the project, early years practitioners believed it has heightened their awareness of prejudice, increased their confidence in dealing with challenges to diversity and inclusion and made it more likely that they would challenge bullying or prejudicial behaviour.

3. Terms of Reference

3.1 ***Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;***

We acknowledge the need for clear definitions and the attempts in recent publications to develop clarity of language and purpose in shared or sharing or integrated or integrating education. Our understanding of the realities of the current situation means we do not need to opt for one model at the expense of others but that we do need to work together on many

models with a common purpose and aim of ensuring a shared future for our society. It is important that this happens at all educational phases from early years through to the end of formal education and beyond. We would welcome statutes for the facilitation of shared education, and the need for clearly defined and agreed definitions. We believe that agreement should be sought on principles governing shared education but that, as a developmental approach is required, these principles should allow for many existing models of practice to exist and indeed for schools to develop their own models of practice if appropriate.

It is also evident that if schools are to be at the forefront of new models of shared education then it is essential that teachers, pre-service and in-service, are equipped with the knowledge, skills and confidence to develop this work. Together Building a United Community, section 2.67 recognises the central role for teachers in stating “*It is therefore important that educators have the necessary continuous training and development to ensure that they are best equipped to play their part in addressing these issues adequately.*”

The CRED policy also identifies insufficient training for teachers as one of the weaknesses in the current policy.

3.2 *Identify the key barriers and enablers for Shared Education and Integrated Education;*

The barriers to this type of approach in education include our existing divided society which is not conducive geographically to sharing in any form. Socio-economic factors can impinge as can an unwillingness for schools to be out of step with perceived attitudes in their own communities. There is also a danger in assuming that education alone can deliver solutions to a much wider societal issue – educational initiatives need to be couched in a broader societal framework.

Enabling approaches include:

- Equipping teachers and other education professionals(pre-service and in-service) with the skills, knowledge and confidence to ensure that they can engage in this work effectively;
- ensuring that this work is developmental so that schools are encouraged to move on from their existing position and not to have a “one size fits all” approach;
- ensuring that this work is embedded across all areas of school life and curriculum;
- developing an appreciation that this work is more than contact for its own sake and that any shared activities need to be prepared and planned over an extended period of time so that the work has a clear purpose and identified outcome;
- ensuring that shared education programmes are not token or superficial, but that they provide genuine opportunities for interaction and exchange, including the exploration of issues of identity, diversity and the creative management of difference;
- ensuring effective monitoring and evaluation of programmes that focuses on ensuring long-term change and sustainability rather short term goals. It is easy to measure if an activity has happened and more challenging to find effective ways to measure what impact such activity has and yet it is crucial to encourage schools and other agencies to ensure they are evaluating this long-term impact.

3.3 *Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;*

The challenges of separation and division are not unique to Northern Ireland, and it is possible to learn generally from an awareness of international experience. Models similar to integrated education and shared education can be found in situations such as Israel/ Palestine and the Balkans, although the additional complication for these regions is linguistic, which tends to limit the opportunities for shared education experiments. In all such cases known to us, however, the focus is on shared facilities, a shared curriculum and a supportive, open ethos of inclusion. Training and policy support is crucial for such work. Some

international bodies, notably the Council of Europe and UNESCO, have developed support mechanisms in the form of publications and conferences and have encouraged positive policy development on the part of governments. If we are to learn anything from this it is surely that integration/sharing in education does not just happen automatically when pupils and students find themselves in the same place together. It requires careful preparation, training, planning, policy development, curriculum development and conscious regular oversight of such initiatives in order for them to be effective.

3.4 Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools;

3.4.1 Investment

While we are aware of the budget constraints across all of Northern Ireland government at present, it is very clear that any serious commitment to understanding and promoting shared education of any sort requires substantial and sustained funding. Small scale projects and short term projects are incredibly valuable to support shared education but only as out-workings of a broader strategic investment. On their own they cannot bring the province-wide and education-wide development that is required. Investing in teacher development is critical as teachers are working in classrooms delivering, shaping views and modelling practice every day. Excellent models already exist of effective teacher development such as the CREDIT project which was evaluated very highly by ETI and such models should be developed and built upon. The CREDIT project demonstrated high impact on schools and on long term development of work in this area and should be developed as a model for future teacher development.

3.4.2 Sharing of Good Practice

Too often in the past, initiatives have come and gone without having real sustained impact on the system. We need to be prepared to invest for the long term so that good practice is shared and becomes embedded in education.

3.4.3 Cohesion across the Education Continuum

Initiatives that can make a real difference need to be across all phases and sectors of education, from beginning and pre-service teachers to leadership teams and governance of schools, from early years to post-compulsory and across all of Northern Ireland. Local small scale programmes then become supporting elements of a broader strategic vision rather than isolated pockets of excellence that can flourish briefly and then fade if key personnel move on. In relation to this, a small number of highly effective educational support NGOs have worked for many years (from long before government took these issues seriously) to assist schools and teacher educators in the development of this work. They have often provided the continuity that schools have not been able to sustain internally when committed members of staff move on. Yet their own work is also threatened by a tendency to dismiss their contribution and short-term thinking on the part of government officials. It would have been impossible for Stranmillis to develop its own work in these areas (DMU, CREDIT, etc.) without the support of such experienced and well trained professionals and it is highly disappointing to see their work side-lined and threatened by constant funding crises. The contribution of such organisations has been invaluable and needs to be recognised and properly engaged. Work on shared education cannot be in addition to other educational initiatives but should be an integral part – for example, area learning partnerships already provide an opportunity for shared work so should be built upon rather than duplicated; existing work with parents, governors and other educational agencies needs to reflect the shared education agenda.

Dr Anne Heaslett

Principal

23 October 2014

The Aspect Group of Prospect

The Aspect Group of Prospect represents nearly 3,000 professionals in the education, children’s services and social care field. It is the major organisation representing Advisory and support staff in the education and examinations sector in Northern Ireland

They are based throughout the UK, and work across a range of sectors serving the interests of children and young people, including the public, private, faith, voluntary and community sectors.

The main activities of ASPECT members in N. Ireland are the training and development and ongoing support of teachers, managers and governors within schools and the continued development of those schools. The Curriculum Advisory and Support Service (C.A.S.S.) and C.C.E.A. operate in a complex and changing environment within the constraints of increasingly limited resources.

The notion of “shared identity” in Northern Ireland is problematical with the community at large divided along Unionist/Nationalist lines. Cultural identity and sectarianism are issues that remain deeply influential in many areas. In recent years newcomer families have settled in many areas of Northern Ireland and are making significant contributions to the life of their local communities. Aspect group members support the schools’ efforts to integrate these children and young people into the education system.

‘Despite almost 20 years of relative peace since the paramilitary ceasefires of 1994, many scars of ‘The Troubles’ remain visible in daily life. While the recent riots are an obvious example, the Protestant and Catholic communities remain divided, often physically, with education also, largely, split along religious lines. (Neil Ferguson and Maren Michaelsen, Royal Economic Society’s 2013)

That being the case there is a need for an education system which provides and encourages access for all to high quality education which concentrates on the needs of society and provides young people with the skills and opportunities to meet those needs.

The focus should be on how schools can explore a range of shared options based on educational provision and access rather than on a political or philosophical basis. The QUB Centre for Shared Education defines the concept as

“any collaborative activity within or between schools or other educational institutions that can: contribute towards school improvement, provide access to opportunity, encourage more effective use of resource and promote social cohesion”

The Department of Education “Sustainable Schools Policy” and the principles of Area Based Planning, reflect the need for children to be educated in accordance with an acceptance of diversity in the nature of education provision, including Controlled, Catholic Maintained, Integrated, Irish Medium or other.

Not everyone is at a stage where a shared campus would be a viable option. In the most developed arrangements there is a history of collaboration between the schools involved with support from communities, CASS service and employing authorities. The Department of Education should consider how it can facilitate a range of options to promote cooperation, ranging from very low key arrangements to very high levels of collaboration among schools from different sectors and ensure that the climate across all sectors is conducive to the promotion of shared education.

There is a need for engagement to be carefully planned and reflective of the context of the history and culture of the local area. The desire to be part of this undertaking must come from the schools themselves by assessing the situation in their local community and identifying a 'sharing partner' or partners with whom they are keen to collaborate. This element of the process allows schools to gauge local attitudes and come forward with appropriate solutions. Such an approach is crucial to fostering ownership and commitment, attributes vital to the potential future success of any partnership. Support should be provided to assist school partners to address the issues that arise in such endeavours.

The PIEE Project initiated by the N.E.E.L.B. supported "regular and sustained engagement between pupils and teachers from two or more schools of different management types, and concluded that the benefits from a Shared Education approach include:

- (i) Educational Benefits; to provide an enhanced quality of educational provision and experience to the schools and young people involved
- (ii) Societal benefits; to improve community relations, reconciliation and community cohesion in light of a divided and troubled past
- (iii) Economic benefits; to maximise educational provision and resourcing in light of a diverse and often rural schools estate which has experienced pressures, ('How to Create and Maintain a Primary Partnership', NEELB, 2013)

The Curriculum Advisory and Support Service (C.A.S.S.) made a key contribution in initiating and sustaining this work, providing strategic direction, governance and support and in recent times Board officers have been involved in innovative work involving sharing at a local community level.

The result of these efforts, based on rigorous evaluation, has proven to have a significant impact on local communities.

Aspect Group of Prospect is supportive of the Shared Education concept and sees it as part of the progressive improvement and normalisation of the way the different sections of our divided society interact and coalesce. Aspect is also supportive of the inclusion in the Programme for Government of efforts to increase the level and scope of shared education. Our members will continue to make significant contributions to the shared education initiative and to lead from the front in researching and establishing sustainable projects in the future.

The Association of School and College Leaders

Response to the Shared and Integrated Education Inquiry request for written evidence from the Northern Ireland Assembly Education Committee

Association of School and College Leaders Northern Ireland.

As an association of school leaders, we believe in the need to promote system leadership which encourages school leaders to care for and work for the success of other schools as well as their own. This idea has relevance to many countries but especially those like Northern Ireland which are emerging from sectarian conflict.

In recently published research on Area Learning Communities in Northern Ireland by McGuinness, Abbott and Cassidy (2013), evidence is drawn from the direct experience of former ASCL heads who participated in innovative area learning communities in Limavady and Ballymena. They argue that the problem in the case of Northern Ireland, is that schools for decades that have been divided on sectarian grounds do not easily collaborate. This provides unique challenges for school leaders and teachers. Schools need to agree and prioritise an inclusive, intercultural vision. There must be support for professional development for teachers and leaders engaged in this difficult work. Innovative use of technology and the help of expert outside agencies are vital to stimulate change and progress. Most importantly, leaders in government departments need to ensure that overall strategic plans make provision for the widest possible uptake of Area Learning Community schemes and to lobby for the necessary funds to ensure that the plans can be translated into practice. In the ASCL national strategy document “Blueprint for a Self-Improving System” (2014), it is suggested that, “the role of government is to remove obstacles and create the conditions for a self-improving system”.

Key barriers in Northern Ireland to the effective development of this approach on Shared Education are both the level of delegated funding and the demotivating complexity of funding delegation. The evidence shows that collective ownership of the collaboration by the schools involved and a high degree of autonomy bring about significant change. Practical measures like the funding of an executive co-ordinator relieves the tensions between school leader allegiance to their own school and ALC plans. Concerns about dividing focus between ALC objectives and individual school accountability to inspection pressures can also inhibit school leader commitment to collaboration.

In ASCL (2014), it is argued that we can learn from initiatives like London Challenge;

“...where a strong sense of collective endeavour, accountability, a focus on students’ outcomes and deep partnerships between and among schools, brought about significant improvement including and especially for children and young people from economically deprived backgrounds”.

“School Leaders took on a shared responsibility for the quality of education of all young people in their area, not just those in their own school. There is a strong commitment to principled strategic partnerships, including with higher education institutions.”

This last comment ties in well with the best practice in N Ireland Learning Communities where local FE colleges provide a strong, well equipped, shared, vocational provision and are

linked in curriculum collaborations with schools. In these type of contexts shared education becomes a reality.

One of the great strengths of Northern Ireland society is the deeply rooted value systems which inform principled citizenship and are exemplified in the ethos of schools from all traditions. There is already shared understanding and commitment to providing the best opportunity and future for the young people in our care, in spite of the anxieties, hurt and residual tensions from our difficult past. The leap of faith needed for schools to move from separate self-interest to educational collaboration needs support and encouragement from government and equally, respect for the excellence and genuine commitment to the existing educational contexts in which schools operate.

Shared education will be enhanced more by changing minds than changing structures. We start from where we are by supporting financially those in collaborative settings who are on that journey however modest their initial projects. This type of change cannot be legislated into existence, it must grow from the local leadership and the emerging confidence of schools and parents.

Frank Cassidy BEM Regional Officer ASCL Northern Ireland

Tor Bank School

Inquiry into Shared/Integrated Education

Submission from Colm Davis on behalf of the Governors, parents, staff and pupils of Tor Bank School, Dundonald.

My name is Colm Davis and I'm both privileged and proud to be Principal of Tor Bank School (a Special School for children and young people who have severe learning difficulties). I also represent National Association of Head Teachers at both local and national levels and have extensive knowledge and understanding of educational working models in England, Wales and NI. I co-chair the Strategic Leadership Forum for Special Schools in NI and represent special schools on the General Teachers' Council. I also Chair the Dundonald Extended Learning Community, a partnership with 5 other mainstream and special schools. I have been teaching 33 years and have a strong passion for ensuring that children and young people with learning disabilities get the best possible inclusive opportunities to enable them to function independently in the local community in which they are expected to work and live. I've also been involved in many Charities over the past 30 years that have focused on promoting equality while supporting peace and reconciliation, my more recent success being with the charity in which I was Chair and Director Forward Learning.

Up until 1987 children with Severe Learning Difficulties were often deemed uneducable and were therefore denied the right to education in a school under DENI control. Social Services and institutions such as Muckamore Abbey Hospital provided a caring environment for them and they automatically transferred or transitioned to Day Centers or Adult workshops. Employment within the Community was rarely attainable and their rights were often compromised by being denied the right to progression routes to employment or life-long learning.

However, thankfully history was made when the 1987 Education Act handed the responsibility of educating these children and young people to DENI (now DE) and the Education and Library Boards. Under the umbrella of the controlled sector, special schools for children with Severe Learning Difficulties (SLD – includes children with profound and multiple learning difficulties) were born and a new phase in their lives (and in education) began. With it, the drive for equality of opportunity gathered momentum and partnership working with Colleges and supported employment agencies gave these young people hope that they could get real jobs beyond Adult Workshops for the Mentally Handicapped. Many of the Adult Workshops were closed and the concept of Supported Employment Agencies gathered momentum. Parents were grateful that at long last their children and young people were being given the same rights to education as those children in mainstream schools. However, we believe their rights continue to be undermined and their opportunities limited by the many initiatives from DENI (in the past) and DE which tend to focus on more enhanced opportunities for mainstream school children to the detriment of those SLD Sector. With the lack of clarity in much of the guidance for schools as to how these children and young people 'could be fitted in' to many of these mainstream initiatives, school leaders of schools with an SLD designation have continued to 'second guess' or to put their own interpretation into how the recommendations contained within this guidance can be implemented successfully with-in the context of an SLD environment. As a result of staff enthusiasm and determination, the schools and pupils within them have continued to thrive and parents have felt their children are included rather than excluded.

We believe that now is the time for NI to take another 'crucial' step in making history once again by giving schools who have children with Severe Learning Difficulties 'integrated status' and the benefits that goes with that branding, label or status. Let me outline and clarify our case further on the next few pages.

Tor Bank School Context

During 2013-2014 school year, Tor Bank received the **UNICEF Level 2 'Rights Respecting School Award'** for their outstanding contribution and commitment to the principles of upholding and supporting children's rights. As an 'outstanding' community school (ETI March 2012) Tor Bank caters for the specialised individual needs of 171 children and young people who have severe to profound and multiple learning difficulties. As a positive and vibrant inclusive community, it provides a supportive and empathetic environment in which parents, teachers, classroom assistants, therapists, nursing staff and other stakeholders share and work in collaboration to plan, design and deliver high quality programmes to meet the holistic needs and complex learning preferences of the individual pupil. Tor Bank considers itself to be an enabling school which is strongly committed to an inclusive agenda for all pupils. We seek to provide an 'enriched' curriculum for each individual pupil in a carefully structured environment which enables them to learn happily and effectively. We strive to work in partnership and collaboration with parents and other stakeholders to meet the 'holistic needs' of each individual pupil throughout their schooling career.

Throughout all aspects of teaching, learning and development, pupils are presented with curriculum strategies and opportunities specifically designed to help them to make connections with the world in which they are expected to live presently and in the future. We strongly believe that connected learning will help our pupils to make sense of the world they are expected to live in and therefore realise their full potential.

The curriculum offered is designed to meet both the Northern Ireland statutory requirements and the individual needs of the pupil. At all times the focus therefore is on needs of the individual child. Curriculum programmes and opportunities therefore are presented to the pupil in small steps and progressive stages of development to enable pupils, staff and parents alike to monitor and record progress systematically. The outcomes from this process enable staff to plan activities for the next stage of learning based on success to date.

The curriculum offered at Tor Bank also aims to provide relevant learning opportunities to enable each young person to develop as an individual, as a citizen and as a contributor to the local economy and the environment. The key elements that underpin our curriculum are contained within our cross curricular themes, all aspects of curriculum delivery and everyday life in Tor Bank.

Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;

Recommendation: "The current definition should explicitly refer to learners of all abilities in all schools"

Currently shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners within an ethos of promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion. Integrated education has similar aims and explicitly seeks to educate together children from protestant and catholic traditions, as well as those of other faiths and none, in an inclusive, welcoming and aspiring environment.

Tor Bank strives to deliver the aims and educational benefits attributed to shared education and, moreover, have an intake from protestant and catholic traditions, as well as those of other faiths and none. The population within Tor Bank has always been multi-faith and multi-cultural. Arguably the first controlled integrated and fully inclusive schools, special schools have been denied the opportunity to be considered as Integrated schools yet have possibly the best models of shared education that have been developed over the past 60 years or so in collaboration with partner schools within their local community.

Identify the key barriers and enablers for Shared Education and Integrated Education for Tor Bank.

Recommendation: ‘Special schools need to be enabled to become integrated in law’.

1. Barriers for Special Schools regarding Shared Education and Integrated Education;

Under NI legislation, all but one of the existing Special Schools in NI is considered to be under the control of the ‘Controlled Sector’. Special Schools like Tor Bank, were the first integrated schools in NI yet we have been excluded from being re-branded ‘Integrated’ by legislation which continues to ignore this fact. We strongly believe that the staffing and pupil composition meet all the requirements to be considered to have integrated status. We have therefore embarked on a consultation process with NICIE to investigate the possible transformation into a fully inclusive and integrated specialist school. Representatives from NICIE have met with staff and Governors to seek out their views and we strongly believe that we making positive steps along the path to becoming a ‘Fully Inclusive’ School. We are excited about these prospects but will seek out more views.

The fact that Tor Bank is perceived as a controlled school inhibits its journey to becoming a fully inclusive school. Being a special school, parents do not have choice about which sector to send their children to; it is therefore all the more important that it should be formally recognised as an integrated school in order to provide maximum assurance and welcome; maximum confidence for internal and external perceptions. Additionally, if the school is seen as a controlled school the school will not be seen as a community space and will be limited in its ability to promote community cohesion.

2. Enablers for Shared Education and Integrated Education;

Shared and Integrated education’s focus on raising school standards and to following a school improvement agenda which gives greater curriculum entitlement and inclusive opportunities to all children is in harmony with the aims and objectives of Tor Bank School.

Tor Bank’s enrolment reflects the increasing number of ‘New Comers’ or ethnic minorities in the community. The school’s knowledge and understanding of diverse cultures is becoming more enhanced as newcomers become more fully integrated into Tor Bank Community.

We believe that Tor Bank is now uniquely placed to act as a hub for community inclusion and peace reconciliation, the new building generating a new phase in its life and development.

Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;

The function of a special school is to ensure that our children and young people are equipped with the knowledge, skills and understanding to become more fully included and independent members of their local community in which they are expected to live and work. This has been fully recognised by DE, by the Health Trusts (in its closure of Institutions such as Muckamore Abbey for Children with its focus now being on Community re-integration) by parents and by mainstream schools alike in that they have continued to endorse and be supportive of the role a special school plays within-in the seamless continuum of specialist educational provision available to nurture and support the needs of all learners in NI. In Tor Bank like many of our other Special Schools in NI, the commitment to relationship building, respecting others, showing unconditional positive regard towards others and valuing people has been recognised as models of ‘best practice’ by educators and stakeholders alike. However, it is worth noting that this continuing success has not been nurtured or cultivated in a segregated vacuum of isolation, but rather with-in a collaborative partnership framework with other schools and agencies that schools with SLD created before any recent policy direction ‘pushed’ other mainstream schools down the collaborative route.

My colleague Dr Peter Cunningham in his submission succinctly describes this in his statement below:

“It is my view that mainstream schools with an inclusive orientation are the most effective means of combating discriminatory attitudes, creating welcoming communities, building an inclusive society and achieving education for all and while I believe that there will always be the need for special school provision it need not be segregated provision. The day of the inclusive special school is very much with us and the invaluable contribution we continue to make recognised by our mainstream school partners”. (Dr Peter Cunningham – Ceara Special School, Lurgan).

Some recent examples of effective and existing collaborative activity in Tor Bank can be found in the following snapshots of partnership activity:

- There is a trend toward increased connectivity, collaboration and partnership working between special schools and mainstream schools, and special schools and special units in all areas of NI;
- All Special schools are now part of every Area Learning Community (ALCs) in NI and the collaborative strand is deeply embedded in most of the collaborative work that exists within and between schools, despite special schools not being suitable platforms for delivering the requirements of the Entitlement Framework because of the type of accreditation opportunities offered for their special learners within their school;
- In many ALCs, staff in special schools often advise and support their colleagues in ‘mainstream’ schools to help deliver the inclusive agenda to enable them to cope with the diverse range of pupils with SEN within their schools.
- Tor Bank now plays an instrumental role within the Dundonald Extended Schools Learning Community and is leading the way regarding the transformation of the remaining schools into Rights Respecting Schools.
- To encourage further understanding of disability and the challenges of supporting effective inclusive practices, Tor Bank encourages students from the local Grammar Schools and Secondary Schools to participate in work experience and community placements within the school. On average in most weeks throughout the school year, as many as 15 students spend at least 1 week in the school for this purpose and some of these students also support our students to attend Brookland’s Youth Club.
- Tor Bank School Development Plan commits to strengthening more inclusive links and collaborative partnerships with local mainstream schools. It already has strong collaborative links with Bloomfield Collegiate, Tullycarnet Primary School, Brooklands Primary School, Dundonald Primary School, St Joseph’s Primary School, Downpatrick Primary School, Brooklands Primary School, Lagan College, Newtownbreda High School, Knockbreda High School, Longstone Special School, Dundonald High School and Our Lady and St Patrick’s Grammar School.

Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools;

Recommendation: “Special schools need to be enabled to become integrated in law”

We strongly believe that’ **integrated and shared education** ‘aims to provide high quality learning experiences for all our young people. While there are some efforts to engage special schools in shared education the fact that they are often viewed as being part of a completely different sector impacts negatively upon the learning opportunities and experiences of young people attending special schools - many of whom come from the most disadvantaged parts of society. The fact that special schools are **not allowed by law to be recognised as integrated in law** compounds this obvious discrimination and limits their present and development. Their Governance and freedom to control their own destiny, future and status is being continually undermined by an ‘antique’ and ‘antiquated’ funding system that continues to allow ELBs to control the budget allocation and enrolment criteria. However, despite this we have continued

to lead the way in producing the highest quality education for our children and young people and ETI inspection reports continue to recognize and endorse the high standards that are within our special schools.

It is important that existing and new parents of children attending Tor Bank School continue to get Governor, Staff and ELB reassurance about the inclusive, integrative nature of Tor Bank School. However, we strongly believe that only formal recognition of the fully inclusive nature of Tor Bank by the Assembly, DE and legislation, will provide further persuasive evidence. It would also help to create and extend the range of existing opportunities through the additional funding streams and support required to help prepare our young people more effectively for the additional challenges they will encounter in their everyday lives outside of Tor Bank School.

Teachers, Classroom Assistants, parents, other stakeholders and partners working collaboratively with Tor Bank welcome the opportunity to remove any perceptions of Tor Bank as a **“controlled”** school and any discussions to rebadge it as an **‘integrated school’**. This would enable the child-centered ethos to be more formally recognised and supported within an inclusive community framework. They firmly believe that ‘Tor Bank – **‘A fully inclusive School’ and/or Tor Bank as ‘a Specialist Integrated Community School’** can only serve to benefit the staff, children, parents and stakeholders even further.

More importantly, demographically, Dundonald is considered a predominantly protestant community who are proud of Tor Bank School and have embraced it as ‘their school’. However, they’re fully aware that even in the darkest times of the troubled past, children of all faiths and backgrounds were transported into Tor Bank School from all areas and traditions and this was accepted by them. Throughout that period and even during this current phase of Tor Bank’s history, the enrolment criteria continues to be defined and controlled by SEELB. In this new era of ‘Shared Futures’ it is crucially more important to be able to provide firm reassurance to parents and the wider community that Tor Bank is being recognised as a fully integrated community specialised school and as such, is playing an instrumental role in the creation of community inclusion and cohesion.

Tor Bank School Development Plan commits to strengthening more inclusive links and collaborative partnerships with local mainstream schools. It already has strong collaborative links with Bloomfield Collegiate, Tullycarnet Primary School, Brooklands Primary School, Dundonald Primary School, St Joseph’s Primary School, Downpatrick Primary School, Brooklands Primary School, Lagan College, Newtownbreda High School, Knockbreda High School, Longstone Special School, Dundonald High School and Our Lady and St Patrick’s Grammar School.

I strongly believe that Tor Bank is now uniquely placed to act as a hub for community cohesion, community inclusion and peace reconciliation, however, recognition of its fully inclusive, integrated character is the vital strap line to enable this ideal to succeed. We urge you to strongly consider the role and status of Tor Bank School within any present or future strategic thinking on Shared Futures.

Transferor Representatives' Council

Transferor Representatives' Council (TRC)

Submission to the NI Assembly Committee for Education
Shared/Integrated Education Inquiry

October 2014

Submission by the Transferor Representatives' Council (TRC) to the NI Assembly Committee for Education: Shared/Integrated Education Inquiry

The TRC welcomes this opportunity to offer comments on Shared/Integrated Education at the request of the Assembly Education for views and opinions to inform its Inquiry. It submits this response on behalf of the Boards of Education of the Church of Ireland, Presbyterian Church in Ireland and the Methodist Church in Ireland.

Introduction

The three transferor churches have in recent years strongly affirmed by resolution at their annual meetings of General Synod, Presbyterian General Assembly and Methodist Conference, their commitment to the concept of shared education. In 2014 for example the following resolution was passed by the Presbyterian General Assembly:

That the General Assembly warmly support the on-going development of Shared Education in Northern Ireland and call upon the Department of Education to ensure that its policies and schemes provide a range of incentivised options to encourage and facilitate schools to participate in models of sharing appropriate for their local community.

Sharing is a challenging concept to develop with schools especially as they have for many years been encouraged to become self-reliant and responsible for their own governance and educational outcomes. It certainly makes sense at a time of scarce resources for schools to find ways of working together to provide the maximum learning opportunities for pupils. One key imperative is the educational benefit particularly at post-primary level, because sharing enables schools to provide pupils with access to a much broader range of courses and qualifications. There are also demonstrable reconciliation benefits as contact with the 'other' community enables traditional barriers to be broken down, understanding to be meaningfully developed and friendships engendered.

There have been a variety of independently funded shared education programmes running in schools across NI for a number of years. The TRC has been represented on the advisory body for the Shared Education Programme (SEP) led by Queen's University Belfast. Our experience of being involved in this work over several funding phases has been extremely positive. We have been impressed by a remarkable development of curriculum focused shared education initiatives across a very wide range of schools delivering beneficial outcomes for pupils and schools alike. There is also clear benefit for the community of enhanced social cohesion and promotion of good relations.

Responses to the terms of reference set out in the request from the inquiry:

- 1. Review the nature and definition of Shared Education and Integrated Education across all educational phases – including consideration for the need for a formal statutory definition and an obligation in stature to facilitate and encourage Shared Education.**
- 1.1. The Ministerial Advisory Group on shared education which reported in 2013 endorsed a definition of shared education from its remit: it ‘involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion’.
- 1.2. The Group examined all barriers to advancing sharing including different types of schools, underachievement, academic selection and socio-economic status. The Group made 20 recommendations. Three recommendations identified the need to address the vexed issue of academic selection; these are unlikely however to attain widespread support due to the diversity of views on this educational issue. However the TRC believes that the main recommendations addressed issues could be tackled immediately: the need to mainstream shared education; supporting schools in shared education; schools and other institutions working together; area-based planning and the school estate.
- 1.3. In his response to the report, the Minister committed to include a statutory definition of shared education in the hoped for Education Bill and provisions for the new Education and Skills Authority (ESA) to encourage and facilitate it. We now know that the Executive has decided not to pursue the establishment of the ESA. It is important that a definition of shared education is agreed and that the new Education Bill to create a single Education Authority includes provision to encourage sharing.
- 1.4. The TRC sees shared education as a spectrum of types of sharing – shared facilities, courses, pupils, staff, and buildings. There can be a variety of modes of sharing with neighbouring schools working together to share campuses, classrooms and programmes for the educational benefit of their pupils with no threat to the ethos of any school. This can include teachers and or pupils moving from school to nearby school across sectoral divides and phases or purpose built facilities shared by two or more schools. We would also see the Integrated schools having an important contribution to make in sharing alongside other types of schools.
- 1.5. In our view there should be a particular encouragement towards shared education given to the two largest sectors of schools – Controlled and Maintained, which are attended by a majority of children from Protestant or Catholic backgrounds. Incentives should be introduced to promote the development of creative ways to share which are consonant with the local needs and settings of individual schools and their communities.
- 1.6. The TRC believes that Shared Education can make an invaluable contribution to the educational outcomes for pupils and that a statutory obligation to facilitate and encourage it would ensure that the Department of Education would provide a long term commitment to its development and not see it simply as a temporary albeit valuable programme.
- 1.7. The TRC has worked with NICIE particularly in the development of controlled integrated schools and recognises the contribution that Integrated Education has made. Our view is that a fully integrated system of schools while perhaps an ideal is not realistically achievable province wide and that there is so much more to be gained by encouraging and facilitating collaboration and sharing across existing sectors.
- 1.8. The transferors have been supportive of the recently announced DE Shared Education Campus Scheme, where schools are invited to apply for funding to set up shared education campuses. The churches are particularly inspired by the Lisanelly education campus in

Omagh and have worked closely with the WELB and school management authorities in taking forward this visionary shared education project which has government support.

2. Identify the key barriers and enablers for Shared Education and Integrated Education.

- 2.1. One of the key benefits of shared education in programmes we have observed is that it encourages collaboration rather than competition in particular between small primary schools. Partnerships developed between schools of different management types have also enabled enhanced community cohesion without compromising the distinctive ethos of any school.
- 2.2. Key to the success of sharing is the need to secure parental and governor support from the outset. It is vital too that account is taken of the local context of the schools. Alongside this it is essential to build the capacity amongst principals to manage sharing within the partnership through support and training. Shared staff development of the wider group of teachers has also been found vital for the establishment and building of good relationships between partner schools. Sufficient resources must be available to provide substitute cover to allow staff to meet and plan their work together.
- 2.3. Teachers have found they need to develop a new range of skills and approaches to teaching pupils from different backgrounds within the same classroom environment. NICIE through its Sharing Classrooms Deepening Learning (SCDL) project has been found to provide very useful training and resources to support teachers in these transformed classroom environments.
- 2.4. Some of the most successful partnerships between controlled and maintained schools particularly at primary level have been with schools in close proximity to each other. This maximises the potential for sharing at many levels of school life. However other programmes eg the University of Ulster's Dissolving Boundaries (DB) programme have used internet technology as an effective way of linking schools which are geographically separate. The DB programme has enabled joint projects through online contact and supplemented by face to face contact. It has been found by teachers to make a good contribution to literacy, numeracy and ICT skills.
- 2.5. Experience of the outworking of various shared education programmes eg the QUB SEP project and the NEELB PEE project suggests that the ownership of the partnership by the schools was vital. Schools applying in pairs and coming up with a shared programme relevant to their local school circumstances proved the most valuable way of initiating and sustaining collaboration.
- 2.6. The curriculum must be the driver of collaboration; partnerships should be developed in order to meet the curriculum needs of pupils through the provision of subject areas of mutual interest which one school on its own is unable to provide. At post-primary this has been found to be an important way of delivering the entitlement framework of access to 24/27 subjects at KS4 and post 16 respectively.
- 2.7. The downside of programme driven initiatives is that once the funding phase has been exhausted the future of collaboration is jeopardised. It is important that funding for shared education becomes much more mainstreamed to allow relationships to fully develop and for the maximum long term benefit to flow from collaboration.
- 2.8. An issue arises regarding ownership of schools in shared campus settings. We understand that the Catholic trustees are the 'owners' of catholic voluntary and maintained schools while controlled schools are 'owned' by the Education and Library Board. When facilities are designed to be shared a question arises about who owns the buildings of the 'enterprise'. This is a relevant question in a number of shared settings and in particular when the potential of jointly managed schools is being explored.

3. Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes.

- 3.1. The TRC does not have specific knowledge of shared education experience in other jurisdictions although it is aware that QUB has much experience of work in divided societies for example Macedonia.
- 3.2. The transferors and Catholic trustees do however have an interest in developing the concept of jointly managed church schools in Northern Ireland. A small number of such schools exist in GB mostly jointly between the Anglican and Roman Catholic Churches. During 2013 discussions began between the Transferor Churches, Catholic authorities and the Department of Education on developing a working model for such a school. The proposal is that the three transferor Churches and the Catholic Church would be joint trustees and managers of a school. There would be a jointly appointed board of governors and an agreed vision and ethos for the school based upon the Christian faith. The provision for Religious Education would be agreed by the Churches and parents. Jointly managed schools would offer a different model to formally Integrated schools as they would be organically linked to and supported by the two main Christian traditions in NI.
- 3.3. It is not envisaged that many jointly managed schools will emerge in the future; however it might be considered in certain rural situations for example in a situation where the Controlled and Maintained schools may have separate challenges to their sustainability. Instead of a village losing both schools, a jointly managed school with pupils from both religious communities might have greater viability and enable a school to be retained in the community.
- 3.4. There are many practical matters to be worked out before such a school might be established including the legal issue of joint ownership. However there is willingness among the Churches and considerable openness among many parents to pursue the proposal. A guidance paper is currently being developed by a working group comprising the four churches and Department officials. It is hoped that this will be published by DE in the next few months.

4. Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special schools.

- 4.1. It is difficult to know how widely the concept of ‘shared education’ is known or understood by the wider community. It is likely also that among principals, staff and governors there is a variety of understandings or interpretations of shared education. There is therefore a key communication and training strategy needed to ensure that the concept is better understood. In particular it is essential that the idea of local sharing solutions for local communities is stressed. A clear and accepted definition of shared education would certainly help along with examples of what is and what is not an acceptable expression of sharing.
- 4.2. Research carried out by QUB has shown that meaningful engagement in collaborative partnerships does benefit community relations. There is a considerable body of evidence to show the reconciliation benefits of sustained contact across school sectors. Research suggests that separate schooling is more likely to contribute to bias towards one’s own group and prejudicial stereotyping of those from other groups. By considering the impact of participation in the Shared Education Programme on cross-group friendships and intergroup anxiety, researchers have confirmed the value of contact as a mechanism for promoting more harmonious relationships. The TRC believes that shared education has demonstrated tangible positive benefits for enhancing good relations in communities and urges that it is a priority task for the Department and proposed Education authority.
- 4.3. The importance of support for schools in developing collaborative partnerships has been demonstrated. For the controlled sector this is more challenging as unlike the maintained, integrated and Irish medium sectors they currently have no sectoral support body. The TRC has strongly advocated the establishment of a controlled sector support body, and is pleased

that following the Minister for Education's recent proposals, the executive has agreed a way forward for the creation of a single education authority with a commitment to fund a sectoral body for controlled schools.

- 4.4. A key role for such a body will be to work alongside other support bodies in matters of mutual interest including promotion of tolerance and understanding. A vital component of this aim will be to develop potential for sharing and collaboration across sectors.
- 4.5. The TRC believes that Special Schools are an essential part of the educational provision among the community of schools. Teachers from Special schools have much to offer other schools in terms of skills and expertise in working with children with special educational needs. Additionally the inclusion of special needs pupils in partnership activities will do much to enrich the educational experience of all pupils. Special schools should therefore be included in any proposed shared education plans for a local area. Particular care should be taken to ensure they are included in any proposed partnerships.

Conclusion

A key requirement for the success of shared education is a long term commitment and strategic decision to develop a culture of collaboration. Shared education presents a good model contributing to a better society in NI as it moves forward from its difficult past. Sharing enables children who will eventually live and work in society to spend some of their childhood learning alongside children from other traditions. As Northern Ireland emerges into a brighter future it is important that we find ways of addressing inherited prejudices and negative stereotypes and that young people can be confident in their own identity and beliefs yet develop openness to and understanding of the outlooks of others. Shared education seems to offer one way to help these things happen, not by dismissing differences but by 'creating interdependencies and making boundaries porous' (QUB SEP Learning Forum conference report, 2012)

Ulster Teachers' Union

Position on Advancing Shared Education

UTU is a professional teaching union representing over 6000 teachers and principals in the nursery, primary, post-primary and special education sectors.

UTU believes that every child, regardless of cultural background, ethnicity, race or religion, should be given equal opportunity to access education and to reach their full potential.

UTU welcomed the announcement by the Minister of Education, John O'Dowd, in July 2012 regarding the establishment of a Ministerial Advisory Group on Advancing Shared Education to explore and bring forward recommendations as to how to advance shared education in Northern Ireland. The Group was independent of the Department of Education¹. The Advisory Group was based at Queen's University of Belfast's School of Education. It was chaired by Professor Paul Connolly (QUB) and the other members were: Dawn Purvis and PJ O'Grady.

The Advisory Group published their findings² on 22nd April 2013.

The Ministerial group's report was to inform the development of a strategy to achieve two commitments – namely:-

That all children have the opportunity to participate in shared education programmes.

That there is a substantial increase in the number of schools sharing facilities by 2015.

The Ministerial Group's Vision of Shared Education:

"Where schools collaborate across sectors to ensure that all children and young people have opportunities to learn together... Shared education can be the core mechanism for improving schools, increasing educational outcomes for all children and young people and preparing them to play a full and active role in building and sustaining an open, inclusive and confident society."

Shared education involves two or more schools or other educational establishments from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion"

"Teachers across the schools and/or educational institutions working together, whether it be in relation to training and professional development activities or curriculum planning and the delivery of lessons; and

Children and young people from across those schools and/or educational institutions actively learning together through face-to-face interaction, whether that is working together on specific projects or through participation in the same classes and/or the same sporting and extra-curricular activities."

The Northern Ireland Commissioner for Children and Young People, Patricia Lewsley, launched her report 'Shared Education - The views of children and young people' on the 24th April 2013³ and it will be important to listen to the views expressed in this report.

1 http://www.deni.gov.uk/index/schools-and-infrastructure-2/shared_education/shared-education-ministerial-advisory-group.htm

2 <http://www.qub.ac.uk/schools/SchoolofEducation/MinisterialAdvisoryGroup/Filestore/Fileupload,382123,en.pdf>

3 <http://www.niccy.org/Publications/policyandresearchreportsandpapers/policyandresearchreportsbydate/shared-education-views-of-children-and-young-people>

The Ulster Teachers' Union shares the vision of shared education as set out in the Ministerial Advisory Group on Advancing Shared Education Report. Many schools already collaborate across all sectors ensuring that all children and young people have opportunities to learn together we would agree that with continued support financially in this area we can continue to allow examples of good practice to be shown and modelled upon by other schools.

The current CRED funding isn't presently enough for every school to take part. The CREDIT courses run by QUB are currently oversubscribed and schools have no access to any other form of training and programmes.

Schools, Education, Teachers and Pupils play an important part in building and sustaining an open, inclusive and confident society as set out in the report and the UTU agree that Shared Education can be a core mechanism in moving this forward.

Pupils, regardless of gender, religion, class or locality should have access to the equal opportunities of Education in Northern Ireland.

The Ministerial Group have proposed twenty recommendations and the Ulster Teachers' Union have commented on each of them.

Mainstreaming Shared Education.

1. The Education Bill should be amended to place a statutory duty on the Department of Education to encourage and facilitate shared education as defined in this report. This should include reviewing all existing and proposed policies within education, and providing advice as required, to ensure that all activities seek to encourage and facilitate shared education where appropriate.

The UTU fully endorses that the Education Bill should be amended to place a statutory duty on Department of Education to encourage and facilitate shared education as defined in the report.

DE should establish a central unit, or identify an existing unit, that should take lead responsibility for encouraging and facilitating shared education. This unit should:

Develop and drive forward a strategy for advancing shared education that includes setting targets and goals, monitoring shared education activities and producing an annual report on progress being made;

Establish and maintain a regional structure for supporting schools and other educational institutions engaged in shared education; and

Commission research and evaluations into shared education and facilitate the sharing and dissemination of good practice.

The UTU supports the idea that a central unit should take lead responsibility for encouraging and facilitating shared education. It should be fully funded and easily accessible to all. Staff should be provided with adequate time and resourcing to carry out their role effectively.

3. As part of the proposed revised common funding formula suggested by Sir Robert Salisbury in his independent review for the Department of Education, a 'shared education premium' should be incorporated into the funding formula for schools and other educational institutions. This premium would recognize the added value of shared education and should be weighted in terms of:
 - The number of children and young people that are engaged in shared education activities, as defined in this report; and

- The proportion of school time that children and young people are engaged in such activities.

The UTU fully supports the proposal suggested by Sir Robert Salisbury in the independent review that a “shared education premium” should be incorporated into the funding formula to recognise the added value of shared education and should be weighted in terms of the number of children engaging in shared educational activities and the proportion of time that children and young people are engaged in such activities.

Supporting Schools in Shared Education.

4. Where schools and other educational institutions are in receipt of a shared education premium, the Education and Training Inspectorate (ETI) should include an explicit review of the use of that funding in its inspection reports particularly in relation to:
 - The added value of such shared education activities;
 - The value for money of the funding provided; and
 - The quality and effectiveness of the shared education activities.

The UTU fully agrees that where a shared education premium is received, then the ETI should include a review of how that funding is used in its inspection reports, especially in relation to:

- **The added value of such shared education activities:**
- **The value for money of the funding provided:**
- **The quality and effectiveness of such activities.**

The impact of shared education with regard to community cohesion.

5. The ETI should produce a biennial report that reviews the current range and extent of shared education activities across Northern Ireland, highlights good practice and makes recommendations regarding how these could be extended and enhanced, within the overall context of school improvement.

The UTU would welcome a complete evaluation on a biennial basis to inform, extend and enhance future provision disseminating best practice across all sectors.

6. The Department of Education, in its review of teacher education and continuing professional development, should develop a framework for supporting the early and continuing professional development of teachers that encourages its delivery through shared education and thus via effective collaboration between schools and other educational institutions. It is recommended that such a framework should encourage collaborative networks of schools and other educational institutions identifying their own professional development needs and being devolved appropriate levels of funding through the common funding formula to commission the training, courses and/or other support that they require from the most appropriate providers.

The UTU recognises that it is of utmost importance that a framework should be developed for supporting the early and continuing professional development of teachers that encourages its delivery through shared education. It is vital that this is fully funded and ring-fenced for Shared Education purposes.

7. ESA should ensure that all teachers and principals in schools and other educational establishments have access to a range of training courses and resource materials, and ongoing advice and support, to help them develop the particular knowledge and skills

associated with effectively organising and managing shared education activities and classes. This should include a focus on:

- Ensuring the meaningful participation of children and young people in the planning and delivery of shared education initiatives (see also Recommendation 11);
- Promoting positive relationships and dealing constructively with any negative incidents and poor interactions between children and young people that may arise;
- Covering sensitive topics and issues which might arise in the context of a diverse group of children and young people; and
- Developing and maintaining meaningful and effective relationships with parents and other care-givers.

The Ulster Teachers' Union fully endorses this recommendation and recognises the importance of each of the above points. However, on a cautionary note, it must be recognised that other agencies should support sensitive issues that arise. Voluntary and Community agencies who specialise in Conflict Resolution are best placed to lead workshops on sensitive issues (core issues that have been avoided in the past) both during teacher development training and pupil participation in programmes.

8. The Department of Education and the Department of Employment and Learning, in conjunction with the higher education institutions responsible for delivering teacher training and professional development courses, should review existing provision to consider appropriate mechanisms for collaboration to ensure that student teachers and teachers returning for professional development can be provided with opportunities to learn together, including in relation to preparation for teaching through shared education.

- **The UTU supports this recommendation as being an essential ingredient if shared education is to be successfully implemented.**
- **Best practice is emerging from CREDIT training programmes QUB.**
- **Teachers currently train together at ELB level**
- **Teacher Training Colleges need a Shared Programme**

Schools and Other Educational Institutions

9. Schools and other educational establishments should develop more meaningful relationships with parents and caregivers to ensure that their rights to be involved in the education of their children are fully respected and supported. To achieve this, it is recommended that:

- DE establish an appropriate network that supports schools and other educational institutions in developing relationships with parents and care-givers and in creating and sharing best practice regionally; and
- Schools and other educational establishments include a specific section in their Development Plans, that includes clear plans and goals, for how they intend to engage parents and caregivers and ensure their active and sustained support in the education of their children.

The Ulster Teachers' Union is in full support of both parts of recommendation number 9. Recognition of the important role played by carers and supporters is essential and it is vital that parents and carers "buy-in" to the advancement of shared education if it is to be implemented successfully. This also promotes the DE strategic plan for Parental involvement in the work of schools.

It is important to recognise Voluntary/Community groups who already exist and deliver conflict resolution/shared programmes and build upon the good practice already there.

- 10 An independent review should be undertaken of current practice in relation to the delivery of:
- Personal, Social and Emotional Development (Pre-School Education);
 - Personal Development and Mutual Understanding (Foundation Stage and Key Stages 1 and 2);
 - Local and Global Citizenship (Key Stages 3 and 4); and
 - The Curriculum Framework for Youth Work (Youth Service).

The Ulster Teachers' Union fully support this recommendation and call upon the independent review of current practice to be carried out as soon as possible but allowing for enough time for respondents to give a full and measured response. It is also essential that all key stakeholders have an input to this review. It may be necessary for information to be collected in a variety of ways due to the scope of the review.

This must include a collation of existing voluntary and community organisations that have programmes delivered in an educational setting. Many of these organisations already address the above curricular areas and all schools should be able to access their resources and services.

11. In fulfilment of its duties under Article 12 of the UNCRC, the Department of Education should make it a requirement that all schools establish School Councils. Within this, School Councils need to:
- Be fully representative of the school body and of all year groups;
 - Provide a mechanism for consulting children and young people on all school matters that affect them, including plans for shared education activities;
 - Support children and young people in forming and expressing their views; and
 - Include appropriate mechanisms for the views of children and young people to then be considered and given due weight by the school.

The Ulster Teachers' Union support the call for all schools to establish School Councils as a mechanism for children's views to be considered. Furthermore, it is important that these bodies be given due weight by schools.

12. The necessary legislation should be brought forward for schools and other educational institutions to be designated as 'public authorities' under Section 75 of the Northern Ireland Act 1998 and thus to be required to comply with the statutory duties to promote equality of opportunity and good relations. In doing this, consideration should be given to whether it is possible to reduce the demands that will be placed on schools and other educational institutions in terms of meeting their specific responsibilities under Section 75 whilst maintaining their core duties to promote equality of opportunity and good relations.

The Ulster Teachers' Union supports recommendation no.12 that Section 75 of the Northern Ireland Act 1998 be legislated for in a manner in which schools and educational institutions can promote equality of opportunity and good relations without placing upon them added bureaucracy.

13. The Education and Skills Authority, in conjunction with the Equality Commission for Northern Ireland, should establish a unit to provide training, produce support materials and to advise schools and educational institutions in relation to preparing, implementing and monitoring the equality schemes they would be required to produce under Section 75. It is expected that one aspect of meeting the duty to promote good relations will include engagement in shared education initiatives.

The Ulster Teachers' Union supports the establishment of a fully funded and easily accessible unit where staff can offer support and networking opportunities to schools wishing to avail of shared educational initiatives. We would also point out that there are

also good examples and personnel who already use shared education in practical and substantive ways. These examples should be used and disseminated in practical and meaningful ways

14. The Department of Education should undertake a review of how shared education, and the enhanced collaboration between mainstream schools, special schools and educational support centres, can most effectively meet the needs of children and young people with disabilities, those with emotional and behavioural difficulties and those with special educational needs. The review should focus on the development of effective models for collaboration that can:
- Ensure, wherever possible, that children and young people are taught in mainstream schools; and
 - For the small minority of children and young people where mainstream schooling is not suitable, that they have meaningful opportunities to learn with children and young people in mainstream school environments.

The Ulster Teachers' Union agree that all schools and educational centres should have equal access to shared education programmes outside of their own sector. The UTU would welcome further collaboration between mainstream and special schools and educational support centres.

Area-Based Planning and the Schools Estate

15. The Department of Education, Education and Library Boards and the CCMS should play an active role in promoting shared education through the area-based planning processes for
- post-primary and primary schools. This should include: Being proactive in identifying opportunities for shared education that may not have been considered and setting out options for schools and colleges to consider; and
 - Supporting and advising schools that wish to develop shared education arrangements, including providing advice on how two or more schools can transfer their status into a 'shared school' whereby they maintain their respective forms of ethos.

The Ulster Teachers' Union firmly believe that Shared Education must be promoted in an active and feasible manner. Schools, School Leaders, Boards of Governors, Teachers, Parents and Pupils must be supported, advised and provided with realistic, feasible and long-term workable arrangements that allow shared education to be developed and sustained with the Educational needs of all students at the heart of the arrangements.

16. Where there is sufficient, viable and consistent parental demand, the Department of Education should actively support the establishment of schools and other educational institutions with a particular religious, philosophical or cultural ethos.

The Ulster Teachers' Union feel that the Department must produce clear and consistent guidelines on what sufficient, viable and consistent parental demand would entail.

17. In relation to all existing schools, the Department of Education should:
- Establish a transformation process for schools where there is clear parental demand wishing to adopt a particular ethos – whether, for example, this be faith-based, integrated, secular or Irish Medium – and to ensure that it is user friendly and not bureaucratic and that parents are made aware of their powers under the processes established;
 - Identify how, in the light of parental demand, the process can be made easier whereby a school can incorporate the badge of a particular school type or sector in its title; and
 - While recognizing the responsibility of the Department to ensure the viability of schools in each local area, where there is clear evidence of over-subscription, it should allow existing

schools to expand, in a phased and careful manner, in order to meet the demand that exists among parents.

While the UTU supports recommendation 17 we would express some concerns that only the Department of Education will be having an input into viability of schools. It is important that all key stakeholders are allowed time to respond to any transformational process that has been suggested for schools.

NICIE currently offer the 'Positive Partnerships for Integration' model which includes all stakeholders in a carefully planned and supported transformation.

Academic Selection

18. The Northern Ireland Executive should, without delay, introduce the necessary legislation to prevent schools from selecting children on the basis of academic ability and require schools to develop admissions criteria that are truly inclusive and egalitarian in nature.

The Ulster Teachers' Union fully support this recommendation and again call for an end to academic selection and any practice of un-regulated testing. The labelling of children at 11 as failures is wrong.

19. The Department of Education, through the area-based planning process should consider how best to plan for sustainable post-primary schools with all-ability intakes. In doing this, the Department should have regard for parental demand in each local area for schools with a different religious, philosophical or cultural ethos and make every effort to ensure diversity of provision to meet this demand where it is feasible.

The Ulster Teachers' Union feel that the Department must produce clear and consistent guidelines on how sustainable post-primary schools will be provided and catered for. As there are many issues to consider stakeholders must be able to express opinions on meeting the needs of the local community. If shared education is to be successful the stakeholders must be able to agree long term solutions which are in the best interests for the pupils, parents and community.

20. The Department of Education should initiate a fundamental review of the use of selection *within* schools with all-ability intakes to explore the benefits and limitations of different models of banding and streaming. The review should be tasked with making recommendations regarding how best to take forward selection within schools so that all children and young people reach their full potential.

The Ulster Teachers' Union agree that models of banding and streaming should be explored by the Department of Education reviewing the many different models which are currently used by schools. However we believe that Principals, School Leaders and Boards of Governors should be able to form their own opinions and have in place a system of class placements which will benefit the students and ethos of every particular school.

UNESCO - Professor Alan Smith

Submission to the Northern Ireland Assembly Education Committee Inquiry into Shared and Integrated Education

**Professor Alan Smith
UNESCO Chair, Ulster University
(November 2014)**

Professor Alan Smith is UNESCO Chair in Education at Ulster University with over 30 years experience of education policy and development in Northern Ireland, including advice to the Department of Education on community relations, sharing and integration and as a member of Ministerial Working Groups following the Agreement. He was a contributing author to the 2011 UNESCO Global Monitoring Report which focused on education and conflict, and is currently a technical advisor to a \$200 million UNICEF programme researching education and peacebuilding in 14 conflict affected societies in Africa, Asia and the Middle East.

Shared Education

1. The concept of shared education is not a new one. Contact and sharing between schools has been taking place at various levels for over 30 years. For example, research from the 1980s focused on the development of inter-school links between schools from different sectors in Strabane, Limavady and Enniskillen – the same communities that are represented in Shared Education programmes today.
2. Many of the practices from these early programmes (sustained and regular contact, a curriculum focus, shared classes rather than fragmented events) are being claimed as ‘new innovations’, and some of the challenges raised about mainstreaming (financial costs, logistical challenges, and sustainability both in terms of level of contact that is achievable and the ability of schools to absorb costs once external funding is unavailable) were also identified in this early research and development work.¹

¹ Smith and Dunn (1990) Extending Inter School Links: An evaluation of contact between Protestant and Catholic pupils in Northern Ireland, Centre for the Study of Conflict.

<http://cain.ulst.ac.uk/csc/reports/extend.htm>

3. There is no compelling evidence to suggest that these important policy concerns have been resolved in the intervening 30 years. In fact, based on the Department's own data the evidence suggests quite the opposite. On previous occasions when the Department has cut funding for shared education the result has been a dramatic drop in school participation. For example, when the Department of Education cut funding for inter school contact from £4.5 to £1.1 million in 2009, the number of pupils participating dropped from 10% to 3.8%.²
4. There are positive aspects to shared education. It has been delivered in difficult circumstances and in challenging funding landscapes, primarily through the dedication and hard work of committed teaching and school management staff. However, the primary focus is on change at the interpersonal and intergroup levels. The Department Business Plan for Shared Education (p.49) identifies three main measures of this aspect (Cross group friendships; Positive action tendencies; and Intergroup anxieties). These will measure any progress achieved by shared education programmes, but the baseline should also include the same measures for integrated schools where one might expect equally positive results given that pupils are in sustained contact on a daily basis.
5. More importantly, this focus on interpersonal and intergroup relations does not tell us how any attitudinal or behavioural changes can have an impact on institutional and systemic change. In other words, there is no evidence to suggest that these changes would lead in the direction of more inclusive schools or a more integrated education system. Indeed, the recent literature on shared education seems to avoid stating whether this would even be a desirable outcome.
6. The current policy debate is of utmost public concern due to a number of issues:
 - Court rulings critical of the Department of Education's interpretation of its statutory duty to 'encourage and facilitate' integrated education in Northern Ireland.
 - A policy shift by the Northern Ireland Executive towards shared education and away from its statutory duty to 'encourage and facilitate' integrated education (Art 64, NI Education (1989) Order), as evidenced through commitments in the *Programme for Government* and the *Together: Building a United Community Strategy*.
 - This shift incentivised by philanthropic funding supporting shared education projects.
 - A proposed £25 million programme from the NI Executive to fund shared education.
 - The creation of 10 'shared campuses' by 2018 one of which will cost £125 million.

Government Proposals to Invest in Shared Education

7. The Department of Education has recently developed a business plan to promote a £25 million Shared Education project in Northern Ireland schools over the next four years. Closer inspection of the Business Plan reveals a number of problems and suggests that shared education may be an expensive diversion in the current economic climate which invests in separate schooling rather than tackling what is a de facto segregated education system. This is a time to pause and ask if this course of action is the best use of taxpayers' money in a climate of increasing financial cuts to frontline education services.

² OFMDFM 'Good Relations Indicators – 2012 Update', published Jan 2013.

The costs of shared education projects are not realistic and the full cost is not sustainable.

8. There are a number of concerns with the Department Business Plan, not least that the full cost is unsustainable, even in the short term. The Business Plan estimates that scaling the programme up to apply to the entire system would cost £44 million, but there is no plan for sustainability beyond a commitment from the current Education Minister that the costs will be 'mainstreamed' after four years. The Department's own cost analysis indicates that the annual running cost at the end of four years if scaled up will be £15 million per year (equivalent to £20,000, or one Special Needs Assistant per school) and this will need to be absorbed into already shrinking school budgets. It is not a sustainable solution for schools to find this amount over and above other costs at a time of massive cuts in expenditure. We know from previous experience in community relations that when additional funding runs out schools simply cannot afford to maintain programmes and they have to be cancelled.
9. We also know that these are costs that will need to be incurred every year onwards because the Department's own business case indicates that, of the £25 million allocated to shared education, £5 million will be spent on transport, and a further £15 million on additional teacher cover and other programme costs such as facilitators and renting premises (p.22-23). It also means pupils spending a great deal of their time moving between schools to take part in classes at different times of the week. Simply put, this involves a level of pupil movement between schools which will sound unrealistic and unachievable to most practising teachers and prove a logistical nightmare for most school principals.
10. Perhaps most worrying is that the Plan envisages that only 65% of schools (762) are likely to participate in the programme since the rest will be too isolated to participate (p.19) – ironically the business plan states that *'the application criteria will exclude schools currently working in isolation'* (p.18) which seems to completely defeat the purpose of shared education by excluding the most important target group of the initiative.

Added bureaucracy and administrative costs

11. The Business Plan also plans to set up a bureaucratic structure of committees (at 5 different levels) to oversee the project, including 15 new advisory posts at £36,000 per year (the equivalent of 25 newly qualified teachers), plus additional administrative posts, at a time when the intention is to streamline the Education and Library Boards and reduce costs. It is depressingly clear that the greater part of this investment will be used up on bureaucracy and logistics, while the future of many front line staff is under threat.

The legal basis for spending taxpayer's money on shared education is not clear.

12. The Department Business Plan identifies two pieces of legislation that it suggests provide a basis for spending public funds on shared education:

Article 64 of NI Education (1989) Order to ‘encourage and facilitate’ integrated education (yet a judicial review recently ruled that shared education is a different concept from integrated education, therefore this programme would not be a fulfilment of that duty); and

Section 75 of the 1998 NI Act requires all public bodies to promote equality and avoid discrimination – this does not currently apply to schools, but it does not need to be introduced through Shared Education – OFMDFM already has the power to change this by simply making all schools subject to Section 75.

13. Presumably the lack of a strong legislative basis for spending public finance on shared education is one reason why the Department wishes to create a definition of shared education. This would be a mistake for a number of reasons. Firstly, it would be contrary to the existing statutory duty to ‘encourage and facilitate’ integrated education which the recent High Court ruling by Justice Treacy is not the same as shared education.³ Secondly, it would actually leave the Department open to new legal challenges if it fails to meet the extremely challenging targets set by the Shared Education business plan.

