

Knowledge Exchange Seminar Series (KESS)

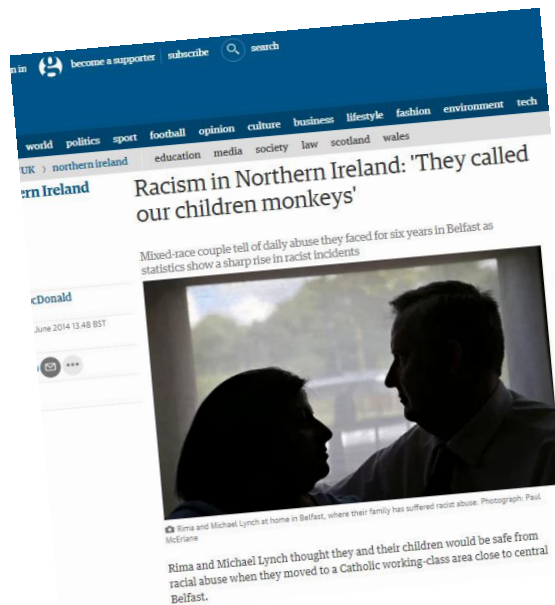

...is a forum that encourages debate on a wide range of research findings, with the overall aim of promoting evidence-based policy and law-making within Northern Ireland

Negativity towards immigrant out-groups among Northern Ireland's Youth – are younger cohorts becoming more tolerant?

Dr Stefanie Doebler (University of Liverpool),
Dr Sally Shortall (University of Newcastle),
Dr Ruth McAreavey (University of Newcastle),
Dr Ian Shuttleworth (Queen's University Belfast)

Negativity towards immigrants and members of a different race or religion has been a problem in Northern Ireland for a long time. Media reports of racially motivated hate-crimes have been so frequent that Northern Ireland has been dubbed the “race-hate capital of Europe”

So, what are drivers of negativity towards ethnic minorities and immigrants in Northern Ireland?

Poverty?

In this talk we examine negativity towards ethnic minorities and immigrants from two perspectives:

Macro-level:

- Racially motivated hate crimes in electoral Wards in Northern Ireland

Individual level:

- Negative Attitudes towards racial and ethnic minorities among the Northern Ireland population aged 16 to 65plus.

Data:

