

Department of Agriculture, Environment and Rural Affairs - Response to TEO - DSC Request - Regulation (EU) 2024/3110 construction products – 6 January 2025

DAERA is supportive of the regulations to make changes to the marketing and design of construction materials. In particular, the requirements set out around giving preference to recyclable materials and materials produced from recycling as well as respecting the minimum recycled content obligations are welcomed. The opportunity to upgrade the design of construction materials to promote extending life through reuse, repair and refurbishment is also of interest. However, implementation of these regulations would require input from those with responsibility for procurement, planning, product standards and building regulations and standards. As such, DAERA has limited remit for these regulations.