Shared Campuses (Omagh presented as the ‘flagship’ costing £125m)

14. Shared education is just one of two ‘flagship’ initiatives outlined in the business plan - the other is to create 10 ‘shared educational campuses’ by 2018. The plan to bring together six separate schools on one site in Omagh will cost approx £125m, however the logistical challenges of bringing 4,000 pupils together on a single campus, but attending separate schools, each with its own principal, staff, most likely different uniforms, arriving daily to enter separate buildings, share some facilities, but probably leaving on separate buses at the end of the school day, are huge. It is not clear what the added value of this is.
15. International examples include building ‘two schools under one roof’, which is fraught with problems, for example, in Bosnia, where a two schools under one roof system has heightened animosities leading to the Bosnian Supreme Court declaring them illegal (November 2014).⁴
16. The Organization for Security and Cooperation in Europe (OSCE) has also carried out research and spoken against the concept of ‘two schools under one roof’.⁵
17. The UN Special Rapporteur on the right to education, Vernor Muñoz Villalobos made a report to the UN General Assembly (2007) and raised concerns about ‘the excessive fragmentation and politicization of the education system; and the segregation between ethnic groups’.⁶
18. UNICEF (2009) has also produced a research report on the negative impacts of the divided school system Report (2009) on Divided Schools.⁷

Is Current Policy Approach Really Transformative?

19. Despite the rhetoric, little has changed in more than 30 years; 93% of our children continue to attend separate schools based on religious affiliation, separation of our children through education during their formative years is systematic and funded by tax payer's money - this is not a good foundation for an integrated workforce that can compete within a global economy.
20. In the current economic context, with dire warnings over the future of up to 2,500 teaching and support staff in our schools, surely it is time to tackle the fundamental, unnecessary, and financially unsustainable divisions in our education system. Government should not continue to hide behind the smokescreen of 'parental choice'. In reality parental choice is limited by what government chooses to provide.
21. Current government policy is at odds with the wishes consistently expressed by parents that their preference is for all children to attend school together in the same classroom on a daily basis. International experience shows that culture and faith can be respected and provided for within common schools without any detriment to the quality of education - in fact, some would argue that the quality of education is enhanced in these more plural environments.

Some Alternative Proposals for Discussion

This submission should not be seen as a counsel of despair – much good work goes on in our schools on a day to day basis, led by committed teachers. But our teachers and school management should not be the people left facing insurmountable funding decisions in four years when the choices may come down to funding limited sharing or cutting back on front line staff. More sustainable options for the millions to be spent on Shared Education are available, many could be implemented immediately and hold the transformative power that shared education seeks to deliver:

- Instead of using the four-year £25 million fund to promote contact between separate schools, equivalent levels of funding should be offered to schools and Boards of Governors that wish to explore possibilities of **voluntary amalgamations between the traditional school sectors**. The Department should 'encourage and facilitate' this sort of structural and systemic change over the next 4-5 years, rather than underwriting separate schooling.
- Instead of reinforcing existing school sectors why not introduce a range of measures that open up all schools to the possibility of becoming more plural and diverse, in terms of their **management, their workforce and their enrolments**:

- ✓ **Make all schools subject to Section 75** – this could be a much more direct way of ensuring equality and non discrimination and already within the power of the Executive to implement
- ✓ Change the regulations for **governing bodies** so that every school has a Board of Governors composed of people from diverse backgrounds since all schools are funded by all tax payers.
- ✓ Remove the exemption of schools from **Fair Employment legislation** so that we can begin to see our children taught by teachers from diverse backgrounds rather than one tradition.
- ✓ Fund **teacher education** arrangements that educate our student teachers together. Encourage them to seek employment in any school, rather than the current perception among many student teachers that they are more likely to be employed in the sector associated with their own tradition. (A single teacher employing authority to oversee the fair employment and universal deployment of teachers)
- ✓ **Facilitate genuine parental choice** by giving parents a real say in any education planning decisions that will affect their children, rather than continue with planning arrangements based on the consolidation of traditional 'sectors'.
- ✓ Incentivise and reward existing schools to **recruit more pupils from other traditions.**

WELB 1

Shared and Integrated Education Inquiry Request for Written Evidence

Terms of Reference No 1

Nature and definition of Shared Education and Integrated Education across all educational phases – including the need for a formal statutory definition in statute to facilitate and encourage Shared Education

The Western Education and Library Board (WELB) welcomes the opportunity to contribute to the Committee for Education's inquiry into Shared/Integrated Education. The WELB believes that 'Shared Education' is 'an umbrella term' (currently without a statutory basis) which is encompassed in the following diverse models that it has supported:

1. Non-Denominational Controlled Primary Schools with significant multi-denominational enrolment , e.g. Ballykelly PS; Culmore PS; Greenhaw PS; Londonderry Model PS; Sion Mills PS, Strabane Controlled PS;
2. Controlled Irish Medium Education;
3. Collaboration between schools from different sectors;
4. Area Learning Communities involving schools from different sectors e.g. Post Primary Area Learning Communities and the emerging Primary Area Learning Communities;
5. Integrated Education arrangements i.e. transformed and designated integrated schools' e.g. Groarty PS;
6. Shared Sustainable Educational Campuses (e.g. Lisanelly Shared Education Campus (LSEC), Limavady High School and St Mary's Limavady and the proposed Brookeborough Shared Campus);
7. Proposed Shared Cross-Border Collaboration between Schools involving St Mary's HS, Brollagh; and
8. Collaboration with the Further Education Colleges.

The WELB is of the view that the way forward is in 'integrating education' and in terms of its understanding of Shared Education, would therefore suggest that formal Integrated Education is only one facet of Shared Education. It does not believe that Shared Education and Integrated Education are synonymous. The Integrated Sector is a legal entity, with a statutory underpinning, and through its admissions criteria and, more recently, it enrolls approximately equal numbers of pupils from Catholic and Protestant backgrounds (40% of each), as well as some from other religious and cultural backgrounds (20%), and also caters for the religious observances of both the Catholic and Protestant sectors.

In light of Article 64 (1) of The Education Reform Order (NI) 1989, which states: '*It shall be the duty of the Department to encourage and facilitate the development of integrated education, that is to say the education together at school of Protestant and Roman Catholic pupils*', the WELB is of the view that the legal definition of integrated education is becoming increasingly difficult to define in its own right, with the introduction of the category 'Others' ie pupils from other religious and cultural backgrounds. Examination of the legal definition prompts the question as to what '*integrated education*' means in the Order, as opposed to 'Integrated Education' and if it is implied that '*integrated education*' is an 'umbrella term' and 'Integrated Education' is a Sector within it. Since there is no current legislative provision

for the accommodation of ‘Others’, the WELB would query if existing legislation in this area requires to be suitably amended with a view to encompassing all sections of our society.

In light of the above, it is very important, therefore, to point out that whilst the criteria of controlled schools do not dwell on the issue of religious balance; nevertheless, the composition in terms of the religious intake of many of them is similar to that of Integrated Schools – with the intakes of such schools being made up of Protestant, Catholic and Others, See Pages 3 and 4 overleaf. Such schools cannot have a particular religious denominational ethos. The Education and Libraries (NI) Order 1986, Article 21 (2) states that: ‘In a controlled school the religious instruction required by paragraph (1) shall be undenominational religious instruction’. The WELB, therefore, considers that such schools, whilst not formally categorised as ‘Integrated Schools’, can increasingly be regarded, in practice, as ‘integrated’ and as such the Department of Education (DE) has also a duty to encourage and facilitate their development.

The WELB is also of the view that because the Controlled Sector is non-denominational in nature, all models of Shared Education, therefore, sit comfortably within this Sector’s remit. The important difference here is that a community has chosen to send its children to its nearest controlled school because it is non-denominational in category. Some controlled schools prefer a governance model that includes four Transferor Representatives whilst others have opted for controlled/integrated status, with two Transferor and two Trustee Representatives respectively, and also prefer to be managed and supported by an Employing Authority (i.e. ELB or CCMS), as opposed to being grant-maintained.

In the promotion of Shared Education and Integrated Education, the WELB would be concerned that the existing work, in terms of natural sharing, within its controlled schools, as detailed below, would be disadvantaged in terms of receiving support from the Signature Project for Shared Education, as the planned funding available for Shared Education is directed towards two, or more, schools from different communities, working together. This would seem to ignore the natural sharing which has evolved, over a number of years, in some schools within the WELB, as shown overleaf.

There is a need for all schools to be treated fairly in the promotion of Shared Education, including the need for the DE to ensure its Open Enrolment and Home to School Transport Policies do not disadvantage or displace provision in some sectors, due to the growth of other sectors.

Census Data - October 2013

	No	Sector	Protestant		Catholic		Other Christian / Non-Christian / No religion		Total pupils
			N	%	N	%	N	%	
1 Breakdown of all schools in WELB area (excluding Nursery) by religious denomination

1%		4%		0%		1%		0%

The WELB would strongly recommend that a **baselining exercise** be undertaken, in the form of an analysis of the intakes to all schools in Northern Ireland (NI), to get a strategic overview as to the extent to which Shared Education is already taking place in practice, as in some cases there may not be recognition of this, and in also to get a better understanding of where

funding for Shared Education needs to be targeted. This analysis needs to be comprehensive and take into account the following categories of schools so that the relevant models can be applied according to the nature and appropriateness of the sharing being undertaken:

- Nursery Schools – Controlled, Nursery Units and Community Nursery Schools;
- Controlled Primary and Post Primary Schools (i.e. non-denominational schools);
- Controlled Integrated Primary Schools
- Maintained Primary and Post Primary Schools;
- Grant Maintained Integrated Primary and Post Primary Schools;
- Controlled Special Schools;
- Controlled Irish Medium Schools, Irish Medium Schools and Units;
- Voluntary and Voluntary Maintained Post Primary Schools; and
- Bi-lateral Schools.

It is important to understand the extent to which certain schools can already be recognised as ‘shared’ before creating an additional ‘category’ of school under the auspices of Shared Education, as this may only be duplicating an existing model.

The WELB is of the view that where Shared Education has been, and is being practised and embedded in certain controlled primary and post primary non-denominational schools, it should be recognised in the proposals contained in the Signature Project for Shared Education.

Terms of Reference Number 2

Key Barrier/Enablers for Shared and Integrated Education

The key enablers for Shared and Integrated Education are:

- Strategic Plan in place by the DE for cross-sectoral collaboration;
- DSC Shared Education Signature Project and Shared Campuses Project are inextricably linked and should work in partnership (ie Estates and Curriculum);
- Policy Framework for Shared Education should be consistent with DE’s other Policies including the Community Relations Equality and Diversity (CRED) Policy;
- Strong collaborative leadership within schools;
- Schools’ curricula sufficiently advanced before responding to the challenges of Shared Education;
- The constitution of the Boards of Governors is not ‘partisan’ but reflects the religious balance in the school to facilitate the promotion of a Shared/Integrated ethos;
- History of close collaboration;
- **Rurality/Close geographical location of schools;
- Cohesion within the community and support for Shared Education (fundamental) and ability to build on community support;
- Facility for transformation from one sector to another;
- No one sector owns the land on which the schools are built (eg LSEC);
- Appropriate governance model for Shared Education Campuses; and
- The identification of appropriate legislation to allow Shared Campuses to be created; and
- Academic Selection.

**There is evidence in the WELB that small rural schools have much to offer each other, in terms of Shared Education, as recently affirmed by the Education and Training Inspectorate (ETI) in the case of a recent Primary School's inspection in Co Fermanagh, which was classified as 'Outstanding', and where it was noted the primary school had: 'well established links' with its neighbouring small schools in the areas of music, drama and physical education. The concept of a 'Shared Education Cluster' also exists in the WELB where Principals and Senior Teachers deliver shared staff development, shared pupil learning and shared parental evenings.

The key barriers to Shared Education are:

- The lack of statutory underpinning with no legislative requirement to share;
- No Strategic Plan in place for cross-sectoral collaboration;
- DSC Shared Education Project and Shared Campuses Project working in isolation;
- Policy Framework for Shared Education not consistent with the DE's other Policies;
- Weak collaborative leadership within schools;
- The composition of Boards of Governors is not representative of the religious balance in the school to promote a Shared/Integrated ethos;
- Rurality/Geographical location of schools which are distant from each other;
- Public perception of Shared Education and potential community opposition;
- Proposer of the Shared School (cf Article 14) [Employing Authority]; i.e. Composition of Board of Governors, ethos, etc;
- Inflexibility of the DE Handbook with regard to Shared Schools;
- One sector owns the land on which the schools are built, leading to an adverse impact on public perception;
- Uncertainty as to how Shared Education will be financed in the long term;
- Management and remuneration of teachers on a dual/shared site and
- how employment-related issues (Terms and Conditions of Service) are dealt with;
- A need for an appropriate Scheme of Management for Shared Schools;
- Admissions Policy/Criteria for Shared Schools;
- Lack of financial and legal representation on any Group responsible for Shared Education;
- Lack of funding through the Common Funding Formula;
- Implications for Home to School Transport Policy;
- The negative impact of 'capping' on some schools' intakes by the DE; and
- Academic Selection.

Terms of Reference No 3

Identification and analysis of alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes

The WELB is of the view that this aspect of the Terms of Reference is not relevant in that historical factors, the Local Management of Schools and the large number of small schools in Northern Ireland, all make it difficult to implement models of good practice from other jurisdictions. However, in the WELB, models of good practice exist in Ballykelly PS; Culmore PS; Greenhaw PS; Londonderry Model PS; Sion Mills PS, and Strabane Controlled Primary Schools, without any additional funding for Shared Education at present – an issue that needs to be addressed in the 'roll-out' of the DSC Shared Education Signature Project.

Terms of Reference No 4

Priorities and actions that need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools

In order to improve the levels of sharing and integration, there is a need to ensure a coherent Policy Framework exists, which establishes a clear purpose and rationale for the approach. The CRED Policy has a wide scope in terms of addressing issues of equality and good relations across all the Section 75 Groups. Since this has only been in place three years, the extent to which this Policy is impacting on schools needs to be assessed. The assessment of the effectiveness of the CRED Policy will be an outcome of the forthcoming inspection by the ETI later this year. The outcome of this process will need to inform how the Policy should develop and what actions need to be taken to strengthen this area of educational priorities in NI.

Shared Education is clearly linked to the CRED Policy in respect of those aspects related to reconciliation and good relations work within and between schools. However, there is clearly a need for the development of a Policy Framework in this area which sets out clearly the rationale, aims and purposes of this work. Such a Policy needs to take cognisance of a range of other relevant educational policies, including the CRED Policy and the 'Every School a Good School' suite of Policies. In the absence of such a Policy, there is the potential for 'Shared Education' to be misunderstood and misinterpreted. It is the WELB's view that 'Shared Education' needs to be recognised as one approach to good relations work. However, it is not the only one.

Shared Education, to date, between mainstream schools has been supported with external funding. Given that a range of programmes, involving sharing, have already taken place, future practice in this area needs to be informed by rigorous evaluation, to objectively ensure that resources are being used effectively and are achieving the outcomes identified in the Policy. In advance of 'rolling out' the Signature Project, there is a requirement for the DE to have a strategy for the monitoring of funding and, therefore, a requirement to baseline the current position to identify the sharing and collaboration in schools, funded and non-funded. A baseline will then allow for:

- any financial data to be collated of the cost of 'rolling out' Shared Education to date;
- educational or non-educational measurements against which the funding for Shared Education can be compared; and
- consideration of a cost/benefit analysis before committing to new funding.

The scale and scope of the DSC Signature Project for Shared Education provides an opportunity for a robust baselining exercise and evaluation of the impact of the Programme.

It is evident that, to date, there has been a commitment to Shared Education as long as there is adequate funding to support the teaching staff. The WELB would ask the question: *'If schools were asked to subsidise the additional cost of Shared Education from their own resources, would there be the same commitment to it as there was when they were funded for its implementation?'*

Prior to committing to Shared Education Programmes, schools will require reassurances with regard to the following:

- duration of additional funding for Shared Education;
- funding and managing absence cover for sickness and maternity leave;
- cost of training;
- managing staff during school closures;
- cost of travel; and

- *commitment required if funding is withdrawn.*

In relation to working with parents and carers, there is already a strong commitment to this partnership reflected in 'Every School a Good School: a Policy for School Improvement'. This Policy may need some further development in the context of a 'Shared Education Policy'.

In closing, and in line with the Terms of Reference supplied, the WELB is of the view that with regard to:

Terms of Reference No 1:

- 1(a) better definitions and criteria are needed in statute to define 'shared' and 'integrated' education as 'Shared Education' means different things to different people;
- 1(b) Shared Education should be implemented with a view to it being 'mainstreamed' into the education system in NI and should not be viewed in isolation as 'a project';
- 1(c) criteria should be drawn up that demonstrate 'mainstreaming' has been achieved in the absence of funding in the long-term;
- 1(d) schools should not be funded unless their vision is to embed Shared Education as 'a way of working';
- 1(e) a capacity building programme should be developed for school leaders that concentrates on developing collaborative leadership and equips schools with the 'tools' to monitor and evaluate progress along the Shared Education continuum; and
- 1(f) thought needs to be given to those schools that do not engage in Shared Education and the impact of their disengagement on the system as a whole.

Terms of Reference No 2:

The enablers and barriers should be addressed as soon as possible.

Terms of Reference No 3:

Existing models of good practice should be recognised and built upon as opposed to importing 'models from other jurisdictions'.

Terms of Reference No 4:

A coherent Policy Framework should be developed for Shared Education that complements existing relevant educational policies.

WELB 2

Western Education and Library Board: Update on Shared Campus Proposals

To date, the WELB has received three proposals: Limavady Shared Campus, Brookeborough Shared Campus and Digital Derry. All three were endorsed by both WELB and CCMS.

The Limavady Shared Campus was successful in the first call of the Programme. The schools worked with the WELB in preparing the documentation.

Brookeborough Shared Campus was unsuccessful in the first call with the proposal being prepared by the schools and Fermanagh Trust. In submitting a proposal under the second call, the WELB and CCMS working with the school Principals and Governors, prepared the main report with supporting information provided by the school. Meetings have also taken place with DE to outline the vision for the proposal.

Digital Derry – WELB and CCMS endorsed the proposal which may require additional information for DE.

The WELB did not receive any other proposals nor did any school contact the WELB with regarding to sharing which they would like explored/developed.

RW/CS

27 February 2015

Dear Mr McCallion

Inquiry into Shared and Integrated Education

I write in response to your letter dated 13 February 2015, regarding the Inquiry into Shared and Integrated Education.

In your letter you are seeking clarity with regard to the constitution of Boards of Governors in Controlled Schools and the facilitation of a Shared/Integrated ethos.

In its paper submitted to the Education Committee for its Inquiry into Shared/Integrated Education, the WELB, under the Terms of Reference – Key Barriers/Enablers for Shared/Integrated Education, indicates that where: 'The constitution of Boards of Governors reflects the religious balance in the school', then this promotes the promotion of Shared/Integrated Education in all schools not in controlled schools in particular, as indicated on Page 6 (enclosed).

I trust this response clarifies your query.

Yours sincerely

BARRY MULHOLLAND
CHIEF EXECUTIVE

SHARED AND INTEGRATED EDUCATION INQUIRY
REQUEST FOR WRITTEN EVIDENCE

Terms of Reference No 1

Nature and definition of Shared Education and Integrated Education across all educational phases – including the need for a formal statutory definition in statute to facilitate and encourage Shared Education

The Western Education and Library Board (WELB) welcomes the opportunity to contribute to the Committee for Education's inquiry into Shared/Integrated Education. The WELB believes that 'Shared Education' is *'an umbrella term'* (currently without a statutory basis) which is encompassed in the following diverse models that it has supported:

1. Non-Denominational Controlled Primary Schools with significant multi-denominational enrolment , e.g. Ballykelly PS; Culmore PS; Greenhaw PS; Londonderry Model PS; Sion Mills PS, Strabane Controlled PS;
2. Controlled Irish Medium Education;
3. Collaboration between schools from different sectors;
4. Area Learning Communities involving schools from different sectors e.g. Post Primary Area Learning Communities and the emerging Primary Area Learning Communities;
5. Integrated Education arrangements i.e. transformed and designated integrated schools' e.g. Groarty PS;
6. Shared Sustainable Educational Campuses (e.g. Lisanelly Shared Education Campus (LSEC), Limavady High School and St Mary's Limavady and the proposed Brookeborough Shared Campus);
7. Proposed Shared Cross-Border Collaboration between Schools involving St Mary's HS, Brollagh; and
8. Collaboration with the Further Education Colleges.

The WELB is of the view that the way forward is in *'integrating education'* and in terms of its understanding of Shared Education, would therefore suggest that formal Integrated Education is only one facet of Shared Education. It does not believe that Shared Education and Integrated Education are synonymous. The Integrated Sector is a legal entity, with a statutory underpinning, and through its admissions criteria and, more recently, it enrolls approximately equal numbers of pupils from Catholic and Protestant backgrounds (40% of each), as well as some from other religious and cultural backgrounds (20%), and also caters for the religious observances of both the Catholic and Protestant sectors.

In light of Article 64 (1) of The Education Reform Order (NI) 1989, which states: *'It shall be the duty of the Department to encourage and facilitate the development of integrated education, that is to say the education together at school of Protestant*

and Roman Catholic pupils, the WELB is of the view that the legal definition of integrated education is becoming increasingly difficult to define in its own right, with the introduction of the category 'Others' ie pupils from other religious and cultural backgrounds. Examination of the legal definition prompts the question as to what '*integrated education*' means in the Order, as opposed to 'Integrated Education' and if it is implied that '*integrated education*' is an 'umbrella term' and 'Integrated Education' is a Sector within it. Since there is no current legislative provision for the accommodation of 'Others', the WELB would query if existing legislation in this area requires to be suitably amended with a view to encompassing all sections of our society.

In light of the above, it is very important, therefore, to point out that whilst the criteria of controlled schools do not dwell on the issue of religious balance; nevertheless, the composition in terms of the religious intake of many of them is similar to that of Integrated Schools – See Pages 3 and 4 overleaf, with the intakes of such schools being made up of Protestant, Catholic and Others. Such schools cannot have a particular religious denominational ethos and the WELB considers that such schools, whilst not formally categorised as 'Integrated Schools', can increasingly be regarded in practice as 'integrated' and as such DE has also a duty to encourage and facilitate their development.

The WELB is also of the view that as the Controlled Sector is non-denominational in nature, all models of Shared Education, therefore, sit comfortably within this Sector's remit. The important difference here is that a community has chosen to send its children to its nearest controlled school because it is non-denominational in category. Some controlled schools prefer a governance model that includes four Transferor Representatives whilst others have opted for controlled/integrated status, with two Transferor and two Trustee Representatives respectively, and also prefer to be managed and supported by an Employing Authority (i.e. ELB or CCMS), as opposed to being grant-maintained.

In the promotion of Shared Education and Integrated Education, the WELB would be concerned that the existing work, in terms of **natural sharing**, within its controlled schools, as detailed below, would be disadvantaged in terms of receiving support from the Signature Project for Shared Education, as the planned funding available for Shared Education is directed towards two, or more, schools from different communities, working together. This would seem to ignore the **natural sharing** which has evolved, over a number of years, in some schools within the WELB, as shown overleaf.

There is a need for all schools to be treated fairly in the promotion of Shared Education, including the need for the DE to ensure its Open Enrolment and Home to School Transport Policies do not disadvantage or displace provision in some sectors, due to the growth of other sectors.

Census Data - October 2013

1

Breakdown of all schools in WELB area (excluding Nursery) by religious denomination		Protestant		Catholic		Other Christian / Non-Christian / No religion		Total pupils
No	Sector	N	%	N	%	N	%

The WELB would strongly recommend that a **baselining exercise** be undertaken, in the form of an analysis of the intakes to all schools in Northern Ireland (NI), to get a strategic overview as to the extent to which Shared Education is already taking place in practice, as in some cases there may not be recognition of this, and in order to get a better understanding of where funding for Shared Education needs to be targeted. This analysis needs to be comprehensive and take into account the following categories of schools so that the relevant models can be applied according to the nature and appropriateness of the sharing being undertaken:

- Nursery Schools – Controlled, Nursery Units and Community Nursery Schools;
- Controlled Primary and Post Primary Schools (i.e. non-denominational schools);
- Controlled Integrated Primary Schools
- Maintained Primary and Post Primary Schools;
- Grant Maintained Integrated Primary and Post Primary Schools;
- Controlled Special Schools;
- Controlled Irish Medium Schools, Irish Medium Schools and Units;
- Voluntary and Voluntary Maintained Post Primary Schools; and
- Bi-lateral Schools.

It is important to understand the extent to which certain schools can already be recognised as '*shared*' before creating an additional '*category*' of school under the auspices of Shared Education, as this may only be duplicating an existing model.

The WELB is of the view that where Shared Education has been, and is being practised and embedded in certain controlled primary and post primary non-denominational schools, it should be recognised in the proposals contained in the Signature Project for Shared Education.

Terms of Reference Number 2

Key Barrier/Enablers for Shared and Integrated Education

The **key enablers** for Shared and Integrated Education are:

- Strategic Plan in place by the DE for cross-sectoral collaboration
- DSC Shared Education Signature Project and Shared Campuses Project are inextricably linked and should work in partnership (ie Estates and Curriculum);
- Policy Framework for Shared Education should be consistent with DE's other Policies;
- Community Relations Equality and Diversity (CRED) Policy;
- Strong collaborative leadership within schools;
- Schools' curricula sufficiently advanced before responding to the challenges of Shared Education;

- The constitution of the Boards of Governors reflects the religious balance in the school to facilitate the promotion of a Shared/Integrated ethos;
- History of close collaboration;
- ****Rurality/Close geographical location of schools;**
- Cohesion within the community and support for Shared Education (fundamental);
- Ability to build on community support;
- Facility for transformation from one sector to another;
- No one sector owns the land on which the schools are built (eg LSEC)
- ~~Appropriate governance model for Shared Education Campuses;~~ and
- The identification of appropriate legislation to allow shared schools to be created.

******There is evidence in the WELB that small rural schools have much to offer each other, in terms of Shared Education, as recently affirmed by the Education and Training Inspectorate (ETI) in the case of a recent Primary School's inspection in Co Fermanagh, which was classified as 'Outstanding', and where it was noted the primary school had: 'well established links' with its neighbouring small schools in the areas of music, drama and physical education. The concept of a 'Shared Education Cluster' also exists in the WELB where Principals and Senior Teachers deliver shared staff development, shared pupil learning and shared parental evenings.

The key barriers to Shared Education are:

- No Strategic Plan in place for cross-sectoral collaboration;
- DSC Shared Education Project and Shared Campuses Project working in isolation;
- Public perception of Shared Education and potential community opposition;
- Weak collaborative leadership within schools;
- The composition of Boards of Governors is not representative of the religious balance in the school to promote a Shared/Integrated ethos;
- The lack of statutory underpinning with no legislative requirement to share;
- Policy Framework for Shared Education not consistent with DE's other Policies;
- Inflexibility of the DE Handbook;
- Uncertainty as to how Shared Education will be financed in the long term;
- Management and remuneration of teachers on a dual/shared site;
- How employment related issues (Terms & Conditions of Service) are dealt with;
- Need for an appropriate Scheme of Management;
- Admissions Policy/Criteria for such schools.
- Lack of financial and legal representation on any Group responsible for Shared Education;
- Proposer of the Shared School (cf Article 14) [Employing Authority]; i.e. Composition of Board of Governors, ethos, etc;
- Lack of funding through the Common Funding Formula;
- Implications for Home to School Transport Policy;

- One sector owns the land on which the schools are built, leading to an adverse impact on public perception;
- The negative impact of 'capping' on some schools' intakes by the DE;
- Rurality/Geographical location of schools that are distant from each other; and
- Academic Selection.

Terms of Reference No 3

Identification and analysis of alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes

The WELB is of the view that this aspect of the Terms of Reference is not relevant in that historical factors, the Local Management of Schools and the large number of small schools in Northern Ireland, all make it difficult to implement models of good practice from other jurisdictions. However, in the WELB, models of good practice exist in Ballykelly PS; Culmore PS; Greenhaw PS; Londonderry Model PS; Sion Mills PS, and Strabane Controlled Primary Schools, without any additional funding for Shared Education at present – an issue that needs to be addressed in the 'roll-out' of the DSC Shared Education Signature Project.

Terms of Reference No 4

Priorities and actions that need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools

In order to improve the levels of sharing and integration, there is a need to ensure a coherent Policy Framework exists, which establishes a clear purpose and rationale for the approach. The CRED Policy has a wide scope in terms of addressing issues of equality and good relations across all the Section 75 Groups. Since this has only been in place three years, the extent to which this Policy is impacting on schools needs to be assessed. The assessment of the effectiveness of the CRED Policy will be an outcome of the forthcoming inspection by the ETI later this year. The outcome of this process will need to inform how the Policy should develop and what actions need to be taken to strengthen this area of educational priorities in NI.

Shared Education is clearly linked to the CRED Policy in respect of those aspects related to reconciliation and good relations work within and between schools. However, there is clearly a need for the development of a Policy Framework in this area which sets out clearly the rationale, aims and purposes of this work. Such a Policy needs to take cognisance of a range of other relevant educational policies, including the CRED Policy and the 'Every School a Good School' suite of Policies. In the absence of such a Policy, there is the potential for 'Shared Education' to be misunderstood and misinterpreted. It is the WELB's view that 'Shared Education' needs to be recognised as one approach to good relations work. However, it is not the only one.

Shared Education, to date, between mainstream schools has been supported with external funding. Given that a range of programmes, involving sharing, have already taken place, future practice in this area needs to be informed by rigorous evaluation, to objectively ensure that resources are being used effectively and are achieving the outcomes identified in the Policy. In advance of 'rolling out' the Signature Project, there is a requirement for the DE to have a strategy for the monitoring of funding and, therefore, a requirement to baseline the current position to identify the sharing and collaboration in schools, funded and non-funded. A baseline will then allow for:

- any financial data to be collated of the cost of 'rolling out' Shared Education to date;
- educational or non-educational measurements against which the funding for Shared Education can be compared; and
- consideration of a cost/benefit analysis before committing to new funding.

The scale and scope of the DSC Signature Project for Shared Education provides an opportunity for a robust baselining exercise and evaluation of the impact of the Programme.

It is evident that, to date, there has been a commitment to Shared Education as long as there is adequate funding to support the teaching staff. The WELB would ask the question: *'If schools were asked to subsidise the additional cost of Shared Education from their own resources, would there be the same commitment to it as there was when they were funded for its implementation?'*

Prior to committing to Shared Education Programmes, schools will require reassurances with regard to the following:

- duration of additional funding for Shared Education;
- funding and managing absence cover for sickness and maternity leave;
- cost of training;
- managing staff during school closures;
- cost of travel; and
- *commitment required if funding is withdrawn.*

In relation to working with parents and carers, there is already a strong commitment to this partnership reflected in 'Every School a Good School: a Policy for School Improvement'. This Policy may need some further development in the context of a 'Shared Education Policy'.

In closing, the WELB is of the view that Shared Education should be implemented with a view to it being 'mainstreamed' into the education system in NI and should not be viewed in isolation as 'a project'. Leadership in schools should be able to demonstrate 'mainstreaming', in the absence of funding in the long term, and schools should not be funded unless they can satisfy this prerequisite. Thought also needs to be given to those schools that do not engage in Shared Education and the impact of their disengagement on the system as a whole.

Dear Barry

Inquiry into Shared and Integrated Education

The Committee would like to express its thanks to your colleague June Neill for her very useful and informative briefing on 11 February 2015, as part of the Committee's inquiry into Shared and Integrated Education.

The Committee noted the following reference in the written submission from WELB in respect of enablers for Shared and Integrated Education:

The constitution of the Boards of Governors is not 'partisan' but reflects the religious balance in the school to facilitate the promotion of a Shared/Integrated ethos;

The Committee agreed to write to WELB seeking clarity – is WELB suggesting that the constitution of Boards of Governors in e.g. some Controlled schools should be amended to reflect the high level of mixing of Protestant and

Catholic children in those schools? If so, does WELB believe that this should be accompanied by transformation to Integrated status for those schools? If WELB is not advocating transformation for mixed Controlled schools to Integrated status in all cases, is WELB suggesting the establishment of mixed Controlled non-Integrated schools with non-partisan boards which could then attract facilitation and encouragement from the Department under Article 64 of the 1989 Order?

A response by 2 March 2015 would be much appreciated.

Yours sincerely

Signed Peter McCallion

Youth Council for Northern Ireland

YCNl Response to TBUC inquiry, October 2014

Youth Council for Northern Ireland (YCNl) wish to take this opportunity to thank the Committee for Education for the opportunity to submit written evidence to the current Inquiry into Shared and Integrated Education.

Youth Council for Northern Ireland (YCNl) was established in 1990, with a key function to encourage and develop community relations. Over the years a number of initiatives and review processes have highlighted the important contribution of Youth Service to the creation, development and maintenance of a shared and peaceful society (see for example 1999; DENI, A Model for Effective Practice, 1987 (updated 2003); DENI, A Youth Service for a New Millennium; DENI, CRED Policy Guidance notes, 2011).

Youth Work is an important aspect of education. As the Education Minister sets out in his foreword to Priorities for Youth (2013), 'Youth work has an important contribution to make to the development of young people within the context of the education service... It is and should be recognised as a major contributor to improving educational and lifelong learning outcomes'. Priorities for Youth also sets out the central role that youth work has to play in building a shared society; noting that 'equipping children and young people with the skills, attitudes and behaviours needed to recognise, understand and respect difference... is particularly important as we continue to deal with the legacy of the conflict and move towards a shared and inclusive society'.

The YCNl welcomes developments aimed at enhancing the shared experience of our young people through formal education and the vital role this work has to play in continuing the journey towards a more united and shared society. Relationship building across divided communities remains central to the process of maintaining lasting reconciliation and Education has an important responsibility within this.

Within Education the Community Relations, Equality and Diversity (CRED) Policy plays a vital role in supporting both youth service providers and schools to deliver on this area. It promotes a whole organisational approach to embedding the principles and practices needed to build a shared society. YCNl has a key responsibility to support and coordinate the delivery and implementation of the CRED policy across Regional Voluntary Headquarter Youth Organisations. The task of embedding CRED within all youth and school settings is large, and resources limited. Reconciliation is a task for the long term; thus it follows that planning and resourcing should model this.

The YCNl recognises and welcomes the commitment to review the nature and definition of Shared Education and Integrated Education, including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education. However, this work must not diminish the valuable role and place of Integrated Education nor should it diminish existing CRED related work plans. YCNl endorses the need for a continuum of provision which includes both Shared and Integrated Education.

The YCNl wishes to highlight that youth work practitioners, particularly those with many years commitment to peace and reconciliation work, have much to offer the implementation and delivery of initiatives aimed at enhancing the shared and integrated education experience. A number of voluntary sector youth organisations contributed to the International Fund for Ireland Sharing in Education programme.

The Department of Education's commitment to developing shared and integrated education would benefit from being part of a wider strategy aimed at enhancing the shared educational experience of all, with an accompanying sustainable, well-resourced package and operational plan outlining the breadth and range of underpinning activity required to make this vision a

reality. Prioritisation of financial investment would reflect the stated political commitment to this area. Existing models of good practice should be built upon (including whole organisational approaches to embedding this work such as that modelled by the JEDI initiative (see: www.jedini.com)).

In addition, a regional body, at arm's length to Government, would be beneficial to securing co-ordination and ongoing challenge for all peacebuilding work across all government departments, including that which contributes to the development of Integrated and Shared Education.

Report on the Inquiry into Shared and Integrated Education Volume 4

Together with the Minutes of Proceedings, Minutes of Evidence
and Written Submissions Relating to the Report

Ordered by the Committee for Education to be printed 1 July 2015

This report is the property of the Committee for Education. Neither the report nor its contents should be disclosed to any person unless such disclosure is authorised by the Committee.

**THE REPORT REMAINS EMBARGOED UNTIL
COMMENCEMENT OF THE DEBATE IN PLENARY**

Powers and Membership

Powers

The Committee for Education is a Statutory Departmental Committee of the Northern Ireland Assembly established in accordance with paragraphs 8 and 9 of the Belfast Agreement, section 29 of the Northern Ireland Act 1998 and under Standing Order 48 of the Northern Ireland Assembly.

The Committee has power to:

- Consider and advise on Departmental budgets and annual plans in the context of the overall budget allocation;
- Consider relevant secondary legislation and take the Committee stage of primary legislation;
- Call for persons and papers;
- Initiate inquiries and make reports; and
- Consider and advise on any matters brought to the Committee by the Minister of Education.

Membership

The Committee has 11 members including a Chairperson and Deputy Chairperson and a quorum of 5. The membership of the Committee is as follows:

Peter Weir (Chairperson) ^{2,6}

Sandra Overend (Deputy Chairperson) ⁷

Maeve McLaughlin

Jonathan Craig

Ross Hussey ^{1,8}

Nelson McCausland ³

Chris Hazzard

Trevor Lunn

20131022 - Ministerial Statement - Advancing Shared Education

Advancing Shared Education

Ministerial Statement

22 October 2013

Oral Statement on Advancing Shared Education

Introduction

With your permission Mr Speaker, I wish to make a statement on the report of the Ministerial Advisory Group on Advancing Shared Education, which was published in March.

In doing so I wish to set out my response to the recommendations, and indicate how I intend to move forward.

Advancing shared education is one of the most important and sensitive challenges facing civic society.

If we are to succeed, there must be a shared readiness to change.

Background

Members will recall that advancing shared education is at the heart of the Programme for Government, and establishing the independent advisory group was a key commitment.

I was very pleased when Professor Paul Connolly, from the School of Education at Queen's University, agreed to chair the group, and his fellow members, Dawn Purvis and PJ O'Grady also took up the challenge.

I would like to thank them for their work, and for producing a very comprehensive, thoughtful, and thought-provoking report.

I would also like to thank everyone who engaged with the group for their contributions.

Starting point

In debating the report, let's remind ourselves of why sharing is important, and what we are trying to achieve.

Educational case

My starting point is the educational case for sharing, to contribute to raising standards, tackling underachievement and creating a better society for all.

In planning for the future, we need to address a key question – what sorts of schools do we want?

We have many different types of school, each proud of their identity and ethos.

I know from my visits how much parents and communities value those schools, and how passionately they care about them.

So having that choice in our system is a strength, we need to now build on that with confidence that a shared education system is inclusive of all and marginalises no one.

But Mr Speaker, choice can't be at the expense of good education.

Our schools need to change and greater sharing is part of that change.

We have too many schools that cannot – by themselves - provide the rich, high-quality educational experience that children need and deserve.

To make that change we must actively plan for shared education.

That means we must also move away from planning by competition: school versus school and sector versus sector - in a battle for scarce resources.

As Minister I see far too many development proposals that are written as if the school up the road doesn't exist.

That has to change.

We know what parents and children want –quality, high performing schools in their local communities.

The parents and communities that I meet are up for sharing.

They want choice, but they aren't asking for separation.

I believe that the vast majority of parents put **quality** first.

They **will choose** shared local schools if they provide a quality education.

The evidence is there.

The Lisanelly complex has fired the imagination of the community in Omagh, and is a game-changer in terms of how we plan education.

I have seen other good examples of communities in the Moy, in Fermanagh; and Ballycastle, coming together to look for shared solutions; and finding new ways to ensure access to good local schools.

So, shared education is not a bolt-on or an optional extra.

It is fundamental to delivering good schools, and central to my vision that every learner should achieve his or her full potential.

Good relations and equality

Mr Speaker, good education comes first, but equality and good relations add to the case for change.

Choice can't be at the expense of good education.

Neither can it be at the cost of separation by religious belief, socio economic status or educational needs.

Such separation is bad for children, and bad for society.

Separation is damaging, unnecessary, and avoidable – Society has the power to change it if the will is there.

In higher and further education, sharing and integration is already the norm.

Why should schools be any different?

We have sharing in preschool education, and youth services.

We have integrated schools, naturally shared schools, and many other examples of good practice in schools working together.

But we can, and we must, do more.

Sharing must become the accepted reality at every stage of education, from early years to post-graduate study.

Equality

There is also a persuasive equality case.

We have good schools serving children of every religious faith, and none.

Today, no child is denied a good education because of their religion.

However, the same cannot be said for socio-economic status.

We know that children living in lower income brackets are at much higher risk of educational under achievement.

Members are familiar with the standard measure.

Our aim is that every child should leave school with at least five good GCSEs including English and maths.

Today, only 34% of children entitled to free school meals achieve that.

For other children, the figure is 68%.

So a child being from a lower income bracket is at double the risk of underachievement.

That is unacceptable, and we must change it.

We also know that academic selection is a barrier to children on Free School Meals and from lower income families.

Just over 7% of children in grammar schools are entitled to free school meals.

For other post primary schools the figure is 28%.

So poorer children are more likely to be rejected by grammar schools.

Is that what those schools want?

Only they can answer.

But segregation by parental income is a reality that we cannot ignore.

Members know my views on academic selection, and I will say more on that in a few moments when I turn to the recommendations in the report.

But whatever happens in relation to selection, we need greater sharing across the socio economic divide.

Mr Speaker, I'm sometimes accused of having an anti-grammar agenda.

Well let me put it on the record – I don't.

I have an anti-academic selection agenda.

But I offer this challenge to grammar schools.

Educate the whole community, not just a part of it.

Across the world, the best performing education systems combine excellence with equality of outcomes – in other words almost all of their pupils achieve high standards, not just a few.

That must surely be our goal too.

Summing up the case for sharing

Bringing all of that together, it is clear that:

- sharing brings educational benefits;
- sharing builds respect for diversity and good relations;
- sharing builds equality; and
- sharing builds a confident community.

So my vision is one of education without barriers; good schools where children learn, grow and develop together.

Schools where sharing is the accepted normality.

Shared education can - and should - involve every type of school.

It is about developing local solutions to local needs, not 'one size fits all'.

It is a challenge to all, but a threat to none.

Every school can share, and I challenge every school to ask itself, '**what more can we do**'.

Sharing and integration

Before turning to the recommendations, I want to talk about the relationship between shared education and integrated education.

Let me make it clear, they are different routes to the same objective.

The right model is the model that enjoys the support of the local community.

Integrated education will continue to play an important role, and my Department, in line with its statutory duty, will continue to encourage and facilitate it.

Shared education should also be encouraged and facilitated, and communities should be encouraged to choose the model that suits them best.

This is in line with the current approach to integrated education where the transformation process begins with consultation with the local community and a parental ballot before the submission of a development proposal to the department.

Every community should be on a journey to sharing.

Different routes will be chosen and some will get there sooner than others.

When a community takes a first step, however modest, we should encourage and support them, and yes perhaps challenge them to go further, but in a positive manner.

Recommendations

Let me turn now to the recommendations.

The report contains 20 recommendations in 5 groups. I welcome all of the recommendations.

There are some that I accept fully, and will aim to take forward as soon as possible.

There are others that I accept in principle, but there may be a better way forward than what the group recommended.

A third group needs further consideration and debate, here in this Assembly and across society.

Mainstreaming (recommendations 1 to 3)

The recommendations begin with mainstreaming, which is the right starting point.

We need to ensure that sharing is in the DNA of our education system: in legislation, policy and the structure of ESA.

I want to be in a position to bring the Education Bill back to the Executive and the Assembly in the coming weeks, however I cannot do that on my own.

In bringing the Bill back, I propose to include a statutory definition of shared education, and provisions for ESA to encourage and facilitate it.

These will complement the provisions on integrated and Irish-medium education, and will not reduce or dilute them in any way.

I will also require ESA to reflect sharing in its structure, in its corporate plans, and in its strategies, and I will hold it to account for doing so.

The report also recommended the inclusion of a shared education premium in the common funding scheme.

I accept this in principle, but further consideration is needed before we move to implementation.

However, I acknowledge that if shared education is to grow and develop, then we will need to mainstream financial support for any additional costs involved.

Shared education is very much at the heart of the Together Building a United Community programme.

In addition to those programmes my Department is working with Atlantic Philanthropies and OFMdFM with a view to put in place an additional funding programme to support shared education.

As we move ahead I will look carefully at the evidence, so as to ensure that whatever financial support we provide is targeted at what works best.

I also need to see what additional resources my Executive colleagues will make available for mainstreaming.

Supporting schools in shared education (recommendations 4 to 8)

The second group of recommendations deals with:

- supporting schools;
- ensuring that sharing delivers real educational benefit; and
- recognising and promoting the spread of good practice.

I welcome these recommendations.

I have asked the Chief Inspector to consider how best to take them forward in the inspection process and the inspection cycle, and to report back to me.

We ask a great deal of our teachers, and it is right that we equip and support them to deliver.

That is why ESA will have statutory duties to ensure support for teachers and schools governors.

I also welcome the recommendations on supporting and developing teachers.

These will be fed into a revised teacher professional development strategy, which is already under development.

I will ensure that it includes an examination of how best to equip and support teachers to deliver shared education.

Schools and other institutions (recommendations 9 to 14)

The third group of recommendations - numbers 9 to 14 – focus on what schools need to do in relation to engagement with parents; the delivery of the curriculum; and the rights of children and young people to participate in the decisions that affect them.

I welcome these recommendations.

As I said earlier, supporting schools will be a key part of ESA's role, and this will include supporting schools to communicate with parents.

Recommendation 10 calls for a review of the **delivery** of key aspects of the curriculum.

I accept this recommendation in principle, and welcome the emphasis on promoting equality.

However, taking this forward requires careful thought.

In any review of the curriculum or its delivery, our aim must be to support teachers to adopt best practice.

Therefore, as a first step, I have asked the Chief Inspector to carry out a survey of current practice, with a particular focus on what additional support and development teachers need.

The report draws attention to the right of young people to participate and be heard in relation to the decisions that affect their lives.

I support this, and it is my aim that every school will have an effective method of encouraging young people's participation in the life of the school.

My Department will continue to encourage schools to implement the Democra-school programme, and to take up the advice, support and a guidance pack available from the Commissioner for Children and Young people.

However, I believe that effective participation of young people is likely to be achieved more effectively if the approach is decided by the schools themselves, rather than being imposed from outside.

Therefore, I would prefer not to go down the compulsory route at this time.

However, I will keep this under review and, if sufficient progress is not being made, then I will consider the case for stronger action.

The report also recommended that schools should be subject to the statutory equality and good relations duties in section 75.

I strongly support the intention behind that recommendation.

Every school must play its part in promoting equality of opportunity and good relations.

Every school must tackle discrimination and bullying, whether it stems from religion, sexual orientation or any other aspect of a young person's identity.

Members will be aware that this is a cross cutting matter, as equality legislation is the responsibility of OFMdfM.

I want to discuss recommendations 12 and 13 of the report with my Executive colleagues, and consider how best to give effect to them.

Using section 75 which sets out minimum requirements may be one option.

However, there is nothing to stop us from enhancing our equality duties so as to ensure better policy making.

Another may be to adopt the approach used in England, where schools have to set clear objectives for promoting equality, and are held to account for delivery.

Whichever option we choose, I want the emphasis to be on action, not bureaucracy.

Recommendation 14 deals with special education.

It calls for the development of effective models for collaboration between mainstream, special schools and educational support centres.

One of my priorities as Minister has been the building of an inclusive educational culture both within and between our schools.

Therefore I strongly support this recommendation.

However it would be wrong not to acknowledge the work already being undertaken in this area.

The current special educational needs framework already promotes inclusion, ensuring, wherever possible, that children and young people are taught in mainstream schools.

This will remain a fundamental tenet of the work being taken forward as part of the SEN and Inclusion Review.

That being said, where a child's best interests are served by attendance at a special school, that option will remain open.

In terms of the collaboration across sectors, special schools are full and active members of the Area Learning Communities.

This is essential to provide opportunities for pupils to learn and grow alongside their peers in special and mainstream schools.

Going forward, I will ensure that shared education projects and shared education campuses will include special schools where that demand exists.

Arvalee Special School will be taken forward as part of the Lisanelly Shared Education Campus, with the construction of the new Arvalee School and Resource Centre commencing next year.

Area based planning and the schools estate (recommendations 15 to 17)

The fourth set of recommendations deal with area planning, which will be central to the delivery of shared education.

I will make it a priority for my Department to bring forward:

- guidance on a range of sharing options that schools and communities may wish to explore;
- clear, practical advice on how to bring forward a development proposal for sharing; and
- guidelines on the development of area plans to ensure that shared education is encouraged.

Recommendation 16 calls on my Department to meet parental demand for different types of schools.

I accept that recommendation in principle, with one important caveat.

Any proposal for a new school must be sustainable and capable of delivering high quality education for the pupils it serves.

Let me say clearly that I want to see:

- collaboration, not competition;
- sharing, not duplication.

Recommendation 17 calls for it to be made easier for a school to transform its ethos from one type to another.

I am pleased to say that the Education Bill already provides for this.

Every school will be able to decide its own ethos, and set it down in its scheme of management and employment scheme.

Any school will be able to change its ethos at any time simply by bringing forward new schemes.

There will be no need for any complex or bureaucratic legal procedure.

Academic selection (recommendations 18 to 20)

Finally, let me turn to the recommendations on academic selection.

It will surprise no-one when I say that I welcome, and strongly endorse them.

Some people have criticised the group for including those recommendations.

They claim that they are nothing to do with sharing.

They are missing a very important point.

Sharing means educating without barriers, and without segregation.

The group's advice is very clear.

Selection discriminates.

Selection divides.

Selection is a barrier to children from low income families.

Those who ignore the evidence should ask themselves:

"If segregation by religion is wrong, how can segregation by income be right?"

I look forward to the day when this Assembly decides to end academic selection for good.

Until that day, I will strive to make it irrelevant, and to limit the damage that it does.

I will continue to promote all ability schools where academic and vocational learning is the norm and these will be taken forward through area planning as recommended by the group.

Conclusion

Mr Speaker, the report asks us all to think differently about the delivery of education.

It reminds us that sharing begins with respect for diversity and the right to equality.

It asks us to put the needs of young people ahead of the interests of institutions.

It challenges long-held assumptions about what is possible.

Through sharing, we all benefit, and no-one loses.

Sharing means celebrating diversity, not undermining or hiding it.

Educational ethos, like language and culture, should be used to build bridges, not barriers.

Mr Speaker, our education system should be enriched by diversity; but not blighted by separation.

I commend the report to the Assembly.

Peter McCallion
Clerk to the Committee for Education
Room 375a
Parliament Buildings
Ballymiscaw
Stormont
BELFAST BT4 3XX

19 May 2014

Dear Peter

Education Committee: Integrated / Shared Education Inquiry

Thank you for your enquiry dated 6 May 2014 in relation to the statement made by the Minister on 23 October 2014 in relation to advancing Shared Education, I have been asked to reply.

The Committee will wish to note that the Minister has previously indicated that discussions were ongoing with OFMdfM and the Atlantic Philanthropies to establish a shared education funding stream. This work is at an advanced stage and it is expected that an announcement will be made before the summer recess with the programme commencing in the 2014/15 academic year.

The programme is being designed to address a number of actions referenced by the Minister including support for teachers and Education and Training Inspectorate (ETI) engagement.

ETI will progress the work of Shared Education within inspection and district work with a view of identifying how 'sharing' has the potential to enhance learners' educational and social learning.

In preparing for this work a team of ETI Inspectors will develop Shared Education indicators, protocols and materials for inspection and district work. The team will also provide ongoing staff development on writing, reporting and recording of effective Shared Education practice.

In the absence of progress with the Education Bill, the Minister is considering other alternatives for legislation that would define and help ensure progress in advancing Shared Education. The Committee will of course be briefed on these at the appropriate juncture.

As part of his statement on advancing shared education, the Minister made clear his aim that every school will have an effective method of encouraging young people's participation in the life of the school. The Department is already committed to encouraging all schools to find

meaningful ways of giving children and young people a voice and of listening and responding to their views and continues to encourage schools to adopt the Democra-schools programme.

The Minister has indicated his intention to bring forward guidance on sharing options for schools and communities that will assist in providing practical advice relevant for a development proposal. It is anticipated that this work will be progressed during the period of the inquiry.

The Committee will also wish to note that both the Area Planning Terms of Reference and subsequent guidance already encourages Shared Education options to be brought forward.

Yours sincerely

A handwritten signature in black ink that reads "V Bintley (min)". The signature is written in a cursive style with a large initial 'V'.

Veronica Bintley

Departmental Assembly Liaison Officer

DE Shared Education Update

SHARED EDUCATION

Introduction

Advancing Shared Education is both a Programme for Government commitment and an action within the Together: Building a United Community strategy.

A Ministerial Advisory Group (MAG) was established in July 2012 to advise the Minister on how best to advance shared education which is defined as:

- meets the needs of, and provides for the education together of learners from all Section 75 categories and socio-economic status;
- involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

Shared Education means the provision of opportunities for children and young people from different community backgrounds to learn together.

Shared Education is expected to be organised and delivered in such a way that promotes equality of opportunity and social inclusion by providing opportunities for children from differing s75 groups (e.g. children from different racial backgrounds, children with and without disabilities, children who are carers or school age mothers) and from differing socio-economic backgrounds to learn together at school and in less formal education.

The MAG reported in March 2013. In accepting its report, the Education Minister encouraged a public debate on the report and its recommendations.

After a period of reflection in a statement of 22 October 2013 to the Assembly the Minister accepted the recommendations of the report, reserving judgement on how best to implement a number of the recommendations. Work to implement the recommendations has been taken forward.

Progress to date is outlined below. The relevant MAG recommendation has been included in each section for ease of reference.