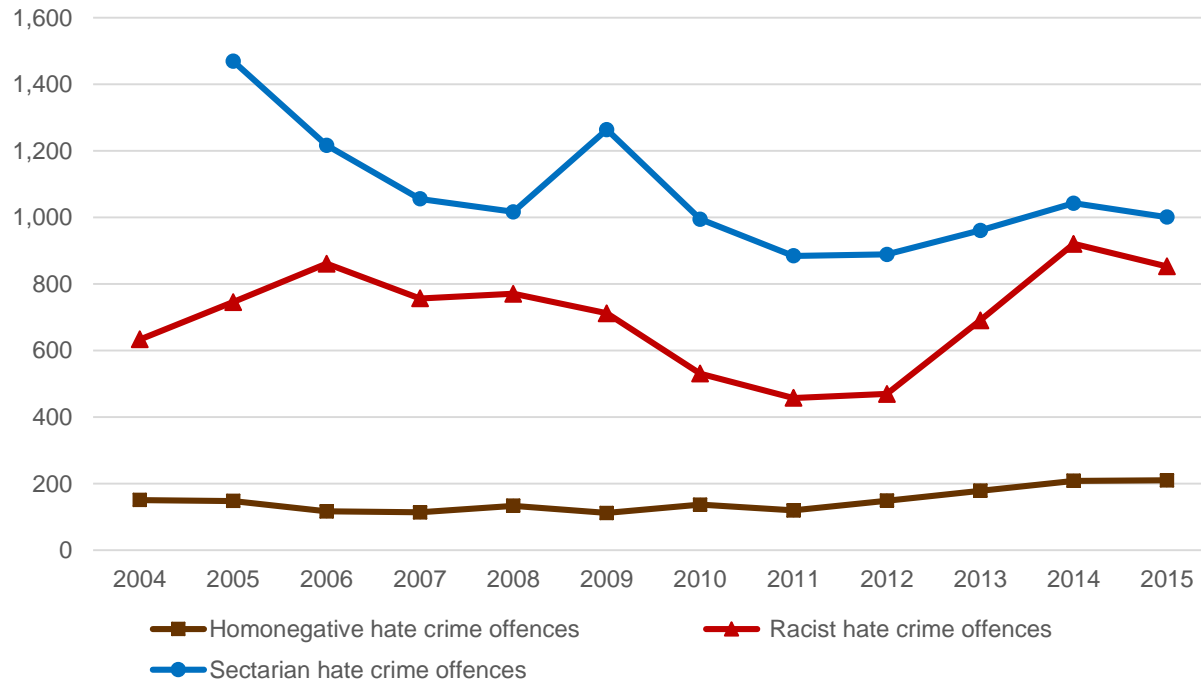

- Time series of hate crimes reported and archived by the Police (PSNI)
- Responses to two Surveys, the Northern Ireland Life and Times Survey (NILT) and the Young Life and Times Survey (YLT) convened by Researchers at Queen's University Belfast & ARK

Prior academic research found negative attitudes towards immigrants and racial out-groups to be related to:

- low education (Borgonovi 2012, McKee 2015)
- deprivation & status anxiety (Hayes & Dowds 2006; McVeigh & Rolston 2007)
- lack of contact to minority members (Quillian 1999, McKee 2015,
- sectarian attitudes (Brewer 1992; Knox 2011; Pehrson et al 2012)
- Protestant identity

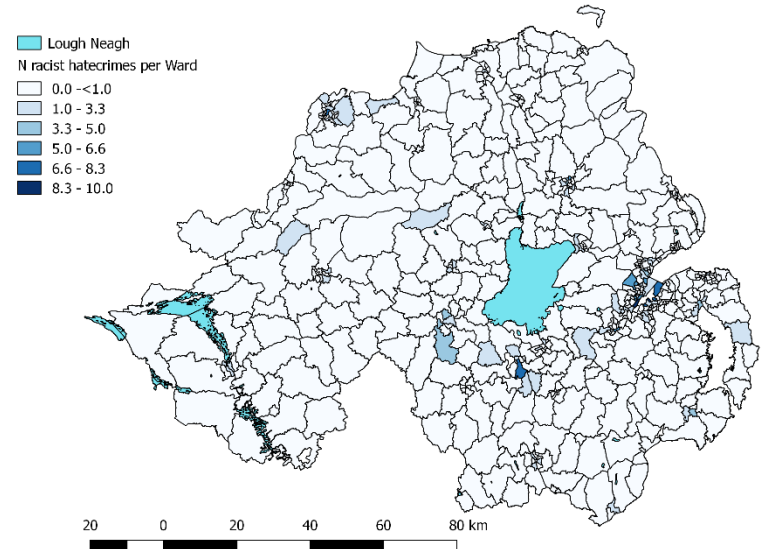

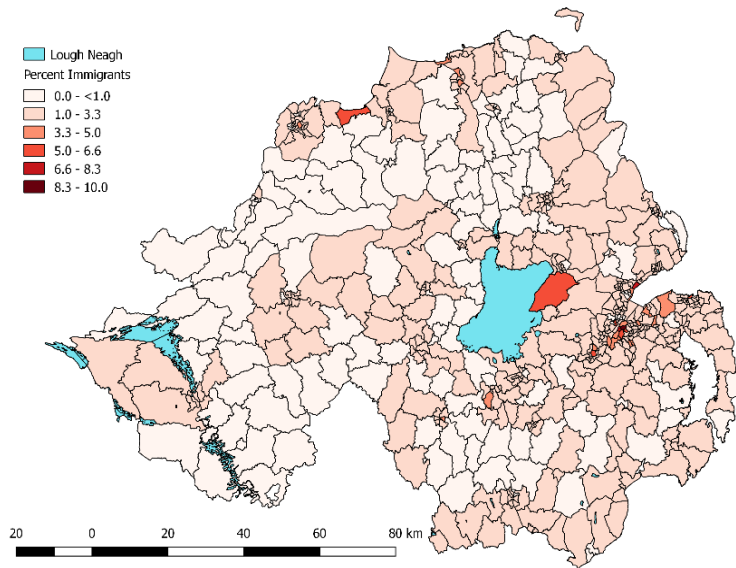

Knowledge of the prevalence and extent of out-group negativity in the population is important in order to detect aggravating factors and find solutions that may help prevent it in the future.