MAG RECOMMENDATION	DEPARTMENTAL POSITION
<p><u>Recommendation 1:</u> The Education Bill should be amended to place a statutory duty on the new Education and Skills Authority (ESA) to encourage and facilitate shared education as defined in this report.</p>	<p>The Minister accepted this recommendation. The original intention had been to include, as an amendment to the Education Bill through which the Education and Skills Authority would be established, a power to encourage and facilitate shared education.</p> <p>As progress on the Education Bill has been halted, the Minister is considering bringing forward a stand-alone Bill designed to support shared education.</p>
<p><u>Recommendation 2:</u> ESA should establish a central unit, or identify an existing unit, that should take lead responsibility for encouraging and facilitating shared education. This unit should:</p> <ul style="list-style-type: none"> • Develop and drive forward a strategy for advancing shared education that includes setting targets and goals, monitoring shared education activities and producing an annual report on progress being made; • Review all existing and proposed policies within education, and provide advice as required, to ensure that all activities seek to encourage and facilitate shared education where appropriate; and • Commission research and evaluations into shared education and facilitate the sharing and dissemination of good practice. 	<p>The Minister accepted this recommendation. It had been intended that ESA would ensure a central focus on shared education. This recommendation will now be taken forward in progressing the one-board model of reform that is necessary to enable education administration to comply with the changes to local government that will take place from April 2015. In the meantime, the Minister will expect the ELBs to take a consistent, regional approach to encouraging and facilitating shared education. At the same time, the Department itself will ensure that a clear strategy is put in place for advancing shared education.</p>
<p><u>Recommendation 3:</u> As part of the proposed revised common funding formula suggested by Sir Robert Salisbury in his independent review for the Department of Education, a ‘shared education premium’ should be incorporated into the funding formula for schools and other educational institutions. This premium would recognize the added value of shared education and should be weighted in terms of:</p> <ul style="list-style-type: none"> • The number of pupils that are engaged in shared education activities, as defined in this report; and 	<p>While recognising the need for funding, the Minister reserved his position on this recommendation as it was not clear that the common funding formula was most appropriate delivery mechanism. Subsequently, it has been agreed that a Shared Education funding scheme will be established to provide financial support for schools engaged in shared education. Consideration is being given to establishing this as a potential Delivering Social Change Signature Programme. As part of this, work is ongoing to secure significant</p>

<ul style="list-style-type: none"> The proportion of school time that pupils are engaged in such activities. 	<p>funding from Atlantic Philanthropies and OFMidFM as well as DE.</p>
<p><u>Recommendation 4:</u> Where schools and other educational institutions are in receipt of a shared education premium, the Education and Training Inspectorate (ETI) should explicitly review the use of that funding in its inspection reports particularly in relation to:</p> <ul style="list-style-type: none"> The added value of such shared education activities; The value for money of the funding provided; and The quality and effectiveness of the shared education activities. 	<p>The Minister has accepted this recommendation. In parallel with the Shared Education programme, ETI will progress the work of Shared Education within inspection and district work with a view of identifying how 'sharing' has the potential to enhance learners' educational and social learning.</p> <p>In preparing for this work a small team of ETI Inspectors will develop Shared Education indicators, protocols and materials for inspection and district work. The team will also provide ongoing staff development on writing, reporting and recording of effective Shared Education practice.</p>
<p><u>Recommendation 5:</u> The ETI should produce an annual report that reviews the current range and extent of shared education activities across Northern Ireland, highlights good practice and makes recommendations regarding how these could be extended and improved.</p>	<p>The Minister has accepted this recommendation. The Chief Inspector's Report is published biennially and in future will make specific comment on Shared Education. The next report is due for publication in autumn 2014.</p>
<p><u>Recommendation 6:</u> ESA should develop a framework for supporting the early and continuing professional development of teachers that encourages its delivery through shared education and thus via effective collaboration between schools and other educational institutions. It is recommended that such a framework should encourage collaborative networks of schools and other educational institutions identifying their own professional development needs and being devolved appropriate levels of funding through the common funding formula to commission the training, courses and/or other support that they require.</p> <p><u>Recommendation 7:</u> ESA should ensure that teachers and principals have access to a range of training courses and resource materials to</p>	<p>The Minister has accepted these recommendations.</p> <p>In the absence of progress on the legislation needed to establish ESA, the Department will, as part of its work to finalise a new teacher professional development strategy, ensure that this includes steps to provide teachers, from initial teacher education through to the most experienced teachers, with opportunities to learn together, including in relation to preparation for teaching through shared education.</p> <p>Specifically in relation to recommendation 8, DE awaits the outworkings of the independent review of teacher education infrastructure commissioned by DEL. DE will consider the outcomes in the context of</p>

<p>help them develop the knowledge and skills required to organise and manage effectively shared education activities and classes. These courses and materials should include a focus on:</p> <ul style="list-style-type: none"> • Establishing and organizing collaborative activities, projects and classes between schools and other educational establishments; • Dealing with negative relationships and poor interactions between pupils; • Covering sensitive topics and issues; and • Exploring ways that existing school subjects might best emphasise commonality in history and between cultures but also actively involve students in contact with cultural activities with those from other sectors e.g., sport, dance, music and language (including Irish and Scottish Gaelic). <p><i>Recommendation 8:</i> The Department of Education and the Department for Employment and Learning, in conjunction with the higher education institutions responsible for delivering teacher training and professional development courses, should review existing provision to consider appropriate mechanisms for collaboration to ensure that student teachers and teachers returning for professional development can be provided with opportunities to learn together, including in relation to preparation for teaching through shared education.</p>	<p>future arrangements for initial teacher education and its proposed strategy for teacher professional development.</p> <p>Through its Community Relations, Equality and Diversity (CRED) policy, DE will continue to ensure provision for teacher education on sensitive and controversial issues and managing shared education classes. A training strategy implemented across all ELBs has been in place since 2012.</p> <p>Additionally, as part of the Executive's <i>Together: Building a United Community</i> strategy, a commitment has been made to develop an anti-sectarianism module and relevant teacher education. Discussions are underway on how best to implement this and to increase the pace of delivery.</p>
<p><i>Recommendation 9:</i> Schools and other educational establishments should develop more meaningful relationships with parents and caregivers to ensure that their rights to be involved in the education of their children are fully respected and supported. To achieve this, it is recommended that:</p> <ul style="list-style-type: none"> • ESA establish an appropriate network that supports schools and other educational institutions in developing relationships with parents and care-givers and in creating and sharing best practice regionally; and 	<p>The Minister has accepted this recommendation. Consideration will be given as part of the Shared Education Programme as to how schools can develop more meaningful relationships with parents and caregivers to ensure that their rights to be involved in the education of their children are fully respected and supported.</p> <p>The Education (School Development Plans) Regulations require schools to outline their strategies for raising the standards of attainment among all pupils and for providing for the special, additional or other individual</p>

<ul style="list-style-type: none"> Schools and other educational establishments include a specific section in their Development Plans that includes clear plans and goals, for how they intend to engage parents and caregivers and ensure their active and sustained support in the education of their children. 	<p>educational needs of pupils. Guidance highlights the importance of consulting with those involved in the life and work of the school; the regulations require that the school development plan outlines the arrangements that have been made to take account of the views of pupils, parents, staff and other persons or bodies.</p> <p>Schools engaging in the Shared Education programme will be required to include a specific reference in their School Development Plans that includes their plans and goals for advancing shared education and engaging with parents and caregivers.</p>
<p>Recommendation 10: An independent review should be undertaken of current practice in relation to the delivery of:</p> <ul style="list-style-type: none"> Personal, Social and Emotional Development (Pre-School Education); Personal Development and Mutual Understanding (Foundation Stage and Key Stages 1 and 2); Local and Global Citizenship (Key Stages 3 and 4); and The Curriculum Framework for Youth Work (Youth Service). <p>The review should consider the effectiveness of the current Community Relations Equality and Diversity (CRED) policy and also include consideration of the opportunities that are provided for children and young people to discuss and explore issues associated with divisions, conflict and inequalities in Northern Ireland. The review should make recommendations regarding the content of these areas of learning and also how teachers and other educationalists can best be supported to deliver these.</p>	<p>The Minister has accepted this recommendation. ETI will undertake the independent review of current practice commencing with a review of the effectiveness of the CRED policy in the autumn. Other areas will be explored on a rolling basis across 2015-2019.</p>
<p>Recommendation 11: In fulfilment of its duties under Article 12 of the UNCRC, the Department of Education should make it a requirement that all schools establish School Councils. Within this, School Councils</p>	<p>As part of his statement on advancing shared education, the Minister made clear his aim that every school will have an effective method of encouraging young people's participation in the life of the school.</p>

<p>need to:</p> <ul style="list-style-type: none"> • Be fully representative of the school body and of all year groups; • Provide a mechanism for consulting children and young people on all school matters that affect them, including plans for shared education activities; • Support children and young people in forming and expressing their views; and • Include appropriate mechanisms for the views of children and young people to then be considered and given due weight by the school. 	<p>The Department is already committed to encouraging all schools to find meaningful ways of giving children and young people a voice and of listening and responding to their views and continues to encourage schools to adopt the Democra-schools programme.</p> <p>The DE website contains information on school councils, which are one mechanism by which effective pupil participation can be achieved, and links to the Democra-School programme. However DE does not wish to be prescriptive about the approach.</p> <p>DE is currently preparing a Circular that will provide further guidance for Principals and Boards of Governors on how to encourage pupil participation in decision making in schools. The circular will include information and guidelines on best practice to help schools identify the method and degree of participation that best suits the needs of their pupils.</p>
<p>Recommendation 12: The necessary legislation should be brought forward for schools and other educational institutions to be designated as ‘public authorities’ under Section 75 of the Northern Ireland Act 1998 and thus to be required to comply with the statutory duties to promote equality of opportunity and good relations. In doing this, consideration should be given to whether it is possible to reduce the demands that will be placed on schools and other educational institutions in terms of meeting their specific responsibilities under Section 75 whilst maintaining their core duties to promote equality of opportunity and good relations.</p> <p>Recommendation 13: The Education and Skills Authority, in conjunction with the Equality Commission for Northern Ireland, should establish a unit to provide training, produce support materials and to advise schools and educational institutions in relation to</p>	<p>The Minister has accepted the principles behind these recommendations and agrees that schools have an important role in promoting equality of opportunity and good relations.</p> <p>The matter of legislation to designate schools as ‘public authorities’ is one for OFMdFM in the first instance and the Minister is writing to FM and dFM to communicate the detail of these recommendations and to seek their views on the practicalities of designating schools for Section 75 purposes.</p> <p>Turning to recommendation 13, the Department will consider the support arrangements that schools would need following a decision by OFMdFM on whether and how to designate schools as ‘public authorities’.</p>

<p>preparing, implementing and monitoring the equality schemes they would be required to produce under Section 75. It is expected that one aspect of meeting the duty to promote good relations will include engagement in shared education initiatives.</p>	
<p>Recommendation 14: The Department of Education should undertake a review of how shared education, and the enhanced collaboration between mainstream schools, special schools and educational support centres, can most effectively meet the needs of children and young people with disabilities, those with emotional and behavioural difficulties and those with special educational needs. The review should focus on the development of effective models for collaboration that can:</p> <ul style="list-style-type: none"> • Ensure, wherever possible, that children and young people are taught in mainstream schools; and • For the small minority of children and young people where mainstream schooling is not suitable, that they have meaningful opportunities to learn with children and young people in mainstream school environments. 	<p>The Minister has accepted this recommendation. It is the Department's policy that, wherever possible, children and young people can be educated together in mainstream settings. A review of the existing legislative framework for SEN and inclusion has been completed and work is progressing on a new Special Educational Needs Bill, which the Minister expects to bring to the Executive shortly. This underpins the existing commitment to inclusion.</p> <p>An ETI 'Guide to Collaborative Practice' which is based on learning from twenty four special schools that worked collaboratively on a joint curriculum project of their choosing with a neighbouring mainstream school is in place. This guidance sets out the key elements arising from these projects which support and encourage collaborative working. It provides a template, alongside a synopsis of the case study projects, to all schools and Area Learning Communities to use to build their capacity to respond more effectively to a wider range of pupils needs through collaborative working.</p> <p>Additionally, the Department will continue work to develop the role of Area Learning Communities and to encourage the particular contribution within ALCs of special schools. All Special Schools and Learning Support Centres have received guidance advising them, as active members, to continue to optimise the opportunities available across ALCs (which will include shared education opportunities) to provide access to a broad and balanced offer of qualifications for learning programmes.</p>

<p>Recommendation 15: The Department of Education, Education and Library Boards and the CCMS should play an active role in promoting shared education through the area-based planning processes for post-primary and primary schools. This should include:</p> <ul style="list-style-type: none"> • Being proactive in identifying opportunities for shared education that may not have been considered and setting out options for schools and colleges to consider; and • Supporting and advising schools that wish to develop shared education arrangements, including providing advice on how two or more schools can transfer their status into a 'shared school' whereby they maintain their respective forms of ethos. 	<p>The Minister has accepted this recommendation and has indicated his intention to bring forward guidance on sharing options for schools and communities that will assist in providing practical advice relevant for a development proposal.</p> <p>Area Planning Terms of Reference and subsequent guidance already encourages Shared Education options to be brought forward.</p> <p>Processes are already in place for schools wishing to transform to integrated status and for schools wishing to expand.</p> <p>Together: Building a United Community Strategy commits to establishing 10 shared education campuses. The Shared Education Campuses Programme, which was launched in January 2014, will complement the work already underway within DE on shared education and Area Planning and will be targeted at infrastructure projects aimed at improving or facilitating sharing initiatives within local schools.</p> <p>The programme will target schools that can demonstrate the following types of sharing:</p> <ul style="list-style-type: none"> • Shared Facilities – where new facilities are built to allow for shared use by all schools within the model; • Enhanced Facilities – where current facilities are improved to allow for shared use by all schools within the model; and • Shared Campus – where schools are co-located and share infrastructure e.g. the Lisanelly model. <p>Sixteen expressions of interest were received. Projects to be advanced are to be announced in June 2014 with commencement of the first projects expected in 2016-17.</p>
<p>Recommendation 16: Where there is sufficient, viable and consistent parental demand, the Department of Education should actively</p>	<p>While accepting this recommendation in principle, the Minister has made it clear that this is with a caveat that any proposal must be</p>

<p>support the establishment of schools and other educational institutions with a particular religious, philosophical or cultural ethos.</p>	<p>sustainable and capable of delivering high quality education.</p> <p>Work is in progress with the Transferors Representative Council and Catholic Trustees regarding the potential for a jointly managed school model which would provide an alternative model for educating pupils together at the same school and that would have the support of the main churches.</p>
<p><u>Recommendation 17:</u> In relation to all existing schools, the Department of Education should:</p> <ul style="list-style-type: none"> • Establish a transformation process for schools where there is clear parental demand wishing to adopt a particular ethos – whether, for example, this be faith-based, integrated, secular or Irish Medium – and to ensure that it is user friendly and not bureaucratic and that parents are made aware of their powers under the processes established; • Identify how, in the light of parental demand, the process can be made easier whereby a school can incorporate the badge of a particular school type or sector in its title; and • While recognizing the responsibility of the Department to ensure the viability of schools in each local area, where there is clear evidence of over-subscription, it should allow existing schools to expand, in a phased and careful manner, in order to meet the demand that exists among parents. 	<p>The Minister has accepted this recommendation. Processes are already in place for schools wishing to transform to integrated status and for schools wishing to expand. Boards of Governors are responsible for setting the ethos of a school. This applies to schools of all management types.</p>

Recommendation 18: The Northern Ireland Executive should, without delay, introduce the necessary legislation to prevent schools from selecting children on the basis of academic ability and require schools to develop admissions criteria that are truly inclusive and egalitarian in nature.

Recommendation 19: The Department of Education, through the area-based planning process should consider how best to plan for sustainable post-primary schools with all-ability intakes. In doing this, the Department should have regard for parental demand in each local area for schools with a different religious, philosophical or cultural ethos and make every effort to ensure diversity of provision to meet this demand where it is feasible.

Recommendation 20: The Department of Education should initiate a fundamental review of the use of selection within schools with all-ability intakes to explore the benefits and limitations of different models of banding and streaming. The review should be tasked with making recommendations regarding how best to take forward selection within schools so that all children and young people reach their full potential.

The Minister has accepted these recommendations. The Department's policy position, supported by international evidence, on the limited educational value of academic selection at the age of 10 or 11 is clear. However, legislation can only be introduced with cross-party support which, to date, has not been forthcoming.

Peter McCallion
Clerk to the Committee for Education
Room 375a
Parliament Buildings
Ballymiscaw
Stormont
BELFAST BT4 3XX

1 October 2014

Dear Peter

Shared Education Campuses Programme

I advised in my letter of 18 September 2014 that the Department were anticipating the second call for applications to the Shared Education Campuses Programme would open at the end of September 2014.

I can now confirm that this call will open on 1 October 2014.

I attach a copy of the Protocol document for the second call which includes the revised criteria as agreed by the Minister.

The deadline for submissions of applications to the Department by School Planning Authorities is Friday 30 January 2015.

As mentioned previously, officials are happy to brief the Committee at this stage or when the call closes.

Yours sincerely

Veronica

Veronica Bintley

Departmental Assembly Liaison Officer

The Shared Education Campuses Programme

Second Call for Expressions of Interest

Protocol Document

September 2014

Shared Education Campuses Programme 2014

1. Introduction and Background

- 1.1 On 9 May 2013, the First Minister and deputy First Minister made a statement to the Assembly on the '**Together: Building a United Community**' strategy, which contains a range of proposals including details on **Shared Education Campuses**. Work on 10 shared education campuses will be commenced within the next 5 years, building on the project proposals for the Lisanelly Shared Education Campus. These campuses will be the pathfinder projects leading to a wider programme of shared education capital projects. The campuses will also integrate community activities and resources and other services, including statutory provision where appropriate.
- 1.2 The specific aim of the Executive's **Together: Building a United Community** (T:BUC) strategy relating to education is '*To enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience*'.
- 1.3 Included in the strategy is a commitment '*to create 10 Shared Education Campuses based on the Lisanelly Shared Education Campus model*'. We believe that building good relations, tackling intolerance and challenging prejudice can be embedded through the ethos of schools. It is already an integral part of the curriculum. In addition to the current work in this area, the strategy proposes that the Programme for Government (PfG) commitment to ensure all children have the opportunity to participate in shared education programmes by 2015, will reinforce opportunities to contribute to the shared vision of building a united community.
- 1.4 Creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement, unemployment and sectarianism; and improving good relations amongst and for our young people.
- 1.5 Lisanelly has been quoted as the template for these new 'Shared Education Campuses'. It is a shared campus in the truest sense of the term, bringing together six schools of different management types and phases, on a site in excess of 130 acres, with a forecast combined long term enrolment of over 4,200 pupils.
- 1.6 While Lisanelly Shared Education Campus is an example or pathfinder for shared education facilities here, it must be recognised that it is also unique. The availability of an extremely large site close to the centre of Omagh will not be readily replicated in other towns across the north. Implementation of the FM/dFM announcement will require a flexible approach to the identification of potential 'shared campuses'.
- 1.7 In progressing shared education, delivery of educational benefits to children and young people must be the overarching priority. It is important that any proposal for a shared campus be consistent with the work currently being undertaken on area planning. Any models of sharing must fit within the relevant Area Plan, taking into account the full needs of an area, including the implications for other schools and recognising the importance of parental preference, which is protected in legislation.

1.8 Enhancing shared education provision provides a range of benefits including: raising educational standards, particularly for disadvantaged pupils; greater choice and greater opportunity; providing sustainable local provision; facilitating delivery of the Entitlement Framework; and providing wider choice for pupils in terms of leisure, cultural and sporting activities.

1.9 The purpose of this document is to set out the process and timetable to be used to identify and assess proposals submitted under this initiative. **Applicants should note that this document has been revised and updated in light of the experience of the first call for Expressions of Interest and includes revisions to the criteria.**

2. Definition and Scope

2.1 In July 2012, the Minister of Education announced the establishment of an independent Ministerial Advisory Group on Advancing Shared Education. The group published its findings on 22 April 2013. The issues arising from the findings on shared education cross many existing policy areas throughout education and the Department is already working on and will continue to develop shared education initiatives in schools.

2.2 It is important that there is a clear definition of what is meant by schools ‘sharing’ and the Department uses the definition of sharing provided to the Ministerial Advisory Group:

“Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.”

2.3 Specifically, **‘Shared Education’ means the provision of opportunities for children and young people from different community backgrounds to learn together.**

2.4 The ‘Shared Education Campuses’ initiative under T:BUC is seen as complementing the work already underway in schools and will be targeted towards infrastructure projects aimed at improving or facilitating educational sharing initiatives within local schools. It is intended therefore that the projects selected will build on a solid foundation of existing sharing.

2.5 The Shared Education Campuses Programme will provide capital funding for facilities at **schools which will be used on a shared educational basis.** The Programme will not provide for replication or duplication of existing or proposed facilities within the education sector, including that provided by the Further Education sector. As this Programme is specifically targeted at the provision of shared education in schools, applications from youth and sporting organisations/groups will not be considered for support under the Programme at this time.

2.6 The Shared Education Campuses Programme will have the potential to bring together a range of schools for the delivery of education to children on a shared basis. There may be additional ancillary benefits which can arise from the establishment of these new facilities, including increased opportunities for the wider community to use school facilities for a range of educational, sporting, recreational, arts or cultural activities in line with the Department’s *Community Use of School Premises: A Guidance Toolkit for Schools* which seeks to assist schools in opening their doors to the local community.

2.7 The programme will target schools that can demonstrate the following types of sharing:

- Shared educational facilities – where new facilities are built to allow for shared educational use by all schools within the model.
- Enhanced educational facilities – where current facilities are improved to allow for shared educational use by all schools within the model.
- Shared Educational Campuses – where schools are co-located and share infrastructure i.e. the Lisanelly model.

- 2.8 Shared facilities or Shared Campuses supported under this Programme must be located on a site that is, or will be, under the ownership or management of the Education sector.
- 2.9 The Shared Education Campuses Programme will not give consideration to the concept of a 'virtual campus' or to those schools that do not actually share facilities.

3. Programme Requirements

Gateway Checks

- 3.1 Each project proposal will have to demonstrate that they meet all four Gateway checks below in order to be appraised under the Programme:-

- a) **Number, Management Type and Phase of Schools**
The proposal must involve a minimum of two schools from different management sectors (ie controlled, Catholic maintained, Irish medium, integrated, voluntary grammar). If any proposal involves schools from more than one educational phase (eg primary/post-primary) at least two schools at each phase from different management sectors must be represented, so that there can be educational sharing across similar age groups.
- b) **Endorsement from respective Managing Authorities –**
The respective Managing Authorities of the schools involved in the application must provide written endorsement of their agreement to the proposal. This is important as any investment at or on behalf of schools through the Programme has the potential to create ongoing liabilities as well as recurrent resource implications that the relevant Managing Authorities should be aware of and be prepared to support. Proposals under the Programme also need to be consistent with the Managing Authorities' strategic plans for the schools under their control.
- c) **Planning Authority endorsement**
The Planning Authority (ie the relevant Education and Library Board) must provide assurance that the proposal meets the criteria in the Sustainable Schools policy for each school involved in the proposal or, where this is not the case, provide a rationale for their endorsement, including an explanation as to how the proposal will contribute to the delivery of sustainable provision in the area going forward.
- d) **Evidence of Community, Parent and Pupil Support**
Community, parent and pupil support is required to ensure the success of these types of proposals. Evidence is therefore required to confirm support is in place.

Essential Criteria

- 3.2 If a project proposal clears the Gateway checks, it will then be assessed, scored and prioritised against the following essential criteria:-
- a) **Educational Benefits** – the proposal must demonstrate how it will benefit the education of all children involved. The overarching priority for any proposal brought forward under this Programme must be the delivery of educational benefits to children and young people through improving or facilitating sharing initiatives. Marks will be allocated on the basis that the proposal clearly demonstrates:
- The sharing of classes, subjects, sports and extra-curricular activities and how educational benefits can be delivered to the children and young people through the sharing of classes together;
 - How educational benefits to the children and young people will be delivered through the sharing of classes together by developing future plans to increase the level of sharing between the schools involved;
 - How the proposal can aid the sharing of teaching expertise amongst the schools;

- That the courses being delivered are not a duplication of existing provision (in particular Further Education courses);
 - That consideration of the Bain report recommendations of not more than 2 composite year groups in a class and a school of a minimum of 4 teachers will be met.
- b) **Evidence of Existing Sharing** – Schools applying to the Programme should already be working in collaboration on curricular and non-curricular issues and/or be sharing facilities on an ongoing basis. The move to a Shared Education Campus should therefore build on a solid foundation of existing sharing that is already well embedded. Evidence must be provided detailing the existing educational sharing arrangements.
- c) **Societal Benefits** – the proposal must demonstrate how it will enhance/develop a shared future for the local community.
- The specific aim of the T:BUC strategy relating to education is ‘To enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child’s educational experience’.
 - Building good relations, tackling intolerance and challenging prejudice can be embedded through the ethos of schools and is already an integral part of the curriculum.
 - Creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement, unemployment, and sectarianism; and
 - improving good relations amongst and for our young people.

Proposals will be marked, based on the evidence provided, on how they will contribute to this overall objective.

- (d) **Religious Balance** - A **minimum** of 15%, and preferably 30%, of the minority community (Protestant or Roman Catholic) should be represented within the combined total of the school population involved.

Where the proposal involves schools from more than one phase of education (eg primary and post primary), there should be a religious balance across individual phases so that educational sharing can take place between similar age groups.

Desirable Criteria

3.3 In addition, priority will be given to project proposals that demonstrate they meet the following desirable criteria which will also be assessed and scored:

- a) **Location** – proposals should be for schools to be located within the same campus or in close proximity to each other. Any proposal that is for shared facilities rather than a shared campus should provide details on the distances between the schools involved and schools will have to demonstrate how they plan to minimise the impact on pupils’ education of travelling between the sites involved.
- b) **Disadvantaged Pupil Considerations** – proposals involving schools where pupils are more greatly impacted by social disadvantage, as indicated by the percentage of free school meal entitled (FSME) pupils enrolled in the schools. This is in line with the recognition given in the T:BUC strategy that one of the benefits of a more shared education system is to raise educational standards, particularly for disadvantaged pupils.

3.4 Applications should demonstrate that all Gateway and essential criteria are met and that any evidence requested is provided. Proposals considered as having met all the Gateway and

essential criteria will then be assessed with priority given to those proposals that best meet both the essential and desirable criteria. Those proposals which best meet the criteria will be submitted to the Minister for a final decision on which projects will be approved to proceed to the Economic Appraisal stage.

4. Process

- 4.1 The Shared Education Campuses Programme will be delivered by means of separate discrete calls for proposals. The first call was launched in January 2014. This is the second call.

Indicative Timetable for Second Call for Expressions of Interest

- 4.2 The indicative timetable for the Second Call under the Shared Education Campuses Programme is as follows:

- End September 2014 – Second Call for Expressions of Interest – the Department notifies Managing and Planning Authorities and all schools of the process, copying the approved protocol document, programme application form and confirming the programme timetable.
- End of January 2015 – deadline for submission of proposals to the Department by School Planning Authorities.
- June 2015 – Announcement of second tranche of Shared Education Campuses. Selected proposals advised to proceed in planning, including securing professional team as required.

- 4.3. In order to reduce the administrative and financial burden on individual schools and Managing Authorities, a two staged approach will be operated with regard to the application process. An application template is included at Annex 1 to this document and a flow chart for the process is attached at Annex 2.

Stage 1 – Call for Expressions of Interest

- 4.4. The first stage will take the form of an Expression of Interest (EOI) supported by an application form (see Annex 1) completed by the project applicant. The completed form will be the Strategic Outline Case (SOC) setting out the case for the shared education campus proposal. It will introduce the basic project concept, backed up with information on the cost, benefit and timing of the project.
- 4.5. The EOI must be endorsed by the relevant school Managing Authorities i.e. the relevant Education and Library Board on behalf of controlled schools in its area; the Council for Catholic Maintained Schools on behalf of Catholic maintained schools; or, in the case of Voluntary Grammar, Grant Maintained Integrated or Irish Medium Schools, the Board of Governors of the individual school(s) concerned.
- 4.6. All EOIs should be submitted through the relevant Education and Library Board (ie the Planning Authority) which will be responsible for submitting the EOIs to the Department of Education. **EOIs which are not submitted via the appropriate Education and Library Board will not be accepted by the Department.** Education and Library Boards will advise schools in their Board area of the date they require receipt of proposals in order to allow them time for consideration and endorsement by Board Members/Commissioners to meet the Department's deadline for responses of **30 January 2015**.
- 4.7. The Planning Authority will confirm in writing to the Department whether or not it endorses the EOIs it receives. If an application is not endorsed by the Planning Authority, the Planning Authority will inform the school(s) involved of the position but the proposal must still be submitted to the Department.

Assessment of Project Proposals

- 4.8. Following the closing date for applications, all project applications will be assessed under the relevant Gateway criteria as set out at 3.1 above. Those applications deemed to have met all the Gateway criteria will be further assessed, along with the supporting evidence provided, against the essential and desirable criteria as set out in 3.2 & 3.3 above. Projects will be sifted and selected on the basis of the information provided in the application forms.
- 4.9. A cross-Directorate panel has been established within the Department to consider proposed projects against the set criteria. This panel will report to the Director of Area Planning and will make recommendations to the Minister based on which projects best meet the criteria and, within the funding available, should be progressed to the Economic Appraisal stage.

Approval of Applications to the Programme

- 4.10. The Minister will make the final decisions on which projects should go forward to Stage 2, based on the recommendations of the assessment panel.
- 4.11. Planning Authorities will be informed of the projects approved by the Minister to proceed to the planning stage.
- 4.12. Projects not selected for advancement in the Second Call will be returned to the Planning Authority. The project may be submitted to any subsequent call for proposals.

5. Stage 2 – Economic Appraisal

- 5.1 The projects selected by the Minister to proceed to the planning stage will be required to work up an Economic Appraisal for consideration and approval by the Department. The Economic Appraisals will be considered within the normal business approval processes and in line with NI Guide to Expenditure Appraisal and Evaluation (NIGEA) guidelines, including value for money and affordability. Only after approval of the Economic Appraisal, and subject to available capital funds, will a project be permitted to proceed to tender and construction.
- 5.2 The Department will provide support to the Managing Authorities in the development of Economic Appraisals for the selected projects.

6. Monitoring

- 6.1 Programme governance and control structures will be established for the programme of shared education campuses emerging.
- 6.2 Project plans will be sought from the School Managing Authorities for all approved projects.

7. Procurement

- 7.1 All professional appointments arising on approved projects must be carried out in full compliance with procurement guidelines and regulations. Where a professional team has already been appointed, the relevant Managing Authorities must provide evidence that the team has been procured in compliance with procurement guidelines and regulations, otherwise the Department will not support the appointment.

Annex 1

Shared Education Campuses Programme Application Form Second Call

Shared Education Campuses Programme – Application Form for Second Call

The Shared Education Campuses Programme will be delivered through separate, discrete calls for proposals which must be endorsed by both the relevant school Managing Authorities and Planning Authorities.

All project proposals must be supported by a completed application form, to be completed by the project applicant, which will form the Strategic Outline Case (SOC) for the shared education campus proposal.

The application form will help the Department to assess whether it is worth committing resources to take the project forward to develop a more detailed design and Economic Appraisal.

The completed application form must be returned through your Education and Library Board to reach the Department by Friday 30 January 2015.

Applications which are not submitted via the appropriate Education and Library Board will not be accepted by the Department.

This form is designed to help applicants make an application using appropriate and proportionate effort. There is flexibility over the amount of information to be included under each heading below, but please note that the application form is intended to be a short document and should not exceed 10 pages.

Project Title:

Planning Authority:

Managing Authorities Involved:

Senior Responsible Officer:

Signed:

Date:

Section 1: Project Overview

Briefly describe the basic project concept. Confirmation must be given that the application relates to schools which are viable and core to emerging area plans.

Section 2: Rationale, Aims and Need

State the rationale for shared education.

Identify the type of educational sharing being proposed (Shared educational facilities, enhanced educational facilities or shared education campus).

Identify the relevant aims and objectives of the proposed project.

Outline how the project meets the following criteria:

- *Number, Management Type and Phase of Schools;*
- *Managing Authority Endorsement;*
- *Planning Authority Endorsement;*

- *Evidence of Community, Parent and Pupil Support;*
- *Demonstration of the Educational Benefits that will be created;*
- *Evidence of Existing Sharing;*
- *Demonstration of the Societal Benefits that will be created;*
- *Evidence of Religious Balance;*
- *Location;*
- *Evidence of Disadvantaged Pupil consideration.*

Section 3: Constraints

Identify likely constraints e.g. land issues; legal constraints; planning approvals.

Section 4: Stakeholder Issues

Identify the key stakeholders and confirm their agreement to the project proceeding.

Indicate their level of commitment to the project as specifically as possible.

Describe any consultations held or still required.

Are there any outstanding stakeholder issues?

Section 5: Management and Implementation

Give a preliminary indication of the proposed project management arrangements.

Is any consultancy support likely to be required?

Describe any legal or contractual issues.

Are there any important outstanding management/implementation considerations?

Section 6: Costs, Benefits & Risks

Provide broad estimates of the capital and revenue costs of the project.

If savings are anticipated, for example of planned minor works or maintenance explain their nature and quantify them broadly.

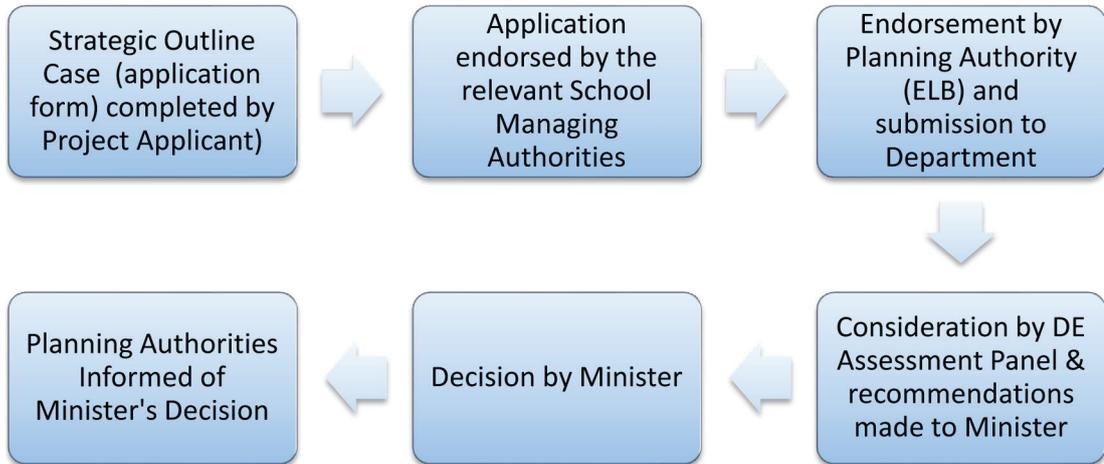

Describe the non-monetary costs and benefits that are expected to arise.

Explain the key risks that the project is likely to face and any potential mitigation measures.

23 October 2014

Dear Peter

Shared Education Campuses

Thank you for your letter of 10 October 2014 regarding the Shared Education Campuses Programme.

Officials will be content to brief the Committee on the Shared Education Campuses Programme protocol on 14 January 2015 at Moy Regional Primary School. I would be grateful if you could contact Roisin Lilley, Head of the Shared Education Campuses Project Team, at roisin.lilley@deni.gov.uk closer to the date to confirm the detailed arrangements.

You had also asked for further information on the Department's use of facilitators to encourage Shared Education and assist in the development of Shared Campus proposals.

As the Committee is aware, the Department of Education, in conjunction with funding from the Delivering Social Change framework and Atlantic Philanthropies, is providing a funding stream to support Shared Education in schools over the next four years. The Shared Education Signature Project will provide funding of £25 million over the four year period. The project will be launched by the Minister and the first call for applications opened in the near future. This funding, which will focus on schools that have already engaged in this work, will increase the number of young people participating in Shared Education and promote reconciliation through schools increasingly working collaboratively. The project will fund a number of Development Officers to support the delivery of Shared Education programmes funded by the project.

In terms of the Shared Education Campuses Programme, the schools involved in projects chosen to go forward under the Programme will be working closely with their respective Managing Authorities, their local Planning Authority (ie the relevant Education & Library Board) and DE officials in the development of each project. Managing and Planning Authorities are also available to work with schools in bringing forward applications to the Programme.

Yours sincerely

Dear Veronica

Shared Education Campuses Programme

At its meeting on Wednesday 8 October 2014 the Committee noted your correspondence regarding the T:BUC Shared Campuses Programme.

Members agreed to write to the Department asking for a briefing on the Shared Campuses Programme protocol on 14 January 2015 at Moy Regional Primary school.

Members also agreed to seek further information on the Department's use of facilitators to encourage Shared Education and assist in the development of Shared Campus proposals.

Yours sincerely

24 October 2014

Dear Peter

Shared Education Signature Programme

Your correspondence of 15 October refers.

As the Committee is aware, on 17 September 2014 the First and Deputy First Minister announced a £58 million funding package provided by the Northern Ireland Executive and Atlantic Philanthropies (AP) for three Delivering Social Change signature programmes, including Shared Education.

The Shared Education Signature Project will run until 2018 with investment of £25 million over the four year period. The project will focus on supporting schools that have previously participated in Shared Education. The Department of Education (DE) is the lead Department and delivery of the project will be through the Education and Library Boards. The project will be launched by the Education Minister and the first call for applications opened in the near future.

The objectives for the project (as set out in the approved business case) are as follows:

- improve education outcomes through schools working collaboratively;
- increase the number of schools participating in Shared Education;
- improve reconciliation outcomes through schools working collaboratively;
- increase the number of young people participating in Shared Education;
- to work collaboratively to provide educators with professional development and develop their confidence and competence in using a range of learning strategies necessary for work in shared classes;
- enable schools to implement a progressive approach to shared education; and
- to ensure shared education becomes a core element of strategic planning within the Department of Education, Education and Library Boards and Schools.

To ensure Shared Education becomes a core element of strategic planning, project targets will be included in both the DE business plan and the ELB Resource Allocation Plans and monitored accordingly. Schools participating in the Shared Education Signature Project will be required to include specific plans and actions for Shared Education in their School Development Plan.

More broadly, the Department is currently developing a Shared Education Policy, which will set out the rationale, vision and objectives for Shared Education. The policy will also set out the actions and interventions that the Department will take to embed Shared Education across the system.

Yours sincerely

17 October 2014

Dear Veronica

Shared Education Signature Programme

At its meeting on 15 October 2014, the Committee noted evidence from Professors Knox and Borooh in respect of the Shared Education Signature Programme announced in September 2014. The relevant extract in respect of the objectives of the Signature Programme is reproduced below:

- improve education outcomes through schools working collaboratively;
- increase the number of schools participating in Shared Education;
- improve reconciliation outcomes through schools working collaboratively;
- increase the number of young people participating in Shared Education;
- to work collaboratively to provide educators with professional development and develop their confidence and competence in using a range of learning strategies necessary for work in shared classes;
- enable schools to implement a progressive approach to shared education; and
- to ensure shared education becomes a core element of strategic planning within the Department of Education, Education and Library Boards and Schools.

The Committee agreed to write to the Department seeking confirmation of the relevant objectives, funding levels and timings for the Shared Education Signature Programme. The Committee particularly sought clarity as to how the Shared Education Signature Programme will facilitate Shared Education becoming a core element of strategic planning within the Department, ELBs and schools.

A response by Friday 31 October 2014 would be much appreciated.

Yours sincerely

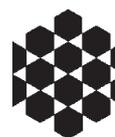

Signed Peter McCallion

BELFAST BT4 3XX

4 November 2014

Dear Peter

CRED / Sharing Categorisation

Your correspondence of 24 October refers.

Officials would be happy to provide the Committee with a briefing on the Community Relations Equality and Diversity (CRED) policy.

As the Committee will be aware, the Department launched its CRED policy in March 2011. The policy is supported by the CRED Enhancement Scheme which provides funding support for the policy and is available to schools and youth organisations. The 2014/15 budget for the Scheme is £1.2 million.

Until 2010, DE provided annual funding of approximately £3.6m for a range of Community Relations schemes. At this time a total of twenty six external organisations were provided with funding. The new CRED policy was designed to move away from the dependency on external organisations in delivering community relations, equality and diversity by seeking to embed this work firmly within educational settings by providing a strong skills base for educators and the teaching resources required.

As the Committee is aware, there is currently no legal definition of Shared Education. It is the Minister's intention to bring forward a stand-alone Bill which will provide a legislative definition and define the role of the Department and its arm's length bodies. This will be supported by a Shared Education Policy, which will set out the rationale, vision and objectives for Shared Education.

The Committee will wish to note that the Terms of Reference for the Delivering Social Change Shared Education Signature Project explicitly state that Shared Education means the provision of opportunities for children and young people from different community backgrounds to learn together. Detailed Terms of Reference for the Shared Education Peace IV Programme have not yet been developed.

Yours sincerely

24 October 2014

Dear Veronica

CRED / Sharing Categorisation

At its meeting on Wednesday 22 October 2014, the Committee noted correspondence (appended) from the Speedway Trust to the COFMDFM inquiry into T:BUC.

The Committee agreed to write to the Department seeking a briefing on the Community Relations Equality and Diversity (CRED) policy as part of the Committee's inquiry into Shared and Integrated Education. The Committee also agreed to request confirmation regarding reported reductions in funding for CRED and clarification in respect of the categorisation of Shared Education projects. In particular, clarity is sought regarding the question raised by the Speedwell Trust as to whether a Catholic Maintained school sharing with a Catholic Voluntary Grammar would be deemed an example of Shared Education which would attract support from the Peace IV or Signature Shared Education Programmes.

A response by 7 November 2014 would be greatly appreciated.

Yours sincerely

Signed Peter McCallion

Inquiry into Building a United Community

Submission from the Speedwell Trust October 2014

Executive Summary

We believe that schools have a central role to play in improving community relations and in building a united community in Northern Ireland. The need for all schools to facilitate cross-community contact for their pupils on a regular basis is clear. The evidence suggests that nearly a quarter (24%) of young people in Northern Ireland who consider themselves either 'Protestant' or 'Catholic' have no friends from the 'other' main religious community. Moreover, 45% of 16 year olds report having nowhere in their area where they could meet young people from a different religious background. There is also robust evidence that cross-community friendships and social activity are more likely among young people who have been given opportunities at school or in youth groups to mix with their counterparts on a cross-community basis.

The current level of participation by schools in cross-community shared education and community relations programmes is disappointing; of the 568 schools which responded to a recent survey on 'shared education' by the Department of Education, only 306 (54%) had been involved in shared education on a cross-community basis.

In our view, there are three principal barriers to participation in cross-community collaboration by schools. The first and most important is undoubtedly that schools are not required to facilitate cross-community engagement for their pupils. Related to this is the lack of any statutory definition of shared education which defines it as cross-community activity. The third barrier is a lack of funding.

Our recommendations to the Committee are as follows:

- OFMdFM should produce an annual progress report, published in a timely fashion, with regard to the good relations indicators which it monitors.
- OFMdFM's 'Good Relations Indicators' reports should provide more analysis and should present recommendations for policy changes which might enhance progress towards improved community relations.
- OFMdFM should clarify the term 'community relations participation' by schools in its good relations indicators reports, and should introduce the following additional indicators:
 - The extent to which schools are providing opportunities for meaningful and sustained cross-community contact for pupils
 - The extent of cross-community friendships among children and young people
 - Whether children and young people have anywhere to meet their counterparts from the other main community

- The Committee should investigate the extent of and reasons for any delays by OFMdFM in making and communicating decisions on applications to its Central Good Relations Fund 2014/2015.
- The Education Minister should bring forward, at the earliest possible opportunity, a statutory definition of shared education which makes explicit that it must involve meaningful cross-community interaction by pupils on a sustained basis.
- Using this definition, the Department of Education must make it a statutory obligation for schools to ensure that all their pupils are provided with the opportunity to participate in shared education on a regular basis.
- The Department must also make available sufficient funding to ensure that all schools can ensure that their pupils have the opportunity to participate in meaningful cross-community shared education and Community Relations, Equality and Diversity (CRED) programmes on a regular basis.
- The Department must institute a robust system of monitoring which enables it to evaluate, on a regular basis, whether and how each individual school is implementing shared education and CRED, including the extent and quality of cross-community engagement which is offered by each school.
- The Department should introduce an award scheme for schools which provide outstanding examples of good practice in shared education and CRED.

In addition, we believe that consideration should be given to synthesising the Department's shared education and CRED policies as there is clearly a considerable degree of overlap between them. However, if this is done, it is vital that the definition of shared education remains one which gives a central role to the importance of cross-community contact between Protestant and Catholic schoolchildren. Clearly, religious division is only one form of division in Northern Ireland, and we welcome the fact that CRED is also designed to address other divisions and stereotypes. At the same time, Northern Ireland will be unable to move forward into a truly harmonious and peaceful society if its most fundamental division is not addressed in schools.

Introduction

The Trust greatly welcomes the decision by the Committee for the Office of the First Minister and deputy First Minister to hold an inquiry into an issue which is of fundamental importance to the future stability and prosperity of Northern Ireland, and to the quality of life of its people. The Trust's own experience lies in its work in assisting schools to collaborate together in shared education and other cross-community programmes. The Trust is dedicated, in particular, to bringing together children from the two main religious communities in Northern Ireland.

For this reason, our submission focuses on the role of schools in facilitating cross-community interaction. We also consider the role of parents in this regard. However, we have not looked at the many other elements and issues involved in building greater cross-community activity and understanding, as these lie outside our direct experience. Although we believe that there are many very important ways in which we can develop a more peaceful and united community, we do believe that schools have a central role to play in progressing such work.

The Speedwell Trust

The Speedwell Trust is a charity which has 23 years' experience of delivering educational programmes designed to facilitate constructive contact and greater understanding between children from different religious and cultural backgrounds. It is based near Dungannon, but works with schools and youth groups across Northern Ireland and, on occasion, in border

areas in the Republic of Ireland. To date, the Trust has provided services to more than 200 schools. Within the last financial year alone (2013/14), Speedwell delivered programmes in partnership with more than 100 schools.

Perspectives on sectarianism, division and good relations

Theory and practice with regard to good relations, shared space and shared services

The benefit of cross-community programmes for young people

One of the main reasons that cross-community contact between children and young people is so crucial is that the evidence suggests that a significant minority – just under a quarter – of young people in Northern Ireland who would consider themselves either ‘Protestant’ or ‘Catholic’ have no friends from the main religious community in which they did not grow up. In 2012, the annual Northern Ireland Young Life and Times (YLT) survey found that 24% of 16 year olds from the Protestant or Catholic religious community reported having no friends in the other main religious community.¹ Moreover, a previous YLT survey, carried out in 2011, found that such friendships were more likely among those who had previously participated in a cross-community scheme, or who had attended a planned integrated school.² Those who fall into these categories were also more likely to socialise or play sport with people from a different religious community.³

Furthermore, 45% of respondents to the 2012 YLT survey said that there were no facilities in their area where they could meet young people of a different religion, and 77% thought that cross-community relations would improve if there were more cross-community projects.⁴

Thus, there is a clear need for all children and young people who regard themselves as belonging to either the Protestant or Catholic community to be provided with opportunities to participate in cross-community programmes – both because these facilitate cross-community friendships and social activity, and because such a high proportion of young people cannot easily meet their counterparts from the ‘other’ community.

In addition, there is specific evidence that children and young people benefit from experiencing such contact on a sustained basis within an educational setting. A research team at Queens University, Belfast, found that children at schools which had participated in a shared education programme run by the University were less worried and more positive about the ‘other’ community than children at schools which did not participate in such a scheme.⁵ This finding applied even when the team confined its comparison to schools which were located in areas viewed as having greater divisions.

The importance of parental attitudes

However, the evidence also suggests that parents have a major influence on the attitudes and friendship patterns of their children. A study which was published in 2010, involving 1,700 children in Northern Ireland and 880 of their parents, found that parental social attitudes were the most powerful factor influencing the social and political attitudes of their children.⁶ This certainly suggests that, if we are to encourage children to have open and positive

attitudes towards those from different cultural and religious traditions, it is vital to engage with parents as well.

Schools' participation in shared education and community relations programmes

The current level of participation by schools in cross-community shared education and community relations programmes is disappointing; of the 568 schools which responded to a recent survey on 'shared education' by the Department of Education, only 306 (54%) had been involved in shared education on a cross-community basis. In other words, nearly half (262 or 46%) had not participated in cross-community shared education.⁷

Moreover, the survey also found that only 15% of schools which had participated in shared education had done so in a way which involved the whole school.⁸ We believe it is essential that all children from either the Protestant or Catholic tradition in Northern Ireland are given the opportunity to engage in a sustained and meaningful way with children from the other main community on a regular basis. This can only happen if each class in every relevant school is provided with such an opportunity. It is also the only way in which the Programme for Government target, referred to previously, can be achieved.

Furthermore, the 2012 Northern Ireland Kids' Life and Times Survey, which surveyed children in P7, found that only 58% reported having taken part in an activity with a child from another school.⁹

Although the YLT survey in the same year found that a much larger proportion - 82% - of 16 year olds reported having taken part in such activity, only 72% of those who had participated in shared education (i.e. 59% of the whole sample) said that some of the pupils from other schools had been from a different religious background.¹⁰ It would seem, therefore, that substantial proportions of both primary and post-primary pupils are not being given any opportunity by their own school for cross-community engagement with children from another school.

In addition to shared education, a further route through which schools can facilitate cross-community engagement by their pupils is provided by the Department of Education. In 2011, the Department of Education published Community Relations, Equality and Diversity in Education (CRED), a new policy which was designed to encourage all schools to foster mutual understanding and good community relations.¹¹ The Department now provides some funding on an annual basis to schools and youth groups to help implement CRED.

The 2011 YLT survey found that 70% of their 16-year old respondents reported having engaged, at some stage, in activity which would fall under the umbrella of the CRED policy, either in school, in a youth group, or in both types of setting. Most of these respondents (60% of the whole sample) had taken part in such activity at school. Conversely, 30% of respondents said they had not participated in such activity.¹² However, this survey did not examine how many of these young people met members of the other main religious community as part of this activity.

7 Department of Education, Omnibus Survey: Shared Education, October 2013, Tables 5 and 10. Table 10 gives a percentage for involvement in cross-community shared education which excludes those schools which did not participate in any shared education. It is important, therefore, to read both these tables in conjunction with each other to discern the actual level of cross-community engagement.

12 Devine, Paula (2013) Community Relations, Equality and Diversity in Education (CRED): Findings from the 2012 Young Life and Times Survey ARK Northern Ireland

We are also very concerned about the level of funding which is made available to schools and youth groups for the implementation of CRED. The Department of Education has significantly reduced the resources which it allocates for the support of community relations in schools. Up to March 2010, it allocated some £3.6m annually for such support in both formal and informal educational settings. It now allocates only £1.2m approx. annually.¹³

Only 15% of schools (181) took part in projects which were allocated funding by the Department through this programme in 2013/14.¹⁴

We further note, from data in OFMdfM's most recent 'Good Relations Indicators' report, that the proportion of schools engaging in community relations activity fell drastically between 2006/07, when it stood at 43%, to 2011/12, when it stood at 21%.¹⁵ It is not clear, from the report, how the OFMdfM data is compiled. It may refer only to schools which have been allocated funding for community relations programmes. Obviously, some schools may participate in community relations activities without recourse to external funding. However, the figures are undoubtedly a cause for concern. Moreover, they mirror informal feedback which we have received from schools which suggests that far fewer schools are now participating in such activity than was the case previously.

Barriers to cross-community collaboration by schools

In our view, there are three principal barriers to participation in cross-community collaboration by schools. The first and most important is undoubtedly that schools are not required to facilitate cross-community engagement for their pupils. Related to this is the lack of any statutory definition of shared education which defines it as cross-community activity. The third barrier is a lack of funding.

As the Committee will be aware, the Northern Ireland Executive's current *Programme for Government 2011–2015* contains a commitment to ensure that all children have the opportunity to participate in shared education programmes by 2015.¹⁶ In addition, the OFMdfM policy document, *Together: Building a United Community* (TBUC), contains a commitment to deliver ten 'shared education' campuses.¹⁷ The Education Minister subsequently made a pledge, in January 2014, to deliver on this promise.

However, if shared education is to form a central element of the Executive's approach to cross-community relations, as we believe it most certainly should, it is essential that all involved are using the same clear definition of 'shared education', and that any 'shared education' will facilitate sustained and meaningful contact between children from the two main religious traditions in Northern Ireland.

We have been disappointed, therefore, to discover that there is no clear statutory definition of 'shared education', and that the Executive seems to be using a definition which appears to allow collaboration between Catholic grammar and non-grammar schools, on the one hand, and between predominantly Protestant controlled or voluntary grammar and non-grammar schools, on the other, to be viewed as 'shared education'. It also appears to allow for collaboration between a Catholic primary and Catholic post-primary school, or a predominantly Protestant controlled primary school and a predominantly Protestant controlled or voluntary post-primary school.

13 The previous figure is cited in Department of Education, 2011, op. cit., p.8, para. 2.4. In Assembly Written Answer AQW29095/11-15, the Education Minister stated that his Department provided £1.163m in 2012/13 to fund the delivery of CRED.

14 The figures quoted are drawn from statistics supplied by the Education Minister in Assembly Written Answer AQW 29626/11-15.

15 OFMdfM (2012) Good Relations Indicators – 2012 Update, 4.11. Available at: <http://www.ofmdfmi.gov.uk/index/equality-and-strategy/pfg-economicsstatistics/equalityresearch/research-publications/gr-pubs.htm>

16 Northern Ireland Executive Programme for Government 2011 – 15, p. 51.

17 See: <http://www.ofmdfmi.gov.uk/together-building-a-united-community>

The definition in question was drawn up by the Ministerial Advisory Group on Shared Education. This Group was tasked by the Executive with providing a set of recommendations on how best to take forward shared education. It reported in March 2013. It defined shared education as follows:

Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting the efficient and effective use of resources, and promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.¹⁸

Crucially, however, the report further clarifies that: “By ‘different sectors’, the definition refers to schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance.”¹⁹ Such a definition seems to allow the ‘single community’ interpretations referred to above.

Moreover, the impression that something close to the Group’s definition is being used by the Department of Education and by schools is reinforced by the fact that, in the “shared education” section of the schools’ survey carried out by the Department of Education, referred to earlier, the Department lists a number of types of ‘shared education’ collaboration in which each school might have participated and includes, as an option, collaboration with a school “from the same sector (e.g. controlled, maintained, integrated, Irish medium)”. Thus, although the Department has a different definition of the term ‘sector’ from the Ministerial Advisory Group, it appears to share the view that ‘shared education’ does not have to involve cross-community collaboration.²⁰

Any such ‘single community’ collaboration, while it may bring many other benefits, is not going to facilitate the type of cross-community contact which the evidence shows is so important in helping to increase cross-community understanding and foster good cross-community relationships in Northern Ireland.

We appreciate that the Education Minister has since committed to bringing forward a definition of shared education and appreciate that the final statutory definition may differ from the above.²¹ However, we are concerned that, in the absence of any official definition, the broad definition recommended by the Working Group will be used, in the meantime, by the Department of Education, education boards and schools in working towards the Executive’s current policy objectives concerning shared education. Moreover, until a firm statutory definition is produced, it will be impossible for either OFMdfM or the Department of Education to monitor robustly the degree and quality of shared education which is taking place, as it will not be clear what it is monitoring.

In addition, the Department of Education’s CRED policy document stipulates only that schools should provide opportunities for their pupils to interact with others from different backgrounds “within the resources available”; in other words, where a school feels it cannot afford to initiate such cross-community engagement, that engagement does not have to take place.²²

Moreover, at present, there is no dedicated funding stream to assist schools in collaborating on a shared education basis. As noted above, there has also been a significant reduction in the amount of funding which the Department of Education provides for schools’ community relations programmes. Perhaps not surprisingly, survey evidence suggests that lack of funding

18 Ministerial Advisory Group on Shared Education (2013) *Advancing Shared Education*, p. xiii. Available at: <http://www.qub.ac.uk/schools/SchoolofEducation/MinisterialAdvisoryGroup/Filestore/Fileupload,382123,en.pdf>

22 Department of Education, 2011, op. cit., para. 6.5.

is the major barrier which schools face when it comes to initiating shared education and cross-community schemes.

Lack of resources was the obstacle cited most commonly by the schools which took part in a survey on shared education carried out by a team from Queen's University; 83% of schools which responded selected this factor as a barrier to delivering shared education.²³ The issue was also identified by 53% of respondents to a survey which the Speedwell Trust carried out with schools with which it has worked (See Table 1). This survey asked schools to identify which factors they felt created potential obstacles for schools in participating in cross-community programmes.²⁴ Moreover, the barrier most commonly identified by the respondents to our survey was transport costs, cited by 85% of respondents.

Accessing Central Good Relations funding: the Trust's experience

In this regard, we wish to highlight our disappointing experience with regard to the fund established by OFMdfM to help achieve the Executive's good relations targets and to deliver its TBUC strategy. OFMdfM published an invitation to apply for the 2014-15 Central Good Relations fund in November 2013. The deadline for applications was 10th February 2014, and the Department's guidance note for applications specifically stated that projects which received funding must be delivered during the 2014-15 financial year.²⁵ However, the Department did not provide any information on the total amount of funding which would be available under this scheme.

The Trust duly applied for funding for a proposed project which would contribute towards the first of the four Ministerial priorities outlined in TBUC - 'our children and young people'. TBUC states that the shared aim of Ministers is "to continue to improve attitudes amongst our young people and to build a community where they can play a full and active role in building good relations"²⁶.

Our proposed project would also have assisted in delivering two of the key actions outlined in TBUC under this Ministerial priority, namely:

- Roll out a "buddy scheme" in publicly run nursery and primary schools
- Develop, in partnership with the relevant agencies and Departments, age-appropriate primary and post-primary anti-sectarianism resources, and ensure that teachers are trained, equipped and supported to deliver an effective anti-sectarianism module²⁷

To date, seven months on from submitting our application, we have not received a decision with regard to funding from OFMdfM, despite following up with the Department on a number of occasions. We have received just two emails during this time, one in March and one in May, both of which stated that staff were assessing the applications, that demand for funding had been very high, and that OFMdfM would let applicants know the outcome of their application as soon as possible. Our last contact with the Department was in August when we were given the same message verbally. We believe the delay in reaching and communicating to us a decision on our application is unacceptable.

It would now be impossible for us to deliver the whole of our proposed project within the 2014-15 financial year. We assume many other organisations which applied for funding are in the same position as ourselves. We would urge the Committee to investigate what proportion of applicants have received funding to date and how much of the funding originally

23 Hughes, Joanne et al. (2010) School Partnerships and Reconciliation: An Evaluation of School Collaboration in Northern Ireland. Queen's University, Belfast, p. 23.

24 The survey was carried out online in June 2014. An invitation to take part in the survey was issued by email to 130 schools. 65 (50%) responded.

25 OFMdfM, Guidance Notes. Central Good Relations Funding Programme 2014/2015, November 2013.

27 op. cit., p.5.

allocated for the Central Good Relations Fund 2014-15 has been awarded and distributed. Where funding has not been allocated and where there have been lengthy delays in notifying applications of the outcome of their application, we would urge the Committee to examine the reasons for this to try to ensure that the situation is not repeated again in future years.

Parental concerns

It might well be assumed that one of the factors which might deter many schools from engaging in cross-community initiatives would be the possibility that parents might object. In general, however, we have not found parental attitudes to present any barrier to the work that we carry out. At the same time, we appreciate that some schools may be reticent about engaging in cross-community programmes because they fear the reaction which they may receive from some parents. Indeed, while most of the schools which responded to our survey did not see lack of support from parents as a barrier to shared education, 11% of respondents did feel it was an obstacle (see Table 1). Thus, the risk of upsetting some parents clearly is a deterrent factor for some schools.

Best practice in bringing together divided communities, and in developing shared space and shared services

We are not providing any comment on international best practice in the field of cross-community work in schools, as we have no direct experience of such work. However, we do have considerable relevant experience in Northern Ireland and, on occasion, in border areas of the Republic of Ireland. Below we highlight two of our most successful cross-community schools' programmes which we believe provide models of good practice which could be rolled out more widely.

Diversity and Drums

The success of our Diversity and Drums programme illustrates the value of facilitating children in directly addressing cultural difference and potentially contentious issues, and encouraging them to understand, respect and appreciate cultural diversity. For the children, the highlight of the programme is generally the opportunity which it provides them to have a go at playing a variety of different types of drum, including both the bodhran and the Lambeg drum. Participating in an activity which most children find hugely enjoyable is a great means of breaking down barriers and reducing any anxieties which the children may feel. However, the programme, through an educational thematic unit, also enables children to find out how drums have been used in different periods of history and in different parts of the world. As part of the programme, children also discuss sensitive issues such as bullying, sectarianism and racism, including the ways in which discriminatory and aggressive behaviour and attitudes impact on people, and on what can be done to address these issues.

The Diversity and Drums thematic unit, which is aimed at children in Key Stage 2, consists of 12 inter-related activities which are designed for use across one or two school terms by two schools whose pupils are each from predominantly different religious traditions. Schools are encouraged to deliver this module to joint groups of pupils from each of the partner schools. To date 30 schools have taken part in this programme and the feedback from them has been overwhelmingly positive.

Connecting Communities

The Connecting Communities programme is also aimed at children in Key Stage 2 and has been very successful. As with Diversity and Drums, Connecting Communities does not shy away from contentious issues, but rather encourages children to think about cultural difference. In this instance, the module explores how our concept of community is formed, the differences within a community, and how we come to think of some people as being 'inside' or 'outside' our community. Participants are also asked to imagine what it would be like to be a newcomer to their own community and how they might feel.

The Connecting Communities thematic unit consists of 14 inter-related activities which are designed for use across one or two school terms by two schools whose pupils are each from predominantly different religious traditions. To date, 15 schools have taken part in the practical workshops and, once more, feedback has been very positive.

What good relations means/how sectarianism and division can be addressed

Challenges at interface areas

We note that, in examining how sectarianism and division can be addressed, the Committee intends to investigate the specific challenges involved in tackling these issues in interface areas. However, we would caution against the assumption that the most entrenched divisions and negative attitudes exist only in interface areas. In our experience, profound distrust of the 'other' community can exist in areas which are not viewed as interface districts.

Nevertheless, the evidence clearly indicates that shared education can have a positive impact, even in sharply divided communities. We noted previously that the Queen's University research, to which we referred earlier, found that children at schools in more divided areas which had participated in a shared education programme were less worried and more positive about the 'other' community than children at schools in such areas which did not participate in such a scheme.²⁸

One potential challenge in bringing together children from different schools on a cross-community basis can be that parents and/or their children may view with apprehension the idea of travelling to a school located in an area associated with the 'other' community. In our own experience, there has only been one instance where a large number of parents objected to their children visiting such a school. This was almost certainly because the school was located in an area which they viewed as being associated with paramilitaries from the 'other' community. This particular instance is the only occasion in our 23 years of running such programmes in which a school has had to withdraw from the scheme, due to objections from a large number of parents.

Where such concerns do exist, however, it can be very helpful to deliver some or all of the programme activities at a neutral venue. Indeed, some rural schools don't have the space to accommodate large numbers of additional pupils, and so welcome the opportunity to use an external venue. Speedwell offers such a facility at our headquarters in Parkanaur Forest near Dungannon, where children have the opportunity to experience a range of outdoor activities in the forest setting, and to make use of indoor accommodation which is designed to accommodate large groups of children. The facility has proved very popular with schools.

Our own experience suggests that one of the most effective ways to engage with parents is to ensure that our cross-community programmes include a performance by the children involved to which parents are invited. Where this opportunity is offered, it is generally taken up by most parents who respond positively. Such opportunities enable parents to have a better understanding of our programmes and to engage with each other on a cross-community basis.

In addition, on those rare occasions where there is real opposition from parents, we have also found that it can be very helpful to engage directly with such parents in an open and constructive way prior to commencing a cross-community programme. Moreover, where there is any parental mistrust, it has never arisen from the cross-community contact per se, nor from the actual content of the programmes. Parental objections have only been raised on very infrequent occasions due to the location of a particular school, as mentioned above, or due to the involvement of an institution which has a negative symbolic significance for the parent(s) concerned e.g. a particular church or the PSNI.

28 Hughes, Joanne et al., op. cit., p. 40.

Role of communities

We note that the Inquiry's terms of reference include an examination of "the role of communities in policy and decision making in relation to community integration and particularly, the removal of interface barriers". We would urge the Committee not to ignore the vital role of schools in this regard. Indeed, for nearly all children and young people of school age, their school is the community in which they spend most of their time. The evidence which we have already cited on the impact of shared education and cross-community schools' programmes demonstrates the compelling need for schools to play a central role in helping to integrate our communities.

Moreover, many children are being taught in schools which have a pupil composition which is almost entirely Protestant or Catholic. In 2012, The Detail website obtained data from the Department of Education which, according to The Detail's website, showed that nearly half of all schoolchildren in Northern Ireland were being educated in schools which were 95% or more Protestant or Catholic in pupil composition.²⁹ Of the 1,070 schools in Northern Ireland in 2011-12:

- 46% of schools (493) had a pupil composition which was 95% or more Protestant or Catholic
- 27% of schools (291) had either no Protestant or no Catholic children on their rolls

While we acknowledge that there are now significantly fewer schools than hitherto which are very largely Catholic or Protestant in pupil composition, it still remains the case that a very large minority of schoolchildren are being educated in a school which is largely or entirely Protestant or Catholic in its make-up. It is especially vital that children in these schools should be provided with the opportunity for sustained interaction on a regular basis with pupils from the main religious tradition other than their own.