Time-Series of racially Motivated Hate Crimes:

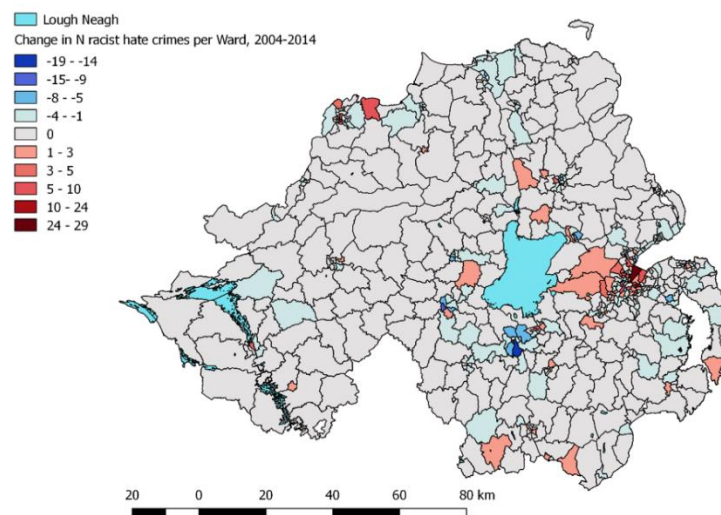

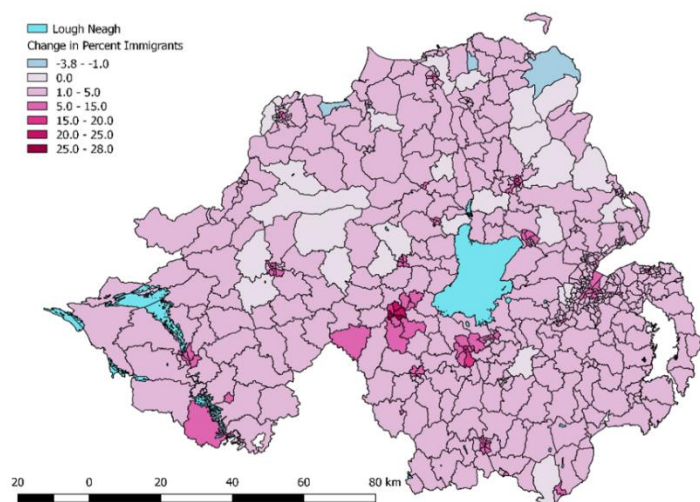

Data: PSNI, 2016.

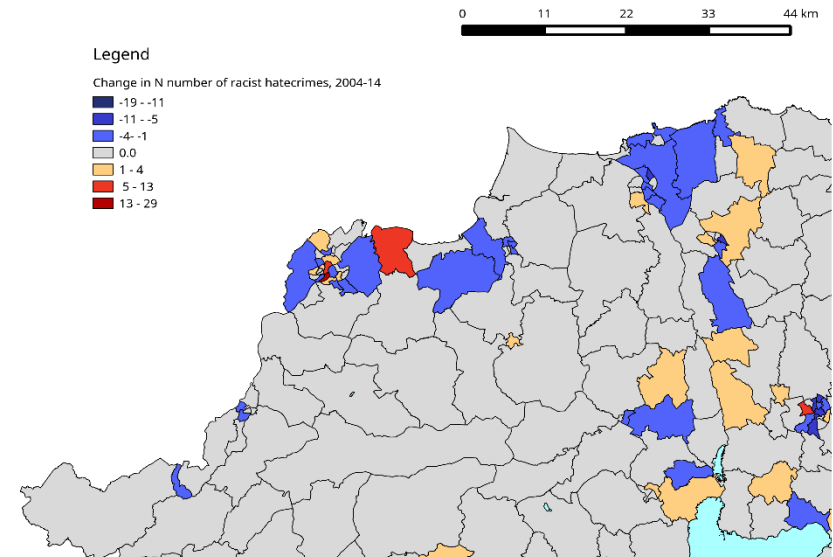

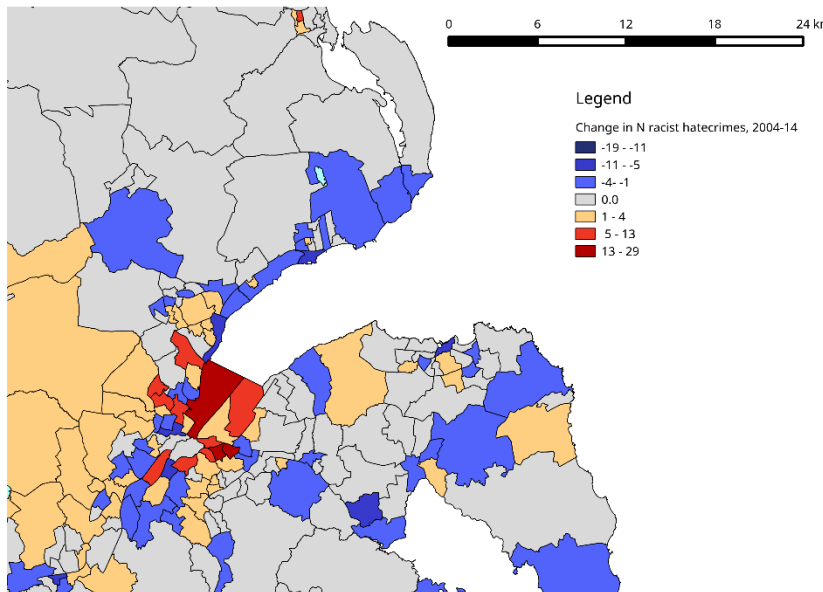

Immigrant Numbers and Racist Hate crimes in Northern Ireland by Ward

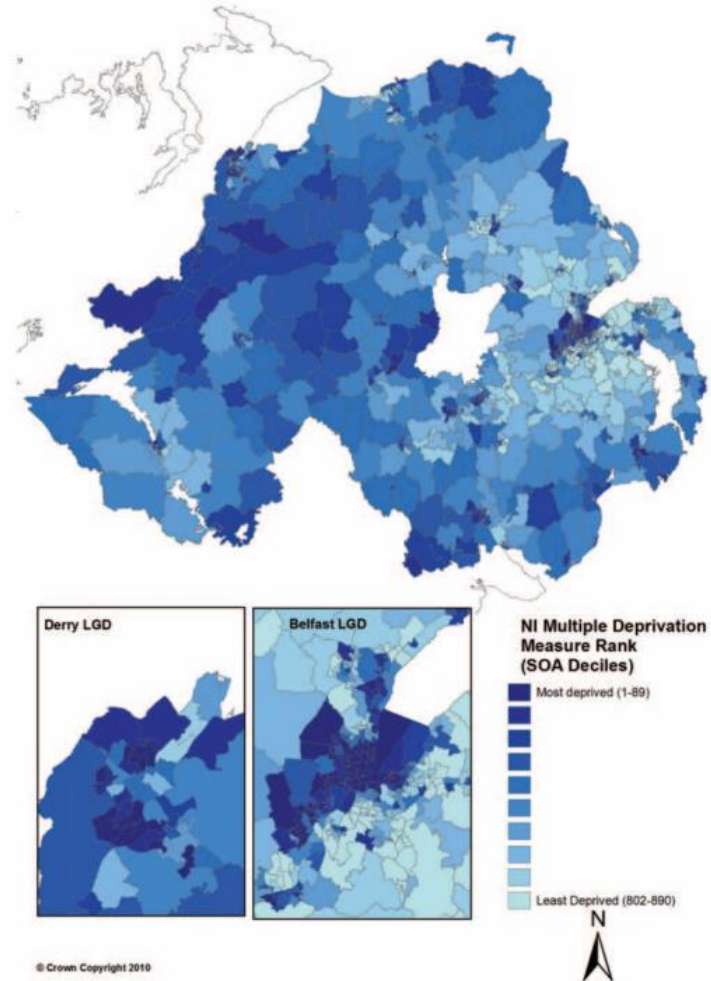

Percent change in Immigrant Numbers and Change in N Hate crimes over Time

Negativity towards Ethnic Minorities and Immigrants – Northern Ireland in UK Context:

Summary of Macro-Level Findings:

- Increases in racist hate crimes in Northern Ireland between 2011 and 2014 (but decrease between 2014 and 2015)
- Different patterns on the Ward-level: Increases in racist hate crimes in urban, deprived areas of Belfast and Derry
- These areas have both (relatively) high and increasing numbers of immigrants and above-average levels of deprivation
- Tendency for areas that already had elevated numbers of hate crimes in 2004 to also experience an increase in hate crimes
- Some improvement (decrease in racist hate crimes) around Craigavon and Cookstown

Negativity towards racial and ethnic minorities on the Individual level:

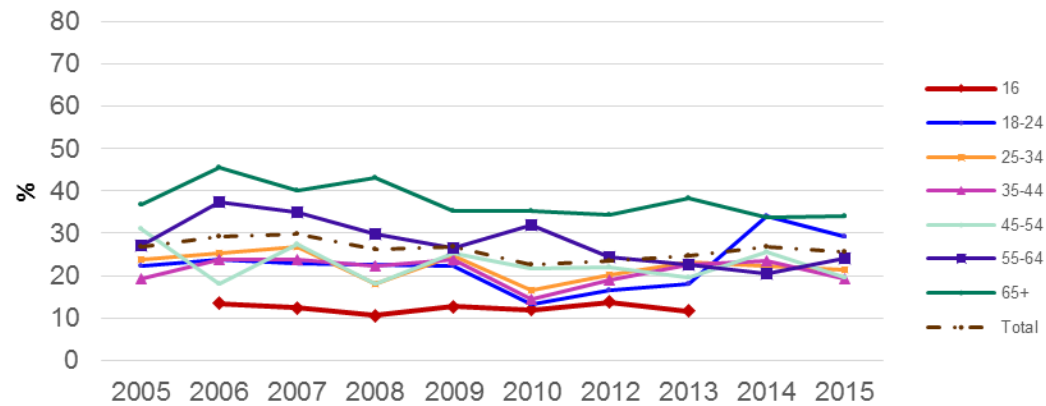

1. Development over time:

Are younger cohorts becoming more tolerant?