Effectiveness of Good Relations indicators in monitoring and measuring progress of government interventions

We welcome the fact that OFMdfM monitors, on a regular basis, a wide range of 'good relations' indicators. However, we are disappointed that the last progress report in this regard was published in 2012.³⁰ If progress is to be monitored effectively, it should be carried out and reported on in a timely fashion on an annual basis. Moreover, we are further disappointed that the most recent monitoring report is presented in a largely descriptive manner with little attempt at analysis and no recommendations for any policy changes which might enhance progress towards improved community relations. If the monitoring is to be of value, it is essential that it feeds into a regular process of policy analysis and review.

We have a specific concern regarding the report's lack of clarity as to how the 'community relations participation by schools' indicator was compiled. We believe that the quoted statistics may relate to schools which receive funding for such activity, but this is not clear. In addition, we believe there is an urgent need for indicators which help to measure the following:

- The extent to which schools are providing opportunities for meaningful and sustained cross-community contact for pupils
- The extent of cross-community friendships among children and young people
- Whether children and young people have anywhere to meet their counterparts from the other main community

The first of these proposed indicators is particularly important because, as already highlighted, neither shared education nor the Department of Education's current community

29 See: <http://www.thedetail.tv/issues/150/religioninschools/how-integrated-are-schools-where-you-live>

30 OFMdfM, 2012, op. cit.

relations policy, CRED, require schools to ensure that any such activity provides opportunities for meaningful and sustained cross-community contact for pupils. The other two proposed indicators have been selected because they are vital in helping to ascertain the degree to which children and young people develop friendships on a cross-community basis, and the extent to which children and young people are prevented from developing such friendships should they so wish.

Recommendations

In summary, our recommendations to the Committee are as follows:

- OFMdFM should produce an annual progress report, published in a timely fashion, with regard to the good relations indicators which it monitors.
- OFMdFM's 'Good Relations Indicators' reports should provide more analysis and should present recommendations for policy changes which might enhance progress towards improved community relations.
- OFMdFM should clarify the term 'community relations participation' by schools in its good relations indicators reports, and should introduce the following additional indicators:
 - The extent to which schools are providing opportunities for meaningful and sustained cross-community contact for pupils
 - The extent of cross-community friendships among children and young people
 - Whether children and young people have anywhere to meet their counterparts from the other main community
- The Committee should investigate the extent of and reasons for any delays by OFMdFM in making and communicating decisions on applications to its Central Good Relations Fund 2014/2015.
- The Education Minister should bring forward, at the earliest possible opportunity, a statutory definition of shared education which makes explicit that it must involve meaningful cross-community interaction by pupils on a sustained basis.
- Using this definition, the Department of Education must make it a statutory obligation for schools to ensure that all their pupils are provided with the opportunity to participate in shared education on a regular basis.
- The Department must also make available sufficient funding to ensure that all schools can ensure that their pupils have the opportunity to participate in meaningful cross-community shared education and CRED programmes on a regular basis.
- The Department must institute a robust system of monitoring which enables it to evaluate, on a regular basis, whether and how each individual school is implementing shared education and CRED, including the extent and quality of cross-community engagement which is offered by each school.
- The Department should introduce an award scheme for schools which provide outstanding examples of good practice in shared education and CRED.

In addition, we believe that consideration should be given to synthesising the Department's shared education and CRED policies as there is clearly a considerable degree of overlap between them. However, if this is done, it is vital that the definition of shared education remains one which gives a central role to the importance of cross-community contact between Protestant and Catholic schoolchildren. Clearly, religious division is only one form of division in Northern Ireland, and we welcome the fact that CRED is also designed to address other divisions and stereotypes. At the same time, Northern Ireland will be unable to move forward into a truly harmonious and peaceful society if its most fundamental division is not addressed in schools.

Table 1: Speedwell Trust survey responses to “What are the main obstacles to shared education activities with schools from a different education sector?” (N = 65. Respondents could tick more than one option.)

	Agree–	Don't know–	Disagree–	Number of respondents responding to option
– cost of transport	85.25% 52	1.64% 1	13.11% 8	61
– lack of training for staff	38.60% 22	19.30% 11	42.11% 24	57
– lack of support from parents	10.91% 6	9.09% 5	80.00% 44	55
– local community tensions	17.54% 10	19.30% 11	63.16% 36	57
– no suitable facilities	22.22% 12	11.11% 6	66.67% 36	54
– lack of resources	53.45% 31	15.52% 9	31.03% 18	58
– curriculum pressures	63.16% 36	5.26% 3	31.58% 18	57
– lack of willingness from staff	5.36% 3	16.07% 9	78.57% 44	56
– poor relationship with partner school	5.45% 3	7.27% 4	87.27% 48	55
– lack of partner school	16.36% 9	10.91% 6	72.73% 40	55

17 December 2014

Dear Peter

SHARED EDUCATION BUSINESS PLAN

Your correspondence of 12 December refers.

The document referred to in a recent press article attributed to Professor Smith, University of Ulster is the Business Case for the Delivering Social Change shared Education Signature Project.

A copy of the Business Case is attached.

Yours sincerely

Veronica

VERONICA BINTLEY
Departmental Assembly Liaison Officer

DE GENERAL BUSINESS CASE TEMPLATE FOR EXPENDITURES GREATER THAN £500k

This template is designed to facilitate documentation of an expenditure appraisal for **total expenditures (i.e. capital plus revenue) expressed in real terms including Optimism Bias where appropriate** greater than £500k. It identifies the main elements of a business case to be covered, followed by spaces or tables for inserting the relevant information. *The spaces and tables should be enlarged or modified as required to accommodate all the necessary information.*

Note that this is a general template covering basic requirements; it can be adapted and tailored to suit particular spending areas as desired (were significant changes to the template are planned, prior agreement should be sought from EAU). There are no precise rules about the length of the business case document for these expenditure decisions, however, it would be expected that a particularly large or significant project will have a greater degree of detail.

For detailed guidance on business cases and expenditure appraisal, consult the Northern Ireland Guide to Expenditure Appraisal and Evaluation (NIGEAE) at <http://www.dfpni.gov.uk/eag> or seek advice from DE's Economic Advisory Unit (EAU).

PROJECT TITLE: DELIVERING SOCIAL CHANGE SHARED EDUCATION SIGNATURE PROJECT

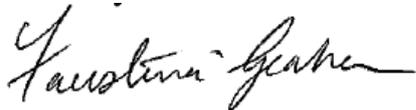

SPONSORING DEPARTMENT: Department of Education

Date of Business Case Initiation: 28 January 2014

Date of Business Case Completion: 7 April 2014

SENIOR RESPONSIBLE OFFICER: FAUSTINA GRAHAM, COLLABORATIVE EDUCATION & PRACTICE DIRECTOR

SIGNED: **DATE:** 8 April 2014

A DE pro forma must be completed and signed off by the Director (G5) prior to formal submission of the business case to Finance Directorate (EAU).

DE Finance Director approval is required for the proposed expenditure.

1. BACKGROUND, STRATEGIC CONTEXT AND NEED

1.1 Strategic Context & Policy Objectives

1.1.1 Legislative Requirements

The Education Reform Order 1989 (Article 6) places a duty on the Department to encourage and facilitate the development of integrated education, that is to say the education together at school of Protestant and Roman Catholic pupils.

Section 75 and Schedule 9 to the NI Act 1998 places a statutory obligation on public authorities in carrying out their various functions relating to Northern Ireland, to have due regard to the need to promote equality of opportunity –

- between persons of different religious belief, political opinion, racial group, age, marital status or sexual orientation;
- between men and women generally;
- between persons with a disability and persons without; and
- between persons with dependants and persons without.

In addition, without prejudice to this obligation, Public Authorities are also required to have regard to the desirability of promoting good relations between persons of different religious belief, political opinion, and racial group.

1.1.2 Programme for Government: 2011-15 (PfG)

One of the five Executive priorities contained within the Programme for Government (2011-15) is to build a strong and shared community. Within that priority there is a particular focus on building better relations between communities. Under this priority, the PfG sets out three specific objectives relating to Shared Education. They are:

- establish a Ministerial Advisory Group to advise on advancing shared education;
- ensure all children have the opportunity to participate in shared education programmes by 2015; and
- substantially increase the number of schools sharing facilities by 2015.

1.1.3 The Children and Young People Strategy

The Children and Young People Strategy (2006-2016) sets out Executive commitments to ensure that, by 2016, all children and young people are fulfilling their potential. Expected outcomes include:

- Living in safety and with stability;
- Contributing positively to community and society; and
- Living in a society which respects their rights.

One of the pledges, recognising that Northern Ireland is emerging from a prolonged period of conflict, commits to ensuring that our children and young people are supported to grow together in a shared, inclusive society where they respect diversity and difference.

By producing positive impacts for all parts of society, the strategy has particular importance for children and young people through the creation of sustainable relationships, built on trust between individuals and communities, to ensure a peaceful and prosperous future.

1.1.4 Together Building a United Community

The 'Together: Building a United Community' (T:BUC) Strategy, published on 23 May 2013, reflects the Executive's commitment to improving community relations and continuing the journey towards a more united and shared society.

The strategy commits to *“enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience.”* The strategy references the Programme for Government Commitments and the recommendations of the Ministerial Advisory Group on Shared Education.

1.1.5 The Delivering Social Change (DSC)

The Delivering Social Change (DSC) framework was established by the Executive to tackle poverty and social exclusion. It represents a new level of joined-up working by Ministers and senior officials across Executive departments to drive through interventions which have a genuine impact on the ground.

The framework aims to deliver a sustained reduction in poverty and associated issues across all ages and to improve children and young people's health, well-being and life opportunities thereby breaking the long term cycle of multi-generational problems.

The DSC framework aims to deliver the following outcomes:

- (i) a sustained reduction in poverty and associated issues, across all ages; and
- (ii) an improvement in children's and young people's health, wellbeing and life opportunities thereby breaking the long-term cycle of multi-generational problems.

1.2 Definition of Shared Education

Shared education has been defined as the organisation and delivery of education so that it:

- meets the needs of, and provides for the education together of learners from all Section 75 categories and socio-economic status;

- involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

By shared education we mean the provision of opportunities for children and young people from different community backgrounds to learn together.

We expect shared education also to be organised and delivered in such a way that promotes equality of opportunity and social inclusion by providing opportunities for children from differing s75 groups (e.g. children from different racial backgrounds, children with and without disabilities, children who are carers or school age mothers) and from differing socio-economic backgrounds to learn together at school and in less formal education.

1.3 Educational Policy Context

The Department of Education's (the department) vision is - *"To ensure that every learner fulfils his or her full potential at each stage of development."*

Fulfilling this vision is underpinned by goals identified as priorities by the Department in its Corporate Plan. The department's two overarching goals are:

- raising standards for all – through high quality teaching and learning, ensuring that all young people enjoy and do well in their education and that their progress is assessed and their attainment recognised, including through qualifications.
- closing the performance gap, increasing access and equity – addressing the underachievement that exists in our education system; ensuring that young people who face barriers or are at risk of social exclusion are supported to achieve to their full potential.

The strategic drivers for the promotion of sharing in education are:

- the education case – improving access for learners to the full range of the curriculum, to high quality teaching, and to modern facilities;
- the economic case – making more effective and efficient use of limited resources to deliver more value for money; and
- the social case – improving societal well being by promoting a culture of tolerance, mutual understanding and inter-relationship through significant, purposeful and regular engagement and interaction in learning.

Shared Education provides a mechanism for peer learning whereby schools that are educationally stronger are incentivised to collaborate with schools that are marginally weaker.

Potentially, it also results in a wider curriculum choice for pupils, the promotion of the efficient and effective use of resources, good relations, equality of identity and community cohesion.

It follows that greater sharing will benefit all learners, from all Section 75 categories and socio-economic status, the community, and the economy through more efficient and effective use of resources on a shared basis.

Better educational outcomes for young people, including life and work skills, capacity building and skill sharing between teachers and more accessible schools engaging with the wider community are expected.

1.4 KEY STAKEHOLDERS

1.4.1 OFMdfM

OFMdfM's Equality and Strategy Directorate is responsible for developing and monitoring the Programme for Government, for providing economic advice and for a range of cross-cutting issues and initiatives to address equality, good relations, deprivation and social exclusion.

It has oversight responsibility for the Delivering Social Change framework which was set up by the Executive to tackle poverty and social exclusion.

It also has oversight responsibility for the cross-cutting 'Together: Building a United Community' (T:BUC) Strategy.

1.4.2 The Atlantic Philanthropies

The Atlantic Philanthropies is a philanthropic organisation that works in conflict zones around the world. Atlantic grant making here dates back to the early 1990s. Initial efforts supported peacemaking and strengthening higher education. Since 2004, Atlantic has focused on three programme areas: Ageing; Children & Youth; and Reconciliation & Human Rights.

As a life limited foundation, the Atlantic Philanthropies are due to conclude their grant making by 2016. They have identified shared education as an area where they wish to help make a lasting impact by collaborating with the Executives where programmes can overlap with the Programme for Government. These will be joint funded Executive/ Atlantic Philanthropies programmes.

Atlantic jointly funded Shared Education pilot programmes since 2007 involving over 165 schools and have developed models of sharing that has lead to economic, education and reconciliation benefits involving pupils, teachers, governors, parents and the wider community.

Their aspiration is that Protestant and Catholic children across Northern Ireland being educated together becomes the norm rather than the exception, and that government policy and practice fully incentivise shared education.

In discussions with OFMDFM, Atlantic Philanthropies propose to provide financial support of up to £10m towards the cost of the Shared Education Signature Project, given the alignment with their grant closure priorities providing match funding was made available from government sources.

1.4.3 Managing Authorities & Arms Length Bodies

Operational delivery of the Shared Education Signature Project will fall primarily to the Educational and Library Boards and CCMS (or Education & Skills Authority).

In seeking to meet the Programme for Government commitment to increase the number of school sharing facilities, Managing Authorities will also have a role through Area Planning to identify opportunities and encourage schools to share existing and any future new facilities.

It is anticipated that other arm's length bodies including CnaG, NICIE, Youth Council NI and CCEA will have a stakeholder interest.

1.4.4 Schools

School will have a direct role in delivering on the Programme for Government commitments to ensure all children have the opportunity to participate in shared education programmes by 2015; and to substantially increase the number of schools sharing facilities by 2015.

The Shared Education Signature Programme will assist schools in meeting these commitments by providing funding for additional costs as well as assisting the Minister of Education in deciding the most appropriate way to mainstream shared education funding.

Schools will also be expected to co-operate with managing authorities in identifying and exploring opportunities to increase the level of sharing of facilities.

1.4.5 Pupils

Pupils will ultimately be the main beneficiaries of the opportunity to participate in a programme of shared education.

Based on the Education and Training Inspectorate's evaluation of a number of strategic shared education projects funded by the International Fund for Ireland, it is anticipated that pupils will benefit from an increase in self-confidence, self-awareness and self-reflection; being open to meeting others with differing perspectives; improved skills in problem solving, decision making, critical thinking and creative thinking.

Shared Education is also expected to lead to improvement in the delivery of minimum curricular requirements for Personal Development and Mutual

Understanding at Primary level and Learning for Life and Work (Local and Global Citizenship) and for the curricular requirement to “Developing Pupils as Contributors to Society” across the range of subject areas at Key Stage 3 and above.

Shared education will improve access for pupils to the full range of curriculum (i.e. wider curriculum choice), to high quality teaching, and to modern facilities. It can allow opportunities for peer learning whereby schools that are educationally stronger are incentivised to collaborate with schools that are marginally weaker.

It follows that greater sharing should ultimately result in better educational outcomes for young people.

1.4.6 Wider Community

As a society emerging from conflict, building a strong and shared community continues to be a key objective within the Programme for Government. Against the background of a diverse education system, shared education is seen as a way to break down barriers and improve community relations.

Improving attitudes amongst young people and building a community where they can play a full and active role in building good relations is recognised as a key priority within T:BUC. Equipping young people for a future in which the cycle of sectarianism and intolerance is broken is a key objective.

In turn this will benefit the wider community.

1.5 IDENTIFICATION OF NEED

1.5.1 Background

As noted in Paragraph 1 above, the PfG commitment (2011-15) contains three specific objectives relating to Shared Education one of which is to establish a Ministerial Advisory Group to advise on advancing shared education;

In order to progress the Ministerial Advisory Group's recommendations on shared education, it is planned that a Shared Education Programme will be delivered under the DSC framework.

The four year programme (2014-15 to 2017-18) will be based on lessons learnt to date from existing shared education pilots that have been operating in schools and will provide an evidence base for mainstreaming shared education funding in the longer term in a way that is sustainable.

In addition, the Department has a complementary programme of work to further mainstream shared education addressing other recommendations by the Ministerial Advisory Group. This includes defining shared education within legislation; directing the Education & Library Boards/Education & Skills Authority to encourage and facilitate shared education; reflecting shared education within the schools inspection process; teacher training; reviewing existing education policy on a rolling basis to reflect shared education and continuing to encourage the establishment of school councils.

All of the above interventions will contribute to meeting the PfG Shared Education targets.

1.5.2 Shared Education - Baseline Statistics

1.5.2.1 School Omnibus Survey

The School Omnibus Survey (2013) is a multipurpose survey of all Principals in grant-aided schools. The 2013 survey had an overall response rate of 52%. The latest results from the 2013 school omnibus survey indicate:

- that 76% of respondent school were involved in some form of shared education in the 2011/12 academic year. Participation in shared education was higher in post primary (94%) than primary (71%).
- In the 2011/12 academic year, 83% of respondent schools partnered with another school in relation to curricular or extracurricular activities.
- In the same academic year, 51% of schools were involved in sharing facilities with another school, 38% in sharing resources; 30% in shared teachers and 26% in sharing equipment.
- Of those responding schools, 13% had partnered between one class; 72% with more than one class and 15% on a whole school basis.

- Of these, 65% partnered on a cross community basis, 51% with a school from the same sector; 35% between primary and post primary; 15% between secondary and grammar; and 8% between nursery and primary.

1.5.2.2 Young Life & Times Survey

According to the Young Life & Times Survey 2011 (which is an annual attitudinal survey targeting 16 year olds), 31% of young people said they rarely or never socialise with people from a different religious community, while 22% said they had no close friends from the other main religious community.

The 2011 survey indicated that 49% of young people agree that most people would like to have friends of a different religion but never have the opportunity.

The 2012 survey included a module commissioned by the NI Commissioner for Children and Young People on shared education. The results indicated that 55% of respondents had undertaken projects with pupils from other schools; 46% had classes with pupils from other schools and 25% had used shared facilities or equipment.

Respondents to the 2012 survey indicated that 71% had shared with children of a different religion (with 16% not knowing).

89% thought projects with pupils from other schools a good idea, 83% thought shared facilities and resources was a good idea, while 76% indicated that classes with pupils from other schools was a good idea.

1.5.2.3 Existing Shared Education Work

Shared education programmes have been taking place in a limited number of schools over the last few years, most notably with significant investment from the International Fund for Ireland and the Atlantic Philanthropies in relation to twenty two strategic projects delivered locally i.e. the Sharing in Education Programme (SiEP).

This work has been subject to evaluation by the Education & Training Inspectorate (see Appendix 3), IFI Evaluation Report: Sharing in Education Programme) as well as a series of evaluations by individual projects. This, together with other research (including a report by the NI Commissioner for Children and Young People), provides a strong evidence base for progressing shared education through existing educational policies as well as new approaches.

These programmes have ranged from teachers learning and planning together, through to coordinate timetabling with the curriculum being taught to mixed classes in different schools as well as extra-curricular activity and joint projects – whatever best meet the needs of local schools and the community.

1.5.3 Historical Context

Shared Education programmes, such as SiEP were set against the background of 92.6% of the school population was educated in either Catholic maintained schools or controlled or voluntary schools attended mainly by Protestant children or young people. The SiEP aimed to break down the barriers arising from the historic conflict in NI by providing a range of opportunities for young people to learn together and to reach the highest possible standards of educational achievement. Shared education should not be seen as just another initiative nor is it a new concept.

The SiEP sought to build on the lessons learned across many years in the development of community relations in Northern Ireland.

1.5.4 The Policy Context

In line with the Programme for Government commitments, the Ministerial Advisory Group was appointed by the Minister of Education in July 2012, and published its findings on 22 April 2013 (report available at

http://www.deni.gov.uk/index/schools-and-infrastructure-2/shared_education/shared-education-ministerial-advisory-group.htm

'Shared education is not a bolt-on or an optional extra. It is fundamental to delivering good schools and central to my vision that every learner should achieve his or her full potential'. - Minister of Education - October 2013

The development of shared education aligns closely with the role of the Department to improve educational outcomes for young people and to promote personal well-being and social development, so that young people gain the knowledge, skills and experience to reach their full potential as valued individuals and active citizens, as envisaged in the department Community Relations, Equality and Diversity in Education (CRED) policy. The Programme for Government (PfG) 2011-15 commitments for the department with respect to shared education include:

- to ensure that all children have the opportunity to participate in shared education programmes by 2015; and
- to increase substantially the number of schools sharing facilities by 2015.

In addition, the work of shared education as evidenced by the SiEP links well to the four tenets of the department's policy of school improvement (Every School a Good School) through promoting child-centred provision, high-quality learning and teaching, effective leadership and a school connected to its local community.

Given these developments, the Minister of Education appointed a Ministerial Advisory Group whose independent report was issued in March 2013 detailing 20 recommendations to advance shared education which are based around five themes:

- Mainstreaming Shared Education;

- Supporting schools in Shared Education;
- Schools and other educational institutions;
- Area Based Planning and Schools Estate; and
- Academic Selection.

In a statement to the Assembly in October 2013, the Minister of Education accepted the recommendations of the Ministerial Advisory Group, reserving final decisions on a small number pending further work

http://www.deni.gov.uk/index/schools-and-infrastructure-2/shared_education.htm

1.5.5 The Curriculum Context

The statutory curriculum provides a core enabling framework to promote shared education. The Curriculum in the north of Ireland was revised in 2007 with the aim of empowering young people to develop their potential and make informed and responsible decisions throughout their lives through three key objectives:

- the development of the young person as an individual;
- a contributor to society;
- a contributor to the economy and environment.

Key elements which focus on the real and relevant issues that young people need to assimilate in preparation for life and work in NI society are embedded in the individual areas of learning (subjects).

The learning areas of Personal Development and Mutual Understanding (PDMU), Local and Global Citizenship and Learning for Life and Work (LLW) are key vehicles for embedding shared education through the NI Curriculum. They were developed specifically to enable young people across the key stages to learn about themselves and others, developing tolerance, respect and open-mindedness through understanding similarities and respecting differences between people in the local community and beyond in order to help them address the challenges and opportunities they may encounter in society.

In addition, all subject strands but in particular, religious education, history, geography, English, languages, drama and art and design provide opportunities for teachers to design learning programmes that explore identity, diversity and promote reconciliation, developing the attitudes and dispositions as shown in Appendix 5.

The evaluation of the SiEP found evidence to demonstrate that shared education activities have the potential to meet the aims of the NIC in a more holistic way through preparing young people better for life and work in an interdependent NI and a globalised world.

Shared education also provides practical experiences and contexts for young people to develop better their thinking skills and personal capabilities, skills needed for lifelong learning; for example, applying critical thinking in shared

classes helps young people to suspend judgement and become open-minded; to be willing to explore alternative viewpoints and imagine “otherwise”.

Independent thinking and personal awareness through engaging with different viewpoints develops the young people’s confidence and self-esteem to safeguard them against dogmatism and peer pressure. The development of interpersonal skills through shared classes enables young people to listen carefully in order to adapt language and behaviour to take account of others’ feelings, and to develop the ability to work together, manage disagreements and reach agreed outcomes.

1.6 THE CONCEPT OF SHARED EDUCATION

The SiEP Evaluation acknowledges that sharing will always require compromise. Compromise will not and cannot always be equal for both parties but the vision statement of *‘Every School a Good School’* provides a clear guiding principle placing the interests of young people rather than institutions at the centre of efforts to improve educational improvement and tackle underachievement.

The professional view of ETI is that shared education is not an event or series of lessons but, rather a process in which to embed a whole-school approach to shared education to prepare young people better for life and work. The evidence from the SiEP Evaluation confirms that schools/organisations are at different starting points along a continuum.

1.6.1 IFI Evaluation Report: Sharing in Education Programme (SiEP)

A formal evaluation was carried out by the Education & Training Inspectorate on nineteen of twenty-two strategic Shared Education projects funded by the International Fund for Ireland (IFI). The remaining three projects, which were jointly funded by IFI and Atlantic, were subject to a separate evaluation.

Details of the ETI findings are summarised at Appendix 3. A full copy of their report is available at: <http://etini.nics.gov.uk/investmentfundireland/>

In summary, in almost all of the projects the participants:

- developed good personal and social skills through their engagement with others in exploring controversial, sensitive, complex and relevant issues to their lives;
- increased their awareness of the impact of their attitudes and actions on other individuals and communities; and
- were able to evaluate their own learning through, for example, reflective journals/diaries, questionnaires and discussions.

The majority of the projects provided them with the opportunity to achieve an accredited qualification or an award designed with set criteria.

In going forward, the evaluation report identified a need:

- for schools/organisations to evaluate consistently the impact of the work of reconciliation on the young people's attitudes, behaviours, understanding and skills to be able to demonstrate clearly the progress of young people and to inform future planning;
- for schools/organisations to focus on the development of the young people's maturity and higher-level skills of negotiation, compromise, collaborative problem-solving, managing disagreement, conflict and confrontation through innovative, inspiring and experiential learning strategies;
- for all stakeholders to recognise, value and reward shared learning through accreditation and assessment arrangements across phases; and
- for support staff across all phases to develop further their confidence and competence in using a wide range of learning strategies necessary for work in shared classes, to provide progressively challenging experiences for young people in tackling controversial and sensitive issues.

1.6.2 The Challenge going forward

It is a commendable goal to provide all young people with a shared education opportunity throughout their school career. However, while the quantitative target is useful, much remains to be done to ensure the experience is effective, sustained and progressive, particularly in schools that have not yet begun the process.

Schools will need support to move along a continuum to embed high-quality shared education.

In helping to address these challenges DE officials need to work more collaboratively to ensure that school improvement policies signpost connections to, and opportunities for, shared education.

The longer-term aim for all schools is for shared education to be so integral to the ethos and fabric of each school community that it becomes 'the way we do things around here'. All of the requirements to achieve this aim are enshrined in the aims of the curriculum, but schools, like our society, are at different starting points.

Only by honest self-reflection will any school community be able to identify its starting point and only with a genuine commitment from all stakeholders can schools be supported to work through the complexities of achieving an aim for children and young people that has so far eluded our wider society. In the short to medium term that will only be achieved through ongoing collaborative practice which allows schools to reflect on how much progress they have made in meeting that longer-term aim.

They will continue to need to be supported by each other but also through initiatives such as the SiEP and project-led work gradually reintegrating what they learn into custom and practice.

2. AIM & OBJECTIVES

2.1 The overall aims of the programme are to scale up the level of sharing drawing on existing evidence; mainstream financial support for any additional costs and improve the educational and reconciliation outcomes in school working collaboratively.

A baseline exercise has been completed to establish the current level of shared education through the 2013 Schools Omnibus Survey (a multi-purpose survey of all Principals in grant-aided schools designed to collect a range of information as determined by DE policy teams.

Research evidence from a number of reports and survey data and baseline information has been taken into account in developing measurable targets.

Project Objectives	Measurable Targets
Improve education outcomes through schools working collaboratively ^{Note 1}	For participating schools: <u>Primary</u> <ul style="list-style-type: none"> • Increase the percentage of pupils achieving KS2 Communication in English from 2013/14 level by 2017/18; • Increase the percentage of pupils achieving KS2 Using Maths from 2013/14 level by 2017/18; <u>Post-Primary</u> <ul style="list-style-type: none"> • Increase the percentage of pupils achieving KS3 Communication in English from 2013/14 level by 2017/18; • Increase the percentage of pupils achieving KS3 Using Maths from 2013/14 level by 2017/18; and • Increase the percentage of pupils achieving 5+ GCSE (or equivalent) A*-C including English & Maths from 2013/14 level by 2017/18. As the level of increase will be dependent on the exact cohort of participating schools, it is proposed that schools will set their baseline and outcome target as part of the application process. Outcomes will be measured at the end of the project with progress being reported in monitoring reports during the project.
Increase the number of schools participating in Shared Education ^{Note 1}	-Using the definition of shared education in the Ministerial Advisory Group Report, to increase the percentage of schools providing shared classes with pupils (other than Entitlement Framework) from 23% to tba% by end of 2017/18
Improve reconciliation outcomes through schools working collaboratively ^{Note 2}	-By 2017/18, to show increase in reconciliation outcomes between schools working cross-sectorally and those which are not, using the following measures: Cross Group Friendship (from 1.94 - 2.37) Positive Action Tendencies (from 2.71 – 3.14); and Intergroup Anxiety (from 1.66 - 1.57).

<p>Increase the number of young people participating in Shared Education ^{Note 3}</p>	<p>-Using the definition of shared education in the Ministerial Advisory Group Report:</p> <ul style="list-style-type: none"> • Maintain the percentage of schools engaged in shared education on a whole school basis at 15% (114) in the 2014/15 academic year and increase to 20% (152) by 2017/18. • Maintain the percentage of schools involving <i>only</i> one class at 13% (99) in 2014/15 academic year and increase to 80% involving <i>more than</i> one class (610) by 2017/18. • Schools in receipt of shared education funding to jointly deliver LLW and PDMU on a shared basis by 2017/18.
<p>To work collaboratively to provide educators with professional development and develop their confidence and competence in using a range of learning strategies necessary for work in shared classes</p>	<p>-By 2017/18, 95% of participating schools have provided teachers with professional development on a range of learning strategies necessary for work in shared classes. ^{Note 4}</p> <p>For participating schools, provision of joint professional development training (to include tackling the challenges of providing and teaching shared classes).</p>
<p>Enable schools to implement a progressive approach to shared education</p>	<p>-Refine the QUB continuum of shared education by end of 2014/15.</p> <p>-Further develop the quality indicators for identification of effective practice by 2017/18.</p> <p>-All participating schools/partnerships to progress at least one step up the continuum of shared education model by 2017/18 (confirmed through ETI assessment)</p>
<p>To ensure shared education becomes a core element of strategic planning within the Department of Education, Education and Library Boards/ Education & Skills Authority and schools</p>	<p>Shared education targets to feature in DE's strategic and business plans;</p> <p>Education & Training Inspectorate to work towards integrating shared education into the normal inspection process.</p> <p>Shared Education targets to feature in ELBs/ESA Resource Allocation Plans</p> <p>Shared Education targets to feature in school development plans</p>

^{Note 1} Due to the variation across schools it is not possible to set a specific generic target increase at the business case stage. Instead, existing baselines, current projected increases, and revised projections resulting from involvement in this programme will be established as part of the application process. This will provide a target increase relevant to each participating school which will allow comparison against ELB and NI averages.

^{Note 2} Evidence shows that improved community relations are natural by-product of cross-community sharing (e.g.: Shared Education Initiatives in Northern Ireland: A Model for Effective Intergroup Contact in Divided Jurisdictions (Blaylock & Hughes Dec 2013). A QUB longitudinal survey, funded by Atlantic Philanthropies will provide the source data, including 2013/14 baselines and Atlantic will fund the continued survey work.

^{Note 3} Measured through School Omnibus Survey; 2014/15 targets represent baseline figures from 2013 Survey as £21m IFI/AP funding terminated in Dec 13, maintaining current levels represents a challenging target. The final outcome target is based on current experience of what is likely to be achievable, but will be re-assessed following the application stage and adjusted if necessary. As the programme will target 65% schools (762) the relevant percentages are calculated against the number targeted by the programme. Recording precise numbers of pupils would impose significant bureaucracy on schools and would be subject to risk of over/under recording as pupils may be involved in more than one programme; proposed measure has a direct correlation on number of pupils.

^{Note 5} Measured by comparing self assessment baselines at application stage with final outcome at end of programme

2.2 Quality Indicators

As a result of previous pilot programmes, a set of quality indicators were developed by ETI to provide a benchmark for this work which school can use to self assess; this will be further refined during the period of the programme. A copy of these indicators can be found at the attached link:

<http://www.etini.gov.uk/index/international-fund-for-irelands-sharing-in-education-programme/quality-indictors-for-use-by-international-fund-for-irelands-sharing-in-education-programme-projects.doc>

2.3 Shared Education Continuum Model

One of the ETI recommendations from evaluation of pilot programmes was the development of a continuum of shared education model against which schools can self assess.

An example as to what this could look like is provided in Appendix 4. The model would be refined to enable it to be used for self-assessment purposes by schools.

3. CONSTRAINTS

3.1 Timing

This will be a four year project commencing from April 2014 (with implementation in schools expected to commence in the 2014/15 academic year) in line with availability of Atlantic Philanthropies' funding window.

3.2 Funding

Agreement was reached with Ministers to establish a fund of up to £25m over the four year period, with contributions of up to £10m from the Atlantic Philanthropies, £10m from OFMDFM through central funds and up to £5m from the Department of Education.

The availability of joint funding will be the incentive for schools to plan and have approved a shared education partnership at primary and post –primary level.

Atlantic funding in year 4 is subject to a commitment by DE (and/or Executive) to provide resources to mainstream shared education in the longer term.

Constraints	Measures to address constraints
Funding level over 4 year period to end 2017/18 FY	Funding is set and agreed over a 4 year period at up to £25m due to closure constraint of the Atlantic Philanthropies funding. Programme will operate over the period funding is available. It will inform decisions on mainstreaming funding in the longer term.
Excludes capital costs, including shared education campuses, which are structural approaches to implementing shared education	The programme excludes capital costs relating to structural building. Capital costs related to Shared Education Campuses are being taken forward through an alternative funding programme and therefore will be excluded from this programme.
Atlantic funding in year 4 is subject to a commitment by DE (NI Executive) to provide resources to mainstream shared education in the longer term	In his statement of 22 October 2013 to the Assembly, Education Minister acknowledged the need to mainstream financial support for any additional costs in relation to shared education. Regular reports on plans for mainstreaming will be made to Project Board and DSC Programme Board. Discussions are on-going to ensure the Memorandum of Understanding between Atlantic Philanthropies, OFMDFM and DE clearly outlines how this commitment will be met.
Only Schools already engaged in some form of Shared Education (i.e. those at level 2 and above on the continuum model (see Appendix 4) will be eligible to avail of the DSC SEP.	The application criteria will exclude schools currently working in isolation. A separate funding stream and programme will be established to address the needs of schools working in isolation.

4. IDENTIFICATION AND SHORTLIST OF OPTIONS

A number of options have been considered and assessed against the objectives of the programme. An overview of each option is provided below and assessment is provided for short listing purposes.

4.1 Option 1: Status Quo (Do Nothing)

Evidence shows that there are a number of current shared education programmes, which have been funded through a variety of existing policies and philanthropic funding. Evidence also indicates that there are a number of additional costs for schools to successfully implement shared education.

Philanthropic funding is set to reduce over the next few years as existing funding streams, such as the International Fund for Ireland and the Atlantic Philanthropies prepare for closure. Hence the opportunity for school to secure funding will be significantly reduced.

Research shows that schools have also financed shared education through existing earmarked funding such as Community Relations, Equality and Diversity, Extended Schools and Entitlement Framework, while others have drawn on their LMS budgets.

As this has been the position for some years, it would suggest that while the status quo does not preclude shared education taking place, it would be difficult to meet the Programme for Government commitments to advance shared education. It would also result in a piecemeal approach with varying degree of opportunity being provided to pupils.

In addition, the status quo would not facilitate actions agreed by the Minister of Education in response to the Ministerial Advisory Group report and would be a barrier to advancing shared education.

While the status quo would not sufficiently meet the Executive's commitment to advancing shared education, it remains a shortlisted option for comparative baseline purposes only.

4.2 Option 2: Shared Education Programme

The Shared Education Programme would provide earmarked funding to support collaborative activities through an open application process to all schools.

Applications would be assessed against specified criteria and scoring framework, which would include level of sharing to date; educational improvement; societal benefits and value for money considerations. As the programme is designed for schools that have already engaged in some form of shared education (i.e.: those at level 2 and above on the continuum model in appendix 4), the application criteria will exclude schools currently working in isolation. A separate funding stream and programme will be established to address the specific needs of schools that are working in isolation.

Consequently it is envisaged that around 65% of schools (equating to 762 schools) would be eligible to participate in the programme).

The programme would be administered and implemented through the ELBs.

A dedicated ELB support team would encourage and promote shared education to all schools and provide advice and support in self assessment of the current level of sharing (against a continuum model) and identification of appropriate actions. The ELB support team would continue to support and monitor implementation over the period of the programme. Experience already exists both within ELBs and in external organisations on implementing shared education

This would ensure experience is developed within managing authorities in advance of mainstreaming shared education in line with Minister's commitment to do so.

Two implementation options have been identified in respect of a dedicated ELB support team:

- 2(a) a central regional delivery team/unit located within one ELB but providing services to all ELBs (for which there is already precedent and which reflects the regionalisation envisaged through the creation of ESA); or
- 2(b) a dedicated team in each of the five ELBs.

Both options are viable and will be considered separately.

The Education and Training Inspectorate would undertake on-going evaluation of the programme.

Potential Displacement/Duplication of Funding

Consideration has been given to the implications of introducing a new funding programme for other funding streams currently used by schools to fund shared education. In practice, schools have used a mix of funding sources to deliver shared education programmes.

The closure of the International Fund for Ireland's *Sharing in Education Programme* of £17m over four years in December 2013 together with further Atlantic Philanthropies funding of almost £4m has immediately created a £21m funding gap for schools that wish to undertake additional shared education activities.

While some schools can continue to draw on other funding streams, the introduction of this programme will address the funding gap resulting from the reduction and closure of philanthropic and external funding. Hence there is no potential for displacement of existing funding.

The application process will seek information on what other funding streams schools are accessing to ensure that there is no duplication of funding.

4.3 Option 3: Continue IFI Sharing in Education Programme (SiEP) Projects

Significant investment of £17m by the International Fund for Ireland established on twenty two strategic shared education projects over the period 2009-13. Funding for these projects terminated on 31 December 2013 with the closure of the IFI SiEP. Although the level of funding was significant, the scope of the Programme did not extend to all schools (around 450 schools were involved).

The projects covered a range of curricular and extracurricular activities, involved all sectors and range of school types and met the definition and objective of shared education (Appendix 5 provides further detail on the nature of these projects).

Projects were subject to independent evaluation, in the majority of cases by the Education & Training Inspectorate, but with three shared class projects subject to a separate evaluation. Evaluation reports indicated that these projects were effective and in a number of cases the projects were evaluated as outstanding.

Option 3 is based on continuing to maintain funding for these programme/projects.

The Education and Training Inspectorate would continue to undertake on-going evaluation of the programme/projects.

As in option 2, there is no potential for displacement or duplication of existing funding.

4.4 Option 4: Scale up existing Sharing in Education Programme projects for rollout to all schools

It would be feasible to scale up the scope of the projects identified in option 3 to provide all schools with the opportunity to participate in at least one shared education project. The range of projects which were undertaken provides a high level of assurance that a school could implement at least one which would be appropriate to the needs of the individual school/pupils.

As with previous options, the Education and Training Inspectorate would continue to undertake on-going evaluation of the programme/projects.

As in option 2, there is no potential for displacement or duplication of existing funding.

4.5 Option 5: Schools and Supported Organisations Programme

It would be feasible to provide funding to schools through a range of voluntary and community organisations to support delivery of shared education through separate funding streams.

In order to ensure sufficient capacity, this would require core funding to these organisations. However, departmental policy is to move away from core

funding of organisations and this option would result in a complex funding mechanism with the potential for overlaps and gaps in provision.

It would also be difficult to ensure consistency of provision.

Previous schemes, such as the Community Relations Funding Schemes which used a similar model were shown to have a number of distinct disadvantages.

Given the more discrete nature of the implementation methodology which this option would involve, it would not be feasible for the Education & Training Inspectorate to undertake a robust evaluation of what is likely to result in a myriad of smaller projects. Consequently for this option independent evaluations would be commissioned by the delivery organisations.

Given the dispersed nature of this option, there would be a higher risk of duplication (and potentially displacement) of other funding streams.

4.6 Assessment of Options

Assessment of the options is summarised in the table below:

<i>Option Number/ Description</i>	<i>Shortlisted (S) or Rejected (R)</i>	<i>Reason for Rejection</i>
1) Status Quo	S	
2) Shared Education Programme (a) Regional Delivery Team (b) Delivery by each of 5 ELBs	S	
3) Continue IFI Sharing in Education Programme projects	S	
4) Scale up existing Sharing in Education Programme projects for rollout to all schools	S	
5) Schools and Supported Organisations Programme	R	Not in line with departmental policy Inconsistent delivery Complex to administer Historical evidence indicates a number of distinct disadvantages

5. MONETARY COSTS AND BENEFITS OF OPTIONS

Monetary costs and benefits of each shortlisted option are considered below.

Option No. 1: Status Quo	Yr 0	Yr 1	Yr 2	Yr 3	Totals
Capital Costs					
	0	0	0	0	0
(a) Total Capital Cost	0	0	0	0	0
Revenue Costs					
(b) Total Revenue Cost	0	0	0	0	0
(c) Total Cost = (a) + (b)	0	0	0	0	0
(d) Discount Factor @ 3.5%pa	1.0000	.9662	.9335	.9019	
(e) Present Cost = (c) x (d)	0	0	0	0	0
(f) Total Net Present Cost (summation of Present Costs [e])	£0				

Option No. 2a Shared Education Programme (Regional Delivery Team)	Yr 0	Yr 1	Yr 2	Yr 3	Totals
Capital Costs					
	0	0	0	0	0
(a) Total Capital Cost	0	0	0	0	0
Revenue Costs					
Salary (Admin)	107,000	107,000	107,000	107,000	428,000
Salary (Support Staff)	234,000	540,000	540,000	360,000	1,674,000
Planning (Sub-cover)	135,000	685,800	685,800	685,800	2,192,400
Transport	162,000	1,066,800	2,074,800	2,198,700	5,502,300
Delivery (e.g.: sub-cover, training, facilitation, venue/ equipment hire)	526,350	3,688,080	4,905,756	4,905,756	14,025,942
Evaluation (ETI)	56,070	204,542	227,044	262,344	750,000
(b) Total Revenue Cost	1,220,420	6,292,222	8,540,400	8,519,600	24,572,642
(c) Total Cost = (a) + (b)	1,220,420	6,292,222	8,540,400	8,519,600	24,572,642
(d) Discount Factor @ 3.5%pa	1.0000	.9662	.9335	.9019	
(e) Present Cost = (c) x (d)	1,220,420	6,079,545	7,972,463	7,683,827	
(f) Total Net Present Cost (summation of Present Costs [e])	£22,956,256				

ASSUMPTIONS - Option 2a

All costs are at 2013/14 prices. Year 0 is 2014/15

Salaries and wages

Estimated salaries are based on previous experience of running the previous IFI programme. Gross Salaries are included.

- Salaries are split between Administration and Support staff:
- Administration - staff including part-time support during application, sift and evaluation process.
 - Support staff – recruitment and employment of 15 development Officers @ £36k p.a. There may be some variance in these costs due to recruitment in year 1 and a reduction of officers in the final year as staff move back to schools. It is anticipated that skills transfer is in place leaving schools requiring less support.

Admin Staff

Staff Role	Gross Figures £'000	Total Costs £'000
Programme Manager (Adviser Level)	60	60
Admin Officer(senior clerical Officer)	22	22
p/t Admin support in each of 5 ELBs	5	25
Total		107

Support Staff

Staff Role	Year 1	Year 2	Year 3	Year 4
15 Development officers @ £36k p.a.		540	540	–
5 full time and 3 part time posts (@50%)	234	–	–	–
30% reduction in staff				360
Total	234	540	540	360

The remaining costs based on the number of targeted schools as set out below:

	Year 1	Year 2	Year 3	Year4
Number of schools	150	762*	762	762
percentage		65%	65%	65%
Partnerships	75	380	380	380

- 762 schools is 65% of 1,172 schools. BELB 154 schools, NEELB 277 schools, SEELB 209 schools, SELB 298 schools, WELB 234 schools. Total 1,172.

Planning Costs

Planning Substitute cover costs based upon 6 days per school for 1 teacher capped @ 150 per full day by the above number of schools per year.

Transport Costs

Based on previous experience of similar projects

Post Primary Schools @ £175 per day * 9 shared classes * 2 year groups

Primary Schools @ £175 * 12 shared classes per year for one key stage group

Note

- these are based on minimum numbers for shared classes and may increase depending on schools.
- The Business Case assumes 152 schools will attain level 5 in year 4, 610 schools will attain level 4 (i.e. total 762) and of these 99 (60% primary and 40% post primary) will move from level 2 through to Level 4.
- The levels of sharing in the 'shovel ready' schools participating in year 1 should increase in years 2, 3 and 4 but that new schools participating from year 2 through to year 4 may be at level 2 in the continuum model in the first year and therefore have lower levels of shared classes depending on the requirements of these schools.
- Funding for transport will be provided to schools and flexibility applied to meet the needs of schools as they move upwards on the continuum.

Delivery Costs

This includes employment costs of shared teachers, training, sharing co-ordinator, sub-cover to attend training and shared classes, visits, travel and subsistence costs, venue hire, materials and equipment @ £2,509 in year 1, £3,840 in year 2 and £5,438 in years 3 and 4 per school where maximum sharing level will take place..

Training sub cover is calculated at 3 days @£150 sub cover per school attending
 Training for 3 day course @ £550 1 teacher per school attending.

Same calculation used for each teacher in the following years.

Note: Flexibility to transfer funding across the three budget lines relating to front line delivery – Planning; Transport and Delivery – will be applied as necessary. For example, where cost savings can be made in relation to planning or transport costs, flexibility will be afforded to schools to use in relation to delivery costs to ensure maximum impact on pupils.

Evaluation Costs
 Evaluation costs estimated based on 3% of the overall costs of the project from start of 2014/15.

The profile for the evaluation costs over the 4 year programme was agreed with ETI to coincide with their recruitment timetable - 1 backfill Inspector in year 1, with further backfill in other years and culminating with peak for final evaluation in last year.

Option No. 2b Shared Education Programme. Delivery by each of 5 ELBs	Yr 0	Yr 1	Yr 2	Yr 3	Totals
Capital Costs					
	0	0	0	0	0
(a) Total Capital Cost	0	0	0	0	0
Revenue Costs					
Salary (Admin)	210,000	210,000	210,000	210,000	840,000
Salary (Support Staff)	234,000	540,000	540,000	360,000	1,674,000
Planning (Sub-cover)	135,000	685,800	685,800	685,800	2,192,400
Transport	162,000	1,066,800	2,074,800	2,198,700	5,502,300
Delivery (e.g.: sub-cover, training, facilitation, venue/ equipment hire)	526,350	3,688,080	4,905,756	4,905,756	14,025,942

(e) Net Present Cost = (c) x (d)	6,396,670	6,180,462	5,971,291	5,769,157	
(f) Total Net Present Cost (summation of Present Costs [e])	£24,317,579				

ASSUMPTIONS - Option 3

All costs are at 2013/14 prices. Year 0 is 2014/15

The total number of schools assumed to be engaged on this programme was approximately 360 individually but in reality some of these organisations worked with the same schools giving a total number of schools recorded as 533 meaning that 173 schools were engaged in more than one of these projects.

The existing group without additional funding and resources do not have the capacity to deliver across all 5 ELB areas and engage with all schools.

The costs here are based upon 22 organisations working at full capacity at the end of SiEP period i.e. 360 individual schools each year. All costs are based on the experience of the existing programme costs.

Salary Costs

Salary costs are for Administration and Delivery staff and include part-time and staff paid through sub-cover figures based on costs across all 22 projects for staffing against school.

Estimated salaries are based on previous experience of running IFI programme. Gross Salaries included (pensions and NIC).

Running Costs

Running costs here are those associated with the overall costs of the organisation such as rent, rates, heat, light, telephone, broadband etc and based against the number of schools involved.

Delivery Costs

Delivery Costs includes facilitation/consultant, OCN accreditation, materials, transport, purchase of equipment or hire, set up costs for offices etc based on the number of schools involved.

Evaluation Costs

Evaluation is based on 3% of annual spend.

Option No. 4 Scale up existing Sharing in Education Programme projects for rollout to all schools	Yr 0	Yr 1	Yr 2	Yr 3	Totals
Capital Costs					
	0	0	0	0	0
(a) Total Capital Cost	0	0	0	0	0
Revenue Costs					
Salary (Admin)	837,400	1,256,100	1,884,150	1,884,150	5,861,800
Running Costs	198,400	347,200	607,600	607,600	1,760,800
Delivery (e.g.: sub-cover, training, facilitation, venue/ equipment)	2,414,400	10,937,232	12,228,936	12,228,936	37,809,504
Evaluation (ETI)	103,506	376,216	441,621	441,621	1,362,964

(c) Total Cost = (a) + (b)					
(d) Discount Factor @ 3.5%pa	1.0000	.9662	.9335	.9019	
(e) Net Present Cost = (c) x (d)	3,553,706	12,480,162	14,154,014	13,674,885	
(f) Total Net Present Cost (summation of Present Costs [e])	£43,862,767				

ASSUMPTIONS - Option 4

All costs are at 2013/14 prices

This option is a scaled up version of Option 3. All costs are based on the number of schools against the costs from each budget heading to meet the school profile to be engaged each year.

First year calculations will show a decrease from Option 3 given that only 200 schools will be engaged as opposed to the 360 as in Option 3 above. The schools profile will be as with Options 2(a) and 2(b).

	Year 1	Year 2	Year 3	Year 4
Number of schools	150	762	762	762
percentage		655	65%	65%

Salary Costs

Salary costs are for Administration and Delivery staff and include part-time and staff paid through sub-cover. It is anticipated that staff numbers should only increase by 1.5 times the original number after the first year as once staff are in place they should have the skills and capacity to increase delivery to the number of schools in the project. This was calculated on the number of staff providing support to 533 schools and then calculating the number of additional staff required to deliver to all schools.

Running Costs

Running costs here are those associated with the overall costs of the organisation such as rent, rates, heat, light, telephone, broadband etc. It is anticipated that these will increase with the number of staff at 0.75 times and then also remain the same.

Delivery Costs

There should not be an increase in actual delivery costs as delivery costs include facilitation/consultant, OCN accreditation, materials, transport, purchase of equipment or hire, set up costs for offices etc based on the number of schools involved. Delivery will increase proportionately with the number of schools engaged as above (Option 3 figures being based on 360 schools).

Evaluation Costs

Evaluation is based on 3% of annual spend.

The total number of schools assumed to be engaged on this programme was approximately 360 individually but in reality some of these organisations worked with the same schools giving a total number of schools recorded as 533 meaning that 173 schools were engaged in more than one of these projects.

6. NON-MONETARY COSTS AND BENEFITS

A number of non-monetary costs and benefits have been identified in relation to the programme drawn from evaluations of shared education pilot projects. Key non-monetary criteria have been weighted and each option assessed against these as outlined in the tables below.

Non-Monetary Criteria	Weighting of Criteria	Rationale for Weighting
1) Exchange of ideas and good practice between schools	10	Evidence shows that shared education provides more opportunity for schools/teachers to share best practice across a wide range of educational areas. Such shared learning facilitates improved quality.
2) Improved confidence and competence for teaching staff in using a range of learning strategies necessary for quality shared education and tackling controversial & sensitive issues	25	Skills and confidence of teaching staff has been highlighted by both Ministerial Advisory Group and ETI as a key enabler in delivering quality shared education. Hence has a higher weighting,
3) Meaningful interaction for pupils	20	Relates to the quality of the educational experience for the pupils and has been identified by ETI as a key enabler to achieving quality shared education. Hence has a higher weighting,
4) Normalised cross-sectoral relationships built through regular contact within mainstream education	5	Research evidence indicates that normalising cross sectoral relationships provides a number of benefits for pupils, teachers, schools and the wider community.
5) Improved cross-community understanding and relationships leading to reduction in community tension	20	Increase in shared education, particularly on a cross community basis, is expected to contribute to a reduction in community tensions by challenging and removing pre-conceived ideas. It is a primary driver for shared education, second only to educational outcomes & reflects Executive commitment.
6) Increase in the level of interdependence in the school system	10	This relates to schools collaborating to provide a larger range of curricular/extracurricular offerings and/or other additional educational benefits for pupils. It is expected that this will increase the pace of sharing by building relationships, reducing competition and benefit pupils.
7) More co-ordinated approach	5	This relates to consistency and quality of delivery and support to all schools. A more co-ordinated approach will ensure equality of opportunity and ease of quality control.
8) Disruption of teaching time	5	This relates to lost teaching time and disruption in transporting pupils/teachers between partner schools. Survey evidence indicates that this is a key concern for schools, parents and pupil. Options with less disruption are more favoured.

Each option has been assessed against the delivery of the primary non-monetary costs and benefits identified above.

Non-Monetary Criteria	Option 1		Option 2				Option 3		Option 4	
	S (out of 10)	WS	2(a)		2(b)		S (out of 10)	WS	S (out of 10)	WS
			S (out of 10)	WS	S (out of 10)	WS				
1. Exchange of ideas and good practice between schools 10	1	10	10	100	9	90	6	60	8	80
2. Improved confidence and competence for teaching staff in using a range of learning strategies necessary for quality shared education and tackling controversial and sensitive issues ²⁵	0	0	9	225	9	225	6	150	8	200
3. Meaningful interaction for pupils in shared activity ²⁰	2	40	8	160	8	160	6	120	8	160
4. Normalised cross sectoral relationships built through regular contact within mainstream education ⁵	0	0	10	50	10	50	7	35	9	45
5. Improved cross-community understanding and relationships leading to reduction in community tension ²⁰	1	20	8	160	8	160	6	120	8	160
6. Increase in the level of interdependence in the school system ¹⁰	0	0	8	80	8	80	5	50	6	60
7. More co-ordinated approach ⁵	0	0	10	50	7	35	4	20	5	25
8. Least disruption to teaching time ⁵	9	45	3	15	3	15	6	30	3	15
Total Weighted Score	115		840		815		585		745	

Non-monetary costs and benefits have been identified by scoring each option against identified benefits using a scale system based on the relative importance of each benefit in accordance with DFP guidance with 0 indicating no benefits and 10 indicates likely to deliver maximum benefits

Scoring Rationale

1. Option 1 does not provide opportunity for structured exchange of ideas and good practice (although informal exchange is possible) and is the lowest. Options 2(a) and 2(b) provide the highest level of ideas exchange/good practice through the ELB Support Team and ETI involvement in a structured and managed way; with option 2(a) providing an increased opportunity for sharing ideas and practice through the regional delivery team. Option 3 provides good opportunity for ideas exchange/good practice amongst schools although less structured, but due to only around 1/3 of schools being involved scope is limited. Option 4 is similar to Option 3 but rated higher due to its more extended scale across all schools.
2. There is no provision for improving confidence and competence for teachers in option 1. Training, together with support to reinforce knowledge, is a key feature of Options 2(a) and 2(b) and therefore has the highest score; while both options 3 and 4 include a level of teacher training, but with more limited scale of delivery.
3. Actions within option 1 are largely at the discretion of individual schools and there is no mechanism to assess quality, and limited opportunity to learn from others, hence its low score. The provision of a continuum model and quality indicators, combined with ELB support and ongoing ETI evaluation means that option 2(a) and 2(b) provides for good quality meaningful interaction between pupils. Shared practice with a degree of support provide some element of quality of meaningful engagement in Option 3 and 4 but with Option 4 offering wider scale of delivery.
4. Option 1 provides very limited opportunity to address educational outcomes which are reliant on skills and experience within schools who participate in shared education. Options 2(a) and 2(b) are likely to achieve the high level of educational benefit/outcome as a result of the availability of funding, ELB support, quality indicators and ETI involvement – all of which will raise standards as well as likely to provide the best scope to enhance curricular and extra-curricular provision. ETI evaluation evidence from pilot projects on which option 3 is based shows this was successful in improving educational outcomes, but on a reduced scale, with option 4 likely to offer a similar level of benefit to Option 2.
5. Option 1 does not provide any structured approach to normalising relationships on a cross-sectoral basis, while options 2(a) and 2(b) provide for the highest level of cross sectoral partnership and regular contact across schools enabled by criteria based funding. Options 3 and 4 also provide for a more normalising of cross sectoral partnership, but on differing scale of delivery.
6. Option 1 offers limited cross-community understanding, while by the definition of shared education being 'between more than one sector' other options provide for this, but on a range of scale, with Options 2(a) ,2(b) and 4 offering the highest potential (short of a single integrated system).
7. Option 1 does not impact on interdependence of school system as collaboration is at the discretion of individual schools and not in a structured manner. Other options offer more interdependence through collaborative working between partner schools, with options 2(a) and 2(b) likely to offer the highest benefit due to its scale and ELB support, with options 3 and 4 differing in scale and lack of support.
8. Option 1 does not offer any co-ordinated approach, while option 2(a) offers the highest level of co-ordination and consistency through its centralised model offering regional support. Option 2(b) has the risk of less co-ordination and consistency due to its more devolved management across 5 ELBs; while option 3 and 4 offer some scope for co-ordination through the individual project structures.
9. Option 1 offers the least disruption to teaching time as involves only very limited collaboration and requirement to transport pupils to other schools, while options 2(a), 2(b) and 4 are likely to impact most on disruption due to likelihood for transporting pupils; with option 3 involving less disruption across all schools due to its reduced scale.

7. ASSESSMENT OF RISKS AND UNCERTAINTIES

7.1 The following table outlines identified risks and uncertainties.

Risk Description	OPTIONS					State how the options compare and identify relevant risk management / mitigation measures
	1	2		3	4	
		2(a)	2(b)			
1. Lack of participation by all schools	H	M/L	M/L	H	M	Requirement on ELBs to promote/encourage shared education through RAP target. Incentives for schools, including in option 2 a support mechanism. Monitoring of involvement at ELB and DE level; targeted intervention for non-participating school Education & Training Inspection Reports
2. Lack of participation by pupils <i>Note 1</i>	H	L	L	L	M	Increased educational benefits
3. Lack of skills/confidence to deal with sensitive & controversial issues amongst teaching staff	H	M	M	M	M	Teacher training needs will be addressed through the Shared Education Programme. School need to release teachers for appropriate training.
4. Objections by parents/wider community	M	M/L	M/L	L	M/L	Schools engaging with parents/wider community to explain shared education & outline benefits.
5. Insufficient capacity to deliver to all schools	n/a	L	L	H	H	Option 2 includes provision of a dedicated support team. Evidence indicates that there is existing capacity to deliver on option 3. Sufficient capacity within statutory and voluntary organisations to scaling up existing provision is judged to be of higher risk.
6. Underspend/ Overspend by schools	n/a	M/L	M/L	H	H	Historical evidence indicates a high level of risk of schools achieving spending profile. In particular, evidence shows that transport costs are liable to variation. Support staff included in option 2 would have a monitoring role in spending; where savings in transport are identified, flexibility will be afforded to direct to frontline delivery to ensure maximum impact on pupils.
7. Schools fail to identify their starting point and set realistic aims & objectives within broader education plan/school development plan/ wider area learning community plans impacting on expected outcomes.	H	M/L	M/L	M/L	M/L	Access to facilitation to identify realistic aims and objectives Governance structures will ensure several layers of monitoring to track achievement of benefits
9. ELBs unable to agree on regional delivery	n/a	M	n/a	n/a	n/a	In this circumstance option 2(b) would deliver the same benefits at a slightly increased cost, but within 10% limit against overall cost.
Overall Risk (H/M/L):	H	M/L	M/L	H/M	M	

KEY: H = high M = medium L = low N/A = Not Applicable

Note 1 Programme for Government target is for all children to have the opportunity to participate in shared education programmes by 2015; it is recognised that in some communities children may withdraw from taking up the opportunity

7.2 Risks and Uncertainties – Sensitivity Analysis

All projects have a range of possible outcomes, although the range will be wider, and variability more important, for some cases than for others. The analysis of risks and uncertainties is a key element in appraisal.

The treatment of any potential uncertainty is generally best dealt with using sensitivity analysis which involves varying the value/number of key project indicators which are likely to be subject to the greatest degree of uncertainty.

In order to determine the impact of potential increases in total cost of the project as a result of uncertainties, NPC calculations have been performed using costs calculated below and subject to the following sensitivities (see also attached Appendix 8):

- Sensitivity 1 - a 10% increase in overall staffing costs
- Sensitivity 2 - a 25% increase in transport/delivery costs

The results of the above sensitivity on the calculated NPV's are shown below.

Options	Original NPC	Ranking	Sensitivity 1 NPC	Ranking	Sensitivity 2 NPC	Ranking
Option 2(a)	£22,956,256	1	£23,155,385	1	£24,234,399	1
Option 2(b)	£23,347,820	2	£23,586,106	2	£24,625,964	2
Option 3	£24,317,581	3	£24,890,603	3	£28,447,943	3
Option 4	£43,862,766	4	44,413,687	4	£52,719,502	4

It can be clearly seen from the above Table that increasing salaries by 10% does not affect the ranking of the options. Option 2a remains the preferred option in this case.

Evidence from previous shared education programmes shows that transport costs are liable to variation in relation to the distance between schools, number of classes involved and whether transport is via ELB buses or private hire coaches.

Support staff included in option 2 would have a monitoring role in spending; where savings in transport are identified flexibility will be afforded to direct to frontline delivery to ensure maximum impact on pupils.

However, it has been considered necessary to sensitise the transport costs across the options. Given the level of uncertainty here an increase of around 25% in transport costs is considered reasonable. The results are set out in the Table above. Clearly a variation in transport costs does not affect the ranking of the options.

As this is a revenue project an Optimism bias adjustment is not considered necessary.

A sensitivity analysis around the Non Monetary Score (NMS) is not considered necessary as there would have to be a significant reduction in Option 2a's NMS to affect its ranking against Options 3 and 4. At the same time Option 2a scores similar to Option 2b, with the exception of Option 2a having a higher score on 'a more co-ordinated approach' which is unlikely to change in the life of this programme.

8. CALCULATION OF NET PRESENT VALUES

Net present values have been calculated for each option (Appendix 8 refers). A detailed breakdown of costs is included in Appendix 9.

9. SUMMARY OF OPTION COMPARISONS & IDENTIFICATION OF PREFERRED OPTION

9.1 The 4 shortlisted options have been appraised with reference to both monetary and non-monetary indicators, the results are summarised below:

Options	Total Cost (Resource)	Net Present Cost (NPC)	Non Monetary Score	NPC per Benefit Point	Ranking
Option 1	£0	£0	115	NA	-
Option 2(a)	£24,572,642	£22,956,256	840	£27,329	1
Option 2(b)	£24,984,642	£23,347,820	815	£28,648	2
Option 3	£25,586,680	£24,317,581	585	£41,568	3
Option 4	£46,795,068	£43,862,766	745	£58,876	4

9.2 In terms of choice of the preferred option, Option 2(a) has the lowest total costs, as well as the lowest Net Present Cost (NPC). Option 2(b), however, ranks a close second in terms of total cost and NPC.

9.3 The choice of preferred option should be based upon the consideration of both the monetary costs and non-monetary benefits of each option. Option 2(a), however, also scores highest in terms of its non-monetary impact (840 compared to 815 for Option 2(b)) giving Option 2(a) the overall lowest NPC per benefit point of £27,329.

9.4 Considering the above, Option 2a The Shared Education Programme via a regional delivery mechanism is clearly the preferred option in terms of both costs and benefits.

9.5 In terms of Risks Options 2(a) and 2(b) both have the lowest overall risk rating of M/L.

9.6 Options 2(a) also fully meets with the objectives of the Programme and is within budget. Option 2a is therefore our preferred option.

10. ASSESSMENT OF AFFORDABILITY AND FUNDING ARRANGEMENTS

	Yr 0 £000's	Yr 1 £000's	Yr 2 £000's	Yr 3 £000's	Totals £000's
Current DEL Provision:					
(a) Capital	0	0	0	0	0
(b) Revenue	0	0	0	0	0
(c) Depreciation Allowance (if required)					
Additional DEL Required:					
(a) Capital	0	0	0	0	0
(b) Revenue ^{Note 1}	1,247,269	6,392,898	8,702,668	8,681,472	25,024,307
(c) Depreciation Allowance (if required)					
Total DEL Requirement:					
(a) Capital	0	0	0	0	0
(b) Revenue	1,247,269	6,392,898	8,702,668	8,681,472	25,024,307
(c) Depreciation Allowance (if required)					

^{Note 1} Adjusted for inflation March 2014 GDP Deflators

Budget from which funding to be allocated	Sum funded & % of total	Funding secured? Yes/No	If not secured, indicate status of negotiations
The Atlantic Philanthropies	£10m (40% of total)	Yes	Atlantic Philanthropies Board approved a matched funding contribution of up to £10m in December 2013.
OFMdfM (DSC Funds)	£10m (40% of total)	No	Bid required to central funds; pending business case approval.
Department of Education	£5m (20% of total)	No	Bid logged with DE finance; pending business case approval.

The total resource costs of £24,572,642 (in constant prices) or £25,024,307 (including inflation) should fall within the anticipated funding profile available.

	2014/15	2015/16	2016/17	2017/18	Total
Atlantic Philanthropies	£1,600,000	£3,500,000	£3,640,000	£1,260,000	£10,000,000
OFMdfM (DSC Funds)	£400,000	£3,680,000	£3,740,000	£2,180,000	£10,000,000
Department of Education	£500,000	£1,820,000	£1,620,000	£1,060,000	£ 5,000,000
Total	£2,500,000	£9,000,000	£9,000,000	£4,500,000	£25,000,000

11. PROJECT MANAGEMENT

11.1 Executive Ministerial Sub-Committee on Children and Young People

Governance arrangements for the programme will be consistent with those in place for Delivering Social Change Signature programmes. The DSC Framework is led by Ministers through the Executive Ministerial Sub-Committee (MSC) on Children and Young People.

11.2 DSC Programme Board

The MSC will be supported by the Delivering Social Change Programme Board which meets every 8 weeks and oversees the delivery of the DSC delivery framework. They will oversee all of the projects. The responsible DE Deputy Secretary is a member of the DSC Programme Board.

11.3 Atlantic Philanthropies/DSC Programme Board

A joint Atlantic Philanthropies/DSC Programme Board will oversee three projects, including the Shared Education Project, where part funding is provided by the Atlantic Philanthropies. The AP/DSC Programme Board will be chaired by OFMDFM and will comprise of reps from AP, DHSSPS, DE and if required, OFMDFM Special Advisers. The Programme Board will provide the Projects with the necessary authorisation to proceed and to overcome any problems.

11.4 Shared Education Project Board

A Shared Education Project Board, chaired by the DE Senior Responsible Owner and comprising representatives from OFMDFM, the Atlantic Philanthropies and ELB representatives. The direct management of each of the projects will be through individual Project Boards (PB).

A Memorandum of Understanding between OFMDFM, The Atlantic Philanthropies and DE will provide the necessary authority and set out roles and responsibilities for the overall governance arrangements. A draft copy is provided in Appendix 6.

Detailed project initiation documents and project plans will be prepared for the project based on PRINCE 2 methodology.

A high level project plan is provided at Appendix 7. This will be further refined by the Project Implementation Team within the Project Initiation document.

11.5 Expert Advisory Committee

An independent Expert Advisory Committee (EAC) will be established to provide advice to each project on service design and implementation including guidance on evaluation and performance measurements. Members will be nominated by OFMDFM, DHSSPS, DE and Atlantic Philanthropies. EAC will report through the SEP Project Board to the AP/DSC Programme Board.

Appendix 6 (Annex A (1)) provides an overview of the governance structure through which the project will be managed.

12. Monitoring and Evaluation Arrangements

12.1 Monitoring

The SEP Project Board will be responsible for monitoring the projects, with oversight from the AP/DSC Programme Board. The SEP Project Board will receive regular update and exception reports on progress at scheduled meetings.

The manager of the ELB support team will be responsible for providing regular progress reports (to include outcome and expenditure against profiled budget) to the SEP Project Board.

In the event of slippage against outcomes or expenditure, the project board will agree remedial action.

12.2 Programme Evaluation

Though a formal agreement, the Education and Training Inspectorate will be engaged to evaluate the schools partnerships against the aims and objectives over the period of the project and give support and guidance when necessary.

ETI has experience in evaluating shared education programme given their involvement for several years with the International Fund for Ireland's Sharing in Education Programme.

ETI will have a future role in inspecting shared education in schools when it is mainstreamed as part of advancing shared education process. Their involvement will ensure building of existing capacity and knowledge.

In addition, external researched may be commissioned by the Atlantic Philanthropies to complement the work of ETI (however this is outside the scope of this business case).

A monitoring and evaluation process will be developed to assess the impact of AP/DSC Shared Education project over a three year period.

The overarching evaluation framework will be agreed by the SEP Project Board with support and guidance from the SEP/Expert Advisory Committee.

Additional information will be collated from a number of surveys. A series of questions have been developed and are included in the schools omnibus survey. This is completed by the head of the school annually and the available

information used to setup baseline data. It will continue to be run on a yearly basis to access the numbers etc involved in sharing in education.

DE contributes questions to the Young Life and Times Annual Survey. At present shared education questions will be included every 2 years to measure the increase in sharing in education partnerships over the next few years. These questions focus on the experiences of 16 year old young people.

12.3 Post Project Evaluation

A post project evaluation, which will incorporate a project evaluation review (to determine the effectiveness of project management procedures, will be undertaken within 6 months of the end of the programme. The PPE will be led by an individual not involved in the programme; the SRO will be responsible for appointing the relevant person.

The review will draw on the finding of the ETI report; any additional reports commissioned by the Atlantic Philanthropies and any related research/surveys.

The PPE evaluation will take into account out-turn against anticipated monetary costs & benefits; non-monetary costs & benefits, any identified unexpected benefits and disbenefits. The review will also provide an outline of lessons learned and recommendations for future projects.

Risk Log for the Preferred Option **Appendix 1**

Risk Description	Category (e.g. funding, operational, etc.)	Impact (L/M/H)	Probability (L/M/H)	Proximity (short, medium, long-term)	Countermeasures	Owner	Author	Date Identified	Date Last Updated	Current Status

EDUCATION & TRAINING INSPECTORATE EVALUATION REPORT: SHARING IN EDUCATION PROGRAMME

This report is based on a broad and in-depth evidence base across the participating schools/organisations visited by the ETI over the period 2010-2013 and which included over 374 meetings and discussions with project and school staff, children and young people, and at least 142 direct observations of learning sessions.

The projects were implemented across the formal and non-formal sectors including early years, primary, post-primary, special education, youth and community work, and teacher education, exploring the development of shared education in different contexts. The projects contributed to the four interrelated strategic aims of the SiEP. Often the work of each project contributed to more than one of the strategic aims. For ease of reference, however, the details of each individual project and key outcomes are provided in Appendix 5 linked to the aim that they most fulfilled.

The reality of making the projects practical and effective in demonstrating measurable outcomes for young people was complex given the multiple views and definitions of what constitutes shared education in NI, and the lack of a substantive body of research to guide evaluative processes. Developing the work of the projects required vision, energy, courage and resilience in taking risks, to discover how to educate young people better and tackle difficult issues.

Over the period 2010-13 the projects report that over 46,5005 children, young people, staff, parents/carers, grandparents, governors, youth and community workers and others involved in education across NI, including 428 schools, were involved directly or indirectly in the SiEP. Their experiences have enabled the ETI to identify how shared education can be instrumental in promoting better learning as we work collaboratively towards a better future. The significant funding by IFI for the SiEP has enabled those involved to engage with issues of reconciliation, diversity, community relations, respect and trust through moving shared education experiences from an aspiration to a reality.

The report identifies what lessons can be learnt from the experience of the projects in piloting how best to help young people from the two main communities and other backgrounds to explore their uniqueness, to recognise and value diversity in order to be able to engage better in life and work with increased confidence, self-esteem and respect for others. The report concludes with a series

of recommendations for consideration at policy and school/organisation level. It presents a work in progress and a challenge to all through shared responsibility and action to become better at shared education.

The SiEP Evaluation was carried out over the period 2010-2013. The ETI's approach to the evaluation centred on building capacity within the projects to reflect and evaluate progress alongside providing external and objective evaluations.

The inspectors evaluated the quality of the provision against a customised set of quality indicators which were shared with the project leaders to ensure transparency and openness. Inspectors encouraged the individual projects to use these indicators to help schools/organisations involved in reconciliation work evaluate the quality of the provision beyond the life of the programme.

Throughout the work, particular emphasis was given to developing a common language and understanding between projects and schools/organisations with regard to the potential impact of the work on curriculum and school/organisation development planning.

Project Outcomes and Achievements

In almost all of the projects the participants:

- developed good personal and social skills through their engagement with others in exploring controversial, sensitive, complex and relevant issues to their lives.
- increased their awareness of the impact of their attitudes and actions on other individuals and communities.
- were able to evaluate their own learning through, for example, reflective journals/diaries, questionnaires and discussions.

The majority of the projects provided them with the opportunity to achieve an accredited qualification or an award designed with set criteria.

The Evaluation report identified in going forward, there is a need:

- for schools/organisations to evaluate consistently the impact of the work of reconciliation on the young people's attitudes, behaviours, understanding and skills to be able to demonstrate clearly the progress of young people and to inform future planning;

- for schools/organisations to focus on the development of the young people's maturity and higher-level skills of negotiation, compromise, collaborative problem-solving, managing disagreement, conflict and confrontation through innovative, inspiring and experiential learning strategies; and
- for all stakeholders to recognise, value and reward shared learning through accreditation and assessment arrangements across phases.

Quality of provision for learning

The SIEP brought a fresh impetus to collaborative learning to motivate and engage young people. It complemented curriculum planning and stimulated a variety of innovative learning and teaching strategies focused on consolidating the participants' understanding of diversity and of the part each can play in the process of reconciliation.

Almost all of the projects planned and developed the shared education work, crucially, through the NIC including PDMU, World Around Us, Local and Global Citizenship, history, language and sport. These projects provided continuing professional development to support teachers, youth workers and other educational providers in being confident in the use of a range of skills and methodologies to facilitate shared learning, including addressing controversial issues.

Participating staff responded willingly to the challenges of facilitating shared education. In the best practice, the staff planned effectively to meet the needs and interests of the participants in a safe and respectful environment.

The Evaluation report identified in going forward, there is a need to:

- support staff across all phases in developing further their confidence and competence in using a wide range of learning strategies necessary for work in shared classes to provide progressively challenging experiences for young people in tackling controversial and sensitive issues.

Leadership and Management of the Projects

The IFI Liaison Team within DE managed effectively the selection of the projects and monitored and reviewed rigorously the projects' work to ensure that progress was assured and focused entirely on the impact on shared learning and associated skills. As

the SIEP progressed there were obvious links between projects which the team encouraged and facilitated. In particular, the team linked the work to the Community Relations, Equality and Diversity (CRED) policy of DE.

Through regular monitoring reports and accountability meetings, the IFI Liaison Team within DE worked flexibly and open-mindedly with the leaders of the projects to achieve an acceptable balance between being creative and taking risks to maximise the learning about shared education with appropriate systems for accountability.

Project leaders and participants across the projects were creative in piloting a range of shared education models to promote reconciliation across religious, cultural, economic and social divides.

The leaders of the projects were effective in supporting participating schools/organisations to develop shared education. Their clear vision for, and commitment to, shared education impacted positively on schools/organisations and helped to develop enhanced self-evaluation and improvement.

There were examples of the excellent use of the voice of the learner to improve the quality of the provision and to inform further planning. This process brought a sense of realism about what worked and what remains to be done in order to plan better for going forward.

An important element of success was the recruitment, deployment, support and development of staff to promote the SIEP. This ensured that most of the project staff brought high levels of expertise and experience in community relations, reconciliation and diversity, including the skilful facilitation of learning to handle controversial and sensitive issues.

The project staff recognised the importance of working in partnership to build effectively the capacity and expertise across the projects the SIEP provided participating teachers and staff with opportunities to develop their pedagogical skills at a time of restricted access to continuing professional development. This included access to appropriate resources which supported better partnership working.

Almost all of the projects addressed effectively the areas for improvement identified in the interim report in June 2012.

Building on the lessons learned and going forward
 IFI, DE and other funders need to continue streamlining the planning and accountability processes for project-driven work of this nature aiming for clarity in planning and effective reporting on quality and finance, while not distracting teams unnecessarily from the practical delivery of the projects.

Schools/organisations need to work with external facilitators as appropriate to identify where they currently are in respect of shared education to enable them to set realistic aims and objectives and ensure planning links with, and builds upon, other initiatives within the schools/organisations.

Schools/organisations need to use their improvement process to develop shared education through staff development, the appointment of key people to lead and co-ordinate the work, a system to evaluate the quality of the provision and outcomes and engage with parents/carers and the community.

Sustainability

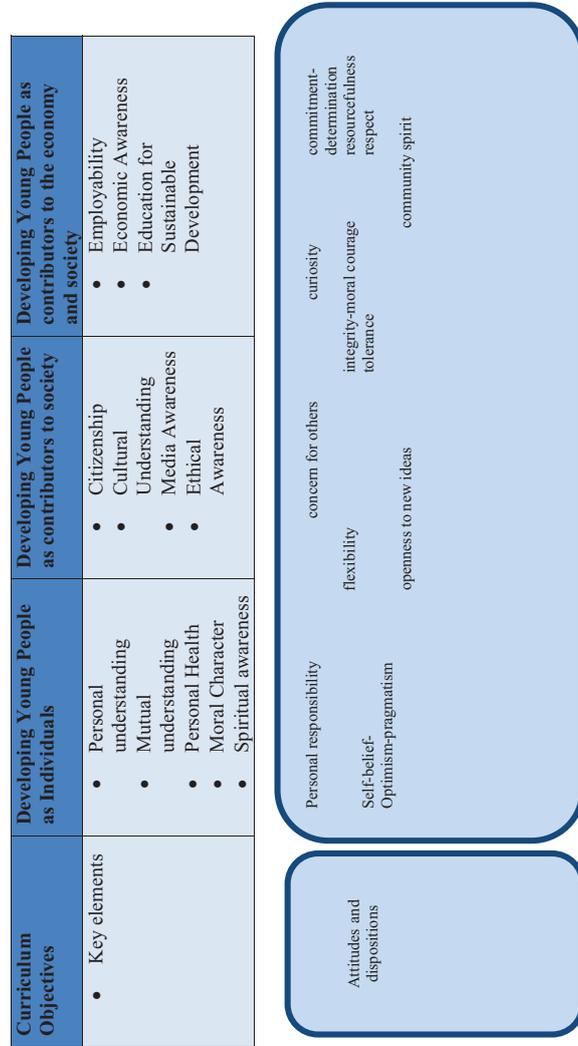

In terms of sustainability, at the time of the final evaluation, almost all of the projects had plans to sustain the learning.

The following nine recommendations are ETI's professional view of how schools can be supported in practical ways: for some; to begin their journey on a continuum which builds true understanding rather than compliance, and for others; to keep pushing the boundaries moving ever closer towards the longer term aim.

For DE	<ol style="list-style-type: none"> 1. To ensure that school improvement policies signpost connections to, and opportunities for, shared education; 2. To build on the effective collaborative work of DE and IFI in future education programmes, through strategic planning which focuses on maximising the number of young people involved and the quality of the practical work, through for example, providing professional support to refine good ideas within bids, identifying specific target groups across schools, and streamlining and combining reporting mechanisms to fulfil the requirements of a range of funders; 3. To commission the development of a continuum of shared education which outlines the key milestones in moving from shared education as additional to the work of a school to being embedded in its ethos, thereby realising the aims of the NIC in a more holistic way.
For DE in conjunction with other stakeholders including the Education Skills Authority/ Education and Library Boards; General Teaching Council for Northern Ireland;	

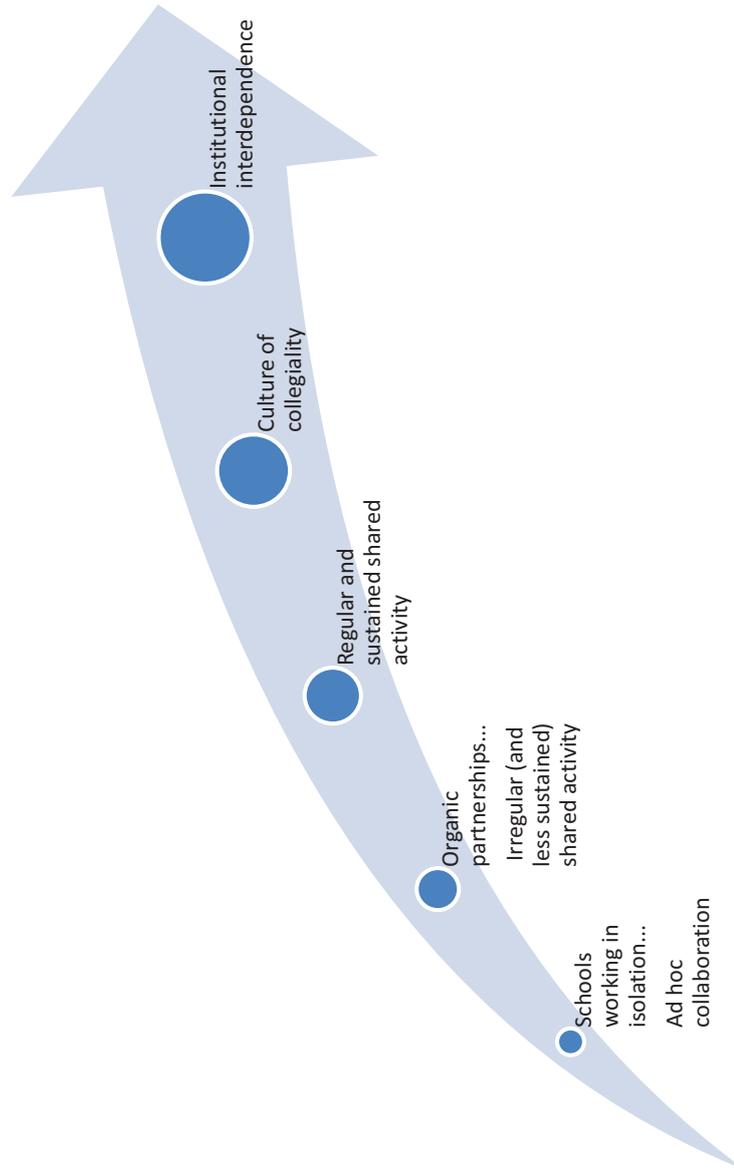

<p>Youth Service; Institutes of Higher Education; IFI and other funding bodies.</p>	<p>4. To reflect the importance of shared education in policy and planning for teacher education, in particular to draw on the emerging shared education continuum in how teachers and youth workers are educated;</p> <p>5 To work collaboratively to provide those who work in the formal and non-formal sectors with high quality resources and professional development, and to develop their confidence and competence in using a range of learning strategies necessary for work in shared classes to provide progressively challenging experiences for young people in tackling controversial and sensitive issues;</p> <p>6. To recognise, value and reward shared learning through accreditation and assessment arrangements which promote the development of young people's higher-level skills of negotiation, compromise, collaborative problem-solving, and managing disagreement, conflict and confrontation with maturity;</p>
<p>For schools/ organisations</p>	<p>7. To identify with external facilitation as appropriate, their starting point and set realistic aims and objectives within the broader education plan/school development plan and in the plans for the wider area learning community;</p> <p>8. To use the improvement process of the school/organisation to develop shared education through staff development; the appointment of key people to lead and co-ordinate the work; the evaluation of the impact of the quality of the provision on the young people's attitudes, behaviours, understanding and skills; and engage with parents, carers and the wider community; and</p>
<p>For ETI</p>	<p>9. To develop further, the quality indicators for the identification of effective practice in shared education and identify and disseminate effective practice.</p>

Figure 1

Appendix 4

CONTINUUM OF SHARED EDUCATION

The shared education (collaboration) spectrum¹	
Schools in isolation	This end of the spectrum represents those schools who are in isolation of one another, where there is little to no collaboration with other schools. This may apply in a number of contexts particularly in rural settings but not exclusively, it may also apply in urban settings where schools choose not to work with other schools. It may also apply in contexts where schools are part of network schools such as an Area Learning Community but their actual levels of engagement with other schools in the learning community is minimal or non-existent.
Ad hoc collaboration	Involves schools where there is limited contact or collaboration with another school. This type of engagement is ad hoc, with infrequent contact between schools. An example of such activity could be an annual joint sports day.
Organic partnerships	Organic arrangements may be more significant in terms of the extent of the collaboration, compared to ad hoc arrangements and crucially are motivated by a school's desire to connect with another school for a myriad of reasons. However, collaborative arrangements are not as a consequence of enactment and are independent of any formal structures or the remit of external funders. This type of collaborative arrangement which is, in effect, a grass roots model may actually amount to a significant model of collaboration given that the schools may be motivated by common needs as opposed to enacting a model of collaboration imposed by external funder requirements.
Irregular (and less sustained) shared activity	Models such as these are characterised by collaboration between schools, which may be meaningful and impactful but which are limited in terms of sustainable practice and the frequency of contact between schools. Models such as these are often funded externally or centrally funded from DE e.g. EMU- type programmes or CRED projects. Models may range from shared pupil learning initiatives through to teacher initiatives or located at senior management level. Often activity between pupils may complement the curriculum or address specific curricular elements but are unlikely to be entire curricular subjects.
Regular and sustained shared activity	Models where the collaboration between schools is more regular – where contact between pupils and staff is more frequent and, crucially, where the collaborative activity occurs over a sustained period of time. In some cases this may mean over a period of years and contact/shared learning between pupils is regular, timetabled and embedded within the curriculum. Such models are likely to encourage schools to develop mature and effective partnerships. In such cases the relationship between schools is more likely to develop whereby collaboration between institutions is not limited to shared pupils' activity but involves collaboration between teachers, leaders and in some cases

¹ This framework has been developed by the QUB Shared Education Team: Dr Gavin Duffy, Alistair Stewart and Mark Baker.

	<p>Governors. Regular and sustained models of collaboration are most likely to be funded by external agencies or Government initiatives.</p> <p>Schools that have been involved in sustained collaborative activities then develop strong institutional relationships. Schools will continue to be involved in shared, regular and sustained learning between pupils but collaboration has become unbound in that the remit of the relationship between the schools is not restricted to shared learning between pupils. Instead, while shared learning opportunities increase, the extent of the relationships between teachers, managers and leaders is much more pronounced and, crucially, links between Governors develop. Collegiality is often characterised by collaboration where practice, including shared learning, becomes normalised in each school. Schools come to value the institutional relationships that have developed and explore where else they could collaborate. In much the same way as organic partnerships, schools recognise that collaboration allows them to address common needs. Collegial partners come to value partnership and seek ways to sustain partnership activities that need not rely on funds from external agencies. Schools begin to generate shared knowledge and shared resources.</p>
<p>Institutional Interdependence</p>	<p>Schools that have reached this point in terms of their relationship have developed an organisational symbiosis in that collaboration has normalised, is based on common need, involves significant shared learning and where staff, leaders and governorship recognise the value of collaboration. At this level, partnerships will have developed a high degree of collaborative infra-structures, including: governance, curriculum and planning, teaching and learning, management and pupils.</p>

For the purpose of this programme, the following definitions will apply:

Primary

Minimum of:

- Class(es) from one key stage group for one session per week over a 6 week period at level 2 (*typically at KS1 this might involve the entire P3 cohort from School A being taken over to School B and then the entire P4 cohort from School B being taken back to School A*).
- Class(es) from one key stage group for one session per week over a 12 week period at level 3;
- Classes from two key stage groups for one session per week over twelve weeks at level 4;
- Classes from two key stage groups for one session per week over 24 weeks at level 5.

Post Primary Level

Minimum of:

- One subject in one year group involving the same cohorts of pupils coming together at least 6 times during the year at level 2
- Two subjects across two year groups with half of the classes being physically shared at level 3 (or equivalent to 18 shared classes across the year). *It is accepted that there may be a skewing effect here, where for example the 2014/15 5th year pupils are already halfway through their GCSE studies, so it may only be possible to bring 4th year pupils onto the shared subjects in Yr-1. Then in Yr2 that cohort would move through and the second year group would follow on. That skewing may then have to be reversed in the final year of the programme (depending on whether the partnership in question intends to continue delivery of that shared subject beyond the programme).*
- Four subjects across two year groups involving all classes being physically shared (*skewing comment above applies*) at level 4; and
- Six subjects across two year groups involving all classes being physically shared (*skewing comment above applies*) at level 5.

The aims of the SIEP were to:	What did the work of the 19 projects do?*	Key outcome of the project
<p>promote shared education by linking schools representative of the two communities;</p>	<p>The Change Makers Project worked with 10 schools in partnership in the Lisburn and greater Belfast area to equip young people to be agents of positive change within and between school communities.</p> <p>The Creative Change Project worked with 10 schools in 5 shared education partnerships in the North Coast area with children, teachers, classroom assistants and parents/carers on the creative delivery of Personal Development and Mutual Understanding (PDMU).</p> <p>The Learning to Live Together Project worked with 12 schools in 6 partnerships across South-Eastern Education and Library Board to promote positive community relations through using methodologies from the formal and non-formal sectors.</p> <p>The Partnership, Inclusion, Reconciliation, Citizenship and History Project worked with 12 schools in 6 shared education partnerships in the North-Eastern Education and Library Board area to promote inclusion and reconciliation through Local and Global Citizenship and history.</p> <p>The Primary Curriculum Partnership Project targeted 20 schools with experience in community relations to form 10 partnerships across the Southern Education and Library Board to develop the mutual understanding strand of PDMU through shared classes.</p>	<p>Young people benefited from learning how to tackle controversial and difficult topics in shared classes through the high-quality facilitation of learning. Quantitative and qualitative research was used well to inform ongoing planning of sessions in order to meet better the needs of the young people.</p> <p>Effective partnership between an institute of higher education, schools and parents resulted in young children from different traditions learning together through the creative delivery of PDMU. The partnership arrangements resulted in high-quality learning experiences for teachers, classroom assistants, parents, carers and children to help them understand the complex nature of the reconciliation process and how to be at ease with difference.</p> <p>Staff contributed positively to shared education through working across the formal and non-formal sectors. These links brought freshness to teaching and learning approaches which engaged and motivated young people, particularly the more reluctant young people. The project showed that shared education can facilitate, and support, an understanding of difference in a respectful, cooperative and interdependent way for the benefit of all pupils.</p> <p>By developing meaningful shared curricular learning opportunities, pupils engaged well together in a common purpose, promoting a greater acceptance of one another's views and opinions.</p> <p>By children learning in shared classes and teachers working in shared partnerships using the PDMU curriculum with considered expertise, the children and staff handled controversial and sensitive issues more effectively. This resulted in raising the standards of learning in PDMU for the children and participating schools.</p>
<p>build on community relations within and between schools;</p>	<p>The Classrooms Re-imagined: Education in Diversity and Inclusion for Teachers Project provided 134 teachers with training in and through shared education to deal with issues of diversity, inclusion and community cohesion within the classroom and on a whole-school basis.</p> <p>The Facing Our History: Shaping the Future Project worked with 178 teachers, 101 student teachers and 855 pupils to explore the shared history of the two main communities in Northern Ireland in dealing with sensitive and contentious issues through transformative learning experiences in order to contribute to reconciliation.</p> <p>The Promoting Reconciliation through a Shared Curriculum: worked with 24 primary and 16 post-primary schools across the Western Education and Library Board to develop shared learning classes through PDMU and Local and Global Citizenship.</p> <p>The Sharing Classrooms: Deepening Learning Project trained 414 teachers working in shared classrooms across the 29 ALCs.</p>	<p>Shared teacher education at all phases is crucial to bring about change through: effective support, challenge and extending perceptions within the school setting in the community. Key to these programmes was the opportunity for teachers to work alongside others from different phases to become more aware of the continuum of education which all young people experience.</p> <p>Effective history education can be a transformative experience and can make a significant contribution to the process of reconciliation; it is crucial that all history teachers are equipped with the skills for handling sensitive and controversial issues in the classroom and that all young people have shared experiences to consolidate their learning.</p> <p>A key strength was the professional development of teachers and the provision of resources to support the statutory aspects of the curriculum for PDMU and Local and Global Citizenship. The training of teachers was crucial to develop their confidence and skills in handling sensitive and contentious issues, especially with young people in shared classrooms.</p> <p>Most young people adapt positively to learning within shared classrooms; where concerns arise they relate to issues of integration regarding gender, socio-economic background and school type. In establishing a genuinely inclusive ethos of shared education, school leaders, teachers and staff need to be supported in developing appropriate strategies to address these challenges.</p>

* Much of the work of each project met more than one of the key aims of the SIEP. For the ease of reference the projects are sorted according to the aim they most fulfilled.

<p>support cultural outreach amongst young people representative of the differing communities/ traditions; and address strategic gaps in achieving reconciliation through a cross-community, cross-border approach through education and the related services sector.</p>	<p>The Welcoming Schools Project worked with 18 schools across the Southern Education and Library Board to take proactive steps to make them a more welcoming place for all young people regardless of religion, race or creed and for schools to engage more effectively with the community.</p> <p>The Belfast Old Firm Alliance Project worked with 2,167 children and young people to develop good relations through sport in interface and divided communities across the greater Belfast area.</p> <p>The Cultural Learning and Social Skills Project worked with 671 young people from diverse backgrounds, isolated locations and vulnerable social situations to engage in community relations programmes to develop their social skills and to provide positive alternatives to the various anti-social circumstances and self-harm influences in the North-West region.</p> <p>The Distinctive Voices: Collective Choices Project worked with 530 young people across 22 schools to explore their own story and the stories of others from differing backgrounds in shared learning experiences.</p> <p>The Reel Frontiers Project worked with 533 pupils across 20 schools to explore themes of division and conflict through the medium of film and through engagement with associated workshop activities to create their own original films about contentious issues that affect the people of Northern Ireland.</p> <p>The Sharing Education Together Project facilitated the learning of over 7,248 young people in reconciliation programmes through training by 336 young volunteers.</p> <p>The Together through Culture Project worked in 38 schools with pupils from both traditions to promote a greater understanding of the Irish language and culture through linking primary schools with post-primary schools.</p> <p>The Building New Communities through Positive Parenting and Reconciliation Project worked with 484 parents and staff to use a parenting programme as a vehicle for reconciliation.</p> <p>The Hand of Friendship Project: 22 schools worked in cross-border, cross-community clusters to explore issues of identity and friendship, diversity, sectarianism and peace and reconciliation.</p> <p>The Youth Works Project worked with 288 young people who were not currently engaged in education, employment or training, to gain recognised qualifications, and to develop the skills and self-esteem necessary to improve their future training and employability choices.</p>	<p>By children learning in schools that developed innovatively a welcoming ethos for all, the children and staff showed greater respect for themselves and others. This resulted in a much greater understanding of a truly welcoming ethos and how to engage more effectively with the community through a climate of reassurance and acceptance fostered within and beyond the school gates.</p> <p>The medium of soccer was an accessible way to engage children, young people, parents, teachers and community workers in promoting reconciliation. It offered an opportunity for those involved, in a neutral and safe environment, to begin to understand diversity and how to promote tolerance.</p> <p>When community relations activities are under-pinned with meticulous planning and preparation, pupils of all ages can benefit from a rewarding and enjoyable experience through engaging with others from diverse backgrounds.</p> <p>By giving young people the opportunity to explore their own story and the stories of others from differing backgrounds in shared learning experiences, they can make a difference in their current communities and for the future.</p> <p>By exploring themes of division and conflict through the medium of film and through engagement with associated workshop activities and creating their own original films, pupils can gain a deeper understanding of a range of contentious issues that affect the people of Northern Ireland.</p> <p>Young people in post-primary schools responded well to the approaches modelled by the young volunteers and facilitators when discussing contentious and sensitive issues. The local area learning communities were a useful starting point from which to promote shared education.</p> <p>Through a study of interests in names, place names, song, dance and traditions and the Irish language in shared classes, the young people gained a greater understanding of language and culture. Through shared classes between primary and post-primary schools, the children and young people were given better opportunities to be prepared for transition.</p> <p>The pre-school stage of education provided a key window of opportunity to influence parental attitudes and behaviours in promoting reconciliation and having a positive effect on their children in their formative years. The commonality of being a parent helped the parents involved to dialogue and overcome barriers to engagement across traditional community divisions.</p> <p>By adults modelling good relations and leading by example, at whole-school level, children got to know, empathise with, and respect one another in neighbouring schools, and from schools across the border. This helped to create a culture of respect and tolerance among primary school children by facilitating contact and opportunities for discussion of sensitive issues such as identity, friendship, diversity, sectarianism and peace and reconciliation.</p> <p>The youth work approach used to support and progress the young people was highly successful in raising their aspirations, and preparing them to engage in education, training or employment.</p>

Appendix 6

Memorandum of Understanding

**Office of the First Minister and deputy First Minister
(OFMDFM), Department of Education (DE),
and The Atlantic Philanthropies (AP)
Operation of the co-funded Delivering Social Change Shared Education
Signature Programme (SESP)**

1. Introduction

The purpose of this Memorandum, which complements the AP commitment letter of XXX (see Annex xx) is to set out, in terms of accountability, operations and reporting, the roles responsibilities and relationship between OFMDFM, DE, and AP on the operation of the co-funded Shared Education Signature Programme (SESP). All parties reserve the right to review the general outline of this understanding and to propose amendments.

2. Purpose of the Programme

The overall co-funded Atlantic Philanthropies / Delivering Social Change programme is a signature project within the Delivering Social Change framework which is led by Ministers through the **Executive Ministerial Sub-Committee (MSC)** on Children and Young People and the Sub-Committee on Poverty and Social Inclusion. It aims at achieving transformative change in the commissioning, design and delivery of services for the most vulnerable members of society and encompasses:

- a. A Dementia Services Programme
- b. A Prevention and Early Intervention Programme
- c. A Shared Education Signature Programme.

The specific outcomes sought by the SESP are outlined in the Business Plan (See Annex xx). The SESP aims to incentivise Shared Education partnerships

Shared Education Programme April 8, 2014

(statutory early years, primary and post primary level) with the aim of improving educational and reconciliation outcomes through schools working together. The joint fund will promote peer learning amongst schools, and will include teacher exchanges, joint development and delivery of shared classes.

3. Governance Arrangements for the Programme

- a) AP, OFMDFM and DE will work together to support the implementation of the SESP. They are agreed that generally, communication about the SESP should be coordinated and shared between the parties to ensure full co-ordination of guidance, advice and direction to the programme, notwithstanding the individual requirements of either party from time to time.
- b) The governance arrangements for the SESP will be consistent with the Governance arrangements in place for the Delivering Social Change Signature Programmes. Governance arrangements are summarised in the diagram and sub-paragraphs below.

Executive Ministerial Sub Committee for Children and Young People

Delivering Social Change Programme Board

OFMDFM Junior Ministers [Chair]
OFMDFM Denis McMahon [Programme Director]
OFMDFM Special Advisers
DE Deputy Secretary
DE Deputy Secretary
DSD Deputy Secretary
DEL Deputy Secretary
DOJ Deputy Secretary
DARD Deputy Secretary
DOE Deputy Secretary
OFMDFM: Henry Johnston (Programme Support)

Joint AP/DSC Programme Board

OFMDFM (Chair)
The Atlantic Philanthropies
DHSSPS
DE
OFMDFM Special Advisers

SESP Board

DE (SRO) (Chair)
The Atlantic Philanthropies
OFMDFM

--
ELBs

SEP EAC

Membership nominated
by:
DE
OFMDFM
The Atlantic Philanthropies

4. Ministerial Sub Committee

The MSC is supported by the **Delivering Social Change Programme Board** which meets every 8 weeks. The role of the DSC Programme Board is to oversee the delivery of the DSC delivery framework, and to ensure that key milestones and targets are achieved. The Board oversees a family of initiatives (including the Atlantic Philanthropies/Delivering Social Change programme), monitoring in particular project formation and delivery. Each initiative has its own Board which includes representatives from key Departments and organisations. OFMDFM Special Advisers are invited on to the DSC Programme Board and all of the individual initiative Boards.

5. DSC/AP Programme Board

- (a) The DSC/AP Programme Board will oversee the joint AP/DSC initiative. The Joint DSC/AP Programme Board will be chaired by OFMDFM and will be comprised of representatives from The Atlantic Philanthropies, DHSSPS, DE and OFMDFM, including OFMDFM Special Advisers.
- (b) The role of the DSC/AP Programme Board will be to provide the SESP Programme Board with the necessary authorisation for the project to proceed and to overcome any problems. The DSC/AP Programme Board will approve the overall Budget parameters for the Project, conditional on achievement of objectives and will report progress to the Executive Ministerial Sub-Committee (MSC).

6. SESP Programme Board

- (a) The direct management and oversight of the SESP will be provided by the SESP Programme Board, established by DE in consultation with AP, which will report to the DSC/ AP Programme Board.
- (b) The SESP Programme Board will be chaired by DE and comprise representatives from The Atlantic Philanthropies, OFMDFM, and ELBs.
- (c) The SESP Programme Board Chair will develop detailed proposals for membership of the Programme Board within these parameters for agreement by the Joint DSC/AP Programme Board.
- (d) The role of the SESP Programme Board will be to

Shared Education Programme April 8, 2014

- Develop plans to deliver the overall vision, objectives and outcomes for the Programme including overarching evaluation framework
 - Oversee the development of the Project Brief and Business Case
 - Authorise expenditure levels, set stage tolerances (agreed by DSC/AP Programme Board) and ensure funding for agreed expenditure is available within delegated limits.
 - Authorise or reject proposed changes to cost or timescale beyond tolerance levels and all proposed changes to scope, checking for possible effects on the Business Case
 - Report to DSC/AP Programme Board (through the SRO) where variances are beyond the authority of the SESP Programme Board
 - Ensure Risks and Issues are being tracked and mitigated/resolved
 - Ensure outcomes are met
- (e) The SESP Programme Board, with the agreement of the DSC/AP Programme Board, may invite input from other key stakeholders at key decision points, including from the Expert Advisory Committee.
- (f) Day to administration for the programme will be managed by the SESP Programme Management Team.
- (g) The SESP Programme Management Team will prepare all the appropriate documentation (based on PRINCE2 methodology) including a Project Initiation Document (PID) setting out its plan for implementation of the Project, for agreement by the SESP Programme Board. The PID will set out key activities, timelines, decision points and spending profiles and will be updated throughout the project as detailed plans for each stage are developed. Review points will be established at key points in the project to oversee implementation and progress.
- (h) On agreement of the PID by the SESP Programme Board, the Programme Management Team will have authority to deliver the Project within the terms of the PID, including such decision points and tolerances as are agreed by the SESP Programme Board.

Shared Education Programme April 8, 2014

7. Expert Advisory Committee

An independent **Expert Advisory Committee** will be established to provide advice on service design and implementation to the SESP Programme Board. The EAC will also provide advice on evaluation and performance measurement. OFMDFM, DE and Atlantic Philanthropies will nominate members to this Committee. The EAC will report to the DSC/AP Programme Board, through the SESP Programme Board.

8. Schedule of Governance meetings

Period	Board	Meeting date

9. Roles and Responsibilities

a) Senior Responsible Officer

Mrs Faustina Graham in the Department of Education is the Senior Responsible Officer for the project.

b) Department of Education

DE has been appointed as the lead NICS department in relation to this programme and will:

- Participate in the Joint DSC/AP Programme board.
- Be formally accountable for all project expenditure and project reporting
- Establish (and chair) the SESP Programme Board comprising representatives from OFMDFM, DE and AP and ELBs. The SESP Programme Board will receive regular reports on progress and will be responsible for management and oversight of the governance arrangements.
- Establish a programme management office, appoint a programme manager and change managers and support implementation of the programme
- Engage with and participate in the agreed monitoring and evaluation processes.

c) Office of the First Minister and Deputy First Minister

OFMDFM will;

Shared Education Programme April 8, 2014

- Nominate an official as a point of contact for the project and establish and chair the Joint AP/DSC Programme Board
- collate reports on progress against project plans, monitor budget profiles and as necessary, report to DFP
- Participate in the SESP Programme Board as appropriate
- Facilitate the operation of and participate in the Joint DSC/AP Programme board and report as appropriate to the Executive Ministerial Sub-Committee (MSC).
- Engage with and participate in the agreed monitoring and evaluation processes.

d) **Atlantic Philanthropies**

AP will;

- Participate in the Joint DSC/AP Programme board
- Account to AP board's for delivering against commitment letter and agreed outcomes
- Monitor compliance with AP reporting requirements
- Participate in the SESP Programme Board
- Engage with and participate in the agreed monitoring and evaluation processes
- Fund Queens University longitudinal research study and provide relevant data for the measurement of reconciliation outcomes, including 2012/13 baselines and annual updates as requested.

10. Committed Investment

Funding for the SESP will be committed as follows, over a three year period beginning in 2014.

SESP	
Delivering Social Change Central Funds	£10m
Atlantic Philanthropies	£10m
DE	£5m
Total	£25m

11. Conditions of Investment

For Atlantic conditions of investment, see commitment letter (annex xx)

a) Any other conditions agreed by the SESP Programme Board

TBC

12. Funding

- (a) The SESP Programme Board will prepare a detailed Budget Profile for the duration of the SESP for approval by the DSC/AP Programme Board.
- (b) In advance of each financial year, the SESP Programme Board will agree the annual requirement and budget profile to be submitted to the DSC/AP Programme Board for approval.
- (c) The DSC/AP Programme Board will determine the respective contributions from Departmental, DSC and AP funds.
- (d) In advance of each financial year and following DSC/AP Programme Board consideration, OFMDFM will advise DFP in relation to funding arrangements.
- (e) The SESP Programme Board, as part of its monitoring process, will provide the DSC/AP Programme Board with regular reports on budget profiles.
- (f) The DSC/AP Programme Board will manage additional pressures/reduced requirements and as part of the monitoring round process in June, SEPtember and November, OFMDFM will advise DFP of any in-year adjustments agreed by the DSC/AP Programme Board

13. Systemic Change and Mainstreaming

OFMDFM and DE in endorsing the SESP signal their commitment that that this new approach to Shared Education will be embedded in future provision.

14. Disputes Resolution

Where consensus cannot be reached on an issue by the SESP Programme Board the issue should be referred to the AP/DSC Programme Board for consideration. The Programme Board may invite the Permanent Secretary of

Shared Education Programme April 8, 2014

OFMDFM, the Permanent Secretary from DE and the Country Director of AP to make a determination. If at this stage no resolution is found, the Ministers in OFMDFM (and/or their nominees) will seek to achieve finality with the President and CEO of AP (and/or their nominees).

15. Public Communication

- a) All press releases or similar announcements issued by any of the parties to this Memorandum will be circulated for consideration and advice before publication. All documentation in relation to the SESP will state that it is funded by the participating Departments, Delivering Social Change and AP. This may include incorporation of the official logos of the relevant Departments and AP.
- b) All of the participating Departments and AP reserve a right to use any information, data, research or materials supplied to it as a result of work supported by the Fund.

16. Monitoring and Evaluation

The SESP Programme Board will be responsible for ensuring that appropriate baseline, monitoring and formative evaluation data is collected throughout the lifespan of the project to allow all NIGEA requirements and standards to be met. A specific budget line has been included within the project to ensure that all necessary operational data is being collected. The SESP Programme Board will also determine how on-going outcome and impact-level assessments will be made. In addition to these strands of monitoring and evaluation, AP intends to independently fund a range of complementary studies which will apply thematic analytical lenses to the overall project (and indeed the overall programme). A detailed project monitoring and evaluation framework will be drawn up over the course of Year 1 to detail how all these strands will be rolled out, and all participating Departments and AP will agree to participate fully in the implementation of that framework.

Dear Veronica

Shared Education Business Plan

At its meeting on Wednesday 10 December 2014, the Chairperson referred Members to a recent press article attributed to Professor Smith, University of Ulster referring to a Department of Education Shared Education Business Plan.

The Committee agreed to write to the Department seeking sight of the Shared Education Business Plan in question.

A response by 12 January 2015 would be greatly appreciated.

Yours sincerely

Signed Peter McCallion

7 January 2015

Dear Peter

Together: Building a United Community - Shared Education Campuses Protocol

In advance of officials' evidence session on Wednesday 14 January, I attach for the Committee's information, the protocol and application document issued on 1 October 2014, for the Second Call for Expressions of Interest in the Shared Education Campuses Programme. This was previously copied to the Committee on the morning of 1 October 2014.

Yours sincerely

Michele

Michele Matchett

Acting Departmental Assembly Liaison Officer

The Shared Education Campuses Programme
Second Call for Expressions of Interest Protocol Document

September 2014

Shared Education Campuses Programme 2014

1. Introduction and Background

- 1.1 On 9 May 2013, the First Minister and deputy First Minister made a statement to the Assembly on the '**Together: Building a United Community**' strategy, which contains a range of proposals including details on **Shared Education Campuses**. Work on 10 shared education campuses will be commenced within the next 5 years, building on the project proposals for the Lisanelly Shared Education Campus. These campuses will be the pathfinder projects leading to a wider programme of shared education capital projects. The campuses will also integrate community activities and resources and other services, including statutory provision where appropriate.
- 1.2 The specific aim of the Executive's **Together: Building a United Community** (T:BUC) strategy relating to education is '*To enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience*'.
- 1.3 Included in the strategy is a commitment '*to create 10 Shared Education Campuses based on the Lisanelly Shared Education Campus model*'. We believe that building good relations, tackling intolerance and challenging prejudice can be embedded through the ethos of schools. It is already an integral part of the curriculum. In addition to the current work in this area, the strategy proposes that the Programme for Government (PfG) commitment to ensure all children have the opportunity to participate in shared education programmes by 2015, will reinforce opportunities to contribute to the shared vision of building a united community.
- 1.4 Creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement, unemployment and sectarianism; and improving good relations amongst and for our young people.
- 1.5 Lisanelly has been quoted as the template for these new 'Shared Education Campuses'. It is a shared campus in the truest sense of the term, bringing together six schools of different management types and phases, on a site in excess of 130 acres, with a forecast combined long term enrolment of over 4,200 pupils.
- 1.6 While Lisanelly Shared Education Campus is an example or pathfinder for shared education facilities here, it must be recognised that it is also unique. The availability of an extremely large site close to the centre of Omagh will not be readily replicated in other towns across the north. Implementation of the FM/dFM announcement will require a flexible approach to the identification of potential 'shared campuses'.
- 1.7 In progressing shared education, delivery of educational benefits to children and young people must be the overarching priority. It is important that any proposal for a shared campus be consistent with the work currently being undertaken on area planning. Any models of sharing must fit within the relevant Area Plan, taking into account the full needs of an area, including the implications for other schools and recognising the importance of parental preference, which is protected in legislation.
- 1.8 Enhancing shared education provision provides a range of benefits including: raising educational standards, particularly for disadvantaged pupils; greater choice and greater opportunity; providing sustainable local provision; facilitating delivery of the Entitlement Framework; and providing wider choice for pupils in terms of leisure, cultural and sporting activities.

- 1.9 The purpose of this document is to set out the process and timetable to be used to identify and assess proposals submitted under this initiative. **Applicants should note that this document has been revised and updated in light of the experience of the first call for Expressions of Interest and includes revisions to the criteria.**
- 2. Definition and Scope**
- 2.1 In July 2012, the Minister of Education announced the establishment of an independent Ministerial Advisory Group on Advancing Shared Education. The group published its findings on 22 April 2013. The issues arising from the findings on shared education cross many existing policy areas throughout education and the Department is already working on and will continue to develop shared education initiatives in schools.
- 2.2 It is important that there is a clear definition of what is meant by schools ‘sharing’ and the Department uses the definition of sharing provided to the Ministerial Advisory Group:
- “Shared education involves two or more schools or other educational institutions from different sectors working in collaboration with the aim of delivering educational benefits to learners, promoting equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.”***
- 2.3 Specifically, **‘Shared Education’ means the provision of opportunities for children and young people from different community backgrounds to learn together.**
- 2.4 The ‘Shared Education Campuses’ initiative under T:BUC is seen as complementing the work already underway in schools and will be targeted towards infrastructure projects aimed at improving or facilitating educational sharing initiatives within local schools. It is intended therefore that the projects selected will build on a solid foundation of existing sharing.
- 2.5 The Shared Education Campuses Programme will provide capital funding for facilities at **schools which will be used on a shared educational basis.** The Programme will not provide for replication or duplication of existing or proposed facilities within the education sector, including that provided by the Further Education sector. As this Programme is specifically targeted at the provision of shared education in schools, applications from youth and sporting organisations/groups will not be considered for support under the Programme at this time.
- 2.6 The Shared Education Campuses Programme will have the potential to bring together a range of schools for the delivery of education to children on a shared basis. There may be additional ancillary benefits which can arise from the establishment of these new facilities, including increased opportunities for the wider community to use school facilities for a range of educational, sporting, recreational, arts or cultural activities in line with the Department’s *Community Use of School Premises: A Guidance Toolkit for Schools* which seeks to assist schools in opening their doors to the local community.
- 2.7 The programme will target schools that can demonstrate the following types of sharing:
- Shared educational facilities – where new facilities are built to allow for shared educational use by all schools within the model.
 - Enhanced educational facilities – where current facilities are improved to allow for shared educational use by all schools within the model.
 - Shared Educational Campuses – where schools are co-located and share infrastructure i.e. the Lisanelly model.
- 2.8 Shared facilities or Shared Campuses supported under this Programme must be located on a site that is, or will be, under the ownership or management of the Education sector.
- 2.9 The Shared Education Campuses Programme will not give consideration to the concept of a ‘virtual campus’ or to those schools that do not actually share facilities.

3. Programme Requirements

Gateway Checks

- 3.1 Each project proposal will have to demonstrate that they meet all four Gateway checks below in order to be appraised under the Programme:

Number, Management Type and Phase of Schools

The proposal must involve a minimum of two schools from different management sectors (ie controlled, Catholic maintained, Irish medium, integrated, voluntary grammar). If any proposal involves schools from more than one educational phase (eg primary/post-primary) at least two schools at each phase from different management sectors must be represented, so that there can be educational sharing across similar age groups.

a) **Endorsement from respective Managing Authorities**

The respective Managing Authorities of the schools involved in the application must provide written endorsement of their agreement to the proposal. This is important as any investment at or on behalf of schools through the Programme has the potential to create ongoing liabilities as well as recurrent resource implications that the relevant Managing Authorities should be aware of and be prepared to support. Proposals under the Programme also need to be consistent with the Managing Authorities' strategic plans for the schools under their control.

b) **Planning Authority endorsement**

The Planning Authority (ie the relevant Education and Library Board) must provide assurance that the proposal meets the criteria in the Sustainable Schools policy for each school involved in the proposal or, where this is not the case, provide a rationale for their endorsement, including an explanation as to how the proposal will contribute to the delivery of sustainable provision in the area going forward.

c) **Evidence of Community, Parent and Pupil Support**

Community, parent and pupil support is required to ensure the success of these types of proposals. Evidence is therefore required to confirm support is in place.

Essential Criteria

- 3.2 If a project proposal clears the Gateway checks, it will then be assessed, scored and prioritised against the following essential criteria:

- a) **Educational Benefits** – the proposal must demonstrate how it will benefit the education of all children involved. The overarching priority for any proposal brought forward under this Programme must be the delivery of educational benefits to children and young people through improving or facilitating sharing initiatives. Marks will be allocated on the basis that the proposal clearly demonstrates:
- The sharing of classes, subjects, sports and extra-curricular activities and how educational benefits can be delivered to the children and young people through the sharing of classes together;
 - How educational benefits to the children and young people will be delivered through the sharing of classes together by developing future plans to increase the level of sharing between the schools involved;
 - How the proposal can aid the sharing of teaching expertise amongst the schools;
 - That the courses being delivered are not a duplication of existing provision (in particular Further Education courses);

- That consideration of the Bain report recommendations of not more than 2 composite year groups in a class and a school of a minimum of 4 teachers will be met.
- b) **Evidence of Existing Sharing** – Schools applying to the Programme should already be working in collaboration on curricular and non-curricular issues and/or be sharing facilities on an ongoing basis. The move to a Shared Education Campus should therefore build on a solid foundation of existing sharing that is already well embedded. Evidence must be provided detailing the existing educational sharing arrangements.
- c) **Societal Benefits** – the proposal must demonstrate how it will enhance/develop a shared future for the local community.
- The specific aim of the T:BUC strategy relating to education is *'To enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child's educational experience'*.
 - Building good relations, tackling intolerance and challenging prejudice can be embedded through the ethos of schools and is already an integral part of the curriculum.
 - Creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement, unemployment, and sectarianism; and
 - improving good relations amongst and for our young people.

Proposals will be marked, based on the evidence provided, on how they will contribute to this overall objective.

- (d) **Religious Balance** - A minimum of 15%, and preferably 30%, of the minority community (Protestant or Roman Catholic) should be represented within the combined total of the school population involved.

Where the proposal involves schools from more than one phase of education (eg primary and post primary), there should be a religious balance across individual phases so that educational sharing can take place between similar age groups.

Desirable Criteria

3.3 In addition, priority will be given to project proposals that demonstrate they meet the following desirable criteria which will also be assessed and scored:

- a) **Location** – proposals should be for schools to be located within the same campus or in close proximity to each other. Any proposal that is for shared facilities rather than a shared campus should provide details on the distances between the schools involved and schools will have to demonstrate how they plan to minimise the impact on pupils' education of travelling between the sites involved.
- b) **Disadvantaged Pupil Considerations** – proposals involving schools where pupils are more greatly impacted by social disadvantage, as indicated by the percentage of free school meal entitled (FSME) pupils enrolled in the schools. This is in line with the recognition given in the T:BUC strategy that one of the benefits of a more shared education system is to raise educational standards, particularly for disadvantaged pupils.

3.4 Applications should demonstrate that all Gateway and essential criteria are met and that any evidence requested is provided. Proposals considered as having met all the Gateway and essential criteria will then be assessed with priority given to those proposals that best meet both the essential and desirable criteria. Those proposals which best meet the criteria will be

submitted to the Minister for a final decision on which projects will be approved to proceed to the Economic Appraisal stage.

4. Process

4.1 The Shared Education Campuses Programme will be delivered by means of separate discrete calls for proposals. The first call was launched in January 2014. This is the second call.

Indicative Timetable for Second Call for Expressions of Interest

4.2 The indicative timetable for the Second Call under the Shared Education Campuses Programme is as follows:

- End September 2014 – Second Call for Expressions of Interest – the Department notifies Managing and Planning Authorities and all schools of the process, copying the approved protocol document, programme application form and confirming the programme timetable.
- End of January 2015 – deadline for submission of proposals to the Department by School Planning Authorities.
- June 2015 – Announcement of second tranche of Shared Education Campuses. Selected proposals advised to proceed in planning, including securing professional team as required.

4.3. In order to reduce the administrative and financial burden on individual schools and Managing Authorities, a two staged approach will be operated with regard to the application process. An application template is included at Annex 1 to this document and a flow chart for the process is attached at Annex 2.