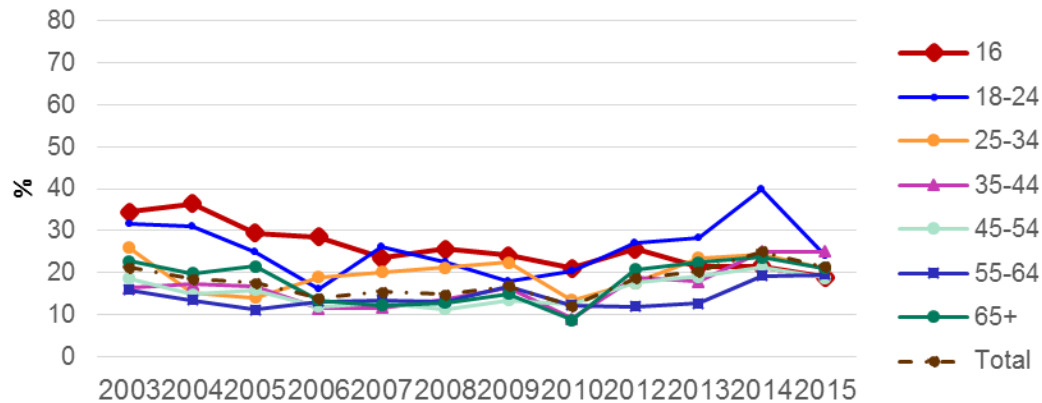

2. What are factors that influence attitudes towards racial and ethnic minorities in Northern Ireland

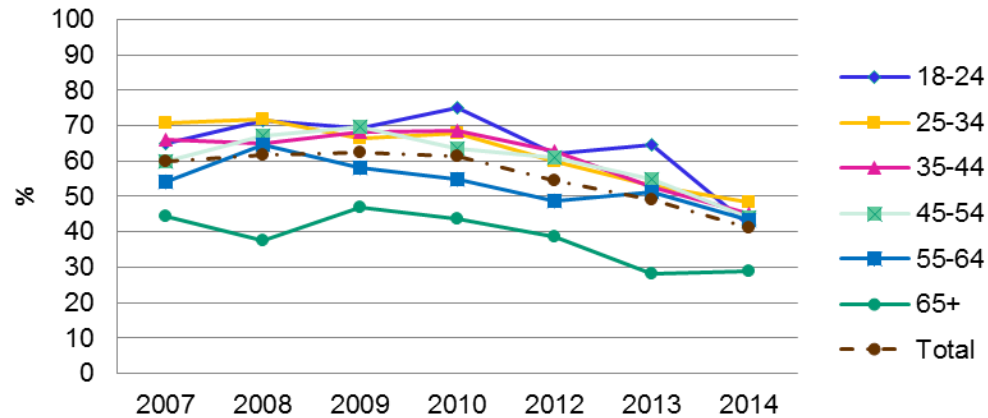

YLYT and NILT: “In relation to race and ethnicity, I prefer to stick with people of my own kind”

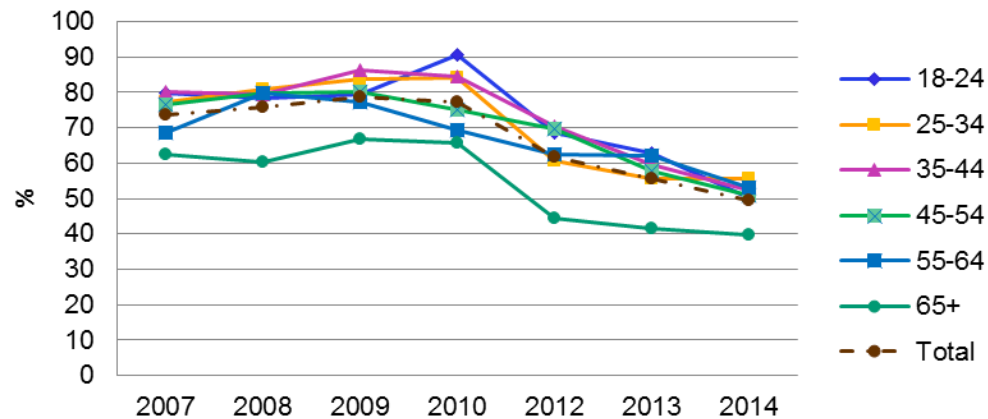

YLTS and NILTS – “I prefer to live in a neighborhood with people of only my own religion”

NILT - "Would accept a Muslim as close friend"

Would accept an Eastern European as a close friend

Summary

Cohort Differences:

- worrying increase in negative attitudes towards racial and ethnic minorities among young adults aged 18 to 25, between 2010 and 2014
- Although we found a, the youngest cohort of 16 year olds does not exhibit this trend and is also consistently more tolerant towards racial and ethnic out-groups than all older cohorts.
- The good news: decrease in negativity between 2014 and 2015
(but will this trend persist after Brexit-vote?)
- Younger cohorts are consistently more tolerant towards racial and ethnic minorities and immigrants than older ones.

Summary:

Multivariate Findings from Regressions:

- Education matters!
- Quality of schooling matters greatly for people's tolerance towards racial and ethnic out-groups.
- In the adult sample: those who attended integrated, religiously mixed schooling were more tolerant towards ethnic minorities.
- In the Youth sample (16 year olds): not integrated school, but quality of school related tolerance towards minorities
- Increased contact with ethnic minority members and feeling a positive sense of belonging good for tolerance towards ethnic minorities.

Conclusion:

What can Policy Makers Do?

- strengthen the supply of a high quality education,
- Strengthen the inclusion of ethnic minority members in local communities, facilitate positive contacts with racial and ethnic minorities.
- policies should aim at reducing poverty and unemployment across Northern Ireland
- counteracting the concentration of poverty and deprivation in neighbourhoods may help reduce out-group negativity.