Stage 1 – Call for Expressions of Interest

4.4. The first stage will take the form of an Expression of Interest (EOI) supported by an application form (see Annex 1) completed by the project applicant. The completed form will be the Strategic Outline Case (SOC) setting out the case for the shared education campus proposal. It will introduce the basic project concept, backed up with information on the cost, benefit and timing of the project.

4.5. The EOI must be endorsed by the relevant school Managing Authorities i.e. the relevant Education and Library Board on behalf of controlled schools in its area; the Council for Catholic Maintained Schools on behalf of Catholic maintained schools; or, in the case of Voluntary Grammar, Grant Maintained Integrated or Irish Medium Schools, the Board of Governors of the individual school(s) concerned.

4.6. All EOIs should be submitted through the relevant Education and Library Board (ie the Planning Authority) which will be responsible for submitting the EOIs to the Department of Education. EOIs which are not submitted via the appropriate Education and Library Board will not be accepted by the Department. Education and Library Boards will advise schools in their Board area of the date they require receipt of proposals in order to allow them time for consideration and endorsement by Board Members/Commissioners to meet the Department's deadline for responses of **30 January 2015**.

4.7. The Planning Authority will confirm in writing to the Department whether or not it endorses the EOIs it receives. If an application is not endorsed by the Planning Authority, the Planning Authority will inform the school(s) involved of the position but the proposal must still be submitted to the Department.

Assessment of Project Proposals

4.8. Following the closing date for applications, all project applications will be assessed under the relevant Gateway criteria as set out at 3.1 above. Those applications deemed to have met all the Gateway criteria will be further assessed, along with the supporting evidence provided,

against the essential and desirable criteria as set out in 3.2 & 3.3 above. Projects will be sifted and selected on the basis of the information provided in the application forms.

- 4.9. A cross-Directorate panel has been established within the Department to consider proposed projects against the set criteria. This panel will report to the Director of Area Planning and will make recommendations to the Minister based on which projects best meet the criteria and, within the funding available, should be progressed to the Economic Appraisal stage.

Approval of Applications to the Programme

- 4.10. The Minister will make the final decisions on which projects should go forward to Stage 2, based on the recommendations of the assessment panel.
- 4.11. Planning Authorities will be informed of the projects approved by the Minister to proceed to the planning stage.
- 4.12. Projects not selected for advancement in the Second Call will be returned to the Planning Authority. The project may be submitted to any subsequent call for proposals.

5. Stage 2 – Economic Appraisal

- 5.1 The projects selected by the Minister to proceed to the planning stage will be required to work up an Economic Appraisal for consideration and approval by the Department. The Economic Appraisals will be considered within the normal business approval processes and in line with NI Guide to Expenditure Appraisal and Evaluation (NIGEA) guidelines, including value for money and affordability. Only after approval of the Economic Appraisal, and subject to available capital funds, will a project be permitted to proceed to tender and construction.
- 5.2 The Department will provide support to the Managing Authorities in the development of Economic Appraisals for the selected projects.

6. Monitoring

- 6.1 Programme governance and control structures will be established for the programme of shared education campuses emerging.
- 6.2 Project plans will be sought from the School Managing Authorities for all approved projects.

7. Procurement

- 7.1 All professional appointments arising on approved projects must be carried out in full compliance with procurement guidelines and regulations. Where a professional team has already been appointed, the relevant Managing Authorities must provide evidence that the team has been procured in compliance with procurement guidelines and regulations, otherwise the Department will not support the appointment.

Annex 1

Shared Education Campuses Programme Application Form Second Call

Shared Education Campuses Programme – Application Form for Second Call

The Shared Education Campuses Programme will be delivered through separate, discrete calls for proposals which must be endorsed by both the relevant school Managing Authorities and Planning Authorities.

All project proposals must be supported by a completed application form, to be completed by the project applicant, which will form the Strategic Outline Case (SOC) for the shared education campus proposal.

The application form will help the Department to assess whether it is worth committing resources to take the project forward to develop a more detailed design and Economic Appraisal.

The completed application form must be returned through your Education and Library Board to reach the Department by Friday 30 January 2015.

Applications which are not submitted via the appropriate Education and Library Board will not be accepted by the Department.

This form is designed to help applicants make an application using appropriate and proportionate effort. There is flexibility over the amount of information to be included under each heading below, but please note that the application form is intended to be a short document and should not exceed 10 pages.

Project Title:

Planning Authority:

Managing Authorities Involved:

Senior Responsible Officer:

Signed:

Date:

Section 1: Project Overview

Briefly describe the basic project concept.

Confirmation must be given that the application relates to schools which are viable and core to emerging area plans.

Section 2: Rationale, Aims and Need

State the rationale for shared education.

Identify the type of educational sharing being proposed (Shared educational facilities, enhanced educational facilities or shared education campus).

Identify the relevant aims and objectives of the proposed project.

Outline how the project meets the following criteria:

- *Number, Management Type and Phase of Schools;*
- *Managing Authority Endorsement;*

- *Planning Authority Endorsement;*
- *Evidence of Community, Parent and Pupil Support;*
- *Demonstration of the Educational Benefits that will be created;*
- *Evidence of Existing Sharing;*
- *Demonstration of the Societal Benefits that will be created;*
- *Evidence of Religious Balance;*
- *Location;*
- *Evidence of Disadvantaged Pupil consideration.*

Section 3: Constraints

Identify likely constraints e.g. land issues; legal constraints; planning approvals.

Section 4: Stakeholder Issues

Identify the key stakeholders and confirm their agreement to the project proceeding.

Indicate their level of commitment to the project as specifically as possible.

Describe any consultations held or still required.

Are there any outstanding stakeholder issues?

Section 5: Management and Implementation

Give a preliminary indication of the proposed project management arrangements.

Is any consultancy support likely to be required?

Describe any legal or contractual issues.

Are there any important outstanding management/implementation considerations?

Section 6: Costs, Benefits & Risks

Provide broad estimates of the capital and revenue costs of the project.

If savings are anticipated, for example of planned minor works or maintenance explain their nature and quantify them broadly.

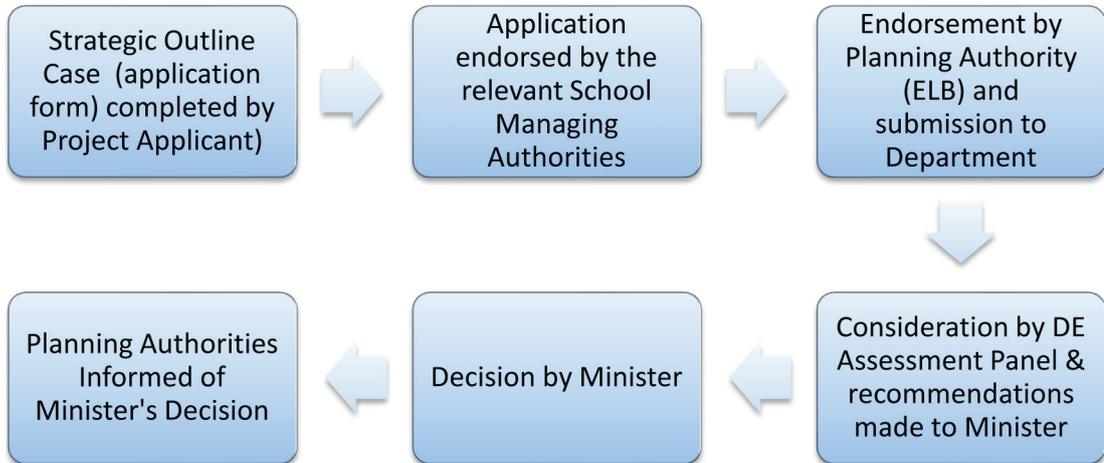

Describe the non-monetary costs and benefits that are expected to arise.

Explain the key risks that the project is likely to face and any potential mitigation measures.

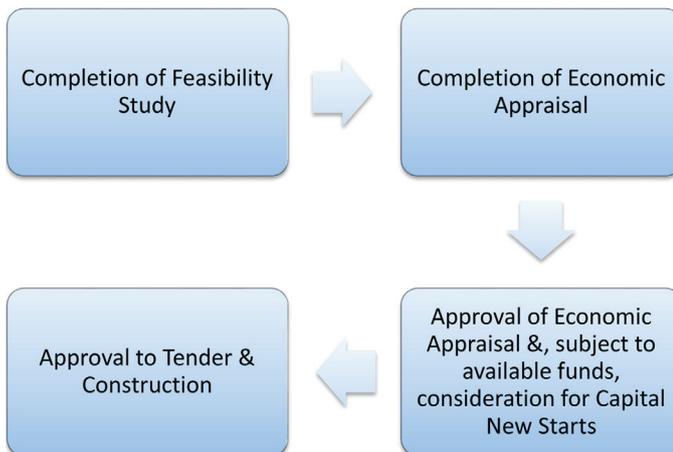

Annex 2

BELFAST BT4 3XX

28 January 2014

Dear Peter

Dissolving Boundaries Programme / Centre for Shared Education

Thank you for your letter of 28 November 2014 seeking clarification on the reasons for the discontinuation of funding for Dissolving Boundaries Programme; you have also sought details of the interaction between the Department and the University of Ulster and the Centre for Shared Education in developing the new Shared Education policy.

Dissolving Boundaries

The Department of Education had funded the Dissolving Boundaries programme since 1999. A jointly funded programme by this Department and DES in the south, both Departments agreed that funding should cease at the end of October 2014 as the benefits of the programme had been largely realised and good principles and learning have been embedded over the duration of the programme.

Interaction between DE / University of Ulster and the Centre for Shared Education

In the development of the Shared Education policy, the Department has drawn on a wide range of research evidence and pilot projects, including those undertaken by the University of Ulster and Queens University's Centre for Shared Education.

Professor Paul Connolly, Head of the School of Education Queen's University, was chair of the Ministerial Advisory Group on advancing Shared Education. The MAG undertook a wide ranging consultation and research programme including experience from the Centre for Shared Education and the University of Ulster.

The recommendation of the Ministerial Advisory Group has heavily influenced the development of the Department's Shared Education policy.

As managing agent for the International Fund for Ireland's Sharing in Education Programme, the Department had regular and on-going contact with both Universities in relation to shared education projects they were delivering.

The University of Ulster's Creative Change Project was subject to a review by the Education and Training Inspectorate, while QUB's Sharing In Education project was subject to an independent evaluation.

Departmental officials responsible for developing the Shared Education Policy had a close working knowledge of both projects, together with a further twenty other shared education projects that received IFI funding. The Department has drawn on both evaluation reports and a series of related research reports in developing the Shared Education policy.

In developing the Delivering Social Change Shared Education Signature Project, representative from QUB's Centre for Shared Education and the University of Ulster (together with the Fermanagh Trust) were involved in a design workshop to draw on their experience.

An Expert Advisory Group is being established as part of the DSC Shared Education Signature Project and this includes representatives with experience in shared education from QUB and the University of Ulster. The input of the Expert Advisory Group will assist in further refining implementation of the policy.

Yours sincerely

Veronica

28 November 2014

Dear Veronica

Dissolving Boundaries Programme / Centre for Shared Education

At its meeting on Wednesday 26 November 2014, the Committee received briefings from the University of Ulster on the Dissolving Boundaries programme and from the Centre for Shared Education at Queen's University of Belfast.

Following these briefings, the Committee agreed to write to the Department to seek clarification on the reasons for the discontinuation of funding for the Dissolving Boundaries programme.

The Committee also agreed to write to the Department to seek details of the interaction between the Department and the University of Ulster and the Centre for Shared Education in the development of the Department's new Shared Education policy.

A response by 12 December 2014 would be much appreciated.

Yours sincerely

30 January 2015

Dear Peter

Together: Building a United Community - Shared Campuses Programme

Thank you for your letter of 16 January 2015 in which you requested the revised scoring criteria for the Second Call for the Shared Education Campuses Programme as well as a timeline and further information on the successful projects in the First Call.

A copy of the marking framework which was revised for the Second Call and which will be used in the assessment process for applications is attached.

The following information confirms the update on the progress of the first three projects from officials on 14 January. In summary:

St Mary's High School, Limavady and Limavady High School

The project will provide two new shared facilities – a shared sixth form centre on the St Mary's school site and a shared Science, Technology, Engineering and Maths (STEM) centre on the Limavady High School site.

Work has commenced on the feasibility study/economic appraisal and is due for completion by the end of March. The first meeting of the Project Board, which includes representatives from both schools, the two Managing Authorities (CCMS and the WELB) and the Department, was held on 15 January.

Moy Regional Controlled Primary School and St John's Primary School, Moy

The Moy Project shared campus initiative - it is proposed to build a single 11 classbase school on a new site to accommodate both Moy Regional Primary School and St John's Primary School. Whilst each school will retain its own distinct ethos and identity, it is envisaged that the two schools will share facilities such as the multipurpose hall, play areas, library and ancillary accommodation.

The Project Board, comprising of representatives of both schools as well as both Managing Authorities (CCMS and the SELB) and the Department, has met twice. Work on the feasibility study/economic appraisal is underway and is expected to be completed by the end of March.

Ballycastle High School and Cross and Passion College, Ballycastle

The proposal was for two new core schools and two shared centres, one for STEM and one for Performance and Creative Arts at Key Stage 4 and Key Stage 5.

This is a significant project and may be more ambitious than was originally anticipated. Discussions have been held with both Managing Authorities (CCMS and the NEELB) and their schools. The first meeting of the Project Board has been arranged for 3 February.

The Economic Appraisals for each of the projects, once submitted, will be considered within required business approval processes and in line with the NI Guide to Expenditure Appraisal and Evaluation guidelines, including value for money and affordability. Access to the funding announcement following the Stormont House Agreement is being discussed with relevant officials. Only after approval of the Economic Appraisal, and subject to available capital funds, will a project proceed to tender and construction.

As all three projects are starting from initial concept stage, members will appreciate that there will be a significant time lag before buildings will physically be on the ground incurring capital expenditure.

Yours sincerely

Veronica

Veronica Bintley

Departmental Assembly Liaison Officer

T:BUC Shared Education Campuses 2014/15 Second Call for Expressions Of Interest Evaluation Framework

This evaluation framework has been drawn up to assist in the determination of those suitable projects, submitted to the second call for the Shared Education Campuses Programme (the Programme), to be advanced to the next stage of development to include the production of a detailed business case.

The evaluation framework should be considered alongside the documentation provided in relation to the second call for Expressions of Interest.

All proposals received will be processed against the Gateway criteria. This initial Gateway Check will determine if a proposal meets all four Gateway criteria outlined in the protocol document. Only those proposals that pass all four Gateway Checks will be scored. Any proposal failing to pass the Gateway Checks will not be scored or ranked in the final list. However in order to provide feedback, any proposal failing to pass the Gateway Checks will have comments provided against all essential and desirable criteria.

Under the marking system a maximum number of points are allocated against criterion with the maximum possible total score being 180.

Each Assessment Panel (the Panel) member will read each application in advance of the Panel meeting. The Panel will discuss each of the applications and seek to establish an agreed "Panel Score" for each criterion. The minutes of the Panel meeting(s) will record the key points raised in reaching the final marking for each criterion.

The scored projects will be ranked in descending score order. The list, together with the recommendations of the Assessment Panel, will be provided to the Minister. The Minister will take the final decision on which projects will be advanced.

Name of Applicant

Type of application: (delete as appropriate) Shared facilities / Enhanced facilities / Shared campus

GATEWAY CHECK - This will require a yes/no answer

Each project proposal will have to demonstrate that they meet all four Gateway checks below in order to be appraised under the Programme:-

Gateway Criteria	Y/N
a) Number, Management type and Phase of schools	
b) Endorsement from respective Managing Authorities	
c) Planning Authority Endorsement	
d) Evidence of Community, Parent and Pupil Support	
Gateway Passed Y/N	

Notes to help assessment against each Gateway criteria can be found below:

- a) **Number, Management Type and Phase of Schools**
The proposal must involve a minimum of two schools from different management sectors (eg controlled, Catholic maintained, Irish medium, integrated, voluntary grammar). If any proposal involves schools from more than one educational phase (eg primary/post-primary) at least two schools at each phase from different management sectors must be represented so that there can be educational sharing across similar age groups.
- b) **Endorsement from respective Managing Authorities**
The respective Managing Authorities of the schools involved in the application must provide written endorsement of their agreement to the proposal. This is important as any investment at or on behalf of schools through the Programme has the potential to create ongoing liabilities as well as recurrent resource implications that the relevant Managing Authorities should be aware of and be prepared to support. Proposals under the Programme also need to be consistent with the Managing Authorities' strategic plans for the schools under their control.
- c) **Planning Authority endorsement**
The Planning Authority (ie the relevant Education and Library Board and CCMS) must provide assurance that the proposal meets the criteria in the Sustainable Schools Policy for each school involved in the proposal or, where this is not the case, provide a rationale for their endorsement, including an explanation as to how the proposal will contribute to the delivery of sustainable provision in the area going forward.
- d) **Evidence of Community, Parent and Pupil Support**
Community, parent and pupil support is required to ensure the success of these proposals. Evidence is therefore required to confirm support is in place.

The following essential criteria will be assessed for all proposals, with only those that have passed the four Gateway Checks being allocated a score.

Essential Criteria 1: Educational Benefits – maximum score 50 marks.

The overarching priority for any proposal brought forward under this Programme must be the delivery of educational benefits to children and young people through improving or facilitating sharing initiatives. The proposal must demonstrate how it will benefit the education of all children involved. Marks will be allocated on the basis that the proposal clearly demonstrates:

- The sharing of classes, subjects, sports and extra-curricular activities and how educational benefits can be delivered to the children and young people through the sharing of classes together;
- How educational benefits to the children and young people will be delivered through the sharing of classes together by developing future plans to increase the level of sharing between the schools involved;
- How the proposal can aid the sharing of teaching expertise amongst the schools;
- That the courses being delivered are not a duplication of existing provision (in particular Further Education courses);
- That consideration of the Bain report recommendations of not more than 2 composite year groups in a class and a school of a minimum of 4 teachers will be met.

Educational Benefits	Score	Comments
No evidence of educational benefits provided. 0 marks		
Some evidence of educational benefits provided. 1 - 25 marks		
Strong evidence on how the proposal will deliver educational benefits. 26 – 50 marks		

Essential Criteria 2: Evidence of Existing Sharing – maximum score 40 marks

Schools applying to the Programme should already be working in collaboration on curricular and non-curricular issues and/or be sharing facilities on an ongoing basis. The move to a Shared Education Campus should therefore build on a solid foundation of existing sharing that is already well embedded. Evidence must be provided detailing the existing educational sharing arrangements. Therefore proposals will be marked on:

- the evidence provided of existing levels of collaboration between schools involved in the proposal on curricular and non-curricular issues;
- the evidence provided of existing levels of current sharing of facilities/classes on a regular basis; and
- the evidence provided of existing levels of current sharing of facilities/classes on a regular basis in the curriculum area in relation to the proposal.

Evidence of Existing Sharing	Score	Comments
No evidence of existing sharing. 0 marks		
Schools have demonstrated some existing sharing. 1 - 20 marks		
Schools have demonstrated strong evidence of effective ongoing sharing. 21 - 40 marks		

Essential Criteria 3: Societal Benefits – maximum score 10 marks

The proposal must demonstrate how it will enhance/develop a shared future for the local community.

- The specific aim of the T:BUC strategy relating to education is *‘To enhance the quality and extent of shared education provision, thus ensuring that sharing in education becomes a central part of every child’s educational experience’*.
- Building good relations, tackling intolerance and challenging prejudice can be embedded through the ethos of schools and is already an integral part of the curriculum.
- Creating more opportunities for socially-mixed, shared education, with a view to achieving a full shared education system in Northern Ireland, is a crucial part of breaking the cycle of inter-generational educational underachievement, unemployment, and sectarianism; and

- improving good relations amongst and for our young people.

Proposals will be marked, based on the evidence provided, on how they will contribute to this overall objective.

Societal Benefits Score Comments	Score	Comments
No evidence provided of societal benefits. 0 marks		
Some evidence provided. 1 - 5 marks		
Strong evidence of how proposal will provide societal benefits. 6 - 10 marks		

Essential Criteria 4: Religious Balance – maximum score 40 marks

A **minimum** of 15%, and preferably 30%, of the minority community (Protestant or Roman Catholic) should be represented within the combined total of the school population involved.

Where the proposal involves schools from more than one phase of education (eg primary and post primary), there should be a religious balance across individual phases so that educational sharing can take place between similar age groups.

It has been recognised that in some rural areas the balance of the population may be such that it would be impossible for the level of participation of the minority community to reach the 30% level. This is why the minimum % has been reduced from the first call to 15% with the preference still remaining for 30%. The difficulty lies in producing a single coherent definition as to what constitutes a community area. To take account of this, marks will be awarded based on the level of participation by the minority community as follows:

Religious Balance	Score	Comments
Minority Community is less than 14%. 0 marks		
Minority Community is 15% or more but less than 30%. 20 marks		
Minority Community is 31% - 49%. 40 marks		

Desirable Criteria

The following desirable criteria will be assessed for all proposals, with only those that have passed the four Gateway Checks being allocated a score.

Desirable Criteria 1: Location - maximum score 20 marks

Effective and ongoing sharing will involve children attending facilities outside their core school. To facilitate maximum use and to ensure significant time is not lost from the teaching timetable through moving children between locations, proposals supported under the programme will be for facilities/schools located within the same campus or in close proximity to each other. Any proposal that is for shared facilities rather than a shared campus should

provide details on the distances between the schools involved and schools will have to demonstrate how they plan to minimise the impact on pupils' education of travelling between the sites involved.

Marking will be based on the proximity of the facilities to the schools involved. The shorter the distance a pupil must travel to access facilities will receive a higher score. For those proposals that involve a number of new facilities and schools, the largest distance that a pupil from one school will have to travel to access a proposed facility will be the distance used to determine the score for that proposal.

Location	Score	Comments
Schools more than 10 miles apart. 0 marks		
Schools between 5 and 10 miles apart. 4 marks		
Schools between 1 and 5 miles apart. 10 marks		
Schools less than 1 mile apart. 16 marks		
Schools to be co-located or within a shared space. 20 marks		

Desirable Criteria 2: Disadvantaged Pupil Considerations – maximum score 20 Marks

Statistics show year on year that pupils from economically disadvantaged backgrounds, as indicated by FSME, are only half as likely to gain five good GCSEs including English and maths as their peers from more affluent backgrounds. FSME is a statistically valid method of identifying and measuring social disadvantage in our schools. Pupils from economically disadvantaged backgrounds have greater obstacles to overcome and schools need to do more to assist them in breaking the link between social deprivation and educational outcome.

Priority will be therefore be given to proposals involving schools where pupils are more greatly impacted by social disadvantage, as indicated by the percentage of free school meal entitled (FSME) pupils enrolled in the schools . This is in line with the recognition given in the T:BUC strategy that one of the benefits of a more shared education system is to raise educational standards, particularly for disadvantaged pupils.

Schools are ‘banded’ for social deprivation (TSN) funding under the Common Funding Formula, based on the numbers of pupils entitled to FSM within each school. The vast majority of schools are placed in bands 1, 2 or 3. Marks will be awarded to proposals on the basis of the bandings of the schools involved in each proposal with the maximum marks awarded to schools in TSN Band 3. Where schools involved in the proposal are in different TSN bandings, the marks will be awarded on the basis of the highest TSN banding school. This is to encourage social as well as religious mixing. This is in line with the T:BUC recognition that greater social mixing can contribute to greater tolerance, and through raised expectations, improve educational performance for our most deprived pupils. [para 4.52 T:BUC Strategy Document]

Disadvantaged Pupil Consideration	Score	Comments
Schools have no FSME pupils. 0 marks		
All schools are in TSN Band 1; or <i>At least one school is in TSN band 1.</i> 5 marks		
All Schools are in TSN Band 2, or <i>At least one school is in TSN Band 2.</i> 10 marks		
All Schools are in TSN band 3; or <i>At least one school is in TSN Band 3.</i> 20 marks		

Summary of Scoring

Only those proposals that have passed the four Gateway Checks are allocated a score.

Criteria	Maximum Score	Score
Essential Criteria		
Educational Benefits	50	
Evidence of Existing Sharing	40	
Societal Benefits	10	
Religious Balance	40	
<i>Essential Criteria Sub Total</i>	140	
Desirable Criteria		
Location	20	
Disadvantaged Pupil Consideration	20	
<i>Desirable Criteria Sub Total</i>	40	
TOTAL	180

16 January 2015

Dear Veronica

Together: Building a United Community – Shared Campuses Programme

At its meeting on Wednesday 14 January 2015, the Committee received a briefing from Departmental officials on the Shared Campuses Programme – Together: Building a United Community (TBUC).

The Committee agreed to write to the Department to seek the revised scoring criteria for the second call for Shared Campus projects as well as a timeline and further information on the successful projects in the first call.

A response by 30 January 2015 would be much appreciated.

Yours sincerely

Dear Peter

Inquiry Into Shared Integrated Education – Follow Up Information – DSC Shared Education Signature Project

Your correspondence of 6 February refers.

The DSC Shared Education Signature Project is open to schools that currently are engaged in a collaborative partnership on a cross-sectoral and cross-community basis providing they demonstrate clear plans to show progress in advancing the level of sharing as defined in the 'Self Evaluation framework for Shared Education' (available at www.sepni.org). It is not primarily targeting schools that are pursuing amalgamation, although each application will be considered on the basis of its merits.

There are already processes in place for schools that are seeking a voluntary amalgamation and the draft Shared Education policy which is currently issued for public consultation commits to working to develop guidance for a jointly managed school, which will be a further option for schools seeking a voluntary amalgamation.

Yours sincerely

Russell

6 February 2015

Dear Russell

Delivering Social Change Shared Education Signature Project

At its meeting on Wednesday 4 February 2015, the Committee received a briefing from Professors Smith and Hamber and the Integrated Education Fund, as part of the Inquiry into Shared and Integrated Education.

The Committee agreed to write to the Department seeking clarification as to whether the Delivering Social Change Shared Education Signature Project (or any other Shared Education programmes) would provide support or guidance to schools wishing to undertake voluntary cross-sectoral amalgamations.

A response by 20 February 2015 would be much appreciated.

Yours sincerely

i. PURPOSE OF THE REPORT	1
ii. EXECUTIVE SUMMARY	2
• Main findings	
• Recommendations	
1. INTRODUCTION AND CONTEXT	6
2. METHODOLOGY	7
3. THE FINDINGS	8
3a Achievements and Standards	
3b Quality of Provision	
3c Leadership and Management	
3d Community Connections	
4. RECOMMENDATIONS	13
• For the Department of Education	
• For the Education and Library Boards/the Council for Curriculum, Examinations and Assessment/support bodies	
• For schools and/or statutory youth organisations	
• For voluntary youth organisations	
• For the Education and Training Inspectorate	
5. CONCLUSION	14
Appendix 1: Schools and youth organisations involved in the CRED survey	
Appendix 2: Summary of responses to the CRED Survey questionnaires from schools and youth organisations	

i. PURPOSE OF THE REPORT

The purpose of this report is to:

- i. summarise the Education and Training Inspectorate’s (ETI) findings of the effectiveness of the outworking of the Community Relations, Equality and Diversity CRED policy in a sample of schools and youth organisations;
- ii. identify aspects going well and identify areas for development in going forward, in relation to current practice; and
- ii. make a set of recommendations in relation to the key findings.

Quantitative terms

In this report, proportions may be described as percentages, common fractions and in more general quantitative terms. Where more general terms are used, they should be interpreted as follows:

Almost/nearly all	-	more than 90%
Most	-	75%-90%
A majority	-	50%-74%
A significant minority	-	30%-49%
A minority	-	10%-29%
Very few/a small number	-	less than 10%

Performance levels

The ETI use the following performance levels in reports:

DESCRIPTOR
Outstanding
Very Good
Good
Satisfactory
Inadequate
Unsatisfactory

ii. EXECUTIVE SUMMARY

This summary outlines the main findings and key recommendations of an evaluation of the impact of the Community Relations, Equality and Diversity (CRED) Policy in schools and youth organisations. The evidence base compiled over the period September 2014 to December 2014, comprised:

- thirty-two visits to schools and youth organisations¹ of various management types and sizes, across all Education and Library Boards (ELBs) and a meeting with 13 voluntary youth organisations;
- discussions with children, young people, co-ordinators, teachers, youth workers, principals, representatives of the five ELBs, the Youth Council for Northern Ireland (YCNl), the Department of Education (DE) and the Council for the Curriculum, Examinations and Assessment (CCEA);
- seventy-three questionnaire returns and associated extended written responses to a web-based survey²; and
- inspection findings 2012-14 for personal social and emotional (PSE) learning in pre-school settings, personal development and mutual understanding (PDMU) in primary schools and personal development (PD) and citizenship education in post-primary schools.

Main findings

Going well

- Most of the schools and youth organisations demonstrate effective CRED practice in helping children and young people to build relationships with others from different back-grounds and traditions; the sustainability of these relationships is variable.
- The majority of the lessons/sessions observed in the schools and youth organisations were very good or better.
- The Shared Education and Community Relations team within DE is proactive in working with a wide range of stakeholders to promote effective CRED practice.
- The ELB steering group and CRED Referencing Group provide a wide range of support to schools and youth organisations within the available resources.
- The YCNl provides appropriate support, guidance and challenge for voluntary organisations in the development of CRED practice.

¹ Schools and youth organisations visited contained in Appendix 1.

² An analysis of the questionnaire returns is contained in Appendix 2.

- In the most effective practice:
 - children and young people demonstrate high levels of self-respect and respect for others; and when given the opportunity through sustained contact, they develop meaningful relationships with others from different backgrounds;
 - children and young people apply their learning in real and relevant contexts and the learning is experiential;
 - staff create safe places for children and young people with physical, emotional, social and learning needs and respond appropriately to community tensions;
 - school and youth councils enable participation of children and young people in school and centre improvement, modelling effective democratic processes in their working practices; and
 - schools and youth organisations embed CRED practice through whole-school/organisation improvement.

Going Forward

- Schools report that DE needs to embed the policy more clearly within a strategic overview of all policies. Youth organisations identified the need for even more explicit development of CRED within Priorities for Youth (PFY).
- The rights of the child, as defined in the United Nations Convention of the Rights of the Child (UNCRC)³, should be more central to the outworking of CRED in policy and practice.
- Given the challenges that remain in promoting community relations, eliminating poverty through reducing discrimination and fostering a respect for diversity, the school and youth sectors need assistance in developing further their sustained community connections through multi-agency support.
- The extent to which schools and youth organisations embed CRED at all levels varies given the context, legacy of the conflict, staff, governance, resources and levels of understanding of the principles and values of CRED. There remains the need to address inconsistency in the access to, and impact of, support provided across the ELBs to embed CRED.
- The voluntary youth organisations need support to expand and embed CRED through dissemination of good practice events, training, mentor support and increased access for young people to programmes.
- There remains insufficient ways to recognize and reward the children's and young people's learning through accreditation.

³ The United Nations Convention on the Rights of the Child (UNCRC) is an international human rights treaty that grants all children and young people (aged 17 and under) a comprehensive set of rights. It came into force in January 1992.

- The overall quality of the taught provision needs to improve so that children and young people are prepared better for life and work. There is insufficient mapping of the statutory key elements related to CRED across the curriculum.
- There is variation in the evaluation of CRED practice against quality indicators in order to demonstrate outcomes for children and young people.
- There is insufficient focus on transition arrangements to enable progression in the knowledge, skills and attitudes of children and young people through CRED.
- There are too many missed opportunities for schools and youth organisations to work together to promote better learning for young people.
- The meaningful participation of children and young people in school and centre improvement processes remains variable.

	Recommendations
For DE	<p>R1 - to review the CRED policy to ensure that:</p> <ul style="list-style-type: none"> • the rights of the child underpin practice; • there is clarity in terminology and expectations of schools/organisations; • it is embedded in a strategic overview of all policies and developed further through “Priorities for Youth”; and • it references the development of shared education in light of emerging research and practice. <p>R2 - to support the personal and professional development of staff and governors in schools and youth organisations to promote and embed CRED, particularly given the legacy of the conflict.</p> <p>R3 - to foster more effective links with other departments and agencies to support better schools and youth organisations in their local communities.</p>
For ELBs/support bodies / CCEA/ YCNI	<p>R4 - to enable, at regional level, greater consistency in the access to, and impact of, targeted support provided by the support bodies. In building on the effective work to date, further support is needed for staff to embed CRED, including through effective governance, community connections, within and beyond the classroom.</p> <p>R5 - to collaborate to develop appropriate accreditation of effective learning through CRED.</p>

<p>For schools and/ or statutory youth organisations</p>	<p>R6 - to review the quality of personal development and mutual understanding, personal development, and citizenship lessons in schools to ensure consistently high quality participatory learning experiences for all children and young people.</p> <p>R7 - to collaborate further to monitor and evaluate the impact of CRED through tracking the acquisition and development of the children's and young people's knowledge, skills and attitudes to inform better strategic planning.</p>
<p>For voluntary youth organisations</p>	<p>R8 - to expand and embed CRED practice more widely across voluntary youth organisations through increasing dissemination of good practice events, training and mentor support; and access by a greater number of young people to CRED programmes.</p>
<p>For ETI</p>	<p>R9 - to ensure that inspection activities evaluate more fully the holistic education of children and young people and the added value for them of their CRED-related learning; and include more explicit evaluation of community connections.</p> <p>R10 - to identify and report on examples of effective and innovative practice in CRED and embed the CRED quality indicators within Together Towards Improvement.</p>

1. INTRODUCTION AND CONTEXT

1.1 In June 2008, the Education Minister initiated a review of the DE's (DE) Community Relations (CR) policy. In 2009, the Education and Training Inspectorate (ETI) published *An Evaluation of Quality Assurance of Community Relations (CR) Funding in a range of Formal and Non-formal Education settings*⁴. This publication highlighted the need for an agreed policy with more robust structures for monitoring and evaluating the quality of CR work; a more collaborative and consistent approach to CR work across the different sectors with clear success criteria and to meet more effectively locally identified CR needs in line with area-based planning.

1.2 In response to the review and to developments in the wider political, societal and educational context, the CRED policy was launched in March 2011, with accompanying guidance in January 2012. The CRED policy aims to contribute to improving relations between communities by educating children and young people to develop self-respect and a respect for others, promote equality and to work to eliminate discrimination; and by providing opportunities for children and young people to build relationships with those of different backgrounds and traditions, through formal and non-formal education, within the resources available.

1.3 The CR team within DE worked collaboratively with the ELBs, YCNI and other agencies to address the issues raised in the ETI report. The restrictive nature of the funding and the complexity of five different funding streams were removed. Importantly, the collaborative working of the Interboard CRED panel and the CRED Referencing Group enabled a more consistent approach to CR; in particular, drawing up quality indicators for both the school and youth sectors. A regional programme of training was planned for collaboratively, implemented jointly and evaluated to demonstrate outcomes for participants and to inform next steps.

1.4 With an annual budget of £1.1m each year the CRED Enhancement Scheme is administered by the five ELBS within schools and youth organisations. The YCNI receives £152,000 from this budget to support and coordinate the delivery and implementation of the CRED policy across Regional Voluntary Headquarter Youth Organisations.

1.5 Schools and youth organisations use a variety of guidance materials, resources and training opportunities, provided by ELBs, YCNI, non-formal organisations and external partners, to embed the CRED policy, alongside many other competing priorities. In particular, the Community Relations Equality and Diversity Northern Ireland (CREDNI) website was developed to identify examples of good practice and to signpost helpful resources for schools/organisations. Furthermore, a voluntary body of over 22,000 youth workers contribute to registered youth services annually to support the personal and social development of young people.

1.6 The concept of Shared Education is developing to provide opportunities for children and young people from different community backgrounds to learn together in regular and sustained ways, in order to improve educational and reconciliation outcomes. With funding from the Northern Ireland Executive, the DE and Atlantic Philanthropies, the Delivering Social Change Shared Education Signature Project intends to support Shared Education through increasing the level of sharing in schools over the next four years. In November 2014, the Northern Ireland Executive announced proposed budget cuts to the CRED Enhancement scheme.

⁴ This report can be accessed from the ETI website.

1.7 As part of the inspection programme for 2014-15, DE requested that ETI carry out an evaluation survey of the CRED policy in a sample of schools and youth organisations. The evaluation focused on the extent to which:

- learners, at each stage of their development, have an understanding of and respect for the rights, equality and diversity of all without discrimination;
- children and young people value and respect difference and engage positively with it, taking account of the ongoing intercommunity divisions arising from conflict and increasing diversity within our society;
- children and young people are equipped with the skills, attitudes and behaviours needed to develop mutual understanding and recognition of, and respect for, difference;
- the needs of children and young people are paramount;
- the self-esteem of the children and young people and their knowledge of diversity are promoted progressively;
- children and young people are involved in planning and evaluating the effectiveness of CRED programmes;
- the curriculum is relevant and connected to improving outcomes for children and young people, and links to other education and wider Government policies, including strengthening the economy;
- active learning is encouraged through the formal and non-formal curricula;
- the CRED policy complements educational improvement and is not perceived to be burdensome or 'another initiative';
- schools and youth organisations collaborate and partner with others to better meet the needs of children and young people;
- there are opportunities for meaningful interaction between different groups with a view to impacting positively on relationships in the community; and
- there is an understanding of effective practice.

2. METHODOLOGY

2.1 The ETI received 73 questionnaires, visited 32 schools and youth organisations and met with 13 voluntary youth organisations. Inspectors held discussions with principals, senior leaders, staff, pupils, parents/carers, observed lessons/sessions, interventions and scrutinised planning and school/organisation improvement documentation. The ETI also used the inspection findings 2012-14 from schools and youth organisations which evaluated aspects of CRED related work in the curriculum, including PDMU and PD and citizenship education.

2.2 The CRED evaluation focused on the effectiveness of the following key areas of provision:

- achievements and standards;
- quality of provision;
- effectiveness of leadership and management of CRED; and
- community connections.

2.3 The CRED officers within the ELBs and YCNI completed a self-evaluation of the quality of provision within their organisations.

3. THE FINDINGS

3a. Achievements and standards

Going well

- When given the opportunity through sustained contact, children and young people work well collaboratively and develop meaningful relationships with others from different faiths, cultures and backgrounds.
- The good examples of accredited learning linked to CRED and which contributed to the development of thinking skills and personal capabilities.
- Young people in voluntary youth organisations respond well to the safe place provided within the community to develop their confidence in discussing issues around diversity and inclusion and to engage with others different from them.

Characteristics of most effective practice

- Children in early years use positive behaviour strategies to self-regulate, resolve conflicts, develop empathy and self-awareness of similarity and difference, inclusion and exclusion through play, stories, visual and media-based resources.
- Children and young people demonstrate self-respect and respect for others; understand their uniqueness, express their identities, and understand diversity in their local community. They reflect on their feelings and emotions and those of others and demonstrate empathy for their peers; they challenge one another's behaviour when appropriate. They have a strong sense of fairness and are developing empathy with regard to global contexts.
- Children and young people respond well to strategies which welcome and celebrate their uniqueness and diversity within the school and youth organisation, which may contrast with messages they receive about themselves from elsewhere.

- Young people have political and social awareness, maturity, understanding and empathy in accepting and celebrating difference, often leading the way for adults. They articulate their frustration at current political processes which hinder developments in health and education and which fail to address economic and social inequality. They have a good understanding of, and strategies for, managing difference and conflict appropriately, for example, restorative justice practices.
- School and youth councils enable participation of children and young people in school and centre improvement, modelling effective democratic processes in their working practices.
- Children and young people take forward their learning to effect change and demonstrate leadership skills within and beyond the schools and youth organisations. They demonstrate resilience, personal, social and emotional development.

Going Forward

- Schools and youth organisations need to ensure children and young people participate meaningfully in school and centre improvement processes and have their views listened to, and acted upon, rather than tokenistic representation and limited decision-making.
- Children and young people report they would like to know more about the reasons for division and inequality in their locality, including understanding better our more recent past and having more opportunities to engage in supporting people in their local community.
- Lesbian, gay, bisexual and transgender young people report the need for greater opportunities to extend their voice beyond their peer group, into the wider community.
- There remains insufficient ways to recognize and reward the learning of children and young people through accreditation. Awarding bodies and other support bodies need to collaborate to enable schools and youth organisations to recognize and accredit learning through CRED.

3b Quality of provision

Going well

- The majority of the lessons/sessions observed in the schools and youth organisations visited were very good or better.

Characteristics of the most effective practice:

- The welcoming and inclusive ethos and positive learning environments, within and beyond the classroom/centre, reflect clearly CRED principles and values. Displays around the schools and youth organisations celebrate diversity, promote inclusion and reference the rights and responsibilities of children and young people.

- Staff create safe places for children and young people with physical, emotional, social and learning needs and respond appropriately to community tensions.
- Effective planning for CRED across the curriculum takes account of the interests and needs of the children and young people and builds progressively on their personal, social and emotional development.
- High quality learning and teaching enables children and young people to apply their learning experientially in real and relevant contexts within and beyond the classroom.
- Staff interact skilfully with children and young people when exploring sensitive and controversial issues through appropriate learning strategies.
- Staff use external agencies judiciously to enhance the quality of the provision and extend their expertise, to include dealing with sensitive and controversial issues such as expressions of sexuality.
- Staff ensure that there is equality of opportunity for children and young people to access sustained CRED programmes and they model appropriate behaviours and language.
- Staff engage regularly with parents/carers to gain a greater understanding of the diverse needs of children and young people.
- The schools make effective use of extended schools and the area learning communities (ALCs) to facilitate shared learning with children and pupils of differing backgrounds and to promote better equality of access to resources and targeted support.

Going forward

- The overall quality of the taught provision needs to improve so that children and young people are prepared well for life and work. In the inspection period 2012-2014, one-quarter of the PDMU lessons in primary schools and one-third of citizenship and PD lessons in post-primary schools were not effective. There is insufficient mapping of the statutory key elements related to CRED across the school curriculum.
- There is variation in the extent to which children and young people are equipped to deal with sensitive and controversial issues, such as racism, sectarianism, sexual orientation and social and economic inequalities in the locality.
- Schools need to track the children's progress in the development of skills, attitudes and behaviours necessary for life and work across areas of learning and beyond the classroom. Better transition arrangements are needed to enable each phase to build upon prior learning, experiences and skills development.
- There remain too many missed opportunities for young people to learn between schools and youth organisations. Schools and youth organisations need support to learn from each other about their roles, curricula, pedagogy and effective practice in engaging with the community to meet better the needs of young people.

- Schools in isolated geographical contexts report difficulty in accessing sustained contact for their children and young people with others from diverse backgrounds. One-off events limit the depth of relationships between children and young people of different backgrounds.

3c Effectiveness of Leadership and management of CRED

Going well

- The Shared Education and Community Relations team within DE is proactive in working with a wide range of stakeholders in promoting effective CRED practice. Key strengths are the engagement with stakeholders, most notably young people, and the flexibility in directing resources to meet the needs of schools and youth organisations through the business-planning process. The team supports innovative practice in challenging circumstances, with appropriate levels of monitoring to ensure value for money.
- The ELB Steering Group and CRED Referencing Group provide a wide range of support to schools and youth organisations. This includes targeted training for leadership and governance in order to enhance or embed CRED. The ELB and youth officers collaborate well to collate a wide range of useful materials to support CRED practice in schools and youth organisations, including the CREDNI website. A key strength is the work of the ELBs in promoting CRED practice through whole-school improvement rather than stand-alone policies and the recent training on embedding CRED through history education. ELBs offer training in CRED for governors, but uptake is low.
- The YCNI provides appropriate support, guidance and challenge for voluntary organisations in the development of CRED practice. This includes clear strategic development of CRED, through well-planned information days, to share practice and build capacity amongst staff, high quality resources and effective links with external partners. Uniformed organisations evaluate well the outcomes for young people to inform next steps.

Characteristics of most effective practice

- Schools have a clear understanding of and support for CRED, embedded in their strategic planning, through the School Development Plan, to improve outcomes for children and young people.
- In youth organisations, CRED is embedded well into the area plans, service level agreements and centre action plans.
- Leaders at all levels model the values of CRED principles and practice. Schools and youth organisations align the principles and values of CRED with their staff code of conduct and monitor the outworking of the code of conduct in practice, addressing issues when they arise through staff development.
- Schools support the holistic development of their children and young people by ensuring high quality provision for those children and young people with special needs, and those from newcomer or traveller backgrounds.

Going forward

- Schools report that DE needs to embed the policy more clearly within a strategic overview of all policies. Youth organisations identified the need for even more explicit development of CRED within Priorities for Youth (PFY).
- The rights of the child as defined in the United Nations Convention of the Rights of the Child (UNCRC)⁵ should be more central to the outworking of CRED in policy and practice.
- The extent to which schools and youth organisations embed CRED at all levels varies given the context, legacy of the conflict, staff, governance, resources and levels of understanding of the principles and values of CRED. In building on the effective work to date, there remains the need to address inconsistency in the access to, and impact of, support provided across the ELBs to embed CRED.
- The voluntary youth organisations need support to expand and embed CRED through dissemination of good practice events, training, mentor support and increased access for young people to programmes.
- There is variation in the rigorous evaluation of CRED practice against quality indicators; monitoring and evaluation processes need to focus more on the impact of the programmes and the outworking of CRED on outcomes for children and young people.
- There is insufficient focus on transition arrangements to enable progression in the development of children's knowledge, skills and attitudes through CRED work.

3d Community connections

Going well

Characteristics of most effective practice

- Schools, youth organisations and communities work in partnership to support one another in understanding changing demographics, challenges to family cohesion, poverty and social issues.
- Schools and youth organisations research and consult widely with parents/carers to understand more fully the backgrounds of individual children and young people to recognise potential barriers to learning, raise expectations and build on prior experiences.
- Schools are proactive in consulting with different community groups in order to support children and young people when there are significant tensions within the community.

⁵ The United Nations Convention on the Rights of the Child (UNCRC) is an international human rights treaty that grants all children and young people (aged 17 and under) a comprehensive set of rights. It came into force in January 1992.

- The ALCs promote community confidence in schools working together and enable the development of shared classrooms.

Going Forward

- The school and youth sectors would benefit from greater levels of sustained community contact, given the challenges that remain in promoting community relations, reducing discrimination and fostering a respect for diversity through multi-agency support.
- Schools and youth organisations need to further their understanding of the impact of their CRED practice on children, young people, parents/carers and the community, through robust monitoring and evaluation.
- Schools and youth organisations need support in developing local partnerships to enable children and young people to access differing perspectives.
- Schools and youth organisations need multi-agency support to challenge negative influences so that children and young people are helped to realise their full potential and that their rights, as defined in the UNCRC, are upheld.

4. RECOMMENDATIONS

	Recommendations
For DE	<p>R1 - to review the CRED policy to ensure that:</p> <ul style="list-style-type: none"> • the rights of the child underpin practice; • there is clarity in terminology and expectations of schools/organisations; • it is embedded in a strategic overview of all policies and developed further through “Priorities for Youth”; and • it references the development of shared education in light of emerging research and practice. <p>R2 - to support the personal and professional development of staff and governors in schools and youth organisations to promote and embed CRED, particularly given the legacy of the conflict.</p> <p>R3 - to foster more effective links with other departments and agencies to support better schools and youth organisations in their local communities.</p>
For ELBs/support bodies / CCEA/ YCNI	<p>R4 - to enable, at regional level, greater consistency in the access to, and impact of, targeted support provided by the support bodies. In building on the effective work to date, further support is needed for staff to embed CRED, including through effective governance, community connections, within and beyond the classroom.</p> <p>R5 - to collaborate to develop appropriate accreditation of effective learning through CRED.</p>

<p>For schools and/ or statutory youth organisations</p>	<p>R6 - to review the quality of personal development and mutual understanding, personal development, and citizenship lessons in schools to ensure consistently high quality participatory learning experiences for all children and young people.</p> <p>R7 - to collaborate further to monitor and evaluate the impact of CRED through tracking the acquisition and development of the children’s and young people’s knowledge, skills and attitudes to inform better strategic planning.</p>
<p>For voluntary youth organisations</p>	<p>R8 - to expand and embed CRED practice more widely across voluntary youth organisations through increasing dissemination of good practice events, training and mentor support; and access by a greater number of young people to CRED programmes.</p>
<p>For ETI</p>	<p>R9 - to ensure that inspection activities evaluate more fully the holistic education of children and young people and the added value for them of their CRED-related learning; and include more explicit evaluation of community connections.</p> <p>R10 - to identify and report on examples of effective and innovative practice in CRED and embed the CRED quality indicators within Together Towards Improvement.</p>

5. CONCLUSION

Most of the schools and youth organisations demonstrate effective CRED practice in helping children and young people develop self-respect and a respect for others from different backgrounds, and understand how to include others within the constraints of available resources and current structures. While there is clear evidence of the building of relationships through formal and non-formal education, the sustainability of them is variable.

Given the continued segregated system of education and the widening equality issues across society, there are examples of sector-leading CRED practice in schools and youth organisations which are ahead of some of the views expressed within society. More remains to be done collaboratively, however, to enable schools and youth organisations to prepare young people better for the diverse world of life and work.

APPENDIX 2

Summary of responses to the CRED Survey questionnaires from schools and youth organisations

There were over 200 questionnaires issued to schools and youth organisations as part of the survey with 73 returns and associated written responses to a web-based survey.

Main findings

The majority of governors or management/advisory committees had not participated in CRED training or initiatives but most of their staff, including volunteers had.

- 54% indicated that their governors/management committees had not received CRED training.
- 88% of staff/volunteers had participated in CRED training.

The majority (60%) of respondents who had participated in CRED training/initiatives felt that it had a significantly positive impact on their provision.

In relation to the significance placed on addressing and resourcing CRED in schools/organisations, only half of the participants who prioritised CRED in their development plan prioritised staff training. Competing priorities was cited as a reason for this in a number of schools, with others stating that staff development days would be planned for the future.

- 81% have addressed CRED as a priority in their School Development Plan.
- 41% have not made staff training and development in CRED a priority.

Most schools /organisations have active links with external agencies to promote CRED. Staff comments reflect the high value placed on these links.

- 84% indicated that they linked with external agencies to provide support in the delivery of CRED.
- 45% of respondents cited at least 4 agencies with whom they link.
- 81% link with other schools and youth organisations.

The number of children and young people involved in CRED-related programmes is rising with most schools/organisations now involving them in both planning and evaluating the programmes delivered. The extent of this involvement ranges from evaluative discussions at the end of each session, to joint planning, delivery and review of all activities with staff.

- 70% indicated that children and young people are involved in the planning for and evaluating the effectiveness of their CRED programmes.

The majority (52%) of participants have not used the quality indicators in the CRED guidance to evaluate their provision, some indicating that they need a clearer understanding of some areas and that it is a lengthy document. Some of the significant minority who have used the indicators felt that they provided clarity in planning, ensuring that staff have a rationale for CRED.

As a result of being involved with CRED interventions, the majority of participants (learners and/or staff) indicated that they knew more about the cultures and traditions of, and respected and felt comfortable being friends with:

- Those from other Christian-based religions.
- Those from different races, community and ethnic backgrounds.
- Those with disabilities.
- 80% felt that they had opportunities to give their views and to listen to others views about issues that affect them.

In answering the same question, the majority of participants were either partly sure or unsure if they knew more about the cultures and traditions of, or respected and felt comfortable being friends with:

- Those with religions other than Christianity.
- Those who speak a different language to English.
- Those who are lesbian, gay, bi-sexual or transsexual.

The majority of participants found the CRED policy and guidance materials useful, with references made to it being clearly written with good practical advice and having useful link to Every School a Good School and other curricular areas. Suggestions for how it could be improved included making a shorter more pupil-friendly document and using more examples of successful projects from other schools.

- 19% found it very helpful.
- 63% found it helpful.

90% of respondents indicated that the support they received from their ELB in developing CRED was either helpful or very helpful. Board officers were cited as being enthusiastic, very knowledgeable and available. References to the significance of funding were made throughout the comments, with difficulties in completing the funding applications also being highlighted.

- 40% found it very helpful.
- 50% found it helpful.

Most of the respondents felt that CRED had clear links with other education and wider government policies such as Child Protection, Every School a Good School, Pastoral Care.

- 75% felt there were clear links.
- 25% felt that links were unclear.

The majority of respondents (61%) indicated that the implementation of CRED raised challenges for their school/organisation. These challenges included:

- funding costs;
- transport costs;
- competing priorities;
- enabling staff to teach about challenging issues and
- enabling parents to deal with challenging issues.

Written comments

Going well:

- “Programmes provide opportunities for parents of both schools to come together not just staff and children.”
- “The duration of CRED work has enabled high level relationships to be built between staff, management and young people.”
- “Working with children who have varying disabilities, who are different cultures and creeds is so good for everyone involved.”
- “The officers of the Curriculum Advisory and Support Service of the Education and Library Boards provide good support and are very helpful if asked.”

Going Forward:

- “Funding is required to embed the policy. A major barrier to implementation is the cost of travel between schools.”
- “It does not recognise the progress and good practice already established in integrated schools.”
- “CRED is on our 3 year plan although other competing priorities can take precedence.”
- “More governor training needs to be offered by ELBs.”
- “Being able to develop the links that have already been established. Level of funding to support projects is not enough. Only able to “touch” on things that could be done.”
- “More work engaging with schools from different communities is needed.”

1 April 2015

Dear Peter

JOINTLY MANAGED SCHOOLS CIRCULAR

For the information of the Education Committee, please find attached, 'in confidence' a copy of the Jointly Managed Schools Circular. It is anticipated this Circular will be launched, via a press statement, week commencing 13 April 2015.

Yours sincerely

Russell

RUSSELL WELSH
Departmental Assembly Liaison Officer

Subject:

Circular Number:

Date of Issue:

JOINTLY-MANAGED SCHOOLS

1 April 2015

Target Audience:

- Principals and Boards of Governors of all grant-aided schools;
- Education Authority
- Council for Catholic Maintained Schools;
- Northern Ireland Commission for Catholic Education
- Comhairle na Gaelscolaíochta;
- Northern Ireland Council for Integrated Education;
- Transferors' Representative Council;
- Teachers' Unions;
- Council for the Curriculum, Examinations and Assessment;
- General Teaching Council.

Summary of Contents:

This circular is an information guide for those stakeholders interested in establishing jointly managed schools.

Governor Awareness:

Essential

Status of Contents:

Information for schools

Superseded Documents:

Not applicable

Expiry Date:

Not applicable

Enquiries:

Any enquiries about the contents of this Circular should be addressed to:

1. Purpose of the Circular

1.1 Concurrent with the growth of a variety of Shared Education programmes, some controlled and maintained schools have expressed an interest in establishing what has been termed by stakeholders a 'jointly managed church school', where both the representatives of the Transferor churches and the Catholic Church working together have a joint role in the management of the school.

1.2 In response, the Department (DE) has worked closely with the Transferor Representatives' Council which represents the Church of Ireland, Presbyterian and Methodist Churches, and representatives of the Catholic Trustees to consider how the concept may be implemented within the current legislative framework.

1.3 The purpose of this circular is to provide guidance on key issues which stakeholders must consider and agree upon when planning to bring forward any proposal to establish a school of this type.

1.4 All those bringing forward a proposal to establish a school of this type must have regard to the content of this circular.

1.5 This is a new concept and while DE has endeavoured to cover all pertinent issues in this circular, it is recognised that as these schools are established through the Development Proposal process, there may be a need to further supplement, or amend this circular.

2. Policy Context: Shared Education

2.1 The wider context for the development of the concept of jointly managed schools has been the emergence and development of the concept of Shared Education.

2.2 Shared Education is the organisation and delivery of education so that it:

- meets the needs of, and provides for the education together of learners from all Section 75 categories and socio-economic status;
- involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

2.3 Specifically, by Shared Education we mean the provision of opportunities for children and young people from different community backgrounds to learn together.

2.4 Shared Education pilot programmes have been taking place in a number of schools in recent years, most notably with significant investment from the International Fund for Ireland and the Atlantic Philanthropies. The Programmes aimed to break down the barriers arising from the conflict here by providing a range of opportunities for young people to learn together.

2.5 Going forward DE is, in conjunction with Delivering Social Change funding and the Atlantic Philanthropies, providing a funding stream to support Shared Education in schools over the next four years. The Education Minister has committed to mainstreaming Shared Education funding in the longer term.

2.6 DE is also working with the Special EU Programmes body to advise on how best Peace IV funding can be used to support further the development of

Shared Education in schools that have not yet engaged in this form of delivery, as well as across pre-school and youth work settings in a way that will complement the Delivering Social Change Shared Education funding.

2.7 DE has developed a Shared Education Policy which provides a framework for the future of development of Shared Education. The policy will ensure that schools and other education environments receive the resources, acknowledgement, support and encouragement to start or continue to develop high quality Shared Education opportunities for their pupils. A Shared Education Bill to define and provide the power to encourage and facilitate Shared Education has also been brought forward.

2.8 There are various forms of association that can provide the opportunity for schools to collaborate on a range of curricular and other issues. These can range from voluntary coalitions and partnerships to a relationship involving formal management and governance structures.

2.9 It is for schools, parents and communities in conjunction with the relevant school Planning Authorities¹ to determine which model they think best meet local needs. In order to support stakeholders who have expressed an interest in the jointly managed model, DE has published this circular.

¹ The Planning Authorities are the Education Authority, which has responsibility for ensuring that efficient primary education and post-primary education are available to meet the needs of its area and that the area has sufficient schools of the right size and of the right type; and the Council for Catholic Maintained Schools, which has a statutory duty to promote and co-ordinate the planning of the effective provision of Catholic maintained schools.

3. Definition

3.1 Whilst there is potential for other forms of jointly managed school, this circular provides guidance only in regard to what has been termed by stakeholders a 'jointly managed church school'.

3.2A jointly managed church school is a grant-aided school, providing shared education with a Christian ethos, with Trustee representation agreed by the Transferor churches and the Catholic Church and managed by a Board of Governors with balanced representation from both the main communities here.

3.3 It should be noted that a 'jointly managed church school' is not a particular school management type set out in legislation but reflects the practical operation and ethos of these schools. The management type of these schools is outlined in Paragraph 4.17 and arrangements for Home to School Transport in Section 6.

3.3 A jointly managed church school may be and will most likely be established as a result of the amalgamation of former controlled and Catholic maintained schools. However, this does not preclude the establishment of an entirely new school of this type where no provision currently exists.

4. Key Issues for Stakeholders to Consider

4.1 A Development Proposal (DP) is required under Article 14 of the Education and Libraries (NI) Order 1986 before any significant change can be made to the character or size of a school, or to establish a new grant-aided school.

4.2 In order to establish a new school as a result of the amalgamation of former controlled and Catholic maintained schools, DPs will be required to:

- close the existing grant-aided schools; and
- establish a new school.

If an entirely new school is to be established where no provision currently exists, a single DP to establish a new school will be required.

4.3 DE would expect the relevant Board (or the Education Authority when established) and CCMS on behalf of the Catholic Trustees to bring forward proposals to close existing schools and together bring forward a proposal to establish the new grant-aided school.

I. Sustainability

4.4 In approving an amalgamation or the establishment of an entirely new school, an essential consideration for DE is that it will be viable for the long term. All proposals are assessed in line with the framework of 'Schools for the Future: A Policy for Sustainable Schools' -<http://www.deni.gov.uk/index/schools-and-infrastructure-2/sustainable-schools.htm>.

4.5 Those intending to bring forward a DP should familiarise themselves with the content of the Sustainable Schools Policy. The policy sets out six criteria for helping to assess existing and future provision. They cover the educational experience of children, enrolment trends, financial position, school leadership and management, accessibility, and strength of links to the community.

4.6 Stakeholders should consider and develop proposals within this overarching framework.

4.7 In a case of an amalgamation between a former controlled and maintained school(s), the new school will not be subject to a minimum enrolment criteria for receipt of recurrent funding.

II. The Area Planning Context

4.8 Area Planning is the process through which a network of viable and sustainable schools will be developed. It aims to have schools of the right size and type in the right place through assessing the current and projected level of demand in an area and shaping provision to meet that demand.

4.9 It is extremely important that proposals are developed in consultation with the relevant Planning Authorities. Any proposal must consider the wider context of the network of schools and must be in line with the overall proposed pattern of provision outlined in the area plan. It is particularly important to consider the implications for other schools in the area.

III. Educational Trust and Ownership

4.10 It is preferable for those intending to bring forward a proposal to establish a school of this type to plan to establish a formal body such as a Trust following the approval of any DP (more details on the DP process are provided from Paragraph 5.1 onwards).

4.11 Trustees would be appointed through a deed of appointment. The Trustees are the legal representatives of the school as an organisation.

4.12 In this case, DE would require the school Trustees to be representative of both the Catholic Church and the Transferor churches.

4.13 The Trustees:

- are the person or persons in whom the premises and site of the school or college of education are, or are to be, vested .(This may involve lease or assignment from either the Education Authority or the relevant Catholic Maintained Trust, if the use of a former school site is proposed);
- will nominate governors in line with the provisions of Schedule 5 of the Education and Libraries (NI) Order 1986 Order; and
- will be the named party to legal contracts on behalf of the school (for example for minor or major capital works).

4.14 The Planning Authorities will provide stakeholders with advice on the establishment of a Trust. It should be noted that it is not envisaged that the legal ownership of any school site will change.

IV. Management Type

4.15 Current legislation stipulates a number of school management types for grant-aided schools: controlled, Catholic maintained, maintained, voluntary (non-maintained) and grant-maintained integrated. It does not provide for any other “hybrid” management type.

4.16 A controlled school must under Article 21 (2) of the Education and Libraries (NI) Order 1986 provide undenominational religious education and collective worship.

4.17 A voluntary maintained management type is likely to be the most practicable management type for this type of school. It is distinct from a Catholic maintained school which is a maintained school designated in a scheme agreed between the DE and CCMS (Article 141(3) of the Education Reform (NI) Order 1989).

4.18 In a significant number of key practical matters, the same management arrangements are in place for maintained schools, as for controlled and Catholic

maintained schools. The Education Authority is the funding authority for these schools and is responsible for the payment of rates, landlord maintenance, purchasing and invoicing and carrying out the internal audit function. The Education Authority is also responsible for employing non-teaching staff and for non-teaching payroll. Like both controlled and Catholic maintained schools, DE is responsible for teacher payroll in maintained schools. As in the case of controlled and Catholic maintained schools, maintained schools would be expected to self-insure with the Education Authority.

V. Board of Governors

4.19 In a maintained school, the Board of Governors comprises nine, eighteen or twenty-seven members. Of the voting members of the Board of Governors:

- a) four-ninths shall be nominated by the nominating trustees in such manner as the scheme of management of the school may provide, and at least one of the persons so nominated shall, at the time of his nomination, be a parent of a registered pupil at the school;
- b) two-ninths shall be nominated by the Board;
- c) one-ninth shall be nominated by the Head of the Department;
- d) one-ninth shall be elected by parents of registered pupils at the school from amongst the parents of such pupils; and
- e) one-ninth shall be elected by assistant teachers at the school from amongst such assistant teachers.²

4.20 In this case, DE would expect a formal local agreement that the governors appointed by the Trustees will be representative of both the Catholic and Transferor Churches. It is also expected that the representatives of the Education Authority will reflect both religious traditions.

³ The Education and Libraries (Northern Ireland) Order 1986; Schedule 5

4.21 Agreements will be detailed in the school's Scheme of Management, which provides for the membership and procedures of the Board of Governors of grant-aided schools.

VI. School Ethos

4.22 The proposed ethos of the school, arrangements for worship and approach to religious education must be agreed prior to any proposal being brought forward. Agreement will also be required in respect of any specific requirements for the development and maintenance of the religious ethos of the school that are to be reflected in the Scheme of Management for the school. A formal Memorandum of Agreement between the school trustees of the main Protestant Churches and the Catholic Church should be drawn up and signed by both parties to reflect these arrangements.

4.23 Subsequently when a school is established, the Board of Governors will implement the agreed ethos for the school and reflect this ethos within the school's Scheme of Management. In these schools, the Department would expect that the ethos would be within a Christian framework which respects both the religious ethos of the Catholic Church and Transferor Churches and where neither ethos would predominate.

4.24 In all grant-aided schools it is expected that the governors and the Principal should maintain an ethos for the school that promotes the moral, spiritual, intellectual, social and personal development of all its pupils. The school's ethos should contribute to the wider goals of the school and be clearly defined and understood by parents, pupils, staff, governors and the local community. It should also be consistent with a commitment to promote equality, good relations and diversity within the school and its community.

4.25 Decisions on teaching of RE within the school are also the responsibility of the Board of Governors within the context of the statutory curriculum for religious education.

VII. Employing Authority

4.26 Boards of Governors will be the employer of teachers for schools of this type.³

These schools will adhere to the agreed remuneration and terms and conditions of service of teachers in grant aided schools in Northern Ireland established through the agreed negotiating machinery (currently the Teachers' Negotiating Committee).

4.27 The Department would expect Boards of Governors in this type of school to have a formal agreement in place to seek, obtain and follow professional advice on Human Resources issues from the Education Authority in the first instance.

4.28 The terms of TNC 2013-2 School Reorganisation Agreement will be applicable to all newly established schools.

4.29 The Education Authority is the employer for all non-teaching staff in controlled, Catholic maintained and maintained schools. There will, therefore, be no change in the employer for non-teaching staff in the event of the establishment of the new school.

VIII. Size

4.30 Articles 11 and 12 of the Education (Northern Ireland) Order 1997 require DE to determine an enrolment number and an admissions number respectively for each grant-aided primary and post primary school.

4.31 All Development Proposals will need to state clearly the proposed enrolment for the new school. This should be determined in discussions with the relevant Planning Authorities within the context of the Area Plan. When two schools are amalgamating, only in exceptional cases would DE expect this to exceed the combined approved enrolment of the former schools. Reducing the number of

³ Teachers are employed by the Board of Governors in Catholic maintained schools and by the Education Authority in controlled schools. CCMS is the Employing Authority for Catholic maintained schools.

unfilled places in the schools' estate is an objective of area planning. Consequently, where the former schools had unfilled places, consideration should be given to reducing the approved enrolment of the new school accordingly and clearly outlined in the Development Proposal.

IX. Accommodation

- 4.32 There is a need to consider short and longer-term accommodation needs for the proposed school and whether additional temporary accommodation may be required. Detailed and realistic costings for any proposed accommodation should be developed. Due regard should be given to maximising the potential of existing school premises.
- 4.33 In a case where a school is formed as the result of an amalgamation of former controlled and maintained school(s), which were already vested in the schools' estate, the school will not be subject to meeting enrolment thresholds for capital viability, as in the case of newly established grant-aided schools.
- 4.34 Jointly managed schools formed by the amalgamation of existing grant-aided schools will attract the additional points associated with rationalisation when applications for new school builds are being assessed. Details are set out in DE's *Protocol for the Selection of Major Capital Works* <http://www.deni.gov.uk/index/june-protocol-major-works.htm>

5. The Development Proposal Process

- 5.1 As noted above, a Development Proposal (DP) is required under Article 14 of the Education and Libraries (NI) Order 1986 before any significant change can be made to the character or size of a school, or to establish a new grant-aided school (para 4.1 refers)
- 5.2 In advance of initiation of the formal development process, it is essential that the key issues outlined in this guidance have been considered and agreed. A proposal to establish a new school requires Planning Authorities to be engaged at an early stage.
- 5.3 Information regarding the DP process can be found at http://www.deni.gov.uk/de1_14_202314_development_proposal_guidance_-_english_version_issued_26_09_14.pdf (Circular 2014/21). Those bringing forward a proposal should familiarise themselves with this guidance.
- 5.4 A decision on any DP is made by the Minister of Education. All DPs are considered on a case by case basis within DE's policy framework.
- 5.5 The body which brings forward a DP is "the proposer". In this case DE would expect that the Education Authority and CCMS would each bring forward in a timely manner proposals to close existing schools and together bring forward a proposal to establish the new grant-aided school.
- 5.6 It is a matter for the proposer to make the case for change for any development proposal being presented to the Minister for consideration. The proposer should provide sufficient evidence to support the case for change to enable those affected by the proposal to understand the educational and other merits of the change proposed. DE should be fully furnished with all pertinent background and supporting information relating to the DP. Such information must be robust and verifiable. A detailed implementation plan must also be included. This should outline the key activities and milestones for successful implementation of the proposal should it be approved.

5.6A key purpose of the DP procedure is to ensure that all interested parties are informed about proposed changes to schools and have an opportunity to comment on any proposed development that may affect them before decisions are taken. All objections and comments received are considered in reaching a final decision on a DP. It is vitally important that the proposal is clear and unambiguous and this should include clarity around the management type and size of the proposed school.

6. Operation of Jointly Managed Schools

Home to School Transport

6.1 The current arrangements for the provision of home to school transport came into operation in September 1997 (Circular 1996/41) and were last updated in September 2009.

6.2 A child is only eligible for transport assistance in circumstances where he or she enrolls at a school which is beyond qualifying distance from their home (two miles for primary pupils or three miles for post-primary pupils) and has been unsuccessful in gaining a place at all suitable schools within statutory walking distance.

6.3 Where there is no suitable school within statutory walking distance from a child's home, the Education Authority may provide transport to any suitable school, provided a suitable Education Authority or public transport service to or in the vicinity of that school is already available.

6.4 A suitable school is a grant-aided school in any of the following categories: -

Primary/Secondary Sector

Categories of School

Catholic maintained
Controlled or other voluntary
Integrated
Irish-medium

Grammar Sector

Categories of School

Denominational
Non-Denominational

6.5 For the purposes of transport provisions under current arrangements, jointly managed primary and post-primary schools will be classified as within both 'controlled and other voluntary' and 'Catholic maintained' categories.

6.6 It should be noted that arrangements for Home to School Transport are current under review and may change. The Department intends consulting

upon the review of Home to School Transport chaired by Sian Thornthwaite, which was published in December 2014.

Temporary Variation (TV)

6.7 There are four categories for the purposes of considering TVs:

(i) **denominational** (i.e. maintained primary schools, maintained post-primary schools, denominational grammar schools);

(ii) **non-denominational** (i.e. controlled primary schools, controlled post-primary schools, non-denominational grammar schools);

(iii) **Integrated** (i.e. controlled or maintained integrated primary or post-primary schools and;

(iv) **Irish Medium** (i.e. Irish Medium primary or post primary schools or Irish Medium primary or post primary units within maintained primary or post primary schools).

6.8A small number of 'other maintained' schools (ie Voluntary maintained schools that are not Irish-medium) are treated 'by exception' and outside of these four categories.

6.9 For the purposes of dealing with TV requests, jointly managed primary and post-primary schools will be classified alongside **both** denominational **and** non-denominational categories. This means that when a TV request for a child is received from a jointly managed school, it is likely to be approved unless there are alternative places available in both the controlled and maintained sectors within a reasonable travelling distance of the child's home. Conversely, a jointly managed school would not be considered as an alternative setting for a child who requests a place in any other sector.

7. Contacts regarding this Circular

7.1 A copy of this circular has been placed on the DE website. Any enquiries about this circular should be addressed to Shared Education and Community Relations Team, telephone number 028 9127 9245.

30 March 2015

Dear Peter

Peace IV – Shared Education

Thank you for your correspondence of 13 March 2015 which sought further information regarding Peace IV Shared Education funding.

The Special EU Programmes Body (SEUPB) is still awaiting approval from the European Commission on proposals for the Peace IV Programme. SEUPB has advised that it does not expect to receive approval until the summer. Discussions are still on-going in relation to final allocations across the thematic areas and the final decision will be subject to agreement by the Executive. Current proposals are that the Peace IV programme will target those schools not eligible for the Delivering Social Change - Shared Education Signature Project (ie: those schools which have not engaged in shared education to date, estimated at 24% of schools), youth to school partnerships and early years partnerships.

I hope you find this helpful.

Yours sincerely

Our Ref: PMcC/KM/2017

Dear Russell

Peace IV – Shared Education

At its meeting on 11 March 2015, the Chairperson advised Members of commentary in recent written questions which indicated that the Peace IV Shared Education funding is to be targeted at the 24% of schools not currently involved in sharing.

The Committee agreed to write to the Department seeking further information on Peace IV Shared Education funding.

A response by 27 March 2015 would be much appreciated.

Yours sincerely

Signed Peter McCallion

1 May 2015

Dear Peter

SHARED AND INTEGRATED EDUCATION INQUIRY: COMMUNITY RELATIONS, EQUALITY AND DIVERSITY (CRED) POLICY

Thank you for your letter of 30 April 2015 seeking sight of the Department's CRED policy update and details of the Young Life and Time survey results in respect of relevant pupils attitudes.

Planning work has commenced in relation to revising the CRED policy and this is expected to be completed within the current year. The Department will keep the Committee informed at key stages during the review process.

I have attached a copy of the 2012 Young Life and Times survey and would advise you that the 2014 Survey is due to be launched on Wednesday 13 May at Queen's University, Belfast. As soon as this 2014 Survey is launched I will have a copy sent to the Committee.

Yours sincerely

Russell

Appendix 1: CRED questions within 2012 Young Life and Times Survey 19

Key findings

1208 16 year olds took part in the 2012 Young Life and Times Survey. The survey included a suite of questions to record the experiences of young people in relation to Community Relations, Equality and Diversity in Education (CRED).

70% of respondents had taken part in CRED activities, either at school or in a youth project or club. Of those who had taken part, 57 per cent had done so only in school, 14 per cent had done so in a youth setting only, and 29 per cent had done so in both.

Most respondents had undertaken activities focusing on people of different religious beliefs. However, other topics such as having dependents, marital status or caring responsibilities were covered by less than one third of respondents. School-based CRED activities covered more of the Section 75 groups that youth settings did.

For each of the identified groups, at least two thirds of respondents felt that CRED activities resulted in more positive feelings among participants. This applied to activities within school and within youth settings. However, the perceived level of changing attitudes among participants in youth settings was generally higher than participants in school.

For each of the identified groups, at least two thirds of respondents felt that CRED activities resulted in them feeling more positive about these groups. There was little difference depending on whether respondents undertook these activities at school or in youth settings.

Overall, the data indicate that the majority of young people are experiencing CRED activities in some shape or form, and these seem effective in changing attitudes. The fact that the breadth and range, as well as perceived effectiveness, may vary across settings is evident. However, this may be expected, given the different roles that schools and youth projects/clubs play within young people's lives.

Introduction

This project feeds into a wider programme of the Department of Education for Northern Ireland (DENI) to measure the success of the Community Relations, Equality and Diversity in Education (CRED) policy. The aim of this policy is to contribute to improving relations between communities by educating children and young people to develop self-respect and respect for others, promote equality and work to eliminate discrimination, and by providing formal and non-formal education opportunities for them to build relationships with those of different backgrounds and traditions within the resources available.

As part of this programme, DENI wished to assess effectiveness of schools and other youth settings in encouraging understanding of groups covered in Section 75 of the 1998 Northern Ireland Act. By developing a suite of indicators, the baseline level of success and effectiveness can be measured, and repeated over time. Whilst existing surveys provide some useful indicators (for example the Young Persons Behaviour and Attitude Survey, and previous Young Life and Times surveys), these do not adequately capture the extent of the policy. In particular, there is a need to develop indicators that reflect the wider scope of the CRED policy, and do not focus solely on community relations.

In order to achieve this, DENI commissioned a suite of questions within the 2012 Young Life and Times (YLT) Survey, which recorded the experiences of young people in relation to Community Relations, Equality and Diversity in Education.

YLT is one of three annual public attitudes surveys undertaken by ARK (Access, Research, Knowledge), which record the views of people living in Northern Ireland to key social policy issues that affect their lives. In particular, the opinions of young people are often ignored when decisions are made about many of the issues involving them. Thus, the aim of the Young Life and Times survey is to record the views of 16 year olds in Northern Ireland on a range of issues such as community relations, health, politics, sectarianism and education.

Aims and objectives of the research

The aim of this research is to assess the effectiveness of the CRED policy amongst young people living in Northern Ireland.

The objectives are:

- to develop a suite of survey questions that will act as indicators of the effectiveness of the CRED policy;
- to include these questions within the 2012 Young Life and Times Survey.

Methodology

Sample

The survey sample was taken from the Child Benefit Register. Child Benefit is a benefit for people bringing up children and is paid for each child. Therefore, the Register contains information on all children for whom Child Benefit is claimed. This Register had previously been the responsibility of the Social Security Agency (SSA) of the Department for Social Development in Northern Ireland (DSD). However, while DSD still maintained the database, the responsibility for the payment of Child Benefit transferred to Inland Revenue. Thus, it was necessary to negotiate access to this Register from Inland Revenue, which involved an explanatory memorandum being prepared relating to the Tax Credits (Provision of Information (Evaluation and Statistical Studies) (Northern Ireland) Regulations 2004).

Due to revised data security procedures in 2007, ARK had to re-apply to access the Child Benefit dataset for further YLT surveys, and permission was granted by Her Majesty's Revenue and Customs (HMRC) in 2008. The sample for the 2012 survey was provided to ARK directly by HMRC. In October 2012 a Service Level Agreement was signed between ARK and HMRC about the sample provision. Within this agreement ARK had to lay out arrangements for the safety and security of the personal data of respondents. This included arrangements for a safe transport and storage of the files as well as destruction of the address file after completion of the data collection.

The sample drawn from the Child Benefit Register contained the names and addresses of all young people resident in Northern Ireland who celebrated their 16th birthday during February and March 2011.

Advance letter

Fieldwork was conducted in November and December 2012. All administration of the mailout for the survey was undertaken by an independent mailing company. An initial letter was sent out in October 2012 to all eligible 16-year olds and provided an introduction to the survey, after the wording of this letter had been agreed with HMRC. Recipients of the letter were given the opportunity to say that they did not want to participate in the survey.

A second letter was then posted out to all those 16-year olds who had not opted out of the survey. This consisted of a letter from the project team, a paper questionnaire and a return envelope with a FREEPOST address. This letter contained a unique identifier (with a check letter) under the address, which was highlighted as "Your identification number". The provided more information about the survey, the three possible methods of completing the questionnaire, and details of a draw for five prizes of £100 for which all respondents completing the questionnaire were eligible.

In total, 34 young people opted out of completing the survey at different stages.

Survey content

The 2012 survey entailed the questions on the following subject areas:

- Community relations - funded by the Office of the First Minister and Deputy First Minister (OFMDFM);
- Shared Education- funded by the Office of the Northern Ireland Commissioner for Children and Young People (NICCY);
- Experiences of Community Relations, Equality and Diversity Education (CRED) – funded by the Department of Education (DENI);
- Attitudes to sexual orientation;
- Family;
- Background information.

At the end of the 2011 survey, respondents were given the opportunity to identify questions they felt should be included in the next Young Life and Times survey. Some of these suggested topics were incorporated in the 2012 survey, namely the questions on attitudes to sexual orientation.

In conjunction with DENI staff, the YLT team developed a suite of questions that asked respondents about their experiences of the CRED activities – see Appendix 1.

Completing the questionnaire

The fieldwork period lasted from 15 November – 31 December 2012.

Respondents were able to choose one of three methods for completing the questionnaire.

1. They could take part by phone, having quoted their identification number and check letter.
2. They could complete the questionnaire online, quoting their personal identifier to enter that part of the YLT website.
3. They could complete the paper questionnaire that was sent to them and post it back in the pre-stamped envelope.

After approximately ten days, a reminder letter with a second questionnaire was sent out to addressees who had not made contact of any kind.

Multiple responses from respondents (for example, one online and one postal response) were prevented by daily recording of the receipt of completed questionnaires. Once a respondent had submitted an online questionnaire, his or her unique identifier was automatically disabled.

Response rate

3,749 names of eligible respondents were on the database of Child Benefit recipients received from HMRC/DSDNI. 31 questionnaires were returned because the addressee had moved or was unknown at the address. This leaves a sample of 3,718 eligible respondents.

1,208 completed questionnaires were received by the end of the fieldwork period. The overall response rate of the 2012 YLT survey is therefore 32 per cent. Table 1 shows that the most popular mode of completing the survey was paper (1,036 questionnaires or 86 per cent). The rest of respondents completed the survey online. To encourage online completion, the first 100 online respondents received a £10 shopping voucher.

Main findings

Experience of CRED

The questionnaire provided an introduction to the topic, using the following text:

'Education and youth work are supposed to encourage understanding of particular groups in society and promote the equal treatment of different groups. This can be done through exchange programmes, discussions, workshops, lessons or videos.'

When asked if they had ever done any of this, seven out of ten of respondents indicated that they had done so. Most of these respondents had done so in school (86 per cent), with half this proportion (43 per cent) doing so within a youth project. Three out of ten had done so both in school and within a youth setting (a youth project or youth club).

Table 14: Participation in CRED activities

	%	
	All respondents	Of those who had undertaken activity
School only	40	57
Youth project/club only	10	14
School and youth project/club	20	29
Not at all	30	-

Tables 15 and 16 focus on those undertaking these activities in school. YLT respondents were asked two questions relating to the type of school that they had most recently attended: type of school, and its religious makeup. This allows us to break down figures relating to school-based CRED activities by these school characteristics. Table 15 shows that respondents attending planned integrated schools were more likely to undertake these activities than those in grammar or secondary schools. (Other school types were omitted from this table due to small numbers). Table 16 indicates that those in mostly Catholic schools, or in schools that are mixed were most likely to undertake CRED activities, whilst those attending mostly Protestant schools were least likely to do so.

CRED topics

The 70 per cent of young people who had experienced CRED activities were then asked if these activities had covered a range of 10 groups, reflecting the Section 75 categories. This was explored separately for school and for youth project/youth club – see Table 17. The findings in relation to school represent only those respondents who indicated that they had undertaken CRED activities in school, and a similar approach is taken in relation to a youth project or youth club.

Overall, schools appear to have covered issues relating to all groups more than youth projects or youth clubs. For example, 74 per cent of respondents who had experienced school-based activities said that this covered different ethnic groups, compared with 58 per cent of those responding in relation to youth projects or youth clubs, and there are three other groups where the differential is at least 14 percentage points (religious beliefs, sexual orientation and disability). Age is the only topic where coverage in youth settings is higher than in schools, although the difference is very slight (2 percentage points).

In general, the pattern of which groups for youth settings is similar to that in schools. Thus, the most frequently covered topic in either setting relates to different religious beliefs, followed by different ethnic groups, whilst the least covered groups related to caring responsibilities, dependents and marital status.

Table 17: Coverage of CRED groups, by setting

	%	
	School	Youth project or youth club
People with different political opinions	59	48
People with different religious beliefs	84	70
People from different ethnic groups	74	58
People of different ages (older and younger people/children)	53	55
People who are single, cohabiting, married or divorced	30	30
People with different sexual orientations	45	31
Men and women	55	46
People with a disability and those without a disability	63	46
People with dependents (e.g. children) and those without	31	26
People with caring responsibilities and those without caring responsibilities	34	29

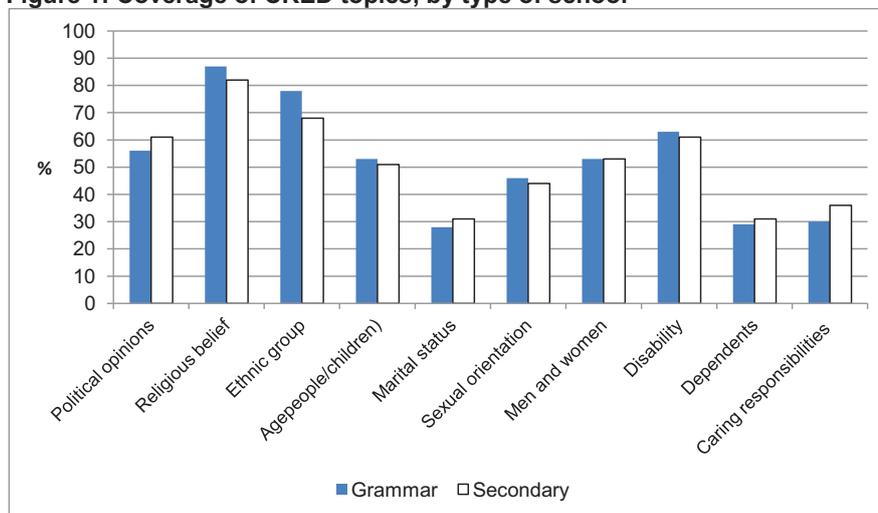

School-based CRED activities appear to be covering a broader range of topics: only 3 per cent of respondents undertaking CRED at school did not identify any of the topics, whilst the relevant figure for young settings was 11 per cent. In contrast, the proportion covering at least eight topics is 25 per cent for schools, and 19 per cent for youth settings – see Table 18. The mean number of topics identified by respondents undertaking CRED activities in school is 5.3, whilst for youth settings, it is 4.4.

Table 18: Number of topics covered, by setting

	%	
	School	Youth project or youth club
0	3	11
1	7	6
2	9	10
3	11	15
4	16	17
5	11	9
6	11	7
7	8	7
8	7	7
9	6	5
10	12	7

Due to the small number of particular types of schools, figures can only be broken down for grammar and secondary schools. Figure 1 indicates that for six topics, a higher proportion of respondents attending grammar schools had covered these, compared with those attending secondary schools. However, these differentials were generally small. The exceptions are political opinion and ethnic groups, where there was at least a 10 percentage point difference. The number of topics does not vary significantly between grammar schools and secondary schools.

Figure 1: Coverage of CRED topics, by type of school

Changing attitudes among participants

Having identified which groups were covered within the CRED activities, the next step was to explore if this resulted in changing attitudes. Thus, respondents were asked if they thought that members of their class or youth project or youth club felt more positive towards any of the groups as a result of what was taught or discussed. (Figures are only presented for those respondents who identified that particular group in q34. YLT is primarily a paper questionnaire, and so respondents sometimes do not follow the appropriate routing of questions).

Two patterns are evident from Table 19. Firstly, for each of the ten groups, at least two thirds of respondents felt that CRED activities resulted in more positive feelings among participants, and this applied for both school and youth settings. Secondly, undertaking these activities within youth settings is more likely to result in more positive attitudes than those undergoing these activities in school. This was the case for eight out of the ten groups, and for the remaining two groups, there was no differential between the two settings.

Table 19: More positive attitudes of participants about CRED groups

	%	
	School	Youth project or youth club
People with different political opinions	74	81
People with different religious beliefs	78	78
People from different ethnic groups	78	78
People of different ages (older and younger people/children)	69	77
People who are single, cohabiting, married or divorced	71	74
People with different sexual orientations	71	81
Men and women	72	75
People with a disability and those without a disability	80	82
People with dependents (e.g. children) and those without	75	83
People with caring responsibilities and those without caring responsibilities	67	77

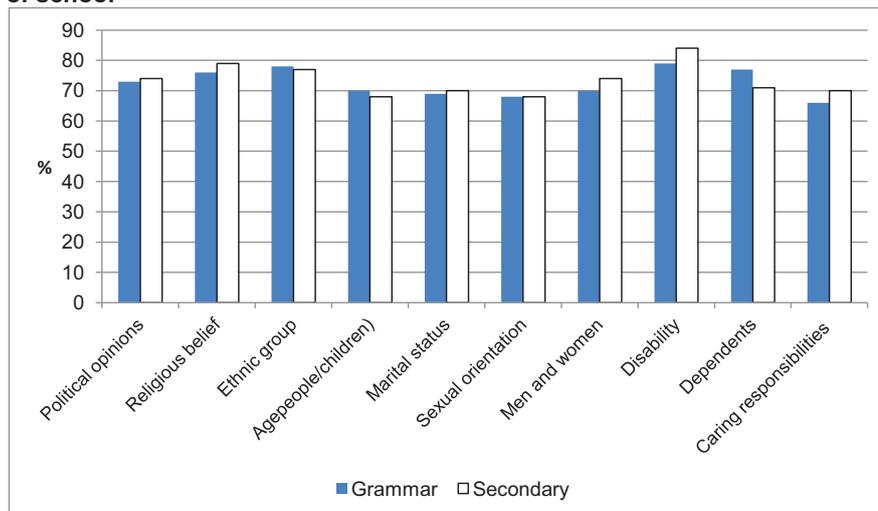

Table 20 suggests that one quarter of respondents attending CRED activities within a youth project or youth club thought that there was no group for which they perceived that CRED activities resulted in more positive feelings among participants. The respective figure for schools was 14 per cent, suggesting that CRED activities are more effective among schools than youth settings. On the other hand, it could be argued that those attending a youth project or youth club had positive feelings to begin with.

Table 20: Number of topics participants more positive about, by setting

	%	
	School	Youth project or youth club
0	14	24
1	10	9
2	13	12
3	15	13
4	12	11
5	9	6
6	6	6
7	7	5
8	3	6
9	5	4
10	7	5

In general, the perceived level of changing attitudes among grammar and secondary school respondents are fairly similar, with the largest differential (five percentage points) being in relation to disability – see Figure 2.

Figure 2: More positive attitudes of participants about CRED groups, by type of school

Changing attitudes of respondents

The final question in this section asked YLT respondents if they themselves felt more positive towards any of the groups as a result of what was taught or discussed during CRED activities.

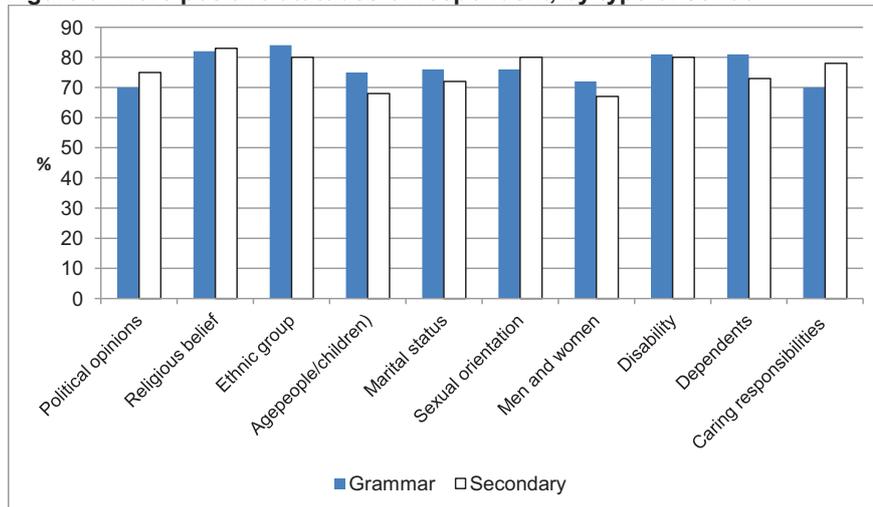

For each of the ten groups, at least seven out of ten respondents felt that their attitudes were more positive as a result of the CRED activities – see Table 21. The results for school were fairly similar to those for a youth project or youth club. Where there was a difference, these were small – the largest differential is seven percentage points, and relates to sex. Comparing Tables 19 and 21, the data suggest that a slightly higher level of respondents felt that their own attitudes had become more positive, than their perception for participants as a whole.

Table 21: More positive attitudes of respondent about CRED groups, by setting

	%	
	School	Youth project or youth club
People with different political opinions	77	75
People with different religious beliefs	83	83
People from different ethnic groups	82	82
People of different ages (older and younger people/children)	71	74
People who are single, cohabiting, married or divorced	75	74
People with different sexual orientations	77	80
Men and women	71	78
People with a disability and those without a disability	80	81
People with dependents (e.g. children) and those without	79	79
People with caring responsibilities and those without caring responsibilities	73	72

Figure 3 shows that the figures for grammar and secondary school pupils are similar for most of the CRED topics. Where differentials do exist, these are fairly low (maximum of eight percentage points); for age and sex, a higher proportion of grammar school pupils feel their attitudes have become more positive, whilst in relation to caring responsibilities, this pattern is reversed.

Figure 3: More positive attitudes of respondent, by type of school

Of all respondents who undertook CRED activities at school, around one in six (14 per cent) said that they did not have more positive feelings about any groups – see Table 22. At the same time, half that proportion (8 per cent) said they felt more positive about all ten groups. However, respondents who had undertaken CRED activities within a youth project or youth club were less likely to say that these activities made them feel more positive – one quarter did not feel more positive about any group. The pattern evident in Table 22 is very similar to that in Table 20, which focuses on the perceived change in attitudes among all respondents.

Of course, Table 22 does not take into account the number of topics that the respondent covered within their CRED activities. When this is considered, just over one half (53 per cent) of respondents felt more positive about all the groups that they discussed.

Table 22: Number of topics participants more positive about, by setting

Discussion

This suite of questions provides an insight into the experiences of 16 year olds to Community Relations, Equality and Diversity in Education (CRED) activities, and their perception of its effectiveness. Just over two thirds of young people (70 per cent) said that they had participated in these activities, the vast majority of whom had done so at school (84 per cent), with half that proportion undertaking these within a youth setting (43 per cent). Around three in ten of those participating in CRED had done so in both arenas.

The range and breadth of topic coverage varies both within, and across, settings. Thus, most respondents had undertaken activities focusing on people of different religious beliefs, although this varied from 84 per cent for school-based activities to 70 per cent among youth settings. For ethnic groups, a similar pattern is evident: 74 per cent in schools and 58 per cent in youth projects/clubs. Other topics, such as having dependents, marital status and caring responsibilities were covered by less than one third of respondents, regardless of the setting. These patterns will obviously have implications for the effectiveness of the programmes, and so may require further investigation as to why some topics are being poorly covered. It may be that facilitators feel that they are less important generally, or that other issues take priority within their particular location.

The survey results suggest that perceived effectiveness of the CRED programme is high: for each of the identified groups, at least two thirds of respondents felt that CRED activities resulted in more positive feelings among participants. This applied to activities within school and within youth settings. However, the perceived level of changing attitudes among participants in youth settings was generally higher than for those in school. This was especially evident in relation to sexual orientation and caring responsibilities, where there was a ten percentage point difference. However, these topics were among those least frequently covered by facilitators. The issue of better perceived effectiveness of CRED activities among youth settings is strategically important. It may be that facilitators and/or participants within youth settings feel more comfortable discussing topics such as sexual orientation than those involved within a school setting are. In addition, the type of activities that participants engage in may also vary across settings, which may affect perceived effectiveness.

Respondents were also asked if their own feelings become more positive after these activities. In attitudinal research, respondents quite often attribute themselves with more positive attitudes than they do for wider society, and this pattern is reflected here: the data suggest that effectiveness was higher for individuals that for general participants. For each of the identified groups, at least two thirds of respondents felt that CRED activities resulted in them feeling more positive about these groups. There was little difference depending on whether respondents undertook these activities at school or in youth settings.

One caveat relates to the wording of these questions, which ask about feeling more positive about particular groups. There are several scenarios where the respondent would not have ticked to say that they had become more positive, but this does not mean that their feelings had become more negative. A respondent may perceive that they had very positive feelings to start with, and this did not change.

Alternatively, they have may have very negative feelings, and this did not change. However, to disentangle these responses is beyond a self-completion questionnaire such as YLT.

In conclusion, the majority of young people are experiencing CRED activities in some shape or form, and these seem effective in changing attitudes. The fact that the breadth and range, as well as perceive effectiveness, may vary across settings is evident. However, this may be expected, and indeed, welcomed, given the different roles that schools and youth projects/clubs play within young people's lives.

- CRED questions asked within 2014 Young Life and Times Survey	26

Introduction

This project feeds into a wider programme of the Department of Education (DE) for Northern Ireland to:

1. Measure the success of the Community Relations, Equality and Diversity in Education (CRED) policy. The aim of this policy is to contribute to improving relations between communities by educating children and young people to develop self-respect and respect for others, promote equality and work to eliminate discrimination, and by providing formal and non-formal education opportunities for them to build relationships with those of different backgrounds and traditions within the resources available;

DE regularly assesses the effectiveness of schools and other youth settings in encouraging understanding of groups covered in Section 75 of the 1998 Northern Ireland Act. In 2012 DE commissioned ARK to develop a suite of questions to be included in the 2012 Young Life and Times (YLT) survey, which recorded the experiences of young people in relation to CRED. This module in the 2012 YLT survey provided a baseline level of success and effectiveness of CRED (Devine, 2013). In 2014 the same questions were again placed in the YLT survey, and this publication reports the findings, where appropriate comparing these with the findings of the 2012 YLT survey.

The aims of this research are:

1. To assess the effectiveness of the CRED policy amongst young people living in Northern Ireland and compare this with the previous results from the 2012 YLT survey.

Methodology

What is the Young Life and Times Survey?

The Young Life and Times (YLT) survey is a constituent part of ARK (Access, Research, Knowledge), a joint resource by Queen's University Belfast and Ulster University providing access to social and political information on Northern Ireland (www.ark.ac.uk). The aim of the YLT survey is to record the views of 16-year olds in Northern Ireland on a range of issues such as community relations, health, politics, sectarianism and education. In its current format the YLT survey has been undertaken since 2003, making it the longest running annual large-scale cross-sectional survey of young people in the British Isles.

Sample

The survey sample was taken from the Child Benefit Register. Since 2004, a statutory instrument and explanatory memorandum (Tax Credits (Provision of Information) (Evaluation and Statistical Studies) (Northern Ireland) Regulations 2004) is in place which allows ARK to access the Child Benefit Register for the YLT survey.

Child Benefit is a benefit for people bringing up children and is paid for each child. Therefore, the Child Benefit Register contains information on all children for whom Child Benefit is claimed. Until March 2013 this was a universal benefit, but in April 2013 legislation came into place which introduced means testing with regard to Child Benefit payments. Higher earners are now no longer entitled to receive Child Benefit. This resulted in a potential significant change to the YLT sampling strategy. Alternative universal or random sample frames for YLT (such as the GP register) were considered prior to the 2013 survey but found unsuitable or unworkable. However, consultations with HMRC, who administer Child Benefit payments across the UK, revealed that the names and addresses of those 16-year olds affected by the Child Benefit Payment changes and those whose parents opted out of receiving Child Benefit are still held at HMRC, for example, in order to issue National Insurance Cards. Thus, the sample of 16-year olds available to ARK for the YLT survey remained potentially universal and unaffected by the legislative changes. According to HMRC, in 2014 only 185 eligible families from Northern Ireland had opted out of receiving Child Benefit payments, which makes the Child Benefit Register an almost 100 percent accurate random sample of 16-year olds in Northern Ireland.

The sample for the 2014 survey was provided to ARK directly by HMRC. Due to an increase in the number of funders, and subsequently a higher number of questions, for the first time we needed to run a split survey (i.e. not everybody would be asked all questions). To account for this and to fulfil our obligations to our funders, we

increased our sample size. Thus, for the first time one quarter of all eligible 16-year olds, namely all respondents with birthdays from January-March, were invited to take part in YLT.

Table 1: 2015 YLT survey content by funder and questionnaire version

Module	Funder	Purple version	Orange version
Background questions	Split among all funders	✓	✓
Community relations	Office of the First Minister and Deputy First Minister (OFMDFMNI)	✓	✓
Relationships and Sexuality Education and attitudes to LGBT people	Department of Education (DE)	✓	✓
Community Relations, Equality and Diversity Education (CRED)	Department of Education (DE)		✓
Children's rights in education*	Northern Ireland Commissioner for Children and Young People (NICCY)		✓
Autism*	Centre for Behaviour Analysis (Queen's University Belfast)	✓	
Attitudes to integrated education*	Integrated Education Fund (IEF)	✓	

* **Note:** The modules on autism, Rights in Education and attitudes to integrated education were also included in the 2014 Kids Life and Times (KLT) survey. For more details, visit www.ark.ac.uk/klt.

Fieldwork methods

Fieldwork was conducted from October to December 2014. An initial letter was sent in September 2014 to all eligible 16-year olds and provided an introduction to the survey. Recipients of the letter were given the opportunity to say if they did not want to participate in the survey. In October 2014, a second letter with a paper questionnaire and FREEPOST return envelope was then posted out to all 16-year olds who had not opted out of the survey. A reminder letter containing another paper

questionnaire and FREEPOST envelope was sent to all who had not responded by the start of November 2014.

Respondents could choose one of three methods for completing the questionnaire:

- They could complete the paper questionnaire and post it back in the pre-stamped envelope;
- They could complete the questionnaire online – inputting their personal identifier to enter that part of the YLT website;
- They could take part by phone, having quoted their identification number and check letter.

Survey Content

Given that the 2014 survey was a split survey, two questionnaires were produced; in the paper versions these were orange and purple. While the majority of questions were the same in both questionnaires, some modules were only included in one survey version (see Table 1). Respondents randomly received either the orange or purple survey questionnaire.

Response rate

5,692 names of eligible respondents were on the database of Child Benefit recipients received from HMRC. Forty-six initial letters or questionnaires were returned because the addressee had moved or was unknown at the address we were given. This leaves an overall sample of 5,642 eligible respondents in total.

Thirteen young people or their parents opted out of completing the 2014 YLT survey at different stages. Commonly this was because the young person suffered from a moderate or severe learning disability or mental illness which did not allow him or her to comprehend or answer the questions.

Overall 1,939 completed questionnaires were received by the end of the fieldwork period. This represents a response rate of 34.4 percent. This total number of responses excludes nine duplicate completions (either online and paper, or two paper completions), which were removed when the datasets were cleaned.

Table 2 shows that the most popular mode of completing the survey remains postal/paper completion. The Table also shows that the response rate among those who received a purple questionnaire version was higher. Telephone responses were offered as in every year, but no phone completions at all were recorded in 2014.

Table 2: Mode of survey completion by survey version

	Orange	Purple	All
Surveys sent out	2,846	2,846	5,692
Addressee unknown	12	34	46
Paper	777	867	1,644
Online	128	167	295
Total	905	1,034	1,939
Response rate	31.9%	36.8%	34.4%

Characteristics of the respondents

Before we report the main findings of the two DE modules, in this section of the report we summarise some key background characteristics of the respondents to the 2014 YLT survey. Due to rounding, column totals in the tables below do not always sum to 100 percent.

Missing responses, that is, where the respondent did not answer a question, were removed for the analysis. In closed questions missing responses typically make up no more than two percentage points of the total YLT population, depending on the type of question asked. In open questions, this figure can be significantly higher, however, YLT survey respondents tend to respond to open questions very well and often write quite extensive comments.

Gender

For the first time the YLT survey included ‘other’ categories in addition to ‘male and ‘female’ when respondents were asked what sex/gender they were. Namely we asked whether they were male to female or female to male transgender or whether they identified as something else. Overall ten respondents chose one of these other categories (Table 3). This figure is too small to undertake any meaningful statistical analysis, however, the fact that 16-year olds said they were something other than male or female justifies the inclusion of these categories.

Table 3: Sex of respondents

	%
Males	41
Females	59
Transgender/Other	<1

Disability

Ten percent of respondents said they had a physical or mental health conditions or illnesses lasting or expected to last for 12 months or more with 68 percent of these respondents saying that this condition affected their ability to carry day-to day activities a little or a lot.

Area of living and number of years lived in Northern Ireland

Just slightly over one in five respondents (22%) lived in a large city or in a city’s outskirts. Over one third of respondents (37%) lived either in a village or in a home in the countryside, confirming the fact that Northern Ireland remains a region with a significant rural population (Table 4).

Table 4: Where respondents live

	%
A big city	8
The suburbs or outskirts of a big city	13
A small city or town	42
A country village	17
A farm or home in the county	20
Don't know	<1

Respondents had lived for an average of 15.4 years in Northern Ireland, so in fact the large majority of respondents (91%) had lived in Northern Ireland for all their life.

Ethnicity

Table 5: Ethnic group (recoded open responses)

	%
White/Caucasian	65
Catholic/Irish Catholic/Roman Catholic	6
White Irish	4
White British	4
British/English	4
Irish	4
White European/European/Continental European	2
Protestant	3
Northern Irish/White Northern Irish	2
Christian	2
White Catholic	1
White Protestant	1
Mixed origin/other	3
Don't know/none	1

Thirteen percent of respondents self-identified as members of a minority ethnic group. Almost six in ten (58%) of those who said they had a 'mixed' or other ethnic background said this, but it is note-worthy that also one in five of those identifying as 'Catholic' or 'Protestant' also said this. In fact, among all respondents who identified as members of a minority ethnic group, almost half (47%) identified as 'White' or 'Caucasian', 15 percent as 'Catholic' and only 12 percent said they had mixed or other (e.g. Chinese, Pakistani etc.) origin.

Religious affiliation

Seventy-two percent of respondents said they had a religious affiliation. Table 6 shows the proportion of respondents affiliating with specific religions. Other religions included for example other branches of Protestant religions (e.g. Elim), Hinduism, Islam, Judaism, Orthodox Christianity and Sikhism.

Table 6: Religious affiliation

	%
Catholic	54
Presbyterian	20
Church of Ireland	13
Methodist	3
Baptist	2
Free Presbyterian	1
Brethren	<1
Other	5

National identity

Table 7 shows that Irish, Northern Irish and British national identities continue to be the main national identities YLT respondents affiliate with. Nearly three quarters of Catholics (74%) identify as 'Irish', whilst over half (54%) of Protestants identify as 'British'. The proportion of Protestants identifying as 'Northern Irish' (38%) is twice that of Catholics saying they feel 'Northern Irish' (19%). However, respondents with no religious affiliation are most likely to say they feel 'Northern Irish' (40%).

Table 7: National identity

	%
Irish	36
Northern Irish	30
British	27
Ulster	2
Other	4
Don't know	2

Sexuality

YLT has been recording sexual preferences for many years. Table 8 shows that 88 percent of males and 81 percent of females were opposite-sex attracted, that is only ever sexually attracted to someone of the opposite sex whilst 11 percent of males and 12 percent of females were at least once sexually attracted to someone of the same sex.

Table 8: Sexual attracted to...*

	%	
	Males	Females
only to females and never to males	88	1
more often to females and at least once to a male	4	1
about equally often to females and males	2	3
more often to males and at least once to a female	2	8
only to males and never to females	3	81
I have never felt sexually attracted to anyone	2	6

*Figures for those saying they are neither female nor male are too small to report

Education

Ninety-five percent of YLT respondents were still in full-time education with the majority (81%) being in school. Table 9 shows the type of school respondents said they attended or, if they had left school, had recently attended. Table 10 shows that perceived religious mix of the schools respondents attended with just 14 percent saying that the proportion of Catholics and Protestants was about half and half.

Family-financial background

YLT records the socio-economic background of respondents via a self-reporting mechanism which has produced a reliable measure over the years. In 2014, just over half of respondents said their families were average well-off. Fourteen percent said they came from not well-off families, whilst 29 percent thought their families were well-off.

Representativeness and weighting

The sample frame for the YLT survey is representative of 16-year olds in Northern Ireland, as described above in the Methodology section. However, as in most other surveys, due to non-response bias, the achieved sample is not representative of the

target population. This may or may not have any implications for the results reported here. Table 3 shows for example that 59 percent of respondents were females, so due to females being much more likely to respond to the survey than males. This is typical pattern for most for social research studies.

Also, as can be seen in Table 9, 52 percent of YLT respondents said they had previously attended grammar schools, whilst the most recent DE enrolment statistics show that the proportion of pupils in grammar schools in Northern Ireland was 42 percent in 2014/15 (Source: www.deni.gov.uk/enrolment_time_series_1415.xlsx; Accessed March 2015). Indirectly, the higher proportion of respondents from grammar schools may also affect the YLT socio-economic background variable (self-perceived family-financial wellbeing), as a much higher proportion of secondary school pupils is entitled to free school meals (37%) than in grammar school attendees (12%) (Source: www.deni.gov.uk/per_cent_fsm_e_time_series_updated_1415.xlsx; Accessed March 2015). Free school meal entitlement can be seen as a proxy for the socio-economic status of young people and their families. All this is only relevant in so far, as frequency tables of results may over-represent slightly the views and experiences of females and those of grammar school attendees and, thus, indirectly the financially better-off respondents.

Should the data be weighted?

Partially, the non-response bias can be addressed by introducing weight factors. This can be done for variables for which we know the actual proportion people in the target population. Gender and school type attended are such examples. This is much harder where reliable statistics are not available, or where certain issues are very complex, for example disability. We know that people with certain sensory disabilities or with complex needs are more likely to opt out of the survey, however, people with physical disabilities may be over-represented – we cannot be sure. Generally several weight factors would need to be applied to address various variables, and even then non-response bias is a complex issue, which cannot be easily fixed. The academic view is that caution needs to be applied when weighting datasets (see point 5.4. in this document produced by the National Centre for Research Methods: <http://www.restore.ac.uk/PEAS/nonresponse.php>), as the weighting procedure whilst increasing representativeness in some areas can, at the same time, decrease sample accuracy in others. The YLT approach is not to weight data. However, gender, family financial background and school background are routinely used to cross-examine findings, and if differences are found, these are reported, as can be seen below.

Main findings

CRED

In this section we report the experiences of YLT responses in relation to CRED. When possible, the results from the 2012 YLT survey are shown for comparison in the Tables and Figures.

Experience of CRED

The CRED module was repeated exactly, thus - as in 2012 - the questionnaire provided an introduction to the topic for the respondents, using the following text:

‘Education and youth work are supposed to encourage understanding of particular groups in society and promote the equal treatment of different groups. This can be done through exchange programmes, discussions, workshops, lessons or videos.’

When asked if they had ever done any of this, 73 percent compared to 70 percent of respondents in 2012 indicated that they had done so. This shows a very slight increase of young people receiving CRED. The increase is largely due to a higher coverage of CRED topics in school. The coverage in youth projects remained the same as in 2012, however the proportion of young people receiving CRED in both school and youth settings actually decreased a little, as Table 11 shows.

Table 11: Participation in CRED activities

	%	
	2014	2012
School only	46	40
Youth project only	10	10
Both school and youth project	16	20
Neither	27	30

Tables 12 and 13 focus on those receiving CRED in school by school type and by the religious composition of the school they currently or last attended.

Table 12 shows that respondents attending planned integrated schools were more likely to receive CRED than those in grammar or secondary schools, which was also the case in 2012. (Other school types were omitted from this table due to small

numbers attending these). The difference between these two surveys is statistically insignificant.

Table 12: CRED received in school by type of school

	%	
	2014	2012
Planned Integrated	70	68
Grammar	59	61
Secondary	59	57

Table 13 indicates that those in all or nearly all Protestant schools were least likely to receive CRED. The findings show a reversal compared to 2012 with regard to schools with 'mostly Catholic' and 'mostly Protestant' intakes, with pupils in 'mostly Protestant' schools being more likely to receive CRED now than those in 'mostly Catholic' schools. This finding should not be overestimated as some respondents in particular in schools with an intake of pupils from mixed religious backgrounds may simply not know whether their schools have a majority Catholic or Protestant background.

Table 13: CRED activities by religious composition of school last or currently attended

Don't know	39	52

CRED topics

Those who had experienced CRED activities were asked if these activities had covered a range of ten groups, reflecting the Section 75 categories. This was explored separately for school and for youth settings (Table 14).

Table 14 clearly shows two trends. Firstly, as in 2012, schools have covered issues relating to all groups more than youth projects or youth clubs. Secondly, with few exceptions, those who said they had received CRED reported a higher coverage of topics compared to 2012, and this was the case for both school-based and youth project-based CRED. The increase in the level of coverage was not necessarily consistent between schools and youth projects. For example, there was a seven percentage point increase in coverage of relationships (ie whether people are married, cohabiting, single or divorced) in schools, but a two percentage point drop in coverage in youth projects, even though this is statistically insignificant. On the other hand, it appears that different political opinions were more discussed in both schools and youth projects in 2014 compared to 2012. Religious beliefs remains the topic most likely to be discussed both in schools and youth settings.

Table 14: Coverage of CRED groups, by setting

	%			
	Your School		Your youth project or youth club	
	2014	2012	2014	2012
People with different political opinions	65	59	53	48
People with different religious beliefs	88	84	79	70
People from different ethnic groups	79	74	65	58
People of different ages (older and younger people/children)	59	53	55	55
People who are single, cohabiting, married or divorced	37	30	28	30
People with different sexual orientations	48	45	41	31
Men and women	58	55	54	46
People with a disability and those without a disability	66	63	54	46
People with dependents (e.g. children) and those without	35	31	34	26
People with caring responsibilities and those without caring responsibilities	34	34	31	29

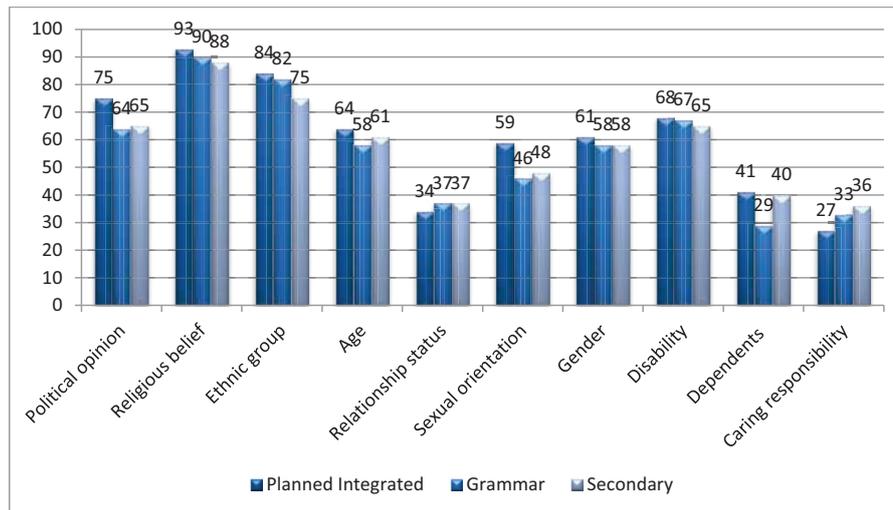

Table 15 shows that there was an increase in CRED topics covered both in school and youth work settings. This means that 2014 YLT respondents who received CRED education were more likely than their counterparts in 2012 to have covered a greater variety of topics. This is particularly noticeable in the increase in proportions of respondents saying that all respective ten CRED topics were covered. Almost one in five respondents who received CRED in school (19%) and 13 percent of respondents who received CRED in youth settings said they covered all CRED topics.

Table 15: Number of CRED topics covered, by setting

	%			
	In school		In a youth setting	
	2014	2012	2014	2012
1	7	7	11	6
2	8	9	14	10
3	12	11	8	15
4	10	16	11	17
5	12	11	13	9
6	12	11	6	7
7	7	8	8	7
8	7	7	6	7
9	7	6	12	5
10	19	12	13	7

In line with the Tables above, Figure 1 shows that most subjects were most likely to be discussed in planned integrated schools. The difference in coverage compared to grammar and secondary schools was greatest with regard to the topics of political opinion and sexual orientation. Religious beliefs, ethnic belonging and political opinions were also more likely to be covered by CRED programmes in schools with an exclusively or predominantly Protestant intake, whereas issues such as caring and dependencies were more likely to be discussed in schools with an all or predominantly Catholic intake.

Figure 1: Coverage of CRED topics, by type of school (%)

Changing attitudes among participants

In this section we report respondents’ perceptions with regard to changing attitudes as a result of the CRED education received – both at group level and at a individual level. Again, we make comparisons with the 2012 data when and where this is appropriate. As in the previous report (Devine, 2013), figures are only presented for those respondents who identified that particular group for which they received CRED education¹.

Group level

Respondents were asked if they thought that members of their class or youth project or youth club felt more positive towards any of the groups as a result of what was taught or discussed in CRED.

Table 16 illustrates that at least seven in ten - in some topics almost nine in ten - respondents who had received CRED education felt that this had had positive effects on the feelings among those receiving the respective education. Similar to the previous survey this applied again to both school and youth settings. The Table also shows that the changes compared to the YLT survey two years ago were generally

¹ For example, if someone said s/he did not receive CRED on the topic of ‘people with different political opinions’, this respondent’s answer is automatically excluded and set as ‘skip’ or ‘missing’ when asked whether s/he felt that his or her views are now more positive towards people with different political opinions as a result of CRED, although, arguably, CRED on another topic, for example on ‘people with different religious views’ could have a more general positive effect, including an effect on the views on political opinions.

only marginal, with some notable exceptions. For example, there was a six percentage point increase in school settings and a seven percentage point increase in youth settings among those who said that CRED with a focus on different religious beliefs resulted in more positive attitudes among participants. Compared to two years ago, there was also a five percentage point increase amongst those who said participants had more positive feelings towards people with different sexual orientations after CRED on this topic in school settings. On the other hand, there was a six percentage point drop in perceived positive feelings among those who had received CRED in youth settings covering the topic of people with and without dependents.

Table 16: More positive attitudes of participants about CRED groups, by setting and year.

	%

People with caring responsibilities and those without caring responsibilities	74	67	78	77

Table 17 shows how many groups respondents thought their classmates or other attendants in youth projects felt more positive about following CRED. This is again

presented in a way that it makes comparisons with the 2012 YLT survey easy. The Table shows a seven percent decrease in the proportion of respondents who felt that CRED in youth settings had no impact on more positive views towards any of the groups covered in CRED. The results for CRED in school settings were almost identical to 2012, however, there was a five percent increase in respondents saying that CRED in school had a positive impact on their classmates' views about *all* ten groups covered in CRED. Overall, Table 17 suggests the closing of the effectiveness gap between CRED in school settings and CRED in youth settings compared to two years ago, although school remains the venue which appears to retain the greater positive effects so far.

8	4	3	4	6
9	6	5	8	4
10	12	7	9	5

Individual level

Table 18 shows the proportion of respondents who felt they personally had more positive views towards any of the groups as a result of what was taught or discussed during CRED activities. The same principle applied as in Table 16, namely, anyone who had either indicated that s/he had not received CRED at all, or had not received CRED on the specific topic in the respective school or youth setting, was excluded in

the analysis of whether or not they held more positive views now. This means, again, that only the very direct effect of CRED education is covered in Table 18 and any possible indirect and cross-cutting positive effects are excluded.

For each of the ten groups, at least seven in ten respondents felt that their attitudes were more positive as a result of the CRED activities in school, and at least two thirds of respondents felt this after CRED in youth settings. Most changes compared to the YLT data from the 2012 survey were again only marginal, with CRED in school settings generally seeing more positive changes. There was an eight percent increase in more positive feelings as a result of CRED in school settings on gender and a six percent increase with regard to positive attitudes towards people of different ages. Around one in ten respondents said that their views had not changed on any of these issues as a result of CRED.

Table 18: More positive attitudes of respondent about CRED groups, by setting and survey year

	%			
	Your School		Your youth project or youth club	
	2014	2012	2014	2012
People with different political opinions	78	77	76	75
People with different religious beliefs	88	83	81	83
People from different ethnic groups	86	82	77	82
People of different ages (older and younger people/children)	77	71	73	74
People who are single, cohabiting, married or divorced	80	75	80	74
People with different sexual orientations	79	77	82	80
Men and women	79	71	76	78
People with a disability and those without a disability	84	80	84	81
People with dependents (e.g. children) and those without	80	79	78	79
People with caring responsibilities and those without caring responsibilities	75	73	67	72

Keeping in mind the overwhelmingly positive response to CRED, if anything, there was slight decrease in positive attitudes as a result of CRED activities in youth settings compared to two years ago. However, statistically this decrease is insignificant. Notable is perhaps the five percentage point lower proportion of respondents, compared to two years ago, who received CRED in youth settings and who said they felt more positive as a result of talking about people from different ethnic groups and people with and without caring responsibility. This can be interpreted in different ways. One possible hypothesis is that CRED in youth settings has become slightly less effective with regard to attitude change. However, it is also possible that an increasing proportion of young people in youth settings already hold more positive views towards people from various other ethnic backgrounds so that CRED does not as such lead to even *more* positive views.

To support the latter hypothesis, we can refer to other YLT data. Attitudes towards minority ethnic groups have been recorded by YLT since 2004. Whilst the proportion of respondents expressing negative attitudes decreased slowly from seven percent in 2004 to three percent in 2014, the proportion of YLT respondents who expressed positive views towards minority ethnic groups increased from 39 percent in 2004 to 48 percent in 2014. This could be an effect of CRED and similar education activities, but it could also be a result of the changed demographic landscape and a higher degree of mixing, as is also evident from the YLT survey. In 2008 13 percent of respondents said they mixed and socialised very often with people from a different ethnic background. In 2014 this figure was 20 percent.

Figure 2: More positive attitudes of participants about CRED groups, by type of school (%)

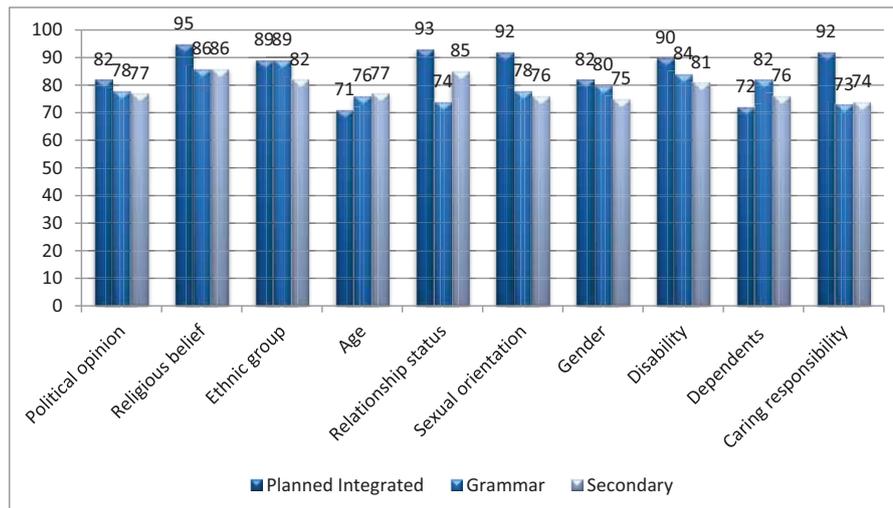

Figure 2 shows the extent to which respondents attending different school types said their own views had become more positive as a result of CRED education in their schools. In general, the perceived level of changing attitudes was similar in all school types although those attending planned integrated schools were slightly more likely to report positive attitude changes in relation to most topics. The differences between schools were largest on the topics of sexual orientation, caring responsibility and relationship status.

Table 19 shows the number of CRED groups that respondents felt *personally* more positive about. Again, the changes compared to two years ago are very modest. The most notable change is the decrease in the proportion of respondents who received in CRED in youth settings and said they did not feel more positive towards any of the groups discussed (24% in 2012 compared to just 18% in 2014). At the other end of the scale, 12 percent in 2014 compared to just seven percent in 2012 of those who took part in CRED in school said they felt more positive towards all ten groups covered by CRED.

Discussion

This suite of questions discussed in this section provides an insight into the experiences of 16-year olds to Community Relations, Equality and Diversity in Education (CRED) activities, and their perception of its effectiveness. It is interesting to compare the results of the 2014 YLT survey with those the baseline data collected by the 2102 YLT survey.

There was a very small increase of 16-year olds taking part in CRED activities compared to 2012 (73% and 70% respectively). This increase was entirely due to a higher proportion of young people receiving CRED in schools (46% compared to 40% in 2012). This means that 62 percent of 16-year olds have received CRED in school settings

The most likely topics covered both in school and youth settings remain ethnicity and religious beliefs, with disability and political opinions being the next most likely topics covered. Thus, our data suggest that even 20 years after the first Northern Ireland ceasefire, 16-year olds in Northern Ireland are still more than twice as likely - both in school and youth settings - to discuss religious and political division than to debate caring responsibility or family dependencies, which emphasises the currency that Northern Ireland conflict-related topics retain.

However, there is very little difference in the perceived effectiveness of CRED on any of the covered topics – Northern Ireland Conflict-related or not - with at least seven in ten respondents saying that discussions led generally to more positive views both among their classmates in school and friends in youth settings, as well as for them personally. This confirms the findings from two years ago that the perceived effectiveness of the CRED programme among 16-year olds is high for both youth and school settings.

The data suggest that planned integrated schools appear to have a slightly higher coverage of CRED topics and also boast a modestly higher effectiveness rate in CRED compared to secondary and grammar schools. Perhaps one of the explanations could be that planned integrated schools are *per se* organised in a way that they have a more diverse pupil population both academically and with regard to the ethnic and religious background of their pupil population, whilst due to the nature of pupil selection grammar schools - and as a consequence many secondary schools tend to have more homogeneous pupil cohorts. Addressing community relations, diversity and equality may be a more 'natural' and prudent activity in more diverse schools.

As pointed out in our previous report (Devine, 2013) and reiterated above, the CRED survey questions are asked in a way that they capture *change* in attitudes. The question module does not capture opinions and attitudes more generally. As Devine (2013) stated in the concluding comments to her report: '*Respondents may perceive that they had very positive feelings to start with, and this did not change.*

Alternatively, they have may have very negative feelings, and this did not change.'

We currently do not record responses like that. Above we made an attempt to relate the CRED findings to other findings, to potentially address this. We showed that an apparently lower effectiveness of youth setting-based CRED addressing ethnic belonging may well be related to an improving attitude and greater degree of contact overall with people from minority ethnic groups.

We also do not capture or report on 'collateral effects' of CRED, for example more positive attitudes towards people with different political opinions as a result of CRED on religious views. This would be quite a reasonable effect to expect in the Northern Ireland context. Nor do we currently provide an opportunity for respondents to say that their views have become more *negative* as a result of CRED, even though this the current evidence would suggest that this would be an unlikely scenario. The proportion of respondents saying that CRED had no impact on their views was about ten percent as reported above, but 'no effect' is not the same as a 'negative effect'. At the moment, there is very little evidence for a negative effect of CRED, quite the opposite – the evidence for the positive effect that CRED has in both youth and school settings is overwhelming. However, a more complex review of CRED in a few years' time could include a more in-depth and qualitative assessment of CRED or alternatively an extended CRED survey module which would allow respondents to share more detailed experiences – both negative and positive.

2 June 2015

Dear Peter

INQUIRY INTO SHARED AND INTEGRATED EDUCATION

Thank you for your letter of 15 May 2015 seeking further clarification and information following DE officials briefing to the Committee on 13 May, as part of the Committee's Inquiry into Shared and integrated education. I will respond to your requests in the order of your letter.

Levels of Progression

The aims of the Delivering Social Change Shared Education Signature Project are to improve educational, including reconciliation, outcomes through schools working collaboratively on a cross-community basis. Key Stage data is the only consistent means of reporting attainment against the cross-curricular skills as defined in our curriculum. Key Stage data is, therefore, necessary in order to evaluate the success of the programme at school and system level. Consequently, schools will be required to comply with the statutory assessment process, as a condition of funding.

Equality of Identity

The use of the phrase 'Equality of Identity' within the Shared Education policy refers to equality in respect of the set of characteristics that somebody recognises as belonging uniquely to himself or herself and constituting his or her individual personality for life.

Religious Balance Pupils and Boards of Governors

Existing schools wishing to transform to integrated status must demonstrate reasonable prospects of achieving, over the longer term, a minimum of 30% of their enrolment drawn from the relevant minority tradition. No pre-existing level of integration is

necessary, but to ensure that transformation is well grounded from the outset, schools must attract at least 10% of their first year intake from whichever is the minority community within the school before final approval is granted.

A new grant-maintained integrated school should aim to attract 30% of its pupils from the minority community in the area where the school is situated.

I enclose, therefore, at **Appendix A** details relating to non-integrated schools that have a minimum of 10% of pupil enrolment from the minority community at the school. I also enclose at **Appendix B** details of relating to current integrated schools that have less than 10% of pupil enrolment from the minority community at the school.

The Department does hold information relating to the overall religious background of the Boards of Governors of individual schools.

Information is requested on the community background of the governors the Department appoints to voluntary grammar and grant maintained integrated schools, although appointees are not obliged to provide this. However, this represents a maximum of one third or two ninths of the governors of a voluntary grammar school and a maximum of one quarter of the governors of a grant maintained integrated school. It does not, therefore, provide an indication of the overall religious balance of a school's Board of Governors.

Shared Education Consultation Events

Four public consultation events were held on the Shared Education Policy and Bill during February 2015, including an event for young people. In total, approximately 63 people attended these events.

Special Schools

Under Articles 68 and 90 of the 1989 Order, Special Schools (and schools established in hospitals) are not eligible to obtain grant maintained and controlled integrated status.

The current intake criteria to Special Schools are based on the special educational needs of each individual child. Integrated schools can include community background as an intake criterion in order to have a reasonable mix of children from each community background. If applied in a Special School, this could mean that children could be admitted, or not, based on their religion rather than to a school that was the most appropriate place for their educational needs to be met.

The prohibition within the legislation recognises the complex needs of children within the special education sector. Special Schools provide a pupil-centred service to a religious mix of children. That approach places children and their individual needs, regardless of their community background, ahead of the needs of institutions.

Early Years and Youth Shared Education Continuum

I enclose a copy of "Developing Shared Education in Early Years Settings: A Framework for Collaborative Partnerships", the continuum developed by ETI specifically

for the early years sector. The continuum model for the Youth Sector is not yet finalised. I will provide a copy when available.

Yours sincerely

Russell

23 June 2015

Dear Peter

Inquiry into Shared and Integrated Education: Equality of Identity

The Shared Education Bill sets out the legislative definition of Shared Education. This references the minimum essential requirements for shared education - that is the education together of those of different religious belief and those experiencing socio-economic deprivation.

The legislative definition is underpinned by the policy description which describes the practical implementation of shared education. The policy description aims to ensure delivery is as inclusive as possible and lists a number of descriptors to ensure this aim, including 'equality of identity'.

In using this term, the Department recognises that individuals have a set of differing characteristics that they regard as their identity – those which make them unique and distinctive. These can include characteristics as diverse as gender, race, marital

status, cultural, disability, national or social origin, association with a minority, sexual orientation, belief, and language.

Inclusion of this phrase recognises that individuals can face discrimination due to their perceived identity. It is included in the policy description to ensure application of the policy is as inclusive as possible and recognises these differing aspects of identity.

Identity is a specific characteristic recognised in the UNCRC. In their General Comments on Article 29 on the goals of education (CRC/GC/2001/1), the UN sets out that the aims of education are the holistic development of the full potential of the child, including an enhanced sense of identity (paragraph 1 of the General Comments). The Convention argues the need for a balanced approach to education and one which succeeds in reconciling diverse values through dialogue and respect for difference.

The Convention's General Comments on Article 29, makes explicit reference to the "*indispensable interconnected nature of the Convention's provisions*", including the link to Article 2 which requires state parties to respect and ensure the rights set forth in the Convention to each child within their jurisdiction without discrimination of any kind. In using the term 'equality of identity' the Department is reflecting the broad aims of the UNCRC.

The UN Commission for Human Rights also uses the term 'identity' when referring to the discrimination, for example in relation to sexual orientation and gender. Additionally 'identity characteristics' is a term which has been used by the European Court of Human Rights.

The British Irish Council used the term 'identity' in their commitment to the mutual respect, civil rights and the religious liberties of everyone in the community, specifically "*.. the principles of mutual respect for the identity and ethos of both communities and parity of esteem*" in the north of Ireland."

(www.britishirishcouncil.org/agreement-reached-multi-party-negotiations/rights-safeguards-and-equality-opportunity)

The Equality and Human Right Commission, which covers England, Scotland and Wales also recognises the term. Their triennial review, 'How fair is Britain?' focused attention on the need to tackle the "*high incidence of identity-based bullying of young people, both within schools and the wider community*". Their report states that ***'Identity-based' (or 'prejudice-based') bullying is widespread and continues to blight the lives of many young people, affecting educational attainment and having a long term impact on their life chances.'*** Their report identified the **common** cause as children's, and sometimes teachers' poor understanding of diversity.

In the public consultation, there were no responses relating to the use of the phrase, 'equality of identity'.

Consequently, the Department is of the view that inclusion of the term "equality of identity" within the practical description of Shared Education as set out in the Sharing Works policy is entirely reasonable in ensuring the inclusive nature of the policy.

Yours sincerely

Caroline Perry and Barbara Love

Young people's views on sharing and integration in education

This research paper presents the findings of a series of focus groups and two surveys conducted with children and young people, exploring their views on shared and integrated education

Research and Information Service briefings are compiled for the benefit of MLAs and their support staff. Authors are available to discuss the contents of these papers with Members and their staff but cannot advise members of the general public. We do, however, welcome written evidence that relates to our papers and this should be sent to the Research and Information Service, Northern Ireland Assembly, Room 139, Parliament Buildings, Belfast BT4 3XX or e-mailed to RLS@niassembly.gov.uk

Key Points

- This paper considers the views of children and young people gathered through focus groups and through additional analysis of existing survey data;
- More primary pupils have participated in shared education (88% compared to 55% at post-primary);
- A majority of respondents to the survey thought that shared education was a 'good idea', with greater support evident at post-primary;
- Catholic students were more likely to state that shared education was a good idea and less likely to say that they had not enjoyed the projects they had participated in than their Protestant counterparts;
- Students tended to be less willing to share projects with schools of a different management type;
- A number of students questioned the value of shared education and suggested that it could emphasise differences;
- Potential advantages highlighted by young people included increased educational opportunities, making new friends and greater tolerance;
- Perceived disadvantages included having to mix with people perceived as being very different to them or disruptive, challenges around integrating during shared education and having to travel to another school;
- There was support for integrated education among most participants in the focus groups, although some stated that they preferred to attend school alongside others of a similar background;
- This paper has highlighted a number of areas that could be given further consideration, including:
 - The reasons why more primary pupils have participated in shared education;
 - The different levels of support for and enjoyment of shared education between Protestants and Catholics;
 - The reluctance of some students to take part in shared education with schools of a different management type;
 - The perception of some participants that shared education may accentuate differences between pupils;
 - The extent to which pupils from different schools integrate when they take part in shared education.

Executive Summary

Introduction

The Committee for Education is carrying out an inquiry into shared and integrated education. This research paper explores the views of children and young people gathered through a series of focus groups and an analysis of the 2012 Kids' Life and Times and Young Life and Times survey data.

Experience of shared education

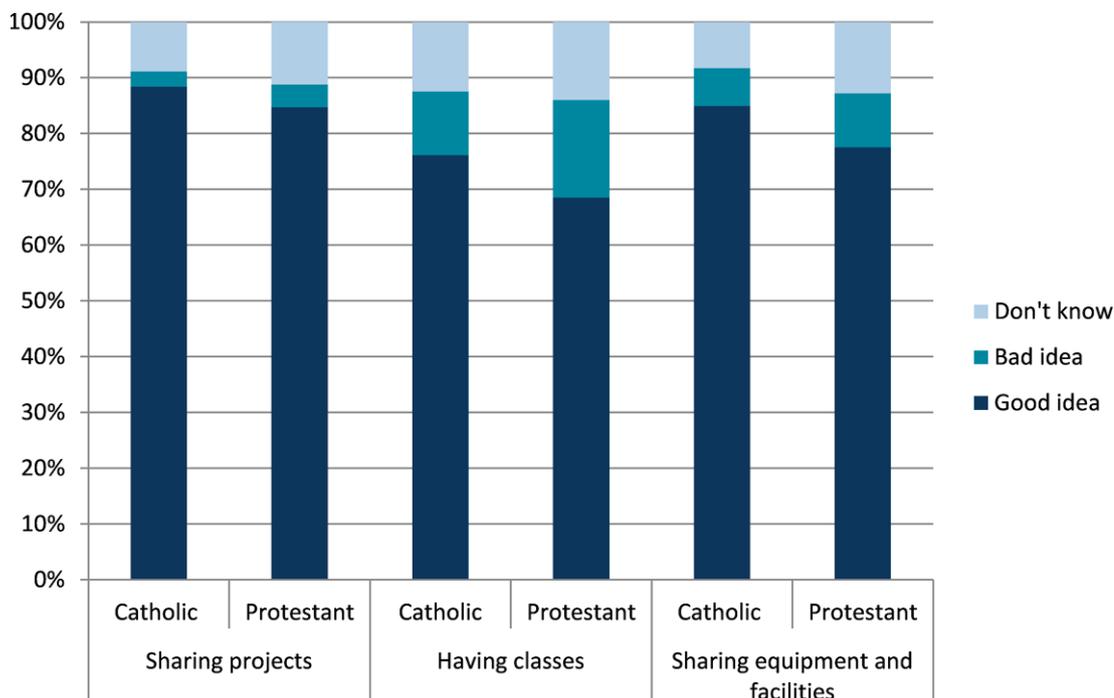

Data from the surveys shows that more primary school pupils have participated in shared education - 88% of primary survey respondents had shared projects with pupils from other schools, compared to 55% at post-primary. Most of those who had participated stated that they enjoyed it 'sometimes' or 'mostly'.

Views on shared education

A majority of survey respondents thought that sharing classes with children from other schools was a 'good idea', with greater support at post-primary (72% compared to 59% at primary). There was more support for sharing projects than classes with other pupils.

With regard to religious background, Catholics were more likely to believe that sharing in education was a good idea, and less likely to note that they did not enjoy the shared education projects they had participated in (4% compared to 13% of Protestants).

Figure 1: Do you think that the following activities are a good idea?

The evidence also suggests that students tend to be less willing to share projects with schools of a different management type. For example, while 98% of grammar respondents would be happy to share projects with another grammar, a lower proportion stated that they would not mind sharing with a non-grammar (85%) or special school (74%). Students from integrated schools were the most willing to share with schools of a different management type.

A majority of participants in the focus groups were in favour of shared education, although some were reluctant to share with schools of a different religious denomination. A number

of students questioned the value of shared education, suggesting that it could actually emphasise differences between people of different backgrounds.

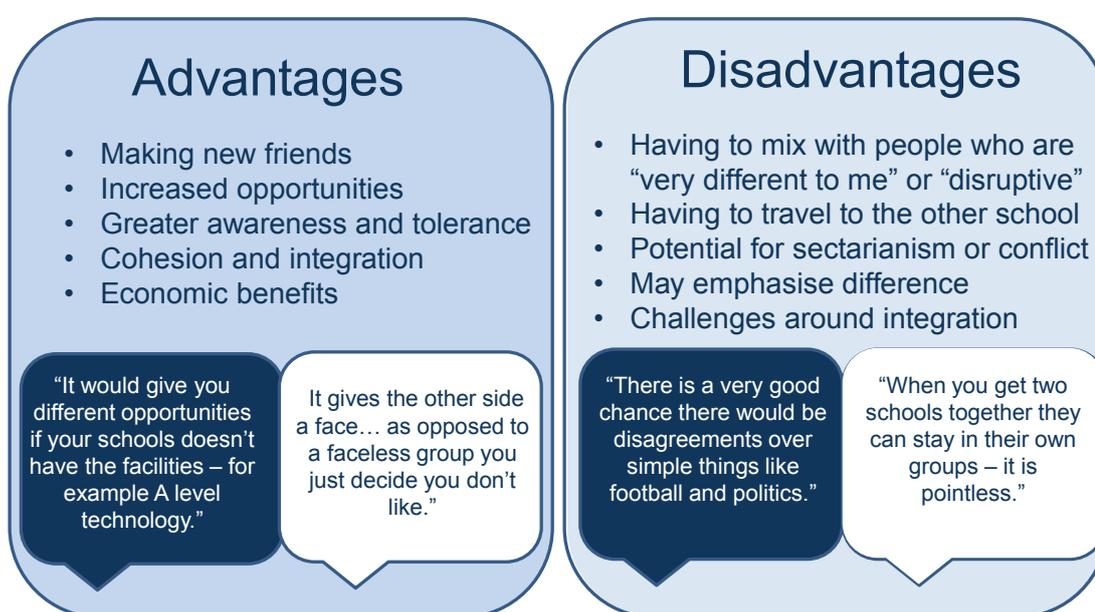

“Shared education is getting Protestants and Catholics, putting them on the same campus and that is it. It is almost promoting their differences.”

(Focus group participant)

Advantages and disadvantages of shared education

Participants in the focus groups and survey respondents highlighted a range of potential benefits and disadvantages that could arise from sharing with other schools; these are illustrated in Figure 2.

Figure 2: Perceived advantages and disadvantages of shared education

With regard to the perceived benefits, post-primary survey respondents were more likely to highlight making new friends and doing different classes as a benefit; while a higher proportion of primary pupils thought that doing interesting projects would be an advantage.

In terms of disadvantages, Protestant respondents were more likely to be concerned about mixing with children of a different religion (8% compared to 4% of Catholic respondents).

There were also differences by school management type, with just under a quarter (23%) of non-grammar respondents stating that mixing with people very different to themselves would be a disadvantage, compared to 16% of grammar students and 10% of respondents from integrated schools.

Integrated education

A majority of participants in the focus groups supported integrated education. However, some students stated that they would prefer to attend a school alongside others from a similar background, and highlighted the importance of school choice. Students from Irish-medium and integrated education were also supportive of the integrated model. The perceived advantages include:

- Greater cohesion and integration;
- More inclusive for pupils from a range of backgrounds;

- Greater choice.

“No one is rejected; they are accepted for who they are.”
“People need to be specific to one community, or they don’t know who they are.”

Conclusion

This paper has highlighted a number of areas that could be given further consideration, including:

- The reasons why more primary pupils have participated in shared education;
- The different levels of support for and enjoyment of shared education between Protestants and Catholics;
- The reluctance of some students to take part in shared education with schools of a different management type;
- The perception of some participants that shared education may accentuate differences between pupils;
- The extent to which pupils from different schools integrate when they take part in shared education.

- 7 Views on integrated education
- 8 Conclusion

1 Introduction

The Committee for Education is currently undertaking an inquiry into shared and integrated education. In order to consider the views of children and young people, this research paper highlights the findings of a series of focus groups conducted with children and young people. It includes a data analysis conducted by the Northern Ireland Assembly Research and Information Service (RalSe) of the 2012 Kids' Life and Times Survey¹ and Young Life and Times Survey.²

2 Methodology

A series of ten focus groups was held with primary, post-primary and special schools, comprising controlled, Catholic maintained, integrated, Irish-medium and voluntary grammar schools. The Assembly's Education Officers facilitated the groups.

The Kids' Life and Times Survey is an annual online survey of Primary 7 (P7) children carried out in school. In 2012, a total of 4,200 P7 children participated in the survey, mostly aged between 10 and 11 years old. The Young Life and Times Survey is an annual postal survey of 16 year olds; 1,210 young people participated in 2012. These surveys included modules on shared education.

The datasets were downloaded from the ARK (Access Research Knowledge) website, a resource aimed at making social and political information on Northern Ireland available to a wide audience, and analysed by RalSe using SPSS. This allowed for further analysis of the Young Life and Times Survey by school type and pupils' religious background. Questions on school management type or religion were not asked in the Kids' Life and Times Survey.³

3 Experience of shared education

Data from the Kids' Life and Times and the Young Life and Times Survey shows that more pupils from primary schools have participated in shared education than their counterparts at post-primary.

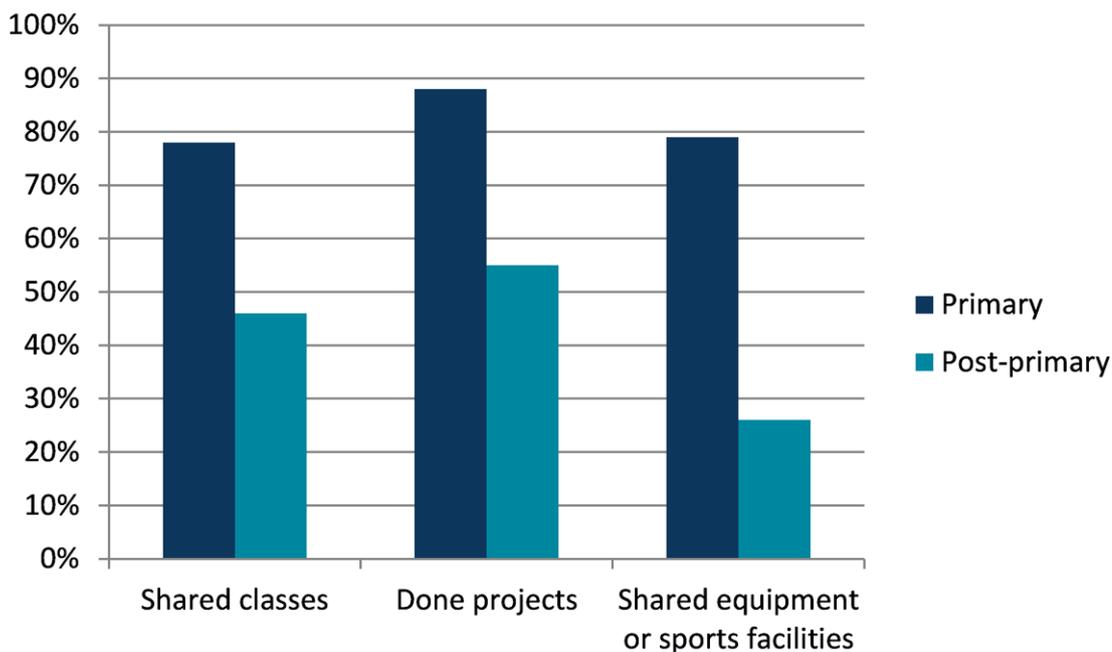

Under three quarters (71%) of post-primary and 61% of primary respondents reported that some of the pupils they participated in shared education had a different religious background.

1 ARK Kids' Life and Times [online] Available at: <http://www.ark.ac.uk/klt/>

2 ARK Young Life and Times Survey [online] Available at: <http://www.ark.ac.uk/ylt/>

3 Please note, cells containing three or less respondents have been suppressed (*).

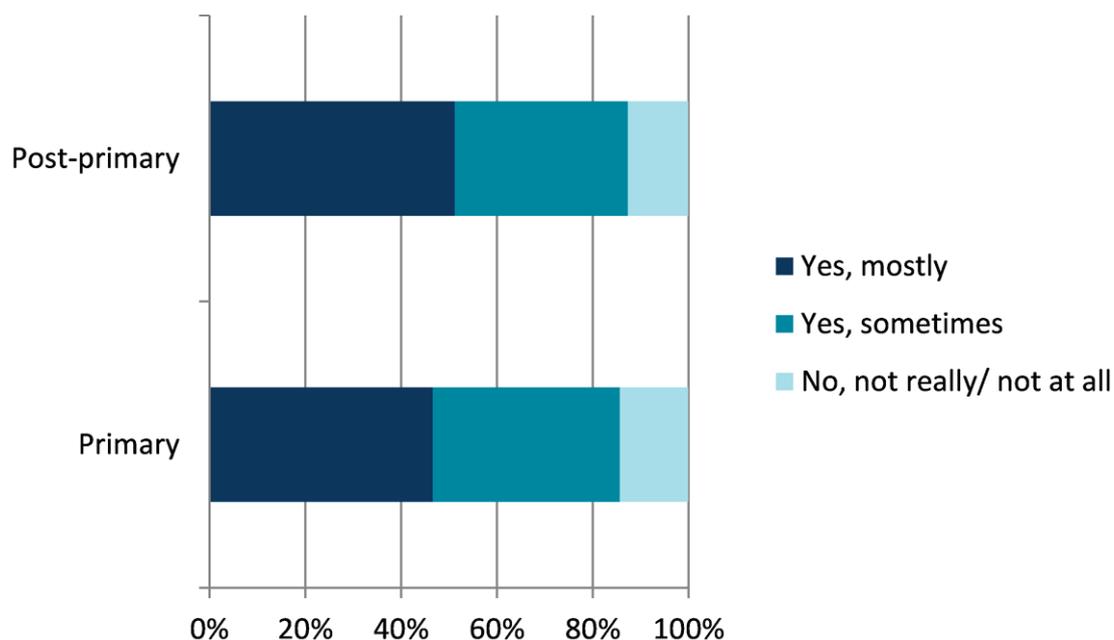

Figure 3: Have you ever participated in the following activities with children from other schools? By school phase

Pupils from non-grammar post-primaries were least likely to have participated in shared education (20% stated that they had not), followed by pupils from grammar schools (18%). Students from integrated schools were most likely to have participated in shared education, with 11% stating that they had not previously done so.

The surveys indicate that most children and young people who participated in shared education enjoyed the experience either ‘sometimes’ or ‘mostly’. For example, 88% of primary respondents and 91% of post-primary respondents enjoyed doing projects with other children.

Figure 4: Did you enjoy having classes with the other children? By school phase

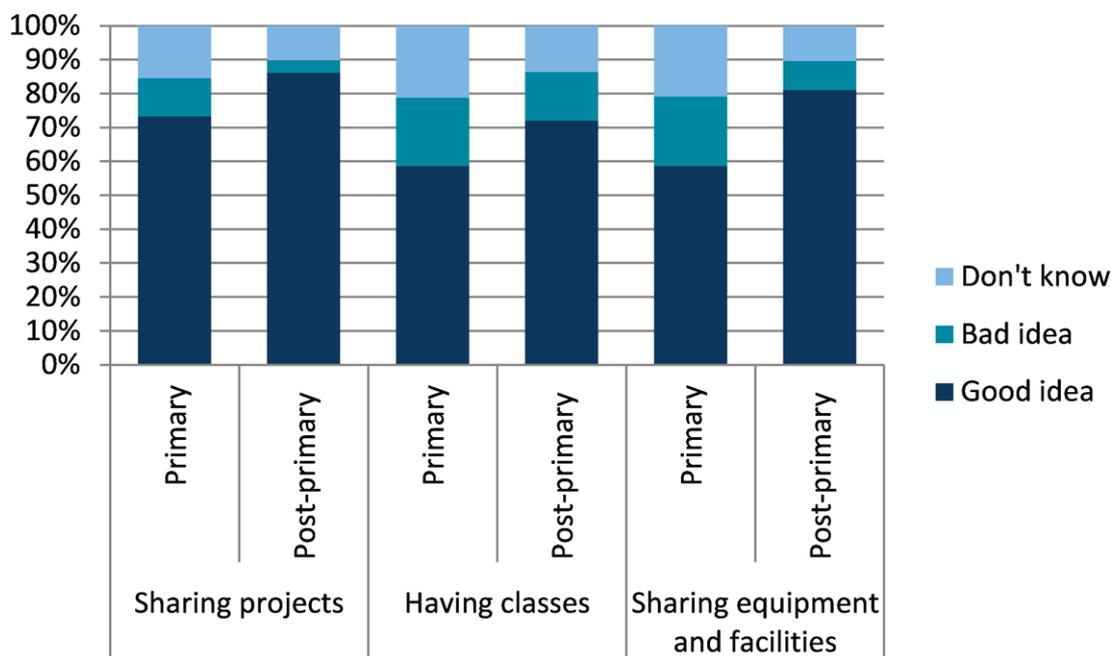

However, there were marked differences by religious background, with 13% of Protestant respondents stating that they did not enjoy the shared education projects they participated in, compared to 4% of their Catholic counterparts.

4 Views on shared education

The survey evidence suggests that a majority of young people believe that sharing classes with children from other schools was a 'good idea'. There was generally more support at post-primary, with 72% of respondents believing that sharing classes is a good idea compared to 59% of primary pupils. There was also greater support for sharing projects compared to having classes or sharing equipment.

In the survey pupils from integrated schools were more likely to feel that sharing projects, classes and equipment with other schools was a good idea - 88% stated that sharing classes was a good idea, compared to 70% of grammar and 73% of non-grammar respondents.

Figure 5: Do you think that the following shared education activities are a good idea? By school phase

In the focus groups the majority of primary school pupils supported shared education and stated that they would be willing to take part in classes with pupils from schools of a different religion. Pupils from an integrated primary highlighted a preference for fully integrated education rather than shared education.

“I think it [shared education] would be good, because we learn from a young age that we are all the same and we shouldn’t fight with them.”

(Primary participant)

At post-primary many students were very supportive of the concept, highlighting benefits such as increased access to resources and integrating with people from a different background.

“It gives you the opportunity to make more friends. You would meet more people and meet people of different religious beliefs; it would give you a flavour of different religions.”

(Post-primary participant)

However, some post-primary students were reluctant to share classes or resources with students from other schools. They highlighted concerns around logistical and financial issues, as well as concerns around mixing with pupils from other schools, the potential for sectarianism and having to share resources with others.

“It could be complicated, like if someone walked in in a Rangers top and one in a Celtic top and that starts something.”

(Post-primary participant)

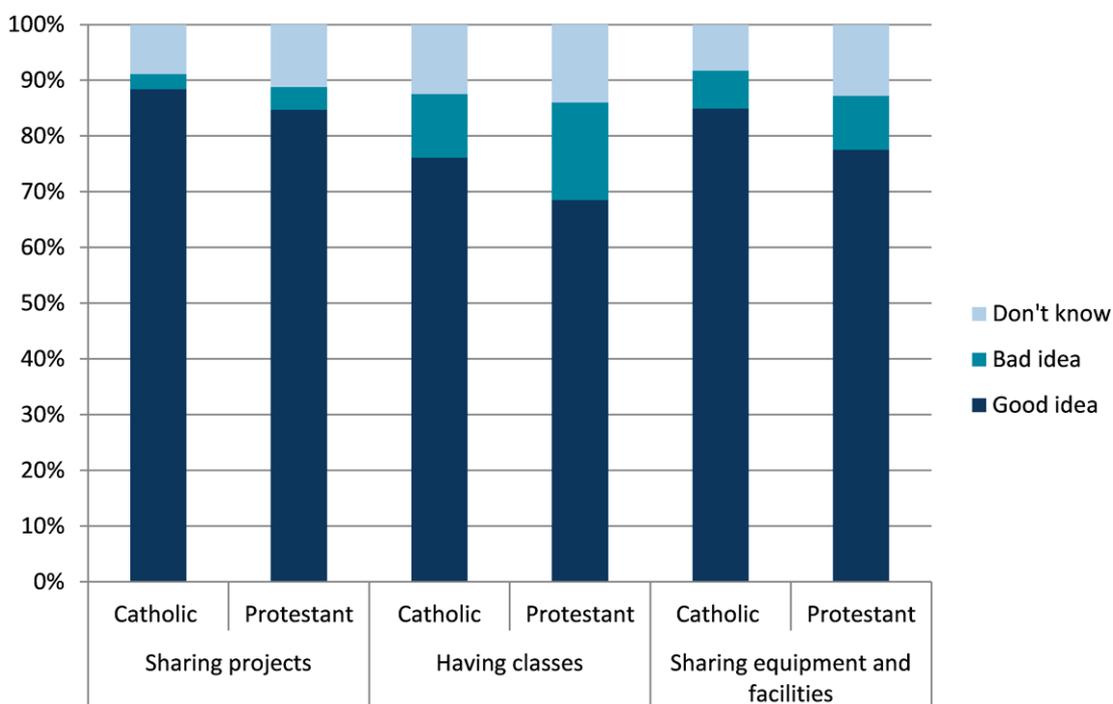

“There are already issues with facilities – if another school comes in it would cause more problems.” (Post-primary participant) “It could be complicated, like if someone walked in in a Rangers top and one in a Celtic top and that starts something.”

(Post-primary participant)

Some focus group participants agreed in principle to the idea of shared education, but voiced fears around having to study particular subjects, for example Irish, or play particular sports.

With regard to religious background, Catholic survey respondents were more likely to state that shared education with pupils of a different religion was a good idea. When asked whether they would mind doing a project with children of a different religious background, 83% of Catholic students stated that they “would not mind at all”, compared to 79% of Protestant respondents.

Figure 6: Do you think that the following shared education activities are a good idea? By religious background

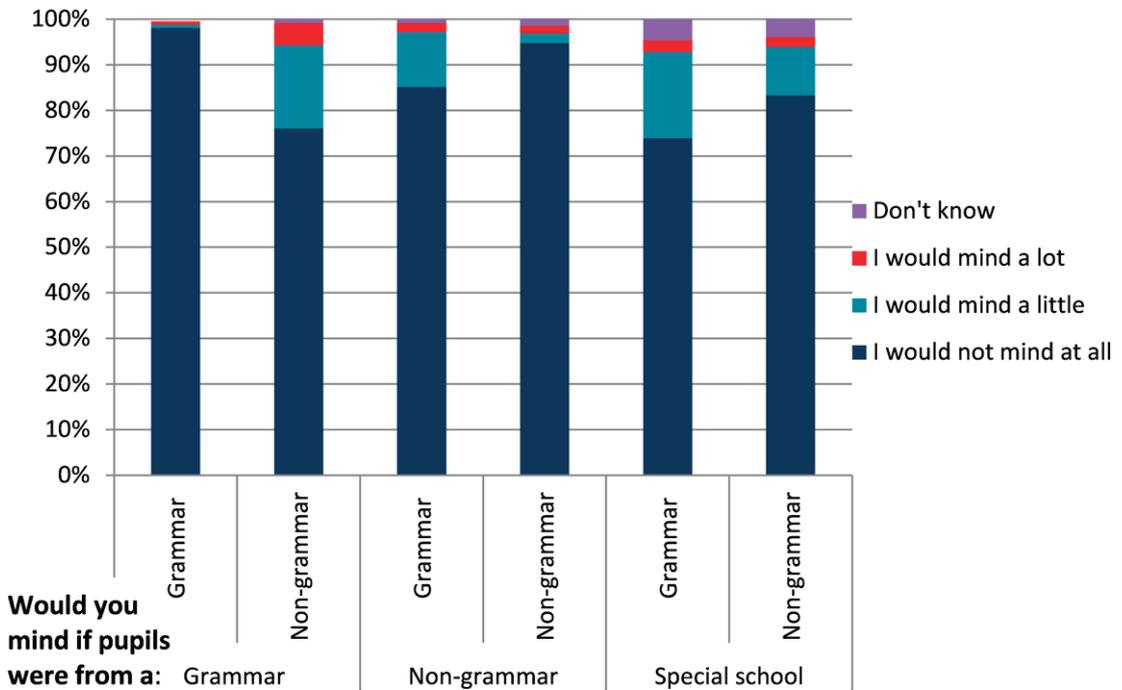

Our analysis of the survey data also found that students tend to be more willing to share projects with other schools of a similar management type. For example, 98% of grammar school respondents stated that they “would not mind at all” sharing projects with pupils of another grammar school, while 85% would not mind sharing with a non-grammar and 74% would not mind sharing with pupils from a special school.

Similarly, 95% of non-grammar students would not mind sharing with another non-grammar, while 76% would not mind sharing with a grammar and 83% would not mind sharing with a special school.

Students from integrated schools were the most willing to share with schools of a different management type, with 95% stating that they would not mind sharing with a non-grammar, 79% noting that they would not mind sharing with a grammar, and 85% saying that they would not mind sharing with a special school.

Figure 7: Would you mind if young people from the following types of schools came to do a project with your class? By school management type

In the focus groups some pupils questioned the extent to which shared education promotes integration in practice, suggesting that it may instead highlight differences between people of different community backgrounds.

“Shared education is getting Protestants and Catholics, putting them on the same campus and that is it. It is almost promoting their differences, which in turn causes sectarian behaviour – we all know how that turns out.”

(Post-primary participant)

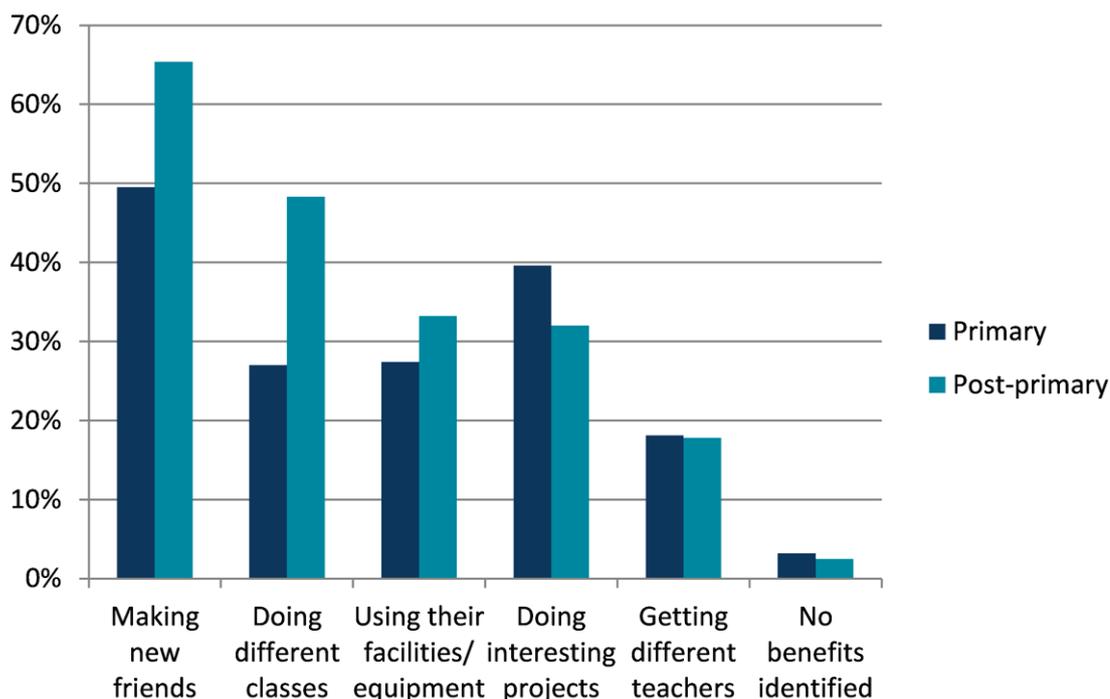

“It would raise awareness of differences. You are saying ‘you two are different – work together’, whereas you might not even have realised.”

(Post-primary participant)

5 Advantages of shared education

Answering a multiple-choice question in the survey, students identified a number of potential benefits of shared education. These are illustrated in Figure 8.

Figure 8: Potential benefits of shared education (survey results)

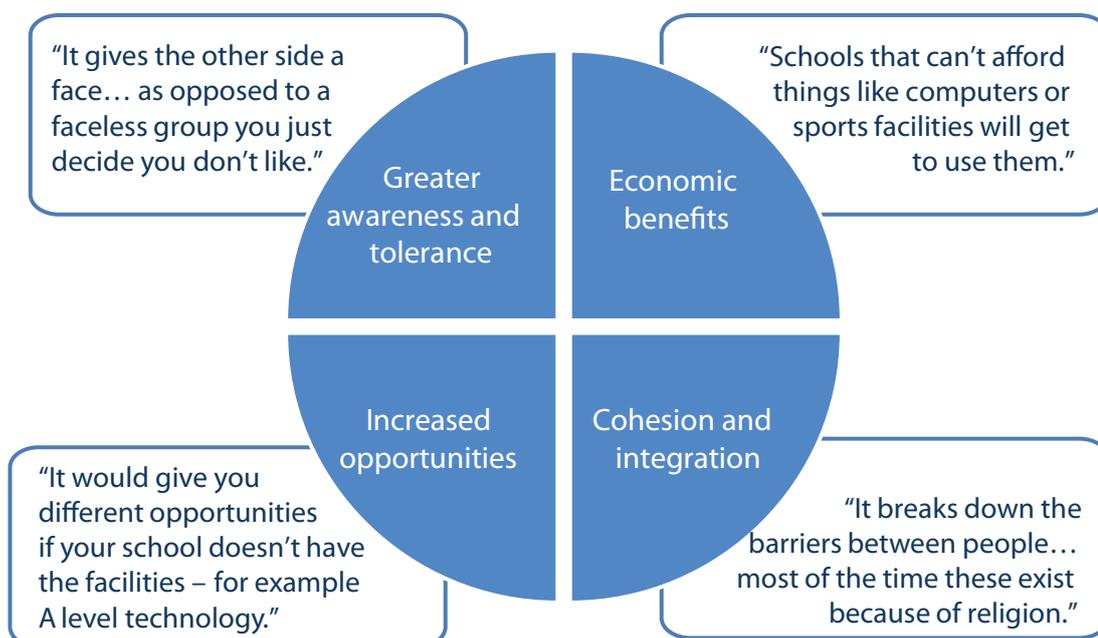

The survey highlighted few differences in opinion by religious background for this question, although Catholic survey respondents were more likely to note having the opportunity to be taught by different teachers as a potential advantage (20% compared to 16% of Protestants).

Participants in the focus groups highlighted a number of potential benefits they felt could arise from sharing classes, projects or sports with pupils of a different religious background; these are illustrated in Figure 9 overleaf.

Many of these centre on mixing with people from a different background, and as a result promoting tolerance across communities. Some students also alluded to the potential economic benefits and the greater opportunities that could be afforded by schools sharing resources and facilities.

Figure 9: Perceived benefits of shared education identified by focus group participants

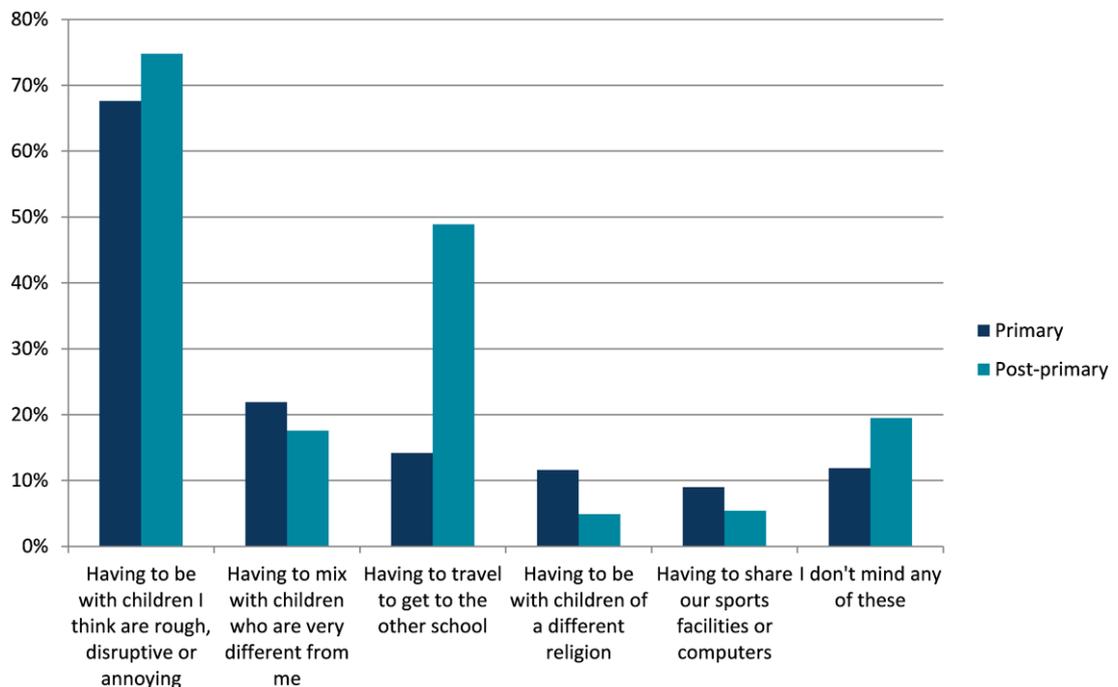

6 Disadvantages of shared education

Again answering a multiple-choice question in the survey, respondents highlighted a number disadvantages they thought could arise from shared education (Figure 10 overleaf). The most common concern of both primary and post-primary respondents to the survey was having to mix with children they thought were ‘rough, disruptive or annoying’.

Mixing with children of a different religion was cited as a potential disadvantage by a minority of respondents: 12% of primary pupils and 5% of post-primary pupils. This was of a greater concern for Protestant students (8% compared to 4% of Catholic respondents). A fifth of post-primary students did not select any of the disadvantages in the questionnaire.

There were also differences by school management type, with 23% of non-grammar respondents highlighting having to mix with people very different to themselves as a concern, compared to 16% of grammar students and 10% of respondents from integrated schools.

Figure 10: Potential disadvantages of shared education

Participants in the focus groups also highlighted a number of disadvantages they thought could arise from sharing classes or taking part in activities with students from schools of a different religion, outlined in Figure 11.

Figure 11: Perceived disadvantages of shared education identified by focus group participants

7 Views on integrated education

At primary, a majority of focus group participants supported the idea of integrated education. At post-primary pupils generally advocated integrated education over shared education, pointing to benefits around inclusion and integration. However, a minority of pupils stated that they would not like to attend an integrated school, preferring instead to attend school alongside pupils from a similar background.

Students who attended integrated schools were particularly supportive of the model, with most preferring it to shared education. Some, however, supported school choice and advocated having both shared and integrated approaches available. Participants in Irish-medium education were also supportive of integrated education.

“I like both ideas, but my favourite would be integrated education... I think it brings people together.”

(Primary participant)

“Without full integration opinions aren’t going to change. We still have our Protestant and Catholic schools; we mix for computers but we still go home to our Protestant and our Catholic schools.”

(Post-primary participant)

The following figure highlights the main potential advantages and disadvantages of integrated education highlighted by participants in the focus groups.

Figure 12: Potential advantages and disadvantages of integrated education

8 Conclusion

This paper has shown that a majority of pupils are in favour of shared education, with most also supportive of integrated education. However, some participants in the research highlighted a number of concerns and potential disadvantages around sharing projects, classes or facilities with students from other schools. Areas that could be given further consideration include:

- The reasons why more primary school pupils have participated in shared education than their counterparts at post-primary;
- The different levels of support for and enjoyment of shared education between Protestants and Catholics;
- The reluctance of some students to take part in shared education with schools of a different management type;
- The perception of some focus group participants that shared education may accentuate differences between pupils;
- The extent to which pupils from different schools integrate when they take part in shared education.

Shared and Integrated Education Inquiry Focus Groups

1. Background

The Committee for Education is undertaking an Inquiry into Shared and Integrated Education. The Terms of Reference are as follows -

The Education Committee will:

- Review the nature and definition of Shared Education and Integrated Education as it applies across all educational phases – including consideration of the need for a formal statutory definition and an obligation in statute to facilitate and encourage Shared Education;
- Identify the key barriers and enablers for Shared Education and Integrated Education;
- Identify and analyse alternative approaches and models of good practice in other jurisdictions in terms of policy interventions and programmes;
- Consider what priorities and actions need to be taken to improve sharing and integration – including the effectiveness of the relevant parts of the CRED policy; the need to engage more effectively with parents/carers; and the role of Special Schools.

The Assembly's Research and Information Service (RaISe) and Education Service are working together to find out about students' opinions and experience of Shared and Integrated

education. The research will take the form of a qualitative study. Qualitative research generates words, rather than numbers, as data for analysis. It is effective in finding out about people’s experiences and understanding different perspectives. The research will be performed using a focus group format.

2. Research Protocol

<p>Aims and Objectives</p>	<p>The research will assess:</p> <ul style="list-style-type: none"> • Attitude towards mixing in general • Attitude towards both models (Shared and Integrated) • Positive outcomes • Negative outcomes • Attitudinal Change • Behavioural change • Levels of enjoyment • Impact on motivation • Barriers • Thoughts for the future
<p>Methods</p>	<p>Research will survey the views of:</p> <ul style="list-style-type: none"> • Pupils who have experienced Integrated Education • Pupils who have experienced Shared Education • Pupils who have experienced neither models <p>Research will involve:</p> <ul style="list-style-type: none"> • Structured Interviews lasting 40 minutes • Working with schools from a variety of sectors • Approximately 8 pupils in each focus group • Sessions performed in Parliament Buildings and the school setting
<p>Ethical Issues</p>	<ul style="list-style-type: none"> • Anonymity will be guaranteed • Measures will be taken to minimise bias • Parental consent will be sought
<p>Resources Required</p>	<ul style="list-style-type: none"> • Education Officers • Research Officer • Bursary Student • Education Administration Team • Recording Equipment • Rooms in Parliament Buildings • Hansard Irish Medium translator
<p>Timescale</p>	<ul style="list-style-type: none"> • Identify Schools by 29 September • Approach Schools by 08 October • Develop Topic Guide by 10 October • Commence structured interviews 13 October • Deliver outreach 10 November • Complete report by 18 December

Dissemination	<ul style="list-style-type: none"> • Results will be forwarded to the Committee for Education as a component of its report • Participating Schools will be alerted once the Inquiry report is published
---------------	---

3. Definitions

For the purposes of the research, Shared and Integrated Education have been defined in the following ways.

Shared Education

The Ministerial Advisory Group¹ defines Shared Education as involving the organisation and delivery of education so that it:

- Meets the needs of, and provides for the education together of, learners from all Section 75 categories and socio-economic status;
- Involves schools and other education providers of differing ownership, sectoral identity and ethos, management type or governance arrangements; and
- Delivers educational benefits to learners, promotes the efficient and effective use of resources, and promotes equality of opportunity, good relations, equality of identity, respect for diversity and community cohesion.

Integrated Education

The Northern Ireland Council for Integrated Education² describes Integration Education as bringing children and staff from Catholic and Protestant traditions, as well as those of other faiths, or none, together in one school.

The Northern Ireland Council for Integrated Education Statement of Principles can be found at the following URL: <http://www.nicie.org/about-us/nicie/statement-of-principles/>

4. Technique

The methodology is designed to ensure that the findings will reflect the research aims, rather than reflecting the bias of the researcher, or a very atypical group. This means that the technique will be:

- Reproducible: the same topic guide could be used to generate similar information;
- Systematic: interviewees will not be selected because they support our pre-existing ideas about the answers;
- Credible: the questions asked and the ways in which they are asked will be reasonable for generating valid accounts; and
- Transparent: methods will be written up so that readers can see exactly how the data were collected and analysed.³

4.1. Selection of Schools

The research aims to have a balance of responses from the following school categories.

Primary	Post-Primary
Controlled	Controlled
Maintained	Maintained
Integrated	Integrated
Irish Medium	Irish Medium
Rural	Rural
Urban	Urban
	Secondary
	Grammar

In the first instance, the schools booked on the Education Service programme were considered for participation in the focus groups. The visiting schools were listed by category to identify schools from specific phases and sectors. Schools were selected to represent a wide geographical area.

It was ascertained that a majority of the categories in the target cohort could be surveyed by working with schools booked on the Education Service programme. However, Irish Medium and Primary Integrated schools were not represented, so Education Service has arranged outreach to deliver focus groups in the school setting. School selection is illustrated in Appendix 1.

4.2. Topic Guide

Topic Guides are used mostly in semi-structured interviews (See Appendix 2). It has a list of the key questions relevant to the topic, with some useful prompts to encourage the interviewee to talk about specific issues if they do not arise spontaneously.

4.3. Briefing for Interviewers

RaSe has produced a briefing for interviewers to ensure that the process is standardised (See Appendix 3). The interviewers will meet prior to the first focus group to reaffirm the procedures.

4.4. Recording

All focus groups will be recorded using a digital audio recorder. The audio files will be saved on a shared network drive. The interviewers will be accompanied by a scribe who will summarise the salient points which arise during conversation.

4.5. Irish Medium Education

The Education Service will deliver an outreach visit to an Irish Medium school to carry out a focus group session. A member of Hansard who is fluent in Irish will translate the Topic Guide and accompany the interviewer during the focus group session. The interviewer in question has GCSE level Irish. The responses will be translated into English.

4.6. Analysis

The Assembly's Research and Information Service will analyse the data and write an associated report which will be forwarded to the Committee for Education in December 2014.

4.7. Briefing Pack for schools

The Education Service will create an information pack for schools which will explain the concepts of Shared and Integrated Education. This will be sent to schools and used to prepare the pupils for the focus groups.

Appendix 1: School Selection Table

Primary		Controlled		Maintained		Grant Maintained Integrated		Controlled Integrated	
Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural
Ballymagee Primary School		St Josephs Primary School	St Brigids Primary School						Carrlough Primary School (part of wider group)
Whiteabbey Primary School		Holy Child Primary School	New Row Primary School						
		Longfower Primary School	St Brendan's Primary School						
			St James' Primary School						
			St Macartan's Primary School						
			St Marys Primary School						
Secondary		Controlled		Maintained		Grant Maintained Integrated		Controlled Integrated	
Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural
Carrickfergus College	Castlederg High School	St Patrick's Academy	Dean Magaurc College				New Bridge Integrated College		
	Banbridge High School								
Grammar		Voluntary Grammar (RC)		Voluntary grammar (Other)					
Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural		
Grosvenor Grammar School	Collegiate Grammar	Aquinas Grammar School	Mount Lourdes Grammar School	Bangor Grammar School				= invited	
	Lurgan College	Dominican College, Fortwilliam		Belfast High School				= accepted	
		Rathmore Grammar School		Belfast Royal Academy				= declined	
		St Dominic's High School		Bloomfield Collegiate					
				Friends' School					
				Methodist College

Loughshore Educational Res	Castletower School								
Irish Medium									

Appendix 2: Topic Guide

Shared/Integrated Education Inquiry

1. The Government is currently working on plans to change schooling in Northern Ireland. All schools will be expected to think about sharing classes, teachers or facilities with other schools of different religions.

How do you feel about schools allowing pupils from other schools to use their sports facilities or equipment like computers?
2. How would you feel about having classes with pupils from other schools of a different religion? What about doing projects or sports?
3. C an you think of things that might be good if young people from schools of a different religion get together? (Unprompted, then probe if necessary)
 - Using their sports facilities and computers or equipment
 - Getting the opportunity to be taught by different teachers/ sports coaches
 - Doing classes we don't normally get to do at our school, like learning a new language; getting the opportunity to do a different subject or qualification
 - Making new friends
 - Doing interesting projects
4. Can you think of any disadvantages if young people from schools of a different religion get together? (Unprompted, then probe if necessary)
 - Having to share our sports facilities or computers
 - Having to travel to get to the other school
 - Having to be with young people of a different religion
 - Having to mix with young people who are very different from me, or having difficulty mixing
 - Wearing a different uniform
5. Integrated schools educate children from both Protestant and Catholic traditions together, as well as those of other faiths and those with no religious faith. This is different from shared education as pupils of different religions go to the same school rather than attending two different schools.

How would you feel about attending an integrated school? Why do you say that?

Appendix 3: Interviewer Guide

Shared education inquiry: focus groups

The main purpose of focus group research is to learn about participants' experiences and views: the idea is that listening to others' experiences stimulates memories and ideas in participants.

Introductions

- Facilitator to explain the reason for the group and what will be done with the findings. May be useful to let them know that we are there to learn from them
- Confidentiality – explain that they may be quoted but they will not be named, the quotations will be non-attributable (for example, we would remove the name of the school or teacher if they reference it)
- Ask them to be as honest as possible and to talk about both the good and the bad
- State that the discussion should be informal and that different views to those expressed by others are welcome
- Need agreement from all participants on the use of the recording. Reassure participants that the recording will not be used for anything other than note-taking purposes

During the group

- Always ask open questions and allow the discussion to flow. If one person gives an answer it can be useful to find out whether this view is widely held or not, for example by saying *'do you all agree with that?'* *'does anyone have a different view?'*
- It is often useful to probe to gain further information, for example *'tell me more about that'*, *'why do you say that'*, *'any other views?'*
- While discussion should be as free-flowing as possible, need to keep it moving and wind up particular questions as required, and also keep participants on topic

Ending the session

- Thank participants for their time and participation – let them know that the information they have shared is valuable for this project.
- Ask them if they have any questions or other points they'd like to make
